1. The volute dewatering screw press equipment shall be designed to adequately condition and dewater the biosolids so that a dewatered Class "B" cake is produced that easily discharges from the unit without blinding or plugging, into the dewatered cake screw conveyance system for discharge into a container/dumpster.

2. The biosolids volute dewatering screw press unit(s) shall be designed to operate in the environment for which it is intended, continuously or intermittently on demand,

and shall perform the required dewatering operations without spillage of water or biosolids beyond the nominal machine envelope.

3. The description of the sludge to be fed to the volute dewatering screw press system is as follows:

Parameter	Value
Type of Biosolids to be Dewatered	Class "B"
Digestion System	Extended Aeration
Feed Solids (% dry solids)	0.6 – 2.0%
pH	6.0 – 8.0
Volatile Suspended Solids Content	25 – 30%

B. Project Performance Requirements

1. The volute dewatering screw press unit shall be capable of meeting the following minimum performance criteria provided the above conditions of service are furnished:

Performance Parameters	Value
Biosolids Throughput - feed solids of 1.6% or greater (lb dry solids/hr/unit)	540
Hydraulic Capacity/unit - feed solids of 1% or less (gpm)	80
Power Use (hp)	3.9
Washwater Use	16 gpm (intermittent) 48 gph (total)
Neat Polymer Metering Pump Capacity (gph)	5
Dilution Water (gph) Minimum	60 - 600
Performance Requirements	**Value**
Dewatered Sludge Concentration (% dry solids), minimum	**16**
Minimum Solids Capture (%)	**90**

C. Performance Testing

1. Perform preliminary testing in order to select a liquid polymer that provides the best performance. Test a minimum of five (5) liquid polymers prior to selection. *Dry polymer systems will not be acceptable.*

2. Perform a complete start-up and shut-down of the volute dewatering screw press system using both local and SCADA control systems. Verify every component start and stop selector functions properly.

3. Verify the input and output signals to and from the control panel are transmitted and received.

4. The Performance Tests shall consist of two (2) tests, of each dewatering unit, that shall last eight (8) hours each, during which no repairs or adjustments shall be allowed. Assure that all interconnects function properly. Test each function specified herein ("*Controls*") and verify that each function is performed. Test interlocks and verify that each interlock functions.

5. Feed sludge to the unit shall contain 0.6 - 2% dry solids, by weight. Demonstrate that the volute dewatering screw press units can produce a biosolids cake with at least 16% dry solids, by weight.

6. During the Performance Tests, the Manufacturer and Owner shall measure the solids concentration in the dewatered biosolids and filtrate. One biosolids sample and one filtrate sample shall be collected each hour of the test and split for the following testing:

   a. One of the split biosolids samples shall be tested for dry solids content.

   b. One of the split filtrate samples shall be tested for dry solids content.

   c. Dewatered biosolids collected shall be composited for each eight (8) hour shift.

   d. Filtrate samples shall be collected composited for each eight (8) hour shift.

   The average of the composited biosolids samples shall ensure that the dewatered solids concentration exceeds the Performance Test requirement. The average of the composited filtrate samples shall ensure that the solids capture rate exceeds the Performance Test requirement.

7. Sampling and analysis shall be performed by an independent laboratory, approved by the Engineer and Owner. This cost shall be included in the Contractor's Bid.

8. If the volute dewatering screw press unit fails to meet the specified Project Performance Requirements (Article 1.06(B)(1)), the Contractor and manufacturer

shall make adjustments or replace the unit as necessary. Two additional eight (8) hour Project Performance Tests shall then be carried out after adjustments have been made. If the volute dewatering screw press units fail these additional tests, the Contractor shall replace the volute dewatering screw press unit(s) with equipment that meets the Project Performance Requirements. ***All modifications or replacement shall be at no cost to the Owner***.

9. The equipment manufacturer shall guarantee the above performance criteria, backed by a performance bond in the full amount of the equipment price, presented with the submission of engineering submittals. The manufacturer shall be allowed two (2) opportunities to demonstrate compliance with the performance criteria. Should the equipment fail to meet the performance criteria after the second test, the manufacturer shall forfeit the bond or irrevocable letter of credit and remove the equipment.

1.7 Manufacturer's Services

A. Mechanical Start-Up Services

1. Provide two (2) eight-hour days of mechanical start-up services and system optimization to the Owner and Engineer on the day of system/equipment start-up and online operation.

B. Polymer Selection and Optimization Services

1. A factory representative who has complete knowledge of proper operation and polymer selection/optimization shall be provided for one (1) eight-hour day of polymer selection/optimization associated with the new volute dewatering screw press units.

2. The selected polymer shall maximize the dry solids content of the biosolids cake and minimize the dry solids content of the filtrate.

C. Operation and Maintenance Training

1. A factory representative who has complete knowledge of proper operation and maintenance shall be provided for one (1) eight-hour day of O&M training to the Owner and Engineer prior to the initial start-up of the respective system/equipment

2. O&M Manuals shall be submitted and approved at least thirty (30) days prior to the training session in accordance with Section 01300, “Shop Drawings, Submittals and Samples” and Section 01730, “Operation and Maintenance Data”.

D. Project Performance Testing

1) A factory representative who has complete knowledge of proper operation and maintenance and system optimization shall be provided for a minimum of two (2) eight-hour days to perform the Project Performance Tests identified in Article 1.06© of this specification section.

2) If there are difficulties in the operation and optimization of the equipment due to the manufacturer's design or fabrication, ***additional manufacturer services and modifications to the volute dewatering screw press unit(s) shall be provided at no additional cost to the Owner***.

1.8 Special Tools and Spare Parts

A. Furnish one (1) complete set of all special tools, including lubricating devices, required for normal operation, adjustment and maintenance of the equipment supplied. All such tools shall be furnished with a heavy duty, thermoplastic tool chest complete with a padlock and duplicate keys.

B. Furnish all required lubricants required for operation and maintenance of the volute dewatering screw press units for a period of one (1) year as specified in Section 01600, “Materials and Equipment”.

C. The manufacturer shall recommend and supply all spare parts for the volute dewatering screw press units to assure normal running and maintenance for a period of one (1) year, from the date of Final Project Acceptance by the Owner. At a minimum, the following spare parts shall be provided: (1) two (2) wash water solenoid valves; and (2) one (1) full set of spray nozzles for each dewatering unit.

D. Spare parts shall be furnished in containers properly labeled and identified with indelible markings as to their contents. Each container shall be suitably protected for long-term indoor storage.

E. Replacement parts required for normal operation, other than routine maintenance items, shall be provided by the manufacturer to assure uninterrupted operation of the volute dewatering screw press units.

1.9 Operation and Maintenance Manuals and Instructions

A. O&M Manuals shall be furnished for this Project in accordance with Section 01730, “Operation and Maintenance Data” and shall be submitted in accordance with Section 01300, “Shop Drawings, Submittals and Samples”.

B. The O&M Manuals shall be ***prepared specifically for this installation*** and shall include all detailed operating and maintenance instructions and specifications relative to the assembly, alignment, checking, lubrication, placing in operation, adjustment, and maintenance of equipment and auxiliaries furnished under this Contract, together with its complete parts lists therefore, and copies of shop drawings, certified dimensions drawings and design calculations, required cut sheets, drawings, equipment lists, descriptions, etc. that are required to instruct operation and maintenance personnel unfamiliar with such equipment.

C. All such material shall be in addition to any instructions or parts lists packaged with or attached to the equipment when delivered.

D. The "final" O&M Manuals shall contain ***"plastic laminated pull-out lubrication and maintenance cards"*** detailing all lubrication points, lubricant type, and frequency of lubrications and all additional required maintenance and frequency intervals.

E. In addition to standard O&M Manuals, all manufacturers supplying equipment and products specified herein shall also submit their operation and maintenance manuals and data to the System Supplier for this Project on CD/DVD/BD's in Corel WordPerfect (latest version), Microsoft Word (latest version), or text, "txt", formats. All graphic files shall be in BMP, PCX, CDR, JPEG, DWG or DXF formats (System Integrators preference for the system shall be required). All O&M Manual files shall also be submitted electronically on CD/DVD/BD's to the Engineer in both PDF and JPEG formats, no exceptions.

F. The System Integrator shall be responsible to configure and compile the O&M Manuals into "hypertext" window help files for use as computer "on-line" help screens for equipment operation and maintenance. The System Integrator shall return all hypertext files to the equipment and product manufacturer's for review and approval prior to introducing them into the SCADA/PICS System at the treatment facility.

1.10 Product Delivery, Storage and Handling

A. The volute dewatering screw press and all ancillary equipment shall be factory assembled and tested, and shall be delivered to the site for installation.

B. All equipment and parts shall be properly protected so that no damage or deterioration will occur during a prolonged delay form the time of shipment until installation is completed and the units and equipment are ready for operation.

C. The Contractor shall store and temporarily support the equipment prior to installation in strict accordance with the manufacturer's recommendations and instructions. Protect

all exposed surfaces. Keep records of the storage parameters and the dates that storage procedures were performed. The Contractor shall be responsible for work, equipment, and materials until inspected, tested and finally accepted.

D. Protect the equipment from being contaminated by dust, vibration and moisture. The equipment storage area shall be well ventilated to prevent excessive heat buildup.

G. Exposed openings for connection to piping shall be properly plugged or protected by wooded planks, etc., strongly built and securely bolted to the flanged surfaces.

H. The Contractor shall handle the equipment during delivery, storage and installation in a manner to prevent damage of any nature in accordance with the manufacturer's approved written instructions and in accordance with instructions given on-site by the manufacturer's representative. Each box, crate or package shall be properly marked to show its net and tare weight in addition to its contents.

I. Store mechanical, electrical and instrumentation equipment, components and appurtenances off of the ground in weathertight enclosures and keep dry at all times.

J. Factory assembled parts and components shall not be dismantled for shipment unless permission is received in writing from the Engineer.

K. Deliver equipment to the job site at the appropriate time for installation. Exercise care to prevent damage from handling. Delivery, storage and handling shall comply with Section 01600, "Materials and Equipment".

1.11 Warranty

A. ***The equipment shall be warranted, in writing, to be free from defects in workmanship, design and materials for a period of two (2) years from the date of Final Project Acceptance by the Owner***.

B. The process equipment supplier shall guarantee that the equipment furnished is suitable for the purpose intended and free from defects of design, material and workmanship.

C. If any part of the equipment should fail during the warranty period, ***it shall be replaced at no additional cost to the Owner***. The manufacturer's warranty period shall run concurrently with the Contractor's warranty period. No exception to this provision shall be allowed.

D. The equipment manufacturers shall each provide the Owner with an annual preventive maintenance contract (renewable) for his consideration prior to Final Project Acceptance. *This cost **shall not** be included in the Bid Amount*.

E. Refer to the General Conditions and Section 01740, “Warranties and Bonds” for additional guarantee and warranty requirements.

F. This warranty is in addition to any other warranty required by the Contract Documents.

1.12 Polymer Selection and Optimization Services

A. The volute dewatering screw press system manufacturer shall provide the services of an independent polymer consultant once the equipment has been tested and placed into operation. The polymer consultant and screw press manufacturer shall be responsible for selecting and optimizing the appropriate liquid polymer specific to the Owner’s Class “B” biosolids product. The polymer consultant and screw press manufacturer shall coordinate all testing activities with the Contractor and shall work directly with the Owner’s personnel during the performance testing period. The polymer consultant and screw press manufacturer shall test a minimum of five (5) liquid polymers prior to selection.

B. Once a polymer has been selected, the Contractor shall be responsible for providing the first six (6) months supply of liquid polymer. ***All polymer costs associated during Performance Testing and for a period of six (6) months thereafter shall be borne by the General Contractor***.

C. Following liquid polymer screening and selection, the independent polymer consultant and screw press system manufacturer shall submit three (3) copies of submit a complete report to the Engineer offering a complete assessment and cost-effectiveness analysis as to the liquid polymer selected.

2.0 PRODUCTS

2.1 Materials and Coatings

A. All materials used in the construction of the biosolids volute dewatering screw press system shall be of the best quality and entirely suitable in every respect for the service required. All stainless steel shall conform to the appropriate ASTM Standard Specifications. Other materials shall conform to the ASTM Specifications where such specifications exist and the use of such materials shall be based on continuous and successful use under similar conditions of service.

B. No carbon steel will be used for any part of the screw press unit

C. All electrical components shall be U.L. listed where such listing exists and all electrical control panels shall be assembled in U.L. approved facilities.

D. All materials utilized in the construction of the biosolids volute dewatering screw press equipment shall be entirely suitable in every respect for the service required. All metals in contact with polyelectrolyte or biosolids, and all other metal components other than those specified in the table below shall be Type 304 or 316 stainless steel.

The following table indicates the materials and coatings that shall be provided for the volute dewatering screw press and related components unless specified otherwise herein:

ITEM	MATERIAL / COATING
Tanks	Type 304 Stainless Steel
Plumbing	Type 304 Stainless Steel
Dewatering Drums	Type 304 Stainless Steel
Dewatering Drum Screw	Type 304 Stainless Steel with Flame Coating 10Co-4Cr
Gear Motors	Die-Cast Aluminum and Type 304 Stainless Steel
Gear Motor Coating	Acrylic Paint
Spray Bars and Water	Type 304 Stainless Steel
Spray Nozzles	Polypropylene
Electrical Enclosure	NEMA 4X Type 304 Stainless Steel
Electrical Wiring Housing	Non-metallic flexible liquid-tight conduit and fittings
Frame/Skid Mounting	Type 304 Stainless Steel
Valves - Wetted Sections	Stainless Steel, EPDM seating

2.2 Structural Components

A. The structural support frame shall be fabricated of Type 304 stainless steel members conforming to the latest ASTM Standard Specifications for Structural Steel, Designation A36. It shall be a rigid structure, adequately braced to withstand intended loads without excessive vibration or deflection.

B. The framework shall be of welded and/or bolted construction. All welding shall conform with the American Welding Society (AWS) Structural Welding Code.

C. The structure shall be designed for installation on a prepared concrete foundation, suitable flat concrete slab, or fabricated platform and secured with anchor bolts.

D. The construction shall allow easy access and visual inspection of all internal components.

2.3 Mixing and Flocculation Tanks

A. Each biosolids volute dewatering screw press unit shall have an integrated two-stage mixing system comprising of a flash/rapid mix tank and flocculation tank, each with mixers and drive motors. Tank sizing and design shall ensure adequate residence times and mixing conditions to ensure complete flocculation and satisfactory dewatering performance. The tank design shall minimize the possibility of any short circuiting of flow.

B. The design and manufacture of tanks and spill trays shall ensure that no leakage or spillage of fluids under normal working conditions.

C. Mixing and flocculation tanks shall be manufactured from Type 304 stainless steel and shall be a minimum of 11 gauge (0.12-inch). Tanks and spill containment trays shall be fully welded internally and externally.

D. Mixing and Tank Drive Motors

1. The mixer and flocculation tank drive motors shall be a one piece gear motor. Gear motors shall be of the *hollow-shaft design* and be designed to drive the mixing impeller shafts with no additional couplings or joints.

2. Motors shall be filled with grease on assembly and sealed for life. Mixer rotational speed shall be obtained through a hypoid reduction gear.

3. The input power to the dewatering drum drive shall be supplied through an AC VFD unit allowing variable mixing energy to be input to the system.

4. Flash Mixing Drive Motor Data

Parameter	Value
Maximum Horsepower (hp)	0.5
Power Requirements	480 VAC, 3-phase, 60 Hz
No Load Motor Speed (rpm)	1720

Parameter	Value
Gear Reduction	10 :1
Output Shaft Speed	180 rpm at 60 Hz
Insulation Class	IP65
Enclosure	TEFC
Enclosure Material	Die Cast Aluminum
Service Factor	1.15

5. Flocculation Tank Drive Motor Data

Parameter	Value
Maximum Horsepower (hp)	2
Power Requirements	480 VAC, 3-phase, 60 Hz
No Load Motor Speed (rpm)	1760
Gear Reduction	60:1
Output Shaft Speed	30 rpm at 60 Hz
Insulation Class	IP65
Enclosure	TEFC
Enclosure Material	Die Cast Aluminum
Service Factor	1.15

E. The polymer mixing system shall be designed specifically for its intended use with the Class “B” biosolids to be generated at the treatment facility from the BNR Process.

2.4 Dewatering Drums

A. The dewatering drums will be constructed of ASTM Type 304 Stainless Steel except for the rings in the thickening section of the drum that will be manufactured in a polycarbonate resin. All circular components will be laser cut to ensure maximum evenness of wear and therefore operating life.

B. Assembly shall be undertaken in such a way that all fixed rings are concentric and parallel. All fixed rings shall be equally spaced apart for each section of the dewatering

drum. When mounted on the retaining rods and installed, all moving rings shall move freely between the fixed rings.

C. Each dewatering drum shall be equipped with individual spray bars. Each spray bar shall consist of a spray pipe fitted with spray nozzles, located above the dewatering drum. The spray pipe and spray nozzle assembly shall be readily removable. Nozzle spacing and spray pattern shall be such that the sprays from adjacent nozzles overlap one another on the dewatering drum surface. The sprays shall operate periodically and shall remove solids built up externally on the drum such that over time no significant buildup of solids occurs on the drum.

D. Dewatering Drum Drive Motor

1. The mixer and flocculation tank drive motors shall be a one-piece gearmotor. Gearmotors shall be of the *hollow-shaft design* and be designed to drive the mixing impeller shafts with no additional couplings or joints. Motors shall be filled with grease on assembly and sealed for life. Mixer rotational speed shall be obtained through a hypoid reduction gear. The input power to the dewatering drum drive shall be supplied through an AC VFD unit allowing variable mixing energy to be input to the system.

2. Dewatering Drum Drive Motor Data

Parameter	Value
Maximum Horsepower (hp)	1
Power Requirements	480 VAC, 3-phase, 60 Hz
No Load Motor Speed (rpm)	1750
Gear Reduction	450:1
Output Shaft Speed	4 rpm at 60 Hz
Insulation Class	IP65
Enclosure	TEFC
Enclosure Material	Die Cast Aluminum
Service Factor	1.15

2.5 Liquid Polymer Blending System

A. Furnish one (1) Polymer Blending Unit (PBU) with progressive cavity pump, motors and controls, including all integral piping, valves, fitting, pipe supports, special equipment and appurtenances in accordance with these specifications, including all incidental work

necessary to make it complete, satisfactory and ready for operation.

B. The polymer dilution and feed system shall be capable of effectively activating and fully blending with water a homogenous polymer solution ranging from 0.1% to 1.0% concentration of emulsion polymers with active contents up to 75%.

C. Design Criteria

Parameter	Value
Polymer	Emulsion
Polymer Activity (percent active)	30 - 75
Polymer Concentration Range	0.1 - 1.0%
Neat Polymer Flow Range (gph)	0.25 - 5.0
Dilution Water Range (gph)	60 - 600

D. Quality Assurance

1. Prior to shipment the system shall be inspected for quality of construction verifying all fasteners and fittings are tight, all wires are secure and connections whisker-free.

2. The system shall be tested under pressure for a minimum of one (1) hour at 100 psi. If leaks are found they shall be fixed and a new test shall be conducted for one a. hour at 100 psi until the plumbing system is verified to be leak free.

3. The liquid polymer blending system equipment shall be shipped in a new, high quality completely enclosed weather proof wooden crate constructed of 2" x 4" studs and $^{3}/_{8}$-inch thick ply wood. Access to the crate shall be by a front panel removable by lag bolts. A skid shall be constructed of 4" x 4" or two 2" x 4" each, allowing fork-lifting. The crate shall include a shock sensor to warn of equipment mishandling during shipment.

4. ***The equipment shall be warranted, in writing, to be free from defects in workmanship, design and materials for a period of two (2) years from the date of Final Project Acceptance by the Owner***. The mixing chamber shall be warranted for the life of the system against failure for plugging for any reason.

E. Provide a name plate securely affixed to the liquid polymer blending system unit providing the manufacturer's phone number, model number, serial number (minimum).

F. The following material requirements shall be strictly adhered to:

Parameter	Value
System Skid	Type 304 Stainless Steel
Hardware	Type 18-8 Stainless Steel
Piping and Pipe Fittings	Schedule 80 PVC
Tubing and Tube Fittings	Polyethylene, polypropylene, stainless steel and viton
Water Solenoid Valve	Brass
Pressure Gauges	Stainless Steel, liquid-filled
Pressure Switches	NEMA 4, brass connection
Flow Meter	Acrylic or stainless steel
Water Control Valve	Stainless Steel with Stainless Steel seat
Mixing Chamber Body/Flanges	Stainless Steel
Mixing Chamber Cover/Chamber	Clear polycarbonate
Impeller	Type 304 Stainless Steel
Impeller Shaft Seal	Viton, stainless steel, ceramic
Mixing Chamber Pressure Relief Valve	Stainless Steel
Metering Pump Wetted Parts	Stainless Steel and Viton
Seals	Ceramic or Teflon
Control Enclosure	FRP

G. Polymer Activation and Blending Chamber

1. To provide control and versatility to optimize the performance of the wide range of polymers available and to optimize system reliability, the system shall be a multi-stage, multi-zone, hydro-mechanical polymer activation and blending technology. The system shall be provided with both a non-mechanical and mechanical mixing stage:

   a. Non-Mechanical Stage

      1) To optimize reliability, the device shall be capable of activating and blending polymer based on plant water pressure alone at 30 psi or greater.

      2) Polymer shall be injected directly into a water jet by means of an injection quill positioned such that the non-mechanical mixing energy is no way diminished prior to polymer and water contact.

      3) The non-mechanical zone shall be designed such that the velocity of the

mixing energy-producing water jet is maintained or increases as flow decreases.

b. Hydro-Mechanical Mixing Stage

1) To provide optimal polymer performance under all operating conditions and to provide total control over mixing energy, in addition to the non-mechanical mixing stage the device shall be capable of producing its mixing energy independent of plant water pressure through a variable intensity, controllable stainless steel hydro-mechanical mixer.

2) The mixing impeller shall be fully controllable and capable of inducing ultra high, non-damaging mixing energy at all flow rates. This shall be accomplished by controlling mixing intensity and preventing over exposure to, or damaging recirculation through the impeller.

3) The polymer mixing impeller shall be designed to produce both axial and radial flow to optimize mixing effectiveness and to effectively inducing high, non-damaging mixing energy over the systems full flow range.

c. Mixers that rely solely on plant water pressure and or flow for mixing energy will not be acceptable. Mixers where performance is affected by flow rate and therefore retention time resulting in under or over exposure to mixing energy, or which rely on constant speed impellers or that rely on close tolerances for blending shall not be acceptable.

2. To prevent polymer build-up, the mixing chamber shall maintain high velocity in the entire chamber. At no time shall there be low velocity within any portion of the mixing chamber.

3. The mixing impeller shall be controlled by an VFD motor controller and driven by a wash-down duty motor. The motor shall be mounted horizontally or above the mixing chamber. Motors mounted under the mixing chamber where seal failure or leaks can damage the motor shall not be acceptable.

4. The mixer drive shaft shall be sealed by a mechanical seal which shall have an integrally mounted and factory plumbed seal flush. A drain port behind the seal shall be provided in the mixing chamber to drain the polymer solution in case of a seal failure. The seal shall be easily accessible for replacement. Systems without a seal flushing system shall not be considered. All bearings shall be external from the mixing chamber. Internal bearings shall not be acceptable.

5. Both mechanical and non-mechanical mixing zones shall be clear polycarbonate to view the mixing action and blending effectiveness. Acrylic chambers prone to becoming brittle over time and cracking, or opaque pipe shall not be acceptable to meet this requirement.

6. The mixing chamber shall have a maximum rated pressure of 100 psi. Provide a pressure relief on the mixing chamber factory set at 75 psi.

7. Provide a neat polymer check valve specifically designed to isolate neat polymer from dilution water. The valve shall be designed with an open, unobstructed path to the valve seat. To minimize check valve plugging due to normally occurring polymer agglomerations, the minimum open area up to and including the valve seat shall be $^{3}/_{16}$-inch without exception. The valve body shall be constructed of Teflon with Viton seals. The valve poppet and spring shall be stainless steel. The spring shall be outside of the polymer flow path to prevent build-up and plugging. The locking pin used to hold the valve in place shall be attached to the mixing chamber with a lanyard. The valve shall be readily accessible for cleaning and shall not require tools for removal, cleaning or replacement. Conventional check valves, valves that rely on ball seals, and or check valves that are installed inside the mixing chamber, or which require mixing chamber disassembly for servicing will not be accepted.

H. Dilution Water Assembly

1. The dilution water flow rate shall be monitored by a Rotameter flow meter having the range as specified under section 2.5C herein. Unions or flanges shall be provided on the flow meter to allow easy removal for cleaning.

2. The unit shall have an electric solenoid valve for on/off control of total dilution water flow.

3. A differential pressure type low water differential pressure alarm shall be provided. The switch shall be adjustable between 9 and 60 psi. Static working pressure, 500 psi. Proof pressure shall be 2000 psi minimum. The pressure switch shall be as manufactured by Ashcroft.

4. Provide a 2½-inch stainless steel, liquid-filled, pressure gauge to monitor the dilution water inlet pressure.

I. Progressive Cavity Neat Polymer Metering Pump

1. The unit shall have one (1) neat polymer metering pump integrally mounted on the systems skid. The metering pump(s) shall have a range as specified under section 2.5C herein. The pump shall be a positive displacement, progressive cavity type constructed of stainless steel and Viton. The shaft seal shall be packing type, mechanical seals shall not be used. A 230/480 VDC wash-down duty motor shall drive the pump. A gear reducer shall be provided to produce a maximum pump shaft speed of not more than 1750 RPM. The motor shall be controlled by an VFD motor controller located in the system control panel.

2. Provide a calibration column with two (2) full-port PVC ball valves having Viton O-rings. The column shall be calibrated for a one (1) minute draw-down at maximum pump rate and read in GPH and milliliters. The calibration column shall be rigidly

mounted to the systems frame with a minimum of two heavy duty brackets.

3. A brass pressure relief on the discharge of the metering pump adjustable between 25 and 100 psi shall be provided.

4. A loss of polymer flow sensor shall be provided with the system.

B. Solution Discharge Assembly

1. Provide a 2½-inch stainless steel, liquid-filled, pressure gauge to monitor system discharge pressure.

C. Controls

1. A junction box integral to the systems frame shall be provided.

2. The enclosure shall be rated NEMA 4X and constructed of FRP.

D. System Skid

1. The system's frame shall be constructed of rugged Type 304 stainless steel.

2. All piping shall be rigidly supported.

3. Under no circumstance shall the pump suction exceed 5-inches from the bottom of the skid for progressive cavity pumps and 12-inches from the bottom of the skid for diaphragm pumps.

4. The overall system dimensions shall not exceed 34" (W) x 24" (D) X 42" (H).

2.6 Control Panels

A. Each biosolids volute dewatering screw press shall have an integrated electrical and control system that will allow for safe, simple and automated operation of the unit. All electrical work, motors and drives will comply with any relevant NEMA standards.

B. The volute dewatering screw press supplier hereunder shall furnish the following control panels:

1. A volute dewatering screw press mounted NEMA 4X 316 Stainless Steel control panel with AC unit on each screw press unit.

C. The Control Panels shall be furnished in full compliance with the requirements of Division 13, “Process Instrumentation and Control System (PICS)” and shall be

powered by a 3-phase 480 VAC source.

D. External Enclosure Features

1. The external door of the panel will have the following switches and indicators:

   a. Main Isolating Switch (Circuit Breaker).

   b. An emergency stop button which shall be a mushroom head style pushbutton that when depressed shall immediately de energize all moving equipment in the system.

2. Within a windowed enclosure mounted on the panel door:

   a. HMI Touch Screen.

   b. An H-O-A system switch to switch the system from *AUTO* to *OFF* to *MANUAL* modes.

   c. Power on Light (white).

   d. An Operating Light to illuminate when the unit is actually in operation (green).

3. In addition to items located on the main enclosure door, provide the following:

   a. An Alarm Light - a flashing light located on the top of the panel (red).

2.7 Programmable Logic Controller (PLC)

A. Each of the Control Panels shall be provided with an Allen Bradley CompactLogix 5380 Series PLC, VTSCADA (VGT) Operator Interface Terminal (OIT), fiber optic interface as defined in Division 13, installed, wired and programmed to perform the following functions:

1. Operational Control

   a. Control of all components of the biosolids volute dewatering screw press and the dewatered sludge conveyance system including the ability to set times and operating speeds for any of the digested sludge transfer pump station feed pumps, solids conveyance system, dewatering drums, mixers, polymer dosing system and wash-down sprays.

2. System Tuning

   a. The PLC shall allow the Operator to adjust operating parameters such as delay

timers for fault alarms and system calibration constants.

3. Monitoring Operation

   a. The PLC shall allow the Operator to inspect the operation of all the components including indicators such as output frequency, current draw, thermal condition, elapsed operating times, and any faults present.

   b. The Operator shall be able to view approximated readouts of all operational speeds and flow rates relevant to the operation of the system.

4. Manual Operation of Components

   a. The Operator shall be able to manually operate each item of equipment from the PLC interface for inspection and maintenance reasons.

5. Time Clocks

   a. The Operator shall be able to set the unit to operate at a specific time or on specific days with no Operators present.

2.8 Electrical Hardware

A. Electrical hardware shall be as follows:
B.

Electrical Hardware	Description
Power Wiring	All power and wiring shall be 600 volt, Type SIS insulation stranded copper and shall be sized for the required load, 14 AWG minimum.
Control Wiring	Control wiring shall be 250 volt, Type SIS insulation stranded copper and shall be sized for the required load, 18 AWG minimum.
Circuit Breakers	Circuit breakers for the main disconnect shall be thermal magnetic molded case units. Circuit breakers shall be Square D, Class 650, Type FAL or approved equal.
Motor Starters	Motor starters shall be full voltage, non-reversing, IEC style across the line units. Coils shall be 120 VAC. Siemens Type Sirius 3RT10 or approved equal.
Selector Switches	All selector switches shall be heavy duty, corrosion resistant units rated for NEMA 4X service. Contact blocks shall be rated for 10 ampere continuous service. Selector switches shall be Idec Series TWTD.
Pilot Lights	Pilot lights shall be heavy duty, corrosion resistant units rated for NEMA 4X service. Units shall be 120 VAC full voltage incandescent type. Pilot lights shall be Idec Series TWTD or approved equal.

Terminal Blocks	Terminal blocks shall be high density, solderless box lug style, with 600-volt rating. Terminal blocks shall be Allen Bradley Type 1492 or approved equal.
Control Relays	Control relays shall be general purpose type with a 10 amp contact rating, miniature square base and internal on status pilot light. Relays shall be Allen Bradley Type 700-HF Series or approved equal.
Variable Frequency Drives (VFDs)	The VFDs shall be UL listed and shall be manufactured by Square D (Altivar Series) or approved equal. See VFD requirements in Specification Section 16370, "Variable Frequency Drives"..

2.9 Functional Specification

A. The control panel shall undertake the functional operations described below.

B. Auto-Manual Operation

1. The biosolids volute dewatering screw press system may be set to either *Auto/Manual/Off* on the Control Panel via a 3-position switch. This shall be the "*main switch*" for the facility.

2. When set to "*Manual*", all items may be switched *"On"* and "*Off*" at the Control Panel by the switches on the HMI unit.

3. When set to "*Off*", no items will work whether switched *"On"* or "*Off*" either at the control panel or anywhere else.

4. When set to *"Auto"*, all items of equipment will work, as further described below.

C. Clock Operation

1. The clock function will be controlled by the PLC in the Control Panel. Two clock functions will be allowed for in the program. The clock may be set to either "*On*" or "*Auto/Timer*" via the PLC. If the clock is set to "*On*" the facility will run for as long as the main switch is set to "*Auto*". When the clock is set to "*Auto/Timer*" the facility shall will operate in accordance with the clock settings.

2. Clock function settings shall allow the Operator to set the volute dewatering screw press and all associated equipment to switch "*On*" and "*Off*", at pre-designated times on pre-designated days with no Operators being present. A minimum of two (2) different "*clock programs*" shall be allowed for in the PLC program.

D. Polymer Feed

1. Polymer feed to the plant is achieved by the integral polymer preparation system connected to the plant. This system is controlled and powered by the control panel.

Outputs from the control panel to the polymer preparation system will include power, start and stop signals, and variable speed control for the polymer feed pump.

2. Manual adjustment of the speed control for the polymer dilution mixing chamber will be make from the Control Panel. The Control Panel shall also monitor the polymer preparation system for faults due to low water pressure, or no polymer flow and shut the system down with an alarm should this occur.

E. Flocculation Tank Agitation

1. Whenever the plant is operating, two (2) motorized agitators will operate continuously, stirring the contents of the flocculation tank. These are geared motors and will be controlled by a VFD in the Control Panel. The VFD shall be adjustable from 5 - 72 Hz.

2. A high level sensor will detect any high fluid level in the flocculation tank and will shut the plant down and cause an alarm should this occur.

F. Dewatering Drums

1. The dewatering drums shall operate whenever the plant is operating. The motor is controlled by a single VFD. The "*range of adjustment*" for this will be 15 - 72 Hz. When the plant shuts down the dewatering drum shall continue to operate for a pre-set time before they shut down.

2. Sprays will periodically switch on while the dewatering drum is operating. The frequency and duration of the spray are adjustable in the PLC.

G. Dewatered Sludge Conveyance pumping System (Discharging into the Container/Dumpster)

1. The dewatered biosolids conveyance pumping system shall operate whenever the dewatering drums are operating and will shut down following a pre-set delay following the shut down of the dewatering drums. The sludge cake pump motor is controlled by a VFD in the Dewatering Screw Press Control Panel. The "*range of adjustment*" for this will be 15 - 72 Hz.

2. The Sludge cake pump speed shall be set to user adjustable speed values (Four).

3. E-stop and Dry-Run protection relay for the conveyance pumping system and located in the Dewatering Screw Press Control Panel, shall shut down the system and cause an alarm in the event they are activated.

H. Sludge Feed pumping System (Discharging from Digester to Dewatering Press)

1. The sludge feed pumping system shall operate whenever the dewatering drums are

operating and will shut down following a shut down of the dewatering press. The sludge feed pump motor is controlled by a VFD in the Electrical Building. The "*range of adjustment*" for this will be 15 - 72 Hz.

2. Assign the sludge feed pumps to a DUTY/STANDBY sequence that can be manually overridden by the operator. If any pump is not controllable (i.e H/O/A is OFF, pump is failed), omit it from the sequence. Automatically switch assignments every time sludge pumping stops.

3. In Manual control mode, The Sludge feed pump speed shall be set to a user adjustable speed value.

4. In Automatic flow control mode:

   a. Provide the following operator adjustable values:

      1) FS – Target discharge flow

      2) FD – Percent allowable differential from target discharge flow.

   b. Provide a PID control loop to adjust the pump speed to maintain a discharge flow of FS. Freeze the PID when the flow reaches FS.

   c. If the flow falls to FS-FD for an operator adjustable time, restart the PID until the flow starts to increase then freeze the PID again.

   d. If the flow rises to FS+FD for an operator adjustable time, restart the PID until the flow starts to decrease then freeze the PID again.

   e. When the DSPCP calls for pumping, run the DUTY pump.

   f. If a pump fails to start or fails while running, automatically call for the STANDBY pump.

5. E-stop and Dry-Run protection relay for the Sludge feed pump shall shut down the pump and cause an alarm in the event they are activated.

3.0 EXECUTION

3.1 Installation

A. The biosolids volute dewatering screw press system shall be shop assembled prior to shipment and test run to assure proper operation of components, and then delivered to the site for installation.

B. Installation of the biosolids volute dewatering screw press system shall be in strict accordance with the manufacturer's instructions and recommendations in the location shown on the Contract Drawings. Installation shall include furnishing the

manufacturer's recommended grades of oil and grease furnished for operation.

C. Anchor bolts of Type 316 stainless steel shall be furnished and installed by the Contractor in accordance with the manufacturer's recommendations and approved shop drawings. The manufacturer shall review the structure layout and verify in writing that the equipment will operate and fit in the structure as designed or as modified per the manufacturer's recommendations.

D. The biosolids volute dewatering screw press system manufacturer shall have responsibility for the screw presses, polymer feed system, operation/control of the biosolids feed pumps and operation/control of the dewatered sludge conveyance system as part of this Project to ensure a complete and functional system. The Contractor and biosolids volute dewatering screw press system manufacturer shall coordinate with the digested biosolids transfer pump station pump manufacturer, BNR Process System supplier and dewatered biosolids conveyance system manufacturer to ensure that all components are integrated properly, function properly and in the proper operational sequence (start, stop, emergency shutdown, interconnects, interlocks, etc.).

E. The Contractor shall provide all necessary anchor bolts, temporary lifting equipment, power, water, labor and all other material and requirements for a complete and satisfactory installation.

3.2 Start-up, Training and Manufacturer's Services

A. The services of a manufacturer's factory trained representative, who is specifically knowledgeable in the type of equipment specified herein, shall be provided during the equipment installation period. Upon complete installation of the biosolids volute dewatering screw press system and all associated equipment and ancillaries by the Contractor, including placing of the equipment, setting and leveling the equipment, piping and electrical connections to all of the equipment, the manufacturer's representative shall approve the installation and begin start-up and training.

B. The manufacturer shall provide a letter to the Engineer approving the:

1. Installation of all components of the biosolids dewatering system and that the system is ready to operate and that the performance testing is to proceed.

2. Integration of the controls for the biosolids volute dewatering screw press system, dewatering biosolids conveyance system, the BNR Process and the digested biosolids transfer pump station pumps and that the controls and overall system is ready to operate as intended (functionally and sequentially).

C. Upon approval of the installation, the manufacturer's factory trained representative shall be provide equipment start-up and calibration services (the Contractor and manufacturer are referred to Article 1.07, "Manufacturer Services"). During the start-up and calibration phase, the manufacturer's representative shall inspect all system

components for proper connection and alignment and assist the Contractor in placing the equipment in a proper operating condition.

D. Upon satisfactory completion of the start-up and calibration of the systems, a representative of the manufacturer shall be provided to instruct the Owner's personnel in the proper operation and maintenance of the "*new*" equipment. The manufacturer's representative who will be providing the instruction shall have prior operation, maintenance and instructing experience acceptable to the Engineer. The Contractor shall submit the individual's name and qualifications to the Engineer for approval at least ten (10) calendar days prior to the scheduled operating and maintenance instruction sessions. The number of days listed in Article 1.07, "Manufacturer Services", for services of the manufacturer's factory trained representative shall be provided when requested by the Owner and Engineer during the Project.

E. The manufacturer's representative shall complete all of the above sessions in a total of two (2) trips to the jobsite. The equipment manufacturer will request, in writing, that all installation of the biosolids volute dewatering screw press system, all associated equipment and ancillaries and electrical and control systems are complete and ready, prior to arriving at the jobsite. If the equipment manufacturer arrives at the jobsite and the equipment installation is not complete, ***the Owner will not be responsible for any additional costs associated with the time delays***. The equipment manufacturer shall bill the Contractor, at the manufacturer's standard service rates, or as agreed, at the time of the service request.

F. The Contractor is referred to Section 1.07, "Manufacturer Services" of this specification section for additional Manufacturers Services requirements.

3.3 Polymer Selection and Optimization Services

A. Polymer Selection and Optimization Services shall be performed as described in Articles 1.06(C)(1), 1.07(B) and 1.12 of this specification section.

3.4 Project Performance Testing

A. Project Performance testing is covered under Section 1.06, "Conditions of Service and Performance Requirements" of this specification section.

END OF SECTION

SECTION 13300

PROCESS INSTRUMENTATION AND CONTROL SYSTEM GENERAL REQUIREMENTS

1. GENERAL

1.01 Scope of Work

A. The overall system general requirements are given in this section. These requirements apply to each additional section of these specifications as noted herein and as specified in the associated sections.

B. Work includes engineering, furnishing, installing, testing, documenting and placing in operation the complete Process Instrumentation and Control System (PICS) for City of Flagler (Owner) Flagler Wastewater Treatment Facility (WWTF) Biosolids Improvements. Training of the Owner's personnel is also included. The work is specified in this Section and as further specified in the following sections:

1. Specification Section 13310: Field Instruments.
2. Specification Section 13315: Control Panels.
3. Specification Section 13325: Programmable Logic Controller (PLC) System.
4. Specification Section 13326: Programmable Logic Controller (PLC) System Programming.
5. Specification Section 13330: Supervisory Control and Data Acquisition (SCADA) System.
6. Specification Section 13360: Fiber Optic System.
7. Specification Section 16370: Variable Frequency Drives

C. Three entities are defined in this specification.

1. Biosolids Process Control Supplier (PCS):
   a. PWTECH Inc.

b. Approved Equal.

2. SYSTEM SUPPLIER:

   a. Controls Instruments Inc.

   b. Rocha Controls

   c. Southern Flow

3. The CONTROL SYSTEM ENGINEER (CSE):

   a. Smart Energy Solutions LLC.

   b. Approved Equal

D. The SYSTEM SUPPLIER scope of work shall include the following:

1. Include the services of the CONTROL SYSTEMS ENGINEER (CSE) in the SYSTEM SUPPLIER scope of work.

2. Coordinate with the Contractor, PCS and CSE during hardware and software development and implementation for proper integration of the PICS.

3. Provide Process Control Panel (PCP-1) in the Biosolids treatment area. PCP-1 shall be NEMA 4X stainless steel panel with AC unit and contain CompactLogix Programmable Logic Controller (PLC-1), mixed media ethernet switch and input output modules, UPS and network interface (copper and fiber optic).

4. PLC-1 shall monitor and Control equipment associated with Biosolids treatment system, sludge feed pumping, and Dechlorination process.

5. Provide programming and configuration for PLC, OIT and Network to reflect all process and equipment monitoring and control.

6. Provide copper and fiber optic network cabling and terminations, as shown on contract drawings and further detailed in Section 13360.

7. Provide all field instruments except those specifically identified in Contract Drawings as being furnished under other Divisions.

E. The CONTROL SYSTEM ENGINEER (CSE) shall work with the SYSTEM SUPPLIER through all phases of the design development, PLC and SCADA programming, network configuration, construction, Installation, testing, and certification. The following outlines the CSE scope of work:

1. The CSE shall work with the SYSTEM SUPPLIER and Process Control Supplier during shop drawing development to ensure that the components of the PICS submitted for use are coordinated, compatible and that all requirements of the project are being implemented.

2. The CSE is responsible for review and approval of PLC and OIT development prior to submittal to the EOR for review.

3. The CSE is responsible for reviewing and approval of the PICS Hardware and Software Startup training materials prior to submittal to the EOR for review.

4. The CSE is responsible for review and approval of the Network and communication protocol coordination prior to submittal to the EOR for review.

5. The CSE is responsible for observing the factory testing of the PICs.

6. The CSE is responsible for observing the field testing and commissioning of the PICS performed by the SYSTEM SUPPLIER.

7. The CSE shall have the following qualifications:

   a. Licensed PE in the state of Florida for “Control Systems”.

   b. Florida based office located within 100 miles of the project site.

   c. 10 years controls engineering experience with minimum 5 years in the Water and Wastewater industry.

8. At the conclusion of the project the CSE shall certify to the Engineer of Record (EOR) that the PICS has been implemented in accordance with project specifications requirements. This includes the PLC, MCC, VFD and Network Hardware and Software systems. As applicable to this project.

F. Instrumentation and control systems for this project are intended to be supplied completely under this section. All control panels shall be supplied through the System Supplier; however, some special control panels and devices specifically called out in Division 11 specifications are to be part of those sections, furnished with that equipment. The instruments and controls shall, however, be furnished in conformance to and in coordination with Division 13.

G. The CONTRACTOR shall furnish all labor, materials, equipment, programming, services and incidentals required to install and place into operation a digital computer-based PICS configured as shown on the Contract Drawings, and as specified herein.

H. The CONTRACTOR shall furnish all labor, materials, equipment, programming, services and incidentals required to install and place into operation a digital computer-based PICS configured as shown on the Contract Drawings, and as specified herein.

I. The CONTRACTOR shall provide all equipment, materials, programming, software, modifications to existing equipment, calibrations and services that are required to successfully interface and interconnect the PICS and any other control systems and associated equipment that are specified or designated in any drawings or provisions of these specifications for the purpose of providing a fully integrated and functional control system.

J. It is the intent of these Contract Documents that the CONTRACTOR shall have overall responsibility for the PICS.

K. Division of Work. It is the ultimate responsibility of the CONTRACTOR to furnish a complete and fully operable PICS that reliably performs the specified functions. The CONTRACTOR is to assume full responsibility for additional costs which may result from unauthorized deviations from the specifications. The CONTRACTOR is to establish the actual division of work with the minimum requirements as specified herein.

L. The CONTRACTOR shall be responsible for:

1. Furnishing and terminating the fiber optic cables.

2. All hardware and software submittals.

3. The final system operation and reliability.

4. Obtaining the required information on all field elements, equipment starters, valve actuators, chemical feed equipment, local control panels, and other control equipment or devices that are required to be interfaced with, but that are not provided with the PICS in order to provide full system coordination regarding interface, function, testing, and adjustment requirements.

5. Providing accessory devices including furnishing and installation of networking interface cards, interposing relays, control switches and signal converters necessary to perform the intent as described by the control strategies and services necessary to achieve a fully integrated and operational system as shown on the Contract Drawings and defined in the Specifications.

6. Coordinating all interface requirements with mechanical and electrical system suppliers and furnishing any signal isolation devices that might be required in order to insure compatibility between all equipment.

7. Providing any special manufacturer's cables required.

8. Defining the final installation and connection requirements of the PICS at the jobsite through development of interconnection diagrams.

9. Final connection of fiber patch cables between Fiber Patch Panels furnished by others and PICS panels.

10. Verifying correctness of all final power and signal connections to the PICS. The

SYSTEM SUPPLIER shall make final adjustments to and calibrate all field elements provided with the PICS.

11. Verifying that:

    a. All components provided under this section are properly installed.

    b. The proper type, size and number of control wires with their conduits and junction boxes are provided and installed.

    c. Proper electric power circuits are provided for all components and systems.

    d. Provision, installation and termination of field and power wiring to PICS supplied control panels and field elements. Termination shall be made in accordance with final accepted interconnection diagrams developed by the SYSTEM SUPPLIER. The electrical subcontractor shall mark on the interconnect diagram the field wire numbers used for each termination point. The SYSTEM SUPPLIER shall finalize the interconnect diagrams by including these field wire numbers in the final as built version.

    e. Installation and termination of all specialty cables, including fiber optic cables, furnished by the SYSTEM SUPPLIER.

    f. Requiring the SYSTEM SUPPLIER to observe and advise on the installation of equipment furnished by SYSTEM SUPPLIER and installed by CONTRACTOR to the extent required to certify, with the operational check-out tests, that the equipment will perform as required.

    g. Ensuring that information on equipment provided under other Divisions and needed by the SYSTEM SUPPLIER to coordinate the PICS is provided in a timely manner.

M. Equipment found to be defective prior to system acceptance shall be replaced and installed at no additional cost to the OWNER.

N. In the bid price, the CONTRACTOR shall provide for obtaining the services of authorized field personnel from the manufacturers of specialty instruments and from the suppliers of application software packages as necessary. Should these personnel be required during installation, start-up and checkout of the respective portions of the PICS, such services shall be provided at no additional cost to the OWNER.

1.02 Related Work

A. Division 15 – Mechanical. Installation of all mechanical piping and fittings, as well as in-line instruments supplied with and/or supplied for the PICS.

B. Division 16 - Electrical. All conduits are provided and installed under Division 16, Electrical. With the exception of certain specified special manufacturer's cables, all wiring and cables are provided and installed under Division 16, Electrical.

C. Field devices such as motorized valves, pump motors, solenoid valves, etc. and local control panels for specialized subsystems such as chemical feed systems, etc. are supplied and installed under other Divisions of these Specifications.

1.03 System Integration Plan

A. Prior to any other shop drawing submittals the System Supplier shall submit a System Integration Plan (SIP). Other submittals received before this submittal will be returned without review.

B. The SIP shall identify, and provide details of, all new and modified PICS functions. This shall include the following elements:

1. Field.
2. PLC.
3. System Inputs and Outputs.
4. Network/communications.

C. Field. Provide an Excel spreadsheet that covers all field instruments. For each instrument define the following:

1. Tag Number.
2. Instrument Type.
3. Specification Section supplied under.
4. Signal Type.
5. Range or On/Off states as applicable.

D. PLC. Provide an Excel spreadsheet that covers all new or modified PLC. For each, define the following:

1. PLC Designation Number.
2. Location.
3. New or modified.
4. A list of I/O modules (existing and new individually identified) that will exist at project completion.

E. System Inputs and Outputs (I/O). Provide an Excel spreadsheet that lists all system I/O for the complete PICS. For each point, the list shall include the following:

1. PICS database tag number.

2. Signal Description.

3. I/O Type.

4. Range or On/Off state as applicable.

F. Network/communications. This shall provide a tabular listing identifying the following:

1. Ethernet switches listed by port and including spares.

2. Connected equipment to each port.

3. Spreadsheet listing all network connected components, including any existing PICS equipment. For each, identify the network connection point and proposed or existing IP address.

G. Following PLC programming, revise the system I/O spreadsheet to include all pseudo points (differentiated from physical I/O) that are used by the OIT/HMI.

H. Provide a fully updated SIP as part of the final system documentation.

1.04 Submittals

A. Furnish, as prescribed under the General Requirements, all required submittals covering the items included under this section and its associated sections of the work.

B. Submit complete, neat, orderly, and indexed submittal packages. Handwritten diagrams are not acceptable and all documentation submittals shall be made using CADD generated utilities.

C. Partial submittals or submittals that do not contain sufficient information for complete review or are unclear will not be reviewed and will be returned by the Engineer as not approved.

D. All submitted component data sheets shall be marked to specifically identify the model/part numbers to be furnished.

E. Provide all shop drawing submittals on thumb drive in PDF format.

F. In addition to the shop drawing submittals required in the related specification sections, submit the submittals defined below covering the complete system.

1. System Performance. This submittal shall be a written description of how the operator will control the system and the system's subsequent response. Every

piece of controllable equipment shall be separately described and the following information included:

a. Use of local manual controls.

b. Use of OIT/HMI software controls.

c. Use of automatic controls.

2. Each functional description shall specifically identify any interlocks (hardware and software) and OIT/HMI alarms generated.

3. Operator Screens. This submittal shall include color copies of all proposed OIT/HMI operator screens.

4. Field Acceptance Test Plan. This submittal shall define the steps to be conducted during the required witnessed acceptance testing. The test shall be conducted in accordance with the general requirements set forth in Part 3 hereof. The submitted plan shall meet the following requirements:

a. Each of the equipment covered in the system performance submittal shall be tested.

b. For each equipment test, the required operator control actions and system response shall be demonstrated on the complete system, including each operator action, the response and appropriate OIT/HMI display/alarm updates.

G. The Contractor and System Supplier are hereby specifically advised that the above submittals shall be Approved or Approved As Noted prior to any witnessed performance testing.

H. Loop Diagram Submittal. This submittal may be made in conjunction with the submittals required under related specification sections. Loop diagrams, consisting of complete wiring and/or plumbing diagrams for each control loop showing all terminal numbers, the location of the dc power supply, the location of any booster relays or common dropping resistors, surge arrestors, etc. The loop diagrams shall be divided into four areas for identification of element locations: PICS I/O point(s), panel face, back-of-panel, and field, respectively.

I. Test Procedures: Submit the procedures proposed to be followed during all required testing. Procedures shall include test descriptions, forms, and check lists to be used to control and document the required tests.

J. Test Reports: Upon completion of each required test, document the test by submitting a copy of the signed off test procedures to the Engineer.

1.05 Final Documentation

A. After the demonstration tests have been completed and as a part of the final acceptance requirements, submit the PICS record drawings. Record drawings shall include, corrected for any changes that may have been made up through Substantial Completion:

1. System block diagram.
2. Network architecture diagram.
3. Instrument loop wiring diagrams.
4. Panel wiring diagrams.
5. Panel elevations.
6. Interconnection diagrams showing terminal numbers at each wiring termination.

B. Record drawings shall be developed or converted to latest version of AutoCAD. Provide electronic copies of all AutoCAD files.

C. Operating and Maintenance (O&M) Manuals: Provide the specified number of complete sets of three-ring bound O&M manuals in accordance with Division 1. Provide separate manuals for each Specification Section, clearly marked. Include descriptive material, drawings, and figures bound in appropriate places. Include:

1. Cross references to 3rd party O&M manuals.
2. Additional operating and maintenance instructions in sufficient detail to facilitate the operation, removal, installation, adjustment, calibration and maintenance of each component provided with the PICS.
3. Internal wiring diagrams (not already shown on the panel wiring diagram record drawings) for all components provided in the PICS that clearly show all terminal block number designations and wire numbers.
4. Bill of Materials identifying the manufacturer and complete part number of all components.
5. All the submittal data for each component from the approved shop drawing submittals with corrections made on approved as noted items.
6. A USB containing the shop drawing data in PDF format in the binder sleeve.

D. Provide a final System Integration Plan.

E. Refer to the individual specification sections of the PICS for final documentation requirements that are in addition to the above.

1.06 Quality Control

A. Base bids for the System Supplier shall be as listed in the Contract Proposal. System Suppliers seeking Engineer approval shall have extensive experience in systems of similar size and complexity. Panel fabrication shop shall be a UL listed panel shop. Acceptance of alternates shall be made based on price, location of the fabrication shop, accessibility of personnel, PLC programming knowledge, and Owner confidence. The System Supplier shall be subcontracted by and paid by the Contractor.

B. The System Supplier shall meet all of the requirements of these specifications, and, unless specifically stated otherwise, no prior acceptance of any subsystem, equipment, or materials has been made.

C. All equipment furnished by the System Supplier shall be of the latest and most recent design and shall have overall accuracy as guaranteed by the manufacturer.

D. Materials and equipment used shall be U.L. approved wherever such approved equipment and materials are available.

E. Component equipment shall be as supplied by one of the manufacturers named in the individual specification sections or approved equal. The design of the PICS is based on the first-named manufacturer's equipment if there is a difference.

F. To facilitate the Owner's operation and maintenance, products shall be of the same major manufacturer, with panel mounted devices of the same type and model as far as possible.

G. In order to insure the interchangeability of parts, the maintenance of quality, the ease of interfacing between the various subsystems, and the establishment of minimums with regard to ranges and accuracy, strict compliance with the above requirements shall be maintained.

H. The System Supplier shall designate a single point of contact for interface with the Engineer on this project. The Engineer reserves the sole right to approve or reject this point of contact.

I. The System Supplier's selected project personnel shall meet the following requirements:

   1. Project engineer shall have at least 10 years' experience in installing similar systems and shall have a minimum of secondary education in the field of electronics or similar technical discipline.

   2. Project technician assisting the project engineer for field element calibration and check out shall have at least five years experience in installing similar systems.

   3. Key staff resumes shall be submitted for Engineer’s approval with the Project Plan as further detailed under submittals.

J. Service Facility: The System Supplier shall have an established service facility from which qualified technical service personnel and parts may be dispatched upon call. Such a service facility shall be no more than six (6) hours travel time from the jobsite.

K. The System Supplier shall provide experienced personnel on-site to coordinate and/or perform installation, termination, and adjustment; on-site testing; Owner training; and startup assistance for the PICS.

L. The System Supplier shall provide, on-site, an experienced project engineer to supervise and coordinate all of the on-site PICS activities. An experienced technician may be provided to assist the project engineer in field element installation, field calibration, and checkout tests. The System Supplier's project engineer shall be on-site during the period required to effect all of the critical on-site activities related to the PICS, particularly the software debugging, PICS training, and witnessed testing activities.

1.07 Standards

A. The design, testing, assembly, and methods of installation of the wiring materials, electrical equipment and accessories proposed under this Contract shall conform to the National Electrical Code and to applicable state and local requirements. UL listing and labeling shall be adhered to under this Contract.

B. Any equipment that does not have a UL, FM CSA, or other approved testing laboratory label shall be furnished with a notarized letter signed by the supplier stating that the equipment famished has been manufactured in accordance with the National Electric Code and OSHA requirements.

C. Any additional work needed resulting from any deviation from codes or local requirements shall be at no additional cost to the Owner.

D. International Society of Automation (ISA) and National Electrical Manufacturers Association (NEMA) standards shall be used where applicable in the design of the PICS.

E. All equipment used on this project to test and calibrate the installed equipment shall be in calibration at the time of use. Calibration shall be traceable to National Institute of Standards (NIS - formally NBS) calibration standards.

F. For the purposes of uniformity and conformance to industry standard, provide analog signal transmission modes of electronic 4-20 ma DC. No other signal characteristics are acceptable.

G. Discrete signals are two-state logic signals. Use 120V ac sources on all discrete signals unless otherwise noted or shown.

H. Provide appropriately sized electrical transient protection devices for all electrical elements of the system as further defined in the individual specification sections. For field mounted devices, provide protector enclosures to the electrical Subcontractor for mounting and installation.

1.08 Warranty and Guarantees

A. In accordance with Division 1, the System Supplier shall furnish to the Owner a written two year guarantee commencing with final acceptance, that all equipment and parts thereof, material and/or workmanship for the field elements, instruments, and control panels are of top quality and free from defects.

B. The System Supplier shall guarantee all equipment whether or not of his own manufacture.

1.09 Spares and Expendables

A. Obtain from the manufacturer(s) and provide the recommended critical spare parts as part of the work. Refer to the individual requirements listed in the associated specification sections for the PICS for specific parts to be provided as a minimum. The spare parts are the property of the Owner.

B. Obtain from the manufacturer(s) and furnish any special tools, calibration equipment and testing apparatus required for the proper adjustment and maintenance of the material provided.

2. PRODUCTS (NOT USED)

3. EXECUTION

3.01 Sequence of Work

A. Coordination Meetings: In order to ensure timely performance of the Contract and the system's conformance with these specifications, coordination meetings shall be held. The first meeting will be held 30 days after award of the Contract to the Contractor. The Contractor and System Supplier shall provide for their attendance at this meeting in their quotation. A schedule for additional coordination meetings (approximately one each month) will be derived at this initial meeting for periodic update, coordination, and conflict resolution during the project duration.

B. Prerequisite Activities and Lead Times: Do not start the following key project activities until the listed prerequisite activities have been completed and lead times have been satisfied:

1. Hardware Purchasing, Fabrication, and Assembly: Associated design related submittals completed (no exceptions, or approved as noted).

2. Shipment: Completion and approval of all design related submittals.

3. Startup: Operational Checkout Tests.

4. Owner Training: Owner training completed and O&M manuals delivered.

5. Demonstration Tests: Operational Check-out Tests, Startup, Owner Training, and Demonstration Test Procedures must be complete. Give 4 weeks' notice prior to the planned test start date.

C. Consoles, Panels, and Panel Mounted Equipment: Consoles, panels, and panel mounted equipment shall be assembled as far as possible at the System Supplier's shop. No work, other than correction of minor defects or minor transit damage, shall be done on the panels at the jobsite.

3.02 Payments

A. General: All work provided under this Section and its associated Sections for the PICS shall be paid for in accordance with the approved payment Schedule of Values submitted by the Contractor. The approved Schedule of Values will be the basis for partial payment for work provided for the PICS.

B. Partial Payment for Work Completed: The breakdown in the Schedule of Values allows for the partial payment of work completed for the PICS. Before partial payment is considered for approval, each specific activity must be completed.

C. Substantial Completion: Substantial Completion for the project is as defined in the General Conditions. However, the following requirements must be fulfilled before consideration will be given for Substantial Completion of the PICS:

1. All PICS submittals have been completed.

2. The PICS has successfully completed the Demonstration Tests.

3. The required Owner training has been implemented.

4. All spares, expendables, and test equipment have been received by Owner.

D. Final Acceptance: PICS final acceptance is defined as the date when the Engineer issues a written notice of final acceptance. For this Section, the following must have been completed before consideration will be given to the issuance of notice of final acceptance:

1. All punch-list items have been checked off.

2. Revisions to the PICS O&M Manuals have been made (that may have resulted from the Demonstration Tests).

E. Partial Payment Limits: The partial payments for work provided for the PICS shall satisfy the following limiting maximum criteria (percentages of the lump sum pay item for the PICS):

1. Submittals (not including O&M Manuals) 15%

2. Training..... 5%

3. O&M Manuals 5%

4. Demonstration Tests 10%

3.03 Product Handling

A. Store and protect equipment until installation following the storage and handling instructions recommended by the equipment manufacturers. Place special emphasis on proper anti-static protection of sensitive equipment.

B. Protection During Construction: Throughout this Contract, provide protection for materials and equipment against loss or damage and from the effects of weather. Prior to installation, store items in indoor, dry locations. Provide heating in storage areas for items subject to corrosion under damp conditions. Provide covers for panels and other elements that may be exposed to dusty construction environments. Specific storage requirements shall be in accordance with the System Supplier's recommendations.

C. Corrosion Protection: Protect all consoles, panels, enclosures, and other equipment containing electrical or instrumentation and control devices, including spare parts, from corrosion through the use of corrosion-inhibiting vapor capsules. Prior to shipment, include capsules in the shipping containers, and equipment as recommended by the capsule manufacturer. During the construction period, periodically replace the capsules in accordance with the capsule manufacturer's recommendations. Replace all capsules just prior to Final Acceptance.

D. ESD Protection: Provide for the proper handling, storage, and environmental conditions required for the PICS components deemed static sensitive by the equipment manufacturer. Utilize anti-stat wrist straps and matting during installation of these items to prevent component degradation. Flooring used in control areas shall be reviewed and approved by the System Supplier.

E. Adequately pack manufactured material to prevent damage during shipping, handling, storage and erection. Pack all material shipped to the project site in a container properly marked for identification. Use blocks and padding to prevent movement.

F. Ship materials that must be handled with the aid of mechanical tools in wood-framed crates.

G. Ship all materials to the project site with at least one layer of plastic wrapping or other approved means to make it weatherproof. Anti-stat protection shall be provided for all sensitive equipment.

H. Inspect the material prior to removing it from the carrier. Do not unwrap equipment until it is ready to be installed. If any damage is observed, immediately notify the carrier so that a claim can be made. If no such notice is given, the material shall be assumed to be in undamaged condition, and any subsequent damage that is discovered shall be repaired and replaced at no additional expense to the Owner.

I. The Contractor shall be responsible for any damage charges resulting from the handling of the materials.

3.04 Installation

A. Material and Equipment Installation: Install the PICS in locations indicated on the Drawings and follow manufacturers' installation instructions explicitly, unless otherwise indicated. Wherever any conflict arises between manufacturers' instruction and these Contract Documents, follow Engineer's decision, at no additional cost. Keep copy of manufacturers' instructions on the jobsite available for review at all times.

B. Install materials and equipment in a workmanlike manner utilizing craftsmen skilled in the particular trade. Provide work which has a neat and finished appearance. Coordinate I&C work with the Owner and work of other trades to avoid conflicts, errors, delays, and unnecessary interference with operation of the existing plant during construction.

C. Provide finish on instruments and accessories that protects against corrosion by the elements in the environment in which they are to be installed. Finish both the interior and exterior of enclosures. Provide extra paint of each color used in the material from the manufacturer for touch-up purposes.

D. Equipment Finish: Provide materials and equipment with manufacturer's standard finish system. Provide manufacturer's standard finish color, except where specific color is indicated. If manufacturer has no standard color, finish equipment with light gray color.

E. Cleaning and Touch-up Painting: Keep the premises free from accumulation of waste material or rubbish. Upon completion of work, remove materials, scraps, and debris from premises and from interior and exterior of all devices and equipment. Touch-up scratches, scrapes, or chips in interior and exterior surfaces of devices and equipment with finishes matching as nearly as possible the type, color, consistency, and type of surface of the original finish. Clean and polish the exterior of all panels and enclosures upon the completion of the demonstration tests.

F. Control Valves: Verify correctness of installation. Verify calibration and adjustment of all positioners and I/P transducers and verify correct control action. Verify position switch settings. Verify opening and closing speeds and travel stops.

3.05 System Operating Criteria

A. Stability: After controls have taken corrective action, as result of a change in the controlled variable or a change in setpoint, oscillation of final control element shall not exceed two (2) cycles per minute or a magnitude of movement of 0.5 percent full travel.

B. Response: Any change in setpoint or change in controlled variable shall produce a corresponding corrective change in position of final control element and become stabilized within 30 seconds.

C. Agreement: Setpoint indication of controlled variable and measured indication of controlled variable shall agree within 2 percent of full scale over a 6:1 operating range.

D. Repeatability: For any repeated magnitude of control signal, from either an increasing or decreasing direction, the final control element shall take a repeated position within 0.5 percent of full travel regardless of force required to position final element.

E. Sensitivity: Controls shall respond to setpoint deviations and measured variable deviations within 1.0 percent of full scale.

F. Performance: All instruments and control devices shall perform in accordance with manufacturer's specifications.

3.06 Training

A. The cost of training programs to be conducted with Owner's personnel shall be included in the Contract price. The training and instruction, insofar as practicable, shall be directly related to the System being supplied.

B. The System Supplier shall provide detailed manuals to supplement the training courses. The manuals shall include specific details of equipment supplied and operations specific to the project.

C. The System Supplier shall make use of teaching aids, manuals, slide/video presentations, etc. After the training services, such materials shall be delivered to Owner.

D. The training program shall represent a comprehensive program covering all aspects of the operation and maintenance of the system.

E. All training schedules shall be coordinated with, and at the convenience of the Owner. Shift training may be required to correspond to the Owner's working schedule.

F. Specific details of the nature and duration of training to be provided are defined in the individual specification sections.

3.07 Testing – General

A. All elements of the PICS, both hardware and software, shall be tested to demonstrate that the total system satisfies all of the requirements of the Contract Documents

B. As a minimum, the testing shall include shop tests, operational check-out tests, and Demonstration Tests.

C. Each test shall be in the cause and effect format. The person conducting the test shall initiate an input (cause) and, upon the system producing the correct result (effect), the specific test requirements will have been satisfied.

D. All tests shall be conducted in accordance with, and documented on, prior approved procedures, forms, and checklists. Each specific test to be performed shall be described and a space provided after it for signoff by the appropriate party after its satisfactory completion. Copies of these signoff test procedures, forms, and checklists will constitute the required test documentation.

E. Provide all special testing materials and equipment. Wherever possible, perform tests using actual process variables, equipment, and data. Where it is not practical to test with real process variables, equipment, and data, provide suitable means of simulation. Define these simulation techniques in the test procedures.

F. The System Supplier shall coordinate all of their testing with the Contractor, the Engineer, all affected suppliers, and the Owner.

G. The Engineer reserves the right to test or retest any and all specified functions whether or not explicitly stated in the approved test procedures. The Engineer's decision shall be final regarding the acceptability and completeness of all testing.

3.08 Factory Test

A. Prior to shipment, perform a factory demonstration test on the fully assembled and functioning system as further defined below.

B. Successfully perform a full dry run of the test prior to certifying to the Engineer that the system is ready for discretionary Owner and/or Engineer witness of a formal test.

C. The intent of this test is to demonstrate to the Engineer’s satisfaction that the system is fully operational and debugged prior to shipment and installation. It is recognized that loop tuning, final drive parameter settings, etc. can only be performed in the field. However, subsequent to shipment it should only be necessary to confirm correct wiring and installation and proper control loop operation. The factory demonstration test shall therefore be structured to confirm the functional operation of the complete system.

D. The test system shall, as a minimum, include the following equipment:

1. All stand-alone VFD and SSS cabinets networked to the appropriate Process Control Panel.

2. Test motors connected to its representative VFD.

3. Simulated I/O for each PCP including each type of signal.

E. Before starting the test, prepare a system inspection log. In the log, record the serial numbers of all major components and document that all portions of the system have been inspected by quality assurance personnel. Include the log in the required test report.

F. Start-up the system from a fully powered down condition demonstrating that the various system elements can be brought on line without adverse consequences. Throughout subsequent testing, use system diagnostics to demonstrate system status under the various fault scenarios.

G. Demonstrate normal operations including the following:

1. Functioning of all control strategies using the operator process graphics.

2. The ability to modify the system including:

a. Add points to the system database

b. Develop a new process graphic using the newly added points

c. Modify a test report to include the new points

d. Build a trend using one of the new points

3. Message logging and alarm handling

4. Historical data collection and access from the administrative network

5. Correct operation of protective interlock relay logic within the Process Control Panels and MCCs.

H. Demonstrate the ability, from an Operator Workstation, to review, modify, and adjust the following:

1. PLC programs.

2. VFD drive parameters.

3. SSS parameters.

4. Radio subsystem parameters

I. Demonstrate the system can automatically fully recover (i.e. no loss of data) from failure of an application server.

J. Demonstrate the required UPS back-up duration. This may be performed concurrently with other portions of the test.

K. Demonstrate the system can detect the following failures and that other system functions remain unaffected:

1. Failure of a PLC.

2. Failure of an Operator Work Station

3. Failure of a drive

4. Loss of communications with a VFD.

L. Provide for up to two hours per day of Owner/Engineer additional tests.

3.09 Operational Readiness Test (ORT)

A. Prior to startup and demonstration testing, certify that the entire installed PICS (inspected, tested and documented) is ready for operation. These inspections and tests shall include Loop/Component inspections and tests. Toward the end of these checkout tests, down load the OIT/HMI software and test the system loop by loop to complete the PICS checkout tests. The System Supplier shall fully debug problems in the system as a whole. Final approval of control software will not be based on written descriptions of software functions alone, but on actual performance in the field.

B. Check the entire PICS for proper installation, calibration and adjustment on a loop-by-loop and component-by-component basis to ensure that it is in conformance with related submittals and the PICS Specifications.

C. The Loop/Component Inspections and Tests shall be implemented using approved forms and checklists. Example sheets are provided at the end of this Specification Section. These shall be developed by the System Supplier and submitted for approval.

D. Maintain the Loop Status Reports and Component Calibration Sheets at the jobsite and make them available to the Engineer at any time.

E. Witnessing: These inspections and tests do not require witnessing. However, the Engineer will review the Loop Status Sheets and Component Calibration Sheets and spot-check their entries periodically and upon completion of the Operational Check-out Tests. Correct any deficiencies found.

F. Final Documentation: The completed reports and sheets shall be assembled in one document and submitted together with a completed Manufacturer's Check-Out Certification.

3.10 Field Acceptance Test (FAT)

A. Once the PICS has passed the ORT, the System Supplier shall perform a witnessed Field Acceptance Test (FAT) on the complete PICS. The FAT shall demonstrate that the PICS is operating and in compliance with the Contract requirements. Each specified function shall be demonstrated on a paragraph-by-paragraph, and site-by-site basis.

B. Prior to the FAT, the entire installed PICS shall be certified in writing by the Contractor that it is ready for operation.

C. The system shall operate for a continuous 100 hours without failure before this test will be considered successful.

D. The FAT shall cover the entire PICS, including control functions, alarms, and status monitoring. Test procedures used for factory tests may be adopted for these tests if modified as required.

3.11 30-Day System Acceptance Test (SAT)

A. After completion of the Field Acceptance Tests, the entire system shall operate for a period of 30 consecutive days, under conditions of full plant process operation, without a single non-field repairable malfunction.

B. Provide complete O&M Manuals for the PICS at the jobsite at least two weeks prior to the SAT.

C. During this test, plant operating and System Supplier personnel shall be present as required. The System Supplier is expected to provide personnel for this test who have an intimate knowledge of the hardware and software of the system.

D. While this test is proceeding, the Owner shall have full use of the system. Only plant operating personnel shall be allowed to operate equipment associated with live plant processes.

E. Any malfunction during the tests shall be analyzed and corrections made by the System Supplier. The Engineer and/or Owner will determine whether any such malfunctions are sufficiently serious to warrant a repeat of this test.

F. Any malfunction, during this 30 consecutive day test period, which cannot be corrected within 24 hours of occurrence by the System Supplier's personnel, or more than two similar failures of any duration, will be considered as a non-field-repairable malfunction.

G. Upon completion of repairs, by the System Supplier, the test shall be repeated as specified herein.

H. In the event of rejection of any part or function, the System Supplier shall perform repairs or replacement within 90 days.

I. All data base errors must be corrected prior to the start of each test period. The 30-day test will not be considered successful until all databases are correct.

J. The total availability of the system shall be greater than 99.5 percent during this test period.

   1. Availability is given by “(Total Time-Down Time)□ / Total Time".

   2. Down times due to power outages or other factors outside the normal protection devices or back-up power supplies provided, shall not contribute to the availability test times above.

K. Upon successful completion of the 30-day Site Acceptance Test and subsequent review and approval of complete system final documentation, the system shall be considered substantially complete and the warranty period shall commence.

END OF SECTION

SECTION 13310

PROCESS INSTRUMENTATION AND CONTROL SYSTEM FIELD INSTRUMENTS

1. GENERAL

1.01 Scope of Work

A. This Specification Section covers work related to the various field instruments to be supplied with the Process Instrumentation and Control System (PICS).

B. Field instrumentation, as specified herein, shall be furnished by the same SYSTEM SUPPLIER furnishing services and equipment as outlined in 13300.

1.02 Related Work

A. Specification Section 13300 defines work associated with the overall PICS.

B. Specification Section 13315 defines work associated with control panels and enclosures housing the various elements of the PICS.

C. Specification Section 13325 defines work associated with the Programmable Logic Controllers (PLCs) that will interface the system with the field instruments defined hereunder.

D. Physical Installation of field instruments is performed under Division 15, Mechanical.

E. Provision of all field and power wiring except manufacturer-supplied cables and installation of all such wiring is performed under Division 16, Electrical.

1.03 Submittals

A. Submit the following Field Instrumentation Shop Drawings in a single package:

1. Catalog information, descriptive literature, wiring diagrams, and shop drawings on all components of the field instruments, including all miscellaneous electrical and mechanical devices furnished under this section.

2. Individual data sheets for all components of the field instruments to supplement the above information by citing all specific features for each specific component (e.g. scale range, materials of construction, special options included, etc.). Each component data sheet shall bear the component name and instrument tag number designation shown in the Drawings and Specifications.

3. Installation details for all field mounted devices to show conformance with the Contract Documents.

4. Configuration documentation for all programmable devices to indicate actual settings used to set the device scale, range, trip points, and other control parameters.

5. Proposed tag numbers for each specific instrument.

2. PRODUCTS

2.01 General Requirements

A. Equipment to be installed in a hazardous area shall meet Class, Group, and Division classification as shown on the Contract Electrical Drawings, or comply with the local or National Electrical Code, whichever is the most stringent requirement.

B. All instruments requiring plumbing shall utilize stainless steel components as follows:

1. Test Tap: Shall consist of Crawford Fitting Co. Swagelock quick connects Series QC4-DE, or equal.

2. Tubing, Stainless Steel: Shall be ASTM A 312, TP 316, seamless, soft annealed with 0.065 inch wall. Fittings shall be ASTM A 276, TP 316 compression or socket weld type.

3. Valve, Ball: Shall be stainless steel ball valves, Whitey Series 40, Hoke Flamite Series 7100, or equal.

C. All instruments shall be provided with mounting hardware and floor stands, wall brackets, or instrument racks.

D. Instruments with remote transmitters shall be provided with power and signal surge protection and sunshields (NEMA 3R Aluminum with rubber front face cover).

E. Instrument cable lengths shall be determined by the SYSTEM SUPPLIER based on actual field installation requirements.

F. All transmitters shall be provided with either integral indicators or conduit mounted indicators in process units, accurate to two percent. Indicator readouts shall be linear in process units.

G. Electronic equipment shall utilize printed circuitry suitably coated to prevent contamination by dust, moisture and fungus. Solid-state components shall be conservatively rated for their purpose, to assure optimum long-term performance and dependability over ambient atmosphere fluctuations and 0 to 100 percent relative humidity. The field mounted equipment and system components shall be designed for installation in dusty, humid, and slightly corrosive service conditions.

2.02 Lightning/Surge Protection

A. Surge suppressors and arrestors meeting the requirements of IEEE/ANSI Standard C-62.41 (latest revision) shall be provided on all electronic field instruments.

B. AC Powered Instruments. Lightning and surge protection shall be provided on both the AC power supply and signal lines. The protectors and the associated instrument/transmitter and power disconnect shall be mounted in a NEMA 3R Stainless Steel, vented enclosure powder-coat painted white with three point latch. The protectors shall meet the following criteria:

1. NEMA 4X small case, conduit mounted enclosure.

2. Response time of less than five nanoseconds.

3. AC Power protection: IEEE/ANSI Std. C-62.41 rated C3 at 330 Volts clamping level.

4. Signal line protection: 10,000 Amp 8 x 20 microsecond surge, clamped at 36 Volts clamping level.

5. Test jacks for low level signal monitoring.

6. Manufacturer/model: ASCO Model 265.

C. Loop Powered Instruments. Lightning and surge protection shall be provided on the 4-20 mA DC signal line. The protectors shall meet the following criteria:

1. Encapsulated in Stainless Steel Pipe nipples for in-line conduit mounting.

2. Response time of less than one nanosecond.

3. Capable of withstanding up to 400 occurrences of 500 Amps at 10 x 1 millisecond.

4. Series resistance of 5 ohms per line.

5. Protection of both lines plus shield.

6. Manufacturer/model: ASCO model 157.

2.03 Field Instruments

A. Electro-magnetic Flow Metering System. The magnetic flow metering system shall comprise a flow through spool piece with sensing electrodes (Flow Element, FE) and an electronics unit (Flow Indicating Transmitter, FIT). The spool piece shall contain a coil energized by d.c. pulses from the electronics unit. The voltage induced in the process fluid shall be sensed by the electrodes and converted, by the electronics unit, into a derived flow signal.

1. System Performance:

   a. Systems shall be wet calibrated at the factory using NIST traceable equipment.

   b. Overall system accuracy shall be plus or minus 0.5 percent of rate between 1 and 30 feet per second.

   c. It shall be possible to verify system calibration in the field. Methods which require removal of the spool piece or a second flow measurement (i.e. another meter or known volume) will not be acceptable.

2. Materials:

   a. Tube – Carbon Steel

   b. Liner – Neoprene rubber for clean water applications. All other applications shall be Teflon.

   c. Flange –316 Stainless Steel ANSI 150#

   d. Electrodes – 316 Stainless Steel.

3. Ratings:

   a. Rated for continual submergence to 10 feet. This shall include potting of the able between the spool piece and electronics unit.

   b. Electronics Unit – Remote mount NEMA 4X.

4. Electrical:

   a. Power Requirement - 120 VAC plus or minimum 10 percent, 60 Hertz.

   b. Maximum Power Consumption – 20 Watts.

5. Functional:

   a. Programmable low flow cut-out

b. Empty pipe detection

c. Electronic unit display: minimum of 2 x 16 character, backlit LCD.

6. Options

a. Provide grounding rings as required to establish potential matching.

b. Provide ultrasonic cleaning where necessary for coating sensitive systems

c. Provide special tools and software necessary to effect field calibration

d. Provide certificate of factory calibration

7. Manufacturer, Model series:

a. Endress and Hauser, ProMag 400

b. Approved equal

B. Flow Element – Ultrasonic Doppler

1. Type:

a. Strap-on single head sensor

b. Stainless steel mounting clamp

2. Operation:

a. Purpose - To produce a 4-20 mA signal proportional to flow rate.

b. Operating Principle – Transmitted ultrasonic signal is reflected back by suspended solids. The received frequency differs from the transmitted frequency because of the Doppler effect. The difference is proportional to flow rate in the pipe.

3. Functional:

a. Power Requirement - 120 VAC plus or minus 10 percent, 60 Hertz.

b. Maximum Power Consumption – 12 VA

c. Transmitter – Back lit LCD display

4. Physical:

a. Transmitter - NEMA 4X fiberglass enclosure with stainless steel hardware

b. Transducer – Epoxy encapsulated.

5. Performance

    a. Accuracy - Plus or minus 2 percent of full scale between 0.2 and 30 feet per second

    b. Capable of operation down to 100 ppm of minimum 100 micron suspended solids.

6. Manufacturers:

    a. Dynasonics DDFXD series

    b. Approved equal

C. Ultrasonic Level Element and Transmitter. The system shall consist of a sensor (Level Element, LE) that uses a non-contact ultrasonic measurement technique to measure the liquid level in a vessel, tank or basin, interconnecting cable, and electronics unit that produces an analog signal proportional to level (Level Indicating Transmitter, LIT) or, in the case of weir applications, flow (Flow Indicating Transmitter, FIT).

1. System Performance:

    a. Overall system accuracy shall be plus or minus 0.25 percent of span or 0.1 inches, whichever is greater, automatically compensated for temperature.

    b. The electronics unit shall contain preset algorithms containing the necessary factors to convert a weir level into a flow value.

    c. The system shall be field calibratable without the use of external calibrators.

2. Sensor Materials:

    a. Chemical tank locations – All Teflon.

    b. Other locations – PVC and Teflon.

3. Ratings:

    a. Electronics Unit – NEMA 4X.

4. Electrical:

    a. Power Requirement - 120 VAC plus or minimum 10 percent, 60 Hertz.

    b. Maximum Power Consumption – 10 Watts.

5. Functional:

    a. Span, output, linearization and digital output scaling shall be adjustable at the transmitter.

    b. Echo status and loss indication shall be provided at the transmitter.

    c. Electronic unit display: 16 character, backlit LCD.

6. Manufacturer, Model series:

    a. Endress and Hauser, Prosonic.

    b. Approved equal.

D. Chlorine Analyzer. The analyzer shall comprise of a panel equipped with two amperometric sensors (Analysis Element, AE), flow switch, and flow cells and a separate analysis indicating transmitter (AIT). The AE shall measure Total Chlorine Residual and pH. The AIT shall then indicate and transmit analog signals proportional to each parameter.

1. Transmitter Performance:

    a. Provide signal conditioning and conversion for up to two analysis sensors.

    b. Dual, isolated analog outputs configurable for linear or logarithmic proportionality.

    c. Built-in self-diagnostics.

    d. Three individually programmable alarm contacts (two process level, one system fault).

    e. Operating temperature range: -20 to 60 degrees C.

2. Chlorine Sensor Performance:

    a. Measurement Range: 0-20 ppm.

    b. Response time: 100 seconds for 90% step change.

3. pH Sensor Performance:

    a. Equipped with Pt 1000 ohm RTD for temperature compensation.

    b. Measurement Range: 0-14.

    c. Accuracy: +/- 0.1% of span.

4. Ratings:

    a. NEMA 4X transmitter enclosure

5. Electrical:

    a. 120 V AC, 60 Hz supply

    b. Alarm contacts: SPDT dry contacts rated for 5A resistive at 24 V DC and 120 V AC.

    c. Graphic dot matrix LCD display with LED backlighting and with a 240 x 160 pixel resolution

    d. Analog outputs: 4-20 mA DC

6. Sample Line. Provide a pressure reducing valve and flow control valve on the sample influent line.

7. Hach no equal

E. Multi-Function Analyzer/Transmitter. The analysis indicating transmitter (AIT) shall be capable of interfacing with multiple types of sensors (Analysis Element, AE) and then indicating and transmitting signals proportional to each particular parameter.

1. Application:

    a. The AIT shall be used to monitor analysis sensors where shown on the Contract Drawings.

2. Transmitter Performance:

    a. Provide signal conditioning and conversion for up to two analysis sensors.

    b. Built-in self-diagnostics.

    c. Pipe or panel mount.

    d. Operating temperature range: -20 to 55 degrees C.

3. Ratings:

    a. IP65 transmitter enclosure.

4. Electrical:

    a. 120 V AC, 60 Hz supply.

    b. Display: 4.5” x 3.4” TFT touch screen with backlighting and 320 x 240 pixel resolution.

c. Dual 4-20 mA outputs.

5. Manufacturer/Model:

   a. Hach model sc4500.

   b. Approved equal.

2.04 Discrete Instruments

A. Level Switch, Float. The level switch shall be a direct acting, weighted float suspended on its own cable. As the liquid level rises the float tilts and actuates a hermetically sealed switch inside the float. The cable shall be terminated within a junction box located outside the tank or basin. For multiple float applications, all cables shall terminate in a single junction box.

1. Materials:

   a. Float wetted part – Polypropylene

   b. Cable – PVC jacketed

   c. Junction box – 316 SS

2. Ratings:

   a. Junction box – NEMA 4X

   b. NSF approved for potable water.

3. Electrical:

   a. Dry contact rated to 4.5 Amps at 120 VAC

   b. Normally open or normally closed as required for the application

4. Options

   a. Provide stainless steel hanging bar. Attach the float cables to the bar using Kellum grips.

   b. Provide other supports/mounting accessories as required.

5. Manufacturer, model:

   a. Anchor Scientific, Eco-float type G

   b. Approved equal.

B. Flow Switch. The flow switch shall use thermal dispersion and be capable of monitoring low flow rates in viscous fluids. The sensor head employs two temperature sensors with a constant low power heating source attached to one. The other temperature sensor compensates for process temperature changes. The difference in temperature between the two sensors varies with flow. Alternate flow switches to those specified that employ physical deflection to detect flow will not be acceptable except for clean water applications.

1. Performance:

    a. Operating Temperature – 0 to 65 degrees C

    b. Operating pressure – Up to 500 psig

    c. Response time – less than 5 seconds

    d. Adjustable setpoint down to 0.01 feet/second in liquid and 0.1 feet/second in air.

2. Physical:

    a. Spherical tip suitable for wastewater applications.

    b. Insertion length suitable for monitored pipe's diameter. Specifically identify proposed insertion lengths in shop drawing submittal.

3. Materials:

    a. Sensor Head – 316L stainless steel.

4. Ratings:

    a. Electrical Class – UL approved explosion proof

    b. Electronic enclosure – NEMA 4X.

5. Electrical:

    a. Power Requirement - 120 VAC plus or minimum 10 percent, 60 Hertz.

    b. Maximum Power Consumption – 5 Watts

    c. Output – DPDT relay contact rated 10 Amps resistive at 120 VAC.

6. Manufacturer, model:

    a. Magnetrol, model TD2

    b. Approved equal

2.05 Test Equipment And Special Tools

A. Provide a hand held programmer suitable for calibrating the pressure transmitters.

2.06 Spares And Expendables

A. Provide the following spare parts:

1. One spare analysis sensor of each type used.

2. Ten percent spare fuses (minimum of 10) of each type and rating supplied.

3. Five percent (minimum of 2) spare surge protection devices of each type used.

B. Provide the following expendables:

1. One year's (or shelf life worth if less than one year) supply of buffer and reagents used for analyzers

3. EXECUTION

3.01 INSTALLATION

A. Install the PICS field instruments in strict accordance with the respective manufacturer's instructions and recommendations, in locations as shown on the Drawings, and as indicated on the installation details of the Drawings.

B. Fully calibrate each instrument.

C. Provide surge protection enclosures to the electrical sub-contractor for mounting and installation. The enclosures shall be fully wired internally. Coordinate grounding requirements with Division 16, Electrical.

3.02 TRAINING

A. On-site (field) training shall be conducted at the OWNER's plant site and shall provide detailed hands-on instruction to OWNER's personnel covering all supplied field instruments.

B. Training shall include:

1. calibration procedures.

2. preventive maintenance methods and timing.

3. fault-finding techniques.

C. The training shall run at times chosen by the OWNER over a period of two (2) months as follows:

END OF SECTION

SECTION 13315

PROCESS INSTRUMENTATION AND CONTROL SYSTEM CONTROL PANELS

1. GENERAL

1.01 Scope Of Work

A. This Specification Section covers work related to the control panels and enclosures to be supplied with the Process Instrumentation and Control System (PICS).

B. The control panels, as specified herein, shall be furnished by the same SYSTEM SUPPLIER furnishing services and equipment as defined under Specification Section 13300.

C. The SYSTEM SUPPLIER shall design, furnish and install all interior wiring within the control panels and furnish complete wiring diagrams showing the electrical circuits inside the panel and interconnections between the panel and the external instruments and components.

D. Size control panel(s) to adequately dissipate heat generated by equipment mounted inside or on the panel front face.

1.02 Related Work

A. Specification Section 13300 defines work associated with the overall PICS,

B. Programmable Logic Controllers (PLC) are to be mounted in control panels hereunder. PLC are defined in Specification Section 13325.

C. The panels defined hereunder are installed under Division 15, Mechanical.

1.03 Submittals

A. Submit the following control panel shop drawings in a single package:

1. Layout diagrams for all control panels and enclosures. Include panel elevations

(front, side, interior), and sizing. Panel front elevations shall be of sufficient scale to allow all engraved nameplates and inscriptions to be legible without the use of schedules.

2. A complete Bill of Materials for each panel cross-referenced to the panel layout drawings and identifying the manufacturer and complete part number of all components.

3. Wiring diagrams for all control panels. Diagrams shall be complete electrical wiring diagrams showing all components and all auxiliary devices such as relays, alarms, fuses, lights, fans, heaters, etc. All wires and terminals shall be numbered on the diagrams, and line cross-references shall be labeled. Include wiring interface to the PLCs where applicable. Include on these drawings a tag number to identify each component and referenced to a component identification list.

4. Data sheets for all components. The data sheets shall be marked to indicate those portions applicable to the components to be furnished.

5. Power requirements and heat dissipation summary for all control panels. Power requirements shall state required voltages, currents, and phase(s). Heat dissipations shall be maximums and shall be given in Btu/hr. The summary shall be supplemented with calculations.

2. PRODUCTS

2.01 General Requirements

A. Equipment to be installed in a hazardous area shall meet Class, Group, and Division classification as shown on the Contract Electrical Drawings, or comply with the local or National Electrical Code, whichever is the most stringent requirement.

B. Electronic equipment shall utilize printed circuitry suitably coated to prevent contamination by dust, moisture and fungus. Solid-state components shall be conservatively rated for their purpose, to assure optimum long-term performance and dependability over ambient atmosphere fluctuations and 0 to 100 percent relative humidity. The field mounted equipment and system components shall be designed for installation in dusty, humid, and slightly corrosive service conditions.

C. All equipment shall be designed to operate on a 60-Hertz alternating current power source at a normal 120 volts, plus or minus 10 percent, except where specifically noted. All regulators and power supplies required for compliance with the above shall be provided between power supply and interconnected instrument loop. Where equipment requires voltage regulation, constant voltage transformers shall be supplied.

D. All equipment, cabinets and devices furnished hereunder shall be heavy-duty type, designed for continuous industrial service. The system shall contain products of a single MANUFACTURER, insofar as possible, and shall consist of equipment models which are currently in production.

E. The equipment furnished shall be designed to operate satisfactorily between 0 degrees C and 40 degrees C for indoor panels and 50 degrees C for outdoor panels at up to 95 percent Relative Humidity (non condensing).

F. Except where specifically noted otherwise, all outdoor panels and enclosures containing electronic or electrical components shall be equipped with sunshields on both sides, the front, the back and the top with a minimum separation of one inch and a maximum separation of one and one-half inches. Sun shields shall be 14 gauge Stainless Steel or 12 gauge Anodized Aluminum or thicker. Finish with reflective white, two part epoxy coating or reflective, white, polyester powder deposited coating.

G. All outdoor control panels and enclosures shall be equipped with 3 ½" stainless steel mounting uni-struts across the width of the back. For free-standing panels the struts shall be located half-way up the panel and six inches from the top. For other panels they shall be located 3" from the top and 3" from the bottom.

H. All switches shall have double-pole, double-throw contacts rated at a minimum of 600 volts-amperes (VA), unless specifically noted otherwise.

I. All equipment shall be designed and constructed so that in the event of a power interruption, the equipment specified hereunder shall resume normal operation without manual resetting when power is restored.

J. All discrete inputs entering the panel shall be wetted by 120 VAC. Provide isolation relays if necessary to accommodate this requirement.

K. All discrete output signals shall be equipped with interposing relays to electrically isolate them from the control system I/O.

L. Provide signal isolators for analog signals leaving the building.

2.02 Lightning/Surge Suppression

A. Surge suppressors and arrestors meeting the requirements of ANSI Standard C-62.41 (latest revision) shall be provided as further detailed below.

B. DC Signals. Lightning and surge protection shall be provided on all DC signal wires entering or leaving the panel. The protectors shall meet the following criteria:

1. 35 mm DIN rail mounted with spring terminals.

2. Response time of less than one nanosecond.

3. Operating signal current: up to 0.5 A

4. Capable of withstanding 5,000 Amps at IEEE/ANSI C-62.41 8 x 20 microseconds combination wave.

5. Nominal series resistance of less than 2 ohms each leg

6. Manufacturer/model:

    a. Dehn DCO RK ME

    b. Approved equal.

C. AC Signals. Lightning and surge protectors for all incoming 120 VAC discrete signals lines shall meet the following criteria:

1. Serial protection.

2. Nominal operating voltage: 120 VAC 47/63 Hz.

3. Response time of less than 0.25 nanoseconds.

4. Capable of withstanding up to 40,000 Amps at IEEE/ANSI C-62.41 8 x 20 microseconds combination wave.

5. Manufacturer/model:

    a. Phoenix Contact 2906840

    b. Approved equal.

D. Single phase AC Power. Lightning and surge protectors for AC power supply lines up to 15 Amps service shall meet the following criteria:

1. Serial protection with replaceable fuse.

2. Failure indicator.

3. Response time of less than five nanoseconds.

4. Capable of withstanding up to 10,000 Amps at IEEE/ANSI C-62.41 8 by 20 microseconds combination wave.

5. Manufacturer/model:

    a. EDCO HSP121BT

    b. Approved equal.

E. Single phase AC Power (over 15Amps). Lightning and surge protectors for AC power supply lines over 15 Amps service shall meet the following criteria:

1. Parallel protection using MOVs and thermal fusing technology.

2. Failure indicator

3. Response time of less than five nanoseconds.

4. Capable of withstanding up to 6,500 Amps at IEEE/ANSI C-62.41 8 x 20 microseconds combination wave.

5. Manufacturer/model:

   a. EDCO FAS-120AC

   b. Approved equal.

F. Three phase AC Power. Lightning and surge protectors for 480 VAC power supply lines shall meet the following criteria:

1. Designed specifically for three phase 480/277 VAC wye connected power supply lines.

2. Wall mountable IP66/NEMA 4x stainless steel enclosure.

3. Failure indicators.

4. Response time of less than twenty-five nanoseconds.

5. Capable of withstanding up to 50,000 amp surge current per phase.

6. Manufacturer/model:

   a. Phoenix Contact SYSTEMTRAB 2800718.

   b. Approved equal.

2.03 Control Panels

A. Dewatering Screw Press Control Panel (DSPCP) by the PCS:

1. Enclosure shall be NEMA 4X Stainless Steel with AC unit, containing PLC equipment defined in Specification Section 13325.

2. DSPCP shall include an integral UPS and battery with 30 minutes minimum full load capacity.

3. DSPCP shall be 3 phase 480 VAC with circuit breakers, VFDs, Starters, power and signal surge protection.

4. DSPCP shall include fiber optic network interface.

B. Dewatered Sludge Cake Pump Conveying Control Panel (CCCP) by Division 11 supplier:

1. Enclosure shall be NEMA 4X Stainless Steel with AC unit, containing PLC equipment defined in Specification Section 13325.

2. CCCP shall include an integral UPS and battery with 30 minutes minimum full load capacity.

3. CCCCP shall be 3 phase 480 VAC with circuit breakers, VFDs, Starters, power and signal surge protection.

4. CCCP shall include fiber optic network interface.

C. Control Panels by SYSTEM SUPPLIER:

1. Process Control Panel PCP-1. The following components are required:

a. Enclosure shall be NEMA 4X Stainless Steel with AC unit, containing PLC equipment defined in Specification Section 13325.

b. PCP-1 shall include an integral UPS and battery with 30 minutes minimum full load capacity.

c. PCP-1 shall be single phase 120VAC with circuit breakers, power and signal isolators and surge protection.

d. PCP-1 shall include fiber optic network interface.

2.04 Control Panels and Enclosures

A. Finish:

1. All front panel openings for panel-mounted equipment shall be cut with counter-boring and provided with trim strips as required to give a neat finished appearance.

2. With the exception of stainless steel panels, all steel panel surfaces shall be treated with phosphatized treatment inside and out, and then finished on the exterior with two coats of baked enamel of the approved color. Interiors of panels shall be white, ANSI No. 51.

3. Stainless steel panels shall be No. 7 polished, 316 stainless steel.

B. Doors:

1. All control panels shall have a continuous piano hinge door for ease of access. A minimum of 80% of the panel interior shall be exposed by doors.

2. NEMA 4X rated panel door openings shall be sealed and fully gasketed.

3. The inside of each door shall be equipped with a print pocket. Provide individually laminated 11x17 sheets for all wiring diagrams.

4. Two-door enclosures shall have a removable center post.

5. Sealed panel doors shall be equipped with quick-release latches.

6. NEMA 1 rated panel doors shall be equipped with a three-point latching mechanism.

7. Where noted or shown on the drawings, doors shall be equipped with a fully gasketed glass window to allow viewing of internally mounted devices without opening the door.

C. All components and terminals shall be accessible without removing other components except for covers.

D. All conduit entry shall be from the bottom only.

E. No components shall be mounted on the interior sides of any panel.

F. All panels shall be provided with an isolated copper grounding bus to ground all signal shield connections.

G. Control Panels containing PICS control system equipment shall each be equipped with an internal, hand-switch controlled, LED light and 120V, 15 amp, duplex utility receptacle.

H. All panels shall be provided with laminated as built electrical wiring diagrams in each panel.

I. Nameplates:

1. All front-face panel mounted controls and indicators shall be equipped with 10-year outdoor-rated adhesive laminated plastic nameplates to completely define their use. Provide Brady Type BBP31 or BBP33 as applicable or approved equal.

2. All internal components shall be equipped with identification tags

3. Each wire shall be uniquely identified and shall be labeled.

J. Power Supplies.

1. Uninterruptible power supplies (UPS) shall be provided in all control panels as follows:

a. Size the supplies for all internal equipment plus an additional 20% spare capacity.

b. Provide 15 minutes battery back-up capability at full load.

c. Provide relay option card for indication of “On UPS Power” and “Low Battery Level”.

d. For outdoor panels provide an UPS and battery rated for operation at up to 50 degrees C.

2. Provide two diode-auctioneered DC power supplies for analog signal use.

3. Provide individually fused DC power for field transmitters.

K. Electrical:

1. Main circuit breaker and branch circuit breaker for each branch circuit as required to distribute power from the main power feed.

2. All breakers accessible when the panel door is open.

3. No more than 20 devices on any single circuit.

4. No more than 12 amps for any branch circuit.

5. Panel (or site) lighting, receptacles, heaters, controls, telemetry and fans on separate branch circuits.

L. Wiring:

1. Power wiring shall be 300 volt, type MTW stranded copper, No. 14 AWG size, for 120V service.

2. Discrete wiring shall be 300-volt type MTW stranded copper, sized for the current carried, but not smaller than No. 16 AWG.

3. Analog signal wiring shall be 300 volt, stranded copper in twisted shield pairs, no smaller than No. 16 AWG.

4. Panel wiring shall be routed within wire troughs or panduits.

5. Hinge wiring shall be secured at each end with the bend portion protected by a plastic sleeve.

6. Analog or dc wiring shall be separated from any ac power or control wiring by at least six inches.

7. Terminal blocks shall be provided for all field wiring entering the panel. The greater of 4 or 15% spare terminal blocks shall be provided.

8. No more than one wire per screw and yoke termination.

M. Construction:

1. Minimum metal thickness: 14-gauge.

2. Stiffeners as required to prevent deflection under instrument loading and permit

lifting without racking or distortion.

3. When required, removable lifting rings and fill plugs to replace rings after installation.

N. Miscellaneous Equipment:

1. All panels shall be protected from internal corrosion by the use of corrosion – inhibiting vapor capsules, Northern Instruments Model Zerust VC, Hoffman, model A-HCI, or equal.

2. All sealed panels shall be equipped with combination drain/breathers, Crouse-Hinds model ECD18; or equal.

3. When noted on drawings, panels shall be equipped with thermostatically controlled space heaters to maintain internal temperatures above dew point.

O. All panels shall be manufactured items, Hoffman Engineering, or equal.

2.05 Front Panel Devices

A. Potentiometer. Units shall meet the following:

1. Three-terminal potentiometers with a total resistance of 1000 ohms and a power dissipation rating of 2 watts

2. Oil-tight construction, rated NEMA 13

3. Resolution of 1 percent, and linearity of plus or minus 5 percent.

4. Panel mounting accommodating panel thickness between 1/16 to ¼ inch.

5. Legend plates with marking as noted.

6. Allen-Bradley, type 800T, or equal.

B. Selector Switch. Units shall meet the following:

1. Heavy-duty, oil-tight, industrial type selector switches rated for NEMA 4 service.

2. Contacts rated for 120-volt ac service at 10 amperes continuous.

3. Number of positions and contact arrangements as required.

4. Factory-engraved legend plate indicating position definition.

5. Panel mounting accommodating panel thickness between 1/16 to ¼ inch.

6. Black knob type operator.

7. Square D Class 9001, Type K; Allen-Bradley type 800T, or equal.

C. Pushbutton. Units shall meet the following:

1. Heavy-duty, oil-tight, industrial type push buttons rated for NEMA 4 service.
2. Contacts rated for 120-volt ac service at 10 amperes continuous.
3. Number of positions and contact arrangements as required.
4. Factory-engraved legend plate indicating function.
5. Panel mounting accommodating panel thickness between 1/16 to ¼ inch.
6. Operator: Red extended head for STOP, green flush head for START, black flush head for other functions.
7. Square D Class 9001, Type K; Allen-Bradley type 800T, or equal.

D. Indicating Light. Units shall meet the following:

1. Heavy-duty, oil-tight, push-to-test industrial type with integral transformer for 120V AC application.
2. Rated for NEMA 4 service.
3. Screwed on flat-faced lenses in colors shown on the drawings.
4. Factory-engraved legend plates.
5. Square D type K, Allen-Bradley Type 800T, or approved equal.

2.06 Internal Panel Components

A. Control/Interposing Relays: All relays shall meet the following:

1. Compact, general-purpose, plug-in type.
2. Socket mounted.
3. Contacts rated for not less than 10 amperes at 120V.
4. Equipped with neon status lights and test buttons.
5. Permanent, legible identification
6. Potter & Brumfield series KRPA or approved equal.

B. Time Delay Relay. Time delay relays shall meet the following:

1. Available functions: On delay, Off delay, or one shot.
2. Socket mounted.
3. Knob adjustment.
4. Contacts rated for not less than 10 amperes at 120V.
5. Timing range as appropriate for the application.
6. Magnecraft series W211 or approved equal.

C. Terminal Blocks. Terminal blocks shall meet the following requirements:

1. Terminals capable of accepting 10-26 AWG wire.
2. DIN-rail mounting.
3. Connectors shall be either copper or steel. Use of aluminum connectors shall not be permitted without prior approval of the Engineer
4. Phoenix Contact or approved equal.

2.07 Spares and Expendables

A. Provide the following spare parts:

1. One spare d.c. power supply of each type provided.
2. Five spare relays of each type provided.
3. Two spare surge protection devices of each type provided

B. Provide the following expendables:

1. Two year supply of corrosion inhibitor capsules
2. Ten spare fuses of each type and rating supplied.
3. Ten spare indicator light bulbs of each type and color supplied.

3. EXECUTION

3.01 Installation

A. Control Panels shall be installed at the locations indicated on the Contract Drawings.

B. Control panels shall be provided to the mechanical subcontractor for installation.

C. Verify the correct installation of all panels supplied under this Specification Section.

END OF SECTION

SECTION 13325

PROCESS INSTRUMENTATION AND CONTROL SYSTEM PLC SUBSYSTEM HARDWARE

1. GENERAL

1.01 Scope of Work

A. This Specification Section covers work related to the PLC subsystem hardware for the Process and Instrument and Control System (PICS).

B. The work specified herein shall be furnished by the same SYSTEM SUPPLIER furnishing services and equipment as defined in 13300.

1.02 Related Work

A. Related work specified elsewhere includes:

1. Specification Section 13300 defines work associated with the overall PICS.

2. The PLCs will be mounted in control panels under Specification Section 13315.

3. Specification Section 13326 defines programming requirements for the equipment specified herein.

1.03 Submittals

A. Provide the following submittals specific to the work defined herein:

B. A PLC hardware shop drawing package that includes the following:

1. Block Diagram: A detailed system block diagram showing all major components. Identify components by model number. Show interconnecting cables diagrammatically (by type and size).

2. Bill of Materials: A list of all components, including all software. Group components by type and include component model number and part number,

component description, quantity supplied, and reference to component catalog information.

3. Descriptive Information: Catalog information, descriptive literature, performance specifications, internal wiring diagrams, power and grounding requirements, power consumption, and heat dissipation of all elements. Clearly mark all options and features proposed for this project.

4. Installation Details. Equipment installation drawings showing external dimensions, enclosure material and spacing, mounting connections, and installation requirements.

2. PRODUCTS

2.01 General Requirements

A. All equipment, cabinets and devices furnished hereunder shall be heavy-duty type, designed for continuous industrial service. The system shall contain products of a single MANUFACTURER, insofar as possible, and shall consist of equipment models which are currently in production. All equipment provided shall be of modular construction and shall be capable of field expansion through the installation of plug-in circuit cards or additional cabinets.

B. The equipment furnished shall be designed to operate satisfactorily between 0 degrees C and 40 degrees C at up to 95 percent Relative Humidity (non-condensing).

C. All equipment furnished shall be designed and constructed so that in the event of power interruption, or temperatures outside the operational range, the equipment specified hereunder shall go through an orderly shutdown with no loss of memory, and resume normal operation without manual resetting when power is restored.

2.02 Programmable Logic Controller (PLC)

A. PLC shall be implemented using Allen Bradley CompactLogix modules. No other PLC series will be considered. Modules shall be selected from the following list:

1. Central Processor Unit (CPU). Each CPU shall be Allen-Bradley CompactLogix 5069-L320ER or approved equal. A minimum of 2 Mbytes of RAM memory shall be installed. However, the actual amount of memory supplied shall be sufficient to provide 20% unused capacity when the entire PLC program, as provided, is loaded and running. Provide battery back-up sufficient to maintain memory integrity for a minimum of 24 hours to eliminate the need for down-loading system programs from the host computer following temporary (short-term) power failures.

2. Each PLC (CPU) shall include bus power supply for CPU and IO modules (MOD) and another bus power supply for field devices (SA). AC and DC devices should be on isolated SA power buses. Provide 5069-FPD Compact I/O Field Potential Distributor Module and terminal kits.

3. End Cap. Each PLC (CPU) bank shall expanded within the PCP, when required by manufacturer's design, to additional local (I/O) banks by use of CompactLogix additional power supplies. 5069-FPD Compact I/O Field Potential Distributor Module shall be use as required for IO module power supply. Terminate last I/O bank with appropriate 5069 end cap: 5069-ECR(right side).

4. Process interface modules. All I/O modules shall be provided with screw-type terminal blocks with barriers between adjacent terminals for connection of field inputs. Terminals shall be suitable for accepting up to and including No. 14 AWG wire. All terminals shall be provided with unique identification in accordance with approved loop interconnection diagrams. Furnish input/output modules sufficient to accommodate the inputs/outputs shown on the Process and Instrumentation Diagrams contained in the Contract Drawings plus an additional 15% spares of each type. The spares shall be supplied fully wired such that it is only necessary to add field wiring and update the PLC database in order to activate them. The requirements for each type of module are:

5. 120VAC Discrete input modules. The module inputs shall be isolated from the PLC and designed to withstand transients and surges without damage. Light emitting diodes, (LED's), one for each input, shall be provided to indicate a closed contact condition. Provide Allen Bradley model 5069-IA16 or approved equal

6. Analog input modules. Analog input modules shall include isolated analog inputs and accept differential and/or single ended 4-20 mA dc inputs from field mounted transmitters. Common mode input protection of 30 V. DC minimum shall be provided. Input signal A/D conversion shall be a minimum of 16-bits, with an accuracy of one bit. Provide Allen Bradley model 5069-IF8 series B or approved equal.

7. Discrete output modules. Isolation resistance shall be 1,000 ohms minimum at 300 V. DC between any set of field terminals and any other set or earth ground. Isolation voltage shall be 500 V. AC rms minimum between any set of field terminals and any other set or earth ground. Light-emitting diode status indication shall be provided adjacent to each contact output to indicate a closed contact condition. Provide Allen Bradley Relay output modules 5069-OW16 or approved equal.

8. Analog output Modules. Analog output modules shall provide isolated 4-20 mA dc signals to adjust set points of local process control stations, pump speed, valve positions, etc. Output load drive capability shall be 750 ohms minimum for each output. There shall be separate D/A conversion circuits for each output which shall convert 16-bit data words into output signals with an accuracy of +/- 1 bit over the full scale output span. Response to station or communication system failure shall be selectable such that upon failure the output would either remain at the last

value, or go to zero (4mA), as required by the process. Provide Allen Bradley model 5069-OF8 or approved equal.

9. All I/O modules shall be provided with manufactured terminal blocks and cables to interconnect with field termination points.

10. All analog IO signals leaving the building shall be provided with analog signal isolators.

B. Communication Module :

1. Protocol Converter. Converts Ethernet/IP to Modbus TCP/IP protocols. Prosoft Technology, Anybus, Red Lion or approved equal.

2. Media Converter. Converts copper Ethernet media to fiber optic media. Moxa or approved equal.

C. Ethernet Switch. The switch shall be an industrialized, hardened metal DIN-rail mountable enclosure meeting the following requirements:

1. Sufficient fiber and copper ports to support all necessary connections (including future) together with at least two spare ports of each type. Additional Ethernet Switches if needed.

2. Operating Temperature: Up to 80 degrees C.

3. Power Supply – Dual redundant 10-49 Volts DC.

4. Appropriate SFP transceivers installed.

5. Surge protection on power inputs and ports leaving the building.

6. Manufacturer:

a. Allen Bradley (Stratix 5400)

D. Operator Interface Terminal. (OIT). The OIT shall be a front panel mounted PC. It shall be connected to its associated PLC and combatable with its hardware, software and communication protocol. It shall provide operator interface for monitoring and controlling all equipment connected to the associated PLC. It shall meet the following requirements:

1. 15 inch, full color resistive touch screen graphical display.

2. Ethernet/IP communication.

3. VTSCADA Graphic Terminal (VGT)

E. Software: Provide Rockwell Studio 5000 Designer programming software.

2.03 Spares and Expendables

A. Provide the following spare parts:

1. One of each PLC module including CPU.
2. One of each I/O module
3. One of each communication module
4. One of each power supply type

3. EXECUTION

3.01 Training

A. Hardware Maintenance: Provide a minimum of one day of hardware training for up to three of the OWNER's personnel in the maintenance of the PICS hardware which shall include:

1. Training in standard hardware maintenance for the equipment provided.
2. Specific training for the actual hardware configuration to provide a detailed understanding of how the equipment and components are arranged, connected, and set up.
3. Test, adjustment, and calibration procedures.
4. Troubleshooting and diagnosis.
5. Component removal and replacement.
6. Periodic maintenance.

B. Software Maintenance: Provide a minimum of one day of software training for up to four of the OWNER's personnel in the maintenance and use of the PICS software.

C. Operator Training. Provide a minimum of one day of training for up to six of the OWNER's personnel in the operation and use of the operator screens.

END OF SECTION

SECTION 13326

PROCESS INSTRUMENTATION AND CONTROL SYSTEM PROGRAMMING

1. GENERAL

1.01 Scope of Work

A. This Specification Section covers work related to programming the PLC and OIT equipment furnished under other sections of these specifications.

B. The Work specified herein associated with PCP-1 shall be performed by the SYSTEM SUPPLIER defined in Specification Section 13300.

1.02 Related Work

A. Specification Section 13300: General Requirements.

B. Specification Section 13325 defines requirements applicable to the equipment to be programmed hereunder.

1.03 Submittals

A. Provide an application programming design package that illustrates each individual control strategy using a program flow chart or written description. The descriptions shall also include details of all formulae to be used (e.g. chemical feed, flow paced, etc.). This submittal shall be Approved or Approved As Noted prior to any PLC programming Work. Simply repeating the descriptions provided herein shall not be acceptable.

B. Provide an OIT programming submittal with copies of all proposed operator graphic screens accompanied by descriptions of the method of operator interaction.

C. Provide a final documentation package that includes:

1. Licenses in the Owner’s name for PLC and, where applicable, OIT programming software.

2. Final copies of all programming files on Compact Disk

3. A complete printout of all “Annotated” PLC program logic.

2. PRODUCTS (NOT USED)

3. EXECUTION

3.01 PLC Programming – General Monitoring

A. Provide the following general monitoring functions for analog inputs:

1. For all analog inputs (pseudo and real):

   a. Provide out of range alarms if the input signal goes outside the instrument’s range

   b. Provide individually operator adjustable emergency high and low alarms when the value goes outside the allowable process range.

   c. Provide individually operator adjustable high and low alarms when the value goes outside the normal process operating range.

   d. Provide a dead-band on all alarm settings.

   e. Issue Return-to Normal alarms whenever the signal returns to within limits.

2. For all flow related analog inputs:

   a. Monitor for and record minimum and maximum daily 5-minute average values. Record the date and time of occurrence for each.

   b. Accumulate a running daily total flow. At midnight, transfer the total to yesterday’s total and restart from zero.

   c. Calculate a running daily average flow. At midnight, transfer the value to yesterday’s average and restart the averaging.

3. For all level and pressure related analog inputs:

   a. Monitor for and record minimum and maximum daily values. Record the date and time of occurrence for each.

4. For all analysis analog inputs:

   a. Monitor for and record minimum and maximum daily values. Record the date and time of occurrence for each.

b. Calculate a running daily average reading. At midnight, transfer the value to yesterday's average and restart the averaging.

B. Provide the following general monitoring functions for discrete inputs:

1. For all discrete inputs:

2. Indicate but do not alarm when a discrete signal changes, as expected, as a result of a control command.

3. Alarm whenever an un-commanded change of state occurs

4. For all local control switch position feedback discrete inputs:

5. Issue an advisory alarm to the operator whenever a position change is detected

6. Exclude from any control strategy any equipment whose local switch position precludes control. If an operator attempts to control the device through the system, issue a message indicating that the control cannot be accomplished together with the reason.

7. For all motorized equipment:

8. Accumulate equipment run times based on the running status feedback discrete input.

9. Reset the run time value to zero only on operator command via the OIT.

10. For all device failure discrete inputs:

11. Issue an alarm when the input indicates a device fault

12. Set a software fault for the controlled device that can only be reset by operator action after the fail signal has been removed.

C. Special Level Monitoring. Based on the level and tank dimensions, continuously calculate the volume of liquid in each storage tank and display on the associated graphic screen.

3.02 OIT Programming

A. Graphic Standards

1. Owner graphic standards shall supersede others. Refer to 1.01 C for owner standards.

2. All operator graphic screens shall include an alarm list at the bottom indicating the most recent alarms colored as defined below under color standards and, at the top, tabs to allow the user to switch to key graphics including the process overview and the alarm list.

3. All graphic screens shall, as closely as possible, depict the actual process equipment in three dimensional symbols with fill color depicting current status in accordance with the graphic standards defined below.

4. For detailed process graphics where the process is continued on or continued from another graphic, software pushbuttons shall be provided to lead to the appropriate other graphic.

5. The owner standard colors shall be used.

6. Operator Actions. Operator control of equipment (e.g. start, stop, change of OIT H/O/A switch, set point adjustment, etc.) shall be accomplished by right-clicking on the appropriate graphic symbol which shall cause a pop-up window to appear providing the operator with the available options.

7. All adjustable values shall be changeable by the operator via the graphic screens.

8. Provide the following general monitoring functions for analog inputs:

    a. For all analog inputs:

        1) Indicate in black text the current value adjacent to the symbol on the graphic.

        2) Provide individually adjustable emergency high and low alarms when the value goes outside the allowable process range.

        3) Provide individually adjustable high and low alarms when the value goes outside the normal process operating range.

        4) Provide a dead-band on all alarm settings.

    b. For all level signals:

        1) Color fill the symbol for the tank or vessel proportionally to indicate the amount contained.

        2) Indicate in text the volume contained.

9. Equipment Status. Color the symbol for each piece of equipment to reflect its current status (e.g. running, stopped, failed, etc.) in accordance with the graphic standards.

10. Equipment Control Status. Adjacent to each piece of equipment indicate its control status, where such is available, as follows:

a. Local Hardware Hand/Off/Auto switch position in context sensitive text: Hand red, Off – black, Auto – green.

b. HMI software Hand/Off/Auto switch position in context sensitive text labeled "HMI": Hand red, Off – black, Auto – green.

11. Set points. Indicate the current value of all set points adjacent to the associated process value. All set points shall be operator adjustable via the process graphics.

B. Graphics

1. Provide the following graphic screens, as further detailed below:

a. Dechlorination Chamber and Mixers

b. Sodium Bisulfate Feed Pumps

c. Chemical Tanks (Polymer and Sodium Bisulfate)

d. Sludge feed Pumps

e. Biosolids Process

2. Plant Overview. No control shall be provided directly from this screen (though pop-up windows are acceptable).

3. Control System. Provide a single system block diagram for the system. Indicate the status of each communication link and, via a separate screen or pop-up window, the status of each PLC module.

C. Other OIT Programming

1. Alarm Log. Provide a log of all alarms issued by the system. The log shall include the date and time of detection. Provide the operator with the ability to sort the displayed log by any combination of the following:

a. Specific equipment.

b. Alarm description

c. Date and time.

2. Trends. Provide trending of all process parameters. Provide the following additional trends:

a. Up to eight comparative trends, each with up to four parameters. The parameters in each shall be as OWNER selected.

3.03 PLC Programming – General Control

A. General Requirements applicable to the control strategies are:

1. All software fault conditions that are set can only be cleared by operator acknowledgement.

2. Wherever in the descriptions the control strategy refers to the operator, it is intended to mean via the Operator Interface Terminal (OIT).

3. All control strategies shall run within the PLC. Data manipulation (calculated analog values, elapsed time functions, event determination) shall be performed by the PLC for the associated equipment it is monitoring. Any resulting values from these manipulations shall be reported as individual registers. The intent is to avoid utilizing the OIT software for this purpose.

4. The control functions described herein are not intended to be complete comprehensive programming logic descriptions. They describe only the general intended control operation required. Provide complete program logic to completely fulfill the functional requirements indicated.

5. Provide all programming necessary to support the functional requirements of the operator graphic screens.

6. Provide complete debugging services to address issues identified by the OWNER or ENGINEER during and after startup until final acceptance.

B. Common Constant Speed Motor Operator Control. For all constant speed equipment, provide an operator controllable software HAND/OFF/AUTO switch and proceed as follows:

1. While the switch is in HAND run the equipment.

2. While the switch is in OFF, stop the equipment and prevent any start commands.

3. While the switch is in AUTO, take start and stop signals from the appropriate automatic control strategy defined herein.

C. Common Variable Speed Motor Operator Control. For all variable speed equipment, provide an operator controllable software HAND/OFF/AUTO switch and SPEED potentiometer and proceed as follows:

1. While the switch is in HAND run the equipment at the speed set by the potentiometer.

2. While the switch is in OFF, stop the equipment and prevent any start commands.

3. While the switch is in AUTO, take start, stop, and speed signals from the appropriate automatic control strategy defined herein.

D. Common Motorized Valve Operator Control. For all valves, provide an operator controllable software OPEN/CLOSE/AUTO switch and POSITION potentiometer where applicable. Proceed as follows:

1. While the switch is in OPEN, open the valve to the position set by the potentiometer.

2. While the switch is in CLOSE, close the valve and prevent any other commands.

3. While the switch is in AUTO, take open, close and position signals from the appropriate automatic control strategy defined herein.

E. Common PLC Fault Logic for VFD/RVSS/OLR Driven Motors:

1. Low Flow:

   a. Flow Switch/Limit Switch – In the event the flow switch fails to open when the pump is called to run, the alarm signal to the VFD/RVSS/OLR shall stop the VFD/RVSS/OLR from running.

   b. Flow Meter – If the flow rate remains below a minimum setpoint entered by the operator on the OIT or HMI, stop VFD/RVSS/OLR from running.

2. High Temp – In the event the motor temperature switch is triggered, the alarm signal to the VFD/RVSS/OLR shall stop the VFD/RVSS/OLR from running.

3. High Discharge Pressure:

   a. Pressure Switch – In the event the high discharge pressure switch is triggered, the alarm signal to the VFD/RVSS/OLR shall stop the VFD/RVSS/OLR from running.

   b. Pressure Indicating Transmitter - If the discharge pressure remains below a minimum setpoint entered by the operator on the OIT or HMI, stop VFD/RVSS/OLR from running.

4. Seal Fail – In the event the motor seal fail switch is triggered, the alarm signal to the VFD shall stop the VFD from running.

5. Fault Lockout – In the event the lockout relay is triggered due to any failure above, the alarm signal to the VFD/RVSS/OLR shall stop the VFD/RVSS/OLR from running.

6. Fault Reset – In failure mode, the pump shall remain in latched alarm state until the failure is no longer active, and lockout relay is reset. If PLC fails to reset the lockout relay after three (3) attempts via OIT, operator shall inspect drives locally to fix fault signals and reset the fault lockout. Operator shall manually restore to normal condition after alarms have been cleared at the VFD/RVSS/OLR.

7. Time Relay – Relay should be set to an operator adjustable time 0-60 sec before system returns online in the event of a failure.

F. Common Motorized Equipment Flow Monitoring. For all motorized equipment provided with a dedicated discharge flow meter, issue an alarm and stop the equipment if the flow fails to reach an operator controllable minimum value within an operator adjustable time of being called to start.

3.04 Specific PLC Automatic Control Strategies

A. Solids and Dewatering Process. Automatic control will be provided by the Process Control Supplier.

B. Sludge Feed Pumps and Valves Control. Automatic control will be provided by the Process Control Supplier.

C. Sludge Feed pumping System (Discharging from Digester to Dewatering Press)

1. The sludge feed pumping system shall operate whenever the dewatering drums are operating and will shut down following a shut down of the dewatering press. The sludge feed pumps motor are controlled by VFDs in the Electrical Building supplied by the contractor. The “range of adjustment” for this will be 15 - 72 Hz.

2. Assign the two sludge feed pumps, one existing and one new, to a DUTY/STANDBY sequence that can be manually overridden by the operator. If any pump is not controllable (i.e H/O/A is OFF, pump is failed), omit it from the sequence. Automatically switch assignments every time sludge pumping stops.

3. In Manual control mode, The Sludge feed pump speed shall be set to a user adjustable speed value.

4. In Automatic flow control mode:

a. Provide the following operator adjustable values:

1) FS – Target discharge flow

2) FD – Percent allowable differential from target discharge flow.

b. Provide a PID control loop to adjust the pump speed to maintain a discharge flow of FS. Disable the PID when the flow reaches FS.

c. If the flow falls to FS-FD for an operator adjustable time, enable the PID until the flow starts to increase (slope positive) then disable the PID again.

d. If the flow rises to FS+FD for an operator adjustable time, enable the PID until the flow starts to decrease (slope negative) then disable the PID again.

e. When the dewatering system calls for pumping, run the DUTY pump after a user adjustable time delay.

f. If a pump fails to start or fails while running, automatically call for the STANDBY pump.

2. E-stop and Dry-Run protection relay for the Sludge feed pumps shall shut down the pump and cause an alarm in the event they are activated.

D. Sludge Feed Transfer valves:

1. The Sludge Feed Transfer valves shall open whenever the sludge feed pump is called to run and close following a stop or shutdown of the sludge feed pump plus a user adjustable time delay.

E. Pump Out Connection Valve. OIT manual control only.

F. Digester Sludge Transfer PS Valve. OIT manual control only.

G. Dechlorination Chamber Mixers. OIT manual control only.

H. Sodium Bisulfate Feed (Dechlorination). This control strategy shall run to eliminate chlorine residual at the Dechlorination Chamber. Establish a DUTY/STANDBY sequence for the pumps that can be manually modified by the operator. Switch the DUTY/STANDBY pump assignment every 24 hours at midnight. Provide an operator controllable software TOTAL TRIM OFF/AUTO switch. Proceed as follows:

1. Provide the following operator adjustable parameters:

a. D – post CCC residual chlorine.

b. T – Trim value.

c. K – scaling factor.

d. P – percentage of effective chemical in the feed solution.

e. AS – Target free chlorine residual level (set to zero).

f. ASH – maximum Dechlorination chamber effluent chlorine residual.

g. ASL – minimum Dechlorination chamber effluent chlorine residual.

2. Run the LEAD pump at a speed given by the following formula:

$$\text{Speed\%} = (D \times T \times K \times F \times 100) / (24 \times P \times Q)$$

Where Q = maximum feed capacity of the pump in g.p.h.
and F = plant discharge flow in m.g.d.

3. Periodically based on an operator adjustable time, check the Dechlorination chamber effluent free chlorine level (AIT-5540). If it is outside an operator adjustable dead band of AS, issue an advisory alarm and increase (chlorine residual too low) or decrease (chlorine residual too high), as appropriate, the dosage, D, by an operator adjustable percentage.

4. When the TOTAL TRIM OFF/AUTO is set to AUTO, check the Dechlorination chamber effluent chlorine residual value every operator adjustable duration (Range: 10-90 minutes, Initial Setting: 15 minutes). If it above ASH or below ASL, issue an advisory alarm and increase (chlorine residual too low) or decrease (chlorine residual too high), as appropriate, T , by an operator adjustable percentage.

5. If the DUTY pump fails to start or fails while running automatically call for the STANDBY pump.

3.05 Programming Acceptance

A. Regardless of any submittal approvals, final acceptance of the system programming will occur during the final Demonstration Test.

B. The ENGINEER/OWNER reserves the right to require minor changes in the graphics and programming during the test.

END OF SECTION

SECTION 13360

PROCESS INSTRUMENTATION AND CONTROL SYSTEM FIBER OPTIC SYSTEM

1. GENERAL

1.01 Scope of Work

A. Work includes furnishing, installing, and testing, fiber optic cable links as defined in the Contract Drawings.

B. The System Supplier defined in Specification Section 13300 shall be responsible for coordinating all aspects of the fiber optic system.

C. All duct bank installation work covered by this specification shall be performed by a SUB-Contractor experienced in fiber optic cable installation.

D. It is the ultimate responsibility of the Contractor to furnish a complete and fully operable system that supports the required functions specified elsewhere. The Contractor is to assume full responsibility for additional costs which may result from unauthorized deviations from the specifications.

E. Equipment found to be defective prior to system acceptance shall be replaced and installed at no additional cost to the Owner.

1.02 Submittals

A. Shop Drawings: Submit, in a single package, catalog information, descriptive literature and drawings for all components of the fiber optic system.

B. Test Procedure: Submit the procedure proposed to be followed during duct bank cable pulls. The procedure shall include data sheets to be used to record cable pull lengths and the attenuation readings before and after installation as defined in Part 3 herein.

1.03 Final Documentation

A. Provide a complete wiring diagram of the entire fiber optic system including termination numbers at all fiber patch panels.

B. Distances and installed attenuation of all fiber runs within the duct bank system.

C. Provide a hard copy of all final documentation and also in electronic format on a Compact Disk.

2. PRODUCTS

2.01 Fiber Optic Cable

A. Provide fiber optic cable for implementing the fiber links required within the system.

B. Duct Bank Cable. The fiber optic cable within the duct bank system shall also meet the following requirements:

1. Six pair (12 strand), or as shown on drawings.
2. OS2 single mode fiber.
3. Number of fibers as defined in the Contract Drawings.
4. Indoor/outdoor rated for underground duct bank installation.
5. All dielectric loose tube.
6. Gel-filled.
7. PE outer jacket.
8. Manufacturer: Belden, Corning or approved equal.

C. Fiber optic cable within buildings shall also meet the following requirements:

D. Non-conductive, plenum rated

1. Type OFNP
2. PVDF outer jacket
3. Manufacturer: Belden, Corning or approved equal.

E. Fiber patch cables shall be manufacturer's pre-fabricated two fiber cables with length as required for the application.

2.02 Fiber Patch Panels

A. Fiber patch panels (FPP) shall be provided at all locations where fiber optic cable enters a building.

B. FPP located outside shall be NEMA 4X 316 Stainless Steel lockable enclosures.

C. FPP located indoors shall be NEMA 12 steel lockable enclosures.

D. FPP shall contain one or more housings with sufficient quantities of ST compatible adaptor panels to accommodate all fibers terminating within the FPP. This requirement includes all dark fibers.

E. The housing shall be equipped with strain relief for the cables and shall have a lockable access door.

F. Provide Siecor WCH housing with CCH connector panels or approved equal

3. EXECUTION

3.01 Installation

A. Install materials and equipment in a workmanlike manner utilizing craftsmen skilled in the particular trade. Provide work which has a neat and finished appearance. Coordinate the work with the Owner and work of other trades to avoid conflicts, errors, delays, and unnecessary interference with operation of the existing plant during construction.

B. Install suitably sized innerduct in all duct bank conduits. Exposed innerduct shall be labeled with fiber optic warning labels where they enter the duct bank and every three feet in between.

C. All conduit within buildings shall be labeled every six feet with fiber optic warning labels.

D. All cables within fiber patch panels shall be clearly labeled with destination.

E. Install all duct bank fiber cable runs in accordance with the manufacturers recommendations and including:

1. Use manufacturer approved cable lubricant.

2. Use a pulling winch that continuously monitors and records the pull tension.

3. Note from the distance markers on the cable the exact length of each installed run and record the information.

F. All pulling equipment and hardware that will contact the cable shall be sized to maintain the cable’s minimum bend radius.

G. Do not utilize a figure-of-eight machine for installation without prior written confirmation of compatibility from both the machine and cable manufacturer.

3.02 Testing

A. Measure the attenuation of the fiber optic cable prior to installation and determine the average attenuation per foot.

B. Following installation, measure the attenuation of each run and compare the attenuation per foot readings with those taken prior to installation. Replace any runs whose attenuation per foot reading is more than 10% higher than the pre-installation value.

C. Provide all special testing materials and equipment.

D. Coordinate all testing with the Contractor, the Engineer, all affected suppliers, and the Owner.

E. The Engineer reserves the right to test or retest any and all specified functions whether or not explicitly stated in the approved test procedures. The Engineer's decision shall be final regarding the acceptability and completeness of all testing.

END OF SECTION

SECTION 15000

MECHANICAL - GENERAL REQUIREMENTS

1. GENERAL

1.01 Description

A. Scope of Work

1. Furnish all labor, materials, services, supplies, tools, equipment, transportation and facilities necessary to install complete and operable all mechanical equipment as shown on the Contract Drawings and specified in this Division.

2. The Contractor shall coordinate all details of the equipment with other related parts of the Work, including verification that all structures, piping, wiring, and equipment components are compatible.

3. The Contractor shall be responsible for all structural and other alternations in the Work required to accommodate equipment differing in dimensions or other characteristics from that contemplated in the Contract Drawings or Technical Specifications.

4. The Work includes, but is not necessarily limited to, the following:

   a. All treatment facility process equipment.

   b. Plumbing fixtures, trim, fittings, and equipment.

   c. Air filtration equipment and accessories.

   d. All electrical devices required for proper operations of equipment, including motors, starters, control devices, contactors, etc.

   e. Vibration isolation equipment, devices and accessories.

   f. Start-up and adjusting.

   g. Piping, valve and equipment identification.

   h. Manuals, charts and instructions, guarantees and warranties.

B. Contract Drawings and Specifications

1. The Contract Drawings and Specifications shall be considered as complementary, one to the other, so that materials and work indicated, called for, or implied by the one and not by the other shall be supplied and installed as though specifically called for by both.

2. The Contract Drawings are to be considered diagrammatic, not necessarily showing in detail or to scale, all of the equipment or minor items.

3. In the event of discrepancies between the Contract Drawings and the Specifications, or between either of these and any regulations or ordinances governing work of this Division, the Bidder shall notify the Engineer in ample time to permit clarification and correction before submitting a Bid.

4. It is the intent of the Contract Drawings and Specifications to obtain a complete and satisfactory installation. The mechanical and electrical drawings are diagrammatic (not necessarily showing in detail or to scale, all of the equipment or minor items), but are not to be followed as closely as the actual construction of the building and the work of other trades will permit.

5. The Contractor shall carefully examine the civil, structural and mechanical drawings and specifications in addition to the electrical and other related trades and sections.

6. The structural drawings shall take precedence over the mechanical and electrical drawings with reference structure construction and dimensions. The mechanical and electrical drawings are diagrammatic but are to be followed as closely as the actual construction of the structures and the work of other trades will permit.

7. All changes from the Contract Drawings necessary to make the work conform with the structures constructed and to fit the work of other trades or to the rules of the bodies having jurisdiction shall be made by the Contractor at his own expense. The Contractor shall provide shop, installation and detail drawings where necessary to supplement the Contract Drawings.

8. The Drawings indicate in diagrammatic form, the arrangements desired for the equipment fixtures, principal apparatus, equipment, etc., and shall be followed as closely as possible. However, the Contractor shall include any additional conduit, boxes and wiring due to structural or other obstructions at no additional cost to the Owner.

C. Safety Requirements

1. In addition to the components specified and shown on the Contract Drawings and necessary for the specified performance, the Contractor shall incorporate in the

design and show on the shop drawings all the safety features required by the current codes and regulations, including, but not limiting to, those of the Occupational Safety and Health Act of 1970, and Amendments thereto.

D. Related Work Specified Elsewhere

Specification Section	Title
01300	Shop Drawings, Submittals and Samples
01650	System Start-up and Demonstration
Division	**Description**
2	Site Work
11	Equipment
15	Mechanical
16	Electrical
Contract Drawings and General Provisions of the Contract	

1.02 Quality Assurance

A. ***All equipment and materials used in this installation shall be new, unused, and undamaged when installed or otherwise incorporated in the Work and shall be standard catalog items of the various manufacturers***. No such material or equipment shall be used by the Contractor for any purpose other than that intended or specified, unless such use is specifically authorized in writing by the Owner. No material shall be delivered to the work site workout prior acceptance of shop drawings and data by the Engineer.

B. Equipment and appurtenances shall be designed in conformity with ANSI, ASME, IEEE, NEMA, OSHA, AGMA, and other generally acceptable applicable standards. They shall be of rugged construction and of sufficient strength to withstand all stresses which may occur during fabrication, testing, transportation, installation, and all conditions or operations. All bearings and moving parts shall be adequately protected against wear by bushings or other approved means. Provisions shall be made for adequate lubrication with readily accessible devices.

C. Machinery parts shall conform to the dimensions shown on the working drawings within allowable tolerances. The corresponding parts of identical machines shall be made interchangeable. Protruding members such as joints, corners and gear covers shall be finished in appearance. All exposed welds shall be ground smooth and the corners of structural shapes shall be rounded or chamfered.

D. ***Provide materials and equipment that are standard products of manufacturers*** regularly engaged in the manufacture of such products, which are of a similar material, design and workmanship.

E. Facilities and labor for handling and inspection of all materials and equipment shall be furnished by the Contractor. If the Engineer requires, either prior to the beginning, or during the progress of the Work, the Contractor shall submit samples of materials for such special tests as may be necessary to demonstrate that they conform to the Contract Specifications. Such samples shall be furnished, stored, packed, and shipped as directed at the Contractor's expense.

F. The Contractor shall submit data and samples sufficiently early in the Project to permit consideration and acceptance before materials are necessary for incorporation into the Work.

G. Service Support

1. The equipment items shall be supported by service organizations. ***Submit a certified list of qualified permanent service organizations*** for support of the equipment which includes their addresses and qualifications.

2. These service organizations shall be reasonably convenient to the equipment installation and able to render satisfactory service to the equipment on a regular and emergency basis during the warranty period of the contract.

H. Tolerances

1. Machinery parts shall conform to the dimensions indicated on the Drawings within allowable tolerances. Protruding members such as joints, corners, and gear covers shall be finished in appearance.

2. ***All exposed welds shall be ground smooth and the corners of structural shapes shall be rounded or chamfered***.

I. Clearances and Access

1. ***Ample clearance shall be provided for inspection and adjustment***. All equipment shall fit the allotted space and shall leave reasonable access room for servicing and repairs.

2. Greater space and room required by substituted equipment shall be provided by the Contractor and at his expense.

3. ***Provide access panels*** for access to valves, equipment or any part requiring maintenance or service.

4. Provide minimum sizes of twelve (12) inches by twelve (12) inches for hand access or twenty-four (24) inches by twenty-four (24) inches for personnel access.

J. Safety Requirements

1. In addition to the components shown and specified, all machinery and equipment shall be safeguarded in accordance with the safety features required by the current safety codes and regulations of ANSI, OSHA, and local industrial codes.

2. The Contractor shall provide for each V-belt drive or rotating shaft a protective guard which shall be securely bolted to the floor or apparatus. The guard shall completely enclose drives and pulleys and be constructed to comply with all safety requirements.

3. For fans, the belt guard shall be arranged so as not to restrict the air flow into the fan inlet. Guards shall not interfere with lubrication of equipment.

4. Points of operation, ingoing nip points, and machinery producing flying chips and sparks shall be guarded in accordance with the applicable portions of 29 CFR 1910 Subpart 0. Provide positive means of locking out equipment so that equipment cannot be accidentally started during maintenance procedures.

5. ***High temperature equipment and piping so located as to endanger personnel or create a fire hazard shall be properly guarded or covered with insulation of the type specified***.

6. ***Ensure that access openings leading to equipment are large enough to carry through routine maintenance items such as filters, tools, etc***.

1.03 Project Conditions

A. ***Prior to commencement of the Work, the Contractor shall verify conditions, locations, dimensions, and counts at building the Project site***. Submit discrepancies and differences, within thirty (30) calendar days of the Notice to Proceed, to the Engineer for consideration and decision before proceeding.

B. Obtain full information regarding peculiarities and limitations of space available for installation of all materials under Contract.

C. Butt all openings, chases and trenches required for introduction of work and equipment and do all backfilling of floors and walls damaged by such cutting. All work completed under this heading must conform in every respect to the finished quality of workmanship and materials used in this construction project.

D. ***Provide accurate layout, grades and elevations; set sleeves and openings in ample time and take proper precautions to protect all work and equipment from damage***. ***Provide all necessary supports required for the safe and proper installation of electrical equipment***.

E. Discrepancies

1. All obvious discrepancies in the above mentioned documents shall be called to the attention of the Engineer prior to commencing the Work.

2. No extras to the original drawings and specifications will be authorized.

3. Questions arising from this inspection and/or from the drawings and specifications shall be submitted, in writing, to the Engineer for clarification and revisions.

F. Contingencies

1. In order to obtain a firm price on the cost of the Project, the Contractor shall include in this Bid sufficient contingencies to complete the Work as designed.

2. The Contract Drawings reflect the finished required results and any changes necessary to accomplish these results because of field conditions or codes in effect at the time of the Bidding shall not result in any change in cost.

1.04 Error and Omissions

A. Site conditions, budget considerations and code interpretations may change. Therefore, all errors and/or omissions or required clarifications in the above mentioned documents that are discovered by the Contractor and/or subcontractor shall be called to the attention of the Engineer at least seven (7) calendar days prior to the Bid Date.

1.05 Connection to Work of Others

A. The mechanical subcontractor shall be responsible for the connection of all equipment included in Division 15, *Mechanical*, even when furnished by others. Control wiring shall be under the supervision of the subcontractor furnishing the equipment.

B. Termination of power wiring shall be performed by the electrical contractor under the supervision of the mechanical contractor. Termination of the low voltage and control wiring shall be performed by the mechanical contractor or designated subcontractor.

1.06 Permits and Inspections

A. Provide all special permits required for Work under the various Sections of this Division. ***All permits shall be paid for by the Contractor. Reinspection fees, if any, shall be paid for by the Contractor at no additional cost to the Owner***.

B. The Work will be observed by the Engineer during the course of the construction. Provide for inspection by others having jurisdiction during the proper phases. Furnish a certificate of final approval at the completion of final inspection.

1.07 Codes and Standards

A. The latest edition and revision of the following codes and standards are considered minimum requirements for materials, workmanship and safety where not covered elsewhere in these specifications:

1. Florida Building Code (FBC).

2. National Electric Code (NEC).

3. Where materials and equipment are available under the continuing inspection and laboring service of Underwriter's Laboratories, Inc., furnish materials and equipment bearing such labels.

4. Law 91-596, Occupational Safety and Health Act.

5. Ordinances of the Local Authority having jurisdiction.

6. NFPA, Life Safety Code.

7. ANSI B-31.0 - 1987 (with addenda, power piping).

1.08 Shop Drawings

A. The Contractor shall submit in conformance with Section 00700, *General Conditions* and Section 00800, *Supplementary Conditions*, for review by the Engineer, complete sets of detailed and dimensioned working shop drawings showing the construction of the proposed facility and installation of all equipment complete in every respect.

B. Shop drawings shall be submitted in accordance with the provisions of the Section 01300, *Shop Drawings, Submittals and Samples*. ***All shop drawing submittals shall be in an electronic (PDF) form***.

C. ***Each drawing shall be indexed and/or referenced to the Contract Drawings and Specifications***.

D. No work upon the manufacture or fabrication of any equipment shall be performed until the Engineer's review has been completed.

E. ***The review of Shop Drawings by the Engineer will not relieve the Contractor of his responsibility to furnish all necessary material and equipment, and to perform all work required by the Contract Documents***.

F. ***Certified performance data/curves shall indicate actual test performance of units furnished***. The Contractor shall submit, with the shop drawings, layout drawings showing exact installation, piping and foundation details for the units being submitted.

G. The various Sections in this Division specify additional requirements for shop drawings with which the Contractor shall comply.

H. Submittals shall include the manufacturer's name, trade name, place of manufacture, catalog model or number, nameplate data, size, layout dimensions, capacity, project specification and paragraph reference, applicable industry and technical society reference standards, years of satisfactory service, and other information necessary to establish contract compliance of each item the Contractor proposes to be provided.

I. Drawings

1. Drawings shall include/site plans, sectional views, wiring diagrams, and installation details of equipment; and equipment spaces identifying and indicating proposed location, layout and arrangement of items of equipment, piping, control panels, accessories, and other items that must be shown to ensure a coordinated installation.

2. ***Wiring diagrams shall identify circuit terminals, and indicate the internal wiring for each item of equipment and the interconnection between each item of equipment***.

3. Drawings shall indicate adequate clearance for operation, maintenance, and replacement of operating equipment devices.

J. Manufacturer's Instructions

1. Where installation procedures or part of the installation procedures are required to be in accordance with the manufacturer's instructions, submit printed copies of those instructions prior to installation.

2. Installation of the item shall not proceed until the manufacturer's instructions are received. Failure to submit can be cause for rejection of the equipment or material.

K. Certificate of Compliance

1. ***Submit a certificate of compliance from the manufacturer for approval for products, finishes, and equipment*** as specified in the technical sections whose compliance with organizational standards or specifications is not regulated by an organization using its own listing or label as proof of the products, equipment, or materials and the referenced standard and shall simply state that the manufacturer certifies that the product conforms to the requirements specified.

   a. Reference Standards Compliance

      1) Where equipment or materials are specified to conform to industry and technical society reference standards of organizations such as, but not limited to, the American National Standards Institute (ANSI), American Society for Testing and Materials (ASTM), National Electrical Manufacturers Association (NEMA), American Society of Mechanical Engineers (ASME), American Gas Association (AGA), American Refrigeration Institute (ARI), and Underwriters Laboratories (UL), submit proof of such conformance.

      2) If an organization uses a label or listing to indicate compliance with a particular reference standard, the labor or listing will be acceptable evidence, unless otherwise specified in the individual sections.

   b. Independent Testing Organization Certificate

      1) In lieu of the label or listing, submit a certificate from an independent testing organization, competent to perform testing and approved by the Engineer.

      2) The certificate shall state that the item has been tested in accordance with the specified organization's test methods, and that the item complies with the specified organization's reference standard.

L. Operation and Maintenance Manuals

1. The O&M Manuals shall be compiled and submitted to the Engineer in accordance with Section 01300, *Shop Drawings, Submittals and Samples*, and 01730, *Operation and Maintenance Data*.

2. O&M Manuals shall be provided for each piece of equipment including individual components and subsystems of complete assemblies. The section of the manual on operation shall describe the function of each component and its relationship to the system of which it is a part. Where several models, options, or styles are described, the manual shall identify the items actually provided.

3. All data furnished shall conform to the installation as constructed. Cuts showing other equipment and data not applicable to the installation shall be crossed out and where practical shall be omitted from the manual. The assembly of the manual shall be in a logical manner and each section shall be indexed in the Table of Contents.

4. ***Each manufacturer shall outline a maintenance procedure for his equipment installed and the Contractor shall then compile these procedures in a logical manner to provide a procedure for the operating personnel of the Owner to follow in their day to day operation of the facility***.

5. Operation and maintenance manuals specified herein are in addition to any operation, maintenance, or installation instructions by the Contractor to install, test, and start up equipment.

6. Prepare and include additional data when the need for such data becomes apparent during instruction of the Owner's personnel.

7. Additional requirements for Operation and Maintenance Data

   a. The Contractor shall refer to the respective Sections of the Specifications.

   b. ***In addition to standard O&M Manuals, all manufacturers supplying equipment and products specified herein shall also submit their operation and maintenance manuals and data to the System Integrator for this Project on CD/DVD/BD's in Corel WordPerfect (latest version), Microsoft Word (latest version), or text, "txt", formats. All graphic files shall be in BMP, PCX, CDR, JPEG, DWG or DXF formats (integrators preference for the system shall be required). All O&M Manual files shall also be submitted electronically on CD/DVD/BD's to the Engineer in both PDF and JPEG formats, no exceptions.***

   c. ***The System Integrator shall be responsible to configure and compile the O&M Manuals into "hypertext" window help files for use as computer "on-line" help screens for equipment operation and maintenance. The System Integrator shall return all hypertext files to the equipment and product manufacturer's for review and approval prior to introducing them into the SCADA System at the treatment facility.***

M. Delivery, Storage and Handling

1. Handle, store and protect equipment and materials to prevent damage before and during installation in accordance with the manufacturer's recommendations, and as approved by the Engineer.

2. ***Replace damaged or defective items at no additional cost to the Owner***.

N. Posted Operating Instructions

1. Posted operating instructions shall be provided for each system and principal item of equipment as specified in the technical sections for the use of the operation and maintenance personnel. The operating instructions shall include the following:

   a. System Descriptive Information

      1) Wiring diagrams, control diagrams, piping diagrams, control sequence and operating points for each principal system and item of equipment.

      2) Post instructions where directed.

   b. Equipment Instructions

      1) ***Attach to or post adjacent to each principal item of equipment and include directions for Start-up, proper adjustment, operating, lubrication, and shutdown procedures; safety precautions, procedure in the event of equipment failure; and other areas as recommended by the manufacturer or each system or item of equipment***.

2. ***Print or engrave, and frame under glass or in approved laminated plastic***. Operating instructions exposed to the weather shall be made of weatherproof materials or enclosed to be weather protected. Operating instructions shall not fade when exposed to sunlight and shall be secured to prevent easy removal or peeling.

O. Electrical Requirements

1. Provide electrical components of mechanical equipment and systems such as motors, controllers, contactors and disconnects under Division 11, *Equipment* or Division 15, *Mechanical*, except that controllers indicated as part of motor control centers shall be provided under Division 16, *Electrical*; these components shall meet the minimum requirements as specified in Division 16, *Electrical*, and all additional requirements specified in the section covering the associated mechanical equipment.

2. Extended voltage range motors will not be permitted. Provide interconnecting wiring for components of packaged equipment as an integral part of the equipment. Interconnecting power wiring and conduit for field erected equipment and control wiring rated at 100 V or higher and conduit shall be as specified in Division 16.

3. Control wiring rated at one hundred (100) volts or less and conduit shall be as specified in Division 13, *Special Construction*, Division 15, *Mechanical*, and Division 16, *Electrical*.

P. Instructions to Operating Personnel

1. When specified in other sections, furnish the services of a competent instructor to give full instruction to the Owner's operating personnel in the adjustment, operation, and maintenance, including pertinent safety requirements, of the specified equipment or system.

2. Instructors shall be thoroughly familiar with all parts of the installation and shall be trained in operating theory as well as practical operation and maintenance work.

3. Instruction shall be given during the first regular work week after the equipment or system that has been accepted and turned over to the Owner for regular operation.

4. The number of man-days (8 hours per day) of instruction furnished shall be as specified in the individual section. When more than four (4) man-days of instruction are specified, use approximately half of the time for classroom instruction. Use other time for instruction with the equipment or system.

5. When significant changes or modifications in the equipment or system are made under the terms of the contract, provide additional instruction to acquaint the operating personnel with the changes or modifications.

1.09 Protective Coatings

A. All machined surfaces and shafting shall be cleaned and protected from corrosion by the proper type and amount of coating necessary to assure protection during shipment and prior to installation.

B. Oil lubricated gearing, bearings, etc. are to be shipped with an oil soluble protective coating as recommended by the equipment manufacturer.

C. Motors, reducers and electric controls shall have the standard factory finish prior to delivery.

D. Refer to Section 09905, *Piping, Valve and Equipment Identification System*, for painting of equipment and piping and Section 09900, *Painting*, for general painting.

1.10 Product Delivery, Storage and Handling

A. Packaging

1. All equipment to be provided shall be suitably packaged to facilitate handling and protect against damage during transit and storage. All equipment shall be boxed,

crated, or otherwise completely enclosed and protected during shipment, handling, and storage.

2. All equipment shall be protected from exposure to the elements and shall be kept thoroughly dry at all times.

B. Protection

1. All machined surfaces and shafting shall be cleaned and protected from corrosion by the proper type and amount of coating necessary to assure protection during shipment and prior to installation. Painted surfaces shall be protected against impact, abrasion, discoloration, and other damage as specified in Section 09900, *Painting* and Section 09905, *Piping, Valve and Equipment Identification System*.

2. ***All painted surfaces which are damaged prior to acceptance of equipment shall be repainted*** to the satisfaction of Engineer.

C. Lubrication

1. Grease and lubricating oil shall be applied to all bearings and similar items as necessary to prevent damage during shipment and storage.

D. Marking

1. ***Each item of equipment shall be tagged or marked*** as identified in the delivery schedule or on the Shop Drawings.

2. Complete packing lists and bills of material shall be included with each shipment.

E. Fabricated Assemblies

1. Fabricated sub-assemblies, if any, shall be shipped in convenient sections as permitted by carrier regulations and shall be properly match-marked for ease of field erection.

F. Responsibility

1. ***The Contractor shall be responsible for all material, equipment, and supplies sold and delivered to the site*** under this Contract, or directly purchased by the Owner, until Final Project Acceptance by the Owner. In the event any such material, equipment, and supplies are lost, stolen, damaged, or destroyed prior to Final Project Acceptance, the Contractor shall replace same without additional cost to the Owner.

2. Should the Contractor fail to take proper action on storage and handling of equipment supplied under this Contract, or ODP equipment, within seven (7) days after written notice to do so has been given, the Owner retains the right to correct all deficiencies noted in previously transmitted written notice and deduct the cost associated with these corrections from the Contractor's Contract.

3. These costs may be comprised of expenditures for labor, equipment usage, administrative, clerical, engineering, and any other costs associated with making the necessary corrections.

G. Delivery

1. The Contractor shall arrange deliveries of products in accordance with construction schedules and coordinate to avoid conflict with work and conditions at the site.

   a. ***The Contractor shall deliver products in an undamaged condition***, in the manufacturer's original containers or packaging, with identifying labels intact and legible.

   b. Immediately on delivery, ***the Contractor shall inspect all shipments to assure compliance*** with requirements of Contract Documents and accepted submittals, and that products are properly protected and undamaged.

   c. ***Under no circumstances shall the Contractor deliver equipment to the site more than one (1) month prior to installation without written authorization from the Engineer.*** Operation and maintenance data shall be submitted to the Engineer for review prior to shipment of equipment as described in Section 01730, *Operation and Maintenance Data*.

H. Storage and Protection of Products

1. The Contractor shall furnish a covered, weather-protected storage structure providing a clean, dry non-corrosive environment for all mechanical equipment, valves, electrical and instrumentation equipment, and special equipment to be incorporated into this Project.

2. Storage of equipment shall be in strict accordance with the "Instructions for Storage" of each equipment supplier and manufacturer including connection of space heaters, and placing of storage lubricants in equipment. Corroded, damaged, or deteriorated equipment and parts shall be replaced before acceptance of the Project. Equipment and materials not properly stored will not be included in a payment application.

3. ***The Contractor shall store products subject to damage by the elements in weathertight enclosures***.

4. The Contractor shall maintain temperature and humidity within the ranges required by manufacturer's instructions.

5. ***The Contractor shall store fabricated products above the ground, on blocking or skids, to prevent soiling or staining***. The Contractor shall cover products which are subject to deterioration with impervious sheet coverings and provide adequate ventilation to avoid condensation.

6. The Contractor shall store loose granular materials in a well-drained area on solid surfaces to prevent mixing with foreign matter.

7. All materials and equipment to be incorporated in the Work shall be handled and stored by the Contractor before, during, and after shipment in a manner to prevent warping, twisting, bending, breaking, chipping, rusting, and any injury, theft, or damage of any kind whatsoever to the material or equipment.

8. ***Cement, sand, and lime shall be stored under a roof and off the ground, and shall be kept completely dry at all times***. All structural and miscellaneous steel and reinforcing steel shall be stored off the ground or otherwise to prevent accumulations of dirt or grease, and in a position to prevent accumulations of standing water, staining, chipping, or cracking.

9. All materials which, in the opinion of the Engineer, have become damaged and are unfit for the use intended or specified shall be promptly removed from the site of the Work and the Contractor shall receive no compensation for the damaged material or its removal.

10. The Contractor shall arrange storage in a manner to provide easy access for inspection. The Contractor shall make periodic inspections of stored products to assure products are maintained under specified conditions, and free from damage or deterioration.

11. Protection After Installation

    a. ***The Contractor shall provide substantial coverings as necessary to protect installed products from damage*** from traffic and subsequent construction operations.

    b. The Contractor shall remove covering when no longer needed.

I. Extended Storage Requirements for Equipment

1. Because of the long period allowed for construction, special attention shall be given to extended storage and handling of equipment onsite. As a minimum, the procedure specified herein shall be followed:

a. If equipment will be stored onsite for more than one (1) month prior to incorporation into the Work, the Contractor shall submit a written request to the Engineer outlining any special provision to be made to protect and maintain the equipment while it is being stored. All such provisions shall be acceptable to the Owner. No equipment shall be stored on-site for more than one (1) month without prior written authorization from the Engineer.

b. All equipment having moving parts including gears, electric motors, and/or instruments shall be stored in a temperature and humidity controlled building accepted by the Engineer, until such time as the equipment is to be installed.

c. All equipment shall be stored fully lubricated with oil and grease unless otherwise instructed by the manufacturer.

d. Manufacturer's storage instructions shall be carefully studied by the Contractor and reviewed by him with the Engineer. These instructions shall be carefully followed and a written record of this review kept by the Contractor.

e. ***Moving parts shall be rotated a minimum of once weekly to ensure proper lubrication and to avoid metal-to-metal "welding"***. ***Upon installation of the equipment the Contractor shall start the equipment and operate, loaded when possible, once weekly for an adequate period of time to ensure that the equipment does not deteriorate from lack of use.***

f. ***Lubricants shall be changed upon completion of installation and as frequently as required thereafter during the period between installation and acceptance***. Mechanical equipment to be used in the Work, if stored for longer than ninety (90) days, shall have the bearings cleaned, flushed, and lubricated prior to testing and startup, at no extra cost to the Owner.

g. ***Prior to acceptance of the equipment, the Contractor shall have the manufacturer inspect the equipment and certify that its condition has not been detrimentally affected by the long storage period***. Such certifications by the manufacturer shall be deemed to mean that the equipment is judged by the manufacturer to be in a condition equal to that of equipment that has been shipped, installed, tested, and accepted in a minimum time period. As such, ***the manufacturer will guarantee the equipment, equally in both instances***. If such a certification is not given, the equipment shall be judged to be defective, and it shall be removed and replaced at the Contractor's expense.

h. ***A maintenance log shall be maintained by the Contractor*** outlining the schedule of maintenance required for each piece of equipment as well as the date on which the maintenance was actually performed and the initials of the individual performing the work. The Contractor shall submit a copy of the maintenance log monthly with his application for payment.

1.11 Pipe and Valve Identification

A. Pipe Identification

1. All exposed pipe shall have code letters and flow arrows painted per Section 09905, *Piping, Valve and Equipment Identification System*. The mechanical contractor shall ensure that the pipes are properly marked.

2. All underground pipe shall be located by laying plastic warning tape continuously along the run of pipe per Section 09905, *Piping, Valve and Equipment Identification System*.

B. Valve identification

1. The Contractor shall provide a coded and numbered identification tag on all valves, per Section 09905, *Piping, Valve and Equipment Identification System*.

1.12 Nameplates

A. Provide identification nameplates for all equipment, controls, and apparatus where nameplates and/or data plates are not specified elsewhere.

1. Equipment and apparatus nameplates shall be fabricated from 1½-inch high corrosion resistant metal with one (1) inch high cut-in black letters, permanently secured with stainless steel screws.

2. Controls and switches shall be labeled with one (1) inch high black laminated plastic with ½-inch white letters to designate functions.

3. The Contractor shall submit a nameplate schedule (proper names and designations) and sample to the Engineer for approval prior to fabrication of the nameplates.

B. ***Each piece of equipment shall be provided with a stainless steel data plate securely fastened*** in a conspicuous place and clearly inscribed with the equipment manufacturer's name, year of manufacture, serial number and principal rating data. These data plates shall not be painted.

1.13 Equipment Cleaning

A. All equipment, piping, duct work, insulation and other work provided under this Division and to receive finish painting by the Contractor shall be thoroughly cleaned and ready for finish painting.

B. ***Thoroughly inspect all items of equipment and any items dented, scratched or otherwise damaged in any manner shall be replaced or repaired and painted to match original finish.*** All items so repaired and refinished shall be brought to the attention of the Engineer for inspection and approval.

1.14 System Cleaning

A. ***Each system of piping shall be blown through, washed out and/or flushed after completion*** to remove grit, dirt, sand, etc., from coils and piping for as long a time as required to thoroughly clean the apparatus.

B. All elements within the system that may be damaged by the cleaning operation shall be removed or otherwise protected during the operation.

C. Repair or replace any control valves or other system components which do not function properly due to damage during the cleaning operation or because of imperfect cleaning of any piping system.

D. ***All strainers shall be inspected and cleaned as often as required*** and left in a clean condition at project completion.

1.15 Protection of Piping, Duct Work and Appurtenances

A. ***All duct work, piping, appurtenances, and openings furnished and installed under this Division shall be protected*** from dirt, foreign objects, and damage during the construction period. Damaged piping, duct work or other appurtenances shall be replaced without additional cost to the Owner, should the damage occur prior to final acceptance of the work by the Owner. As soon as installed, all metal plated or polished fixture trimmings shall be thoroughly covered with non-corrosive grease which shall be maintained until all construction work is completed.

B. Suitable precautions against freezing shall be taken during cold weather.

C. All open ends of piping shall be closed by suitable cap or plug fitting to prevent obstruction and damage.

D. The Contractor shall also be responsible for the work of other trades that may be damaged or disturbed in the course of this work and he shall restore it to the condition existing prior to damage without additional cost to the Owner.

1.16 Field Instructions

A. Upon completion and start-up of the work and at a time designated, the Contractor shall provide the services of one or more project engineers to work in conjunction with the service engineers and suppliers' representative in instructing the Owner's personnel in the proper operation and maintenance of the equipment.

B. The project engineer(s) shall also be required to start-up and operate under normal working conditions the entire installation as a unit. These field instructions shall cover all the items contained in the bound instructions.

C. The instruction period shall be given at the time the facility is operating under normal conditions.

D. In addition to these requirements, the Contractor shall provide field instructions as specified under the various Sections of the Specifications.

1.17 Framed Instructions

A. ***Approved wiring and control diagrams showing the complete layout of the entire system, including equipment, piping, valves and control sequence, framed in laminated plastic, shall be posted within the associated control panels or where directed by the Owner***.

B. In addition, condensed operating instructions explaining preventive maintenance procedures, methods of checking the system for normal safety operation and procedures for safely starting and stopping the system shall be prepared in typed form, framed as specified above for the wiring and control diagrams and posted beside the diagrams.

C. ***Proposed diagrams, instructions and other sheets shall be submitted for approval prior to posting***. The framed instructions shall be posted before acceptance testing of the systems.

1.18 Project Record Drawings

A. Project Record Drawings shall be submitted to the Engineer before Final Project Acceptance, in accordance with the requirements of Section 01720, *Project Record Documents*. In addition to the details included in Section 01720, submit the following:

1. Exact vertical and horizontal locations of all buried pipes and conduits, giving dimensions from fixed reference points.

2. A survey shall show any deviations from contract drawings and such changes shall be reviewed prior to approval, for all tanks and structures.

3. Drawings shall show routing of piping indicating valves, cleanouts, and access panels.

1.19 Guarantee and Warranties

A. ***The Contractor shall guarantee all work, materials, equipment, etc. against defects for a period of two (2) years from the date of the Final Project Acceptance by the Owner***, unless specified otherwise in the Contract Documents, that all the equipment has the capacity specified and that it will operate without excess noise or vibration caused by improper installation.

B. In addition to the guarantee, the Contractor shall provide the performance warranties as specified for the equipment in the various sections.

C. The manufacturer's written warranty shall be submitted for all major pieces of equipment, as specified in Section 01740, *Warranties and Bonds*.

1.20 Spare Parts and Special Tools

A. Spare parts and Special Tools for certain equipment provided under Division 11, *Equipment*, Division 13, *Special Construction*, Division 15, *Mechanical*, and Division 16, *Electrical* have been specified in the pertinent sections of the specifications.

B. The Contractor shall collect and store all spare parts in an area to be designated by the Engineer. In addition, the Contractor shall furnish to the Engineer an inventory listing of all spare parts and special tools, the equipment they are associated with, and the name, address, telephone and FAX numbers, e-mail address and website of the supplier.

2. MATERIALS

2.01 General Product Compliance

A. <u>General</u>

1. The compliance requirements, for individual products as indicated in the Contract Documents, are multiple in nature and may include generic, descriptive, proprietary,

performance, prescriptive, compliance with standards, compliance with codes, conformance with graphic details and other similar forms and methods of indicating requirements, all of which must be complied with.

2. Also “allowances” and similar provisions of the Contract Documents will have a bearing on the selection process.

B. Procedures for Selecting Products

1. The Contractor’s options in selecting products are limited by the requirements of the Contract Documents and governing regulations. They are not controlled by industry traditions or procedures experienced by the Contractor on previous construction projects.

2. Required procedures include, but are not limited to, the following for various indicated methods of specifying.

C. Single Product/Manufacturer Name as Basis of Design

1. Provide the product indicated, unless “equivalent” products with listed salient features for equivalency are permitted.

2. Advise the Engineer before proceeding, where known that the named product is not a feasible or acceptable selection.

D. Two or More Product/Manufacturer Names as Basis of Design

1. Provide one of the named products at the Contractor’s option; but excluding products that do not comply with the requirements.

2. Do not provide or offer to provide an unnamed product, except where none of the named products comply with the requirements or are a feasible selection; advise the Engineer before proceeding.

E. “Named”, except as otherwise indicated, is defined to mean the manufacturer’s name for a product, as recorded in published product literature, of the latest issue as of the date of the Contract Documents. Refer requests to use products of a later (or earlier) model to the Engineer for acceptance before proceeding.

F. Where only compliance with an imposed standard, code or regulation is required, selection from among products which comply with the requirements including those standards, codes and regulations, is the Contractor’s option.

G. Performance Requirements

1. Provide products which comply with the specific performances indicated, and that are recommended by the manufacturer for the application indicated.

2. The manufacturer's recommendations may be contained in published product literature, or by the manufacturer's individual certification of performance.

3. General overall performance of a product is implied where the product is specified for specific performances.

H. Descriptive Specification Requirements

1. Provide products that have been produced in accordance with descriptive requirements, using specified ingredients and components, and complying with specified requirements for mixing, fabricating, curing, finishing, testing and similar operations in the manufacturing process.

I. Visual Matching

1. Where matching an established sample is required, the final judgement of whether a product proposed by the Contractor matches the sample satisfactorily will be determined by the Engineer.

2. Where there is no product available within the specified product category that matches the sample satisfactorily and also complies with other specified requirements, comply with the provisions of the Contract Documents concerning "Change Orders" for the selection of a matching product in another product category, or for non-compliance with specified requirements.

J. Visual Selection

1. Except as otherwise noted, where specified product requirement include the phrase "... as selected from the manufacturer's standard colors, patterns, textures ....." or similar phrases, the Contractor has the option of selecting the product and manufacturer, provided the selection complies with other specified requirements.

2. The Engineer is subsequently responsible for selecting the color, pattern and texture from the product line selected by the Contractor.

2.02 Fabrication and Manufacture

A. Workmanship and Materials

1. ***The Contractor shall guarantee all equipment against faulty or inadequate design, improper assembly or erection, defective workmanship or materials, and leakage, breakage or other failure.*** Materials shall be suitable for all service conditions.

2. All equipment shall be designed, fabricated and assembled in accordance with recognized and acceptable engineering and shop practice.

3. Individual parts shall be manufactured to standard sizes and gages so that repair parts, furnished at any time, can be installed in the field. Like parts of duplicate units shall be interchangeable.

4. ***Equipment shall not have been in service at any time prior to delivery***, except as required by tests.

5. Except where otherwise specified, structural and miscellaneous fabricated steel used in equipment shall conform to AISC standards. All structural members shall be designed for shock or vibratory loads. Unless otherwise specified, all steel which will be submerged, all or in part, during normal operation of the equipment shall be at least ¼-inch thick.

B. Lubrication

1. Equipment shall be adequately lubricated by systems which require attention no more frequently than weekly during continuous operation. Lubrication systems shall not require attention during startup or shutdown and shall not waste lubricants.

2. Lubricants of the type recommended by the equipment manufacturer shall be furnished by the Contractor in sufficient quantity to fill all lubricant reservoirs and to replace all consumption during testing, startup, and operation prior to acceptance of equipment by Owner. Unless otherwise specified or permitted, the use of synthetic lubricants will not be acceptable.

3. Lubrication facilities shall be convenient and accessible. Oil drains and fill openings shall be easily accessible from the normal operating area or platform.

4. Drains shall allow for convenient collection of waste oil in containers from the normal operating area or platform without removing the unit from its normal installed position.

C. Drive Units

1. Unless otherwise specified, drive units furnished with equipment shall meet the following requirements. The nominal input horsepower rating of each gear or speed reducer shall be at least equal to the nameplate horsepower of the drive motor. ***Drive units shall be designed for twenty-four (24) hour continuous service***.

2. Gear Reducers

   a. Each gear reducer shall be a totally enclosed unit with oil or grease lubricated anti-friction, rolling element bearings throughout.

   b. Helical, spiral bevel, combination bevel-helical, and worm gear reducers ***shall have a service factor of at least 1.50*** based on the nameplate horsepower of the drive motor. Shaft-mounted and flange-mounted gear reducers shall be rated AGMA Class 11. Helical gear reducers shall have a ***gear strength rating to catalog rating of 1.5.*** Each gear reducer shall bear an AGMA nameplate.

   c. ***The thermal horsepower rating of each unit shall equal or exceed the nameplate horsepower of the drive motor***. During continuous operation, the maximum sump oil temperature shall not rise more than 100°F above the ambient air temperature in the vicinity of the unit and shall not exceed 200°F.

   d. Each grease lubricated bearing shall be installed in a bearing housing designed to facilitate periodic regreasing of the bearing by means of a manually operated grease gun. Each bearing housing shall be designed to evenly distribute new grease, to properly dispose of old grease, and to prevent overgreasing of the bearing. The use of permanently sealed, grease lubricated bearings will not be acceptable. An internal or external oil pump and appurtenances shall be provided if required to properly lubricate oil lubricated bearings. A dipstick or sight glass arranged to permit visual inspection of lubricant level shall be provided on each unit.

   e. Gear reducers which require the removal of parts or periodic disassembly of the unit for cleaning and manual regreasing of bearings will not be acceptable.

   f. Certification shall be furnished by the gear reducer manufacturer indicating that the intended application of each unit has been reviewed in detail by the manufacturer and that the unit provided is fully compatible with the conditions of installation and service.

D. Safety Guards

1. ***All belt or chain drives, fan blades, couplings, and other moving or rotating parts shall be covered on all sides by a "safety guard"***. Safety guards shall be

fabricated form 16 USS gauge or heavier galvanized aluminum-clad sheet steel or ½-inch mesh galvanized expanded metal or Type 316 stainless steel mesh.

2. Each guard shall be designed for easy installation and removal.

3. All necessary supports and accessories shall be provided for each guard. Supports and accessories, including bolts, shall be galvanized. ***All safety guards in outdoor locations shall be designed to prevent the entrance of rain and dripping water***.

2.03 Equipment Foundation and Support

A. All foundations, platforms and hangers required for the proper installation of equipment shall be furnished and installed by the Contractor.

B. All floor mounted equipment shall be mounted on a reinforced concrete pad of four (4) inches in height, as a minimum, or as required by the Contract Drawings.

C. ***Concrete for pads shall be Class B concrete (3,000 psi)*** and shall conform to the requirements of Section 03300, *Cast-in-Place Concrete*.

D. Reinforcement shall be as shown on the Contract Drawings or as specified in Section 03200, *Concrete Reinforcement*, and all edges shall be chamfered.

E. Cast iron or welded steel baseplates shall be provided for pumps, compressors, and other equipment. Each unit and its drive assembly shall be supported on a single baseplate of neat design. Baseplates shall have pads for anchoring all components and adequate grout holes. Baseplates for pumps shall have a means for collecting leakage and a threaded drain connection. Baseplates shall be anchored to the concrete base with suitable anchor bolts and the space beneath filled with grout as specified in Section 03600, *Grout*. All open equipment bases shall be filled with non-shrinking grout sloped to drain to the perimeter of the base.

F. The Contractor shall furnish, install, and protect all necessary guides, bearing plates, anchor and attachment bolts, and all other appurtenances required for the installation of equipment. These shall be of ample size and strength for the purpose intended.

G. ***Equipment suppliers shall furnish suitable anchor bolts for each item of equipment***. Anchor bolts, together with templates or setting drawings, shall be delivered sufficiently early to permit setting the anchor bolts when the structural concrete is placed. Anchor bolts shall, unless otherwise specified, have a minimum diameter of ¾-inch. Unless otherwise indicated or specified, anchor bolts for items of equipment mounted on baseplates shall be long enough to permit 1½-inches of grout beneath the baseplate and to provide adequate anchorage into structural concrete.

H. ***Anchor bolts required or indicated by the Contract Drawings shall be furnished and built into the concrete foundations***.

I. Structural steel supports and miscellaneous steel required for supporting and/or hanging equipment and piping furnished under this Division shall be provided and installed by Contractor.

J. All foundations, anchor pads, piers, inertia blocks, pipe supports, and structural steel supports shall be built to template and reinforced as required for loads imposed on them.

K. ***The Contractor shall assume all responsibility for sizes, locations and design of all foundations, anchor pads, piers, inertia blocks, pipe supports, curbs and structural steel supports***.

2.04 Vibration Isolation

A. ***All rotating or reciprocating equipment unless otherwise directed shall be mounted on vibration isolators and provided with flexible connections*** to isolate the equipment from the structure and/or installation.

B. Isolators shall produce uniform loading and deflections, regardless of equipment weight distribution, and shall be the product of a manufacturer regularly engaged in the production of such items and who publishes engineering and selection data.

2.05 Shop Painting

A. All steel and iron surfaces shall be protected by suitable paint or coatings applied in the shop. Surfaces which will be inaccessible after assembly shall be protected for the life of the equipment. Exposed surfaces shall be finished smooth, thoroughly cleaned and filled as necessary to provide a smooth uniform base for painting.

B. Electric motors, speed reducers, starters, and other self-contained or enclosed components shall be shop primed or finished with a high-grade oil-resistant enamel suitable for coating in the field with an alkyd enamel.

C. ***All coatings shall be suitable for the environment where the equipment is installed***.

D. Surfaces to be painted after installation shall be prepared for painting as recommended by the paint manufacturer for the intended service, and then shop painted with one or

more coats of the specified primer. Unless otherwise specified, the shop primer for steel and iron surfaces shall be Cook "391-167 Barrier Coat", Koppers "No. 10 Inhibitive Primer", or equal.

E. Machined, polished, and nonferrous surfaces which are not to be painted shall be coated with rust-preventive compound, Houghton "Rust Veto 344", Rust-Oleum "R-9", or equal.

2.06 Noise Attenuation and Control

A. Unless otherwise specified, the maximum permissible noise level for a complete installed piece of equipment located within or outside a structure ***shall not exceed seventy-five (75) dB at three (3) feet***. A complete piece of equipment includes the driver and driven equipment, plus any intermediate couplings, gears, and auxiliaries.

B. All equipment provided herein that is specified to be factory and field tested shall be tested as specified herein for noise generation at the equipment manufacturer's expense.

C. Maximum permissible noise (sound pressure) levels shall be in decibels as read on the "A" weighting scale of a standard sound level meter (dB). All measurements shall be made in relation to a reference pressure of 0.0002 microbar.

D. Measurements of emitted noise levels shall be made on a sound level meter meeting at least the Type 2 requirements set forth in ANSI S 1.4 *Specification for Sound Level Meters*. The sound level meter shall be set on the "A" scale and to slow response. Unless otherwise specified for a particular piece of equipment, the point of measurement of sound level shall be made at the specified distance from any major surface along the entire perimeter and at mid-height of the piece of equipment, or at the specified distance from an outer major surface encompassing the sound source including inlets or outlets.

2.07 Fire Hazard Rating

A. All piping, duct work, and equipment insulation, fasteners, and jacketing materials shall have ***a fire hazard rating not to exceed 25 for flame spread, 50 for fuel contributed, and 50 for smoke developed***. Rating shall be determined by ASTM Designation E84, *Surface Burning Characteristics of Building Materials*. Corresponding ratings determined by Underwriters' Laboratories, Inc., UL-723, *Test Method for Fire Hazard Classification of Building Materials,* will also be acceptable.

B. Fire hazard ratings for materials proposed for use shall be substantiated by test results from the National Bureau of Standards, a certified report from an approved testing laboratory, or a UL label or listing.

C. Flame-proofing treatments will not be accepted.

2.08 Accessories

A. Special Tools and Accessories

1. ***Equipment requiring periodic repair and adjustment shall be furnished complete with all special tools, instruments, and accessories required for proper maintenance***. Equipment requiring special devices for lifting or handling shall be furnished complete with those devices.

B. Fasteners

1. ***All nuts, bolts, anchors, washers, and other fastening devices shall be a minimum of Type 304 stainless steel unless otherwise specified***.

C. Hardware

1. All hardware and accessory fittings shall be of a type designed, intended or appropriate for the use, and complement the items with which they are used, and ***shall have corrosion protection suitable for the atmosphere in which they are installed.***

2. ***All such hardware shall be U.S. Standard Size***.

3. EXECUTION

3.01 Field Supervision

A. The Contractor shall be responsible for compliance with all laws and ordinances governing his work.

B. ***The Contractor shall have, at all times, a competent, English speaking superintendent on the Project site***.

3.02 Operation and Maintenance

A. Repairs and Replacement - Performance

1. Repair and replacements required shall be accomplished as promptly as possible.

2. This includes overtime work required to make emergency repairs as promptly as possible.

B. Repairs and Replacement - Expense

1. Any repair or replacement required because of established vandalism, fire, windstorm, or other Acts of God, shall be accomplished by the Contractor at his cost prior to Final Project Acceptance and by the Owner and at the Owner's expense after Final Project Acceptance by the Owner.

C. Owner's Inspection

1. Periodic inspections and year-end inspections to determine if the maintenance services have been properly performed will be made by the Engineer.

2. Evidence of improper performance of service will result in the prompt notification of the Contractor's bonding company.

3.03 Equipment and Materials

A. ***Equipment and materials used in this installation shall be "new", "unused" and of the best quality***, and unless otherwise noted, shall be the standard catalog items of the various manufacturer's and shall be the manufacturer's latest design.

B. Equipment and materials shall be installed to fit the allotted space with reasonable access room for servicing and repairs.

C. Pipe openings shall be kept closed with approved caps or plugs prior to installation. Plumbing fixtures, valves and equipment shall be adequately kept covered and protected against weather, dust, and/or chemical or mechanical injury, and delivered and installed in a condition acceptable to the Engineer. All such items not acceptable shall be replaced at no additional cost to the Owner.

D. Equipment of similar nature shall be identical. For example, all unit ventilators must be of the same manufacture and of the same style.

3.04 Access

A. The Contractor shall inform himself fully regarding the peculiarities and limitations of the space available for the installation of materials under this Contract. All devices such as valves, traps, strainers, cleanouts, controls (manual, electric, pneumatic), and other such apparatus, which are concealed above the ceilings or in furred spaces, shall be readily accessible.

B. Access panels shall be painted to match the adjacent surfaces, unless provided in stainless steel or aluminum.

3.05 Interferences

A. Where interferences occur, and departures from the indicated arrangement are required, the Contractor shall consult with the other trades involved and come to an agreement as to changed locations and elevations of the ductwork and/or piping and shall obtain approval from the Engineer prior to implementing the proposed changes.

3.06 Excavation

A. The Contractor shall do all excavating and backfilling necessary for installation of the Work. The Contractor shall provide the required compacting.

B. Pipe trenches shall be sufficiently straight between designated angle points to permit the pipe to be laid true to line in the approximate center of the trench.

C. All excavations outside the fenced “limit of construction” area shall be backfilled at the end of each work day and adequately marked with barricades, barriers, flashing lights, etc., appropriate to protect public life and safety.

3.07 Installation of Equipment

A. The Contractor's attention is called to the fact that the project area will be open to public viewing. Therefore, it is the intention of these specifications that all finished work be suitable for such purpose.

B. The equipment shall not be installed or operated except by, or with the guidance of, qualified personnel having the knowledge and experience necessary for proper results. When so specified, or when employees of the Contractor or his subcontractors are not qualified, such personnel shall be field representatives of the manufacturer of the equipment or materials being installed.

C. The Contractor shall have on-site sufficient proper construction equipment and machinery of ample capacity to facilitate the work and to handle all emergencies normally encountered in work of this character. To minimize field erection problems, mechanical units shall be factory assembled when practical.

D. Equipment shall be erected in a neat and workmanlike manner on the foundations and supports at the locations and elevations shown on the Contract Drawings, unless otherwise directed by the Engineer during installation.

E. All equipment shall be installed in such a manner as to provide access for routine maintenance including lubrication.

F. ***All rotating equipment shall be statically and dynamically balanced***. Unless otherwise specified, the vibration allowance in the units shall not exceed the upper limits as established by the manufacturer.

G. Equipment of a portable nature which requires no installation shall be delivered to a location designated by the Owner.

H. All valves and operators shall be installed in the position shown on the Contract Drawings or as directed by the Engineer if not shown.

I. Tolerances

1. ***Precision gauges and levels shall be used in setting all equipment***. All piping and equipment shall be perfectly aligned, horizontally and vertically.

2. ***Tolerances for piping and equipment installation shall be 1/8-inch in 50 feet horizontal and vertically***.

J. Alignment and Level

1. The equipment shall be brought to proper level by shims (¼-inch maximum). After the machine has been leveled and aligned, the nuts on the anchor bolts shall be tightened to bind the machine firmly into place against the wedges or shims. Grout shall be as specified in Section 03600, *Grout*.

K. Contact of Dissimilar Metals

1. Where the contact of dissimilar metal may cause electrolysis and where aluminum will contact concrete, mortar, or plaster, the contact surface of the metals shall be separated using not less than one (1) coat of zinc chromate primer and one (1) heavy coat of aluminum pigmented asphalt paint on each surface.

2. The Contractor is referred to Section 09900, *Painting*.

L. Grouting

1. The grout shall be tamped into position with a board, steel bar or other tool. Tamping should not be so hard as to raise or otherwise displace the plate.

M. Cutting and Patching

1. All cutting and patching necessary for the work shall be performed by the Contractor. Where interferences occur, and departures from indicated arrangements are required, the Contractor shall coordinate the mechanical work with the other trades involved and make a determination as to changed locations and elevations of ductwork and/or piping and shall obtain approval from the Engineer for the proposed changes.

2. The Contractor shall furnish and set pipe sleeves and other accessories and frame other necessary openings.

N. Operation

1. All equipment installed under this Contract, including that furnished by Owner or others under separate contract, shall be placed into successful operation according to the written instructions of the manufacturer or the instructions of the manufacturer's field representative.

2. ***All required adjustments, tests, operation checks, and other startup activity shall be provided as part of this Project***.

3.08 Coordination with Other Trades

A. The Contractor shall clean all pipe surfaces and hanger rods free of grease, scale, rust and other foreign matter and prepare those materials that need to be painted. Touch-up all factory finishes marred in construction with factory touch-up kits.

B. Provide motor starters when required for motors specified in the Contract Documents. Provide all control items and wiring diagrams required for this equipment. Electrical items furnished must conform in all respects to the requirements of Division 16, “Electrical”.

C. Where there is a combination of air conditioning ductwork, plumbing, piping, and electrical conduits in the ceilings, walls, piping spaces, and equipment rooms, special care must be exercised to avoid conflict.

1. Where elevations of piping are specified on the Contract Drawings, the installation shall be made with extra care after studying the air conditioning and electrical drawings.

2. Wherever a crossing is indicated, the installation of the plumbing lines shall be coordinated with the electrical and air conditioning subcontractors prior to the installation of any work.

3. Provide the necessary pipe, valves and fittings where required to off-set or re-route piping to clear electrical piping, ducts or conduits.

D. Coordinate the work with other trades to avoid interferences and obtain the proper fit with related work specified in other Divisions of these Contract Documents.

3.09 Lubrication

A. ***The Contractor shall thoroughly lubricate all equipment in accordance with the equipment manufacturer's instructions***. Lubricating oils and greases shall be of type and viscosity as recommended by the equipment manufacturer.

B. All lubricants shall be furnished by the Contractor.

C. All systems requiring oil lubrication for gearing, bearings, etc., are to be flushed with flushing oils as recommended by the equipment manufacturer. This includes all gearings, bearings, etc., regardless of whether they have been shipped with or without oil soluble protective coatings.

D. Following flushing, oil lubricated systems shall be filled with "run-in" oil as recommended by the equipment manufacturer. The equipment will be "run-in" at the no-load condition for a minimum period of two (2) hours. Following "run-in" and inspection, the equipment is to be drained and flushed again with flushing oil as recommended by the equipment manufacturer.

E. The schedule for the above procedures is to be submitted for review by the Engineer at least two (2) weeks prior to the selected procedure starting date. At this time inspection details can be worked out.

F. ***The Contractor shall provide a one (1) year supply of all types of lubricants*** required for the various types of equipment furnished and installed under this Contract. Lubricants shall be in metal containers suitably labeled.

3.10 Cleaning and Adjustment

A. The Contractor shall keep the premises free from accumulation of waste materials or rubbish caused by his employees on the job, and at the completion of the same, he shall leave the site of his work broom clean.

B. Enamelware and plated piping shall be left clean and bright. The Contractor shall take proper precautions to protect his work and equipment from damage and disfigurement.

C. Upon completion of the Work, the Contractor shall clean, oil and grease fans, motors, compressors, pumps, and other running equipment and apparatus and mechanisms as instructed in other sections of this specification.

3.11 Pressure Tests

A. After installation, all piping shall be pressure tested. Piping shall be tested in accordance with Section 15044, *Pressure Testing of Piping*.

B. All tests shall be made in the presence of and to the satisfaction of the Engineer and Owner's representative and also, to the satisfaction of any local or state inspector having jurisdiction.

1. ***Provide not less than seventy-two (72) hours written notice to the Engineer*** and the authority having jurisdiction when it is proposed to make the tests.

2. Any piping or equipment that has been left unprotected and subject to mechanical or other injury in the opinion of the Engineer shall be retested in part or in whole as directed by the Engineer.

3. The piping systems may be tested in sections as the work progresses but no joint or portion of the system shall be left untested.

C. All elements within the system that may be damaged by the testing operation shall be removed or otherwise protected during the operation.

D. All defects and leaks observed during the tests shall be corrected and made tight in an approved manner and the tests repeated until the system is proven tight.

E. Repair all damage done to existing or adjacent work or materials due to or on account of the tests.

F. Provide test pumps, gauges, and other instruments and equipment required for the performance of all tests. Provide all temporary bracing, test plugs, and additional restraint which may be required for test pressures above normal working pressures.

G. ***All tests shall be maintained for as long a time as required to detect all defects and leaks*** but not less than the duration specified for each type of pipe or piping system in this Division.

3.12 Observation of Performance Tests

A. Where the specifications require observation of performance tests by the Engineer or Resident Project Representative, such tests shall comply with Article 1.02, *Quality Assurance* in this specification section.

3.13 Test Operation

A. When equipment is required to be factory tested, ***the results of the tests shall be submitted to the Engineer and approval*** of the test results shall be obtained before shipment of the equipment.

B. When an item of equipment, including controls and instrumentation, has been completely erected, the Contractor shall notify the Engineer, who will designate a time to make such tests as required, and operate the item to the satisfaction of the Engineer. ***All testing shall be done in the presence of the Engineer or Resident Project Representative (RPR)***. "Completely erected" shall mean that the installation is erected, all necessary adjustments have been made, all required utility connections have been made, required lubricants and hydraulic fluid have been added and the unit has been cleaned up and painted (as required).

C. ***The Contractor shall furnish labor, lubricants, and all other materials, equipment and instruments necessary for all tests***.

3.14 Failure of Tests

A. Defects

1. ***Any defects in the equipment, or deviations from the guarantees or requirements of the specifications, shall be promptly corrected by the Contractor by replacements or otherwise***. The decision of the Engineer as to whether or not the Contractor has fulfilled his obligations under the Contract shall be final and conclusive.

2. If the Contractor fails to correct any defects or deviations, or if the replaced equipment, when tested, shall fail again to meet the guarantees or specified

requirements, the Owner, notwithstanding his having made partial payment for such equipment, may reject that equipment and order the Contractor to remove it from the premises at the Contractor's expense.

B. Rejection of Equipment

1. In case the Owner rejects a particular item of equipment, then the Contractor hereby agrees to repay the Owner all sums of money paid to him and the Owner agrees to deliver to the Contractor a bill of sale of all his rights, title, and interest in and to the rejected equipment provided, however, that the equipment shall not be removed from the premises until the Owner obtains from other sources other equipment to take the place of that rejected.

2. The bill of sale shall not abrogate the Owner's right to recover damages for delays, losses or other conditions arising out of the basic Contract.

3. The Owner hereby agrees to obtain the alternate equipment within a reasonable time and the Contractor agrees that the Owner may use the original equipment furnished by him without rental or other charge until the other equipment is obtained.

3.15 Responsibility During Tests

A. ***The Contractor shall be fully responsible for the proper operation of equipment during tests and instruction periods and shall neither have nor make any claim for damage which may occur to equipment*** prior to the time when the Owner formally takes over the operation thereof.

3.16 Equipment Manufacturer's Service Representative

A. ***An experienced, competent, and authorized representative of the manufacturer of each item of equipment shall visit the site of the Work and inspect, check, adjust if necessary, and approve the equipment installation***. In each case, the manufacturer's representative shall be present when the equipment is placed in operation. The manufacturer's representative shall revisit the jobsite as often as necessary until all trouble is corrected and the equipment installation and operation are satisfactory in the opinion of Engineer and Owner.

B. ***All costs relative to services by equipment manufacturer's service representatives shall be borne by the Contractor and be included in the contract amount***.

C. ***A letter of certification and Check-Out Memo, shall be submitted to the Engineer from the manufacturer's representative, upon completion of a facility visit indicating that the equipment has been properly installed and lubricated; is in accurate alignment; is free from any undue stress imposed by connecting piping or anchor bolts; that the facility personnel have been instructed in the proper use of the equipment; and has been operated under full load conditions and that it operated satisfactorily***.

END OF SECTION

SECTION 15041

DISINFECTION OF PIPING AND STRUCTURES

1. GENERAL

1.01 Description

A. Scope of Work

1. Furnish all labor, materials, equipment, incidentals and procedures for disinfection of potable water mains and systems by the continuous feed method and by the slug method. The tablet method to disinfect pipelines is unacceptable.

2. Disinfection of piping in accordance with AWWA C-651 except as modified below.

B. Related Work Specified Elsewhere

Specification Section	Title
15044	Pressure Testing of Piping
15100	Valves and Appurtenances
Division	**Description**
15	Piping

1.02 Quality Assurance

A. Discharge of chlorinated water into watercourses or surface waters is regulated by the National Pollutant Discharge Elimination System (NPDES). Disposal of the chlorinated disinfection water and the flushing water is the Contractor's responsibility.

B. The Contractor shall schedule the rate of flow and locations of discharges in advance to permit review and coordination with the Owner, Engineer and responsible regulatory authorities.

C. Potable water shall be used for chlorination of structures and pipelines.

D. ***The Contractor shall submit a written request for use of water from waterlines of the Owner at least seventy-two (72) hours in advance***.

1.03 Submittals

A. The Contractor shall submit shop drawings of pipe and fittings in accordance with Section 01300, *Shop Drawings, Submittals and Samples*. All submittals shall be in an electronic format (PDF).

B. ***The following items shall be submitted***:

1. Procedures for disinfection of pipelines and/or structures.

2. Materials to be used in the disinfection process.

3. Description and literature on the disinfectant to be used including SDS sheets.

2. PRODUCTS

2.01 Liquid Chlorine

A. Inject with a solution feed chlorination and a water booster pump.

B. Use an experienced operator and follow the instructions of the chlorination manufacturer.

2.02 Sodium Hypochlorite (Solution)

A. Further dilute in water to the desired concentration and pump into the pipeline or structure at a metered rate.

2.03 Calcium Hypochlorite

A. Dissolve in water to a known concentration in a drum and pump into the pipeline or structure at a metered rate.

3. EXECUTION

3.01 Cleaning and Flushing

A. Prior to the disinfection process, all pipelines and structures to be disinfected under this Contract shall be ***cleaned and flushed*** to remove sand, loose dirt, and other debris.

B. Pipelines

1. ***The minimum flushing velocity shall be 2.5 feet per second***. Flushing shall continue until clean water flows from the main. The Contractor shall endeavor to use the minimum amount of flushing water required to complete the work.

2. Temporary blowoffs may be required for the purpose of flushing mains. Temporary blowoffs shall be installed as close as possible to the ends of the main being flushed. Blowoffs installed on the main shall be the same diameter as the main. Temporary blowoffs shall be removed and plugged after the main is flushed. All costs for installing and removing temporary blowoffs shall be at no additional cost to the Owner.

3. Blowoffs and temporary drainage piping used for flushing shall not be discharged into any gravity sewer or pumping station wetwell. The Contractor shall obtain prior approvals from the Engineer and the Owner as to the methods and locations of flushing water discharge.

C. Structures

1. ***All structures to be disinfected shall have the interiors pressure washed and cleaned***.

2. All cleaning water, flushing water and debris shall be removed from the structure.

D. The Owner shall be notified, in writing, at least seventy-two (72) hours prior to flushing water lines.

3.02 Disinfection of Potable Water Lines

A. Before any portion of the potable water piping system is to be placed in service, it shall be disinfected; and its disinfection shall be demonstrated by bacteriological tests conducted in accordance with *Standard Methods for Examination of Water and Wastewater*, latest edition, for the coli-aerogenes group, by an approved laboratory, acceptable to the Engineer, County Health Department and FDEP.

B. ***All pipe, fittings, valves, and all other appurtenances installed for potable water lines shall be disinfected prior to being placed in service***. Disinfection procedures shall be approved by the Engineer and shall be in conformance with ANSI/AWWA C-651, latest revision.

C. Pipe subjected to contaminating materials shall be treated in a manner approved by the Engineer. Should such treatment fail to remove the contaminants from the pipe, the contaminated sections of pipe shall be replaced with new uncontaminated pipe at no additional cost to the Owner.

D. Disinfection of a completed line shall be accomplished using the following procedure:

1. All potable water piping, fittings, valves, and appurtenances shall be disinfected with a chlorine solution with a sufficient concentration such that the ***initial chlorine concentration in the potable water line shall be a minimum of 100 mg/L*** available chlorine, at any point in the line.

2. Chlorine used for the purpose of disinfection shall be sodium hypochlorite (liquid) or high test granular calcium hypochlorite which contains approximately 65 to 70 percent available chlorine by weight. The calcium hypochlorite shall be stored in a cool, dry, and dark environment, prior to its use, to minimize deterioration. The dry calcium hypochlorite will be used to makeup a high concentration chlorine solution which will be used for disinfection. Under no circumstances will undiluted, dry calcium hypochlorite be placed in the pipeline to be disinfected. Upon approval by the Engineer, the Contractor may substitute gaseous chlorine for the above referenced disinfectants. However, the same minimum initial available chlorine residual shall be 100 mg/L.

3. Water from the existing, in-service water line shall be made to flow at a constant, slow rate into the line to be disinfected. Chlorine solution shall be injected or pumped at a regulated rate into the new main, at a point not more than ten (10) feet downstream from the beginning of the new water main. The method of tapping the water main for the chlorine injection point and the location of the tap shall be approved by the Engineer.

4. ***The chlorine solution shall be circulated*** in the water main by opening the water control valve and systematically manipulating hydrants, valves and blowoffs.

5. Water service lines shall be disinfected in a similar manner as that for water mains, including corrective measures, by methods acceptable to the Engineer.

6. The chlorine solution shall remain in the water lines for no less than twenty-four (24) hours, but longer than twenty-four (24) hours if directed by the Engineer.

7. Extreme care shall be exercised at all times to prevent concentrated chlorine solution from entering existing water mains.

E. ***After twenty-four (24) hours, the free residual chlorine concentration in the water line at the pipe extremities shall be at least 20 mg/L***; if not, the water lines shall be re-disinfected as described above.

F. ***Final flushing of lines may proceed after twenty-four (24) hours, provided the free residual chlorine analysis is satisfactory***. Flushing shall be continued until a chlorine residual test shows that lines contain only the normal chlorine residual. Prior to flushing water with high chlorine concentrations, obtain approvals from the Engineer and the Owner as to the methods and locations of discharge.

G. Following disinfection and thorough flushing of the water lines, as specified herein, the Contractor shall furnish all labor and materials required to obtain samples of water from established points of the water line, in accordance with AWWA C-651, in suitable sterilized containers obtained from the County Health Department or approved analytical laboratory. Two (2) series of successive samples shall be obtained at each established sampling point. Each test series will require two (2) samples at each sampling point. The period between each series of samples shall be a minimum of twenty-four (24) hours. Samples shall be delivered by the Contractor to the County Health Department or approved analytical laboratory for bacteriological examination within six (6) hours after sample collection. Samples shall be collected in conformance with the County Health Department standards and lab testing schedule. Prior to collecting samples, the Contractor shall notify the Engineer and the Owner who will have representatives present during sample collection.

H. At a minimum, the following number and location of samples shall be collected:

1. One (1) sample for every 1,000 feet of new potable water line.

2. One (1) sample from the end of the line.

3. One (1) sample from each branch.

4. One (1) sample from each point of connection to an existing potable water main.

5. One (1) sample from each occupied building on the treatment facility site.

I. ***Bacteriological test results will be available approximately forty-eight (48) to seventy-two (72) hours after samples are submitted***. If tests results are unsatisfactory, the Contractor shall immediately re-chlorinate and retest the water lines and proceed with such corrective measures as are necessary to secure disinfected lines. All services shall be re-chlorinated if the lines are re-chlorinated. The water lines shall be re-disinfected and retested, at the Contractor's expense, until approved by the Engineer, Owner, Health Department and Florida Department of Environmental Protection (FDEP).

J. ***At satisfactory completion of the bacteriological test requirements, potable water lines shall be placed in service only after receiving official written approval from FDEP through a "Letter of Clearance"***. Lines shall be placed in service in a manner approved by the Engineer and the Owner. The Contractor shall notify the Engineer and the Owner, in writing, seventy-two (72) hours prior to placing lines in service.

K. ***Following the chlorination period, all treated water shall be flushed from the lines at their extremities and replaced with water from the distribution system***. All treated water flushed from the lines shall be disposed of by discharging to the nearest sanitary sewer or by other approved means. No discharge to any storm sewer or natural water course will be allowed.

3.03 Disinfection of Structures

A. Before any structure identified herein is to be placed in service, it shall be disinfected; and its ***disinfection shall be demonstrated by bacteriological tests conducted*** in accordance with *Standard Methods for Examination of Water and Wastewater*, latest edition, for the coli-aerogenes group, by an approved laboratory, acceptable to the Engineer, County Health Department and FDEP.

B. Disinfection of a completed line shall be accomplished using the following procedure:

1. ***Structures shall be disinfected immediately prior to facility start-up***. The Contractor and Engineer shall develop a disinfection schedule following substantial completion and prior to facility start-up so that the following procedures do not have to be repeated.

2. ***All structures and associated piping, fittings, valves, and appurtenances shall be disinfected with a chlorine solution*** with a sufficient concentration such that the initial chlorine concentration shall be a minimum of 10 mg/L available chlorine, at any point.

3. Chlorine used for the purpose of disinfection shall be sodium hypochlorite (liquid) or high test granular calcium hypochlorite which contains approximately 65 to 70 percent available chlorine by weight. The calcium hypochlorite shall be stored in a cool, dry, and dark environment, prior to its use, to minimize deterioration. The dry calcium hypochlorite will be used to makeup a high concentration chlorine solution which will be used for disinfection. Under no circumstances will undiluted, dry calcium hypochlorite be placed in the pipeline to be disinfected. Upon approval by the Engineer, the Contractor may substitute gaseous chlorine for the above referenced disinfectants. However, the same minimum initial available chlorine residual shall be 100 mg/L.

4. Water from the existing, in-service water line shall be made to flow at a constant, slow rate into the structure to be disinfected. Chlorine solution shall be injected or pumped at a regulated rate into the line feeding the structure. The method of tapping the water main for the chlorine injection point and the location of the tap shall be approved by the Engineer.

5. The chlorine solution shall remain in the structures for no less than twenty-four (24) hours, but longer than twenty-four (24) hours if directed by the Engineer.

C. After twenty-four (24) hours, the free residual chlorine concentration in the water line at the pipe extremities shall be at least 2.0 mg/L; if not, the structure shall be re-disinfected as described above.

D. Following disinfection. as specified herein, the Contractor shall furnish all labor and materials required to obtain samples of water from established points with the structures in suitable sterilized containers obtained from the County Health Department or approved analytical laboratory. Two (2) series of successive samples shall be obtained at each established sampling point. Each test series will require two (2) samples at each sampling point. The period between each series of samples shall be a minimum of twenty-four (24) hours. Samples shall be delivered by the Contractor to the County Health Department or approved analytical laboratory for bacteriological examination within six (6) hours after sample collection. Samples shall be collected in conformance with the County Health Department standards and lab testing schedule. Prior to collecting samples, the Contractor shall notify the Engineer and the Owner who will have representatives present during sample collection.

E. ***Bacteriological test results will be available approximately forty-eight (48) to seventy-two (72) hours after samples are submitted.*** If tests results are unsatisfactory, the Contractor shall immediately re-chlorinate and retest the structures and proceed with such corrective measures as are necessary to secure said structures. The structures failing the bacteriological tests shall be re-disinfected and retested, at the Contractor's expense, until approved by the Engineer, Owner, and Florida Department of Environmental Protection (FDEP).

F. At satisfactory completion of the bacteriological test requirements, structures shall be placed in service only after receiving official written approval from FDEP.

END OF SECTION

SECTION 15044

PRESSURE TESTING OF PIPING

1. GENERAL

1.01 Description

A. Scope of Work

1. This Section specifies the general requirements for testing (pneumatic, hydrostatic, and leakage) the various piping systems shown on the Contract Drawings and specified elsewhere in these Specifications.

B. Test Pressures

1. Test pressures for the various services and types of piping are shown in Table 15044-1, at the end of this specification section.

2. ***Testing of piping shall be at a minimum of 150% of the working pressure***.

C. Related Work Specified Elsewhere

Specification Section	Title
15000	Mechanical - General Requirements
15060	Ductile Iron Pipe and Fittings
15065	Polyvinyl Chloride (PVC) Pressure Pipe and Fittings
15100	Valves and Appurtenances

1.02 Submittals

A. Submittals shall be submitted in accordance with Section 01300, *Shop Drawings, Submittals and Samples*, for the Engineer's review. ***All shop drawings shall be in an electronic (PDF) format***.

B. Testing Plan

1. ***Submit a testing plan (in a PDF format) prior to testing*** and include at least the information that follows:

   a. Testing dates.

   b. Piping systems and section(s) to be tested.

   c. Test type.

   d. Method of isolation.

   e. Calculation of maximum allowable leakage for piping section(s) to be tested.

C. Certifications of Calibration of all testing equipment.

D. Certified Test Report.

E. Testing Records

1. ***Provide a record of each piping installation during the testing (in a PDF format)***. These records shall include, but not be limited to, the following:

   a. Date of the test.

   b. Identification of the pipeline tested or retested.

   c. Identification of the pipeline material.

   d. Identification of the pipe specification.

   e. The test fluid.

   f. The test pressure.

   g. Remarks

      1) Leaks identified (type and location).

      2) Types of repairs.

      3) Corrections made.

h. Certification by the Contractor that the leakage rate measured conformed to the Specifications.

i. Signature of the Engineer's or Owner's representative witnessing the pipe test.

2. Submit the test records in an electronic (PDF) format to the Engineer's representative upon completion of the testing.

1.03 Reference Standards

A. American Waterworks Association (AWWA)

1. AWWA C600

2. AWWA M23

1.04 Quality Assurance

A. Hydrostatic tests consisting of pressure tests and leakage tests shall be conducted on all newly-installed pressure pipes and appurtenances.

B. The tests shall be in accordance with the provisions listed in this specification and with the provisions of AWWA C600 or M23 as applicable.

2. PRODUCTS

2.01 Tests

A. Hydrostatic Tests

1. The testing fluid shall be water for all hydrostatic tests whenever possible.

2. In those systems where water cannot be used the test fluid may be either the one to be used in the system or one agreed upon by the Engineer and the Contractor.

B. Service Pressure Tests

1. The fluid for which the system is designed shall be the test fluid.

C. Pneumatic Test

1. Compressed air shall normally be used. Other gases may be used when specified or directed by the Engineer.

2. ***Test pressures shall be one hundred ten percent (110%) of the anticipated maximum operating pressure, but not exceeding 100 psig, and not less than 5 psig at the highest point in the system***.

2.02 Testing Equipment

A. The Contractor shall provide pressure gauges, pipes, bulkheads, pumps, test plugs, all necessary bracing and restraint, meters and all other ancillary equipment to perform the hydrostatic and/or pneumatic testing.

B. Hydrostatic Testing

1. Water: *Of sufficient capacity to deliver the required test pressure.*

2. Strainer: *On inlet side of the pump to prevent foreign matter from entering the system.*

3. Valves: *Shall be provided on the suction and discharge side of the pump.*

4. Heater: *To allow heating of the test fluid when elevated temperatures are required for test.*

5. Relief Valve: *Set at a pressure to relieve at 20 to 25 percent above the required test pressure.*

6. Pressure Gauge(s): *Capable of reaching 50 percent over the test pressure. These should be located at the pump discharge and any other place deemed convenient by the Contractor. The pressure gauges shall be marked in one (1) psi increments.*

7. ***Pressure gauges and relief valves shall be checked for accuracy before use in all test procedures***.

C. Service Testing

1. A pressure gauge capable of registering 25 psi (minimum) over the design pressure shall be installed down-stream from the supply shut-off valve if one is not included in the system. The pressure gauge shall be marked in one (1) psi increments.

D. Pneumatic Testing

1. Building supply air to deliver the required test pressure if available, or provide a compressor capable of the required test pressure.

2. Valves shall be provided on the discharge side of the pump.

3. ***A relief valve shall be provided to relieve at 10 - 15 percent over the test pressure***.

4. ***Pressure gauge(s) capable of reaching fifty percent (50%) over the test pressure shall be provided***. A gauge shall be located on the pump discharge and other location as required by the Engineer. The pressure gauges shall be marked in one (1) psi increments.

3. EXECUTION

3.01 Preparation

A. Pipes shall be in place and anchored before commencing pressure testing.

B. Conduct the hydrostatic and/or pneumatic tests on exposed and aboveground piping ***after*** the piping has been installed and attached to the pipe supports, hangers, anchors, expansion joints, valves, and meters.

C. Before conducting the hydrostatic tests, flush all pipes with water to remove dirt and debris. For pneumatic tests, blow air through all of the pipes.

D. Test new pipelines which are to be connected to existing pipelines by isolating the new line from the existing line by means of pipe caps, special flanges, or blind flanges. After the new pipeline has been successfully tested, remove all caps or flanges and connect to the existing piping.

E. ***Conduct hydrostatic tests on buried pipe after the trench has been completely backfilled***. The pipe may be partially backfilled and the joints left exposed for inspection for an initial leakage test. Perform the final leakage test, however, after completely backfilling and compacting the trench.

F. ***The Contractor shall provide any temporary piping needed to carry the test fluid to the piping that is to be tested***. After the test has been completed and demonstrated to comply with the specifications, disconnect and remove all temporary piping. Do not remove exposed vent and drain valves at the high and low points in the tested piping; remove any temporary buried valves and cap the associated outlets. Plug taps or connections to the existing piping from which the test fluid is obtained.

G. ***The Contractor shall provide temporary drain lines needed to carry testing fluid away from the pipe being tested***. Remove such temporary drain lines after completing the pressure testing. Drain the pipes after they have been tested.

H. ***The Contractor shall notify the Engineer, in writing, a minimum of seventy-two (72) hours prior to conducting the pressure testing***.

I. Chlorine Piping

1. Chlorine piping shall be tested, dried and cleaned in accordance with the requirements of the Chlorine Institute, Pamphlet 6.

J. New Piping Connected to Existing Piping

1. Isolate new piping with grooved-end pipe caps, spectacle blinds, blind flanges or as acceptable to the Engineer.

K. Items that do not require Testing

1. Piping between wet wells and wetwell isolation valves.
2. Equipment seal drains.
3. Tank overflows to atmospheric vented drains.
4. Tank atmospheric vents.

L. Cleaning

1. ***Before conducting hydrostatic tests, flush all pipes with water to remove dirt and debris***. For pneumatic test, blow air through the pipes.
2. ***Maintain a flushing velocity of at least 2.5 feet per second for water testing and at least 2,000 feet per minute for pneumatic testing***. Flushing shall continue until clean water flows from the pipeline. ***The minimum amount of flushing time shall be as follows***:

$$T = 0.667\ L$$

Where: T = *Flushing Time (seconds)*

L = *Pipe Length (feet)*

M. ***Performed all required disinfection after hydrostatic testing is complete and acceptable, in accordance with these specifications***.

N. Length of Test Section for Buried Piping

1. The maximum length of the test section for buried pipe shall be as follows:

Pipe Diameter (inches)	Maximum Allowable Test Section Length (feet)
≤ 12	3,500
> 12	5,280

2. Provide intermediate test bulkheads where the pipeline length exceeds these limits.

O. Initial Pipeline Filling for Hydrostatic Testing

1. The maximum rate of filling shall not cause the water velocity in the pipeline to exceed one-half (½) foot per second.

P. Gravity Piping

1. Perform testing after service connections, manholes and backfilling have been completed between stations to be tested.

2. Determine the groundwater level at the time of testing by excavating exploratory holes or other methods acceptable to the Engineer.

Q. Pressure Test

1. ***All tests shall be made in the presence of and to the satisfaction of the Engineer and/or Owner*** and also, to the satisfaction of any local or state inspector having jurisdiction.

   a. ***Provide not less than seventy-two (72) hours written notice to the Engineer, Owner***, and the authority having jurisdiction when it is proposed to make the tests.

   b. Any piping or equipment that has been left unprotected and subject to mechanical or other injury, in the opinion of the Engineer, shall be retested in part or in whole as directed by the Engineer.

c. The piping systems may be tested in sections as the work progresses, but no joint or portion of the system shall be left untested.

2. All elements within the system that may be damaged by the testing operation shall be removed or otherwise protected during the operation.

3. ***Repair all damage done to any existing or adjacent work or materials due to or on account of the tests***.

3.02 Inspection and Testing

A. Hydrostatic Testing of Above Ground or Exposed Piping

1. ***The maximum filling velocity shall be 0.50 feet per second***, applied over the full area of the pipe.

2. Open vents at high points of the piping system to purge air while the pipe is being filled.

3. Subject the piping system to the test pressure indicated.

4. ***Maintain the test pressure for a minimum of four (4) hours***.

5. Examine all joints, fittings, valves, and connections for leaks.

6. ***The piping system shall show no leakage or weeping***.

7. ***Correct leaks and retest until no leakage is obtained***.

B. Hydrostatic Testing of Buried Piping

1. ***Testing shall begin after backfilling operations have been completed. Expel air from the piping system during filling***.

2. Where any section of the piping contains concrete encasement, do not make the pressure test until at least ten (10) days after the concrete has been poured. When testing mortar-lined piping, fill the pipe to be tested with water and allow it to soak for at least forty-eight (48) hours to absorb water before conducting the pressure test.

3. Apply and maintain the test pressure by means of a hydraulic force pump. ***Maintain the test pressure for a minimum duration of four (4) hours***. ***After the***

test pressure is reached, use a meter to measure the additional water added to maintain the pressure during the four (4) hours. This amount of water is the loss due to leakage in the piping system. ***The allowable leakage volume is defined by the following formula***:

a. AWWA C-600 Ductile Iron Mains

$$V = \frac{S \times D \times \sqrt{P} \times T}{133{,}200}$$

b. AWWA Manual No. M-23 PVC Mains

$$V = \frac{0.90 \times S \times D \times \sqrt{P} \times T}{133{,}200}$$

c. *Where:*

V = Allowable Leakage (gallons)

S = Length of Pipe Tested (feet)

D = Diameter of the Pipe Tested (inches)

P = Specified Test Pressure (psig)

T = Pressure Test Time (hours)

d. ***Repair and retest any and all pipes showing leakage rates greater than that allowed***.

C. Pneumatic Testing

1. This procedure for a pneumatic test of piping systems shall be used when directed by the Engineer when water, or other liquid, cannot be introduced into the line, or as a supplement to a hydrostatic test. ***It shall not be used to test non-metallic (plastic) pipe, including, but not limited to, PVC, CPVC, E-CTFE, etc***.

2. All pneumatic tests shall be done under the supervision of Contractor and in the presence of the Engineer and/or Owner's representative.

3. ***The Engineer and the Owner must be informed, in writing, at least seventy-two (72) hours prior to the proposed pressure test***.

4. Only those people actively participating in the test shall be allowed in the test area. Protect test personnel and the Owner's/Engineer's operating personnel.

5. Safety glasses and hard-hats must be worn.

6. Perform tests only after the piping has been completely installed including supports, hangers and anchors. Secure piping to be tested to prevent the pipe from moving and to prevent damage to adjacent piping and equipment. Remove or isolate from the pipe any appurtenant instruments or devices that could be damaged by the test, prior to applying the test.

7. Fluid: ***Oil-free, dry air***.

8. Procedure

    a. ***The test pressure shall be 150% of the working pressure***.

    b. Apply an initial pneumatic test pressure of 25 psig maximum to the piping system prior to final leak testing, to locate visible leaks. Apply a soap bubble mixture to joints and connections, and examine the system for leakage.

    c. Correct visible leaks and repeat the preliminary test until all visible leaks are corrected.

    d. ***Gradually increase the pressure in the system to one-half (50%) of the test pressure***. Thereafter, increase the pressure in steps of approximately one-tenth of the specified test pressure until the required test pressure has been reached.

    e. ***Maintain the pneumatic test pressure continuously for a minimum time of four (4) hours and for such additional time as may be necessary to conduct a soap bubble examination for leakage***.

    f. ***The piping system shall show no leakage***. ***Correct any visible leakage and retest. All leaks shall be noted on the Pressure Test Record Form***.

    g. After satisfactory completion of the test, vent the line and allow it to return to atmospheric pressure. Connection can then be made to the supply line as necessary.

D. Hydrostatic Test for Gravity Piping

1. ***The testing equipment accuracy shall be ± 0.5 gallons of water leakage*** under the specified conditions.

2. ***The maximum allowable leakage shall be 0.10 gallons per hour per inch diameter per 100 feet***. Include service connection footage in the test section, subjected to the minimum head specified.

3. Gravity Sanitary and Roof Drain Piping

    a. Test with fifteen (15) feet of water to include the highest horizontal vent in filled piping.

    b. Where vertical drain and vent systems exceed fifteen (15) feet in height, test systems in fifteen (15) foot vertical sections as piping is installed.

4. Exfiltration Test

    a. Hydrostatic Head

        1) At least six (6) feet above the maximum estimated groundwater level in the section being tested.

        2) No less than six (6) feet above the inside top of the highest section of pipe in the test section, including service connections.

5. Infiltration Test

    a. Groundwater Level

        1) At least six (6) feet above the inside top of the highest section of pipe in the test section, including service connections.

6. Piping with a groundwater infiltration rate greater than the allowable leakage rate for exfiltration will be considered defective even if pipe previously passed a pressure test.

7. Defective Piping Sections

    a. Replace or test and seal individual joints, and retest as specified.

E. Pressure Testing of Double-Walled Containment Piping

1. Test the primary pipe as described for buried and aboveground or exposed piping.

2. Test the secondary containment piping by performing a pneumatic test as described above of the annual space between the primary and secondary pipes at a pressure of 5 psi.

F. Repetition of Test

1. If the actual leakage exceeds the allowable leakage, locate and correct the faulty work and repeat the test.

2. Restore the work and all damage resulting from the leak and its repair. Eliminate visual leakage.

G. Test Pressure

1. ***All pipe shall be tested at the pressures shown in Table 15044-1 and at a minimum of 150% of the normal working pressure of the pipe***.

END OF SECTION

TABLE 15044-1

PIPING PRESSURE TEST SCHEDULE

Service	Pipe Designation	Test Pressure (psig)
Chemical Vacuum Pipe	CG	See note 3
Chemical Solution Lines	---	150
Domestic Water Pipe	DW	150
Gravity Flow Pipe	DR	See notes 2 and 3
Irrigation Pipe	IW	150
Non-Potable Water	NPW	150
Potable Water	PW	150
Pressure Process Pipe	RW, PW, FW	150
Reuse Water	RW	150

NOTES

1. **Piping not listed and sections of piping in gross conflict with the listed pressure, with the prior approval of the Engineer, shall be tested at a minimum of 150% of the working pressure.**
2. **Non pressure process piping shall be tested at 150% of the maximum head pressure on the pipe.**
3. **Gravity drain lines within buildings shall be hydrostatically tested by capping or plugging drain lines and system ends and filling the system through the vent lines to the top of the vents. Leaking shall be calculated from this static head pressure and amount of water required to refill the vent pipe after the test duration.**

SECTION 15060

DUCTILE IRON PIPE AND FITTINGS

1. GENERAL

1.01 Scope of Work

A. Furnish all labor, materials, equipment, gaskets, accessories and incidentals required to install, disinfect, and test ductile iron pipe, fittings and appurtenances of the sizes and in the locations shown on the Contract Drawings and as specified herein.

B. The Engineer reserves the right to make such modifications in locations as may be found desirable to avoid interference between pipes, or for other reasons. Pipe fitting notation is for the Contractor's convenience and does not relieve him/her from installing and jointing different or additional items where required to achieve a complete piping system.

C. ***All wastewater ductile iron piping shall have an interior lining of Protecto 401 Ceramic Epoxy. All buried ductile iron pipe and fittings shall have a bituminous exterior coating.***

1.02 Related Work

A. The Contract Documents include, but are not limited to, the following related sections:

Specification Section	Title
01600	Materials and Equipment
02200	Earthwork
02220	Excavation, Backfill and Compaction
09900	Painting
09905	Piping, Valve and Equipment Identification System
15000	Mechanical - General Requirements
15041	Disinfection of Piping and Structures

Specification Section	Title
15044	Pressure Testing of Piping
15100	Valves and Appurtenances
15125	Pipe Hangers and Supports
Contract Drawings and General Provisions of the Contract	

1.03 Reference Standards

A. Unless otherwise indicated, all materials, workmanship and practices shall conform to the following standards:

STANDARD	DESCRIPTION
American Society for Testing and Materials (ASTM)	
ASTM A-307	Standard Specification for Carbon Steel Bolts and Studs, 60,000 PSI Tensile Strength
ASTM C-150	Standard Specification for Portland Cement
ASTM D-1248	Standard Specification for Fusion-bonded Polyethylene Lining for Water
American National Standards Institute (ANSI) / American Water Works Association (AWWA)	
.ANSI/AWWA C104/A21.4	American National Standard for Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water.
ANSI/AWWA C105/A21.5	American National Standard for Polyethylene Encasement for Ductile-Iron Piping for Water and Other Liquids
ANSI/AWWA C110/A21.10	American National Standard for Ductile-Iron and Gray Iron Fittings, 3-inch through 48-inch (75mm Through 1200mm) for Water and Other Liquids
ANSI/AWWA C111/A21.11	American National Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings
AWWA C115	Standard for Flanged Ductile-Iron Pipe
ANSI/AWWA C150/A21.50	American National Standard for the Thickness Design of Ductile-Iron Pipe
ANSI/AWWA C151/A21.51	American National Standard for Ductile-Iron Pipe, Centrifugally Cast for Water or Other Liquids
ANSI/AWWA C153/A21.53	American National Standard for Ductile- Iron Compact Fittings, 3-inch through 60-in, for Water and Other Liquids
ANSI B16.1	American National Standard for Cast Iron Pipe Flanges and Fittings

STANDARD	DESCRIPTION
American Water Works Association (AWWA)	
AWWA C600	AWWA Standard for Installation of Ductile-Iron Water Mains and Their Appurtenances
AWWA C651	AWWA Standard for Disinfecting Water Mains
American National Standards Institute (ANSI)	
ANSI B 16.1	Cast Iron Pipe Flanges and Flanged Fittings
National Science Foundation (NSF)	
NSF No. 60	Drinking Water Treatment Chemicals - Health Effects
NSF No. 61	Drinking Water System Components - Health Effects
Miscellaneous	
CIPRA Standard	Standard for Threaded Flanges

B. Where reference is made to one of the above standards, the revision in effect at the time of the Bid Opening shall apply.

1.04 Quality Assurance

A. All ductile iron pipe and fittings shall be from a single manufacturer who is fully experienced, reputable, and qualified in the manufacture of the materials to be furnished. All ductile iron pipe and fittings to be installed under this Project shall be inspected and tested at the foundry as required by the standard specifications to which the material is manufactured. Furnish, in duplicate, to the Engineer, sworn certificates of such tests and their results prior to the shipment of the pipe.

B. The pipe and fittings shall be designed, constructed and installed in accordance with the best practices and methods and shall comply with these specifications as applicable.

C. Inspection of the pipe and fittings will also be made by the Engineer or representative of the Owner after delivery. The pipe shall be subject to rejection at any time on account of failure to meet any of the Specification requirements, even though sample pipes may have been accepted as satisfactory at the place of manufacture. Pipe rejected after delivery shall be marked for identification and shall be removed from the Project site.

D. All ductile iron pipe and fittings shall be permanently marked with the following information:

1. Manufacturer, date.

2. Size, type, class, or wall thickness, length dimension.

3. Standard produced to (ANSI/AWWA, ASTM, etc).

E. Construction Requirements

1. ***All pipelines shall be installed with at least three (3) feet of cover, unless otherwise shown or indicated on the Contract Drawings***.

2. For underground utilities, changes in horizontal alignment of less than 11¼□ may be achieved through the use of allowable pipe deflection in lieu of fittings shown on the Contract Drawings at the Contractor's option, but subject to approval of the Engineer as to layout. Said deflection shall not exceed seventy-five percent (75%) of the maximum allowable deflection as stated in the pipe manufacturer's installation instructions.

3. ***All piping installed underneath structures or concrete slabs shall be ductile iron Pressure Class 250 for 14-inch pipe and larger and Pressure Class 350 for 12-inch pipe and smaller and shall be concrete-encased***.

F. Supplier / Manufacturer

1. All pipe shall be as manufactured by the American Cast Iron Pipe Company, U.S. Pipe and Foundry Company, McWane Cast Iron Pipe Co., or approved equal.

1.05 Submittals

A. All shop drawings shall be submitted to the Engineer for approval in accordance with Section 01300, *Shop Drawings, Submittals and Samples*, prior to construction. ***All shop drawing submittals shall be in an electronic (PDF) format***.

B. ***Submit to the Engineer, within fifteen (15) days of the Effective Date of the Agreement, the name of the pipe and fitting suppliers, their addresses, phone numbers, FAX numbers, e-mail addresses, and a list of materials to be furnished***.

C. The Contractor shall submit shop drawings, including layouts within, and under buildings and structures, to the Engineer for approval.

D. ***Shop drawing submittals shall include, at a minimum***, the following:

1. A laying schedule and marking diagrams which indicate the specific number of each pipe and fitting, the location and direction of lay of each pipe and fitting in the completed line shall be submitted to the Engineer. In addition, the laying schedules shall include, but not limited to, the following:

   a. Order of installation and closures.

   b. Pipe invert elevation and station at each change of grade and alignment.

   c. The station and invert elevation to which the bell end of each pipe will be laid.

   d. Elements of curves and bends, both in horizontal and vertical alignment, including elements of the resultant true angular deflections in cases of combined curvature.

   e. The limits of each reach of pipe thickness class and of restrained joints.

   f. The limits of each reach of concrete encasement or encasement in casing.

   g. Locations of closures for length adjustment and for construction convenience.

   h. Locations of manholes and other points of access for placement of mortar lining, field joints and removal of test bulkheads.

   i. Locations of valves and other mechanical equipment.

   j. Methods and locations of supports.

2. Details of special elbows and fittings.

3. ***Calculations and test data demonstrating that the proposed restrained joint arrangement can transmit the required forces with a minimum safety factor of 1.50.***

4. Copy of the manufacturer's quality control check of pipe material and production. Include hydrostatic test records and acceptance test records. For each acceptance test, submit a stress-strain diagram showing yield strength, yield point, tensile strength, elongations, and reduction in area. Provide specimen test section dimensions and speed and method used to determine speed of testing, method used for rounding of test results, and reasons for replacement specimens, if any. Submit ring bending test of pipe of the same diameter and pressure class as the pipe required for this Project to prove ring bending stress at 48 ksi results in a factor of safety of 2.0.

5. ***Provide an affidavit of compliance with AWWA standards referenced in this specification section***.

6. ***Coatings and linings applied, materials and thicknesses (dft)***.

7. Details of restrained and flexible joints.

8. Couplings.

9. Flexible expansion joints, tie-rods, and flange coupling adapters.

10. Joint lubricant.

11. Temporary plug and anchorage systems for hydrostatic pressure tests.

12. A test report on the physical properties of the rubber compound used in the gaskets.

13. Drawings or manufacturer's data sheet showing flange facing, including design of facing serrations.

E. Submit the anticipated production and delivery schedule for the Project materials.

1.06 Delivery, Storage and Handling

A. All pipe and fittings shall be shipped and stored at the Project Site in accordance with DIPRA's *Guide for the Installation of Ductile Iron Pipe* and the pipe manufacturer's recommendations.

B. The Contractor shall exercise care in loading, transporting, and unloading to prevent injury to the pipe. Under no circumstances shall the pipe be dropped or skidded against each other. Slings, hooks, or pipe tongs shall be used in pipe handling.

C. ***Materials, if stored, shall be kept safe from damage***. The interior of all pipe, fittings and other appurtenances shall be kept free from dirt or foreign matter at all times.

D. ***Pipe shall not be stacked higher than the limits recommended by the manufacturer***. ***The bottom tier shall be kept off the ground on timbers, rails, or concrete***. Wood lagging shall be required between pipes such that pipes do not make contact with one another. Stacking shall conform to manufacturer's recommendations.

E. Gaskets for mechanical and push-on joints to be stored shall be placed in a cool location out of direct sunlight. Gaskets shall not come in contact with petroleum products. Gaskets shall be used on a first-in, first-out basis.

F. ***The Contractor shall exercise extra care when handling epoxy, cement and polyethylene lined pipe and fittings***. Damage to the lining will render it unfit for use and shall require replacement, unless repair to the lining can be made in accordance with AWWA C104.

1.07 Job Conditions

A. Water in Excavation

1. Water shall not be allowed in the trenches while underground pipes, fittings, valves and/or accessories are being laid and/or tested.

2. The Contractor shall not open more trench than the available pumping facilities are able to dewater to the satisfaction of the Engineer. The Contractor shall assume responsibility for disposing of all water so as not to injure or interfere with the normal drainage of the territory in which he is working.

3. In no case shall the pipelines being installed be used as drains for such water, and the ends of the pipe shall be kept properly and adequately plugged during construction by the use of approved stoppers and not by improvised equipment.

4. ***All necessary precautions shall be taken to prevent the entrance of mud, sand, or other obstructing matter into the pipelines***. If on completion of the work any such materials has entered the pipelines, it must be cleaned as directed by the Engineer so that the entire system will be left clean and unobstructed.

1.08 Warranties and Guarantees

A. The manufacturer shall guarantee that the equipment and materials furnished is suitable for the purpose intended and free from defects of design, material and workmanship.

B. ***The ductile iron piping and fittings shall be unconditionally warranted by the manufacturer for a period of five (5) years from the date of Final Project Acceptance by the Owner***.

C. Warranties shall be provided for all equipment in accordance with the Project General Conditions and Section 1740, *Warranties and Bonds*, unless specified otherwise.

D. In the event that any equipment or material fails to perform as specified herein, the equipment manufacturer shall promptly repair or replace the defective equipment at no additional cost to the Owner.

E. This warranty is in addition to any other warranty required by the Contract Documents.

2. PRODUCTS

2.01 Materials

A. General

1. ***Pipe shall have a minimum rated water working pressure of 250 psi*** and shall be furnished in laying lengths of twenty (20) feet or less, unless specifically shown otherwise on the Contract Drawings.

2. All ductile iron pipe shall conform to ANSI A-21.51 and AWWA C-151.

3. If not otherwise specified, provide the following:

   a. Flanged joints for exposed piping.

   b. Standard mechanical joints, restrained joints, or rubber-ring type push-on joints for buried piping.

B. Pipe Markings

1. Plainly mark each length of straight pipe and each fitting at the bell end to identify the design pressure class, the ductile-iron wall thickness, and the date of manufacture, and the proper location of the pipe item by reference to the layout schedule.

2. Mark the spigot end of restrained joint pipe to show clearly the required depth of insertion into the bell.

C. Ductile Iron Pipe (DIP)

1. Exposed (Flanged) Pipe

   a. Fabricated in accordance with requirements of AWWA C 151, Thickness Class 53 (Special Class).

2. Buried (Non-Flanged) Pipe

   a. Non-flanged pipe shall conform to AWWA C150/C151 and ANSI A21.51 for material, pressure, thickness, dimensions, tolerances, tests, markings, and other requirements. The pipe shall be supplied in standard lengths as much as possible.

   b. ***Thickness design shall be a minimum Class 350 for diameters up to twelve (12) inches and minimum Class 250 for piping diameters fourteen (14) inches and larger***.

3. Pipe for use with sleeve type couplings shall have plain ends (without bells or beads) cast or machined at right angles to the axis.

4. Pipe for use with split type couplings shall have ends with cast or machined shoulders or grooves that meet the requirements of the coupling manufacturer.

5. ***Pipe supplied shall be supplied in lengths not in excess of twenty (20) feet*** having rubber-ring push-on joints, standard mechanical joints or restrained joints where required for underground piping and flanged joint piping, for all above grade piping as shown on the Contract Drawings.

D. Coatings and Linings

1. Exterior Coating for Buried Pipe

   a. Ductile iron pipe, fittings, and specials to be installed underground shall be ***coated on the exterior at the factory with two coats, 1 mil DFT per coat, of bituminous coating*** (ANSI A21.4), minimum.

   b. All clamps, bolts, nuts, studs, and other uncoated parts of joints for underground installation shall be coated with a bituminous coating prior to backfilling. The bituminous coating shall meet ANSI A21.4 and shall be 2 mils, DFT, minimum.

2. Exterior Coating for Exposed Pipe

   a. Ductile iron pipe, fittings, and specials to be installed aboveground shall be furnished with a shop applied primer on the exterior. The shop primer shall be as specified in Section 09900, *Painting*.

   b. Exposed piping shall be painted in accordance with Sections 09900, *Painting,* and 09905, *Piping, Valve and Equipment Identification System*.

3. Cement-Mortar Interior Lining

   a. Cement mortar linings are to be used, where indicated on the piping schedule for potable water applications.

   b. All cement mortar linings shall be in accordance with ANSI 21.4 .

4. Ceramic Epoxy Interior Lining - Wastewater, Sludge/Biosolids, Reclaimed Water and Reject Water

   a. ***Ductile iron pipe, fittings, and specials shall be lined with Protecto 401 Ceramic Epoxy***, a high build multi-component amine cured Novalac epoxy lining, containing at least twenty percent (20%) by volume of ceramic quartz pigment, manufactured by Indurall Coatings, Inc., Birmingham, AL, or approved equal.

   b. ***The interiors of the ductile iron pipe, fittings, and specials shall receive forty (40) mils dry film thickness (DFT) of the ceramic epoxy protective lining***. Storage, surface preparation, application, and safety precautions shall strictly follow manufacturer's instructions.

   c. ***Test the lining thickness using a magnetic film thickness gauge***. Conduct testing in accordance with SSPC-PA-2, Film Thickness Rating. Test for pinholes with a non-destructive 2,500 V test. Repair all defects prior to shipment.

5. The pipe manufacturer shall label, in large legible lettering on the exterior of the pipe, the type of pipe interior lining.

6. Air service piping shall be unlined.

E. Fittings

1. Fittings for ductile iron pipe shall be either mechanical joint, restrained joint, flanged joint, or grooved-end coupling as indicated on the Contract Drawings and shall have a ***minimum working pressure of 250 psi***.

2. Fittings shall be ductile iron and shall conform to ANSI/AWWA C110, ANSI/AWWA C111 and ANSI/AWWA C153, latest revisions, for flanged and mechanical joint pipe, and grooved-end fittings shall conform to AWWA C110 and ANSI B16.1 with grooved ends conforming to AWWA C606, radius cut rigid joints.

3. Fitting material shall conform to ASTM A-48, Class 30, or ASTM A-126, Class B.

4. All flanged fittings shall be Class 125 (ANSI B-16.1) unless otherwise specifically noted.

5. ***Fittings shall be coated and lined as specified above in Article 2.01(D)***.

6. The rubber gaskets for flanged, mechanical, and push-on joints shall be as described in herein.

7. Fittings and couplings shall be furnished by the same manufacturer.

F. Joints

1. General

a. Joints in "*runs*" of aboveground (exposed) piping or piping located in vaults and structures shall be flanged or rigid radius grooved end.

b. Joints in "*runs*" of buried piping shall be of the push-on, mechanical, restrained joint type per AWWA C-111, except where flanged joints are required to connect to valves, meters and other equipment.

2. Flanged Joints

a. ***Flanges shall be Class 125 per ANSI B-16.1, unless otherwise specifically noted to be Class 250.***

b. Flanges shall be of the long-hub type screwed tightly on the pipe by a machine at the foundry prior to facing and drilling.

c. Flange faces shall be coated with a rust inhibitor immediately after facing and drilling. Field assembled screwed on flanges are prohibited.

d. Provide specifically drilled flanges when required for connection to existing piping or special equipment.

e. Gaskets

1) Gaskets shall be fullface, c-inch thick, cloth-inserted rubber and shall be suitable for a ***water pressure of 350 psi at a temperature of 180°F***.

2) Air Service

a) ***Gaskets for air service shall be manufactured of materials suitable for high temperature service*** (***> 250°F***).

3) All Other Services

a) Gaskets for all other services shall be manufactured of Buna-N rubber suitable for wastewater, biosolids/sludge, reclaimed water and water service.

f. Bolts and Nuts for Flanges

1) Bolts and nuts for flanges located indoors, in enclosed vaults and structures, buried and submerged and located outdoors above ground or in open vaults or structures shall Type 316 stainless steel conforming to ASTM A-193, Grade B8M for bolts and ASTM A-194, Grade M for nuts.

2) Provide washers for each nut. Washers shall be of the same material as the nuts.

3. Grooved-End Couplings

a. Grooved-end couplings shall be malleable iron, ASTM A-47 (Grade 32510) or ductile iron, ASTM A-536 (Grade 65-45-12).

b. Bolts shall be ASTM A-193, Grade B8, Class 2.

c. Gaskets shall be halogenated butyl rubber or EPDM for water service and Buna-N for wastewater and reclaimed water service, conforming to ASTM D-2000.

d. Couplings

1) AWWA C-606 for rigid radius ductile iron pipe. Couplings shall be Victaulic Style 31, Gustin-Bacon No. 500, or equal.

e. Grooved-end adapter flanges for piping having an operating pressure of 150 psi and less shall be Victaulic Style 341, or equal. Flange dimensions shall conform to ANSI B-16.1, Class 125.

f. Grooved-end transition couplings for connecting ductile iron pipe to steel pipe shall be Victaulic Style 307, or approved equal.

4. Push-on and Mechanical Joints

a. Pipe using push-on and mechanical joints shall be in strict accordance with AWWA C111 and ANSI A21.11, latest revision and shall be as manufactured

by American Cast Iron Pipe Company (Fastite Joint), U.S. Pipe Company (Tyton Joint), or Clow Corporation (Super Bell Tite Joint), or approved equal.

b. Gaskets

1) Gaskets shall be full-face, c-inch thick, EPDM and shall be suitable for a ***water pressure of 350 psi at a temperature of 180°F***.

2) Air Service

a) ***Gaskets for air service shall be manufactured of materials suitable for high temperature service*** (***> 250°F***).

3) All Other Services

a) Gaskets for all other services shall be manufactured of Buna-N rubber suitable for wastewater, biosolids/sludge, reclaimed water and water service.

c. Each joint shall be complete with gasket, cast iron gland and all required bolts and nuts.

d. Jointing materials shall be provided by the pipe manufacturer and installation shall be in strict accordance with the manufacturer's recommended practice.

5. Restrained Joints and Fittings

a. Restrained joints shall be provided for all buried piping systems at the location required to restrain system thrust.

b. Pipe joints and fittings shall be restrained in accordance with the Contract Drawings and the requirements of this specification section.

c. It is intended that all buried joints and all fittings be restrained.

d. In cases where the calculated required length of restrained pipe is not evenly divisible by nominal laying lengths of pipe, the total required length of restrained pipe shall be rounded up to the next closest nominal length that is evenly divisible by the standard laying length.

e. Pipe joints and fittings shall be restrained as follows:

1) Manufactured restrained joints shall be “Flex-Ring”, “Lok-Ring”, or “Lok-Fast” manufactured by the American Cast Iron Pipe Company; “Lok-Tyte” or “Tr-Flex” Type manufactured by the United States Pipe Company; or an equal approved by the Engineer. Joints shall be the manufacturer's standard specifically modified push-on type joints with joint restraint provided by ductile iron retainer rings joined together by corrosion-resistant, high strength steel tee head bolts and nuts or with joint restraint provided by a welded-on retainer ring and a split flexible ring or locking ring assembled behind the retainer ring.

2) Restrained joint pipe and fittings shall be ductile iron only and shall comply with applicable portions of this specification. Manufactured restrained joints shall be capable of deflection during assembly. Deflection shall not exceed seventy-five percent (75%) of the manufacturer's recommendations.

3) Tee head bolts and nuts for restrained joints shall be manufactured of CORTEN, high strength, low alloy, corrosion resistant steel as manufactured by NSS Industries, Plymouth, Michigan, or an equal approved by the Engineer.

4) Restrained joints utilizing tie-rods, or retainer glands and set screws will not be allowed.

5) Field-Lok by U.S. Pipe Company and “Fast-Grip” by American Cast Iron Pipe Company are acceptable for push-on joint pipe.

f. Alternate Restrained Joints

1) When prior approval is obtained from the Engineer, ductile iron pipe and fittings with mechanical joints may be restrained using a follower gland which includes a restraining mechanism. When actuated during installation, the restraining device shall impart a multiple wedging action against the pipe wall which increases resistance as internal pressure in the pipeline increases.

2) The joint shall maintain flexibility after installation.

3) Glands shall be manufactured of ductile iron conforming to ASTM A-536 and restraining devices shall be of heat treated ductile iron with a minimum hardness of 370 BHN. The gland shall have standard dimension and bolting patterns for mechanical joints conforming to ANSI/AWWA C111 and C153, latest revisions.

4) Tee head bolts and nuts shall be manufactured of corrosion-resistant, high strength, low alloy CORTEN steel in accordance with ASTM A-242.

5) The restraining wedges shall have twist-off nuts to insure proper torquing. The mechanical joint restraint device shall have a minimum working pressure rating of 250 psi with a minimum safety factor of 2 to 1 and shall be MEGALUG® as manufactured by EBBA Iron, Inc. No other retainer gland type device will be acceptable.

6) After installation prior to backfilling, all parts of the joint restraint system shall be coated with bituminous epoxy.

6. Compression Sleeve Couplings

a. The Contractor shall furnish and install, where required or where shown on the Drawings, manufactured compression couplings equal to Style 38 or Style 39, as manufactured by the Dresser Manufacturing Division of Dresser Industries or an approved equal.

b. The compression couplings shall consist of two (2) steel follower flanges, one (1) steel middle ring with pipe stops removed, and sufficient rolled thread trackhead bolts to properly compress the gaskets. After fabrication, the middle and follower rings shall be cold expanded to size and dimension. The thickness of the middle rings shall be suitable for the pressures specified, and the application, and in no case be less than 3/8-inch thick for pipes ten (10) inch through thirty-six (36) inch or ¼-inch thick for pipes less than ten (10) inches in diameter.

c. All parts of the compression coupling shall be galvanized or heavily cadmium plated at the point of manufacture and shall be epoxy coated in accordance with AWWA C-210 or AWWA C-203.

d. The entire compression sleeve coupling unit shall be rated for working pressure plus surge pressure as a minimum.

e. The Contractor shall provide field coating for buried couplings in accordance with AWWA C-203.

f. Deflections

1) Small deflections in the pipe alignment may be made at compression type coupling joints, but such deflections shall not exceed 3□ between any two (2) adjacent pipe sections.

2) Where changes in line and/or grade in excess of 3□ are required the deflections shall be made by deflecting multiple joints or by using fittings approved by the Engineer.

3) ***Joint deflection shall be limited to seventy-five percent (75%) of the manufacturer's recommended maximum***.

2.02 Polyethylene Encasement

A. Polyethylene encasement, where shown on the Contract Drawings, shall be cross laminated, high density polyethylene sleeves as specified in and conforming to AWWA C-105. The minimum polyethylene thickness shall be four (4) mils.

B. Polyethylene sleeves shall be white in color, manufactured with ultraviolet (UV) light inhibitors and installed by Method A specified in AWWA C-105. Exposure of the polyethylene sleeves to weather shall be kept to a minimum, and in no case shall it exceed five (5) days.

2.03 Accessories

A. Outlets

1. For outlets larger than two (2) inches, where required or indicated on the Contract Drawings, provide a tee with a flanged outlet.

2. Provide outlets two (2) inches and smaller, where required or indicated on the Contract Drawings, by tapping and attaching a service clamp.

2.04 Quality Control

A. The Contractor shall follow the manufacturer’s and supplier’s recommended product quality control specifications as required for the Project.

3 EXECUTION

3.01 General

A. Inspection and Testing

1. All pipe, fittings and specials shall be inspected and tested at the foundry.

2. The Owner shall have the right to have any or all piping, fittings or special castings inspected and tested by an independent testing agency at the foundry or elsewhere. Such inspection and testing will be at the Owner's expense.

3. The Contractor shall mark as rejected and immediately remove from the Project site, all pipe lengths showing cracks in pipe or damaged lining, which cannot be repaired per AWWA C-104, or received a severe blow that may cause an incipient fracture, even though no such fracture can be seen. Damaged lining shall be defined as lining that appears to be separated from the pipe wall over extensive areas, excessive hair line fractures, or lifted edges or separated segments visible to the naked eye.

4. Any pipe showing a distinct crack, but no incipient fracture beyond the limits of the visible crack, may be cut off and the sound portion installed. Cut the pipe at least twelve (12) inches from the visible limits of the crack. Cutting of pipe shall be done by skilled workmen, and in such a manner as to not damage the pipe. Every cut shall be square and smooth, with no damage to the pipe lining. Cut surfaces shall be recoated as specified for the pipe. Cutting and installing cracked pipe shall only be performed when approved by the Engineer, and shall be at the expense of the Contractor.

B. Care shall be taken in loading, transporting, and unloading to prevent injury to the pipe, coatings and linings. Pipe and fittings shall not be dropped. All pipe and fittings shall be examined before laying, and no piece shall be installed that is found to be defective. Any damage to the pipe coatings shall be repaired in accordance with the manufacturer’s instructions.

C. All connections to existing piping systems shall be made as shown or indicated on the Contract Drawings after consultation and cooperation with authorities of the Owner. Some such connections may have to be made during off-peak hours (late night or early morning).

D. If any defective pipe is discovered after it has been laid, it shall be removed and replaced with a sound pipe in a satisfactory manner, by the Contractor, at his/her own expense.

E. All pipe and fittings shall be thoroughly cleaned before laying, shall be kept clean until they are used in the work and, when installed or laid, shall conform to the lines and grades required.

F. Pipe Joint Deflection

1. Whenever it is desirable to deflect pipe joints to avoid obstructions or to maintain required alignment, ***the amount of the joint deflection shall not exceed seventy-five percent (75%) of the maximum limits allowed by the pipe manufacturer***.

G. Pipe, fittings, valves, and accessories shall be installed as shown or indicated on the Contract Drawings.

3.02 Installation

A. Handling and Cutting Pipe

1. Care shall be taken in handling, cutting, and laying ductile iron pipe and fittings to avoid damaging the pipe and interior lining, scratching or marring machined surfaces, and abrasion of the pipe coating.

2. ***All cracked pipe and fittings shall be removed at once from the Work at no additional cost to the Owner***.

3. Pipe cutting shall be done in a neat workmanlike manner without creating damage to the pipe and interior linings.

4. Ductile iron pipe may be cut using an abrasive pipe saw, rotary wheel cutter, guillotine pipe saw, milling wheel saw or oxyacetylene torch. Cut ends and rough edges of ductile iron pipe shall be ground smooth.

5. For push-on joint connections, the cut end shall be beveled to prevent gasket damage during joint assembly.

6. ***The interior lining shall be repaired at cut ends per the manufacturer's instructions prior to joint assembly***.

B. Installing Buried Pipe and Fittings

1. Inspect each piece of pipe or fitting before lowering it into the trench. Inspect the interior and exterior protective coatings. Clean the ends of the pipe or fitting thoroughly. Remove any foreign matter or dirt from inside the pipe or fitting and keep clean during and after laying.

2. Excavation, backfill and compaction shall conform to the provisions of Section 02220, *Excavation, Backfilling and Compaction*. Upon satisfactory installation of the pipe bedding material as specified in Section 02220, *Excavation, Backfilling and Compaction* a continuous trough for the pipe barrel and recesses for the pipe bells or couplings shall be excavated by hand digging. When the pipe is laid in the prepared trench, true to line and grade, the pipe barrel shall receive continuous, uniform support and no pressure will be exerted on the pipe joints from the trench bottom.

3. In preparation for pipe installation, placement (stringing) of pipe should be as close to the trench as practical on the opposite side of the trench from the excavated material. The bell ends of the pipe should point in the direction of the work progress.

4. ***Pipe and fittings shall be laid accurately to the lines and grades indicated*** on the Contract Drawings or required. Where grades for the pipeline are not indicated on the Contract Drawings, maintain a uniform depth of cover with respect to finish grade. Care shall be taken to insure a good alignment both horizontally and vertically and to give the pipe a firm bearing along its entire length. Any pipe which has its grade or joint disturbed after laying shall be taken up and relayed.

5. ***All pipe and fittings shall be cleared of sand, dirt, and debris before laying***. All precautions shall be taken to prevent sand, dirt, or other foreign material from entering the pipe during installation. If necessary, a heavy, tightly woven canvas bag of suitable size shall be placed over each end of the pipe before lowering into the trench and left there until the connection is made to the adjacent pipe. Any sand, dirt, or other foreign material that enters the pipe shall be removed from the pipe immediately. The interior of all pipe and fittings shall be kept clean, by the Contractor, after installation until Final Project Acceptance by the Owner.

6. The Contractor shall keep the trench in a dewatered condition during pipelaying in accordance with Section 02220, *Excavation, Backfilling and Compaction*.

7. Any time that pipe installation is not in progress, the open ends of pipe shall be closed by a watertight plug or other method approved by the Engineer. Plugs shall remain in pipe ends until all water is removed from the trench. No pipe shall be installed when trench conditions are unsuitable for such work, including standing water, excess mud, or rain.

8. After pipe has been laid, inspected, and found satisfactory, sufficient backfill shall be placed along the pipe barrel to hold the pipe securely in place while conducting the preliminary hydrostatic test. No backfill shall be placed over the joints until the preliminary test is satisfactorily completed, leaving them exposed to view for the detection of visible leaks.

9. Cover for underground piping shall not be less than that indicated on the Contract Drawings. ***The minimum cover for pipe shall be thirty-six (36) inches***. In areas where other piping conflicts preclude the maximum cover desired, the piping shall be laid to provide the maximum cover obtainable.

10. ***Upon satisfactory completion of the hydrostatic test, backfilling of the trench shall be completed***.

11. The Contractor shall provide and install all required piping and accessories in strict accordance with the Contract Documents and manufacturer's recommendations.

C. Installing Interior Pipe and Fittings

1. All piping and fittings shall be installed true to alignment and rigidly supported thrust anchors shall be provided where required. Any damage to linings shall be repaired to the satisfaction of the Owner and Engineer before the pipe is installed. Each length of pipe shall be cleaned out before erection.

2. ***Any sand, dirt, or other foreign material that enters the pipe shall be removed from the pipe immediately***. The interior of all pipe and fittings shall be kept clean, by the Contractor, after installation until Final Project Acceptance by the Owner.

3. ***Sleeves shall be installed of the proper size for all pipes passing through floors and walls as shown on the Contract Drawings***. Where indicated on the Contract Drawings, or required for liquid or gas-tightness, the pipe shall be sealed with a mechanical seal equal to Link-Seal as manufactured by the Thunderline Corporation, Wayne, Michigan.

4. Concrete inserts for hangers and supports shall be furnished and installed in the concrete as it is placed. The inserts shall be, in accordance with the requirements of the piping layout and jointing method and their locations shall be verified from approved layout drawings and the structural drawings.

5. Except as otherwise shown on the Contract Drawings, either flange joints or split type couplings may be used. Prior to approval of jointing, method layouts for hangers and supports shall be submitted to the Engineer for approval.

6. Flanged joints shall be made with bolts, bolt studs with a nut on each end, or studs with nuts where the flange is tapped.

7. All pipe and appurtenances connected to equipment shall be supported in such a manner as to prevent any strain from being imposed on the equipment. When manufacturer's have indicated requirements that piping loads shall not be transferred to their equipment, a certification shall be submitted stating that such requirements have been complied with.

8. The Contractor shall provide and install all required piping and accessories in strict accordance with the Contract Documents and manufacturer's recommendations.

9. ***Upon satisfactory completion of the piping, fitting and appurtenance installation, hydrostatic testing of the system shall be performed***.

D. Ductile Iron Pipe Joints

1. ***The joints of all pipelines shall be made absolutely "water-tight"***.

2. The particular joint used shall be approved by the Engineer prior to installation.

3. Where shown on the Contract Drawings or where, in the opinion of the Engineer, settlement or vibration is likely to occur, all pipe joints shall be of the bolted mechanical type or restrained joint as specified above, or as indicated on the Contract Drawings.

4. Push-on Joints

   a. ***Push-on joints shall be made in strict accordance with the manufacturer's recommendations and AWWA C-600***.

   b. Manufacturer's installation recommendations shall be submitted to the Engineer for review and approval before commencing work.

   c. Insert the gasket into the groove of the ball.

   d. Uniformly apply a thin film of special lubricant over the inner surface of the gasket the will contact the spigot end of the pipe. The lubricant shall be an inert, non-toxic, water soluble compound incapable of harboring, supporting, or culturing bacterial life.

   e. The bell of the pipe shall be cleaned of excess materials or other obstructions and wiped out before the cleaned and prepared spigot of the next pipe is inserted.

   f. Insert the chamfered end of the plain end pipe into the gasket and push until firmly into place until properly seated and held securely.

5. Bolted Joints

   a. Remove rust preventative coatings from machined surfaces prior to assembly.

   b. Thoroughly clean and carefully smooth all burrs and other defects from pipe ends, sockets, sleeves, housings and gaskets.

6. Grooved End Joints

   a. Install grooved end pipe and fittings in accordance with the coupling manufacturer's recommendations and the following:

1) Clean loose scale, rust, oil, grease and dirt from the pipe or fitting groove before installing the coupling. Apply the coupling manufacturer's gasket lubricant to the gasket exterior, including lips, pipe ends and housing interiors.

2) Fasten coupling alternately and evenly until the coupling halves are seated. Use torques as recommended by the coupling manufacturer.

7. Flanged Joints

a. Flanged joints shall be made up by inserting the gasket between the flanges. The threads of the bolts and the faces of the gaskets shall be coated with a suitable lubricant immediately before installation. The lubricant shall be an inert, non-toxic, water soluble compound incapable of harboring, supporting, or culturing bacterial life.

b. Bolt holes of flanges shall straddle the horizontal and vertical centerlines of the pipe. The Contractor shall clean flanges by wire brushing them before installing flanged fittings. The Contractor shall clean flange bolts and nuts by wire brushing them and lubricate bolts with oil and graphite.

c. The Contractor shall insert the nuts and bolts (or studs), finger tighten, and progressively tighten diametrically opposite bolts uniformly around the flange to the proper tension.

d. The Contractor shall execute care when tightening joints to prevent undue strain upon valves, pumps, and other equipment.

e. ***If flanges leak under pressure testing, the Contractor shall loosen or remove the nuts and bolts, reset or replace the gasket, reinstall or retighten the bolts and nuts, and retest the joints. All joints shall be "water-tight"***.

8. Mechanical Joints

a. All types of mechanical joint pipes shall be laid and jointed in full conformance with manufacturer's recommendations and AWWA C-600, which shall be submitted to the Engineer for review and approval before work is begun.

b. Only specially skilled workmen shall be permitted to makeup mechanical joints. Torque wrenches, set as specified in AWWA Standard C-111, shall be used; or spanner type wrenches not longer than specified therein may be used with the permission of the Engineer.

c. ***Thoroughly clean, with a wire brush, surfaces that will be in contact with the gaskets***.

d. ***Lubricate the gasket, bell and spigot by washing with soapy water***.

e. Slip the gland and gasket, in that order, over the spigot and insert the spigot into the bell until properly sealed. Evenly seat the gasket in the bell at all points, center the spigot, and firmly press the gland against the gasket.

f. ***Insert the bolts, install the nuts finger tight, and progressively tighten diametrically opposite nuts uniformly around the joints to the proper tension with a torque wrench***.

9. Bell and Spigot Joints

a. ***Thoroughly clean the bell and spigots and remove excess tar and other obstructions***.

b. Insert the spigot firmly into place and hold securely until the joint has been properly completed.

10. Restrained Joints

a. Restrained joints shall be made in strict, complete compliance with the manufacturer's recommendations.

b. Restrained joints shall be provided where indicated on the Contract Drawings and at all connections to existing piping systems.

c. Joint assembly shall be made in strict accordance with the manufacturer's instructions, which shall be submitted to the Engineer for review and approval before commencing work.

E. Fabrication

1. Tapped Connections

a. The Contractor shall make all tapped connections as shown on the Contract Drawings or as directed by the Engineer.

b. ***The Contractor shall make all connections watertight and of adequate strength to prevent pullout***.

c. The Contractor shall drill and tap normal to the longitudinal axis of the pipe.

d. The maximum size of taps in pipes and fittings without bosses shall not exceed the sizes listed in the Appendix of ANSI A21.51 based on two full threads.

2. Cutting

a. The Contractor shall perform all cutting with machines having rolling wheel cutters or knives designed to cut ductile iron. The use of a hammer and chisel to cut pipe is prohibited.

b. The Contractor shall after cutting, examine all cut ends for possible cracks and advise the Engineer for observation.

c. The Contractor shall adequately chamber all cut ends to be used with push-on joints to prevent damage to gaskets when pipe is installed.

3.03 Polyethylene Encasement

A. The polyethylene encasement, where shown on the Contract Drawings, shall be installed in accordance with either method specified in AWWA C-105.

3.04 Separation of Non-Potable Water Mains and Potable Water Mains

A. Horizontal Separation

1. ***Existing and proposed water and wastewater or non-potable force mains shall be separated at least six (6) feet horizontally***.

2. ***Horizontal separation between water mains and wastewater or non-potable force mains must always be a minimum of six (6) feet*** unless a closer than separation has been specifically detailed on the Contract Drawings that have been approved under the FDEP Permit.

B. Vertical Separation

1. Parallel Lines

a. Whenever potable water and non-potable water lines (reclaimed, sanitary, stormwater, force mains) run parallel and do not meet the horizontal separation

requirements, then the lines shall be vertically separated with the potable water line ***at least eighteen (18) inches above the top of the non-potable lines***.

2. Crossings

   a. ***Force mains crossing water mains shall be installed to provide a minimum vertical distance of eighteen (18) inches*** measured from the outside of the potable water line to the outside of the non-potable line. The potable water line may be either above or below the non-potable line at crossings. The constructed pipeline shall be installed so that the pipeline joints are as far from the crossing as possible.

   b. ***When the eighteen (18) inch maximum vertical separation distance cannot be maintained, the potable water main shall be encased in concrete. Concrete encasement of the potable water main shall be ten (10) feet each way of the crossing***.

3.05 Concrete Pipe Encasement

A. ***Concrete for concrete pipe encasement shall have a minimum strength of 3,000 psi at 28 days*** and encasement shall be constructed in accordance with details shown on the Contract Drawings. ***Encasement shall be constructed where***:

   1. Indicated on the Contract Drawings.

   2. Piping is laid under buildings, structures and structure pads.

   3. Potable water mains do not meet the eighteen (18) inch vertical separation.

   4. The Engineer shall order the pipeline encased.

B. The points of beginning and ending of concrete pipe encasement shall not be more than six (6) inches from a pipe joint to protect the pipe from cracking due to uneven settlement of its foundation or the erects of superimposed live loads.

C. ***Pipe encasement shall provide a minimum coverage of twelve (12) inches all around the pipe including pipe bells***.

3.06 Connection to Existing Water, Wastewater, Biosolids/Sludge and Reuse Systems

A. The Contractor shall coordinate making connection of the new mains to mains which are in service at the time of construction with the Owner.

B. ***The Contractor shall not connect to existing facilities unless the Engineer and a representative of the Owner are present. The Engineer and the Owner shall be notified, in writing, at least seventy-two (72) hours prior to the time connection is desired***.

C. Operation of all system valves shall be the responsibility of the Owner's personnel only. At no time shall the Contractor operate any system valves. System valves shall be defined as any valve which has main pressure against either side of the valve. The Contractor shall notify the Owner to request that a valve be operated, in writing, at least seventy-two (72) hours prior to the time operation is required.

3.07 Cleaning and Flushing of Pipelines

A. Following the hydrostatic and leakage tests, all the mains constructed under this Contract shall be cleaned and flushed to remove sand, loose dirt, and other debris. The ***minimum flushing velocity shall be 2.5 feet per second***. Flushing shall continue until clean water flows from the main. However, the Contractor shall endeavor to use the minimum amount of flushing water required to complete the work.

B. Upon completion of testing for the gravity drain line system, drain lines shall be flushed to remove dirt, sand, stones, and other debris which may have entered the lines during construction and settled out in the lines and/or manholes. Materials and debris flushed from the drain lines shall be removed from a downstream manhole, basin or lift station and disposed of at an approved disposal area.

C. Temporary blowoffs may be required for the purpose of flushing mains. Temporary blowoffs shall be installed as close as possible to the ends of the main being flushed. Blowoffs installed on the main shall be the same diameter as the main. Temporary blowoffs shall be removed and plugged after the main is flushed. All costs for installing and removing temporary blowoffs shall be at no additional cost to the Owner.

D. ***The Owner shall be notified, in writing, at least seventy-two (72) hours prior to flushing mains***.

E. Blowoffs and temporary drainage piping used for flushing shall not be discharged into any gravity sewer or pumping station wetwell. The Contractor shall obtain prior approvals from the Engineer and the Owner as to the methods and locations of flushing water discharge.

3.08 Disinfection of Potable Water Pipelines

A. Before any portion of the potable water piping systems is to be placed in service, it shall be disinfected; and its disinfection shall be demonstrated by bacteriological tests conducted in accordance with *Standard Methods for Examination of Water and Wastewater*, latest edition, for the coli-aerogenes group, by an approved laboratory, acceptable to the Engineer and the County Health Department.

B. Disinfection of potable water pipelines shall be in accordance with Section 15041, *Disinfection of Piping and Structures*.

3.09 Pressure Testing of Pipe

A. After installation, the pipe shall be tested for compliance with the specifications. The Contractor shall furnish all necessary equipment and labor for the pressure test and leakage test on the pipelines.

B. Pressure testing of pipeline shall be in accordance with Section 15044, *Pressure Testing of Piping*.

END OF SECTION

SECTION 15065

POLYVINYL CHLORIDE (PVC) PIPE AND FITTINGS

1. GENERAL

1.01 Scope of Work

A. Furnish all labor, materials, equipment and incidentals required and install, disinfect and test polyvinyl chloride (PVC) pipe, fittings and appurtenances of the sizes and in the locations shown on the Contract Drawings and as specified herein.

B. The Engineer reserves the right to make such modifications in locations as may be found desirable to avoid interference between pipes, or for other reasons. Pipe fitting notation is for the Contractor's convenience and does not relieve him/her from installing and jointing different or additional items where required to achieve a complete piping system.

C. Pipe/piping refers to all pipe, fittings, material and appurtenances required to construct PVC pressure piping systems throughout the Project, as specified, complete and in place.

1.02 Related Work Specified Elsewhere

A. The Contract Documents include, but are not limited to, the following related sections:

Specification Section	Title
01600	Materials and Equipment
02200	Earthwork
02220	Excavation, Backfilling and Compaction

National Sanitation Foundation (NSF)	
Std No. 14	Plastic Piping Components and Related Materials
Std No. 61	Drinking Water System Components - Health Effects

B. Where reference is made to one of the above standards, the revision in effect at the time of Bid Opening shall apply.

1.04 Quality Assurance

A. ***All PVC pipe and fittings shall be from a single manufacturer*** who is fully experienced, reputable, and qualified in the manufacture of the items to be furnished. The equipment shall be designed, constructed, and installed in accordance with the best practices and methods and shall comply with these specifications.

B. ***Pipe for use with domestic potable water shall have an NSF seal of approval***. The Supplier shall be responsible for the provisions of all test requirements specified in NSF Standard No. 14 as applicable.

C. Acceptable Manufacturers of PVC shall include Certain-Teed Products, Corporation; Johns-Manville (J-M), or approved equal.

1.05 Submittals

A. Submit to the Engineer, in accordance with Section 00700, *General Conditions*, and Section 01300, *Shop Drawings, Submittals and Samples*, within thirty (30) days of the

Effective Date of the Agreement, the name of the pipe and fitting manufacturers and a list of materials to be furnished by each manufacturer. The submittal shall include information on the local representative for each manufacturer, if the product is sold through a distributor, descriptive literature, illustrations, specifications, installation instructions and related information.

B. Shop Drawings including piping layouts and schedules shall include dimensioning, fittings, types and locations of valves and appurtenances, joint details, methods and location of supports, anchorage, gasket material, grade of material and all other pertinent technical information for all items to be furnished.

C. Prior to each shipment of pipe, certified test reports that the pipe for this Contract was manufactured and tested in accordance with the ASTM and AWWA Standards specified herein shall be submitted.

D. ***All shop drawings shall be submitted in an electronic (PDF) format***.

1.06 System Description

A. The equipment and materials specified herein are intended to be of standard types for use in transporting water, wastewater and reclaimed water. Note information in the pipe schedule on Contract Drawings, if any, and in this Section, especially concerning pressures, minimum thickness, etc.

B. ***The Contractor is responsible for compatibility between pipe materials, fittings and appurtenances***.

1.07 Product Delivery, Storage and Handling

A. PVC pipe shall be delivered to the Project Site in unbroken bundles packaged in such a manner as to provide protection against damage. When possible pipe should be stored at the Project Site in unit packages ready for use. Package units shall be handled using a forklift or a spreader bar with fabric straps. ***Packaged units shall not be stacked higher than two (2) units high at the Project Site***. ***Any pipe damaged in shipment shall be replaced as directed by the Engineer, at no additional cost to the Owner***.

B. ***When it is necessary to store PVC pipe and fittings for more than thirty (30) days, exposure to direct sunlight shall be prevented by covering the pipe with an opaque material***. Adequate air circulation above and around the pipe shall be provided as required to prevent excessive heat accumulation. PVC pipe shall not be stored close

to heat sources or hot objects such as heaters, fires, boilers or engine exhaust. Pipe gaskets shall be protected from excessive exposure to heat, direct sunlight, ozone, oil and grease. The interior and all sealing surfaces of pipe, fittings and other appurtenances shall be kept clean and free of dirt and foreign matter.

C. ***All pipe and fittings shall be thoroughly cleaned before installation and the interior shall be kept clean until testing***.

D. Care shall be taken in handling and laying pipe and fittings to avoid severe impact blows, crushing, abrasion damage, gouging or cutting. Pipe shall be lowered, not dropped, from trucks or into trenches. All cracked, damaged or defective pipe and fittings, or any length of pipe having a gouge, scratch or other permanent indentation of more than ten percent (10%) of the wall thickness in depth, shall be rejected and removed at once from the work and replaced with new acceptable pipe at no additional cost to the Owner.

1.08 Job Conditions

A. Water in Excavation

1. Water shall not be allowed in the trenches while underground pipes, fittings, valves and/or accessories are being laid and/or tested.

2. The Contractor shall not open more trench than the available pumping facilities are able to dewater to the satisfaction of the Engineer. The Contractor shall assume responsibility for disposing of all water so as not to injure or interfere with the normal drainage of the territory in which he is working.

3. In no case shall the pipelines being installed be used as drains for such water, and the ends of the pipe shall be kept properly and adequately plugged during construction by the use of approved stoppers and not by improvised equipment.

4. All necessary precautions shall be taken to prevent the entrance of mud, sand, or other obstructing matter into the pipelines. If on completion of the work any such materials has entered the pipelines, it must be cleaned as directed by the Engineer so that the entire system will be left clean and unobstructed.

1.09 Warranties and Guarantees

A. Provide an equipment warranty in accordance with Section 01740, *Warranties and Bonds*.

2. PRODUCTS

2.01 General

A. All materials that come into contact with potable water shall be on either the EPA or NSF lists of products approved for use in contact with potable water. Manufacturers shall submit an affidavit with the shop drawings indicating approval by the EPA or NSF for the materials used in products that come into contact with potable water, in accordance with Rule 62-555.320(3), Florida Administrative Code.

2.02 Polyvinyl Chloride (PVC) Pipe and Fittings

A. Small Diameter Gravity Drainage Piping (< 4-inches)

1. PVC pipe smaller than four (4) inches nominal diameter used for gravity drainage piping shall be Schedule 40 pipe in accordance with ASTM D-1785.

2. Schedule 40 PVC pipe shall have solvent welded joints as specified for PVC pressure pipe.

B. Large Diameter Gravity Drainage Piping (≥ 4-inches)

1. Unless otherwise noted, large gravity drainage piping shall conform to the requirements and shall have gasketed integral bell ends:

Pipe Size (inches)	Pipe Requirements
4 - 12	AWWA C900, DR25
> 12	AWWA C905, DR25

2. ***Pipe shall be designed for a maximum working pressure at not less than 100 psi and with not less than a 4 to 1 sustained hydrostatic pressure safety factor***.

3. ***Fitting shall be ductile iron fittings with restrained mechanical joints*** and as specified in Section 15060, *Ductile Iron Pipe and Fittings*.

4. ***Pipe shall be made of ductile iron pipe O.D.'s instead of IPS***.

C. Small PVC Pressure Piping (< 4-inches)

1. Unless otherwise specified, PVC pressure pipe smaller than four (4) inches nominal diameter shall conform to the following requirements, as shown on the Contract Drawings or specified in other Sections.

Pipe Size (inches)	Pipe Requirements
< 4	Schedule 80, ASTM D-1785

2. Schedule 80 pipe shall have solvent welded joints unless otherwise shown on the Contract Drawings or specified in other Divisions.

3. PVC pressure pipe shall bear the approved seal of the National Sanitation Foundation (NSF).

4. ***PVC pipe that is exposed to sunlight shall be manufactured with UV additives to provide resistance to ultraviolet light deterioration***.

5. Fittings

   a. Socket type, solvent welded fittings for Schedule 80 PVC pipe, less than three (3) inches in diameter, shall be in conformance with ASTM D-2467. Socket type, solvent welded fittings for Schedule 80 CPVC pipe, less than three (3) inches in diameter, shall be in conformance with ASTM F-439.

   b. Threaded type fittings for Schedule 80 PVC pipe, less than three (3) inches in diameter, shall be in conformance with ASTM D-2464. Threaded type fittings for Schedule 80 CPVC pipe, less than three (3) inches in diameter, shall be in conformance with ASTM F-437.

   c. ***Solvent weld solvent welded or threaded joints shall be "water-tight"***.

   d. ***All fittings for PVC pipelines greater than or equal to three (3) inches shall be ductile iron***. All adapters, fittings and transition gaskets necessary to connect PVC fittings shall be furnished.

6. Flanges

   a. ***Flanges for Schedule 80 PVC pipe shall be rated for a 150 psi working pressure*** with ANSI B-16.1 dimensions and bolting pattern.

b. Flanges shall be connected to PVC piping with either solvent welded or threaded joints in accordance with ASTM D-2467 or ASTM D-2464, respectively. Gaskets shall be neoprene, full faced type with a minimum thickness of 1/8-inch.

c. Nuts and bolts shall be hexagonal with machine threads, manufactured of Type 316 stainless steel in accordance with ASTM A-320, Class 2.

d. ***Type 316 stainless steel flat washers with lock washers shall be used against PVC flanges***.

e. The nuts shall have a hardness that is lower than that of the bolts and washers by a difference of 50 Brinnell hardness to prevent galling during installation.

7. PVC solvent cement shall be in compliance with ASTM D-2564 and in accordance with the pipe manufacturer's recommendations. The Contractor shall use a cleaner recommended by the manufacturer for cleaning the pipe/fittings prior to solvent welding. Lubricant for Schedule 80 threaded joints shall be Teflon tape only.

8. Provide suitable adapters for connections to equipment and other piping systems.

D. Large PVC Pressure Piping (≥ 4-inches)

1. Unless otherwise noted, PVC pressure pipe for the nominal diameters shown shall conform to the following requirements, have gasketed integral bell ends, and be manufactured to ductile iron O.D.'s instead of IPS.

Pipe Size (inches)	Pipe Requirements	Max. Working Pressure (psi)
4 - 12	AWWA C900, DR-18	150
> 12	AWWA C905, DR-18	235

2. PVC pipe shall bear the NSF marking of approval when used for potable water applications.

3. ***PVC Pipe shall be designed for maximum working pressure as indicated above and with not less than a 4 to 1 sustained hydrostatic pressure safety factor***.

4. ***Fittings shall be ductile iron fittings with restrained mechanical joint ends*** as specified in Section 15060, *Ductile Iron Pipe and Fittings*. All adapters, fittings and transition gaskets necessary shall be furnished.

5. ***PVC pipe that is exposed to sunlight shall be manufactured with UV additives to provide resistance to ultraviolet light deterioration***.

6. Bell and Spigot

   a. Pipe joints shall be made with integral bell and spigot pipe ends meeting ASTM D-3139, *Standard Specification for Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals*. The bell shall consist of an integral thickened wall section designed to be at least as strong as the pipe wall.

   b. The bell shall be supplied with factory glued rubber ring gasket which conforms to the manufacturer's standard dimensions and tolerances.

   c. The gasket shall meet the requirements of ASTM F-477, *Elastomeric Seals (Gaskets) for Joining Plastic Pipe*.

   d. PVC joints shall be "Ring-Tite" as manufactured by Johns-Manville Manufacturing Company, Inc. or an equal approved by the Engineer.

7. Fittings

   a. ***All fittings for use with PVC pipe three (3) inches and larger in size shall be ductile iron with a minimum working pressure of 250 psi*** and shall conform to ANSI/AWWA A21.10/C-110, latest revision except as shown on the Contract Documents.

   b. Fittings shall have mechanical joint bell ends manufactured in accordance with ANSI/AWWA A21.11/C-111, latest revision. Jointing materials for mechanical joints shall be provided by the fitting manufacturer. Materials, assembly and bolting shall be in accordance with ANSI/AWWA A21.11/C-111, latest revision.

   c. Tee head nuts and bolts for mechanical joints shall be manufactured of corrosion resistant high strength, low alloy COR-TEN steel meeting the requirements of ASTM A-242.

   d. ***All cast iron and ductile iron fittings for use with PVC pipe shall be coated and lined***, as specified for ductile iron pipe in Section 15060, *Ductile Iron Pipe and Fittings*, intended for similar service, as noted on the Contract Drawings.

8. Restrained Joints

   a. In accordance with the Contract Drawings, to prevent pipe joints and fittings from separating under pressure, pipe joints and fittings shall be restrained as follows:

1) PVC pipe bell and spigot joints shall be restrained with the EBBA Iron MEGALUG® Series 1500 Restrainer or an equal approved by the Engineer. The restraining device and tee head bolts shall be manufactured of high strength ductile iron meeting ASTM A-536, Grade 65-45-12. Clamping bolts and nuts shall be manufactured of corrosion resistant high strength, low alloy COR-TEN steel meeting the requirements of ASTM A-242.

2) Mechanical joint fittings used with PVC pipe shall be restrained with the EBBA Iron MEGALUG® Series 2000 PV Restrainer or an equal approved by the Engineer. The restraining device and tee head bolts shall be manufactured of high strength ductile iron meeting ASTM A-536, Grade 65-45-12. Clamping bolts and nuts shall be manufactured of corrosion resistant high strength, low alloy COR-TEN steel meeting the requirements of ASTM A-242.

E. Clear PVC Reinforced Tubing

1. Clear PVC tubing, for chemical applications shown on the Contract Drawings, shall be nylon reinforced, PVC clear tubing.

2. The inside diameter shall be as shown on the Contract Drawings or as specified in Sections of this Project Manual.

3. ***Tubing shall be able to withstand a working pressure of 150 psi***.

4. Tubing shall be Amaclear "R" as manufactured by Amazon Hose Rubber Company, or approved equal.

F. ***All ductile iron fittings and accessories for pipelines (above grade - flanged; below grade - mechanical joint) shall be compatible with the pipe***.

G. PVC fittings shall meet the requirements of AWWA C-900/C-905 and be of the same, or higher, pressure rating as the pipeline.

H. ***PVC color shall be in accordance with the Contract Documents and as required by the Engineer and Owner***.

3. EXECUTION

3.01 Storage and Handling of PVC Pipe

A. Delivery, Storage and Handling of PVC pipe shall follow the requirements of Article 1.07 of this Section.

3.02 Installation of PVC Pipe and Fittings

A. ***No single piece of pipe shall be laid unless it is straight***. The centerline of the pipe shall not deviate from a straight line drawn between the centers of the openings at the ends of the pipe by more than $^{1}/_{16}$-inch per foot of length. If a piece of pipe fails to meet this requirement check for straightness, it shall be rejected and removed from the site. Laying instructions of the pipe manufacturer shall be explicitly followed.

B. If any defective pipe is discovered after it has been installed, it shall be removed and replaced with a sound pipe in a satisfactory manner at no additional cost to the Owner.

C. All PVC pipe and fittings and cast or ductile iron fittings shall be laid in accordance with the pipe manufacturer's published installation guide, the AWWA Manual of Practice No. M23, *PVC Pipe - Design and Installation* and the Uni-Bell Plastic Pipe Association installation recommendations.

D. In preparation of pipe installation, placement (stringing) of pipe should be as close to the trench as practical on the opposite side of the trench from the excavated material. The bell ends of the pipe should point in the direction of the work progress.

E. ***Pipe and fittings shall be laid accurately to the lines and grades indicated*** on the Contract Drawings or as indicated by the Engineer. Care shall be taken to insure a good alignment both horizontally and vertically and to give the pipe a firm bearing along its entire length. Any pipe that has its grade or joint disturbed after laying shall be taken up and re-laid.

F. ***All pipe and fittings shall be cleared of sand, dirt and debris before laying***. All precautions shall be taken to prevent sand, dirt or other foreign material from entering the pipe during installation. If necessary, a heavy, tightly woven canvas bag of suitable size shall be placed over each end of the pipe before lowering into the trench and left there until the connection is made to the adjacent pipe. ***Any sand, dirt or other foreign material that enters the pipe shall be removed fro the pipe immediately***. The interior of all pipe and fittings shall be kept clean after installation until accepted in the complete work.

G. ***Any time that pipe installation is not in progress, including lunchtime, the open ends of the pipe shall be closed by a watertight plug or other method*** approved by the Engineer. Plugs shall remain in the pipe ends until all water is removed from the trench. No pipe shall be installed when trench conditions are unsuitable for such work, including standing water, excess mud, rain or snow.

H. Good alignment shall be preserved during installation. ***The deflection at joints shall not exceed that recommended by pipe manufacturer***. Fittings, in addition to those shown on the Contract Drawings, shall be provided, if required, in crossing utilities which may be encountered upon opening the trench.

I. As soon as the excavation is complete to normal grade of the bottom of the trench, bedding shall be placed, compacted and graded to provide firm, uniform and continuous support for the pipe. Bell holes shall be excavated so that only the barrel of the pipe bears upon the bedding. The pipe shall be laid accurately to the lines and grades indicated on the Contract Drawings. Blocking under the pipe will not be permitted. Bedding shall be placed evenly on each side of the pipe to mid-diameter, and hand tools shall be used to force the bedding under the haunches of the pipe and into the bell holes to give firm continuous support for the pipe. Bedding for pipe shall be as specified in Section 02220, *Excavation, Backfilling and Compaction*. Generally the compaction shall be done evenly on each side of the pipe and compaction equipment shall not be operated directly over the pipe until sufficient backfill has been placed to ensure that such compaction equipment will not have a damaging effect on the pipe. Equipment used in compacting the initial three (3) feet of backfill shall be approved by the pipe manufacturer's representative prior to use.

J. Field Cutting of PVC Pipe

1. ***Field cutting of pipe shall be done in a neat workmanlike manner without creating damage to the pipe***. The pipe shall be cut square with a fine-toothed hand or power saw or other cutter or knife designed for use with plastic pipe.

2. Prior to cutting, the pipe shall be marked around its entire circumference or a square-in vise shall be used to ensure the pipe end is cut smooth at right angles to the axis of the pipe.

3. ***Remove burrs by smoothing edges with a knife, file, or sandpaper***.

4. ***Bevel the cut end of the pipe*** with a pipe beveling tool, wood rasp or portable sander to prevent damage to the gasket during joint assembly. A factory finished beveled end should be used as a guide to ensure a proper beveling angle and correct depth of bevel. ***Round off any sharp edges on the leading edge of the bevel with a knife or file***.

K. ***Any pipe having defective joint surfaces shall be rejected***, marked as such and immediately removed from the job site.

L. Each length of the pipe shall have the assembly mark aligned with the pipe previously laid and held securely until enough backfill has been placed to hold the pipe in place.

M. Before any joint is made, the pipe shall be checked to assure that a close joint with the next adjoining pipe has been maintained and that the inverts are matched and conform to the required grade. The pipe shall not be driven down to grade by striking it.

N. Precautions shall be taken to prevent flotation of the pipe in the trench.

O. When moveable trench bracing such as trench boxes, moveable sheeting, shoring or plates are used to support the sides of the trench, care shall be taken in placing and moving the boxes or supporting bracing to prevent movement of the pipe, or disturbance of the pipe bedding and the backfill. Trench boxes, moveable sheeting, shoring or plates shall not be allowed to extend below top of the pipe. As trench boxes, moveable sheeting, shoring or plates are moved, pipe bedding shall be placed to fill any voids created and the backfill shall be recompacted to provide uniform side support for the pipe.

3.03 Jointing PVC Pipe (Push-On Type)

A. ***Pipe shall be laid with bell ends looking ahead***.

B. The PVC bell and spigot joint shall be assembled in accordance with the pipe manufacturer's installation instructions, ASTM D-2774, and AWWA Manual M-23. Clean the interior of the bell, the gasket, and the spigot of the pipe to be jointed with a rag to remove any dirt or foreign material before assembling. Inspect the gasket, pipe spigot bevel, gasket groove, and sealing surfaces for damage or deformation.

C. ***Lubricate the spigot end of the pipe with a lubricant*** supplied or specified by the pipe manufacturer for use with gasketed PVC pipe in the application being installed (potable water, wastewater, effluent, or reclaimed water). The lubricant should be applied as specified by the pipe manufacturer. After the spigot end is lubricated, it must be kept clean and free of dirt and sand. If dirt and sand adhere to the lubricated end, the spigot must be wiped clean and relubricated.

D. ***Insert the spigot into the bell so that it contacts the gasket uniformly***. Align the pipe sections and push the spigot end into the bell until the manufacturer's reference mark on the spigot is flush with the end of the bell. The pipe should be pushed into the bell using a bar and block. The joint shall not be assembled by "stabbing" or swinging the pipe into the bell, nor shall construction machinery be used to push the pipe into the bell.

E. If undue resistance to insertion of the spigot end is encountered or if the reference mark does not reach the flush position, disassemble the joint and check the position of the gasket. If the gasket is twisted or pushed out of its seat, inspect the components, repair or replace damaged items, clean the components, and repeat the assembly steps. Be sure the pipe is in proper alignment during assembly. If the gasket was not out of position, check the distance between the spigot end and the reference mark and relocate the mark if it is out of position.

F. ***The weight of valves and fittings shall not be carried by the PVC pipe. The valve or fitting shall be supported by a concrete cradle*** as shown on the standard details. Concrete for the cradle shall be poured against undisturbed soil.

3.04 Jointing Mechanical Joint Fittings

A. Mechanical joints at valves, fittings and where designated shall be in accordance with the AWWA C-111 and the instructions of the pipe manufacturer. Suitable PVC to cast iron adapters shall be installed prior to installing fittings. PVC beveled spigots shall be cut flush prior to insertion in mechanical joint pipe. To assemble the joints in the field, thoroughly clean the joint surfaces and rubber gasket with soapy water before tightening the bolts.

B. ***Bolts shall be tightened to the specified torques***. Under no condition shall extension wrenches or pipe over handle of ordinary ratchet wrench be used to secure greater leverage.

3.05 PVC Joint Assembly for Threaded and Solvent Welded Pipe

A. All threaded and solvent welded joints shall be made watertight in accordance with ASTM D-2855, ASTM D-2564, and AWWA Manual M-23. All pipe cutting, threading, and jointing procedures for threaded and solvent welded PVC pipe joints shall be in strict accordance with the pipe and fitting manufacturer's printed installation instructions. Thread lubricant for threaded joints shall be teflon tape only.

B. At threaded joints between PVC and metal pipes, the metal side shall contain the socket end and the PVC side the spigot. A metal spigot shall not, under any circumstances, be screwed into a PVC socket.

C. ***The Contractor shall make sure that the proper cement is used with the proper pipe and fittings***. Never use CPVC cement on Type I PVC pipe or, conversely, never use PVC cement on CPVC pipe and fittings.

3.06 Restrained Joints

A. Restrained joints shall be made in strict, complete accordance with the manufacturer’s recommendations.

B. ***All piping shall be restrained*** as indicated on the Contract Drawings.

C. ***All fittings shall be restrained***.

D. In cases where the calculated required length of restrained pipe is not evenly divisible by nominal laying lengths of pipe, the total required length of restrained pipe shall be rounded up to the next closest nominal length that is evenly divisible by the standard laying length.

3.07 Field Painting

A. ***Pipe normally exposed to view shall be painted and marked*** as specified in Section 09900, *Painting* and Section 09905, *Piping, Valve and Equipment Identification System*.

3.08 Separation of Non-Potable Water Mains and Potable Water Mains

A. Horizontal Separation

1. Existing and proposed water and wastewater or non-potable force mains shall be ***separated at least six (6) feet horizontally***.

2. Horizontal separation between water mains and wastewater or non-potable force mains ***must always be a minimum of six (6) feet*** unless a closer than separation has been specifically detailed on the Contract Drawings that have been approved under the FDEP Permit.

B. Vertical Separation

1. Parallel Lines

a. Whenever potable water and non-potable water lines (reclaimed, sanitary, stormwater, force mains) run parallel and do not meet the horizontal separation requirements, then the lines shall be ***vertically separated with the potable water line at least eighteen (18) inches above the top of the non-potable lines***.

2. Crossings

a. Force mains crossing water mains shall be installed to ***provide a minimum vertical distance of eighteen (18) inches measured from the outside of the potable water line to the outside of the non-potable line***. The potable water line may be either above or below the non-potable line at crossings. The constructed pipeline shall be installed so that the pipeline joints are as far from the crossing as possible.

b. ***When the eighteen (18) inch maximum vertical separation distance cannot be maintained, the potable water main shall be encased in concrete. Concrete encasement of the potable water main shall be ten (10) feet each way of the crossing***.

3.09 Concrete Pipe Encasement

A. ***Concrete for concrete pipe encasement shall have a minimum strength of 3,000 psi at twenty-eight (28) days*** *and encasement shall be constructed in accordance with details shown on the Contract Drawings****. Encasement shall be constructed where***:

1. Indicated on the Contract Drawings.
2. Piping is laid under buildings, structures and structure pads.
3. Potable water mains do not meet the eighteen (18) inch vertical separation.
4. The Engineer shall order the pipeline encased.

B. The points of beginning and ending of concrete pipe encasement shall not be more than six (6) inches from a pipe joint to protect the pipe from cracking due to uneven settlement of its foundation or the erects of superimposed live loads.

C. ***Pipe encasement shall provide a minimum coverage of twelve (12) inches all around the pipe including pipe bells***.

3.10 Connection to Existing Water, Biosolids/Sludge, Wastewater and Reuse Systems

A. The Contractor shall coordinate making connection of the new mains to mains which are in service at the time of construction with the Owner.

B. The Contractor shall not connect to existing facilities unless the Engineer and a representative of the Owner are present. ***The Engineer shall be notified, in writing, at least seventy-two (72) hours prior to the time connection is desired***.

C. Operation of all system valves shall be the responsibility of the Owner's personnel only. At no time shall the Contractor operate any system valves. System valves shall be defined as any valve which has main pressure against either side of the valve. The Contractor shall notify the Owner to request that a valve be operated, in writing, ***at least seventy-two (72) hours prior to the time operation is required***.

3.11 Cleaning and Flushing of Pipelines

A. ***Following the hydrostatic and leakage tests, all the mains constructed under this Contract shall be cleaned and flushed to remove sand, loose dirt, and other***

debris. ***The minimum flushing velocity shall be 2.5 feet per second. Flushing shall continue until clean water flows from the main***. However, the Contractor shall endeavor to use the minimum amount of flushing water required to complete the work.

B. ***Upon completion of testing for the gravity drain line system, drain lines shall be flushed*** to remove dirt, sand, stones, and other debris which may have entered the lines during construction and settled out in the lines and/or manholes. Materials and debris flushed from the drain lines shall be removed from a downstream manhole, basin or lift station and disposed of at an approved disposal area.

C. Temporary blowoffs may be required for the purpose of flushing mains. Temporary blowoffs shall be installed as close as possible to the ends of the main being flushed. Blowoffs installed on the main shall be the same diameter as the main. Temporary blowoffs shall be removed and plugged after the main is flushed. All costs for installing and removing temporary blowoffs shall be at no additional cost to the Owner.

D. ***The Owner shall be notified, in writing, at least seventy-two (72) hours prior to flushing mains***.

E. Blowoffs and temporary drainage piping used for flushing shall not be discharged into any gravity sewer or pumping station wetwell. The Contractor shall obtain prior approvals from the Engineer and the Owner as to the methods and locations of flushing water discharge.

3.12 Disinfection of Potable Water Pipelines

A. Before any portion of the potable water piping systems is to be placed in service, it shall be disinfected; and its disinfection shall be demonstrated by bacteriological tests conducted in accordance with *Standard Methods for Examination of Water and Wastewater*, latest edition, for the coli-aerogenes group, by an approved laboratory, acceptable to the Engineer and the County Health Department.

B. Disinfection of potable water pipelines shall be in accordance with Section 15041, *Disinfection of Piping and Structures*.

3.13 Pressure Testing of Pipe

A. ***After installation, the pipe shall be tested for compliance with the specifications***. The Contractor shall furnish all necessary equipment and labor for the pressure test and leakage test on the pipelines.

SECTION 15076

PVC DOUBLE WALL CONTAINMENT PIPING

1. GENERAL

1.01 Scope of Work

A. Furnish all labor, materials, equipment and incidentals required and install, disinfect and test double wall containment piping, fittings and appurtenances of the sizes and in the locations shown on the Contract Drawings and as specified herein.

B. The Engineer reserves the right to make such modifications in locations as may be found desirable to avoid interference between pipes, or for other reasons. Pipe fitting notation is for the Contractor's convenience and does not relieve him/her from installing and jointing different or additional items where required to achieve a complete piping system.

C. All plastic pipe and fittings shall conform to this specification section whether provided as a part of an equipment “package” or purchased separately by the Contractor.

D. ***Double wall containment piping systems are required for all underground pipe, risers and chemical feed lines***. The double wall containment piping shall be used when the piping is in contact with the ground, located in the trenches or any other location indicated on the Contract Drawings.

E. Related Work Specified Elsewhere

1. Painting:	Section 09900
2. Piping, Valve and Equipment Identification System:	Section 09905
3. Mechanical - General Requirements:	Section 15000
4. Disinfection of Piping and Structures:	Section 15041
5. Pressure Testing of Piping:	Section 15044
6. Valves and Appurtenances:	Section 15100

7. Pipe Hangers and Supports: Section 15125

8. Couplings and Connectors: Section 15129

1.02 Quality Assurance

A. All double wall containment piping, fittings and appurtenances shall be furnished by a single manufacturer who is fully experienced, reputable, and qualified in the manufacture of the items to be furnished. The equipment shall be designed, constructed and installed in accordance with the best practices and methods and shall comply with these specifications.

B. The solvent welder shall be qualified in accordance with Chapter VII of the ASME B31.3-93 Code, Part 9, Paragraph A328.

C. Double wall containment pipe shall be as manufactured by Asahi, Guardian, R.G. Sloane, or approved equal. The manufacturer shall have at least ten (10) years experience and proven product reliability.

1.03 Submittals

A. Submit shop drawings to the Engineer, in accordance with Section 00700, *General Conditions*, and Section 01300, *Shop Drawings, Submittals and Samples*.

B. Shop Drawings shall include complete piping layouts and schedules shall include dimensioning, fittings, types and locations of valves and appurtenances, joint details, methods and location of supports, anchorage, gasket material, grade of material, installation instructions and all other pertinent technical information (specifications, detail, literature, etc.) for all items to be furnished.

C. Prior to each shipment of pipe, certified test reports that the pipe for this Contract was manufactured and tested in accordance with the ASTM and AWWA Standards specified herein shall be submitted.

1.04 Product Delivery, Storage and Handling

A. Double wall containment piping, fittings and accessories shall be delivered to the Project site in unbroken bundles packaged in such a manner as to provide protection against damage.

B. Any piping, fittings or accessories damaged in shipment shall be replaced as directed by the Engineer, at no additional cost to the Owner.

C. Pipe and fittings shall be handled and stored in a manner which will ensure installation in a sound, undamaged condition. Handling methods and equipment used shall prevent damage to the pipe. Bare cables, chains, or metal bars shall not be used. Pipe shall be stored off the ground on wide padded skids.

D. PVC items deteriorate in sunlight and are slightly brittle, especially at lower temperatures, so care shall be taken in loading, transporting and unloading items to prevent injury to the items. All items shall be examined before installation and no piece shall be installed which is found to be defective. Handling and installation of pipe and fittings shall be in accordance with the manufacturer's instructions, referenced standards and as specified herein.

E. Any pipe or fitting showing a crack or which has received a blow that may have caused an incident fracture, even though no such fracture can be seen, shall be marked as rejected, removed at once from the work, and replaced at no additional cost.

F. While stored, pipe shall be adequately supported from below at not more than three (3) foot intervals to prevent deformation.

G. When it is necessary to store double wall containment pipe and fittings for more than thirty (30) days, exposure to direct sunlight shall be prevented by covering the pipe with an opaque material. Adequate air circulation above and around the pipe shall be provided as required to prevent excessive heat accumulation. Double wall containment pipe and fittings shall not be stored close to heat sources or hot objects such as heaters, fires, boilers or engine exhaust. Pipe gaskets shall be protected from excessive exposure to heat, direct sunlight, ozone, oil and grease. The interior and all sealing surfaces of pipe, fittings and other appurtenances shall be kept clean and free of dirt and foreign matter.

H. ***If any defective item is discovered after it has been installed, it shall be removed and replaced with an exact replacement item in a satisfactory manner by the Contractor, at the Contractor's own expense***. All pipe and fittings shall be thoroughly cleaned before installation and the interior shall be kept clean until testing.

I. Care shall be taken in handling and laying pipe and fittings to avoid severe impact blows, crushing, abrasion damage, gouging or cutting. Pipe shall be lowered, not dropped, from trucks or into trenches. All cracked, damaged or defective pipe and fittings, or any length of pipe having a gouge, scratch or other permanent indentation of more than ten percent (10%) of the wall thickness in depth, shall be rejected and removed at once from the work and replaced with new acceptable pipe at no additional cost to the Owner.

1.05 Job Conditions

A. Water in Excavation

1. Water shall not be allowed in the trenches while underground pipes, fittings, valves and/or accessories are being laid and/or tested.

2. The Contractor shall not open more trench than the available pumping facilities are able to dewater to the satisfaction of the Engineer. The Contractor shall assume responsibility for disposing of all water so as not to injure or interfere with the normal drainage of the territory in which he is working.

3. In no case shall the pipelines being installed be used as drains for such water, and the ends of the pipe shall be kept properly and adequately plugged during construction by the use of approved stoppers and not by improvised equipment.

4. All necessary precautions shall be taken to prevent the entrance of mud, sand, or other obstructing matter into the pipelines. If on completion of the work any such materials has entered the pipelines, it must be cleaned as directed by the Engineer so that the entire system will be left clean and unobstructed.

1.06 Warranties and Guarantees

A. Provide an equipment warranty in accordance with Section 01740, *Warranties and Bonds*.

2. PRODUCTS

2.01 General

A. All double wall containment piping system components shall be pre-engineered, factory fabricated, tested and assembled such that field assembly is minimized to primarily that of straight joints.

2.02 Materials and Equipment

A. Carrier Pipe

1. Unless specified otherwise, pipe shall be made of polyvinyl chloride (PVC), Schedule 80 pipe, conforming to ASTM D1784-92.

2. Schedule 80 pipe shall have solvent welded socket type joints.

3. Laying lengths of twenty (20) feet or as shown on the Drawings shall be used.

B. Containment Pipe

1. Pipe shall be made of polyvinyl chloride (PVC) or chlorinated polyvinyl chloride (CPVC), Schedule 80 pipe, conforming to ASTM D1784-92 and the material being conveyed; chemical and pipeline capatability is required.

C. Fittings

1. Fittings for Schedule 80 pipe shall be of the socket type, solvent welded in conformance with ASTM D-2467.

2. Solvent welded joints shall be watertight.

D. Solvent Cement

1. PVC solvent cement shall be in compliance with ASTM D-2564.

2.03 Accessories

A. Leak Detection System

1. Install in strict accordance with the system manufacturer's instructions and recommendations. Leak detection shall be installed with a sensor located at the lowest point in the piping, with all piping sloping to the location of the leak detection sensor. ***The leak detection system shall sound a local alarm and an alarm signal shall be sent to the facility SCADA system when a leak occurs.***

2. Signal wires from the low point sensor shall be connected to the local output panel. Contact with any aqueous chemical shall result in an audible alarm and an LED signal. The local output panel shall be housed in a NEMA 4X enclosure. The leak detection output panel shall be located outside the chemical feed facilities where the piping first penetrates the ground or is located within the trench. For any miscellaneous control component data, the Contractor is referred to Division 11, *Equipment*, Division 13, *Special Construction* or Division 16, *Electrical*. The output relays shall be capable of interfacing with the facility SCADA system.

3. The leak detection system shall be manufactured by Asahi or approved equal.

2.04 Spare Parts

A. All special tools, solvents, lubricants, and cements required for normal installation shall be furnished with the pipe.

2.05 Quality Control

A. The Contractor shall follow the manufacturer's and supplier's recommended product quality control specifics as required for this project.

3. EXECUTION

3.01 Installation

A. Install double wall containment pipe where shown on the Contract Drawings and in strict accordance with the manufacturer's technical data and printed instructions.

B. No single piece of pipe shall be laid unless it is straight. The centerline of the pipe shall not deviate from a straight line drawn between the centers of the openings at the ends of the pipe by more than $^{1}/_{16}$-inch per foot of length. If a piece of pipe fails to meet this requirement check for straightness, it shall be rejected and removed from the site. Laying instructions of the pipe manufacturer shall be explicitly followed.

C. If any defective pipe is discovered after it has been installed, it shall be removed and replaced with a sound pipe in a satisfactory manner at no additional cost to the Owner. All pipe and fittings shall be thoroughly cleaned before installation, shall be kept clean until they are used in the work and when laid, shall conform to the lines and grades required. Double wall containment pipe and fittings shall be installed in accordance with requirements of the manufacturer, ASTM and AWWA standards or as otherwise provided herein.

D. All pipe shall be sound and clean before installation. When installation is not in progress, including lunchtime, the open ends of the pipe shall be closed by a watertight plug or other approved means. Good alignment shall be preserved during installation. The deflection at joints shall not exceed that recommended by pipe manufacturer. Fittings, in addition to those shown on the Contract Drawings, shall be provided, if required, in crossing utilities which may be encountered upon opening the trench.

E. All valves and equipment shall be supported independently from the pipe. Anchor valves such that the turning moment resulting from their operation will not be transmitted to the pipe.

F. Joints for double wall containment pipe and fittings shall be solvent welded. ***All joints shall be made watertight.*** All pipe cutting, threading and jointing procedures for solvent welded pipe joints shall be in strict accordance with the pipe and fitting manufacturer's printed installation instructions. In making solvent welded connections, clean dirt and moisture from pipe and fittings, bevel pipe ends slightly with emery cloth, if necessary and apply solvent cement of proper grade.

G. Installation of valves and fittings shall be strictly in accordance with the manufacturer's instructions. Particular care shall be taken not to over-stress threaded connections at sleeves. In making solvent weld connections the solvent shall not be spilled on valves or allowed to run from joints.

H. All piping shall have sufficient number of unions to allow convenient removal and shall be as approved by the Engineer.

I. ***Where plastic passes through wall sleeves, joints shall be scaled with a mechanical seal.*** Mechanical seals shall be Link-seal, or approved equal.

J. Concrete inserts for hangers and supports shall be furnished and installed in the concrete as it is placed. The inserts shall be set in accordance with the requirements of the piping layout and the Contractor shall verify their locations from approved piping layout Drawings and the structural Drawings. Pipe hangers and supports are specified in Section 15125, *Pipe Hangers and Supports*.

K. Field Painting

1. Pipe normally exposed to view shall be painted and marked as specified in Section 09905, *Piping, Valve and Equipment Identification System*.

3.02 Cleaning, Flushing and Testing of Pipelines

A. The Contractor shall clean and flush all double wall containment lines to remove sand, loose dirt, and other debris. The minimum flushing velocity shall be 2.5 feet per second. Flushing shall continue until clean water flows from the main. However, the Contractor shall endeavor to use the minimum amount of flushing water required to complete the work.

B. All double wall containment piping shall be hydrostatically pressure tested in accordance with Section 15044, *Pressure Testing of Piping*.

C. Following installation and testing:

1. Flush clean the carrier and containment piping system.

2. Purge the annular space of moisture with clean, dry air.

3.03 Start-up and Instruction

A. Provide a manufacturer's representative to assist with the unloading of the double wall containment piping system, system tests, containment pipe joint closure, installation and testing of the leak detection system, and training of the Owner's personnel in the operation and maintenance of the leak detection system.

B. The manufacturer's representative shall complete a Certificate of Completed Demonstration Form (Section 00866) for the double wall containment piping system and present a letter to the Engineer that the system has been installed, tested and calibrated and is ready for operation in accordance with the manufacturer's instructions and recommendations. Inspection and examination practices shall be according to ASME B31.3-93 for normal fluid service.

END OF SECTION

SECTION 15100

VALVES AND APPURTENANCES

1. GENERAL

1.01 Description

A. The Work included in this Section consists of furnishing all labor, equipment, materials, and incidentals required to install and test, complete and ready for operation, all valves and appurtenances as shown on the Contract Drawings and as specified herein.

B. The equipment shall include, but is not limited to, the following:

1. Gate Valves
2. Ball Valves
3. Diaphragm Valves
4. Check Valves
5. Pressure Relief Valves
6. Solenoid Valves
7. Valve Operators
8. Air Release Valves
9. Eyewashes and Showers
10. Sediment Strainers
11. Service Saddles and Corporation Stops
11. Hose Bibbs
12. Washdown Hoses
13. Expansion Joints
14. Strainers
15. Unions
16. Pressure Gauges
17. Diaphragm Seals
18. Valve Boxes

C. Related Work Described Elsewhere

09900	Painting
09905	Piping, Valve and Equipment Identification System
15000	Mechanical - General Requirements
15044	Pressure Testing of Piping
15129	Couplings and Connectors

Division	Description
15	Piping
16	Electrical
Contract Drawings and General Provisions of the Contract	

D. General Design

1. All of the equipment and materials specified herein are intended to be standard for use in controlling the flow of water, air, chemicals, etc., depending on the application.

1.02 Quality Assurance

A. All types of valves and appurtenances shall be the products of well established reputable firms who are fully experienced, reputable and qualified in the manufacture of the particular equipment to be furnished. The equipment shall be designed, constructed and installed in accordance with the best practices and methods and shall comply with these specifications as applicable.

B. Compliance with Standards

1. Valves and appurtenances shall meet the requirements of the following applicable standards that shall be made a part of the Contract Documents by reference:

   a. American Water Works Association (AWWA).

   b. American Society for Testing and Methods (ASTM)

   c. American National Standard Institute (ANSI)

   d. American Society of Mechanical Engineers (ASME)

      1) ASME B31.9 for building services piping valves

      2) ASME B16.10 and B16.34 compliance for ferrous valves (dimension and design criteria).

   e. National Sanitation Foundation (NSF)

      1) NSF 61 for valve materials for potable water use.

C. Valving and Appurtenance Inspection

1. ***The Contractor shall obtain from the valve and appurtenance manufacturer's, a certificate of inspection*** to the effect that the equipment supplied for this Contract have been inspected at the plant and that they meet the requirements of these specifications.

2. All valving and appurtenances shall be subject to visual inspection at the time of delivery by rail or truck and also just before they are installed. Equipment that does not conform to these specifications will be rejected and must be removed immediately by the Contractor and shall be replaced at no additional cost to the Owner.

3. The entire product of any plant may be rejected when, in the opinion of the Engineer, the methods of manufacture fail to secure uniform results, or where the materials used are such as to produce valves or appurtenances.

1.03 Submittals

A. All shop drawings shall be submitted to the Engineer for approval in accordance with Section 01300, *Shop Drawings, Submittals and Samples*, prior to construction. ***All shop drawings shall be submitted in an electronic (PDF) format***.

B. ***Submit within fifteen (15) calendar days after the Project Notice to Proceed a list of materials to be furnished***, the names of suppliers and the date of delivery of materials to the Project Site.

C. Complete shop drawings of all valves and appurtenances shall be submitted to the Engineer for approval prior to ordering of materials. The valve manufacturers shall certify, in writing, that the valve design and materials of construction are suitable for the intended service.

D. Shop drawings for valves and appurtenances shall include, at a minimum, the following:

1. ***Certified Dimensional Drawings*** of all piping, fittings, valves and appurtenances.

2. ***A laying schedule and marking diagrams*** which indicate the specific number of each pipe, fitting, valve and appurtenance, the location and direction of lay of each pipe, fitting, valve and appurtenance in the completed line. In addition, the laying schedules shall include, but not limited to, the following:

   a. Invert station and elevation of each valve and appurtenance.

   b. Locations of valves, appurtenances and other mechanical equipment.

1) Methods and locations of supports.

2) Details of special elbows and fittings.

c. Details of restrained and flexible joints.

d. All valves, including gate, plug, ball, check, air release, solenoid, telescoping valves, etc.

e. Valve operators.

f. Valve boxes.

g. Valve and meter vaults.

h. Fire hydrants, backflow preventers and emergency eyewashes/showers.

i. Hose bibbs and washdown hoses

j. Couplings, connectors and unions.

k. Service saddles.

l. Pressure gauges.

m. Flexible expansion joints, tie rods, and flanged coupling adapters.

n. Joint lubricant.

o. Sediment strainers.

p. Diaphragm seals.

q. Service saddles and corporation stops.

3. A separate shop drawing submittal will be required for each major item listed above and for each different type of an item within a major item. For example, separate submittals will be required for butterfly, plug, ball, solenoid, check, and automatic air release valves. All submittals shall be in accordance with the General and Supplementary Conditions and Section 01300, *Shop Drawings, Submittals and Samples*.

E. Quality Control Submittals

1. Certificate of Compliance for:

   a. Electric Operators: *Full compliance with AWWA C-540*

   b. Butterfly Valves: *Full compliance with AWWA C-504*

2. Test and inspection data.

3. Manufacturer's certificate of proper installation and check-out.

4. Operation and Maintenance Manuals.

F. ***Submit manufacturer's catalog data and detail construction sheets showing all valve parts***. Describe each part by material of construction, specification (such as AISI, ASTM, SAE, CDA, etc.), and grade and type. Identify each valve by tag number to which the catalog data and detail sheets pertain.

G. ***Show valve dimensions including layout lengths***. Show port sizes. ***Show dimensions and orientation of valve actuators, as installed on the valve***. Show the location of internal stops for gear actuators. State differential pressure and fluid velocity used to size the actuators. For worm gear actuators, state the radius of the gear sector in contact with the worm and state the handwheel diameter.

H. ***Show valve linings and coatings*** and submit the manufacturer's catalog data and descriptive literature.

I. ***Submit three (3) copies of a report verifying that the valve interior linings and exterior coatings have been tested for holidays and lining thickness***. Describe test results and repair procedures for each valve. Do not ship valves to the Project Site until the reports have been returned by the Engineer and marked either "Approved" or "Approved as Noted".

J. For butterfly and eccentric plug valves, show the clear diameter or size of the port. Show the actual area of the port as a percentage of the area as calculated for the nominal valve size.

K. Acceptance of Material and Certifications

1. The Contractor shall ***furnish a certified Affidavit of Compliance for all valves, appurtenances and other products or materials furnished*** under this Contract complies with all applicable provisions of current AWWA, ASTM, NSF and ANSI standards, and these specifications.

2. ***No valves and/or appurtenances will be accepted for use in the Work on this project until the Affidavit has been submitted*** and approved by the Engineer.

L. ***Submit O&M Manuals for valves, appurtenances and other products and materials*** requiring periodic maintenance and/or explanation of operation.

1.04 Delivery, Storage and Handling

A. All valves and appurtenances shall be handled in such manner as to ensure a sound undamaged condition during shipping, delivering, and installing. The Contractor shall also refer to the requirements of Section 01600, *Materials and Equipment*.

B. Care shall be taken not to injure the valve and/or appurtenance coating and/or lining.

C. The Contractor shall exercise care when handling lined valves and appurtenances. Damage to the lining will render it unfit for use and shall require replacement at no additional cost to the Owner.

D. The insides of valves and appurtenances shall be kept free of dirt and debris.

1.05 Operation and Maintenance Manuals

A. O&M Manuals shall be furnished for this Project in accordance with Section 01730, *Operation and Maintenance Data* and shall be submitted in accordance with Section 01300, *Shop Drawings, Submittals and Samples*.

B. The O&M Manuals shall be prepared specifically for this installation and shall include all detailed operating and maintenance instructions and specifications relative to the assembly, alignment, checking, lubrication, placing in operation, adjustment, and maintenance of equipment and auxiliaries furnished under this Contract, together with its complete parts lists therefore, and copies of shop drawings, certified dimensions drawings and design calculations, required cut sheets, drawings, equipment lists, descriptions, etc. that are required to instruct operation and maintenance personnel unfamiliar with such equipment.

C. All such material shall be in addition to any instructions or parts lists packaged with or attached to the equipment when delivered.

D. The “final” O&M Manuals shall contain ***plastic laminated pull-out lubrication and maintenance cards*** detailing all lubrication points, lubricant type, and frequency of lubrications and all additional required maintenance and frequency intervals.

E. ***In addition to standard O&M Manuals, all manufacturers supplying equipment and products specified herein shall also submit their operation and maintenance manuals and data to the System Integrator for this Project on CD/DVD/BD's in Corel WordPerfect (latest version), Microsoft Word (latest version), or text, "txt", formats. All graphic files shall be in BMP, PCX, CDR, JPEG, DWG or DXF formats (integrators preference for the system shall be required). All O&M Manual files shall also be submitted electronically on CD/DVD/BD's to the Engineer in both PDF and JPEG formats, no exceptions.***

F. ***The System Integrator shall be responsible to configure and compile the O&M Manuals into "hypertext" window help files for use as computer "on-line" help screens for equipment operation and maintenance. The System Integrator shall return all hypertext files to the equipment and product manufacturer's for review and approval prior to introducing them into the SCADA System at the treatment facility.***

1.06 Job Conditions

A. Water in Excavation

1. Water shall not be allowed in the trenches while underground valves and/or appurtenances are being laid and/or tested.

2. The Contractor shall not open more trench than the available pumping facilities are able to dewater to the satisfaction of the Engineer. The Contractor shall assume responsibility for disposing of all water so as not to injure or interfere with the normal drainage of the territory in which he is working.

3. All necessary precautions shall be taken to prevent the entrance of mud, sand, or other obstructing matter into the valves and appurtenances. If on completion of the work any such materials has entered either valves or appurtenances, it must be cleaned as directed by the Engineer so that the entire system will be left clean and unobstructed.

1.07 Warranties and Guarantees

A. Provide equipment warranty in accordance with Section 01740, *Warranties and Bonds*. ***Provide a minimum three (3) year warranty from the date of Final Project Acceptance by the Owner***.

2. PRODUCTS

2.01 General

A. Install valves complete with operating handwheels or actuators, levers, chain wheels, extension stems, floor stands, gear operators, operating nuts, chains, wrenches and accessories required for operation.

B. All valves and appurtenances shall be of the size shown on the Contract Drawings and all equipment of the same type shall be from a single manufacturer.

C. All valves and appurtenances shall have the name of the manufacturer, size of the valve and the working pressure for which they are designed cast in raised letters upon some appropriate part of the body.

D. ***All bolts, washers and nuts shall be Type 304 stainless steel***.

2.02 Finishes

A. Potable Water

1. Epoxy Lining and Coating

a. An epoxy lining and coating shall be applied to all potable water valves and appurtenances in accordance with AWWA C-550, unless otherwise specified and NSF approved.

b. Either two-part liquid material or heat-activated (fusion) material shall be used, except only heat-activated material shall be used if the specifications call for “fusion” or “fusion bonded” epoxy.

c. ***A minimum seven (7) mil dry film thickness shall be provided except where limited by valve operating tolerances***.

2. Exposed Valves

a. Exposed valves shall be coated in accordance with Section 09900, *Painting*.

b. Safety isolation valves and lockout valves with handles, handwheels or chain wheels shall be painted “safety yellow”.

B. Raw Wastewater, Biosolids/Sludge, Secondary Effluent and Reclaimed Water

1. Exterior Coating for Buried Valves and Appurtenances

   a. All exterior surfaces of valves and appurtenances shall be clean, dry and free from rust and grease before coating.

   b. Valves and appurtenances to be installed underground shall be coated on the exterior at the factory with a ***two (2) coat bituminous epoxy system with a minimum total finish dry film thickness of twenty (20) mils***.

   c. Prior to back filling, all uncoated nuts, bolts, glands, rods, and other parts of joints for underground installation shall be coated in the field with bituminous epoxy.

2. Exterior Coating for Exposed Valves and Appurtenances

   a. All exterior surfaces of valves and appurtenances shall be clean, dry and free from rust and grease before coating.

   b. For valves and appurtenances installed above-ground, the exterior ferrous parts of all valves shall be shop primed at the factory with ***one (1) coat, minimum dry film thickness of four (4) mils***, of a lead/chromate free, rust-inhibitive universal epoxy primer. The primer shall be suitable for the finish paint specified.

   c. Following installation, all above-ground valves shall be finish painted in accordance with Section 09900, *Painting*.

   d. Exposed piping shall be painted in accordance with Sections 09900, *Painting*, and 09905, *Piping, Valve and Equipment Identification System*.

3. Interior Valve and Appurtenance Lining

   a. The interior of the valve body and valve disc shall be coated with a ***two-coat fusion bonded or thermosetting epoxy coating*** in accordance with AWWA C-550, latest revision and NSF 61.

   b. ***The coating shall be holiday-free, NSF approved, with a minimum thickness of sixteen (16) mils***.

   c. Surfaces shall be clean, dry, and free from rust and grease before coating.

2.03 Gate Valves (GV)

A. General

1. Gate valves shall have a clear waterway equal to the nominal diameter of the pipe when fully open.

2. The opening nut or wheel shall have an arrow cast in the metal indicating the direction of the opening. Each valve shall have the manufacturer's distinctive markings, pressure rating and year of manufacture cast on the body. Prior to shipment from the factory, each valve shall be tested by applying to it a hydrostatic pressure equal to twice the specified working pressure.

3. Hydrostatic and leakage testing shall be conducted in strict accordance with ANSI/AWWA C-500, latest revision or ANSI/AWWA C-509, latest revision whichever is applicable.

4. All gate valves which are installed on pipe sizes larger than three (3) inches shall have mechanical joint or flanged ends to fit the pipe run in which they are to be used. Flanged valves shall be faced and drilled to the ANSI 125/150 pound standard. Mechanical joint ends shall be to the AWWA Standard C111-72. Gate valves installed on pipes three (3) inches and smaller shall have slip on joints or screwed ends. Screwed ends shall be to the NPT Standard.

5. Gate valves shall open left or counter-clockwise when viewed from the stem.

6. Buried gate valves shall be furnished with two (2) inch square AWWA standard nut operators with a valve box and cover. Gate valves located above ground or inside structures shall be furnished with handwheel operators and shall have a suitable indicator arrow to give the valve position from fully open to fully closed.

B. Gate Valves for Tapping Valves and Sleeves

1. Tapping Valves

a. Tapping valves shall conform to ANSI/AWWA C-500 or C-509, latest revision, and shall be designed for a minimum working pressure of 150 psi.

b. Tapping valves three (3) inches to twelve (12) inches shall be resilient seat type gate valves as specified in Article 2.03. Resilient seat type tapping valves shall be furnished with a raised guide ring cast integrally on the flanged end which is designed to match the groove in the tapping sleeve. The purpose of this guide ring shall be to ensure true alignment of the valve with the tapping sleeve.

c. Tapping sleeves larger than twelve (12) inches shall be iron body, bronze mounted gate valves, with double disc, parallel seat and non-rising stem. The stem shall be bronze and sealed by two "O" rings. The stem nut shall be bronze and cast integrally into the top wedge. The valve disc seating mechanism shall be bottom wedging, hook and wedge type, with disc hooks and wedges as separate interacting parts. The valve shall be designed for vertical mounting in approximately level setting on buried water lines. The valve ends shall be flanged American Standard Class 125 pound steam pressure ratings on one side of the valve and mechanical joint on the other side for use with the class and type of pipe to be installed from the tapping sleeve. Tapping sleeves twelve (12) inches and larger shall be furnished with a raised guide ring cast integrally on the flanged end as specified above for resilient seat type tapping valves.

d. The valve shall open left or counter-clockwise when viewed from the stem. The valve shall be furnished with a 2-inch square AWWA standard nut operator with a valve box and cover as specified herein.

2. Tapping Sleeves

a. Tapping sleeves shall be of the cast iron, mechanical joint type, with a working pressure rating of 200 psi for sizes four (4) inches through twelve (12) inches and 150 psi for sizes fourteen (14) inches and larger, and shall conform to the applicable sections of AWWA Standard C-110, latest revision.

b. Sleeve and glands shall be of the split-type for assembly on the pipe, and the sleeve and mechanical joint glands and gaskets shall be sized for use with the class and type of pipe being tapped. Sleeve and glands shall be standard bituminous coated, and shall be furnished complete with all accessories. The outlet flange shall be Class 125 Standard. The Contractor shall obtain approval from the Engineer for drilling machine used prior to tapping connections.

3. Operator

a. Two (2) inch square nut or other operator specified on the Contract Drawings or by the Engineer.

4. Gate valves shall be manufactured by Mueller Company, Dresser Industries, Inc., American Valve and Hydrant Valve Company, Kennedy Valve Manufacturing Company, or equal.

5. Interior and Exterior coatings shall be in accordance with Article 2.02.

C. Knife Gate Valves (KGV) - Stainless Steel

1. Provide electric operated knife gate valves, in sizes and quantities as indicated on the Drawings for the dewatered solids discharge system.

2. Monitoring and control of the electric actuated knife gate valves to be integrated into the Master Dewatering Control Panel and facility SCADA.

3. The Master Dewatering Control Panel PLC programming shall allow for operator adjustable periodic cycling through all or any selected combination of possible cake discharge points at desired preset time intervals while the dewatering system is in operation. The programming shall allow for the use of only one drop point, cycling among any two adjacent drop points, or cycling between three drop points.

4. Knife gate valves shall be resilient seated, full, round port design for high flow capacity and minimal pressure drop. The valve body port area shall not be less than eighty percent (100%) of the nominal pipe diameter. Valves shall be designed for positive drip-tight shutoff at 150 psi. All materials of construction shall be as specified herein and shall be suitable for use with dewatered biosolids. The valves shall be equipped with automatic actuators and secondary chainwheel operators and extensions or floor stand operator with handwheel and extensions as shown on the Contract Drawings. Provide bevel gear actuators for valves fourteen (14) inches and larger.

5. Body and Gate

    a. The body material shall be Type 316 stainless steel.

    b. The body shall have a lugged design drilled tapped in accordance with ANSI 150 standards.

    c. The gate shall be constructed of Type 316 stainless steel in accordance with ASTM A-240, finish ground on each side to prevent packing or seat damage.

6. Packing and Gland Material

    a. The packing gland shall be Type 316 stainless steel in accordance with ASTM A-240.

    b. Valve packing shall be square braided PTFE impregnated synthetic fiber. Removal or replacement of the packing shall be accomplished without necessitating the removal of the valve from the pipeline.

7. Yoke Sleeve

    a. The yoke super structure shall be constructed of ASTM A-36. The yoke sleeve shall be aluminum bronze in accordance with ASTM B-30, Alloy C84400.

b. The bonnet shall be Type 316 stainless steel.

8. Seat Ring and Seat

   a. The seat ring shall be Type 316 stainless steel in accordance with ASTM A-240.

   b. The resilient seat material shall be EPDM or Neoprene and shall be bonded to the seat ring.

9. The stem and gate shall be manufactured of Type 316 stainless steel in accordance with ASTM A-240.

10. Interior and Exterior coatings shall be in accordance with Article 2.02.

11. The valve shall be cast of stainless steel and shall be manufactured by DeZurik, or approved equal.

2.04 Butterfly Valves

A. General

1. Butterfly valves for shall meet or exceed the design standards of ANSI/AWWA C-504-150B, latest revision and designed for a ***minimum working pressure of 150 psi***.

2. Valves shall be bubble tight in either direction at the rated pressure and shall be suitable for throttling and/or operation after long periods of inactivity.

3. ***The manufacturer shall provide the Engineer with a letter of compliance, within twenty (20) calendar days of the Notice to Proceed*** indicating that the valve and all materials are compatible with the liquid to flow through it and applicable for the intended use.

4. All valves shall be furnished with position indication.

5. Valve discs shall rotate 90° from the fully open position to the fully closed position.

6. Thrust Bearings

   a. Provide thrust bearings to hold the valve disc in the center of the valve seat. No bearings shall be mounted inside the valve body within the waterway.

   b. Do not use thrust bearings in which a metal bearing surface on the disc rubs in contact with an opposing metal surface on the inside of the body.

7. Bronze Components

   a. Bronze components in contact with water shall comply with the following requirements:

Constituent	Maximum Content (%)
Zinc	7
Aluminum	2
Lead	8
Copper + Nickel + Silicon	83

8. Port Sizes

   a. For valves twenty-four (24) inches and smaller, the actual port diameter shall be at least ninety-three percent (93%) of the nominal valve size. For valves larger than twenty-four (24) inches, the port diameter shall not be more than 1.25-inches smaller than the nominal valve size.

   b. The dimension of the port diameter shall be the clear waterway diameter plus the thickness of the seat.

9. Butterfly valves shall be as manufactured by DeZurik, Dresser Industries, Inc., Kennedy Valve Manufacturing Company, Clow Valve Company, Mueller Company, Henry Pratt Company, or equal.

B. Valve Bodies

1. Valve bodies shall be constructed of high-strength cast iron or ductile iron conforming to ASTM A126, Class B.

2. Buried valves shall have integrally cast mechanical joint ends as specified for ductile iron pipe and above-ground valves shall have cast iron flanges.

3. End flanges shall conform in dimensions and drilling to ANSI B 16.1, Class 125.

4. Two trunnions for shaft bearings shall be integral with each valve body.

5. Valve body thickness shall be in strict accordance with ANSI/AWWA C-504, latest revision, for Class 150B valves.

C. Valve Seat Ring

1. The valve seat ring shall be constructed of Type 316 stainless steel. The seating

edges of the seat ring shall be smooth and polished.

2. The seat ring shall be capable of compensating for changes in direction of flow to assure a bubble tight seal in either direction.

D. Valve Discs

1. Valve discs shall be solid (no cores) for 24-inch and smaller valves, and shall be either solid or hollow core for valves greater than 24-inch. Valve discs shall be constructed of ductile iron in conformance with AWWA C-504.

2. The valve disc shall be of the offset type design to provide 360° uninterrupted seating.

E. Valve Shafts

1. Valve shafts may consist of a one piece unit extending completely through the valve disc bearings and into the operating mechanism or may be of the "stub shaft" type, which comprises two separate shafts inserted into the valve disc hubs. If used, stub shafts shall extend a minimum of 1½ shaft diameters into the valve disc hubs.

2. Valve shafts shall be constructed of Type 316 stainless steel or a stainless steel with greater overall corrosion and oxidation resistance.

3. The minimum shaft diameter shall conform to ANSI/AWWA C-504, latest revision, for Class 150B valves.

4. The valve disc shall be attached to the shaft by means of "O" ring sealed taper pins.

5. The valve shaft seal shall consist of "O" rings in bronze cartridge or self adjusting nitrile Vee-type ring seals.

F. Valve Seats

1. Valve seats shall be of a corrosion and chlorine resistant synthetic rubber compound bonded to a high grade stainless steel retaining ring and secured to the valve disc by Type 316 stainless steel set screws or shall be molded in, vulcanized, and bonded to the body.

2. Seats bonded to the body shall withstand a 75-pound pull tested in accordance with ASTM D429, Method B.

3. The valve seat shall be adjustable and replaceable in the field without dismantling operator, disc, or shaft.

G. Valve Bearings

1. Valve shafts shall be fitted with sleeve-type bearings.

2. Bearings shall be corrosion resistant and self-lubricating (Nylon or Teflon).

3. Bearings shall be designed for a pressure not exceeding the published design load for the bearing material, or $^1/_5$ of the compressive strength of the bearing or shaft material.

H. Valve Operators

1. All butterfly valves shall open left or counter-clockwise (CCW) when viewed from the stem. Automatic valve operators shall have motorized valve actuators as specified hereinafter. Manual valve operators shall be of the worm gear or traveling nut type and shall be fully enclosed suitable for buried or submerged service.

2. All operators shall have adjustable mechanical stop limiting devices to prevent over travel of the disc. Should an adjustment of the disc be required to maintain a bubble tight seal, this adjustment shall be made externally without removing the operator housing cover. The operator shall be designed such that all adjustments can be made under pressure and without the possibility of dirt getting into the operator lubricant. Any adjustments through the lower shaft will not be acceptable.

3. Units furnished for buried service shall be fully gasketed and grease packed.

4. Manual valves located above ground and above grating shall be equipped with handwheel or chainwheel operators and shall have a suitable indicator arrow to give valve position from “fully open” to “fully closed”.

5. Buried butterfly valves and valves below grating shall be furnished with a two (2) inch square AWWA nut operator with valve box and cover. The stems shall be “pinned” and shall bring the 2-inch square nut to approximately six (6) inches from the finished valve pad elevation. Operator components shall, at the extreme operator positions, withstand without damage a pull of 200 lbs. for handwheel or chainwheel operators or an input torque of 300 ft-lbs. for operating nuts.

I. Interior and Exterior coatings shall be in accordance with Article 2.02.

J. Valve Testing

1. Prior to shipment from the factory, hydrostatic and leakage tests shall be conducted on each butterfly valve. Hydrostatic and leakage tests shall be conducted in strict accordance with ANSI/AWWA C-504, latest revision, and results shall be submitted to the Engineer.

2.05 Ball Valves

A. PVC Ball Valves

1. General

a. All PVC ball valves ½-inch through 4-inch in size shall be of one piece capsule type manufactured of Type I, Grade 1 PVC.

b. All ball valves shall be true union design with two-way blocking capability and shall have solvent welded socket or NPT threaded ends.

c. All ball valves shall be designed for a 150 psi water working pressure at 120°F.

d. Manually operated ball valves shall be supplied with an ABS lever operating handle. Motorized ball valves shall be equipped with an electric actuator as specified hereinafter.

2. PVC Ball Valves for Anti-Scalant, Sodium Hydroxide, Hydrofluosilicic Acid, Phosphate Inhibitor and Ammonia - NOT USED

3. PVC Ball Valves Used with Halar (ECTFE) Sulfuric Acid Piping Systems - NOT USED

4. PVC Ball Valves Used with Teflon-Lined Carbon Steel Sulfuric Acid Piping Systems - NOT USED

5. PVC Ball Valves for Bulk Sodium Hypochlorite - NOT USED

6. Standard PVC Ball Valves for Water and Reclaimed Water Service

a. All PVC ball valves ½-inch through 4-inch in size shall be of one piece capsule type manufactured of Type 1, Grade 1 PVC.

b. Ball valves shall be true union design with two-way blocking capability and shall have solvent welded socket or NPT threaded ends.

c. Ball valves shall have Teflon seats with Viton backing cushions and Viton O-ring seals, and shall be designed for a 150 psi water working pressure at 120°F.

d. Manually operated valves shall be supplied with ABS lever operating handles. Motorized ball valves shall be equipped with an electric actuator as specified hereinafter.

e. PVC ball valves shall be manufactured by Plast-O-Matic, Asahi/America, Hayward, or an equal approved by the Engineer.

B. Stainless Steel Ball Valves

1. Stainless steel ball valves shall be of the standard port type with flanged connections for the sizes indicated on the Contract Drawings or specified herein.

2. Stainless Steel ball valves shall be designed for a working pressure of 200 psi with positive shut off when in the closed position.

3. The valve shall be a one (1) piece, Grade CF-8M, Type 316 stainless steel body, ANSI B16 with a solid Type 316 stainless steel ball and stem.

4. The seats and seals shall be Teflon.

5. The ball shall have a full bore port design machined from a solid metal piece with highly polished surfaces.

6. Manually operated ball valves shall be furnished with level operators manufactured of forged Type 316 stainless steel with a molded vinyl sleeve.

7. Stainless steel ball valves shall be manufactured by KTM, DeZurik, Neles-Jamesbury, or an equal approved by the Engineer.

C. Electric Actuator for PVC Ball Valves

1. Where indicated on the Contract Drawings, PVC ball valves shall be provided with an electric actuator. The actuator shall be matched to the valve and shall have sufficient operating torque to operate the valve for its maximum expected breakaway torque.

2. The actuator shall be capable of full 90° actuation within ten (10) seconds. The actuator shall be UL listed and suitable for 120 volt AC, 60 Hz, one-phase electric power, and shall be provided with a corrosion-resistant, NEMA 4 enclosure.

3. The valve actuator shall be provided with a manual operator override which is disengageable such that the valve cannot be operated electrically while the manual override is engaged.

4. The actuator shall be furnished with a high torque, reversible, brushless, capacitor run, heavy duty motor with built-in motor overload protection, and gears and shafts shall be heat treated, high allow steel.

5. The unit shall be permanently lubricated and travel limit switches shall be independently adjustable. The actuator shall be provided with an integral electrical

terminal strip, position indicator, over-torque protection, and travel limit switches for position light operation.

6. The valve actuator enclosure shall be provided with a combination heater and thermostat to maintain the case interior above 40°F.

7. Two additional limit switches shall be provided to energize and de-energize a pump interlocked with the valve.

8. The electric actuator shall be a Model 92 Electric Valve Actuator as manufactured by Asahi/America, or an equal approved by the Engineer.

2.06 Diaphragm Valves

A. Bronze Angle Hose Valves

1. Angle-type hose valves, less than two (2) inches in size, shall have a brass or bronze body (ASTM B-62 or ASTM B-584, Alloy C83600) with rising or non-rising stem, composition disc, and bronze or malleable iron handwheel.

2. The stem shall be bronze, ASTM B-62, ASTM B-584 (Alloy 83600), or ASTM B-198 (Alloy 87600).

3. The valve shall have a cold water service pressure rating of 150 psi.

4. Provide a cap and chain with the valve.

5. Threads on the valve outlet shall be American National Standard fire hose coupling screw thread.

6. Valves shall be Nibco T-301-HC, Powell Figure 151 with Figure 527 nipple adapter, Crane 17TF with hose nipple adapter, or approved equal.

B. Bronze Hose Bibbs

1. Hose bibbs of size ½-inch, ¾-inch and 1-inch shall be all bronze (ASTM B-62 or ASTM B-584, Alloy C83600) with rising or non-rising stem, composition disc, and bronze or malleable iron handwheel.

2. The stem shall be bronze, ASTM B-99, Alloy 651; ASTM B-371, Alloy C69400; or ASTM B-584, Alloy 87600. The packing shall be Teflon or graphite.

3. The valve shall have a cold water service pressure rating of 150 psi.

4. Provide a cap and chain with the valve.

5. Threads on the valve outlet shall be American National Standard fire hose coupling screw thread (ANSI B1.20.7).

6. Provide a vacuum breaker approved by the State of Florida Health Department on each hose bibb.

7. Valves shall be Jenkins Figure 112, 113 or 372; Nibco T-113-HC; Powell Figure 503H, or approved equal.

C. Electric Actuator for Diaphragm Valves

1. Where indicated on the Contract Drawings, diaphragm valves shall be provided with an electric actuator. The actuator shall be matched to the valve and shall have sufficient operating torque to operate the valve for its maximum expected breakaway torque.

2. The actuator shall be capable of full 90° actuation within ten (10) seconds. The actuator shall be UL listed and suitable for 120 volt AC, 60 Hz, one-phase electric power, and shall be provided with a corrosion-resistant, NEMA 4 enclosure.

3. The valve actuator shall be provided with a manual operator override which is disengageable such that the valve cannot be operated electrically while the manual override is engaged.

4. The actuator shall be furnished with a high torque, reversible, brushless, capacitor run, heavy duty motor with built-in motor overload protection, and gears and shafts shall be heat treated, high allow steel.

5. The unit shall be permanently lubricated and travel limit switches shall be independently adjustable. The actuator shall be provided with an integral electrical terminal strip, position indicator, over-torque protection, and travel limit switches for position light operation.

6. The valve actuator enclosure shall be provided with a combination heater and thermostat to maintain the case interior above 40°F.

7. Two additional limit switches shall be provided to energize and de-energize a pump interlocked with the valve.

8. The electric actuator shall be a Model 92 Electric Valve Actuator as manufactured by Asahi/America, or approved equal.

2.07 Plug Valves

A. General

1. Plug valves shall be of the non-lubricated eccentric type for use in wastewater service with flanged or mechanical joint ends as specified herein. Valves shall open by turning to the left (counter-clockwise), when viewed from the stem. The port area of the valves shall be a minimum of eighty percent (80%) of the full pipe area. The valves shall be capable of providing a drip-tight shutoff to the full valve rating with the pressure in either direction.

2. Plug valves shall be tested in accordance with AWWA C-504-80, Section 5. Each valve shall be performance tested in accordance with Section 5.2 and shall be given a leakage test and hydrostatic test as described in Articles 5.3 and 5.4. The leakage test shall be applied to the face of the plug tending to unseat the valve. The leakage test shall be performed at the valve rating pressure as specified herein. The manufacturer shall furnish certified copies of the reports covering proof of design testing as described in Section 5.5.

3. All interior ferrous surfaces of the valve that will come into contact with the wastewater shall be coated with a factory applied, thermally bonded epoxy coating in accordance with AWWA C-550, latest revision. Surfaces shall be clean, dry and free from rust, oil and grease before coating. Exterior surfaces shall be coated as specified hereinafter.

4. Valve Joints

    a. All plug valves installed above-ground, in valve vaults or on flange piping shall have flanged ends. Flanges shall comply with facing, drilling and thickness requirements of the ANSI Standards for Class 125 dimensions.

    b. Nuts and bolts for flanged connections in valve vaults or corrosive environments shall be Type 304 stainless steel in accordance with ASTM A-320, Class 2.

    c. Nuts and bolts for above-ground installations or non-corrosive atmospheres shall be carbon steel in accordance with ASTM A-307, Grade B.

    d. All buried plug valves shall have mechanical joint ends with dimensions, bolting patterns and assembly in strict accordance with ANSI/AWWA C-111, latest revision.

    e. Tee head bolts and nuts for mechanical joints shall be manufactured of CORTEN-A, high strength, low alloy, corrosion resistant steel as manufactured by NSS Industries, or an equal approved by the Engineer.

    f. Plug valves four (4) inch in size and larger buried underground, and all plug valves six (6) inch in size and larger installed above-ground, buried or in valve vaults shall be furnished with mechanical gear actuators. Gear actuators shall be furnished with AWWA Standard 2-inch square operating nuts for buried valves, or handwheel, chainwheel or 2-inch square nut operators for above-ground or valve vault installation, as shown on the Contract Drawings. The gear actuator shall be sized for the maximum pressure differential across the valve,

equal to the pressure rating of the valve. All gearing shall be enclosed in a high strength cast iron housing, suitable for running in a lubricant.

B. Prior to shipment from the factory, each valve shall be hydrostatically tested as follows. Valve seats shall be tested to provide leak tight shut off to 175 psi for valves through 12-inch and 150 psi for valves 14 inches and larger, with pressure in either direction. In addition, a hydrostatic shell test shall be performed with the plug open to a pressure twice that of rating specified above to demonstrate overall pressure integrity of the valve body.

C. Plug valves shall be eccentric plug valves as manufactured by DeZurik, Henry-Pratt Co., or approved equal.

D. Eccentric Plug Valves

1. Valve bodies shall be constructed of high strength cast iron conforming to ASTM A126, Class B and AWWA C504, latest revisions. Valve bodies shall be cast with raised eccentric seats which have a corrosion-resistant welded-in overlay of not less than ninety percent (90%) pure nickel on all surfaces contacting the plug face or valve seats shall be replaceable 316 stainless steel seats. Valve seats shall be in accordance with AWWA C504 and AWWA C507, latest revisions.

2. Valves shall be furnished with resilient faced plugs with neoprene facing, suitable for use with wastewater or sludge. Valves shall be furnished with replaceable, permanently lubricated, stainless steel sleeve-type bearings in the upper and lower plug stem journals. Plug stem bearings shall comply with AWWA C504 and C507, latest revisions.

3. The valves shall be of the bolted bonnet design with shaft seals designed so that they can be repackaged without removing the bonnet and the packing shall be adjustable. Packing material shall be Buna-Vee type packing. Valve shaft seals shall be in accordance with AWWA C504 and AWWA C507, latest revisions.

4. All exposed valve nuts, bolts, springs, washers, and the like shall be Type 316 stainless steel.

5. Eccentric plug valves shall be as manufactured by DeZurik, Henry-Pratt Co., or equal.

E. Interior and Exterior coatings shall be in accordance with Article 2.02.

F. Pressure Rating for the valves shall be in accordance with ANSI B16.1-1967 and shall be as follows:

Pipe Size (inches)	Pressure Rating (psi)
≤ 12	175
> 14	150

2.08 Check Valves - NOT USED

2.09 Pressure Relief Valves (PRV's) - NOT USED

2.10 Backpressure Sustaining Valves - NOT USED

2.11 Isolation Valves

A. Isolation valves shall be provided for water and reclaimed water services.

B. The isolation valves shall be of the ball type. Materials of construction of the valve body shall be compatible with the type of service, as indicated above, and as shown on the Contract Drawings.

C. Valves shall be of the threaded, flanged, socket, plain, union or grooved ends as required by the Contractor.

D. The operator shall be of the "handle" type compatible with the type of service.

E. The valve shall be rated for an operating pressure of 150 psi.

F. The isolation valves shall be as manufactured by ASAHI/America, Simtech, or approved equal.

2.12 Solenoid Valves

A. Potable Water Service

1. The solenoid valve shall be normally closed and shall be equipped with a manual override operator.

2. The valve shall be of the general purpose type and shall be fabricated with a body and trim of stainless steel.

3. The operator shall be of the solenoid type rated for 120 V service.

4. The valve shall be rated for an operating pressure of 150 psi.

5. The solenoid valve shall be as manufactured by ASCO Red-Hat or approved equal.

2.13 Pinch Valves - NOT USED

2.14 Electric Motor Operated Pinch Valves - NOT USED

2.15 Telescoping Valves - NOT USED

2.16 Air Release Valves

A. Wastewater and Reclaimed Water Air Release Valves

1. Air release valves for wastewater service shall be of the long stem and body type designed to keep the valve operating mechanism as free from contact with the wastewater as possible.

2. Valves shall have a two (2) inch threaded inlet, with a one (1) inch blow-off connection with a one (1) inch blow-off valve (gate valve), ½-inch back-flushing attachments with a ½-inch outlet. The outlet and back flushing connections shall be quick couplings. The valve shall have a minimum orifice diameter of $^{5}/_{16}$-inch.

3. Valves shall be shall be properly sized for the proposed application and of the proper materials of construction for the intended service (wastewater, reclaimed water, etc.) and shall be a product manufactured by APCO, Valmatic, Valve and Primer Co., or approved equal.

4. Valves shall be constructed of cast iron, ASTM A48, Class 35 with Type 316 stainless steel trim, lever pins and float.

5. Valves shall have a working pressure rating of at least 150 psi.

B. Air and Vacuum Wastewater/Reclaimed Water Valves

1. Air and vacuum valves for wastewater service shall be of the long stem and body type designed to keep the valve operating mechanism as free from contact with the wastewater as possible.

2. Valves shall have a two (2) inch threaded inlet, with a one (1) inch blow-off connection with a one (1) inch blow-off valve (gate valve), ½-inch back-flushing attachments with a ½-inch outlet. The outlet and back flushing connections shall be quick couplings. The valve shall have a minimum orifice diameter of one (1) inch. The valves on the discharge piping of pumping stations shall have the orifice sized as required to expel air on pump starting.

3. Valves shall be shall be properly sized for the proposed application and of the proper materials of construction for the intended service (wastewater, reclaimed water, etc.) and shall be a product manufactured by APCO, Valmatic, Valve and Primer Co., or approved equal.

4. The valve body shall be constructed of cast iron, ASTM A48, Class 35. The valve and float shall be Type 316 stainless steel. Valves shall have a working pressure rating of at least 150 psi.

C. Valve End Connections

1. Valves smaller than three (3) inches shall have threaded ends. Valves four (4) inches and larger shall have flanged ends.

2. Flanges for Class 150 valves shall comply with ANSI B 16.1, Class 125.

3. Flanges for Class 300 valves shall comply with ANSI B16.1, Class 250.

4. Threaded ends shall comply with ANSI B2.1.

D. All air release and vacuum relief valves shall be isolated from the service line with a Type 316 stainless steel gate valve for valves up to 3-inches, and a flanged body butterfly valve for valves greater than three (3) inches (provide a spacer plate if required to clear the rotation of the butterfly disc).

2.17 Surge Anticipating Control Valve - NOT USED

2.18 Reduced Pressure Backflow Preventors (RPBP)

A. Potable Water Service

1. Reduced pressure backflow preventers for potable water service shall meet the requirements of AWWA C-511.

2.19 Valve Operators

A. General

1. All operators shall be sized to operate the valve at the valve's full-rated pressure. Gear actuator shall be sized for the maximum pressure differential across the valve, equal to the pressure rating of the valve. All gearing shall be enclosed in a high-

strength cast iron housing, suitable for running in a lubricant. Housing shall be provided with seals on all shafts to prevent the entry of dirt and water into the actuator. The actuator shaft and quadrant shall be supported on permanently lubricated bronze bearings. The actuator shall clearly indicate valve position for above-ground and valve vault installations and an adjustable stop shall be provided to set closing torque. The actuator shall be capable of withstanding an over-torque without damage up to 450 foot-pounds for two (2) inch square nut operators and to 300 foot-pounds for handwheel or chainwheel operators.

2. Valve operators, handwheels or levers shall open by turning counter-clockwise (CCW) and shall be constructed of non-corrosive materials.

3. Four (4) inch and smaller aboveground valves shall be furnished with manual actuators, one-quarter turn to open. The actuator shall be supplied with an AWWA Standard two (2) inch operating nut with a standard valve operating lever.

4. Exposed operators shall be furnished with chainwheel operators, geared operators, extension stems, floor stands, and other elements to permit operation from the normal operating level.

5. ***All valve stem extensions for buried valves shall be "pinned"***.

B. Manual Operators

1. Manual operators include handwheel, chainwheel, lever and handle type operators. When the maximum force to operate a valve under full operating head exceeds forty (40) pounds, gear reduction operators shall be provided.

2. Lever Operator

   a. ***Levers shall be fabricated of non-corrosive materials***. They shall include a set screw and be grease lubricated.

   b. The operator shall be capable of being locked in any position and shall be provided with an adjustable memory stop.

3. Handwheel

   a. Gate/valve operators shall be selected so that no more than forty (40) pounds effort on the operator will be required to open or close a gate/valve. Gate/valve operators shall be located at a maximum height of forty-two (42) inches above the structure. When the normal yoke elevation is above 42-inches above structure, the geared lift shall be coupled to a ninety degree (90°) bevel gear box by means of a floating shaft and lovejoy couplings. This gearbox shall be mounted on the edge of the self-contained yoke. ***All shafts and couplings***

shall be Type 304 stainless steel and aligned to acceptable coupling tolerance. All cast iron gearbox housings shall be epoxy coated in accordance with Section 09900, *Painting*, for corrosion protection.

b. ***All operators shall be geared and shall have a weatherproof cast iron housing or pedestal with a bronze operating nut***. An effective gear ratio of at least 2:1 is required.

c. The operator shall include a position indicator and self-locking feature to prevent the disc or plug from creeping.

d. Gear operators shall be totally enclosed and lubricated. Operators shall be grease lubricated and provided with grease fittings.

e. Handwheel operators supplied with floorstands and benchstands shall be self-locking at any position of stem travel. ***Cranks and handwheels shall be cast iron and hot dip galvanized after fabrication or as specified on the Contract Drawings***. Cranks shall be no less than twelve (12) inches long and shall be keyed to the operating nut. Handwheels shall not have a diameter greater than thirty (30) inches.

f. Self-locking gear shall be a one-piece design of gear bronze material (ASTM B 427), accurately machine cut. The sector gear shall be hardened alloy steel (ASTM A-322), grade G41500 or ASTM A-148, Grade 105-85, with thread ground and polished. The reduction gearing shall run in a proper lubricant.

4. Buried Operators

a. Buried service operators on valves larger than 2½ inches shall have a 2-inch AWWA operating nut (extended to within 6 inches of the finished valve pad elevation).

b. Buried operators on valves 2-inches and smaller shall have cross handle for operation for forked key. All moving parts of the valve and operators shall be enclosed in a housing to prevent contact with the soil.

c. Buried service operators for quarter-turn valves shall be designed to withstand 450 foot-pounds of input torque at the fully open or fully closed positions without damage to the valve or operator and shall be grease packed and gasketed to withstand a submersion in water to 10 psi.

d. ***Valves shall be installed with "pinned" extension stems, as required, valve boxes, concrete valve pad and valve identification tag***.

C. Electric Motor Operated Valve Actuators

1. General

a. The actuators shall be suitable for use on a nominal 460 volt three-phase 60 Hertz power supply and are to incorporate motor, integral reversing starter, local control facilities, and terminals for remote control and indication connections.

b. The actuator shall include a device to ensure that the motor runs with the correct rotation for the required direction of valve travel with either phase sequence of the three-phase power supply connected to the actuator.

c. It shall be possible to carry out the setting of the torque, turns, and configuration of the indication contacts without the necessity to remove any electrical compartment covers.

2. Actuator Sizing

a. The actuator shall be sized to guarantee valve closure at the specified differential pressure.

b. The safety margin of motor power available for seating and unseating the valve shall be sufficient to ensure torque switch trip at maximum valve torque with the supply voltage ten percent (10%) below nominal.

c. The operating speed shall be such as to give valve closing and opening at approximately 10 - 12 inches per minute.

3. Ambient Temperature

a. The actuator shall be capable of functioning in an ambient temperature ranging from -22 ºF (-30ºC) to +158ºF (+70ºC).

4. Motor

a. The electric motor shall be Class F insulated with a time rating of at least fifteen (15) minutes at 104ºF (40ºC) or twice the valve stroking time, whichever is the longer, at an average load of at least 33% of the maximum valve torque.

b. Electrical and mechanical disconnection of the motor should be possible without draining the lubricant from the actuator gear case. Plugs and sockets are not acceptable as a means of electrical connection for the motor.

5. Motor Protection

a. Protection shall be provided for the motor as follows:

1) The motor shall be de-energized in the event of stall when attempting to unseat a jammed valve.

2) Motor temperature shall be sensed by a thermostat to protect against overheating.

3) Single phasing protection.

6. Gearing

a. The actuator gearing shall be totally enclosed in an oil-filled gear case suitable for operation at any angle. All main drive gearing must be of metal construction.

b. Where the actuator operates gate valves or large diameter ball or plug valves, the drive shall incorporate a lost-motion hammerblow feature.

c. For rising spindle valves, the output shaft shall be hollow to accept a rising stem and incorporate thrust bearings of the ball or roller type at the base of the actuator, and the design should be such as to permit the gear case to be opened for inspection or disassembled without releasing the stem thrust or taking the valve out of service.

d. Standard SAE80EP gear oil shall be used to lubricate the gear case. Special or exotic lubricants shall not be used as they may be difficult to source in remote locations.

7. Hand Operation

a. A handwheel (***non-corrosive material***) shall be provided for emergency operation engaged when the motor is declutched by a lever or similar means; the drive being restored to power automatically by starting the motor.

b. The hand/auto selection lever should be padlockable in both the "Hand" and "Auto" positions. It should be possible to select “Hand” operation while the actuator is running or start the actuator motor while the “Hand/Auto” selection lever is locked in "Hand" without damage to the drive train.

c. The handwheel drive must be mechanically independent of the motor drive, and any gearing should be such as to permit emergency manual operation in a reasonable time.

d. Clockwise (CW) operation of the handwheel shall give closing movement of the valve.

8. Drive Bushing

   a. The actuator shall be furnished with a drive bushing easily detachable for machining to suit the valve stem or gearbox input shaft. Normally the drive bushing shall be positioned in a detachable base of the actuator.

   b. Thrust bearings, when housed in a separate thrust base, should be of the "sealed for life" type.

9. Torque and Turns Limitations

   a. Torque and turns limitation to be adjustable as follows

      1) Position setting range: 2.5 to 100,000 turns, with resolution to 7.5° of actuator output.

      2) Torque setting: 40% to 100% rated torque.

      3) Torque sensing must be affected directly electrically or electronically. Extrapolating torque from mechanically measured motor speed is not acceptable due to response time. Torque measurement shall be independent of variations in frequency, voltage or temperature.

      4) "Latching" shall be provided for the torque sensing system to inhibit torque off during unseating or during starting in mid-travel against high inertia loads.

   b. The electric circuit diagram of the actuator should not vary with valve type remaining identical regardless of whether the valve is to open or close on torque or position limit. An inexpensive setting tool is required for non-intrusive calibration and interrogation of the actuator. This setting tool will provide speedy interrogation capabilities as well as security in a non-intrusive intrinsically safe watertight casing.

10. Remote Valve Position/Actuator Status Indication

    a. In the event of a (main) power (supply) loss or failure, the position contacts must continue to be able to supply remote position feedback and maintain interlock capabilities. If batteries are required to maintain contact functionality the actuator vendor shall provide a supply sufficient for thirty (30) continuous days of unpowered operation with one (1) complete valve cycle every hour.

    b. A backup power source must be provided in the actuator to ensure correct remote indication should the actuator be moved manually when the power supply is interrupted.

c. The position of the actuator and valve must be updated contemporaneously, even when the power supply is not present.

d. Four (4) contacts shall be provided which can be selected to indicate any position of the valve with each contact externally selectable as normally open or normally closed. The contacts shall be rated at 5A, 250V AC, 30V DC.

e. As an alternative to providing valve position, any of the four (4) above contacts shall be selectable to signal one of the following:

1) Valve Opening or Closing

2) Valve Moving (Continuous or Pulsing)

3) Local Stop Selected

4) Local Selected

5) Remote Selected

6) Open or Close Interlock Active

7) ESD Active

8) Motor Tripped on Torque in Mid-Travel

9) Motor Tripped on Torque Going Open

10) Motor Tripped on Torque Going Closed

11) Pre-Set Torque Exceeded

12) Valve Jammed

13) Actuator Being Operated by Handwheel

14) Lost Main Power Phase

15) Customer 24V DC or 120V AC Supply Lost

16) Battery Low

17) Internal Failure Detected

18) Thermostat Tripped

f. Provision shall be made in the design for the addition of a contact less transmitter to give a 4-20 mA analog signal corresponding to valve travel for remote indication when required.

11. Local Position Indication

a. The actuator must provide a local display of the position of the valve, even when the power supply is not present. The display shall be able to be rotated in 90° increments so as to provide easy viewing regardless of mounting position.

b. The actuator shall include a digital position indicator with a display from fully open to fully closed in 1% increments. Red, green, and yellow lights corresponding to Open, Closed, and Intermediate positions shall be included on the actuator. The digital display shall be maintained even when the power to the actuator is isolated.

c. The local display should be large enough to be viewed from a distance of six (6) feet when the actuator is powered up.

12. Integral Starter and Transformer

a. The reversing starter, control transformer, and local controls shall be integral with the valve actuator, suitably housed to prevent breathing and condensation buildup.

b. For ON/OFF service, this starter shall be an electromechanical type suitable for 60 starts per hour and of a rating appropriate to the motor size.

c. For modulating duty, the starter shall be suitable for up to a maximum of 1,200 starts per hour. The controls supply transformer shall be fed from two of the incoming three phases. It shall have the necessary tapings and be adequately rated to provide power for the following functions:

1) 120V AC energization of the contactor coils

2) 24V DC output where required for remote controls

3) Supply for all the internal electrical circuits

4) The primary and secondary windings shall be protected by easily replaceable fuses.

13. Integral Push Buttons and Selector

a. Integral to the actuator shall be local controls for Open, Close, and Stop, and a local/remote selector Switch, padlockable in any one of the following three positions:

1) Local Control Only

2) Off (No Electrical Operation)

3) Remote Control plus Local Stop Only

b. It shall be possible to select maintained or non-maintained local control.

c. The local controls shall be arranged so that the direction of valve travel can be reversed without the necessity of stopping the actuator.

14. Control Facilities

a. The necessary wiring and terminals shall be provided in the actuator for the following control functions described herein.

b. Removable links for substitution by external interlocks to inhibit valve opening and/or closing.

c. Connections for external remote controls fed from an internal 24V DC supply and/or from an external supply of (min. 12V, max. 120V) to be suitable for any one or more of the following methods of control:

1) Open, Close, and Stop.

2) Open and Close.

3) Overriding Emergency, Shutdown to Close (or Open) Valve from a "Make" Contact.

4) Two-Wire Control, Energize to Close (or Open), De-Energize to Open (or Close).

d. Selection of maintained or push-to-run control for modes (1) and (2) above shall be provided and it shall be possible to reverse valve travel without the necessity of stopping the actuator. The starter contactors shall be protected from excessive current surges during travel reversal by an automatic time delay on energization of approximately 300 ms.

e. Provision shall be made for connectivity with field bus control systems via a plug-in card. The following interfaces shall be available:

1) Modbus 2) Approved equal.

f. The internal circuits associated with the remote control and monitoring functions are to be designed to withstand simulated lightning impulses of up to 2.0 kV.

15. Monitoring and Diagnostics Facilities

a. Facilities shall be provided for monitoring actuator operation and availability as defined herein.

b. Monitor (availability) relay, having one change-over contact, the relay being energized from the control transformer only when the Local/Off/Remote selector is in the "Remote" position to indicate that the actuator is available for remote (Operations Building) operation.

c. Where required, it shall be possible to provide indication of thermostat trip and "Remote" selected as discreet signals.

d. A non-intrusive hand-held computer must be available, capable of duplex communication for uploading and downloading all variables for the actuator as well as performing detailed diagnostics.

e. Actuators shall include a diagnostic module, which will store and enable download of historical actuator data to permit analysis of changes in actuator or valve performance. A software tool shall be provided to allow configuration and diagnostic information to be reviewed and analyzed and reconfigured.

f. Diagnostic status screens must be provided to show multiple functions simultaneously so troubleshooting can be affected rapidly and efficiently. All diagnostic information should be contained on no more than eight (8) screens so multiple functions can be checked simultaneously.

g. Provision shall be made to display valve torque demand as a percent of rated actuator torque and position simultaneously, so as to facilitate valve troubleshooting and diagnostics.

16. Wiring and Terminals

a. Internal wiring shall be of tropical grade PVC insulated stranded cable of appropriate size for the control and three phase power. Each wire shall be clearly identified at each end.

b. The terminals shall be embedded in a terminal block of high tracking resistance compound.

c. The terminal compartment shall be separated from the inner electrical components of the actuator by means of a watertight seal.

d. The terminal compartment of the actuator shall be provided with a minimum of three (3) threaded cable entries. When required, a forth cable entry shall be provided.

e. All wiring supplied as part of the actuator to be contained within the main enclosure for physical and environmental protection. External conduit connections between components are not acceptable.

f. Control logic circuit boards mid relay boards must be mounted on plastic mounts to comply with double insulated standards. No more than a single primary size fuse shall be provided to minimize the need to remove single covers for replacement.

g. A durable terminal identification card showing plan of terminals shall be provided attached to the inside of the terminal box cover indicating:

   1) Serial Number.

   2) External Voltage Values.

   3) Wiring Diagram Number.

   4) Terminal Layout.

h. This must be suitable for the contractor to inscribe cable core identification beside terminal numbers.

17. Enclosure

a. Actuators shall be 'O' ring sealed, watertight to NEMA 6, and shall at the same time have an inner watertight and dustproof "O" ring seal between the terminal compartment and the internal electrical elements of the actuator fully protecting the motor and all other internal electrical elements of the actuator from ingress of moisture and dust when the terminal cover is removed on site for cabling.

b. The enclosure must allow for temporary site storage without the need for electrical supply connection.

c. All external fasteners should be of Type 316 stainless steel.

d. Actuators for explosion hazardous applications shall in addition be certified flameproof for Zones 1 and 2 (Divisions 1 and 2) Group gases.

18. Startup Kit

a. Each actuator shall be supplied with a startup kit comprising installation instruction, electrical wiring diagram, and sufficient spare cover screws and seals to make good any site losses during the commissioning period.

19. Performance Test Certificate

a. Each actuator must be performance tested and individual test certificates shall be supplied free-of-charge. The test equipment should simulate a typical valve load and the following parameters should be recorded:

1) Current at maximum torque setting.

2) Torque at maximum torque setting.

3) Flash Test Voltage.

4) Actuator Output Speed or Operating Time.

b. In addition, the test certificate should record details of specification, such as gear ratios for both manual and automatic drive, closing direction, and wiring diagram code number.

20. Warranty

a. Each actuator shall be warranted for a ***three (3) years from the date of Final Project Acceptance by the Owner***.

21. Experience

a. All technologies and devices used in the actuator must have a minimum of five (5) years' of commercial operating experience for that specific manufacturer, including torque and position sensing, lubrication, and electrical compartment design. The manufacturer must provide ten (10) Florida municipal site references of similar applications.

b. Electric motor valve actuators shall be as manufactured by Limitorque, Auma Actuators, Inc., or approved equal.

2.20 Valve Boxes

A. Furnish, assemble, and place a valve box over the operating nut for each buried valve. The valve box shall be designed so as to prevent the transmission of surface loads directly to the valve or piping.

B. Valve boxes shall be of the adjustable slide-type of suitable length with an interior diameter of not less than five (5) inches. The valve boxes shall be manufactured of cast iron and shall be of the two piece design including a bottom section and top section with cover. The cast iron cover shall be cast with the applicable service, "WATER," "WASTEWATER," "REUSE," etc., markings. The top section shall be adjustable for elevation and shall be set to allow equal movement above and below finished grade.

C. The castings shall be manufactured of clean, even grain, gray cast iron conforming to ASTM A48, Class 30B for Gray Iron Castings; and shall be smooth, true to pattern, free from blow holes, sand holes, projections, and other harmful defects. The seating surfaces of both the cover and the top section shall be machined so that the cover will not rock after it has been seated.

D. The valve boxes shall be coated inside and outside with an asphaltic coating prior to machining, so that the machined seating surfaces will be free of any coating. Cast iron valve box assemblies shall be Clow Corp. No. F-2452, Tyler Corp. Series 6855 or 6865 or an approved equal.

E. ***Valve extension stems shall be provided for all buried valves when the operating nut is deeper than three (3) feet below finished grade. The stems shall be "pinned" and shall bring the 2-inch square nut to approximately six (6) inches from the finished valve pad elevation***.

2.21 Tie Rods

A. When prior approval is obtained from the Engineer, ductile iron pipe, fittings, and valves may be restrained using a "*tie bolt joint restraint*".

B. Joint restraint materials for this method of restraint shall be the Super-Star SST Series Joint Restraint System as manufactured by Star National Products, a Division of Star Industries, Inc. Columbus, Ohio, or an equal approved by the Engineer.

C. All bolts, nuts, washers, tie rods, and other fasteners for the joint restraint system shall be manufactured of CORTEN high strength, low alloy, corrosion-resistant steel in conformance with ASTM A242. Tie bolts shall be manufactured of heat treated CORTEN steel. Tie rods and all fasteners f or the system shall be galvanized in conformance with the requirements of ASTM A123. Tie rods shall have a minimum diameter of ¾-inch. The number of tie rods required per joint shall be as recommended by the manufacturer.

D. ***Prior to backfilling after installation, all parts of the joint restraint system shall be coated with bituminous epoxy*** equal to Kop-Coat Bitumastic No. 300-M, for a minimum dry film thickness of twenty (20) mils.

2.22 Valve Identification

A. Aboveground Valve Identification

1. A coded and numbered tag attached with a stainless steel chain and/or stainless steel "S" hooks shall be provided on all valves.

2. Tag Types

a. Tags for valves on pipe shall be stainless steel, or anodized aluminum, 19 gauge thick. Colors for aluminum tags shall, where possible, match the color code of the pipe line on which it is installed.

b. ***Square tags shall be used to indicate "normally closed" valves and round tags shall indicate "normally open" valves***.

3. Coding

a. In addition to the color coding, each tag shall be stamped or engraved with "wording" or abbreviations to indicate the information presented in Article 2.01(G)(1)(a-g) of Specification Section 09905, *Pipe, Valve and Equipment Identification System*.

b. ***All color and letter coding shall be approved by the Engineer***.

c. ***Above ground valve tags shall be furnished with stainless steel (Type 316) wire for attachment thereof***. The tag shall not be attached to the handwheel or crank operators or any part of the valve which would inhibit operation of the valve.

d. Valve service shall either be as listed in Table 09905-1 (Section 09905), or by equipment abbreviation if associated with a particular piece of equipment. Valve numbering shall be as approved by the Engineer and/or Owner.

B. Belowground Valve Identification

1. Buried valves shall have valve boxes protected by a concrete pad as identified on the Contract Drawings. The concrete pad for the valve box cover shall have a 3-inch diameter, 19 gauge thick, bronze disc embedded in the surface as shown on

the Contract Drawings. The bronze disc shall have the following information neatly stamped on it:

a. Valve Service: See Table 09905-1 for the abbreviations to be used

b. Valve Identification No.: To be provided by the Engineer and Owner

c. Size of valve, inches

d. Type of valve

1) GV: Gate Valve
2) BfV: Butterfly Valve
3) PV: Plug Valve
4) Other valve abbreviations shall be provided by the Engineer.

e. Number of turns to fully open the valve

f. Direction to open the valve

g. Year of Installation

2. Submit to the Engineer for approval, within thirty (30) days from the Notice to Proceed, a valve schedule containing all valves required for his/her work.

3. The valve schedule, abbreviations, words, identification, etc. shall be approved by the Engineer and Owner prior to submission for casting.

4. ***The information contained in the valve schedules shall be coded on the tags in a system provided by the Engineer and Owner***.

C. ***Submit to the Engineer for review, two (2) samples of each type of tag proposed and the manufacturer's standard color chart and letter styles***. Tags shall have stamped or engraved on them the information shown on the Contract Drawings and the data described herein. Submit to the Engineer for approval, within thirty (30) days from the Notice to Proceed, a valve schedule containing all valves required for his/her work. The schedule shall contain all of the information required by Articles 2.22(A) and 2.22(B) of this Specification Section.

D. The valve schedule, abbreviations, words, identification, etc. shall be approved by the Engineer and Owner prior to submission for casting.

E. The information contained in the valve schedules shall be coded on the tags in a system provided by the Owner.

F. Above ground valve tags shall be furnished with stainless steel chain and/or stainless steel "S" hooks (Type 316) for attachment thereof. The tag shall not be attached to the handwheel or crank operators or any part of the valve which would inhibit operation of the valve.

2.23 Expansion Joints

A. Water Service

1. Expansion joints shall be manufactured of molded EPDM with a single wide arch. Expansion joints shall be suitable for buried service or above ground service. Flanges shall be drilled to ANSI 125 lb.

2. Working pressures are as follows:

Size (inches)	Pressure (psi)
2 - 12	150
14	130
16 - 20	110
24 - 30	100
36	90

3. The maximum temperature shall be 250°F.

4. Expansion joints shall be Model 100 HT/711 as manufactured by Metraflex or approved equal.

5. ***Expansion joints shall be furnished with 304 stainless steel split, bevelled retaining rings and control rod assemblies*** to limit over expansion or compression. A minimum of two control units shall be furnished with each expansion joint and shall be suitable for working pressures as specified above.

B. Chemical Solution Service - NOT USED

2.24 Sediment Strainers

A. Sediment strainers shall be Y-type manufactured of transparent Type 1, Grade 1 PVC with threaded or solvent welded socket ends.

B. The screen for the strainers shall be 20 mesh, Type 316 stainless steel. The screen shall be easily removed for cleaning or replacement from the filter body without removing the body from the pipeline. The bonnet seal shall be EPDM "O" rings.

C. The sediment strainers shall have a pressure rating as follows:

Strainer Size	Water Non-Shock Pressure Rating
½-inch to 1-inch	150 psi at 70°F
1½-inch to 2-inch	90 psi at 70°F
3-inch to 4-inch	60 psi at 70°F

D. Sediment strainers shall be manufactured by Asahi/America, or an equal approved by the Engineer.

2.25 Unions

A. Unions on ferrous pipe 2 inches in diameter and smaller shall be 150 pounds malleable iron, zinc-coated.

B. Unions on water piping 2½ inches in diameter and larger shall be of the flange pattern, 125-pound class, zinc-coated.

C. Gaskets for flanged unions shall be of the best quality fiber, plastic, or leather.

D. Unions shall not be concealed in walls, ceilings, or partitions.

2.26 Pressure Gauge Assemblies - NOT USED

2.27 T-Handled Operating Wrench

A. ***Provide two (2) galvanized operating wrenches***, 4 feet long.

B. The operating wrenches shall be Mueller; No. A-224610, Clow No.; F-2520, or approved equal.

2.28 Floor Box and Stem - NOT USED

2.29 Emergency Shower/Eye Wash (ES/EW) - NOT USED

2.30 Spare Parts

A. Special tools, if required for normal operation and maintenance, shall be supplied with the equipment.

2.31 Quality Control

A. The Contractor shall follow the Manufacturer's and Supplier's recommended product quality control specifics as required for the Project.

2.32 Hose Bibb/Wash Station

A. Provide the number, type and materials as shown on the Contract Drawings.

B. ***Hose racks shall be fabricated from Type 304 stainless steel***.

2.33 Washdown Hose

A. ***Hoses shall be fifty (50) feet long, or the length specified on the Contract Drawings, 1-inch diameter abrasion and weather resistant and "kink-proof", industrial grade hose with a ¼-turn industrial grade stainless steel ball valve, with a 1-inch stainless steel male x female (NPT) QF series quick connect coupling on the supply end***.

B. ***An industrial grade Type 304 stainless steel spray nozzle*** shall be provided on each hose.

C. All components shall be manufactured by Amazon Hose & Rubber Company or approved equal.

2.34 Miscellaneous Items

A. Other items necessary for the complete installation and not specified herein shall conform to the details and notes shown on the Contract Drawings.

B. All minor items implied, usually included, or required for the construction of a complete operating system shall be installed whether shown on the Contract Drawings or not.

3. EXECUTION

3.01 Inspection

A. All valves and other material shall be subject to inspection and approval by the Engineer after delivery, and no broken, cracked, imperfectly coated, or otherwise damaged or unsatisfactory material shall be used.

B. ***When a defect or crack is discovered, the damaged item shall not be installed and shall be replaced at no additional cost to the Owner***.

3.02 Preparation

A. All exterior surfaces of iron body valves shall be clean, dry and free from rust and grease before coating.

B. For valves installed underground or in valve vaults, all exterior ferrous parts or valve and actuator shall be coated at the factory with a thermally bonded epoxy coating in accordance with AWWA C-550, latest revision, or with a bituminous epoxy (Engineer approval required). ***Bituminous epoxy shall be applied in two (2) 8-mil dry film thickness coats for a minimum total finish dry film thickness of sixteen (16) mils. Prior to backfilling, all uncoated nuts, bolts, glands, rods and other part of joints shall be coated in the field with bituminous epoxy.***

C. For above-ground service, the exterior ferrous parts of all valves shall be coated as follows:

1. Prior to shipment from the factory, valves shall be coated with a thermally bonded epoxy coating in accordance with AWWA C-550, latest revision, or shall be shop painted with one (1) coat, 1.5 mils dry film thickness, of a combination lead and chromate primer with rust-inhibitive pigments and synthetic resins (Engineer approved method).

2. ***Following installation in the field, valves shall be painted with one (1) coat, 1.5 mils dry film thickness, of a combination lead and chromate primer with rust-inhibitive pigments and synthetic resins. Valves shall be finish painted with two (2) coats, 1.5 mils dry film thickness each coat, of a medium to long oil alkyd resin coating.*** Field applied coatings shall be as manufactured by the Carboline Co. or an equal approved by the Engineer. The color of the finish coats shall be in accordance with the piping color code in the painting schedule.

3.03 Installation

A. Excavation, backfill and compaction shall conform to the provisions of Section 02220, *Excavation, Backfill and Compaction*.

B. Cover for buried valves shall not be less than that indicated on the Contract Drawings. The minimum cover for pipe shall be thirty-six (36) inches.

C. ***Valves of the size and type shown on the Contract Drawings shall be set plumb and installed at the locations indicated*** on the Contract Drawings. Valves shall be installed in accordance with manufacturer's installation instructions and with the details shown on the Contract Drawing and shall be rigidly supported.

D. Valves shall be installed such that they are supported properly in their respective positions, free from distortion and strain. ***Valves shall be installed such that their weight is not borne by pumps and equipment*** that are not designed to support the weight of the valve.

E. Valves shall be carefully inspected during installation; they shall be opened wide and then tightly closed and the various nuts and bolts shall be tested for tightness. Special care shall be taken to prevent any foreign matter from becoming lodged in the valve seat. ***Check and adjust all valves for smooth operation***.

F. ***Install valves with the operating stem in either horizontal or vertical position***.

G. ***Allow sufficient clearance around the valve operator for proper operation***.

H. Clean iron flanges by wire brushing before installing flanged valves. Clean carbon steel flange bolts and nuts by wire brushing, lubricate threads with oil or graphite, and tighten nuts uniformly and progressively. Clean threaded joints by wire brushing or swabbing. Apply teflon joint compound or teflon tape to pipe threads before installing threaded valves. All joints shall be watertight.

I. Install all floor boxes, brackets, extension rods, guides, the various types of operators and appurtenances as shown on the Contract Drawings that are in masonry floors or walls, and install concrete inserts for hangers and supports as soon as forms areerected and before concrete is poured. Before setting these items, the Contractor shall check all plans and figures which have a direct bearing on their location and he shall be responsible for the proper location of these valves and appurtenances during the construction of the structures.

J. Pipe for use with flexible couplings shall have plain ends as specified in the respective pipe sections in Division 15, *Mechanical*.

K. ***Flanged joints shall be made with Type 304 stainless steel bolts, nuts and washers***. Mechanical joints shall be made with mild corrosion resistant alloy steel bolts

and nuts. All exposed bolts shall be painted the same color as the pipe. ***All buried bolts and nuts shall be heavily coated with two (2) coats of bituminous paint.***

L. ***Pressure gauges shall not be installed until after the substantial completion date*** unless otherwise requested by the Owner.

M. For buried valves, a valve box shall be centered accurately over the operating nut and the entire assembly shall be plumb. ***The tops of all valve boxes shall be adjusted to the proper elevation*** as specified below and as shown on the Contract Drawings.

1. ***In paved areas, the tops of valve box covers shall be flush with the pavement***. Following paving operations, a twenty-four (24) inch square shall be neatly cut in the pavement around the box and the paving removed. The top of the box shall then be adjusted to the proper elevation and a twenty-four (24) inch square by six (6) inch thick concrete pad poured around the box cover. ***Concrete pads in traffic areas shall be reinforced with No. 4 reinforcement bars as shown on the Contract Drawings. Concrete for the pad shall be 3,000 psi compressive strength at 28 days***.

2. ***In unpaved areas, tops of valve box covers shall be set one (1) inch above finished grade. After the top of the box is set to the proper elevation, a twenty-four (24) inch square by six (6) inch thick concrete pad shall be poured around the box cover. Concrete for the pad shall be 3,000 psi compressive strength at 28 days***.

3. ***The concrete pad for the valve box cover shall have a three (3) inch diameter, identification disc embedded in the concrete surface*** as shown on the Contract Drawings. The *bronze* identification disc shall be as specified in Section 09905, *Piping, Valve and Equipment Identification System* and shall have the information as shown on the Contract Drawings neatly stamped on it.

N. Valve Orientation

1. Install operating stem vertical when the valve is installed in horizontal runs of pipe having centerline elevations 4.5 ft or less above finished floor, unless otherwise shown.

2. Install operating stem horizontal in horizontal runs of pipe having centerline elevations between 4.5 feet and 6.75 feet above finish floor, unless otherwise shown.

3. If no plug valve seat position is shown, locate as follows:

a. Horizontal Flow: *The flow shall produce an "unseating" pressure, and the plug shall open into the top half of valve*.

b. Vertical Flow: *Install seat in the highest portion of the valve*.

O. Install a line size ball valve and union upstream of each solenoid valve, in-line flow switch, or the in-line electrical device, excluding magnetic flowmeters, for isolation during maintenance.

P. Locate valve to provide accessibility for control and maintenance. Install access doors in finished walls and ceilings for valve access.

Q. ***All valves and appurtenances shall be tested hydrostatically for a minimum of four (4) hours***, concurrently with the pipeline in which they are installed at the working pressure corresponding to the class of pipe, unless a different test pressure is specified. Protect or isolate any parts of valves, operators, or control and instrumentation systems whose pressure rating is less than the pressure used for the pressure test(s). If valve joints leak during pressure testing, loosen or remove the nuts and bolts, reseat or replace the gasket, reinstall or retighten the bolts and nuts, and hydrostatically retest the joints.

R. Following installation, all above-ground valves shall be painted in accordance with the painting system specified in Section 09900, *Painting*. Following installation of buried valves or valves installed in valve vaults, repair any scratches, marks and other types of surface damage, etc., with a coating equal to the original coating supplied by the manufacturer.

3.04 Installation of Air Release and Air and Vacuum Valves

A. Piping, fittings, and the air release and air and vacuum valves shall be installed as shown on the Contract Drawings. Air Release/Air and Vacuum valves shall be installed on the discharge side of all “non-submersible” type pumping stations.

B. The air release valve assemblies shall be installed so that they are properly supported and such that they will function properly and freely and no parts shall be strained.

C. Air release/air and vacuum valve testing shall be performed during the testing of pipeline which air release is attached.

3.05 Installation of Tie Rods

A. Tie rods shall be installed in strict accordance with the manufacturer's written installation requirements.

B. Unless otherwise indicated on the Contract Drawings, the size and number of tie rods for a joint or installation shall be as recommended by the manufacturer's design chart for a working pressure of 150 psi.

C. Following installation and prior to backfilling, all parts of the buried tie rod joint restraint system, including tie rods, tie bolts, nuts, washers, and other fasteners, shall be coated with two (2) coats, ten (10) mils DFT per coat, of bituminous epoxy.

3.06 Inspection and Hydrostatic Pressure and Leakage Testing

A. ***Completed pipe shall be subjected to hydrostatic pressure test for four (4) hours at full working pressure***. All leaks shall be repaired and lines retested as approved by the Engineer. Prior to testing, the gravity pipelines shall be supported in an approved manner to prevent movement during tests.

B. Hydrostatic pressure and leakage testing shall be performed in accordance with Section 15044, *Pressure Testing of Piping*.

END OF SECTION

SECTION 15125

PIPE HANGERS AND SUPPORTS

1. GENERAL

1.01 Description

A. Scope of Work

1. Furnish all labor, materials, equipment, accessary items (bolts, screws, nuts, neoprene isolation pads, drip guards, etc.) services, and incidentals required and install pipe hangers, supports, concrete inserts, and anchor bolts including all metallic hanging and supporting devices required for supporting all piping as indicated and as specified herein.

B. Number and Location

1. The Contract Drawings depict only "*minimum*" pipe support locations.

2. ***Adequate pipe supports shall be supplied for all piping systems to provide a "rigid overall" installation and additional support for pipe ends when equipment is disconnected. Non-rigid installation shall be replaced at the Contractor's cost.***

C. Related Work Specified Elsewhere:

Specification Section	Title
05500	Metal Fabrications
09900	Painting
15000	Mechanical - General Requirements
Division	**Description**
3	Concrete
15	Piping and Fittings
Contract Drawings and General Provisions of the Contract	

1.02 Quality Assurance

A. Hangers and supports shall be of an approved standard design where possible and shall be adequate to maintain the supported load in the proper position under all operating conditions. ***The minimum working safety factor for pipe supports shall be five (5) times the material ultimate strength of the material, assuming ten (10) feet of water filled pipe being supported***.

B. ***All pipe and appurtenances connected to equipment shall be supported in such a manner as to prevent any strain being imposed on the equipment***.

C. When manufacturer's have indicated requirements that piping loads shall not be transmitted to their equipment, the Contractor shall submit a certification stating that such requirements have been complied with.

1.03 Submittals

A. Shop drawing submittals shall be in accordance with the General Conditions, Supplementary Conditions, and Section 01300, *Shop Drawings, Submittals, and Samples* and shall be submitted to the Engineer for approval. All submittals shall be in an electronic format (PDF).

B. Submit to the Engineer, for approval, the ***manufacturer's descriptive literature for all pipe support devices*** and materials demonstrating compliance with this Specification and the support details shown on the Contract Drawings and samples of all materials specified herein.

C. ***Submit line drawings of each piping system*** to the scale shown on the Contract Drawings, or larger, locating each support or hanger. Identify each type of hanger or support by the manufacturer's catalog number or figure.

D. ***Submit installation drawings and manufacturer's information on each type of hanger and support used***. Clearly indicate the actual pipe outside diameter (not just nominal pipe size) that is used for the hangers and supports.

1.04 Product Delivery, Storage and Handling

A. The equipment provided under this specification section shall be shipped, handled and stored in accordance with the manufacturer's written instructions and in accordance with Section 01600, *Materials and Equipment*.

1.05 Warranty and Guarantees

A. ***The Contractor shall furnish the Owner with a five (5) year service/parts warranty*** as specified in Section 01740, *Warranties and Bonds*.

B. The equipment manufacturer shall guarantee that the equipment furnished is suitable for the purpose intended and free from defects of design, material and workmanship.

C. In the event that any equipment fails to perform as specified herein, the equipment manufacturer shall promptly repair or replace the defective equipment at no additional cost to the Owner.

D. This warranty is in addition to any other warranty required by the Contract Documents.

2. PRODUCTS

2.01 General

A. ***All piping and tubing shall be supported as required to prevent significant stresses in the pipe or tubing material, valves, and fittings and to support and cure the pipe in the intended position and alignment***. ***Support piping by piping support where it connects to pumps or other mechanical equipment***. All supports shall be designed to adequately secure the pipe against excessive dislocation due to thermal expansion and contraction, internal flow forces, and all probable external forces such as equipment, pipe and personnel contact. ***All pipe supports shall be approved prior to installation***.

B. ***The Contractor shall select and design all piping support systems within the specified spans and component requirements***. Structural design and selection of support system components shall withstand the dead loads imposed by the weight of the pipes, fittings, and valves, all filled with water, plus valve actuators and any insulation***. Commercial pipe supports and hangers shall have a minimum safety factor of five (5) based on material ultimate strength***.

C. ***No attempt has been made to show all required pipe supports in all locations, either on the Contract Drawings or in the details***. The absence of pipe supports and details on any Drawings shall not relieve the Contractor of the responsibility for providing them throughout the facility.

D. All support anchoring devices, including anchor bolts, inserts and other devices used to anchor the support onto a concrete base, roof, wall or structural steel works, shall be of the proper size, strength and spacing to withstand the shear and pullout loads imposed by loading and spacing on each particular support.

E. All materials used in the manufacturing of hangers and supports shall be capable of meeting the respective ASTM Standard Specifications with regard to tests and physical and chemical properties, and be in accordance with MSS SP-58.

F. ***Hangers and supports shall be spaced in accordance with ANSI B31.1.0*** except that the maximum unsupported span shall not exceed ten (10) feet unless otherwise specified herein.

G. Unless otherwise specified herein, pipe hangers and supports shall be as manufactured by ITT Grinnel Co., Inc, Carpenter and Patterson, Inc., or approved equal. Any reference to a specific figure number of a specific manufacturer is for the purpose of establishing a type and quality of product, and shall not be considered as proprietary. Any item comparable in type, style, quality, design and performance will be considered for approval.

2.02 Piping Hangers and Supports for Metal Pipe

A. ***Furnish and install supports necessary to hold the piping and appurtenances in a firm, substantial manner at the lines and grades indicated on the Contract Drawings*** or as specified. Piping supports and hangers shall conform to Federal Specification WW-H-171 or shall be as specifically shown or indicated on the Contract Drawings. ***Piping within structures shall be adequately supported from floors, walls, ceilings or beams***. Supports from the floor shall be approved flange supports, saddle stands or suitable concrete piers as indicated or approved. Pipe saddles shall be shaped to fit the pipe with which they will be used and shall be capable of screw adjustment.

B. Suspended Single Pipes

1. Suspended single pipes shall be supported by hangers suspended by steel rods from galvanized concrete inserts, beam clips or ceiling mounting bolts as follows:

2. Hangers

Pipe Size (inches)	Grinnel Figure No.
< ½	138R
½ - 1	97C
1¼ - 4	104
6 - 12	590
14 - 30	171

3. Hanger rods shall be rolled steel machine threaded with load ratings conforming to ASTM specifications and the strength of the rod shall be based on the root diameter. Hanger rods shall have the following minimum diameters:

Pipe Size (inches)	Minimum Rod Diameter (inches)
< 2½	3/8
2½ - 3	½
4	5/8
6	3/4
8 - 12	7/8
14 - 30	1

4. Where applicable, structural attachments shall be beam clamps. Beam clamps, for rod sizes ½-inch through ¾-inch shall be equal to Grinnel Figure No. 229, and for rod sizes ⅞-inch through 1¼-inches shall be equal to Grinnel Figure No. 228, or approved equal.

5. Concrete inserts for pipe hangers shall be continuous metal inserts designed to be used in ceilings, walls or floors, spot inserts for individual pipe hangers, or ceiling mounting bolts for individual pipe hangers and shall be manufactured by Unistrut Corp., Wayne, Michigan; Carpenter and Patterson, Inc., Laconia, New Hampshire; Richmond or approved equal and shall be as follows:

   a. Continuous concrete inserts shall be used where applicable and/or as shown on the Contract Drawings and shall be used for hanger rod sizes up to and including ¾-inch diameter. Inserts to be used where supports are parallel to the main slab reinforcement shall be Series P3200 by Unistrut Corporation; Figure 1480, Type 2 by Carpenter and Patterson, Inc., or approved equal. Inserts to be used where supports are perpendicular to the main slab reinforcement shall be Series P3300 by Unistrut Corporation; Figure 1480, Type 1 by Carpenter and Patterson, Inc., or approved equal.

   b. Spot concrete inserts shall be used where applicable and shall be used for hanger sizes up to and including ⅞-inch diameter. Inserts shall be Figure 650 by Carpenter and Patterson, Inc. for hanger rod sizes ½-inch through and including ¾-inch, and Figure 266 by Carpenter and Patterson Inc., for ⅞-inch hanger rods, or approved equal.

   c. Ceiling mounting bolts shall be used where applicable and be for hanger rod sizes 1-inch through 1¼-inches and shall be Figure 104M as manufactured by Carpenter and Patterson, Inc., or approved equal.

d. All pipe hangers shall be capable of vertical adjustment under load and after erection. Turnbuckles, as required and where applied, shall be equal to Grinnel Figure No. 230.

C. Wall or Column Supported Pipes

1. Wall or column supported pipes shall be supported by welded steel brackets equal to Grinnel Figure 194, 195 and 199 as required, for pipe sizes up to and including 20-inch diameter. Additional wall bearing plates shall be provided where required.

2. Where the pipe is located above the bracket, the pipe shall be supported by an anchor chair and U-bolt assembly supported by the bracket for pipes four (4) inches and larger and by a U-bolt for pipes smaller than four (4) inches. Anchor chairs shall be equal to Carpenter and Patterson Figure No. 127. U-bolts shall be equal to Grinnel Figure No. 120 and 137.

3. Where the pipe is located below the bracket, the pipes shall be supported by pipe hangers suspended by steel rods from the bracket. Hangers and steel rods shall be as specified above.

D. Floor Supported Pipes

1. Floor supported pipes three (3) inches and larger in diameter shall be supported by either cast-in-place concrete inserts or adjustable pipe saddle supports as directed by the Engineer. In general, concrete supports shall be used when lateral displacement of the pipes is probable (unless lateral support is provided), and adjustable pipe saddle type supports shall be used where later displacement of pipes is not probable.

2. Each concrete support shall conform to the details shown on the Contract Drawings. Concrete shall be poured after the pipe is in place with temporary supports. ***Concrete piers shall conform accurately to the bottom one-third (⅓) to one-half (½) of the pipe***. ***Top edges and vertical corners of each concrete support shall have one (1) inch bevels***. Each pipe shall be secured on each concrete support by a wrought iron or steel anchor strap anchored to the concrete with cast-in-place bolts or with expansion bolts. Where directed by the Engineer, vertical reinforcement bars shall be grouted into drilled holes in the concrete floor to prevent overturning or lateral displacement of the concrete support. ***Unless otherwise approved by the Engineer, maximum support height shall be five (5) feet***.

3. Concrete piers used to support base elbows and tees shall be similar to that specified above. Piers may be square or rectangular.

4. Each adjustable pipe saddle support shall be screwed or welded to the corresponding size 150 lb. companion flange or slip-on welding flange, respectively. The supporting pipe shall be of schedule 40 steel pipe construction. Each flange shall be secured to the concrete floor by a minimum of two (2) expansion bolts per flange. Adjustable saddle supports shall be equal to Grinnel Figure No. 264, or approved equal. Where used under base fittings, a suitable flange shall be substituted for the saddle.

E. Vertical Piping

1. ***Where pipes change from horizontal to vertical, the pipes shall be supported on the horizontal runs within two (2) feet of the change*** in direction by pipe supports as previously specified herein.

2. For vertical runs exceeding ten (10) feet, pipes shall be supported by approved pipe collars, clamps, brackets, or wall rests at all points required to insure a rigid installation.

3. Where vertical piping passes through a steel floor sleeve, the pipe shall be supported by a friction type pipe clamp which is supported by the pipe sleeve. Pipe clamps shall be equal to Grinnel Figure No. 262.

F. Anchor bolts shall be equal to Kwik-Bolt as manufactured by the McCullock Industries, Wej-it as manufactured by Wej-it Expansion Products, Inc., or approved equal.

G. All fabricated steel or cast iron pipe supports, saddles, rolls, brackets, clevises, and the like shall be hot dip galvanized after fabrication and/or machining in accordance with ASTM A123.

H. ***All nuts, bolts, clips and other hardware, and all hanger rods used for pipe supports, shall be Type 316 stainless steel***. All nuts, bolts and threaded rods shall be in accordance with ASTM A-320, Class 2.

2.03 Pipe Hangers and Supports for Plastic Pipe and Rubber Hose

A. Single plastic pipes shall be supported by pipe supports as previously specified herein.

B. Multiple, suspended, horizontal plastic pipe runs, where possible, and rubber hose shall be supported by ladder type cable trays such as the Electray Ladder by Husky-Burndy, the Globetray by the Metal Products Division of United States Gypsum, or approved equal. The ladder shall of mild steel construction. Rung spacing shall be approximately eighteen (18) inches for plastic pipe and twelve (12) inches for rubber hose. The tray

width shall be approximately six (6) inches for single runs of rubber hose and twelve (12) inches for double runs of rubber hose. Ladder type cable trays shall be furnished complete with all hanger rods, rod couplings, concrete inserts, hanger clips, etc., required for a complete support system. Individual plastic pipes shall be secured to the rungs of the cable tray by strap clamps or fasteners equal to Globe Model M-CAC, Husky-Burndy Model SCR or approved equal. The spacing between the clamps shall not exceed nine (9) feet. The cable trays shall provide continuous support along the length of the pipe.

C. Individual clamps, hangers and supports in contact with plastic pipe shall provide firm support but not so firm as to prevent longitudinal movement due to thermal expansion and contraction.

2.04 Pipe Supports for Small Diameter PVC, Copper and Steel Pipe

A. Small diameter PVC piping, three (3) inches in diameter and smaller, and steel or copper piping two (2) inches in diameter or smaller shall be supported with "SUSPORT" system arrangements as manufactured by Universal Suspension Systems Inc., Gillette, New Jersey, or approved equal. Clamping halves for the pipe support shall be manufactured of molded polypropylene and shall support and fit closely for 360□ around the pipe. To support piping carrying non-corrosive fluids or gases located in non-corrosive, indoor environments, all hardware for the "SUSPORT" system shall be nickel chrome plated carbon steel. ***To support piping carrying corrosive fluids or gases located in corrosive environments or piping located outdoors, all hardware for the "SUSPORT" system shall be manufactured of Type 316 stainless steel***.

B. In some cases, to adequately support small diameter PVC or steel piping, a metal frame support structure may be required for support of the "SUSPORT" system specified above. Where required, metal frame support structures shall be constructed using channels, fittings, brackets, hardware and other accessories as manufactured by B-Line Systems, Inc. of Highland, Illinois, or an equal approved by the Engineer. If located in indoor, non-corrosive environments, the materials for the frame structure shall be carbon steel with an epoxy coating applied by a cathodic, electro-deposition process which is equal to "Dura-a-Green" by B-Line Systems, Inc. ***For corrosive or outdoor systems, the materials for the frame structure shall be Type 316 stainless steel unless otherwise noted on the Contract Drawings***. ***Hardware used to construct the frame support structure shall be Type 316 stainless steel***.

C. Pipe supports for small diameter PVC shall be located wherever necessary in the opinion of the Engineer to adequately support the pipe; however, they shall have a maximum spacing as specified below for straight pipe runs. Adequate supports shall especially be used adjacent to valves and fittings in pipelines. The following table is based on spacing requirements for Schedule 80 PVC or Standard Weight (Schedule 40) steel pipe and hard drawn copper tube carrying a fluid with a specific gravity of 1.0

at a temperature not exceeding 120□F. Support spacing for PVC or steel piping carrying fluids with specific gravities or temperatures exceeding those stated above shall be approved by the Engineer.

Nominal Pipe Diameter (inches)	Support Spacing (feet)		
	PVC Pipe	Steel Pipe	Copper
½	3.5	4.5	4.0
¾	4.0	5.0	4.0
1	4.5	5.5	4.0
1¼	5.0	6.5	6.0
1 ½	5.0	7.5	6.0
2	5.5	8.0	6.0
2 ½	5.5		
3	6.0		

2.05 Waffle Isolation Pads

A. Waffle isolation pads shall be a minimum ¼-inch thick.

B. Waffle isolation pads shall be Mason Type “W”; Machinery Installation Systems “Unisorb”, Type S, SB, F or FB; or approved equal.

2.06 Neoprene Isolating Sleeves

A. Neoprene isolating sleeves for metal pipe six (6) inches and smaller shall be Unistrut P2600, B-Line “Vibrocushion”, or approved equal.

2.07 Quality Control

A. The Contractor shall follow the manufacturer’s and supplier’s recommended product quality control specifics as required for this Project.

3. EXECUTION

3.01 Preparation

A. ***Prior to prime coating, all pipe hangers and supports shall be thoroughly clean, dry and free from all mill-scale, rust, grease, dirt, paint and other foreign substances*** to the satisfaction of the Engineer.

B. ***All submerged pipe supports shall be prime coated with Koppers 654 Epoxy Primer or approved equal***. All other pipe supports shall be prime coated with Rustinhibitive Primer No. 621 as manufactured by Koppers Company, Inc.,or equal.

C. ***Finish coating shall be compatible with the prime coating used*** and shall be applied as specified in Section 09900, *Painting* and 09905, *Piping, Valve and Equipment Identification System*.

3.02 Installation

A. ***All pipes, horizontal and vertical, shall be rigidly supported from the building or structure by approved supports. Supports shall be provided at changes in direction and elsewhere*** as shown on the Contract Drawings or specified herein. No piping shall be supported from other piping or from metal stairs, ladders and walkways, unless it is so indicated on the Contract Drawings, or specifically directed or authorized by the Engineer.

B. ***All piping supports shall be designed with liberal strength and stiffness to support the respective pipes under the maximum combination of peak loading conditions to include pipe weight, liquid weight, liquid movement and pressure forces, thermal expansion and contraction, vibrations and all probable externally applied forces***. Prior to installation, all pipe supports shall be approved by the Engineer.

C. ***Pipe supports shall be provided to minimize lateral forces through valves, both sides of split type couplings, and sleeve type couplings and to minimize all pipe forces*** on pump housings. Pump housings shall not be utilized to support connecting piping.

D. ***Install separate hangers or supports at each valve***. Provide one (1) hanger or support around each end of the valve body or on the adjacent connecting pipe within one pipe diameter of the valve end. Provide additional hangers or supports to relieve eccentric loadings imposed by offset actuators.

E. Install separate hangers or supports at each pipe elbow, tee or fitting. Provide separate hangers or supports on both sides of each non-rigid joint or flexible pipe coupling.

F. Install hangers and supports at sufficiently close intervals to maintain proper alignment and prevent sagging.

G. Piping support systems and accessories shall be installed in accordance with the manufacturer's installation instructions.

H. Pipe supports shall be provided as follows:

1. ***Cast iron and ductile iron shall be supported at a maximum support spacing of ten (10) feet with a minimum of one (1) support per pipe section at the joints***.

2. ***All vertical pipes shall be supported at each floor or at intervals of at least ten (10) feet by approved pipe collars, clamps, brackets or wall rests, and at all points necessary to insure rigid construction***.

I. Supporting PVC

1. Support the piping in strict accordance with the manufacturer's instructions and recommendations for the conditions of operation, temperature, and size of pipe.

2. Support the piping in a manner that will prevent subsequent visible sagging of the pipe between supports due to plastic deformation.

J. ***Support drain, waste and vent piping by adjustable hangers***.

K. ***Effects of thermal expansion and contraction of the pipe shall be accounted for in pipe support selection and installation***.

L. ***Inserts for pipe hangers and supports shall be installed on forms before the concrete is poured***. Before setting these items, all Drawings and figures shall be checked which have a direct bearing on the pipe location. The Contractor shall be responsible for the proper location of all pipe supports to be installed as part of this Project.

M. ***Continuous metal inserts shall be embedded flush with the concrete surface***.

N. Standard Pipe Supports

1. Horizontal Suspended Piping

a. Single Pipes: *Adjustable swivel-ring, splint-ring, or clevis hangers.*

b. Grouped Pipes: *Trapeze hanger systems.*

c. Furnish a galvanized steel protection shield and oversized hangers for all insulated pipe.

d. Furnish pre-cut sections of rigid insulation with vapor barrier at hangers for all insulated pipe.

2. Horizontal Piping Supported from Walls

a. Single Pipes: *Wall brackets or wall clips attached to the wall with anchors. Clips attached to wall mounted framing shall also be acceptable*.

b. Stacked Piping

1) Wall mounted framing systems and clips are acceptable for piping smaller than three (3) inches in diameter.

2) Piping clamps which resist axial movement of the pipe through the support shall not be acceptable.

c. Wall mounted piping clips shall not be acceptable for insulated piping.

3. Horizontal Piping Supported from Floors

a. Stanchion Type

1) Pedestal type, adjustable with stanchion, saddle and anchoring flange.

2) Use yoke saddles for piping whose centerline elevation is eighteen (18) inches or greater above the floor and for all exterior installations.

3) Provide neoprene waffle isolation pads under anchoring flanges, adjacent to equipment or where otherwise required to provide vibration isolation.

b. Floor Mounted Channel Supports

1) Use for piping smaller than three (3) inches nominal diameter running along floors and in trenches at piping elevations lower than can be accommodated using pedestal type supports.

2) Attach the channel framing to the floors with anchor bolts.

3) Attach the pipe to the channel with clips or pipe clamps.

c. Concrete Cradles

1) Use for piping larger than three (3) inches along the floor and in trenches at piping elevations lower than can be accommodated using stanchion type supports.

4. Vertical Pipe

a. Support with wall brackets and base elbow or riser clamps on floor penetrations.

5. Standard Attachments

Attachment To	Standard Attachment(s)
Concrete Ceilings	Concrete inserts
Steel Beams	I-beam clamp or welded attachments
Wooden Beams	Lag screws and angle clips to members not less than 2½ inches thick
Concrete Walls	Concrete inserts or brackets or clip angles with anchor bolts

O. Temporary Pipe Supports

1. Layout each section of pipeline and make connections while the pipe is held in temporary supports.

2. After the completion of connections in each section of pipeline, hold the section in place with temporary clamps.

3. Do not remove the temporary clamps until the piping is correctly installed on the permanent supports.

3.03 Painting

A. All fabricated steel or cast iron pipe supports, saddles, brackets , rolls, clevises and the like shall be painted, after installation, as specified in Sections 09900, *Painting* and 09905, *Piping, Valve and Equipment Identification System*.

END OF SECTION

SECTION 15129

COUPLINGS AND CONNECTORS

1. GENERAL

1.01 Description

A. Furnish all labor, materials, equipment, devices, services, ancillary items, accessories and incidentals and perform all operations required, for the correct installation of couplings and connectors of the type(s) and size(s) in the location(s) shown on the Contract Drawings, as specified herein and as required to ensure proper engineering construction methods.

B. Pipe supports shall be placed where shown on the Contract Drawings or as required by Section 15125, *Pipe Hangers and Supports*.

C. The Contractor may install additional pipe supports and flexible couplings to facilitate piping installation, provided that complete details describing their location, the pipe supports and hydraulic thrust protection are submitted. ***Thrust protection shall be adequate to sustain the force developed by one hundred fifty percent (150%) of the design operating pressures specified***.

D. Related Work Specified Elsewhere

Specification Section	Title
15000	Mechanical - General Requirements
15044	Pressure Testing of Piping
15125	Pipe Hangers and Supports
Division	**Description**
15	Piping
Contract Drawings and General Provisions of the Contract	

1.02 Quality Assurance

A. The minimum pressure rating shall be equal to that of the pipeline in which they are to be installed.

B. Couplings and connectors, other than those specified herein, are subject to the Engineer's approval.

1.03 Submittals

A. Shop drawing submittals shall be in accordance with the General Conditions, Supplementary Conditions, and Section 01300, *Shop Drawings, Submittals, and Samples*. All submittal shall be in an electronic format (PDF).

B. Submit shop drawings to the Engineer for approval, including, but not limited to, manufacturer's catalog data on all couplings and connectors. Show the manufacturer's model or figure number for each type of coupling or joint for each type of pipe material for which couplings are used.

C. Submit the manufacturer's recommended torques to which the coupling bolts shall be tightened for the flexible gasketed sleeve-type compression pipe coupling.

D. Show materials of construction by ASTM reference and grade. Show all dimensions.

E. Show the number, size and materials of construction of the rods and lugs for each thrust harness on the Project.

1.04 Product Delivery, Storage and Handling

A. All of the couplings and connectors and all accessories covered by this specification section shall be ***delivered to the job site and stored in a safe, dry place*** with appropriate labels and/or other product identification and in accordance with Section 01600, *Materials and Equipment*.

1.05 Warranty and Guarantees

A. The Contractor shall furnish the Owner with a ***five (5) year service/parts warranty*** as specified in Section 01740, *Warranties and Bonds*.

B. This warranty is in addition to any other warranty required by the Contract Documents.

C. The equipment manufacturer shall guarantee that the equipment furnished is suitable for the purpose intended and free from defects of design, material and workmanship.

D. In the event that any equipment fails to perform as specified herein, the equipment manufacturer shall promptly repair or replace the defective equipment at no additional cost to the Owner.

2. MATERIALS

2.01 Material and Equipment

A. All Couplings and Connectors

1. Gasket Materials: *Material to be manufactured from a composition material suitable for exposure to the liquid, pressure and temperature to be contained within the pipe*.

2. Diameters to properly fit the specified type of pipes on which couplings and connectors are to be installed.

B. Sleeve-Type Couplings (When Applicable)

1. Exposed Couplings (When Applicable)

a. Steel middle ring.

b. Two (2) steel follower rings.

c. Two (2) wedge-section gaskets.

d. Sufficient steel bolts to properly compress the gaskets.

e. Acceptable Manufacturers

1) Dresser Manufacturing Co.: Style 38

2) Smith-Blair, Inc.: Style 411

3) Or approved equal.

2. Buried Couplings (When Applicable)

a. Cast iron middle rings with pipe stops removed.

b. Two (2) malleable iron follower rings with ribbed construction.

c. Two (2) wedge-section gaskets.

d. Bolts and Nuts for buried couplings, shall be Type 316 stainless steel conforming to ASTM A-193, Grade B8 for bolts, and ASTM A-194, Grade 8 for nuts. Bolts and nuts greater than 1c inches shall be carbon steel, ASTM A-307, Grade B, with cadmium plating, ASTM A-165, Type NS.

e. Acceptable Manufacturers

1) Dresser Manufacturing Co.: Style 53

2) Smith-Blair, Inc.: Style 411

3) Or approved equal.

C. Split-Type (Grooved End) Couplings (When Applicable)

1. Constructed from malleable or ductile iron.

2. For use with grooved or shouldered end pipe with a minimum wall thickness as required so as not to weaken the pipe.

3. Cast in two (2) segments for ¾-inch through 14-inch pipe sizes; four (4) segments for fifteen (15) inch through twenty-four (24)inch pipe sizes; and six (6) segments for pipe sizes over twenty-four (24) inches.

4. Coating: Enamel

5. Bolts: Carbon Steel

6. Acceptable Manufacturers

a. Victaulic Company of America: Style 77

b. Gustin-Bacon Co.

c. Or approved equal.

D. Flanged Adapters (When Applicable)

1. For joining plain end of grooved end pipe to flanged pipes and fittings.

2. Adapters shall conform in size and bolt hole placement to ANSI standards for steel and/or cast iron flanges 125 or 150 pound standard unless otherwise required for connections.

3. Exposed Sleeve Type

   a. Constructed from steel.

   b. Coating: Enamel

   c. Bolts: Carbon Steel

   d. Acceptable Manufacturers

      1) Dresser Manufacturing Co.: Style 128 for CI, DIP and steel pipes with diameters of two (2) inches through ninety-six (96) inches.

      2) Or approved equal.

4. Buried Sleeve Type

   a. Construction from cast iron.

   b. Bolts and Nuts for buried sleeves, shall be Type 316 stainless steel conforming to ASTM A-193, Grade B8 for bolts, and ASTM A-194, Grade 8 for nuts and washers. Bolts and nuts greater than 1c inches shall be carbon steel, ASTM A-307, Grade B, with cadmium plating, ASTM A-165, Type NS.

   c. Acceptable Manufacturers

      1) Dresser Manufacturing Co.: Style 127 locking type for CI, DIP, AC and steel pipes with diameters of three (3) inches through twelve (12) inches.

      2) Or approved equal.

5. Split Type

   a. Constructed from malleable or ductile iron.

   b. For use with grooved or shouldered end pipe.

   c. Coating: Enamel

d. Acceptable Manufacturers

1) Victaulic Company of America: Style 741 for pipe diameters of two (2) inches through twelve (12) inches

2) Victaulic Company of America: Style 742 for pipe diameters of fourteen (14) inches through sixteen (16) inches

3) Or approved equal.

E. Deflection Joints

1. Joints designed to permit a nominal maximum deflection of 15□ in all directions from the axis of the adjacent pipe length, will prevent pulling apart, and will remain watertight at any angle of deflection under 15□.

2. Material to be manufactured from a composition material suitable for exposure to the liquid, pressure and temperature to be contained within the pipe.

3. Supplied with control rods as required.

F. Transition Couplings

1. Transition couplings for connecting different types of pipe having different outside diameters shall be steel.

2. Acceptable Manufacturers

a. Dresser Manufacturing Co: Style 62 or 162

b. Rockwell: Series 413

c. Baker: Series 212 or 240

d. Or approved equal

2.02 Accessories

A. Joint Harnesses

1. Tie bolts or studs shall be as shown in the Table 15129 - 1.

2. Bolt or stud material shall conform to ASTM B-193, Grade B7.

3. Nuts shall conform to ASTM A-194, Grade 2H.

4. Lug material shall conform to ASTM A-36, ASTM A-283 (Grade B, C or D) or ASTM A-285 (Grade C). Lug dimensions shall be as shown in AWWA Manual M-11, Table 19.7.

TABLE 15129 - 1

Tie Bolts or Stud Requirements for Flexible Pipe Couplings

Tie Bolt or Stud Minimum Requirements

Nominal Pipe Size (Inches)	150 psi		300 psi	
	No. of Bolts or Studs	Size (inches)	No. of Bolts or Studs	Size (inches)
2	2	e	2	e
3	2	e	2	e
4	2	e	2	e
6	2	e	2	e
8	2	e	2	e
10	2	e	2	e
12	2	¾	2	f
14	2	¾	2	1
16	2	f	2	1¼
18	2	1	2	1d
20	2	1	2	1½

36	4	1¼	4	1¾
42	4	1½	6	1e
48	6	1½	6	1f
54	6	1½	6	2¼

TABLE 15129 - 1

Tie Bolts or Stud Requirements for Flexible Pipe Couplings

Tie Bolt or Stud Minimum Requirements

Nominal Pipe Size (Inches)	150 psi		300 psi	
	No. of Bolts or Studs	Size (inches)	No. of Bolts or Studs	Size (inches)
60	6	1e	8	2¼
66	6	1¾	8	2¼
72	6	1f	10	2¼
84	6	2¼	12	2¼
96	8	2¼	14	2¼

5. Select number and size of the bolts based on the test pressure shown in Section 15044, *Pressure Testing of Piping*. For test pressures less than or equal to 150 psi, use the 150 psi design in Table 15129-1. For test pressures between 150 and 300 psi, use the 300 psi design in Table 15129-1.

6. Provide a washer for each lug. The washer material shall be the same as the nut material. The minimum washer thickness shall be 1/8-inch.

2.03 Quality Control

A. The Contractor shall follow the manufacturer's and supplier's recommended product quality control specifics as required for this Project.

3. EXECUTION

3.01 Installation

A. Sleeve Type Couplings (When Applicable)

1. ***Thoroughly clean pipe ends for a distance of eight (8) inches from the ends prior to installing couplings, and use soapy water as a gasket lubricant***.

2. Slip a follower ring and gasket (in that order) over each pipe and place the middle ring centered over the joint.

3. Insert the other length into the middle ring the proper distance.

4. Press the gaskets and followers evenly and firmly into the middle ring flares.

5. Insert the bolts, finger tighten and progressively tighten diametrically opposite nuts uniformly around the adapter with a torque wrench applying the torque recommended by the manufacturer.

6. Insert and tighten the tapered threaded lock pins.

7. Insert the nuts and bolts for the flange, finger tighten and progressively tighten diametrically opposite bolts uniformly around the flanges to the torque recommended by the manufacturer.

B. Split Type Flange Adapters (When Applicable)

1. Install in the same manner as the Split Type Couplings.

C. Buried Couplings, Adapters and Connectors (When Applicable)

1. ***Thoroughly coat all exterior surfaces, including nuts and bolts, after assembly and inspection by the Engineer with a heavy-bodied bituminous mastic as approved by the Engineer***.

D. Install thrust rods, supports, and other provisions to properly support the pipe weight and axial equipment loads.

3.02 Inspection and Testing

A. ***Upon completion of all coupling and connector work covered by this specification section, visually inspect the work and verify that it has been correctly installed***.

B. Hydrostatically test flexible pipe coupling and joints in place with the pipe being tested. Tests shall be in accordance with Section 15044, *Pressure Testing of Piping*.

END OF SECTION

SECTION 15421

FLOOR DRAINS

1. GENERAL

1.01 Description

A. Furnish all labor, materials, equipment, services, and incidentals required and install a complete floor drain plumbing system as shown on the Contract Drawings and as specified herein.

B. All work of this Section shall be governed by all provisions of the General and Supplementary Conditions, Division 3, *Concrete* and Division 15, *Mechanical*, and the Contract Drawings.

1.02 Submittals

A. Shop drawing submittals shall be in accordance with the General Conditions, Supplementary Conditions, and Section 01300, *Shop Drawings, Submittals, and Samples*.

B. Submit catalog information on each device to show compliance with the specifications.

2. MATERIALS

2.01 Floor Drains (FD)

A. For the purpose of explanation and description only, plate numbers have been given in the following schedule; such numbers, unless otherwise noted, are taken from the catalogs of Zurn Industries Inc. or approved equal. All drains shall be of sizes and types shown on the Drawings.

B. Provide floor drains as shown on the Contract Drawings.

C. Refer to the Contract Drawings, which indicate the floor finish in each room or area where floor drains are to be installed.

D. ***All floor drains as required shall be fitted with a deep seal cast iron "P" type trap to suit drain outlet***.

E. ***All floor drains shall have cast iron drainage flanges, seepage control, clamping collar and inside caulk outlet*** unless noted otherwise to be IPS outlet.

F. Provide trap primers for floor drains where indicated on the Contract Drawings and where required by Code.

G. Provide all necessary bolts, clamping rings and incidentals for a complete system.

3. EXECUTION

3.01 Floor Drains

A. Install floor and area drains in accordance with the manufacturer's written procedures and in locations indicated.

B. The Contractor shall coordinate flashing work with work of waterproofing and adjoining substrate work.

C. ***Install drains at low points of surface areas to be drained, or as indicated. Set tops of drains flush with the finished floor***.

D. ***Install drain flashing collar or flange so that no leakage occurs between the drain and the adjoining flooring***. Maintain the integrity of waterproof membranes, where penetrated.

E. ***Position drains so that they are accessible and easy to maintain***. Relief valves and equipment seal water shall be piped to drain over the floor drains.

F. Protect drains during the remainder of the construction period, to avoid clogging with construction materials and debris, and to prevent damage from traffic and construction work.

G. Install trap primers as indicated on the Contract Drawings, and in accordance with the manufacturer's installation instructions. Pitch piping towards the drain trap, a minimum of 1/8-inch per foot (1%). Adjust the trap primer for proper flow.

END OF SECTION

SECTION 16050

ELECTRICAL – GENERAL PROVISIONS

1. GENERAL

1.01 Scope of Work

A. Furnish all labor, materials, equipment and incidentals required for a complete electrical system at the Flagler Beach Wastewater Treatment Facility (WWTF) Sludge Management System Improvements, hereinafter specified and shown on the Drawings.

B. The work, apparatus and materials which shall be furnished under these Specifications and accompanying Drawings shall include all items listed hereinafter and/or shown on the Drawings. Certain equipment will be furnished as specified in other sections of these Specifications which will require wiring thereto and/or complete installation as indicated. All materials necessary for the complete installation shall be furnished and installed by the Contractor to provide complete power, lighting, communication systems, instrumentation, wiring and control systems as indicated on the Drawings and/or as specified herein.

C. The Contractor shall furnish and install the necessary main circuit breakers, cables, transformers, motor control centers, protective devices, panelboards, exterior electrical system, etc., to serve motor loads, lighting loads and miscellaneous electrical loads as indicated on the Drawings and/or as specified hereinafter.

D. The work shall include complete testing of all equipment and wiring at the completion of the work and making any minor connection changes or adjustments necessary for the proper functioning of the system and equipment. All workmanship shall be of the highest quality; sub-standard work will be rejected.

E. It is the intent of the Contract Documents that the Contractor will have the ultimate responsibility for the coordination of the Division 11, 13, 15 and Division 16 systems.

F. Mount and wire speed indicators, variable frequency drives, reduced voltage soft starters, and process instruments furnished under other Divisions of these Specifications.

G. Mount and wire isolation transformers, operator's stations, and power conversion equipment for all variable speed drive systems furnished under other Divisions of these specifications.

H. Make all field connections to process instrument panels and other control panels furnished under other Divisions of these Specifications.

I. For process instrumentation, furnish and install all conduit, wire and interconnections between primary elements, transmitters, local indicators and receivers.

J. Furnish necessary devices and make connections to provide power to drinking fountains and other equipment. This will require appropriate receptacles in some cases and direct wiring in other cases, depending upon equipment furnished.

K. Install and wire all thermostats and other devices furnished under other Divisions of this Specification directly controlling heating equipment or fan motors.

L. Mount and wire electric heaters furnished under other Divisions of this Specification.

M. Wire all ventilation equipment furnished under other Divisions of this Specification.

N. Each bidder or his authorized representatives shall, before preparing his proposal, visit all areas of the site in which work under this division is to be performed and inspect carefully the present installation. The submission of the proposal by this bidder shall be considered evidence that he or his representative has visited the proposed site and noted the locations and conditions under which the work will be performed and that he takes full responsibility for a complete knowledge of all factors governing his work.

O. It is the intent of these Specifications that the electrical system shall be suitable in every way for the service required. All material and all work which may be reasonably implied as being incidental to the work of this Section shall be furnished at no extra cost.

P. Related Work Specified Elsewhere

1. Submittals:	Section 01300
2. Manufacturer’s Field Services:	Section 01460
3. Materials and Equipment:	Section 01600
4. Equipment Testing and Facilities Startup:	Section 01465
5. Operations and Maintenance Data:	Section 01730
6. Sitework:	Division 2
7. Concrete:	Division 3

1.02 Service and Metering

A. Permanent electrical power is existing provided by the Florida Power & Light (FPL) at the voltages indicated on the drawings.

1.03 Codes, Inspection and Fees

A. All material and installation shall be in accordance with the 2020 edition of the National Electrical Code and all applicable national, local and state codes.

B. Pay all fees required for permits and inspections.

1.04 Tests

A. Test all systems and repair or replace all defective work. Make all necessary adjustments to the systems and instruct the Owner's personnel in the proper operation of the systems.

B. The following minimum tests and checks shall be made prior to the energizing of electrical equipment. Test shall be by an independent NETA certified testing firm, and a certified test report shall be submitted stating that the equipment meets and operates in accordance with the Manufacturer's and job specifications, and that equipment and installation conforms to all applicable Standards and Specifications:

1. Testing and setting of protective relays for calibration and proper operation.

2. Mechanical inspection of all circuit breakers 100 amps and larger to assure proper operation.

3. Motors: Megger to ground each motor winding. Record date, motor temperature, terminal, reading and operator and have Owner representative sign off on each reading.

4. Conductors: Megger to ground prior to termination all 600 volt conductors not used for service conductors. Record the date, conductor, reading and operator and have Owner representative sign off on each reading.

5. Service Conductors: Megger to ground prior to termination in the presence of the Engineer or his representative all 600 volt service conductors. Record date, conductor, reading, operator, and have the Owner representative sign off on each reading.

6. 480 Volt Main Breakers and Power Panels: After installing, with circuit breakers closed, but prior to terminating any conductors or bus to the motor control center, megger each phase to phase and phase to ground. Record the date, test (i.e. A/B or A/G), reading and operator and have Owner representative sign off on each reading.

7. Connections & Terminations:

    a. Main Breakers and Power panels: Torque to Manufacturer's values in the presence of the Engineer or his representative. Record the date, conductor, torque, operator and have the Engineer sign off on each reading.

8. Data Base: After equipment suppliers test, calibrations, and inspection, megger all circuits leaving all switchgear and power panels. Record the date, conductor, circuit condition (i.e. load connected or unconnected), reading and operator and have Owner representative sign off on each reading.

9. Hot Spot Testing: Perform infrared hot spot inspection of the main breaker, ATS, motor control centers and associated equipment as soon as determined by the engineer that representative loads are present. Record the date, gear conditions found, operator and have the owner's representative who must be present for the inspection sign off in each instance.

10. Miscellaneous

    a. Meggering must be done at 1000 VDC for one minute. The ground plane used must be the one established at the main source of energy for conductors, switchboards and control centers. The motor frame may be used for the ground plane for motors.

    b. In the course of construction, it will become necessary to temporarily energize some systems for testing. Confirm that any motor has been meggered prior to connection and testing. Do not leave any motor or system unattended and energized without written authorization.

    c. An unsuccessful test will be one in which any one of the three megger readings differs from another by more than 25%. Engineer shall determine if cables and/or equipment bussing shall be replaced.

1.05 Sleeves And Forms For Opening

A. Provide and place all sleeves for conduits penetrating floors, walls, partitions, etc. Locate all necessary slots for electrical work and form before concrete is poured.

1.06 Cutting And Patching

A. All cutting and patching shall be done in a thoroughly workmanlike manner.

1.07 Interpretation Of Drawings

A. The Drawings are not intended to show exact locations of conduit runs.

B. All three-phase circuits shall be run in separate conduits unless otherwise shown on the Drawings.

C. Unless otherwise approved by the Engineer conduit shown exposed shall be installed exposed; conduit shown concealed shall be installed concealed.

D. Where circuits are shown as "home-runs" all necessary fittings and boxes shall be provided for a complete raceway installation.

E. The Contractor shall harmonize the work of the different trades so that interferences between conduits, piping, equipment, architectural and structural work will be avoided. All necessary offsets shall be furnished so as to take up a minimum space and all such offsets, fittings, etc., required to accomplish this shall be furnished and installed by the Contractor without additional expense to the Owner. In case interference develops, the Owner's authorized representative is to decide which equipment, piping, etc., must be relocated, regardless which was installed first.

F. Verify with the Engineer the exact locations and mounting heights of lighting fixtures, switches and receptacles prior to installation.

G. The locations of equipment, fixtures, outlets, and similar devices shown on the Drawings are approximate only. Exact locations shall be as approved by the Engineer during construction. Obtain in the field all information relevant to the placing of electrical work and in case of any interference with other work, proceed as directed by the Engineer and furnish all labor and materials necessary to complete the work in an approved manner.

H. Surface mounted panel boxes, junction boxes, conduit, etc., shall be supported by spacers to provide a clearance between wall and equipment.

I. Circuit layouts shown are not intended to show the number of fittings, or other installation details. Furnish all labor and materials necessary to install and place in satisfactory operation all power, lighting, and other electrical systems shown. Additional circuits shall be installed wherever needed to conform to the specific requirements of the equipment.

J. The ratings of motors and other electrically operated devices together with the size shown for their branch circuit conductors and conduits are approximate only and are indicative of the probable power requirements insofar as they can determined in advance of the purchase of equipment.

K. All connections to equipment shall be made as shown, specified, and directed and in accordance with the Manufacturer's approved shop drawings, regardless of the number of conductors shown on the Drawings.

1.08 Size of Equipment

A. Investigate each space in the building where equipment must pass to reach its final location. If necessary, the Manufacturer shall be required to ship his material in sections, sized to permit passing through such restricted areas in the building.

B. The equipment shall be kept upright at all times. When equipment has to be tilted for ease of passage through restricted areas during transportation, the Manufacturer shall be required to brace the equipment suitably, to insure that the tilting does not impair the functional integrity of the equipment.

1.09 Record Drawings

A. Provide red lined record drawings at appropriate intervals of work on site not to exceed every three months. Red lined drawings shall depict as exact, as-built information.

B. See specification 01720 for additional requirements.

1.10 Component Interconnections

A. Component equipment furnished under this Specification will not be furnished as integrated systems. Contractor shall field install and wire completely all components.

B. Contractor shall analyze all systems components and their shop drawings, identify all terminals and prepare shop drawings and wiring tables necessary for component interconnection. Contractor shall provide crimp on wire numbers on both ends of all control wiring installed between all panels furnished under this contract. These numbers shall directly relate to the interconnect wiring drawing furnished by the Contractor and be reflected in the record drawings submitted.

1.11 Shop Drawings

A. As specified under other sections shop drawings shall be submitted for approval of all materials, equipment, apparatus, and other items as required by the Engineer.

B. Shop drawings shall be submitted for the following equipment as a minimum:

1. Panelboards
2. Main Breakers (MB)
3. Variable Frequency Drives (VFDs)
4. Dry Type Transformers
5. Lighting Contactor Panels
6. Component Interconnect Drawings

7. Process Control Panel (PCP)
8. Lighting Fixtures with Structural Engineering Certification
9. Disconnect Switches
10. Enclosed Circuit Breakers
11. Motor Starters
12. Lighting Contactors
13. Emergency Battery Units
14. Wire and Cable
15. Conduit Layout Drawings
16. Equipment Racks with Structural Engineering Certification
17. Lightning Protection and Grounding System
18. Field Instrument Transmitters and enclosures
19. Coordination, Short Circuit and Arc Flash Study

C. The Manufacturer name and product designation and catalog data sheet shall be submitted for the following material:

1. Conduit
2. Receptacles
3. Boxes and fittings
4. Switches
5. Lamps
6. Control Relays

D. Prior to submittal by the Contractor, all shop drawings shall be checked for accuracy and contract requirements. Shop drawings shall bear the date checked and shall be accompanied by a statement that the shop drawings have been examined for conformity to Specifications and Drawings. This statement shall also list all discrepancies with the Specifications and Drawings. Shop drawings not so checked and noted shall be returned.

E. The Engineer's check shall be only for conformance with the design concept of the project and compliance with the Specifications and Drawings. The responsibility of, or the necessity of, furnishing materials and workmanship required by the Specifications and Drawings which may not be indicated on the shop drawings is included under the work of this Section.

F. The responsibility for all dimensions to be confirmed and correlated at the job site and for coordination of this work with the work of all other trades is also included under the work of this Section.

G. No material shall be ordered or shop work started until the Engineer's approval of shop drawings has been given.

1.12 Manufacturer Services

A. Provide Manufacturer services for testing and start-up of the following equipment:

1. 480 Volt Panelboards

2. Variable Frequency Drives

3. Other items as required by appropriate specification sections.

B. The Manufacturer of the above listed equipment shall provide experienced Field Service Engineer to accomplish the following tasks:

1. The equipment shall be visually inspected upon completion of installation and prior to energization to assure that wiring is correct, interconnection complete and the installation is in compliance with the manufacturer's criteria. Documentation shall be reviewed to assure that all Drawings, operation and maintenance manuals, parts list and other data required to check out and sustain equipment operation is available on site. Documentation shall be red-lined to reflect any changes or modifications made during the installation so that the "As-built" equipment configuration will be correctly defined. Spare parts shall be inventoried to assure correct type and quantity. The Manufacturer shall provide written approval that equipment supplied is approved for energization

2. The Field Service Engineers shall provide engineering support during the energization and check out of each major equipment assembly. They shall perform any calibration or adjustment required for the equipment to meet the Manufacturer's performance specifications.

3. Upon satisfactory completion of equipment test, they shall provide engineering support of system tests to be performed in accordance with Manufacturer's test specifications.

4. Two (2) 4-hour training sessions on operation, and two (2) 4-hour training sessions (one for each system) on maintenance and trouble-shooting procedures shall be provided for the Owner's maintenance personnel. All training shall be

conducted at a facility provided by the Owner. The maintenance and trouble-shooting sessions shall be conducted with record "As-built" electrical drawings sufficient for a class of eight personnel.

5. A final report shall be written and submitted to the Contractor within fourteen days from completion of final system testing. The report shall document the inspection and test activity, define any open problems and recommend remedial action. The Contractor shall forward a copy of this report to the Engineer for approval.

1.13 Materials

A. The materials used in all systems shall be new, unused and as hereinafter specified. All materials where not specified shall be of the very best of their respective kinds. Samples of materials or Manufacturer's specifications shall be submitted for approval as required by the Engineer.

B. Materials and equipment used shall be Underwriters Laboratories, Inc. listed.

C. Electrical equipment shall at all times during construction be adequately protected against mechanical injury or damage by water. Electrical equipment shall not be stored out-of-doors. Electrical equipment shall be stored in dry permanent shelters. If any apparatus has been damaged, such damage shall be repaired by the Contractor at his own cost and expense. If any apparatus has been subject to possible injury by water, it shall be thoroughly dried out and put through such special tests as directed by the Engineer, at the expense of the Contractor, or shall be replaced by the Contractor at his own expense.

1.14 Coordination, Short Circuit And Arc Flash Hazard Study

A. General

1. The Contractor shall provide a complete project wide Power System Study and Arc Flash Study for the electrical power distribution and motor control equipment. The studies shall be a totally independent effort to verify adequacy of all of the existing equipment as well as new additions being implemented under these Specifications. The studies shall be prepared by a professional Engineer, registered in the State of Florida, with demonstrated experience in the performance of industrial power system and fault arc hazard analysis. All work shall be submitted both hard copy and thumb drive. The studies shall be prepared using SKM Power Tools, latest edition. The following firms are approved to perform the study:

   a. Judson Walker P.E., RCDD (904) 219-0885

   b. Industry Electric Design (Mr. Don Trawick, P.E. (678) 617-7507

2. The Contractor shall provide data necessary to perform the study. This includes

feeder cable sizes, approximate feeder length motor data, generator data, existing protective relay settings and any other information relevant to the study.

3. A summary of the short circuit analysis shall be provided to the Contractor at the time shop drawings for all of the new equipment is submitted for approval.

4. The Contractor shall provide complete sets of motor control center and emergency generator shop drawings for use in the studies.

B. Scope

1. The short circuit study shall be in accordance with ANSI Standard C37.010 and C37.13, shall be performed to check the adequacy, and to verify the correct application of circuit protective devices and other system components specified. The study shall address the case when the system is being powered from the normal source as well as from the on-site generating facilities. Minimum as well as maximum possible fault conditions shall be adequately covered in the study.

2. Fault contribution of all motors shall be considered. The Contractor shall be responsible for obtaining all required data of equipment. All back-up calculations shall become part of the final report. The calculations shall be in sufficient detail to allow easy review.

3. The arc flash analysis study shall include the calculations of flash protection boundary limits and the incident energy exposure for the maximum arc producing flash expected from the electrical equipment. The study will determine incident energy exposure level and flash arc protection boundaries for the electrical equipment, based on IEEE-1584 and NFPA-70E. The study shall be based on the protective device settings and interrupting device clearing time.

C. Contents

1. The study shall include representation of the power company's system, the base quantities selected, impedance source-data, calculation methods and tabulations, one-line and impedance diagrams, conclusions and recommendations. Short-circuit momentary duties, shall be calculated on the basis of an assumed bolted three-phase short circuit at the main breaker, ATS, 480 volt motor control center, distribution panelboard, pertinent branch circuit panelboard, and other significant locations throughout the systems. The short circuit tabulations shall include significant X to R ratios, asymmetry factors, KVA, and symmetrical fault current.

2. A protective device time current coordination study shall be included with coordination plots of key and/or limiting devices, tabulated data, rating, and/or settings selected. The study shall present an Engineering balance between the competing objectives of protection and continuity of service for the system specified, taking into account the basic factors of sensitivity, selectivity and speed.

3. Separate plots shall be provided for each mode, "normal," and, "standby," operation. Maximum fault values shall be shown in each case. Both power sources shown in one plot will not be accepted.

4. Generator short circuit decrement curves and thermal limit curves shall be included.

5. Required settings for breakers and relays shall be maximized to provide the most effective protection possible whether the system is fed from the normal or emergency source.

6. Tabulations indicating recommended set points for all protective devices shall be provided. This shall include the normal as well as the emergency source.

7. Arc Flash study shall include representation of the calculation methods and tabulations, and a one-line drawing of all identifying equipment included in this study. The complete study shall be turned over to the Owner. As part of the study, the Contractor shall affix permanent adhesive non-fading labeling indicating the equipment ID number and required information as required by NFPA 70E. Two Arc Flash labels shall be provided for each equipment: The first label shall provide arc flash information based on generator power (generator running). The second label shall provide arc flash information based on utility power (normal power).

8. Samples of arc flash warning labels are presented below:

Figure 1

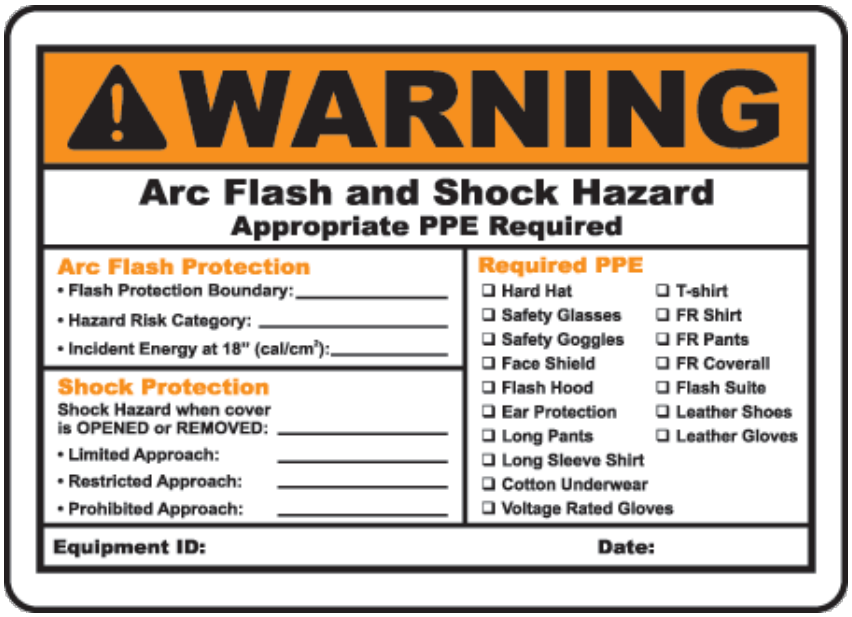

Figure 2

D. Motor Current-Time Characteristic Curves

1. A complete independent set of current-time characteristic curves for all 480 volt motor drives indicating coordination between the protective relays and the thermal characteristics of the motor shall be provided.

2. The Contractor shall obtain from the motor supplier, the necessary information to perform the study. Certified curves for, "Safe time vs. current at 100 percent voltage," and "Accelerating time vs. current at 100 percent voltage," shall become part of the final report.

E. Motor Starting Study

1. A motor starting study for all large electric drives to determine voltage dip or power inrush limitations at selected locations due to starting of motors shall be provided. This applies to both the normal and the emergency mode.

F. Generator Protective Devices

1. The study shall address all of the protective devices provided for generator protection.

2. Protective relays requiring settings shall include, but not necessarily limited to:

a. Differential

b. Overcurrent with voltage restraint

c. Ground

d. Undervoltage

e. Reverse power

f. Unbalanced loading and open phase

g. Loss of excitation

G. General Information for Time-Current Curves Presentation

1. The coordination plots shall include complete titles, representative one-line diagrams, legends, associated power company's relay or system characteristics, significant motor starting characteristics, complete parameters for power, and substation transformers, and complete operating bands for low-voltage circuit breaker trip devices.

2. The coordination plots shall define the types of protective devices selected, together with the proposed coil taps, time-dial settings and pickup settings required.

3. The short-time region shall indicate the medium voltage relay instantaneous elements, the magnetizing in-rush, and ANSI withstand transformer parameters, the low-voltage circuit breaker instantaneous trip devices, fuse manufacturing to tolerance bands, and significant symmetrical and asymmetrical fault currents.

4. Each primary protective device required for a delta-to-wye connected transformer shall be selected so that the characteristic or operating band is within the transformer parameters; which, where feasible, shall include a parameter equivalent to 58 percent of the ANSI withstand point to afford protection for secondary line-to-ground faults.

5. Low-voltage power circuit breakers shall be separated from each other and the associated primary protective device, where feasible, by a 16 percent current margin for coordination and protection in the event of secondary line-to-line faults.

6. Protective relays shall be separated, where feasible, by a 0.3 second time margin when the maximum three-phase fault flows, to assure proper selectivity.

1.15 Conduit Layout Drawings

A. In addition to the manufacturer's equipment shop drawings, the Contractor shall submit for the approval, electrical installation working drawings for the overall site work, existing electrical buildings and all process structures. The layout drawings shall contain the following:

1. Concealed and buried conduit layouts shown on floor plans drawn at not less than 1/4-inch = 1-foot-0-inch scale. The layouts shall include locations of process equipment, motor control centers, transformers, panelboards, control

panels and equipment, motors, switches, motor starters, large junction or pull boxes, instruments, and any other electrical devices connected to concealed or buried conduits.

2. Plans shall be drawn with ACAD 2021, size 34-inch x 22-inch, and shall be presented in a neat, professional manner. Drawing files shall be provided for review.

3. Concrete floors and/or walls containing concealed conduits shall not be poured until conduit layouts are approved.

4. Site plan conduit layout drawings shall be at 1" = 30'-0".

5. Note: ACAD drawing files are available from the Engineer.

1.16 Operation and Maintenance Data

A. Submit complete operations and maintenance data for all equipment furnished under this Division in accordance with Section 01730. The manuals shall be prepared specifically for this installation and shall include all required cutsheets, Drawings, equipment lists, descriptions, complete part lists, etc. that are required to instruct operating and maintenance personnel unfamiliar with such equipment.

1.17 Warranty

A. A one year warranty shall be provided for all electrical equipment. Commencement date shall be after substantial completion.

2. PRODUCTS – (NOT USED)

3. EXECUTION – (NOT USED)

END OF SECTION

SECTION 16108

MISCELLANEOUS EQUIPMENT

1. GENERAL

1.01 Scope of Work

A. Furnish and install all miscellaneous equipment as hereinafter specified and as shown on the Drawings.

2. PRODUCTS

2.01 Materials

A. Disconnect Switches

1. Fusible and non-fusible disconnect switches shall be heavy-duty, NEMA type H, quick-make, quick-break, visible blades, 600 volt, 3 pole with full cover interlock. All current carrying parts shall be copper.

2. Enclosure type shall be NEMA 4X 316 stainless steel unless otherwise noted.

3. Furnish with copper lugs except as otherwise shown on the Drawings.

4. Provide a single dry contact with each disconnect to provide position indication of the switch.

5. Switches shall be horsepower rated as manufactured by Schneider Electric or Eaton.

6. Control wiring shall not pass through any disconnect enclosure. A junction box shall be provided, constructed of the same material as the disconnect switch, and utilized to separate power and control wiring prior to the disconnect enclosure.

7. Each disconnect shall be provided with a plastic nameplate, affixed to the enclosure without screws, identifying the equipment served.

B. Manual Motor Starters

1. Manual motor starters shall be furnished and installed for single-phase motors. Manual starters shall be non-reversing, reversing or two speed type as shown on the Drawings. Built-in control stations shall be furnished where shown on the

Drawings.

2. Enclosure type shall be NEMA 1 except as shown on the Drawings.

3. All outdoor enclosures shall be NEMA 4X 316 stainless steel.

4. Manual motor starters shall be manufactured by the Schneider Electric or approved equal.

C. Magnetic Motor Starters

1. Motor starters shall be 2 or 3 pole, 1 or 3-phase as required, 60 Hz, 600 volt, magnetically operated, full voltage non-reversing except as shown on the Drawings. NEMA sizes shall be as required for the horsepowers shown on the Drawings.

2. Two speed starters shall be for single or two winding motors as shown on the Drawings.

3. Each motor starter shall have a 120 volt operating coil, and control power transformer. Three phase starters shall have 3 overload relays. Auxiliary contacts shall be provided as shown on the Drawings or required.

4. Overload relays shall be non-adjustable, ambient compensated and manually reset.

5. Control power transformers shall be sized for additional load where required. Transformer secondaries shall be equipped with time-delay fuses.

6. Built-in control stations and indicating lights shall be furnished where shown on the Drawings.

7. Enclosure type shall be NEMA 1 except as shown on the Drawings.

8. All outdoor enclosures shall be NEMA 4X 316 stainless steel.

9. Magnetic motor starter shall be as manufactured by Schneider Electric or Eaton.

D. Control Stations

1. Control stations shall be NEMA 4X 304 stainless steel heavy-duty type, with full size operators when located outdoors, in "NEMA 4" locations or in "Corrosive" areas.

2. Control stations shall be Class 9001, manufactured by the Schneider Electric or Eaton.

3. Pilot lights shall be complete with glass jewels and 150 volt lamps.

E. Dry Type Step Down Transformers

1. Transformers shall be dry type, two-winding with KVA and voltage ratings as shown on the Drawings.

2. Four full capacity taps shall be furnished, two 2-1/2% above and two 2-1/2% below rated primary voltage.

3. Transformers shall be built in accordance with ANSI C89 and NEMA ST1-4 with a maximum insulation temperature rise of 115° C.

4. Transformers shall be manufactured by Schneider Electric or Eaton.

F. Unless otherwise noted, all outdoor enclosures shall be NEMA 4X 316 stainless steel. NEMA 4X push buttons and pilot lights shall be provided in all weatherproof control panels.

G. All Enclosures installed in “Corrosive” areas shall be non-metallic fiberglass reinforced polyester.

H. Electrical Switchboard Matting

1. Electrical Switchboard matting shall be provided in the electrical rooms and control rooms around all electrical gear including Switchgear, Switchboard, MCC’s, distribution/lighting panels, transformers and PLC’s.

2. The rubber matting shall provide a floor covering to prevent shock around high voltage electrical apparatus, fuse boxes, switchgear, control panels and heavy machinery.

3. The matting shall meet current ASTM and ANSI (plus IEC Division of ANSI, Tech Committee-78) specifications for this material.

4. The matting shall be 1/4-inch thick, Class 2 as manufactured by The Mat King, or approved equal.

5. Provide floor sealant, suitable for electrical/control rooms.

I. Break-Glass Emergency (Shunt Trip) Stations

1. Break-Glass Emergency Station shall be of the break glass design with a weatherproof cast metal outer case finished in fire red and have an attached chain hung “Hammer”. A glass panel shall be mounted in front of the push button operator. Switch contacts shall be 1-open, 1-closed, rated 10 amps, 600 Volts.

2. Emergency stations shall be NEMA 4X stainless steel heavy-duty type.

3. EXECUTION (NOT USED)

END OF SECTION

SECTION 16110

RACEWAYS AND FITTINGS

1. GENERAL

1.01 Scope of Work

A. Furnish and install complete raceway systems as shown on the Drawings and as specified herein.

1.02 Applications

A. Except where otherwise shown on the Drawings, or hereinafter specified. The following describes the conduit requirements of the project:

1. All exposed raceways shall be in aluminum conduit except as noted below in 2 and 3 below.

2. Exposed raceways in chemically “Corrosive” areas shall be in PVC schedule 80 conduit. Mounting hardware shall be 316 stainless steel

3. Underground raceways shall be PVC schedule 80.

4. Underground raceways containing shielded cable shall be provided with a #10 ground wire.

B. Transition from concrete reinforced or underslab to exposed shall be PVC coated rigid aluminum. All elbows above grade shall be suitably grounded. Conduit spaces shall be provided for underground conduit installation.

C. All conduits entering or leaving Corrosive Areas shall have Crouse Hinds EYS conduit seals installed and filled with Chico Cement.

D. All conduit of a given type shall be the product of one manufacturer.

E. All switch, outlet and control station boxes and fittings shall be cast aluminum FS boxes with aluminum covers.

F. Concealed switch, outlet and control station boxes in NEMA 1 areas shall be aluminum.

G. Terminal boxes, junction boxes, pull boxes, etc.; installed outdoors shall be NEMA 4X 316 stainless steel. All boxes installed indoors (except in corrosive areas) shall be aluminum. Boxes in corrosive areas shall be PVC.

H. Combination expansion-deflection fittings shall be used where exposed or embedded conduits cross structure expansion joints.

2. PRODUCTS

2.01 Materials

A. Rigid Metal Conduit:

1. Rigid metal conduit shall be for use under the provisions of NEC Article 346.

2. Rigid aluminum conduit shall be 6063 alloy and shall be as manufactured by New Jersey Aluminum Corp., AFC Co., VAW of America, Inc., or approved equal.

3. PVC coated aluminum conduit shall have a 1/50-in thick, polyvinyl chloride coating permanently bonded to the aluminum conduit and an internal phenolic coating, and shall be plasti-bond 2" as manufactured by Robroy Industries, Triangle PWC Inc., Perma-Cote Industries, or approved equal.

B. Rigid Nonmetallic Conduit:

1. Rigid nonmetallic conduit shall be for use under the provisions of NEC Article 347.

2. PVC conduit shall be rigid polyvinyl chloride schedule 80 as manufactured by Carlon, An Indian Head Co., Kraloy Products Co., Inc., Highland Plastics Inc., or approved equal.

C. Liquidtight Flexible Conduit, Couplings and Fittings:

1. Liquidtight flexible conduit shall be for use under the provisions of NEC Article 351A.

2. All flexible connections shall be made with liquidtight flexible metal conduit (LFMC) shall be for use under the provisions of NEC Article 351A.

3. Fittings used with LFMC shall be grounded.

D. Construction shall be aluminumFlexible Couplings, Non-metallic:

1. Flexible non-metallic couplings shall be as manufactured by the Crouse-Hinds Co., Appleton Electric Co., Killark Electric Manufacturing Co., or approved equal.

E. Boxes and Fittings:

1. PVC, aluminum and stainless steel switch and outlet boxes shall be manufactured by Carlon, Appleton, or approved equal.

2. NEMA 1 terminal boxes, junction boxes, pull boxes etc., may be fiberglass (FRP) or stainless steel. Boxes shall be as manufactured by Hoffman Engineering Co., Stahlin, or approved equal. NEMA 4 boxes located outdoors shall be 316 stainless steel.

3. Cast aluminum boxes and fittings shall be copper-free aluminum with cast aluminum covers and corrosion-proof screws as manufactured by the Killark Electric Co., Crouse-Hinds Co., Appleton Electric Co., or approved equal.

4. Conduit hubs shall be as manufactured by Meyers Electric Products, Inc., Raco Div., Appleton Electric Co., or approved equal. Conduit hubs shall be provided for all outdoor conduit terminations.

5. Conduit wall seals shall be Type WSK as manufactured by the O.Z. Electrical Mfg. Co., or approved equal.

6. Combination expansion-deflection fittings shall be Type XD as manufactured by the Crouse-Hinds Co., or approved equal.

7. Conduit wall seals for new concrete walls below grade shall be O.Z./Gedney Co., Type WSK, Spring City Electrical Manufacturing Co., Type WDP, or approved equal.

8. Conduit wall seals for cored holes shall be Type CSML as manufactured by the O.Z./Gedney Co., or approved equal.

9. Conduit wall and floor seals for sleeved openings shall be Type CSMI as manufactured by the O.Z./Gedney Co., or approved equal.

10. Conduit sealing bushings shall be O.Z./Gedney Type CSB or approved equal.

F. Conduit Mounting Equipment:

1. 316 Stainless steel channel and stainless steel hardware shall be used in all areas indoors or outdoors unless otherwise noted.

2. In “Corrosive” areas all mounting equipment shall be “non-metallic” or 316 stainless steel.

3. EXECUTION

3.01 Installation

A. No conduit smaller than 3/4-inch electrical trade size shall be used, nor shall any have more than four 90 degree bends in any one run. Pull boxes shall be provided as required or directed. Minimum size in floor slabs shall be 3/4-inch.

B. All empty raceways shall be installed with a pull cord.

C. No wire shall be pulled until the conduit system is complete in all details; in the case of concealed work, until all rough plastering or masonry has been completed; in the case of exposed work, until the conduit system has been completed in every detail.

D. The ends of all conduits shall be tightly plugged to exclude dust and moisture while the buildings are under construction.

E. Conduit supports shall be spaced at intervals as required to obtain rigid construction, but in no case less as required by the NEC.

F. Single conduits shall be supported by means of one-hole pipe clamps in combination with one-screw back plates, to raise conduits from the surface. Multiple runs of conduits shall be supported on trapeze type hangers with steel horizontal members and threaded hanger rods. The rods shall be not less than 3/8-inch diameter. Material type shall be as specified in Section 2.

G. Conduit hangers shall be attached to structural steel by means of beam or channel clamps. Where attached to concrete surfaces, concrete inserts of the spot type shall be provided.

H. All conduits on exposed work shall be run at right angles to and parallel with the surrounding walls and shall conform to the form of the ceiling. No diagonal runs will be allowed. Bends in parallel conduit runs shall be concentric. All conduit shall be run perfectly straight and true. Conduits not installed in this fashion shall be replaced entirely at the Contractor’s expense with no cost to the Owner.

I. No unbroken run shall exceed 300 feet in length. This length shall be reduced by 75 feet for each 90 degree elbow.

J. Conduit terminating in pressed steel boxes shall have double locknuts and insulated bushings.

K. Conduit terminating in gasketed enclosures shall be terminated with conduit hubs.

L. Conduit wall seals shall be used for all conduits penetrating walls below grade or other locations shown on the Drawings.

M. Liquidtight flexible metal conduit shall be used for all motor terminations and other equipment where vibration is present.

N. Flexible couplings shall be used in hazardous locations for all motor terminations and other equipment where vibration is present.

O. Conduit stub outs for future construction shall be provided with threaded PVC end caps at each end.

P. Metallic conduit entering manholes and below grade pull boxes shall be terminated with grounding type bushings and connected to a 5/8" x 10" copperweld rod with a #6 bare copper wire.

Q. Underground 120 volt circuits (Schedule 80 PVC) shall be installed directly to the respective motor control centers, lighting panels, etc. Stainless steel pull boxes shall be wall mounted on structures to eliminate excessive bends. With prior approval, below grade pull boxes, equal to Brooks #2424 (minimum), with hot dip galvanized covers and frames may be used. Splices shall not be made in above or below grade pull boxes without prior approval.

R. All exposed conduits coming up through the ground or slab shall have concrete curbs surrounding conduit, extending 3-inch up from floor level or grade and 3-inch horizontally from conduit. This applies to ALL exposed conduits installed indoors or outdoors.

3.02 Conduit Identification

A. Exposed conduits shall be identified at the source, load, and all intermediate components of the raceway system. Examples of intermediate components include but are not limited to junction boxes, pull boxes, condulets, and disconnect switches. Identification shall be by means of an adhesive label with the following requirements:

1. Labels shall consist of an orange background with black text. Text for the label shall be the conduit number as indicated in the conduit and wire schedules.

2. In addition, at the source end of the conduit, a second line of text shall be included to indicate the load equipment name. This second line shall consist of the word “TO:” and the text in the ‘TO’ column of the conduit and wire schedule (e.g. TO: MCC-1A). At the load end of the conduit, a second line of text shall be included to indicate the source equipment name. This second line shall consist of the word “FROM:” and the text in the ‘FROM’ column of the conduit and wire schedule (e.g. FROM: EEB-SWGR-1). This requirement applies only to the source and load ends of the conduit, and not anywhere in between.

3. For conduits ¾” through 1½” in size, the text shall be a minimum 18 point font. For conduits 2” and larger, the text shall be a minimum 24 point font.

4. Label height shall be ¾” minimum, and length shall be as required to fit required text. The label shall be installed such that the text is parallel with the axis of the conduit. The label shall be oriented such that the text can be read without the use of any special tools or removal of equipment.

5. Labels shall be installed after each conduit is installed and, if applicable, after painting. Labels shall be printed in the field via the use of a portable label printing system. Handwritten labels are not acceptable.

6. Labels shall be made of permanent vinyl with adhesive backing as manufactured by Brady, Seton equivalent, Panduit equivalent, or equal. Labels made of any other material are not acceptable.

B. Conduits that are not exposed but installed beneath free standing equipment enclosures shall be identified by means of a plastic tag with the following requirements:

1. The tag shall be made of white Tyvek material, and have an orange label with black text, as described above, adhered to it. Text for the label shall be the conduit number as indicated in the conduit and wire schedules.

2. The tag shall be affixed to the conduit by means of a nylon cable tie. The tag shall be of suitable dimensions to achieve a minimum text size of 18 points.

3. Tags shall be White Tyvek as manufactured by Brady, Seton equivalent, Panduit equivalent, or equal.

END OF SECTION

SECTION 16120

LOW VOLTAGE WIRE AND CABLE

1. GENERAL

1.01 Scope of Work

A. Furnish, install and test all wire, cable, and appurtenances as shown on the Drawings and as hereinafter specified.

1.02 Submittals

A. Approved samples will be sent to the project location for comparison by the Resident Engineer with the wire actually installed.

B. Installed, unapproved wire shall be removed and replaced at no additional cost to the Owner.

1.03 Applications

A. Wire for lighting and receptacle circuits above grade shall be type THWN-2.

B. Wire for all power motor circuits and below grade lighting and receptacle circuits shall be type XHHW-2, stranded.

C. All cables between the VFD and the motor shall be VFD rated cable.

D. Single conductor wire for control, indication and metering shall be type MTW No. 14 AWG, 19 strand or type XHHW No. 14 AWG stranded.

E. Multi-conductor control cable shall be No. 14 AWG, 19 strand.

F. Wire for process instrumentation or shielded control cable shall be No. 16 AWG, shielded and stranded. All shielded cables shall be provided with a #16 shielded ground.

G. Ethernet shielded Twisted Pair (STP), 600V rated. Cable shall be Cat-6, yellow, Belden 7953A or approved equal.

1.04 Minimum Sizes

A. Except for control and instrumentation wiring, no conductor smaller than No. 12 AWG shall be used.

2. PRODUCTS

2.01 Material

A. All wires and cables shall be of annealed, 98 percent conductivity, soft drawn stranded copper conductors.

2.02 600 Volt Wire and Cable

A. Type XHHW-2 shall be cross-linked polyethylene (XLP); as manufactured by General Cable, Southwire Co., Collyer Insulated Wire Co., Rome Cable or approved equal.

B. Type THWN-2 shall be as manufactured by General Cable, Southwire Co., Collyer Insulated Wire Co., Rome Cable or approved equal.

2.03 Instrumentation And Control Cable

A. Process instrumentation wire shall be twisted pair, 600V, cross-linked polyethylene insulated, aluminum tape shielded, polyvinyl chloride jacketed, type "XLP" as manufactured by General Cable, American Insulated Wire Co., Eaton Corp. "Polyset," or approved equal. Multi-conductor cables shall be supplied with individually shielded twisted pairs.

B. Multi-conductor control cable shall be stranded, 600V, cross-linked polyethylene insulated with PVC jacket, type "XLP" as manufactured by General Cable, American Insulated Wire Co., Eaton Corp. "Polyset," or approved equal.

2.04 Variable Frequency Drive (VFD) Output Power Cable

A. Section applies to power cables routed between the output of VFD’s and motor terminals.

B. Cable shall be rated for 2000 volts and shall meet the requirements below:

1. Conductors shall be stranded Class B bare copper.

2. All wire shall be brought to the job in unbroken packages and shall bear the data of manufacturing; not older than 12 months.

3. Type of wire shall be XLPE RHH/RHW-2 rated 90 degrees C suitable for wet locations.

4. Provide overall 5 millimeter metallic shield (copper tape shield) overlapped 50%.

5. No wire smaller than No. 12 gauge shall be used unless specifically indicated.

6. Cable construction shall consist of three insulated current-carrying phase conductors and three bare ground conductors, symmetrically placed between the phase conductors, and twisted beneath a continuous overall PVC polymeric jacket.

C. Each ground conductor size (circular mil area) shall be one-third (1/3) of the NEC required size (circular mil area) for a single ground conductor. If one third of the required circular mil area does not correspond to a standard size (circular mil area) of construction, the next largest size of standard construction shall be used. All conductors shall be megger tested after installation and insulation must be in compliance with the Insulated Power Cable Engineers Association Minimum Values of Insulation Resistance.

D. Manufacturers

1. Belden

2. Flex

3. Lutze

2.05 CAT 6E Ethernet Cable

A. All Cat 6 Cable shall be suitable for harsh environment and suitable for underground installation in wet areas. Cables shall meet the following requirements:

1. 600 volt rated with shielding.

2. UV-resistant PVC jacket.

3. Suitable for WET installations

4. Operating Temperature Range: -45 to +80 degrees C.

5. Beldon 7953A or approved equal.

B. Surge protection shall be provided at both ends of all ethernet cables installed.

2.06 Terminations and Splices

A. Power Conductors: Terminations shall be die type or set screw type pressure connectors as specified. Splices (where allowed) shall be die type compression connector and waterproof with heat shrink boot or epoxy filling.

B. Control Conductors: Termination on saddle-type terminals shall be wired directly with a maximum of two conductors per termination. Termination on screw type terminals shall be made with a maximum of two spade connectors. Splices (where allowed) shall be made with insulated compression type connectors. Heat shrink boots shall be utilized for all outdoor splices.

C. Instrumentation Signal Conductors (including graphic panel, alarm, low and high level signals): Terminations permitted shall be typical of control conductors. Splices are allowed at instrumentation terminal boxes only.

D. Except where otherwise approved by the Engineer no splices will be allowed in manholes, handholes or other below grade located boxes.

E. Splices shall not be made in push button control stations, control devices (i.e., pressure switches, flow switches, etc.), conduit bodies, etc.

3. EXECUTION

3.01 Installation

A. All conductors shall be carefully handled to avoid kinks or damage to insulation.

B. Lubrications shall be used to facilitate wire pulling. Lubricants shall be U.L. listed for use with the insulation specified.

C. Shielded instrumentation wire shall be installed from terminal to terminal with no splicing at any intermediate point.

D. Shielded instrumentation wire shall be installed in rigid steel conduit and pull boxes that contain only shielded instrumentation wire. Instrumentation cables shall be separated from control cables in manholes.

E. Shielding on instrumentation wire shall be grounded at one end only, as directed by supplier of the instrumentation equipment.

F. Wire and cable connections to terminals and taps shall be made with compression connectors. Connections of insulated conductors shall be insulated and covered. All connections shall be made using materials and installation methods in accordance with instructions and recommendations of the manufacturer of the particular item of wire and cable. The conductivity of all completed connections shall be not less than that of the uncut conductor. The insulation resistance of all completed connections of insulated conductors shall be not less than that of the uncut conductor.

G. All wire and cable shall be continuous and without splices between points of connection to equipment terminals, except a splice will be permitted by the Engineer if the length required between the points of connection exceeds the greatest standard shipping length available from the manufacturer specified or approved by the Engineer as the manufacturer of the particular item of wire and cable.

H. Steel fish tapes and/or steel pulling cables shall not be used in PVC conduit runs.

I. All control and instrumentation circuits and wiring shall be clearly and permanently numbered and labeled at each end so as to identify the location of the opposite end and the function of the circuit. Individual wires in a multi-wire circuit shall be identified with wire numbers. Labeling shall be in place prior to turnover of any equipment, system or sub-system to Owner.

3.02 Tests

A. All 600-volt wire insulation shall be tested with a meg-ohmmeter after installation. Tests shall be made at not less than 1,000 VDC. See section 16050 – Electrical – General Provisions, for additional testing requirements.

B. All service conductors shall be tested as in paragraph A above. These tests shall be witnessed by the Engineer. A written report shall be submitted to the engineer for review.

END OF SECTION

SECTION 16150

MOTORS

1. GENERAL

1.01 Scope of Work

A. Furnish and install the motors as hereinafter specified and as called for in other sections of these Specifications.

1.02 Qualifications

A. Motor shall be sufficient size for the duty to be performed and shall not exceed their full-rated load when the driven equipment is operating at specified capacity. Unless otherwise noted, motors driving pumps shall not be overloaded at any head or discharge condition of the pump.

1.03 Submittals

A. The motor manufacturer shall submit to the Engineer certified dimension prints showing nameplate data and outline dimensions within three weeks of the date they receive the order.

B. Guarantee: All equipment furnished and installed under this Section shall be guaranteed against defects of workmanship, materials and improper installation for the period of time specified Section 16050 – Electrical General Provisions. All such equipment or parts proven defective, due to the above noted causes, shall be replaced in the machines by the Contractor at no expense to the Owner.

2. PRODUCTS

2.01 Ratings

A. Unless otherwise noted, all motors shall be of the low voltage type. All motors 1/2 through 100 horsepower shall be rated 230/460 volt, 3 phase, 60 Hertz A.C.; motors 125 horsepower through 500 horsepower shall be rated 460 volt, 3-phase, 60 Hertz, and motors below 1/2 horsepower shall be rated 115/230 volt, 1 phase, 60 Hertz A.C.

2.02 Three Phase Induction Motors

A. Unless otherwise indicated, Motors 15 HP and larger shall have a 120-volt space heater for moisture control.

B. Unless specifically noted in other sections of these Specifications, all motors shall have a minimum as indicated in the table below. All motors shall be "premium efficiency" type.

TABLE 1

Motor HP	Min. Eff.	Max. dba	Motor HP	Min. Eff	Max. dba
1-2	0.84	74	25-30	0.92	92
3-5	0.865	79	40-50	0.93	97
7.5-10	0.902	84	60-75	0.94	100
15-20	0.91	89	100	0.941	102

C. Motors operating with variable frequency drives shall state that they are suitable for their intended applications. Motor nameplate shall read "Inverter Duty Rated".

D. Motors larger than 1 HP shall have imbedded winding temperature switch in each phase.

E. Motors operating with variable frequency drives (VFD's) shall meet the requirements of NEMA MG1, Part 31.

2.03 Construction

A. General

1. All dripproof and weather protected Type I motors shall have epoxy encapsulated windings. Totally enclosed motors shall not be encapsulated. Motors not readily available with encapsulated windings may be standard type. Motors exposed to the outside atmosphere shall be totally enclosed fan cooled (TEFC) unless otherwise specified.

2. Squirrel-cage rotors shall be made from high-grade steel laminations adequately fastened together and to the shaft, or shall be cast aluminum or bar-type construction with brazed end rings.

B. Low Voltage, Three Phase Motors

1. Motors shall be of the squirrel-cage or wound rotor induction type as noted. Horizontal, vertical solid shaft, vertical hollow shaft, normal thrust and high thrust types shall be furnished as specified herein. All motors shall be built in accordance with current NEMA, IEEE, ANSI and AFBMA standards where applicable. Motors shall be of the type and quality described by these specifications, fully capable of performing in accordance with manufacturer's

standard rating, and free from defective material and workmanship.

2. Motors shall have normal or high starting torque (as required), low starting current (not to exceed 600 percent full load current), and low slip.

3. Motors shall be totally enclosed fan-cooled construction with 1.15 service factor unless otherwise noted. Indoor motors shall be WPI unless otherwise noted.

4. Motors shall be suitable for operation in moist air with hydrogen sulphide gas present.

5. The output shaft shall be suitable for direct connection or belt drive as required.

6. Motors shall have a Class B nonhygroscopic insulation system. Class F insulation shall be used and shall be limited to Class B temperature rise.

7. All motors shall have a final coating of chemical resistant corrosion and fungus protective epoxy fortified enamel finish sprayed over red primer over all interior and exterior surfaces. Stator bore and rotor of all motors shall be epoxy coated.

8. All fittings, bolts, nuts, and screws shall be 316 stainless steel. Bolts and nuts shall have hex heads.

9. All machine surfaces shall be coated with rust inhibiter for easy disassembly.

10. Conduit boxes shall be gasketed. Lead wires between motor frame and conduit box shall be gasketed.

11. Totally enclosed motors shall be provided with condensate drain hole and epoxy coated motor windings to protect against moisture.

12. Nameplates shall be stainless steel. Lifting lugs or "O" type bolts shall be supplied on all frames 254T and larger. Enclosures will have stainless steel screen and motors shall be protected for corrosion, fungus and insects.

13. Low voltage, three phase motors shall be manufactured by General Electric, Siemens, U.S. Motors, Westinghouse or approved equal.

C. Fractional Horsepower

1. Fractional horsepower motors shall be rigid, welded-steel, designed to maintain accurate alignment of motor components and provide adequate protection. End shields shall be reinforced, lightweight die-cast aluminum. Windings shall be of varnish-insulated wire with slot insulation of polyester film, baked-on bonding treatment to make the stator winding strongly resistant to heat, aging, moisture, electrical stresses and other hazards.

2. Motor shaft shall be made from high-grade, cold-rolled shaft steel with drive-shaft extensions carefully machined to standard NEMA dimensions for the particular drive connection.

3. For light to moderate loading, bearings shall be quiet all-angle sleeve type with large oil reservoir that prevents leakage and permits motor operation in any position.

4. For heavy loading, bearings shall be carefully selected precision ball bearings with extra quality, long-life grease, and large reservoir providing 10 years' normal operation without relubrication.

D. Integral Horsepower

1. Motor frames and end shields shall be cast iron or heavy fabricated steel of such design and proportions as to hold all motor components rigidly in proper position and provide adequate protection for the type of enclosure employed.

2. Windings shall be adequately insulated and securely braced to resist failure due to electrical stresses and vibrations.

3. The shaft shall be made of high-grade machine steel or steel forging of size and design adequate to withstand the load stresses normally encountered in motors of the particular rating. Bearing journals shall be gound and polished.

4. Rotors shall be made from high-grade steel laminations adequately fastened together, and to the shaft. Rotor squirrel-cage windings may be cast-aluminum or bar-type construction with brazed end rings.

5. Motors shall be equipped with vacuum-degassed antifriction bearings made to AFBMA Standards, and be of ample capacity for the motor rating. The bearing housing shall be large enough to hold sufficient lubricant to minimize the need for frequent lubrication, but facilities shall be provided for adding new lubricant and draining out old lubricant without motor disassembly. The bearing housing shall have long, tight, running fits or rotating seals to protect against the entrance of foreign matter into the bearings, or leakage of lubricant out of the bearing cavity.

6. Bearings of high thrust motors will be locked for momentary upthrust of 30% downthrust. All bearings shall have a minimum B10 life rating of 100,000 hours in accordance with AFBMA life and thrust values.

7. Vertical hollow-shaft motors will have nonreverse ratchets to prevent backspin.

E. Low Voltage, Single Phase Motors

1. Single phase motors shall be split-phase and capacitor-start induction types rated for continuous horsepower at the rpm called for on the Drawings. Motors shall be rated 115/230 volts, 60 Hertz, single phase, open dripproof, or totally enclosed fan cooled as called for on the Drawings or driven equipment specifications, with temperature rise in accordance with NEMA Standards for Class B insulation.

2. Totally enclosed fan cooled motors shall be designed for severe-duty.

3. Motors shall have corrosion and fungus protective finish on internal and external surfaces. All fittings shall have a corrosion protective plating.

4. Mechanical characteristics shall be the same as specified for polyphase fractional horsepower motors.

3. EXECUTION

3.01 Installation

A. Motor Connections: All motors shall be connected to the conduit system by means of a short section 18-inch minimum of flexible conduit unless otherwise indicated. For all motor connections, the Contractor shall install a grounding conductor in the conduit and terminate at the motor control center with an approved grounding clamp.

3.02 Tests and Checks

A. The following tests shall be performed on all motors after installation but before putting motors into service.

1. The Contractor shall megger each motor winding before energizing the motor, and, if insulation resistance is found to be low, shall notify the Engineer and shall not energize the motor. The following table gives minimum acceptable insulation resistance in megohms at various temperatures and for various voltages with readings being taken after one minute of megger test run.

TABLE 2

Degree Winding Temperature		**Voltage**			
ºF	ºC	115V	230V	460V	4,160V
37	3.9	60	108	210	1700
50	10	32	60	120	1000
68	20	13	26	50	460
86	30	5.6	11	21	195
104	45	2.4	4.5	8.8	84
122	50	1	2	3.7	35
140	60	0.5	0.85	1.6	15

2. The Contractor shall check all motors for correct clearances and alignment and for correct lubrication, and shall lubricate if required in accordance with manufacturer's instructions. The Contractor shall check direction of rotation of all motors and reverse connections if necessary.

3.03 Shaft Grounding Rings (All Motors With Variable Frequency Drives)

A. Shaft grounding rings (SGR) shall be factory installed inside the motors by the manufacturer wherever possible. SGR's may be field installed by installing contractor subject to Engineer's approval. Provide AEGIS SGR Colloidal Silver Shaft Coating, or approved equal, on shafts prior to rings installation, per SGR manufacturer's recommendations, after first cleaning shafts.

B. Install and test SGR's in accordance with manufacturer's recommendations. Install the SGR so that the aluminum frame maintains an even clearance around the shaft. Conductive microfibers shall be in full circumferential contact with conductive metal surface of the shaft. Do not use thread lock to secure the mounting screws as it may compromise the conductive path to ground. If thread lock is required, use a small amount of EP2400 AEGIS Conductive Epoxy, or approved equal, to secure the screws in place.

C. Shafts shall be clean and free of any coatings, paint, or other nonconductive material (clean to bare metal). Depending upon the condition of the shaft, it may require using emery cloth or Scotch-Brite. If the shaft is visibly clean, a non petroleum based solvent may be used to remove any residue. Check the conductivity of the shaft using an ohm meter. Ohms test: Place the positive and negative meter leads on the shaft at a place where the microfibers will contact the shaft. Each motor will have a different reading but in general one should have a maximum reading of less than 2 ohms. If the reading is higher, clean the shaft again and retest.

D. After motors with SGR are fully installed in the field (in equipment, assemblies, or individually), for both factory-installed-SGR and field-installed-SGR cases, test for a conductive path to ground using an Ohm meter. Place one probe on metal frame of SGR and one probe on motor frame. Motor must be grounded to common earth ground with variable frequency drive according to applicable standards. Verify that SGR installations and test readings comply with SGR manufacturer's requirements. Shaft voltage testing and verification of the proper installation of the AEGIS Bearing Protection Ring and its effectiveness can be accomplished by testing the motors for shaft voltages using a digital oscilloscope that is 100-Mhz or faster. An AEGIS Shaft Voltage Test Probe is attached to the oscilloscope probe end which is then placed on the machine's shaft allowing for the "real time" measurement of machines as they are operating under PWM IGBT VFD control.

3.04 High-Frequency Bonding (All Motors With Variable Frequency Drives)

A. All motors operated on variable frequency drives shall be bonded from the motor foot to system ground with a high-frequency ground strap made of flat braided, tinned copper with terminations to accommodate motor foot and system ground connection. Provide AEGIS HF Ground Straps, or equal. After motors with SGR are fully installed in the field (in equipment, assemblies, or individually), for both factory-installed-SGR and field-installed-SGR cases, test for a conductive path to ground using an Ohm meter. Ground resistance must be 2 Ohms or less.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 16160

PANELBOARDS

1. GENERAL

1.01 Scope of Work

A. Furnish all labor, materials, equipment and incidentals required and install all panelboards as hereinafter specified and as shown on Drawings.

2. PRODUCTS

2.01 Rating

A. Panelboard ratings shall be as shown on the Drawings. All panelboards shall be rated for the intended voltage.

2.02 Standards

A. Panelboards shall be in accordance with the Underwriter Laboratories, Inc. "Standard for Panelboards" and "Standard for Cabinets and Boxes" and shall be so labeled where procedures exist. Panelboards shall also comply with NEMA Standard for Panelboards and the National Electrical Code.

2.03 Construction

A. Interiors

1. All interiors shall be completely factory assembled with circuit breakers, wire connectors, etc. All wire connectors, except screw terminals, shall be of the antiturn solderless type and all shall be suitable for copper wire of the sizes indicated.

2. Interiors shall be so designed that circuit breakers can be replaced without disturbing adjacent units and without removing the main bus connectors and shall be so designed that circuits may be changed without machining, drilling or tapping.

3. Branch circuits shall be arranged using double row construction except when

narrow column panels are indicated. Branch circuits shall be numbered by the manufacturer.

4. A nameplate shall be provided listing panel type, number of circuit breakers and ratings.

B. Buses

1. Bus bars for the mains shall be of copper. Full size neutral bars shall be included. Bus bar taps for panels with single pole branches shall be arranged for sequence phasing of the branch circuit devices. Bussing shall be braced throughout to conform to industry standard practice governing short circuit stresses in panelboards. Phase bussing shall be full height without reduction. Cross connectors shall be copper.

2. Neutral bussing shall have a suitable lug for each outgoing feeder requiring a neutral connection.

3. Spaces for future circuit breakers shall be bussed for the maximum device that can be fitted into them.

4. Buses for 480V panelboards shall be rated for 65,000 amperes RMS symmetrical. Buses for 120/208V panelboards shall be rated 10,000 amperes RMS symmetrical.

C. Boxes

1. Recessed boxes shall be made from galvanized code gauge steel without multiple knockouts. Surface mounted boxes shall be painted to match the trim. Boxes shall be of sufficient size to provide a minimum gutter space of 4-inches on all sides.

2. Surface mounted boxes shall have an internal and external finish as hereinafter specified in paragraph D4.

3. At least four (4) interior mounting studs shall be provided.

4. All conduit entrances shall be field punched.

D. Trim

1. Hinged doors covering all circuit breaker handles shall be included in all panel trims.

2. Doors shall have semi flush type cylinder lock and catch, except that doors over 48-inches in height shall have a vault handle and 3-point catch, complete with lock, arranged to fasten door at top, bottom and center. Door hinges shall be concealed. Two keys shall be supplied for each lock. All locks shall be keyed alike; directory frame and card having a transparent cover shall be furnished on each door.

3. The trims shall be fabricated from code gauge sheet steel.

4. All exterior and interior steel surfaces of the panelboard shall be properly cleaned and finished with ANSI Z55.1, No. 61 light gray paint over a rust-inhibiting phosphatized coating. The finish paint shall be of a type to which field applied paint will adhere.

5. Trims for flush panels shall overlap the box by at least 3/4-inch all around. Surface trims shall have the same width and height as the box. Trims shall be fastened with quarter turn clamps.

E. Manufacturer

1. 120/240V, single phase, 3-wire, and 120/208V 3-phase, 4-wire panelboards shall be manufactured by Schneider Electric, Eaton, Allen Bradley or approved equal.

2. 480V, 3-phase, 3-wire panelboards shall be manufactured by Schneider Electric, Eaton, Allen Bradley or approved equal.

2.04 Construction (NEMA 4X)

A. Interiors and buses:

1. Interiors and buses shall be as herein before specified for NEMA 1 construction.

B. Boxes and Covers:

1. Boxes and covers shall be made from stainless-steel with natural finish.

2. Boxes and covers shall be bolted together and gasketed.

3. Conduit openings shall be tapped.

C. Manufacturers:

1. All panelboards shall be NEMA 4X 304 stainless steel as required by voltage application.

2.05 Circuit Breakers

A. Panelboards shall be equipped with circuit breakers with frame size and trip settings as shown on the Drawings.

B. Circuit breakers shall be molded case, bolt-in type. Plug in circuit breakers not accepted.

C. Circuit breakers used in 120/240V and 120/208V panelboards shall have and interrupting capacity of not less than 10,000 - amperes, RMS symmetrical.

D. Three pole breakers used in 480V panelboards shall have an interrupting capacity of not less than 65,000 - amperes RMS symmetrical.

E. GFCI (ground fault circuit interrupter) shall be provided for circuits where indicated on the Drawings. GFCI units shall be 1 pole, 120 volt, molded case, bolt-on breakers, incorporating a solid state ground fault interrupter circuit insulated and isolated from the breaker mechanism. The unit shall be U.L. listed Class A Group I device (5 milliamp sensitivity, 25 millisecond trip time), and an interrupting capacity of 10,000 amperes RMS.

2.06 Surge Suppressors

A. All panelboards shall be equipped with surge protection devices.

3. EXECUTION

3.01 Installation

A. Boxes for surface mounted panelboards shall be mounted so there is at least 1/2-inch air space between the box and the wall.

B. Unless otherwise noted on the Drawings, top of cabinets shall be mounted 6-feet 6-inches above the floor, properly aligned and adequately supported independently of the connecting raceways.

C. All wiring in panelboards shall be neatly formed, grouped, laced, and identified to provide a neat and orderly appearance. A typewritten directory card identifying all circuits shall be placed in the card holder inside the front cover.

3.02 Warranty

A. The warranty provided shall comply with Section 01740, “Warranties and Bonds”.

END OF SECTION

SECTION 16370

VARIABLE FREQUENCY DRIVES

1. GENERAL

1.01 Scope of Work

A. Furnish all labor, materials, equipment and incidentals required to furnish and install variable frequency drives as shown on the Drawings and as specified herein.

B. These specifications are intended to give a general description of what is required, but do not cover all details which will vary in accordance with the requirements of the equipment furnished. They are, however, intended to cover the furnishing, the shop testing, the delivery and complete installation and field testing, of all materials, equipment and appurtenances for the variable frequency drives herein specified.

1.02 Description of System

A. The variable frequency drives shall be furnished by the Division 16 CONTRACTOR and integrated into the control system by the SYSTEM SUPPLIER specified in Division 13. These VFDs shall be furnished by the designated equipment manufacturer. The CONTRACTOR is responsible for complete system operation and necessary coordination.

B. The variable frequency drives will operate motors as specified in Division 11, 15 and Division 16. The drives furnished herein under shall be totally compatible and adequately sized with the Motors to be supplied.

C. 6-pulse variable frequency drives shall be provided with integrally mounted line reactors. Drives 30 hp and larger shall be furnished with a DC choke. All variable frequency drives shall be provided with integrally mounted dV/dT output filters.

D. Drives shall be sized at a minimum of 125% larger than the full load ampacity of the motor, unless otherwise shown on the single line diagrams.

1.03 Qualifications

A. Variable speed drives shall be of sufficient size for the duty to be performed and shall not exceed their full rated capacity when the driven equipment is operating as

specified. To assure unity of responsibility, all equipment specified in this Section of the specifications shall be furnished and coordinated by the Contractor.

B. The drives covered by these Specifications are intended to be equipment of proven ability as manufactured by reputable manufacturers having long experience in the production of identical units. The equipment furnished shall be designed, constructed and installed in accordance with the best practice and methods, and shall operate satisfactorily when installed.

C. The variable frequency control shall operate satisfactorily when connected to a bus supplying other solid state power conversion equipment which may be causing up to 10% total harmonic voltage distortion and commutation notches up to 36,500 volt microseconds, or when other variable frequency drives are operated from the same bus.

D. Individual or simultaneous operation of the variable frequency drives shall not add more than 5% total harmonic voltage distortion to the normal bus, nor more than 10% while operating from standby generator (if applicable) per IEEE 519, latest edition. The load side of the main breaker shall be the point of common coupling (PCC). The short circuit current at point of common coupling under utility operation is approximately 25,000 Amps. A preliminary harmonic (voltage and current) analysis must be submitted by the variable frequency drive manufacturer withing 30 days after the notice to proceed, this must include all calculations, simply a statement of compliance is not acceptable. Compliance shall be verified by the variable frequency drive manufacturer with field measurements of the harmonic distortion difference at the point of common coupling with and without variable frequency drives operating. See testing requirements.

E. The variable frequency drive manufacturer shall maintain and staff engineering service and repair shops through the United States, including the State of Florida, trained to do start up service, emergency service calls, repair work, service contracts and training of customer personnel.

F. Approved Manufacturers:

1. Schneider Electric
2. Eaton
3. Yaskawa

1.04 Submittals

A. Copies of all materials required to establish compliance with the specifications shall be submitted. Submittals shall include at least the following:

1. Certified shop and erection drawings showing all important details of construction, dimensions and anchor bolt locations.

2. Descriptive literature, bulletins and/or catalogs of the equipment.

3. Data on the characteristics and performance of the variable frequency drives. Data shall include certification that the variable frequency drives are warranted for use with the motors specified in Division 13, 15, and Division 16.

4. Complete drawings shall be furnished for approval before proceeding with manufacture and shall consists of master wiring diagrams, elementary or control schematics including coordination with other electrical control devices operating in conjunction with the variable frequency drive, and suitable outline drawings with sufficient details for locating conduit stub-ups and field wiring. Generic schematics not specific to this project shall not be acceptable.

5. A list of the manufacturer's recommended spare parts with the manufacturer's current price for each item. Include gaskets, packing, etc. on the list. List bearings by the bearing manufacturer's numbers only.

1.05 Operating Instructions

A. See Section 01730: Operation And Maintenance Data.

1.06 Tools and Spare Parts

A. One (1) set of all special tools required for normal operation and maintenance shall be provided. If no special tools are required, then a statement to this effect shall be provided.

B. The Manufacturer shall furnish a complete list of recommended spare parts.

1.07 Product Handling

A. All parts shall be properly protected so that no damage or deterioration will occur during a prolonged delay from the time of shipment until installation is completed and the units and equipment are ready for operation.

B. All equipment and spare parts must be properly protected against any damage during a prolonged period at the site.

C. Factory assembled parts and components shall not be dismantled for shipment unless permission is received in writing from the Engineer.

D. Each box or package shall be properly marked to show its net weight in addition to its contents.

1.08 Warranty

A. The warranty provided shall comply with Section 01740, “Warranties and Bonds”.

2. PRODUCTS

2.01 General

A. The Contractor shall furnish and install complete variable frequency drives as described in this specification and as detailed on the applicable Drawings.

B. The Contractor shall be responsible for the erection, installation, and start up of the equipment covered by this specification.

C. The variable frequency drive shall be furnished by a VFD manufacturer who has actively been manufacturing variable frequency drives for a period of at least five (5) years.

D. The variable frequency drive shall be comply with the latest applicable standards of ANSI, NEMA, IEEE, and the National Electric Code.

E. Variable frequency drive shall operate as specified on standby generators or normal power sources.

F. The Contractor shall provide a listing of all programmable parameters that are different from the factory default values. For each indicate:

1. The factory default and meaning

2. The revised value and meaning

G. The Contractor shall provide hardwired interface to all VFDs specified.

H. The Contractor shall provide a copy of PC compatible remote programming/ diagnostic software to the supplier of the control system. Refer to Section 13300.

2.02. Construction

A. Each variable frequency drive shall consist of a 460V, 3 phase rectifier, DC link and variable frequency inverter with features, functions and options as specified. The inverter shall be voltage source design using pulse width modulation (PWM) techniques.

B. The variable frequency drives shall be rated for the HP, full load current and rpm of the motor. The variable frequency drives shall be designed to provide continuous speed adjustment of three-phase motors. The variable frequency output voltage shall provide constant volts-per-Hertz excitation to the motor terminals up to 60 Hertz.

C. Inverters shall be capable of converting incoming three phase, 460V (+10 to -5%) and 60 Hertz (+/-2) Hertz power to DC bus levels. The DC voltage shall be inverted to a variable frequency drive output.

D. Controllers shall be rated for an ambient temperature of 0ºC to 40ºC, an altitude of up to 3,300 feet above sea level and humidity of 0 to 95% non-condensing.

E. VFDs shall have complete front accessibility.

F. The following standard basic control features shall be provided on the inverter:

1. Start, Stop, and indicating lights as shown on the drawings. Terminations for remote mounted operator control devices shall be furnished.

2. Unidirectional operation, coast to rest upon stop.

3. Variable linear independent timed acceleration.

4. Variable torque performance from 4 to 60 Hertz.

5. Frequency stability of 0.5% for 24 hours with voltage regulation of +2% of maximum rated output voltage.

6. LED status indication for Power On, Run, Inverter Enable, Overcurrent, Overvoltage, Overtemperature, Low Supply, and Phase Loss.

7. 115V AC control power for operator devices.

8. Phase insensitive to input power.

9. Automatic restart upon return of power following a utility outage. Drive shall require manual reset after three (3) attempts in a 60 second period.

G. The following protective features shall be provided on the drive:

1. Input AC circuit breaker with an interlocked, pad lockable handle mechanism and AC input line current limiting fuses for fault current protection of AC to DC converter section and circuit breaker. Minimum short circuit rating of 65,000 AIC shall be provided.

2. Electronic overcurrent trip for instantaneous overload protection.

3. Undervoltage and phase loss protection of output.

4. Over-frequency protection.

5. Over-temperature protection.

6. Surge protection from input AC line transients.

7. Electrical isolation between the power and logic circuits, as well as between the 115V AC control power and the static digital sequencing.

8. Drive to be capable of withstanding output terminal line short or open circuits without component failure.

9. Output filters with di/dt and dv/dt protection for converter semiconductors.

10. Units shall have an English language (no codes) alphanumeric diagnostic display. LED indication of overfrequency, instantaneous overcurrent, DC overvoltage, AC undervoltage/loss-of-phase, emergency stop, overload overtemperature, inverter pole trip and standby modes shall be provided and door mounted. Additional door mounted status indicating LEDs for self-diagnostic including run, phase loss, micro-processor fault, as well as board mounted LEDs including one for each inverter pole gating signal, each inverter pole status and each logic level VDC used. A comprehensive microprocessor based digital diagnostic system which monitors its own control functions and displays faults and operating conditions is also approved.

11. Input Line Reactors

12. Input Filters as required by the required IEEE study to be performed by the Contractor.

H. The following standard independent adjustments shall be provided on the inverter:

1. Minimum speed (1 to 60 HZ).

2. Maximum speed (1 to 60 HZ).

3. Acceleration time 1 to 60 Sec.

4. Deceleration time 1 to 60 Sec.

5. Volts per Hertz.

6. Stability adjustment, if required.

7. Voltage boost (100 to 600 percent of nominal V/HZ ratio at 1 HZ tapering to 100 percent at 20 HZ).

I. Additional control circuitry as shown on the drawings.

3. EXECUTION

3.01 Execution

A. The Contractor shall ensure that all VFDs shall be furnished in a timely fashion.

3.02 Installation

A. Installation shall be in strict accordance with the manufacturer's instructions and recommendations in the locations shown on the Drawings. Field wiring shall be in accordance with manufacturer's recommendations. Anchor bolts shall be stainless steel and set in accordance with the manufacturer's recommendations.

3.03 Shop Painting

A. Prior to shop painting, all surfaces shall be thoroughly cleaned, dry, and free from all mill/scale, rust, grease, dirt, and other foreign matter.

B. Drives shall be shop painted.

3.04 Testing

A. Tests and Check

1. The drive manufacturer shall test the drive controller with a motor load prior to shipment. The motor shall have equal or greater full load current than the specified motor.

2. A certified copy of all tests and checks performed in the field, complete with meter readings and recordings, where applicable, shall be submitted to the Owner.

B. The Contractor shall provide the services of a competent and experienced equipment manufacturer's factory field engineer to supervise start-up and provide training to the Owner's personnel. The factory field engineer shall be available for one (1) - eight (8) hour day to inspect the installed equipment and supervise the start-up demonstration and testing as specified in Section 01465 – Equipment Testing and Facilities Startup, and additional testing and training as specified herein. The factory field engineer shall be available for two (2) additional eight (8) hour days (a total of three (3) - eight (8) hour days) to provide factory and on-site training to the Owner's personnel as specified herein. Training of the Owner's personnel will only be considered valid for approval by the Engineer if it takes place after the successful start-up and demonstration test.

3.05 Training

A. The training and instruction shall be directly related to the System being supplied.

B. The Supplier shall provide classroom training detailed manuals to supplement the training courses. The manuals shall include specific details of equipment supplied and operations specific to the project.

C. The Supplier shall make use of teaching aids, manuals, slide/video presentations, etc. After the training services, such materials shall be delivered to Owner.

D. The training program shall represent a comprehensive program covering all aspects of the variable frequency drive and maintenance of the system.

E. All training schedules shall be coordinated with, and at the convenience of the Owner. Shift training may be required to correspond to the Owner's working schedule.

F. Factory Training: Factory training shall be conducted before the System is commissioned, and subsequent to final manual submittals. Two days of factory training shall be provided and consist of schooling and hands on experience for two people covering the following:

1. Theory of Operation

2. Use of Software

3. Troubleshooting

G. On-site Training: On-site (field) training shall be conducted at the Owner's Plant Site and shall provide detailed hands-on instruction to Owner's personnel covering: system debugging, program modification, trouble-shooting, maintenance procedures, calibration procedures, and system operation.

END OF SECTION

SECTION 16402

UNDERGROUND SYSTEM

1. GENERAL

1.01 Scope of Work

A. Furnish and install a complete underground system of ducts, manholes and handholes all as hereinafter specified and shown on the Drawings.

B. Provide a minimum of one (1) spare conduit of each size in each duct bank from distribution gear to nearest manhole or handhole.

1.02 Related Work

A. Excavation and backfilling is included in Division 2.

B. All concrete and reinforcing steel shall be included under Division 3.

C. Conduit for ducts shall be as specified under Section 16110 – Raceways and Fittings.

D. Ground rods and other grounding materials and methods shall be as specified under other Sections of Division 16.

2. PRODUCTS

2.01 Material

A. Ducts shall be PVC Schedule 40 DB encased in concrete. Direct buried conduits shall not be allowed.

B. Cable racks, supports, pulling-in irons, manhole steps, and hardware shall be stainless steel manufactured by Cope or approved equal. All hardware shall be 304 stainless steel.

C. Precast manholes and handholes shall be heavy duty type, designed for a Class H20 wheel load. Precast manholes and handholes shall be as manufactured by Oldcastle, or approved equal.

D. Class H20 traffic rated handhole covers and frames shall be provided as required.

3. EXECUTION

3.01 Installation

A. Ducts shall be installed to drain away from buildings; ducts between manholes or handholes shall drain toward the manholes or handholes. Duct slopes shall not be less than 3 inches per 100 feet.

B. Duct banks shall be fiber reinforced concrete.

C. Duct lines shall be laid in trenches on a clean backfill bedding not less than 6 inches thick and well graded.

D. Plastic spacers shall be used to hold ducts in place whether concrete encased or not. Spacers shall provide not less than 2-inch clearance between ducts.

E. The minimum cover for duct lines shall be 24 inches unless otherwise permitted by the Engineer.

F. Duct entrances to buildings and structures shall be made with PVC coated rigid aluminum.

G. PVC duct terminations at manholes shall be with PVC end bells. Steel conduits shall be terminated with insulated, grounding-type bushings.

H. Where bends in ducts are required, standard radius elbows, sweeps and offsets shall be used.

I. All ducts shall be rodded and a mandrel drawn through followed by a swab to clean out any obstructions which may cause cable abrasions. The mandrel shall be 12 inches in length and the diameter 1/2 inch less than the inside diameter of the duct.

J. Spare ducts shall be plugged and sealed watertight at all manholes, buildings and structures.

K. Ducts in use shall be sealed watertight at all manholes, buildings and structures.

L. Pulling-in irons shall be installed opposite all duct entrances to manholes, equal to Cope Cat. No. 311-9.

M. Cable racks shall be cut to length for one, two, three or four vertical tiers of cables. Racks shall be mounted with 1/2 inch by 4 inch expansion bolts on manhole walls. Arms similar and equal to Cope Cat. No. 325-T4, 325-T75 and/or 325-T10 for one, two and/or three cables respectively shall be furnished and installed with Cat. No. 326-T22 porcelain insulators for support of cables. Lock clips shall be furnished and installed to secure hooks in position.

N. Cables shall be trained in manholes and supported on racks and hooks at intervals not greater than 3 feet-0 inches and supports shall be installed on each side of all splices. Furnish inserts on all manhole walls for mounting future racks as well as racks required for present installation.

O. PVC coated rigid steel conduit shall be used for risers. For fiber runs, a fiber to PVC coated rigid steel conduit adapter shall be used at the lower end of the elbow and the elbow and all exposed conduit shall be PVC coated.

P. All risers from underground shall be given a heavy coat of bitumastic paint from a point 1 foot-0-inch below grade to a point not less than 6 inches above grade or surface of slab.

Q. All joints shall be made so as to prevent the passage of concrete inside the conduit to form obstructions or cause cable abrasions.

R. Manhole covers in streets shall finish flush with finished paving and in other areas shall finish 3 inches above crown of adjacent roadway. Floor elevations of manholes shall be so set that the center line of the lowest conduit entering will be not less than 1-foot above the floor and center line of the highest conduit entering will be not less than 1 foot below the roof slab.

S. Concrete monuments shall be provided at each stubbed conduit location. Monuments shall be as shown on the Drawings and shall be installed in the same manner outlined for manhole covers.

T. A 5/8-inch by 20-foot copperclad ground rod shall be driven in the bottom of each manhole. After installation, the ground rod opening shall be filled in with non-shrink grout to form a watertight plug. All bond wires and galvanized steel conduits shall be bonded to the ground rod.

END OF SECTION

SECTION 16450

GROUNDING SYSTEM

1. GENERAL

1.01 Scope of Work

A. Furnish and install a complete grounding system in strict accordance with Article 250 of the National Electrical Code and as hereinafter specified and shown on the Drawings.

B. Furnish and install a grounding system for facilities shown on the plans. Grounding grid shall consist of copper ground rod, bare copper ground conductor, ground test well and copper to copper exothermic weld, as indicated. All handrails, walkways, equipment racks, pole mounted lighting fixtures, air pipes and pipe supports shall be bonded to the grounding system.

1.02 Related Work

A. Wire shall be as specified under Section 16120–Low Voltage Wire and Cable.

B. Conduit shall be as specified under Section 16110–Raceway and Fittings.

2. PRODUCTS

2.01 Materials

A. Ground rods: Ground rods shall be copperclad steel 5/8-inch x 20 foot. Ground rods shall be Copperweld or be an approved equal product.

3. EXECUTION

3.01 General

A. As a minimum, the service entrance equipment ground bus shall be grounded to the ground grid, equipment pad structural rebar, electrical equipment racks, and the steel frame of the building. The Contractor shall not allow water pipe connections to be painted. If the connections are painted, they shall be disassembled and remade with new fittings.

B. Ground bus in all switchboards and unit substations shall be connected to the service entrance equipment ground bus with using copper conductors, sized as shown on the single line diagrams.

C. All steel building columns shall be bonded together and connected to the building ground grid and to the service entrance ground with a No. 3/0 copper conductor. The bond wire for all motors shall be connected to the motor casing via Cadweld.

D. Conduits stubbed-up below a motor control center shall be fitted with insulated grounding bushings and connected to the motor control center ground bus. Boxes mounted below motor control centers shall be bonded to the switchboard ground bus. The grounding wire shall, unless otherwise indicated on the drawings, be sized in accordance with Table 250-122 of the National Electrical Code, except that a minimum No. 12 AWG shall be used.

E. Motors shall be grounded as specified in Section 16150-Motors.

F. Step down Transformer neutrals shall be grounded to a grounding electrode and the service entrance ground.

G. Grounding electrodes shall be driven as required. Where rock is encountered, copper grounding plates may be used in lieu of grounding rods.

H. All equipment enclosures, motor and transformer frames, conduits systems, cable armor, exposed structural steel and similar items shall be grounded.

I. Exposed connections shall be made by means of approved grounding clamps. Exposed connections between different metals shall be sealed with No-Oxide Paint Grade A or approved equal. All buried connections shall be made by welding process equal to Cadweld.

J. The plant grounding grid conductors shall be embedded in backfill material around the structures.

K. All underground conductors shall be laid slack and where exposed to mechanical injury shall be protected by pipes or other substantial guards. If guards are iron pipe or other magnetic material, conductors shall be electrically connected to both ends of the guard.

L. The Contractor shall exercise care to ensure good ground continuity, in particular between the conduit system and equipment frames and enclosures. Where necessary, jumper wires shall be installed.

3.02 Tests

A. The Contractor shall test the ground resistance of the system using the 3 point fall of potential method. All test equipment shall be provided by the Contractor and approved by the Engineer. Dry season resistance of the system shall not exceed 5 ohms. If such resistance cannot be obtained with the system as shown, the Contractor shall provide additional grounding as directed by the Engineer, without additional payment. The Contractor shall submit all grounding system test results to the Engineer for review.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 16500

LIGHTING SYSTEM

1. GENERAL

1.01 Scope of Work

A. Furnish and install complete lighting systems including panelboards, transformers, lighting fixtures, receptacles, switches, contactors, clocks and all necessary accessories and appurtenances required as hereinafter specified.

1.02 Standards

A. All lighting fixtures shall be in accordance with the National Electrical Code and shall be constructed in accordance with the latest edition of the Underwriters Laboratories "Standards for Safety, Electric Lighting Fixtures." All lighting fixtures shall be Underwriters Laboratories labeled.

1.03 Related Work

A. Panelboards shall be as specified under Section 16160.

B. Conduit shall be as specified under Section 16110.

C. Wire shall be as specified under Section 16120.

D. Transformers shall be specified under Section 16050.

2. PRODUCTS

2.01 Materials

A. Switches

1. Wall switches shall be of the indicating, toggle action, flush mounting quiet type. All switches shall conform to Federal Specification W-S-896-D.

2. Wall switches shall be of the following types and manufacturer or approved equal.

a. Single pole - Arrow-Hart No. 1991 or Leviton No. 1221-2.

b. Double pole - Arrow-Hart No. 1992 or Leviton No. 1222-2.

c. Three way - Arrow -Hart No. 1993 or Leviton No. 1223-2.

d. Four way - Arrow-Hart No. 1994 or Leviton No. 1224-2.

e. Single pole, key operated - Arrow-Hart No. 1991-L or Leviton No. 1221-2L.

f. Momentary contact, 2 circuit, center off - Arrow-Hart No. 1895 or Leviton No. 1256.

g. Weatherproof cover for Arrow-Hart 2900 series tap action switches - Arrow-Hart Catalog No. 2881-G.

B. Receptacles

1. Wall receptacles shall be of the following types and manufacturer or approved equal.

a. Single, 20A, 125V, 1P, 3W; Arrow-Hart No. 5361 or Leviton No. 5361.

b. Duplex, 20A, 125V, 2P, 3W; Arrow-Hart No. 5362 or Leviton No. 5362.

c. Weatherproof, 20A, 125V, 2P, 3W; Arrow-Hart No. 5362 or Leviton No. 5361 and Crouse-Hinds WLRD-1 cover or Leviton No. 4926.

d. Corrosion-resistant, duplex, 20A, 125V, 2P, 3W; Arrow-Hart No. 5739-CR or Leviton No. 5362CR and Crouse-Hinds WLRD-1 cover.

e. Ground fault interrupter, duplex, 20A, 125V, 3P, 2W; Arrow-Hart No. GF5362 or Leviton No. 6899.

f. Stainless steel indoor mounting plate for G.F.I. receptacle; Arrow-Hart Catalog No. S-26.

g. Weatherproof cover for G.F.I. receptacle in FS box; Arrow-Hart No. 4501-FS or Leviton No. 6196.

h. Clock hanger, 15A, 125V, 2P, 3W; Arrow-Hart No. 452 or Leviton No. 628.

i. Single, 20A, 250V, 2P, 3W; Arrow-Hart No. 5461 or Leviton No. 5461.

j. Single, 30A, 125V, 2P, 3W; Arrow-Hart No. 5716N; cap: Arrow-Hart No. 5717N or Leviton No. 5371.

k. Clothes dryer, 30A, 125/250V, 3P, 3W; Arrow-Hart No. 9344N. Cap: Arrow-Hart No. 9352AN or Leviton No. 5209 and No. 9382-P.

2. Special wiring devices shall be provided as noted of the drawings.

    a. Tamper resistant duplex receptacle Leviton No. 5262-SG or approved equal.

    b. Scene select microprocessor dimmer Leviton No. 17765 or approved equal.

    c. Surge protective duplex receptacle Leviton No. 5380 or approved equal.

C. Device Plates

1. Plates for flush mounted devices shall be of the required number of gangs for the application involved and shall be 302 (18-8) high nickel stainless steel of the same manufacturer as the device.

2. Plates for surface mounted device boxes shall be of the same material as the box.

D. Lighting Fixtures

1. Lighting fixture types shall be as shown on the "Lighting Fixture Schedule" on the Drawings. The catalog numbers listed are given as a guide to the design and quality of fixture desired. Equivalent designs and equal quality fixtures of other manufacturers will be reviewed. Photometric and minimum in order for Engineer to consider equivalency.

E. Lamps

1. All lamps shall be LED type.

2. All lamps shall be of one manufacturer and shall be as manufactured by Lithonia, Kenall, Hubble Beghelli, Columbia or approved equal.

F. Flexible Fixture Hangers

1. Flexible fixture hangers used in nonhazardous areas shall be Type ARB and flexible fixture supports used in hazardous areas shall be Type ECHF as manufactured by the Crouse-Hinds Company or approved equal.

2. Stainless steel channel, roll formed into U-shape, shall be sued to span between building steel for mounting of fixtures where required by fixture location or as indicated on the Drawings. Channel shall be as manufactured by Unistrut Corporation or approved equal.

G. Lighting Contactor

1. Lighting contactor shall be of the electrically operated, mechanically held type in NEMA 1 steel enclosures of the number of poles as called for on the Drawings.

2. Contactors shall be rated for 20A-600 volt contacts and be equal to Automatic Switch Company bulletin 1255-166 RC.

H. Photocell

1. Intermatic K4400 series or equal.

3. EXECUTION

3.01 Installation

A. Each fixture shall be a completely finished unit with all components, mounting and/or hanging devices necessary, for the proper installation of the particular fixture in its designated location and shall be completely wired ready for connection to the branch circuit wires at the outlet.

B. When fixtures are noted to be installed flush, they shall be complete with the proper accessories for installing in the particular ceiling involved. All flush mounted fixtures shall be supported from the structure and shall not be dependent on the hung ceilings for their support.

C. Flexible fixture hangers shall be used for all pendant mounted fixtures.

D. Conduit run in areas with hung ceilings shall be installed in the space above the hung ceiling as close to the structure as possible. Conduits shall be supported from the structure.

E. Receptacles in process areas and shops shall be mounted 36 inches above the floor unless otherwise noted on the Drawings.

F. Receptacles in office and other like areas shall be mounted 18 inches above the floor unless otherwise noted on the Drawings.

3.02 Cleaning Up

A. All fixtures shall be left in a clean condition, free of dirt and defects, before acceptance by the Engineer.

END OF SECTION

SECTION 16670

LIGHTNING PROTECTION SYSTEM

1. GENERAL

1.01 Scope of Work

A. A Lightning Protection System shall be furnished and installed for the following facilities:

1. Electrical building No. 1.

2. Chemical Facility.

3. Operations/Maintenance Building

B. The system shall be furnished and installed in compliance with provisions of Code for Lightning Protection Systems as adopted by the National Fire Protection Association and Lightning Protection Institute. All equipment to that result shall be included whether or not specifically called for herein or shown on the plans. Installers shall be LPI (Lightning Protection Institute) certified, master and Journeyman in accordance with LPI standards or of equal qualifications as approved by Engineer. A LPI label for the system shall be required.

C. Material shall comply in weight, size and composition with the requirements of the Lightning Protection Institute and the National Fire Protection Code relating to this type of installation, and shall be LPI labeled.

1. All materials, where available by any one manufacturer, shall be cast. All bolts shall have hexagonal heads, no screw heads will be permitted.

2. Lightning protection cable shall be Class I copper. Grounding counterpoise shall be as shown. Fittings and straps shall be cast copper.

1.02 Submittals

A. Shop Drawings: Shop drawings shall be submitted before work is done. Drawings shall include full layout of cabling and points, and connections.

B. Product Data: Product Data shall be submitted on all equipment to show compliance with this section of the specifications and shall include manufacturer's written recommendations for installation.

2. PRODUCTS

2.01 Air Terminals

A. Air terminals shall be copper as required to match roof conductors, and shall have proper base support for surface on which they are attached, and shall be securely anchored to surface. Terminals shall project a minimum of 10" above top of object to which attached.

2.02 Conductors

A. Roof conductors shall consist of copper complying with the weight and construction requirements of the Code, and shall be coursed to interconnect with air terminals, and in general, provide a two-way minimum path to ground. The angle of any turn shall not exceed 90 degrees, and shall provide an approximately horizontal or downward course. Down conductors shall be copper, concealed within the structure. Radius of bends shall not be less than 8 inches. Roof conductors material shall match and/or be compatible with roof flashing material.

2.03 Fastener

A. Conductor fasteners shall be of the same material as the conductor, having ample strength to support conductor. Where fasteners are to be mounted in masonry or structural work, they shall be furnished to the Masonry or Structural Contractor so they may be installed during construction of the project.

2.04 Ground Connections

A. Ground connections shall be made in accordance with requirements of all applicable codes. Ground rods shall be placed in a minimum of two (2) feet from building foundations. In addition to above artificial grounds, one down conductor of each two-path system shall be connected to water piping system with approved water pipe type strap connector.

B. All ground rods shall be 5/8" diameter, with a minimum length of 20' copperweld type. Each installed ground rod shall be checked for resistance to ground. If a 0 to 5 ohm reading is not obtained, extend 10’ rod lengths and continue driving rods until the required reading is obtained.

C. No rod can be connected to the bonding cable without the required ohm reading.

3. EXECUTION

3.01 Installation

A. Installation shall be made in an inconspicuous manner with conductors coursed to conceal equipment as much as possible. Down conductors shall be concealed within structure, and shall be run in 1" schedule 80 PVC conduit. All metallic equipment within 6 feet of any lightning conductor shall be bonded to conductor. System shall also be tied to the main service electrical ground.

3.02 Equipment

A. Equipment shall be as manufactured by Lightning Masters Corp or approved equal.

ADDENDUM NO. 1

RESPONSE TO INQUIRIES RECEIVED
Waste water Treatment Facility Sludge Management Improvements
Bid Number FB-240111
November 25, 2024

To All Plan Holders:

The following changes, clarifications and additions are hereby made a part of the bidding and contract documents for the above referenced project, and prepared by the City of Flagler Beach as fully completely as if the same were fully set forth therein.

Response to Questions received at the Pre-bid Meeting and before the deadline of 5:00 p.m. Friday, November 22, 2024. Questions are in **Bold** and responses are in *Italics.*

1. **For the underground conduit duct bank, the drawings show it as direct bury while the specs call for it to be concrete encased. Please confirm which is required.** *They shall be concrete encased.*
2. **Would you provide the sign-in sheet and any agenda/notes for the pre-bid meeting?** *The sign in sheet and any notes will be provided.*
3. **Are the building department fees going to be paid through the project allowance?** *Contractor is responsible for building dept. fees.*
4. **Spec 01010, 1.01, E mentions FPL fees to be paid for by the Contractor. It does not appear there is any FPL work in this project. Please confirm.** *We are going to have the power pole removed, so there should not be any FPL fees.*
5. **Please confirm the PWTech Press has been purchased and provided by Flagler County. Therefore, we do not need to include pricing for purchasing the press in our bid.** *Yes, it has been purchased.*
6. **Spec "05XXX – Prefabricated Metal Building" is missing from the bid documents.** *The table of contents has been revised and is attached as exhibit "A" to this Addenda.*
7. **Spec "11XXX – Submersible mixers" is missing from the bid documents.** *The table of contents has been revised and is attached as exhibit "A" to this Addenda.*
8. **The 100 days for substantial completion and 130 days for final completion is not enough time to complete this project. Submittals, approvals, and material deliveries will be in the 90-to-100-day range. Then the work in the field must be completed. Can the tie for constriction be extended?** *We can extend substantial completion to 180 days and final at 210 days.*

9. **Drawing D1.0, and other drawings, show an existing overhead power line and pole that conflict with the new structure location. Please address what to do with the existing uti** *The city will have the pole removed and will not be in the scope.*

10. **On Drawing C1.1 regarding the manholes. For manhole #5 is the flow line elevation to the NW, as SW is indicated? Is there only that one opening for that #5 manhole. For manhole #8, is that a doghole style manhole? Please provide more details as to how to insert the manhole, if it is tying into an existing line.** *The manholes, piping between manholes, and asphalt paving will be removed from this scope.*

11. **On drawing C1.1 the pipe schedule #11 suggests 8" schedule 80 PVC. Between manhole 6 and 7 with the ductile fitting is C900 acceptable to use?** *TBD*

12. **On drawing C1.1 fitting schedule #24, please confirm that the wye is 8x8x8 to match the incoming pipe from the wye. Also can a Ductile Iron fitting be used for the #31 MJ 45 bend, again seen as #42 on drawing M1.1?** *TBD*

13. **On drawing C1.1 on the 20" effluent line, is there a shut off to prevent backflow while making the tie in connection? How long can the 20" effluent be out of service to complete the rerouting of the pipe?** *The 20" effluent line needs to remain in place. Remove the relocation of the 20" effluent line from the scope.*

14. **On Drawing M1.2 what happens at the end of the bisulfate discharge pipe? Capped, connected to by others?** *The bisulfite tank will not be included in this scope, not any of the associated piping.*

15. **On drawing I4.0 the descriptions say Bisulfite while other drawings say Bisulfate. Are these chemical terms the same, and interchangeable, or the same product at a different stage of the process?** *The plans should read Bisulfite.*

16. **Does this project require Davis Bacon wages with certified payroll documentation?** *YES*

17. **Are there any special funding requirements, like USA Domestic only, AIS, or MBE/DBE?** *NO*

18. **The contract time shows 100 days for substantial completion per spec -00 26 00-4.02. The equipment and metal building materials may take that long just to fabricate & ship. Can the contract time be extended to accommodate the long lead equipment deliveries?** *See #8*

19. **Are the building permit fees waived by the City? If the contractor has to pay the permit fees, can there be an allowance for that on the bid form?** *See #3*

20. **Is there an engineer's cost estimate for this project?** *That information is not released unt the bid opening.*

21. **How long can the 20" effluent discharge line on sheet C1.1 be shutdown to tie in the new 20" gate valves and cut in the 20" 45' bend on the new 20" effluent line?** *The 20" effluent discharge line needs to remain in place and will be removed from the scope of this bid.*

22. **How long can the sludge line on sheet C1.1 be shutdown to tie in the 8"x4" tee & 8" plug valve for the new feed line to the presses?** *The sludge line is already turned off with a gate valve upstream.*

23. **How long can the sludge line on sheet C1.1 be shutdown to install the new 8" gate valve and the new seepex pump?** *The sludge line is already turned off and not an issue.*

24. **At manhole #8, how long can the existing drain line be shutdown to install the manhole?** *All manholes and associated piping will be removed from this bid.*

25. **Does the City intend to direct purchase through the contactor any of the equipment and materials on this project in order to save the sales tax?** *YES*

26. **The table of contents shows a spec 09090 Finish Schedule. We couldn't find that in the specs going from section 06702 to 09750. Can a finish schedule be provided to show what specifically gets painting/coatings?** *To be provided*

27. **Section 09090 – Finish Schedule is missing from the specifications. Please provide this section og the specifications.** *To be provided*

28. **Do you have soil borings for this project? If so, can we get a copy? If not, where is the water table on site? We need this to determine if any dewatering will be required for this project and to know if dewatering will be required to obtain compaction under the structures.** *We do not have any soil borings.*

ADDENDUM NO. 2

Additional and Revised Documents
Waste water Treatment Facility Sludge Management Improvements
Bid Number FB-240111
November 21, 2024

To All Plan Holders:

The following changes, clarifications and additions are hereby made a part of the bidding and contract documents for the above referenced project, and prepared by the City of Flagler Beach as fully completely as if the same were fully set forth therein.

Attached to this Addendum are revised and additional items for the bid package.

Exhibit "A": Revised Table of Contents to Volume 2 Technical Sections

Exhibit "B": Proposal/Scope from PW Tech on the Screw Press

Exhibit "C": Geotechnical Evaluation performed by Universal Engineering Services

Exhibit "D": Revised Drawings Sheet M2.0 and Sheet S1.1

Exhibit "E": Sign in Sheets from Pre-bid Meeting

Response to additional question:

The bid submission deadline will not be extended and stands as 2:00 PM, Friday, December 6, 2024.

Disclaimer: It is the sole responsibility of bidder to confirm that all addenda have been received prior to submitting bid and acknowledge such in bid documents

*Volute is registered with the U.S. Patent and Trademark Office as a registered trademark of AMCON

SCOPE OF SUPPLY

Line	Qty.	Item	Manufacturer / Model / Description
1	1	Volute* Dewatering Press	PWTech - ES-303
2	1	Influent Sludge flowmeter	Rosemount™ Model 8750W with 2" ANSI Flanges
3	1	Control System for Item 1-2	PWTech
4		Documentation	Submittals, O&M manuals, Startup Report
5		Field services	Installation inspection, Commissioning, Testing and operator training
6		Delivery to site	

*Volute is registered with the U.S. Patent and Trademark Office as a registered trademark of AMCON, Inc., Yokohama, Japan

SCOPE DETAILS

1. Volute Dewatering Press - PWTech Model ES-303

Design

- The unit to be supplied will be an ES-303 with a MAXIMUM capacity of 100 GPM of thin sludge (<1%) or 1050 dry pounds per hour for heavier sludge (>3%)

Components

- The Dewatering Press consists of:
  - Flash mixing tank including mixer with gear motor.
  - Flocculation tank including mixer with gear motor.
  - Three (3) x 300 Series Dewatering Drum with a drive motor.
  - Filtrate collection pan and support frame.
  - Integrated, pre-wired control panel for the unit and appurtenances mounted on the flocculation tank. (may be provided mounted separately if requested).
- Connections are:
  - Inlet: DN 3" ANSI B16.5 Class 150 Flange
  - Filtrate outlet: DN 6" ANSI B16.5 Class 150 Flange
  - Drain: DN 2" ANSI B16.5 Class 150
  - Washwater Water inlet: ¾" FNPT

Materials and Construction

- The unit is all stainless steel. No carbon steel is used in the manufacture of the press.
- Unit is manufactured and assembled in the USA. All components are sourced from the USA or Japan.
- Electrical components are manufactured and tested prior to shipment to site in the United States.
- Gear Drives are Nissei GTR gear motors utilizing heloid gear reduction. They are one piece construction and are sealed for life.

Supplied spare parts

- No spare parts are included in this scope.

Additional Press information is appended to this scope.

2. Magnetic flowmeter, 2" Rosemount™ Model 8750W

Design

- 2" Flowmeter is designed for accurate measurement of flows between 10-200 GPM
- Suitable for direct burial and constant flooding (IP 68).
- Includes Compact mounting of transmitter on the flowmeter body
- Flowmeter out-puts analogue signal (4-20 mA) to Volute Press Control panel

Components

- 2 inch ANSI 150# flange connections.
- Includes grounding rings

*Volute is registered with the U.S. Patent and Trademark Office as a registered trademark of AMCON, Inc., Yokohama, Japan

Materials and Construction

- Coated Carbon Steel construction with a polyurethane, ceramic, neoprene, or Teflon liner as required by the application.
- All metallic wetted parts are stainless steel type 316

3. Electrical and Control

The Volute* unit is supplied with a pre-mounted, pre-wired control panel designed to control all aspects of the thickening/dewatering operation unless otherwise specified and noted.

- Control panel is:
  - Fed by a single 208, 240, or 480VAC, 3-phase, 60 Hz, power supply (client specified)
  - NEMA 4X rated manufactured in Stainless Steel type 304
  - Manufactured in a UL accredited facility and is UL listed
- Panel includes HMI and PLC control modules.
  - PLC/HMI is a single Unitronics Unistream 10.4 unit.
- All manual switching operations are undertaken via switches on the HMI
- Unit includes complete control system for unit and ancillary equipment including operation of the polymer preparation system and VFD control for feed pump.
- Control system may utilize a system flow meter and PID loop to allow operator to set the system flow.
- Control panel includes system running and system fault outputs to plant PLC and the ability to connect via Ethernet to external controls.
- A junction box on the polymer preparation skid is pre-wired to the polymer preparation components and designed for easy on-site connection to the main Volute* system control panel.
- Junction box is NEMA 4X FRP and includes numbered terminal block & wires with terminal block legend.

4. Documentation:

Scope includes:

- Submittals (hard copy and electronic) and
- O&M Manuals (hard copy and electronic).
- Startup Report
- PLC/HMI Program (electronic copy) – does not include programming software

5. Field Services:

Scope includes the following start-up services -

- On-site start-up and training services for:
  - One (1) trip consisting of four (4) consecutive days (8 hours per day, Monday-Friday) by a PWT field service engineer and/or qualified manufacturer's representative
- Services include:
  - Installation inspection
  - Commissioning of Volute* unit and Controls
  - Start-up of Ancillary equipment included in this Scope
  - Functional testing and calibration of equipment
  - Training on all equipment
- Phone consultation regarding installation will also be provided.
- Should additional services be deemed necessary by the PURCHASER, the additional services can be procured from PWT on a per diem basis. The current rate is $1000 per day plus travel.

*Volute is registered with the U.S. Patent and Trademark Office as a registered trademark of AMCON, Inc., Yokohama, Japan

6. Delivery and Freight

- Submittals issued approximately six (6) weeks from receipt of written Purchase Order
- Delivery is approx. twenty (20) weeks from receipt of written acceptance of Submittal documents [x]
- Deliver to site for all components **is INCLUDED in the price**.

[x] **PLEASE NOTE:** While seller believes this estimated delivery time to be a valid and realistic estimate, due to the unpredictable nature of current parts shortages, this does not constitute any form of guarantee regarding the delivery schedule.

EXCLUSIONS AND EXCEPTIONS:

The Following items are specifically excluded from this scope unless specifically noted otherwise:

- Taxes, permits, and bonding
- Any civil works including, but not limited to, any building works, construction of suitable foundations, and access structures.
- Installation including, but not limited to, mechanical, plumbing, and electrical hook-ups
- Unloading of delivered equipment on site and storage
- PLC/HMI Programming software unless specified elsewhere.

GOVERNING TERMS AND CONDITIONS AND WARRANTY

This scope is subject to Process Wastewater Technologies, LLC. Standard Terms and Conditions and Standard Warranty as attached. The following items are specific to this project:

Payment Terms:

Payment terms for this scope are as per the table below:

Trigger	Amount		Terms			Condition
Submittals	**20**	%	due NET	30	days	On Approval of Submittals
Delivery	**70**	%	due NET	30	days	On shipping, or the offer to ship
O&M	**5**	%	due NET	30	days	On Delivery of final O&M Manuals
Startup	**5**	%	due NET	30	days	On Completion of startup and any other services provided under this scope.

Validity

Validity of this proposal is strictly 30 days. Written authorization from seller is required to extend this.

Warranty

PWTech warrants that the Products shall be free from defects in material and workmanship for the shorter period of: (i) twelve (12) months from the date of start-up; (ii) the warranty period for the third party good or service embodied in the Product; or (iii) eighteen (18) months from the delivery of the specified Product.

*Volute is registered with the U.S. Patent and Trademark Office as a registered trademark of AMCON, Inc., Yokohama, Japan

PRICE

Total price for the ES-303 and appurtenances as per this scope: **$413,000.00**

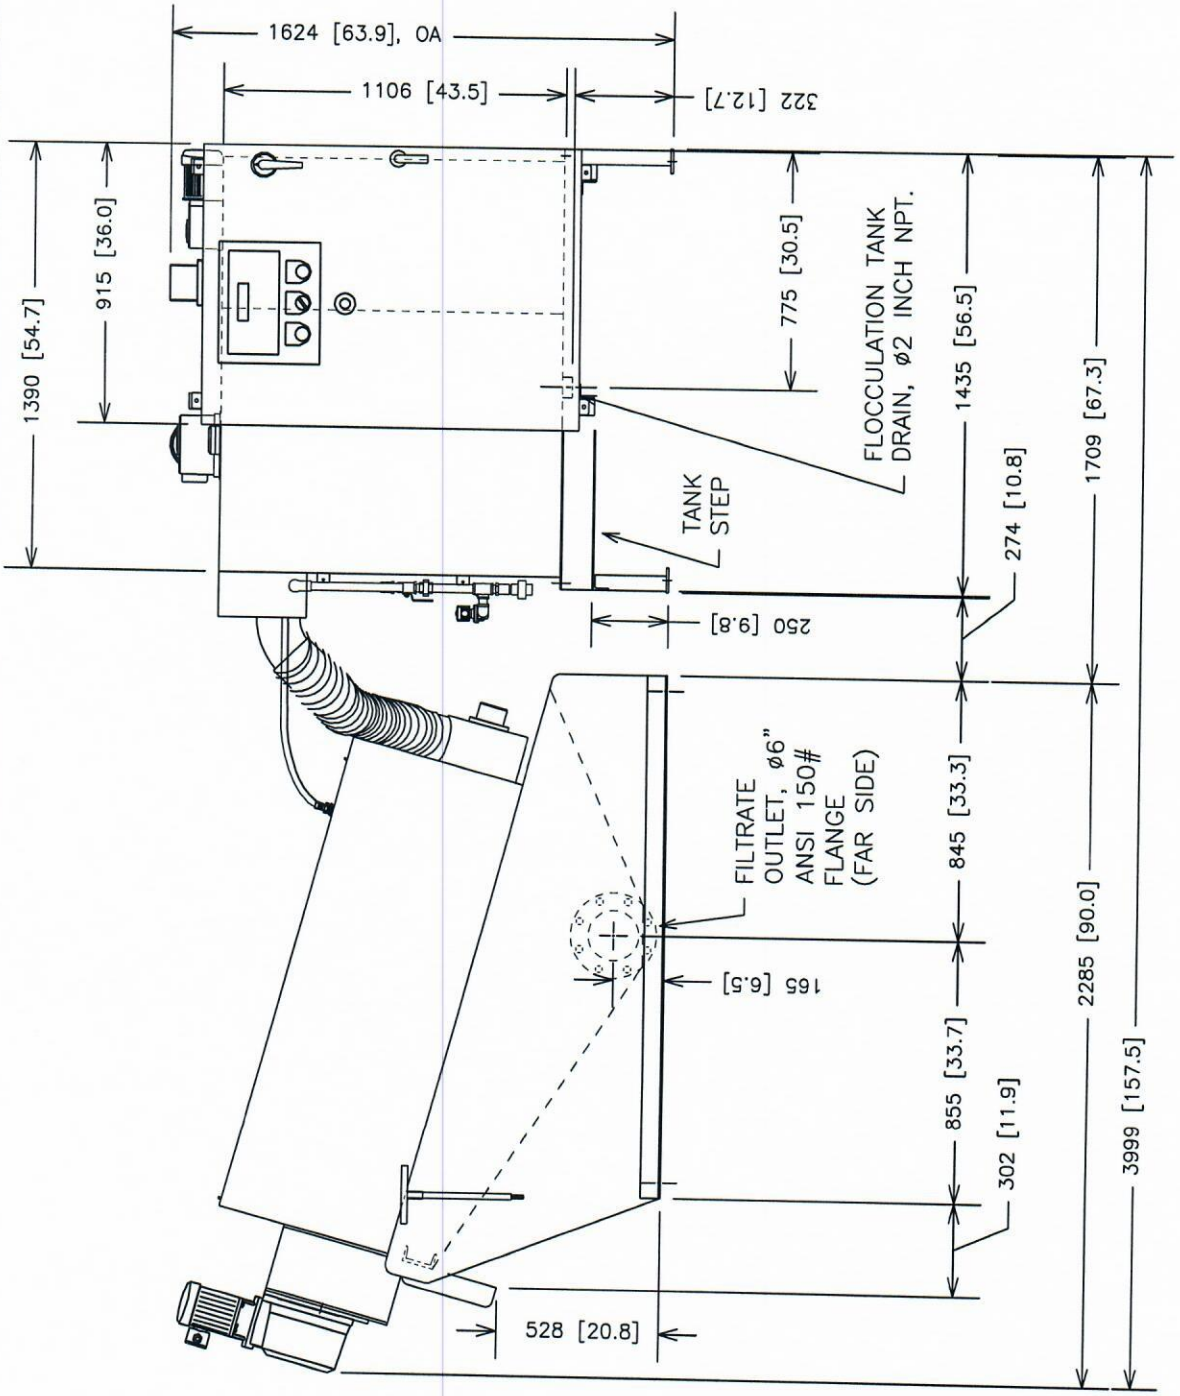
Alternative offering:
Total Price for the ES-303[2]* and appurtenances as per this scope: **$338,000.00**

*ES-303[2] is the same size and design as ES-303, but delivered with one fewer drum, lowering its capacity by 33%. The ES-303[2] can be expanded to a full ES-303 and it's full capacity via a drum expansion at a later date.

*Volute is registered with the U.S. Patent and Trademark Office as a registered trademark of AMCON, Inc., Yokohama, Japan

Volute Dewatering Press Data Sheet - ES-303

Please note - All information here is generic and for preliminary reference only. Detailed dimensions, and other data is very project specific and this sheet has not been altered to reflect that. Project specific data would be available from PWTech at the appropriate time.



General Data		Over All Dimensions:	158" x 63" x 74" (L x W x H)
		Optimal Space requirement of installation:	218" x 146" (L x W)
		Minimum Opening dimensions for installation:	65" x 60"
	Weight	Empty:	4100 lbs
		Operating:	6650 lbs
		MAX Solids throughput (Solids >4%):	1050 Dry pounds per hour
		MAX Hydraulic throughput (Solids <1%):	105 GPM
		Power use:	3.9 HP
		Washwater use:	16 GPM intermittent, 48 GPH total
Dewatering Drum	General	Dimension:	12" diameter x 61" long
		Quantity:	3
		Rings, Tierods, spacers:	Type 304 Stainless Steel
		Screw:	304 Stainless Steel with CoCr coating
	Drive info	Gear Motor Supplier:	Nissei Corporation
		Model:	FSW-55-750-T040-WEX
		Motor Power:	0.4 kW (0.54HP) 4-Pole
		Insulation:	TEFC / IP65
		Gear Reduction:	750 : 1
Flash mixing tanks	General	Dimensions:	20" x 33" x 43" (L x W x H)
		Volume	112.3 Gallons
		Working Volume:	98.2 Gallons
		Material	Type 304 Stainless Steel
	Drive Info	Gear Motor Supplier:	Nissei Corporation
		Model:	FSW-30-15-T020 WA
		Motor Power:	0.2 kW 4-Pole
		Motor Insulation:	TEFC / IP65
		Gear Reduction:	15 : 1

Flocculation tank	**General**	Dimensions:	33" x 33" x 43" (L x W x H)
		Volume	190.9 Gallons
		Working Volume:	167.0 Gallons
		Material	Type 304 Stainless Steel
	Drive Info	Gear Motor Supplier:	Nissei Corporation
		Model:	FSW-45-60-075 WEX
		Motor Power:	0.75 kW (1.0HP) 4-Pole
		Motor Insulation:	TEFC / IP65
		Gear Reduction:	60 : 1

Electrical	**General**	Supply Voltage:	208/240/440/480 VAC
		Service:	3-Phase, 3-Wire (No Neutral)
		Control Voltage:	Dual - 24VDC & 115VAC
		Minimum Required Breaker Size:*	12 Amps * 480 VAC
	Panel	Standard Panel Size:	36"(w) x 48"(h) x 12"(d)
		Panel Material:	Type 304 Stainless Steel
		Panel Rating:	Nema 4X
		Standard Control Module:	Unitronics Unistream 10 PLC

Polymer System	Supplier:	Velocity Dynamics, Inc.
	Model:	VM-5P-600-X0D
	Mixing Type:	Variable - Mechanical & Hydraulic
	Feed Pump Type:	Progressive Cavity
	Polymer Feed Capacity:	0.25 - 5 Gallons per hour
	Water Use:	60 - 600 Gallons per hour
	Dimensions:	24" x 34" x 42" (L x W x H)
	Weight:	~200 lbs

Connections	Feed Sludge:	3" ANSI 150# Flange
	Filtrate:	6" ANSI 150# Flange
	Drain:	2" FNPT Coupling
	Water:	3/4" FNPT Coupling
	Polymer Water Inlet:	1" FNPT
	Polymer Solutions Outlet.	1"FNPT
	Raw Polymer Feed Inlet:	1"FNPT

UES Project No. 0430.2000179.0000 and UES Report No. 136638

Dear Mr. Mahler:

Universal Engineering Sciences, Inc. has completed the geotechnical evaluation for the subject project. This report contains the results of our evaluation, an engineering interpretation of these with respect to the project characteristics described to us, and recommendations for shallow foundation support and site preparation.

We appreciate the opportunity to have worked with you on this project and look forward to a continued association. Please do not hesitate to contact us if you should have any questions, or if we may further assist you as your plans proceed.

Respectfully submitted,

UNIVERSAL ENGINEERING SCIENCES

1.0 INTRODUCTION

1.1 GENERAL

In this report we present the results of the subsurface evaluation for the proposed construction in Flagler Beach, Florida. We have divided this report into the following sections:

- SECTION 2.0 - SCOPE OF SERVICES
- SECTION 3.0 - FINDINGS
- SECTION 4.0 - FOUNDATION RECOMMENDATIONS
- SECTION 5.0 - CONSTRUCTION RELATED SERVICE
- SECTION 6.0 - LIMITATIONS

2.0 SCOPE OF SERVICES

2.1 PROJECT DESCRIPTION

Project information has been provided to us in correspondence with you. We were provided with a conceptual site plan indicating the location of the proposed structures and the requested boring locations. We understand the proposed project will consist of constructing a lift station, biological nutrient removal unit, flow splitter box, secondary clarifier with supporting infrastructure, disc filtration unit, sludge dewatering building and polymer bulk storage system. We understand the clarifier will have a diameter of 60-feet and a side water depth of 12-feet. Additionally, the pump station and flow splitter box will bear at depths of 25-feet and 10-feet below grade, respectively. A grading plan has not been provided at this time therefore, we have assumed one to three feet of fill will be placed within the structure areas.

Our recommendations are based upon the above considerations. If any of this information is incorrect, or if you anticipate any changes, inform Universal Engineering Sciences so that we may review our recommendations.

2.2 PURPOSE

The purposes of this investigation were:

- to investigate the general subsurface conditions at the site;
- to interpret and review the subsurface conditions with respect to the proposed construction; and,
- to provide geotechnical engineering recommendations for shallow foundation support and site preparation.

This report presents an evaluation of site conditions on the basis of traditional geotechnical procedures for site characterization. The recovered samples were not examined, either visually or analytically, for chemical composition or environmental hazards. Universal Engineering Sciences would be pleased to perform these services, at your request.

Our investigation was confined to the zone of soil likely to be influenced by the proposed construction. Our work did not address the potential for surface expression of deep geological

conditions, such as sinkhole development related to karst activity. A deep geological evaluation requires a more extensive range of field services than performed in this study.

2.3 FIELD INVESTIGATION

2.3.1 Borings

The subsurface conditions within the proposed structure areas were investigated with Standard Penetration Test (SPT) borings advanced to depths varying approximately between 10 and 60 feet below existing grade. The boring designations and approximated boring depths for each of the proposed structures are displayed in the table below. We performed the SPT borings according to the procedures of ASTM D-1586.

Proposed Structure	Boring Designation	Approximate Boring Depth (feet)
Master Lift Station	B-1	40
Biological Nutrient Removal Tank	B-2	40
	B-3 through B-6	10
Flow Splitter Box	B-7	20
Secondary Clarifier Supporting Infrastructure	B-8 and B-9	15
Secondary Clarifier	B-10	60
Disc Filtration	B-11	15
Sludge Dewatering Building	B-12	15
Polymer Bulk Storage System	B-13	15

The borings were located by our field personnel using tape measurements from established landmarks, and should be considered accurate only to the degree implied by the method used. The location of the borings is presented on the attached Boring Location Plan in Appendix A.

Samples obtained from the borings were transported to our laboratory for further evaluation. Samples of the soils encountered will be held in our laboratory for your inspection for 60 days unless we are notified otherwise.

2.4 LABORATORY INVESTIGATION

2.4.1 Index Testing

The soil samples recovered from the soil borings were returned to our laboratory and a UES Engineer visually examined and reviewed the field descriptions. The soils were classified in accordance with the Unified Soil Classification System (USCS). Tests consisting of percent passing a No. 200 sieve determination were performed to aide in classification of the soils.

3.0 FINDINGS

3.1 SUBSURFACE CONDITIONS

The boring locations and detailed subsurface conditions are illustrated in Appendix A: Boring Location Plan and Subsurface Profiles. The classifications and descriptions shown on the profiles are based upon visual characterizations of the recovered soil samples. Also, see Appendix A: Key to Boring Log, for further explanation of the symbols and placement of data on the Subsurface Profiles. The following discussion summarizes the soil conditions encountered.

The results of the borings generally indicated the presence of topsoil in the upper approximate 6 to 12-inches underlain by intermittent layers of fine sand (SP), fine sand with silt (SP-SM), weakly cemented fine sand with silt (SP-SM, HARDPAN) and sandy shell to the deepest boring termination depth of approximately 60 feet below existing grade.

3.2 GROUNDWATER

The groundwater level was encountered at depths varying between approximately 2.3 and 7.5 feet below grade. The depth of the measured groundwater level is noted on the Subsurface Profiles. It should be anticipated the groundwater level will fluctuate due to seasonal climatic variations, surface water runoff patterns, construction operations, and other interrelated factors

We recommend positive drainage be established and maintained on the site during construction. We further recommend permanent measures be constructed to maintain positive drainage from the site throughout the life of the project.

4.0 FOUNDATION RECOMMENDATIONS

4.1 GENERAL

The following recommendations are made based upon a review of the attached soil test data, our understanding of the proposed construction, and experience with similar projects and subsurface conditions. If the structural loadings, construction locations, or grading information change from those discussed previously, we request the opportunity to review and possibly amend our recommendations with respect to those changes.

As presented in the subsurface profiles, very loose sandy soils were observed in the upper approximate 10 feet at Boring Location B-5. To preclude excessive settlement to the structure, we recommend the soils be improved by additional compactive effort. We recommend the upper 2 to 3 feet of the existing soils be removed within the south east corner of the Biological Nutrient Removal Tank and the exposed surface then be compacted with a heavy tracked dozer. The soils removed can then be replaced in compacted lifts in accordance with Section 4.3. With these recommendations we anticipate this will improve the upper 4 to 5 feet of the existing profile. If a significant cut occurs within the proposed tank area, then soil improvement will likely not be required. UES should be provided with the proposed grading plan to evaluate the necessity of the recommended improvements. Also, UES should be contacted during this portion of the site work to delineate the very loose soil zone.

4.2 STRUCTURE FOUNDATIONS

4.2.1 Bearing Pressure

The maximum allowable net soil bearing pressure for shallow foundations should not exceed 2,500 pounds per square foot (psf). Net bearing pressure is defined as the soil bearing pressure at the base of the foundation in excess of the natural overburden pressure. The foundations should be designed based upon the maximum load that could be imposed by all loading conditions.

4.2.2 Foundation Size

The minimum widths recommended for any isolated column footing and continuous wall footings are 24 inches and 18 inches, respectively. Even though the maximum allowable soil bearing pressure may not be achieved, these width recommendations should control the size of the foundations.

4.2.3 Bearing Depth

The exterior foundations should bear at a depth of at least 18 inches below the exterior final grades and the interior footings should bear at a depth of at least 18 inches below the finish floor elevation to provide confinement to the bearing level soils. We recommend stormwater and surface water be diverted away from the building exterior, both during and after construction, to reduce the possibility of erosion beneath the exterior footings.

4.2.4 Bearing Material

The foundations may bear on either the compacted suitable natural soils or compacted structural fill. The bearing level soils, after compaction, should exhibit densities of at least 95 percent of the maximum dry density of the bearing soils as determined by ASTM D-1557 (Modified Proctor), to the depth described subsequently in the Site Preparation section of the report. In addition to compaction, the bearing soils must exhibit stability and be free of “pumping” conditions.

4.2.5 Settlement Estimates

Post-construction settlement of the structures will be influenced by several interrelated factors, such as (1) subsurface stratification and strength/compressibility characteristics of the bearing soils; (2) footing size, bearing level, applied loads, and resulting bearing pressures beneath the foundations; (3) site preparation and earthwork construction techniques used by the contractor, and (4) external factors, including but not limited to vibration from offsite sources and groundwater fluctuations beyond those normally anticipated for the naturally-occurring site and soil conditions which are present.

Our settlement estimates for the structures are based upon the use of successful adherence to the site preparation recommendations presented later in this report. Any deviation from these recommendations could result in an increase in the estimated post-construction settlement of the structures.

Due to the nature of the surficial soils, following the compaction operations, we expect a significant portion of settlement to be elastic in nature. This settlement is expected to occur relatively quickly, upon application of the loads, during and immediately following construction. Using the recommended maximum bearing pressure, the assumed maximum structural loads, and the field test data which we have correlated to the strength and compressibility characteristics of the subsurface soils, we estimate the total settlements of the structures to be less than one inch.

Differential settlement results from differences in applied bearing pressures and the variations in the compressibility characteristics of the subsurface soils. Based on the subsurface conditions as determined by our borings and required improvement, it is anticipated that differential settlements will be within tolerable limits.

4.3 SITE PREPARATION FOR SHALLOW FOUNDATIONS

We recommend the following site preparation procedures for the structure areas:

1. Prior to construction, the location of existing underground utility lines within the construction area should be established. Provisions should then be made to relocate interfering utilities to appropriate locations. It should be noted that if underground pipes are not properly removed or plugged, they may serve as conduits for subsurface erosion which may subsequently lead to excessive settlement of the overlying structures.

2. Strip the proposed construction limits of all debris, grass, roots, topsoil, asphalt and other deleterious materials within and 5 feet beyond the perimeter of the proposed structure. Expect initial clearing and grubbing to depths of approximately 6 to 12 inches.

3. Due to the construction of the pump station and flow splitter box to depths on the order of 25 feet below existing grade, temporary groundwater control measures to dewater the area to facilitate the over-excavation and backfilling processes will be necessary. We recommend implementing temporary groundwater control measures if the groundwater is within two feet of the required depth of excavation at the time of construction. Dewatering measures should be the responsibility of the contractor. We recommend the groundwater control measures remain in-place until compaction of the existing soils is completed and backfilling has reached a height of 2 feet above the groundwater level at the time of construction. The site should be graded to direct surface water runoff from the construction area

4. Excavation work will be required to meet OSHA requirements. Either a braced sheet pile structure or excavation with temporary slopes cut back at 1.5 horizontal to 1 vertical (1.5H:1V) may be used depending on the specific project requirements. The 1.5H:1V slopes are contingent upon the dewatering system adequately controlling slope groundwater seepage. Sheet piling, if required, should be designed in accordance with OSHA requirements by a Florida Registered Professional Engineer.

   Compact the exposed surface using tracked dozer or vibratory equipment. **We recommend that vibratory equipment be operated in static mode within 75 feet of any existing structures.** The upper one foot of soils below the exposed surface within the structure areas should be improved to achieve a minimum compaction requirement of 95% of the Modified Proctor Test (ASTM D-1557). As discussed, we recommend the upper two feet of soils below the exposed surface (after the upper two to three feet are removed) be compacted to 95% of the Modified Proctor Test (ASTM D-1557) within the south east portion of the Biological Nutrient Removal Tank. We recommend the compacted soils exhibit moisture content within 2 percent of the soils optimum moisture content as determined by the Modified Proctor Test (ASTM D-1557). Should the soils experience pumping and soil strength loss during the compaction operations, compaction work should be immediately terminated and (1) the disturbed soils removed and backfilled with dry structural fill soils which are then compacted, or (2) the excess moisture content within the disturbed soils allowed to dissipate before compacting.

5. Test the compacted surface for compliance at a minimum of one location per 2,500 square feet within the building area, or at a minimum of four locations.

6. Place fill material, as required. The fill should consist of "clean," fine sand with less than 5 percent soil fines. You may use fill materials with soil fines between 5 percent and 10 percent, but strict moisture control may be required. Place fill in uniform 8 to 12-inch loose lifts and compact each lift to a minimum density of 95 percent of the Modified Proctor maximum dry density. We recommend the compacted soils exhibit moisture content within

1509

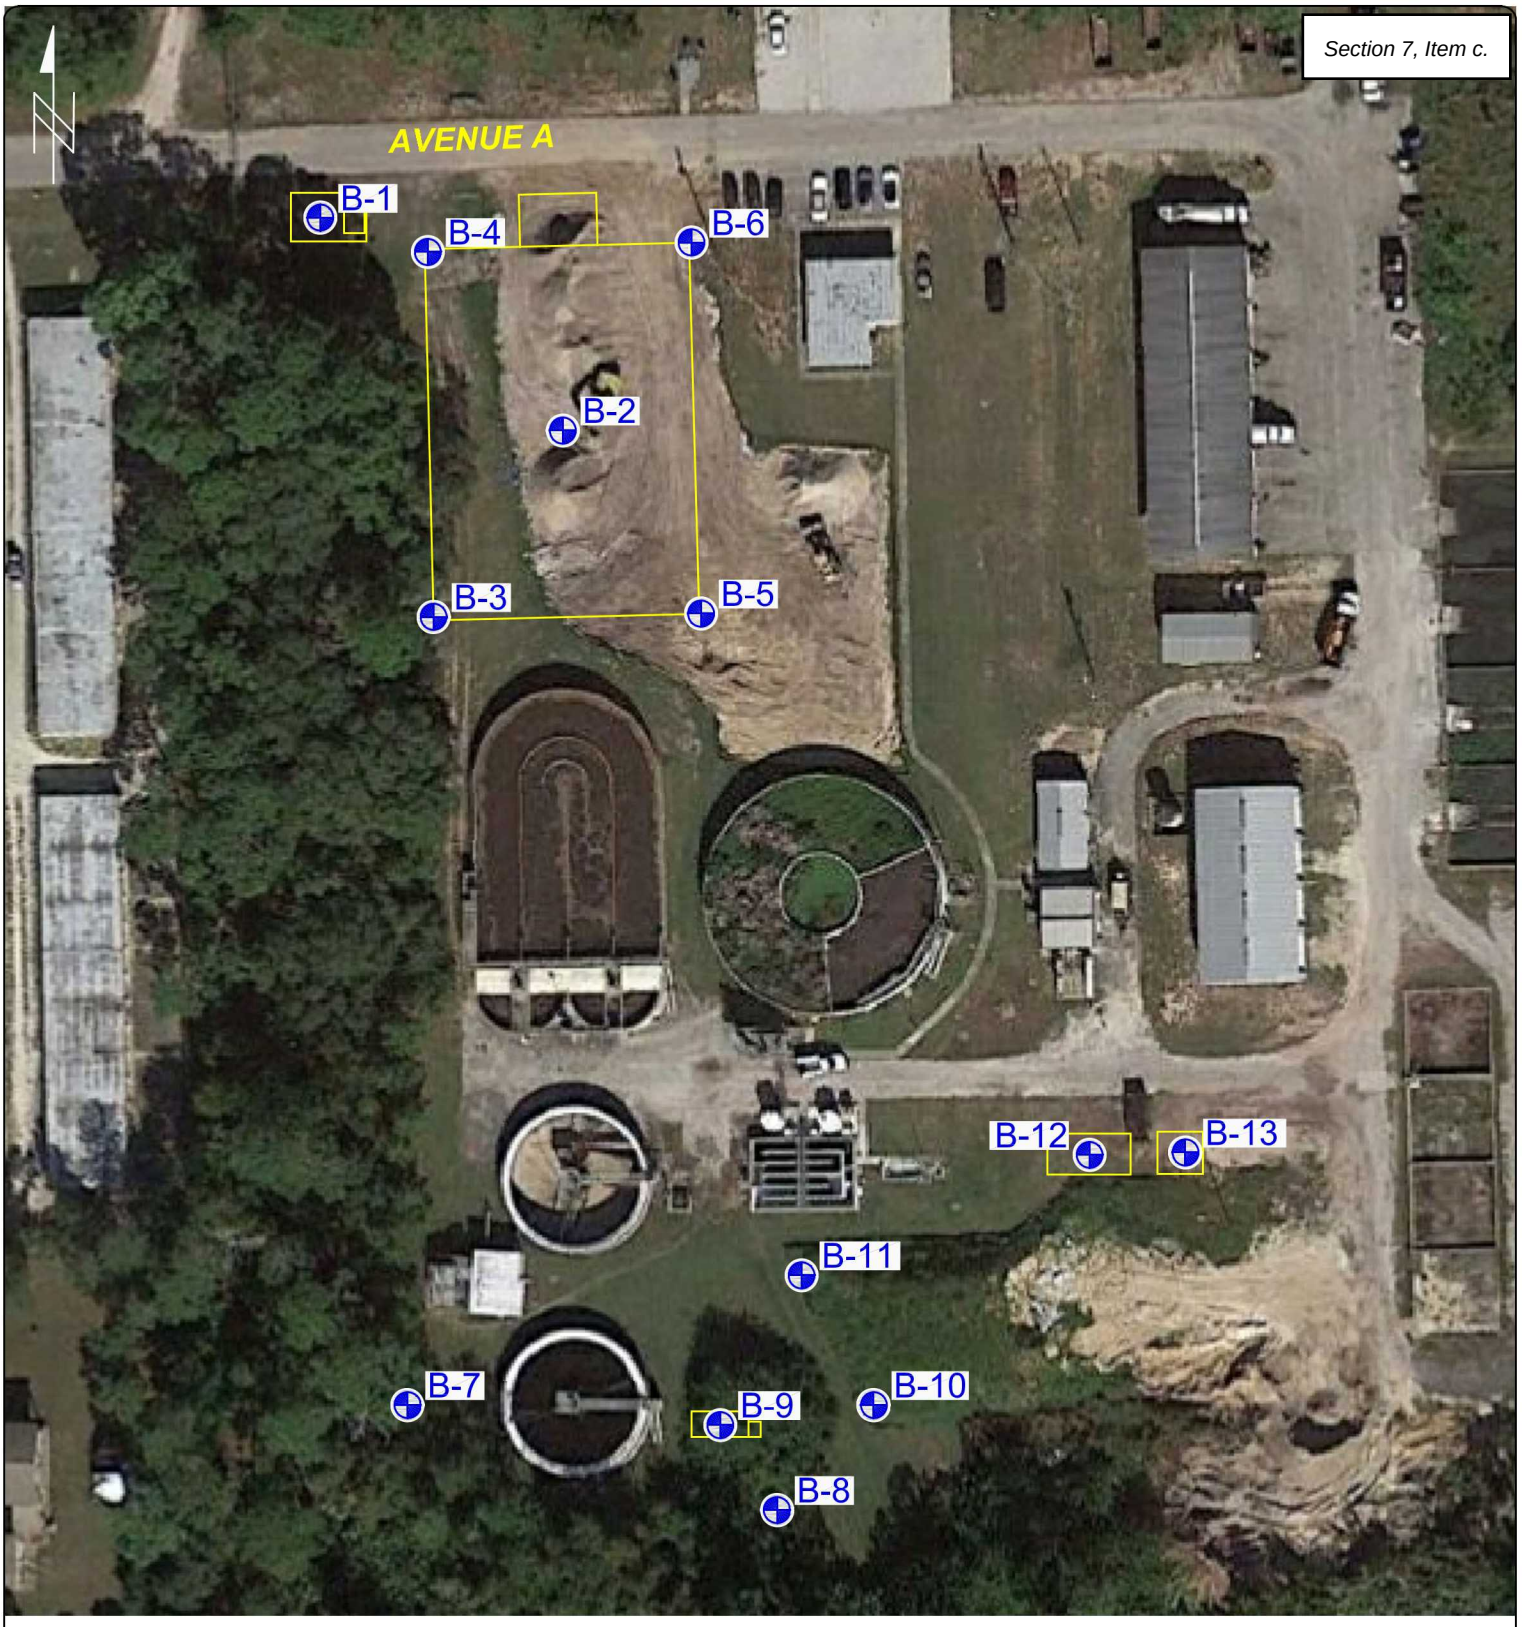
2 percent of the soils optimum moisture content as determined by the Modified Proctor Test (ASTM D-1557). If light compaction equipment is used, we recommend the lift thickness be reduced to 8 inch thick lifts.

7. Perform compliance tests within the backfill and fill soils at a minimum of one location per 2,500 square feet per lift (minimum four locations).

8. Compact and test footing cuts for compaction to a depth of two feet below bearing levels. We recommend that you test one out of every four (25 percent) column footings and perform one test per every 50 linear feet of wall footing. Compaction operations in confined areas, such as footing excavations, can best be performed with a lightweight vibratory sled or other hand-held compaction equipment.

5.0 CONSTRUCTION RELATED SERVICES

We recommend the owner retain Universal Engineering Sciences to perform construction materials tests and observations on this project. Field tests and observations include verification of foundation subgrades by monitoring filling operations and performing quality assurance tests on the placement of compacted natural soils and structural fill. We can also perform concrete testing, pavement section testing, structural steel testing and other construction materials testing services.



The geotechnical engineering design does not end with the advertisement of the construction documents. The design is an on-going process throughout construction. Because of our familiarity with the site conditions and the intent of the engineering design, we are most qualified to address problems that might arise during construction in a timely and cost-effective manner.

6.0 LIMITATIONS

During the early stages of most construction projects, geotechnical issues not addressed in this report may arise. Because of the natural limitations inherent in working with the subsurface, it is not possible for a geotechnical engineer to predict and address all possible problems. An Association of Engineering Firms Practicing in the Geosciences (ASFE) publication, "Important Information about Your Geotechnical Engineering Report" appears in Appendix C, and will help explain the nature of geotechnical issues. Further, we present documents in Appendix C: Constraints and Restrictions, to bring to your attention the potential concerns and the basic limitations of a typical geotechnical report.

		SANDS WITH FINES	SM**	Silty sands, sand-silt mixtures
			SC**	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS 50% or more passes No. 200 sieve*	SILTS AND CLAYS Liquid limit 50% or less		ML	Inorganic silts, very fine sands, rock flour, silty or clayey fine sands
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
			OL	Organic silts and organic silty clays of low plasticity
	SILTS AND CLAYS Liquid limit greater than 50%		MH	Inorganic silts, micaceous or diatomaceous fine sands or silts, elastic silts
			CH	Organic clays or high plasticity, fat clays
			OH	Organic clays of medium to high plasticity
			PT	Peat, muck and other highly organic soils

* Based on the material passing the 3-in. (75 mm) sieve.
** Use dual symbol (such as, SP-SM and SP-SC) for soil with more than 5% but less than 12% passing through No. 200 sieve.

MODIFIERS

These modifiers provide our estimate of the amount of minor constituents (SILT or CLAY sized particles) in the soil sample.
Trace - 5% or less
With SILT or with CLAY - 6% to 11%
SILTY or CLAYEY - 12% to 30%
Very SILTY or Very CLAYEY - 31% to 50%

These modifiers provide our estimate of the amount of organic components in the soil sample.
Trace - 1% to 2%
Few - 3% to 4%
Some - 5% to 8%
Many - Greater than 8%

These modifiers provide our estimate of the amount of other components (Shell, Gravel, Etc.) in the soil sample
Trace - 5% or less
Few - 6% to 12%
Some - 13% to 30%
Many - 31% to 50%

APPENDIX B

LABORATORY TESTING PROCEDURES

DESCRIPTION OF LABORATORY TESTING PROCEDURES

LABORATORY PERMEABILITY TEST

The laboratory permeability test is a Falling Head Test that is performed on soil samples recovered from this site. The data recovered from this test are used to calculate Darcy's Coefficient of Permeability (k) of the soil.

WASH 200 TEST

The Wash 200 test is performed by passing a representative soil sample over a No. 200 sieve and rinsing with water. The percentage of the soil grains passing this sieve is then calculated.

ORGANIC CONTENT TESTS

The organic content test is performed by weighing a sample before and after placing in a high temperature oven which burns the organic material in the sample. The percent of organic material by weight is then calculated.

MOISTURE CONTENT DETERMINATION ASTM D-2216

Moisture content is the ratio of the weight of water to the dry weight of soil. Moisture content is measured by drying a sample at 105 degrees Celsius. The moisture content is expressed as a percent of the oven dried soil mass.

ATTERBERG LIMITS

The Atterberg Limits consist of the Liquid Limit (LL) and the Plastic Limit (PL). The LL and PL were determined in general accordance with the latest revision of ASTM D-4318. The LL is the water content of the material denoting the boundary between the liquid and plastic states. The PL is the water content denoting the boundary between the plastic and semi-solid states. The Plasticity Index (PI) is the range of water content over which a soil behaves plastically and is denoted numerically by as the difference between the LL and the PL. The water content of the sample tested was determined in general accordance with the latest revision of ASTM D-2216. The water content is defined as the ratio of “pore” or “free” water in a given mass of material to the mass of solid material particles.

CONSOLIDATION TESTING

A single selected portion of the undisturbed sample was extruded from the 3-inch diameter sample tube for consolidation testing. The selected sample was trimmed and confined into a stainless steel disc having a diameter of 2.5 inches and a height of 1 inch. The disc was then “sandwiched” between 2 porous stones, saturated and subjected to incrementally increasing loads. The resulting deformation of the sample within the steel disc was measured using a micrometer gauge.

APPENDIX C

GENERAL CONDITIONS
CONSTRAINTS AND RESTRICTIONS AND
IMPORTANT INFORMATION ABOUT YOUR
GEOTECHNICAL ENGINEERING REPORT

Universal Engineering Sciences, LLC
GENERAL CONDITIONS

SECTION 1: RESPONSIBILITIES

1.1 *Universal Engineering Sciences, LLC, Universal Engineering Inspections, LLC, and GFA International Inc. ("UES"), have the responsibility for providing the services described under the Scope of Services section. The work is to be performed according to accepted standards of care and is to be completed in a timely manner. The term "UES" as used herein includes all of Universal Engineering Sciences, LLC, Universal Engineering Inspections, LLC, GFA International, Inc., its' agents, employees, professional staff, and subcontractors.*

1.2 The Client or a duly authorized representative is responsible for providing UES with a clear understanding of the project nature and scope. The Client shall supply UES with sufficient and adequate information, including, but not limited to, maps, site plans, reports, surveys and designs, to allow UES to properly complete the specified services. The Client shall also communicate changes in the nature and scope of the project as soon as possible during performance of the work so that the changes can be incorporated into the work product.

1.3 The Client acknowledges that UES's responsibilities in providing the services described under the Scope of Services section is limited to those services described therein, and the Client hereby assumes any collateral or affiliated duties necessitated by or for those services. Such duties may include, but are not limited to, reporting requirements imposed by any third party such as federal, state, or local entities, the provision of any required notices to any third party, or the securing of necessary permits or permissions from any third parties required for UES's provision of the services so described, unless otherwise agreed upon by both parties.

1.4 Universal will not be responsible for scheduling our services and will not be responsible for tests or inspections that are not performed due to a failure to schedule our services on the project or any resulting damages.

1.5 **PURSUANT TO FLORIDA STATUTES §558.0035, ANY INDIVIDUAL EMPLOYEE OR AGENT OF UES MAY NOT BE HELD INDIVIDUALLY LIABLE FOR NEGLIGENCE.**

SECTION 2: STANDARD OF CARE

2.1 Services performed by UES under this Agreement will be conducted in a manner consistent with the level of care and skill ordinarily exercised by members of UES's profession practicing contemporaneously under similar conditions in the locality of the project. No other warranty, express or implied, is made.

2.2 The Client recognizes that subsurface conditions may vary from those observed at locations where borings, surveys, or other explorations are made, and that site conditions may change with time. Data, interpretations, and recommendations by UES will be based solely on information available to UES at the time of service. UES is responsible for those data, interpretations, and recommendations, but will not be responsible for other parties' interpretations or use of the information developed.

2.3 Execution of this document by UES is not a representation that UES has visited the site, become generally familiar with local conditions under which the services are to be performed, or correlated personal observations with the requirements of the Scope of Services. It is the Client's responsibility to provide UES with all information necessary for UES to provide the services described under the Scope of Services, and the Client assumes all liability for information not provided to UES that may affect the quality or sufficiency of the services so described.

2.4 Should UES be retained to provide threshold inspection services under Florida Statutes §553.79, Client acknowledges that UES's services thereunder do not constitute a guarantee that the construction in question has been properly designed or constructed, and UES's services do not replace any of the obligations or liabilities associated with any architect, contractor, or structural engineer. Therefore it is explicitly agreed that the Client will not hold UES responsible for the proper performance of service by any architect, contractor, structural engineer or any other entity associated with the project.

SECTION 3: SITE ACCESS AND SITE CONDITIONS

3.1 Client will grant or obtain free access to the site for all equipment and personnel necessary for UES to perform the work set forth in this Agreement. The Client will notify any and all possessors of the project site that Client has granted UES free access to the site. UES will take reasonable precautions to minimize damage to the site, but it is understood by Client that, in the normal course of work, some damage may occur, and the correction of such damage is not part of this Agreement unless so specified in the Proposal.

3.2 The Client is responsible for the accuracy of locations for all subterranean structures and utilities. UES will take reasonable precautions to avoid known subterranean structures, and the Client waives any claim against UES, and agrees to defend, indemnify, and hold UES harmless from any claim or liability for injury or loss, including costs of defense, arising from damage done to subterranean structures and utilities not identified or accurately located. In addition, Client agrees to compensate UES for any time spent or expenses incurred by UES in defense of any such claim with compensation to be based upon UES's prevailing fee schedule and expense reimbursement policy.

SECTION 4: SAMPLE OWNERSHIP AND DISPOSAL

4.1 Soil or water samples obtained from the project during performance of the work shall remain the property of the Client.

4.2 UES will dispose of or return to Client all remaining soils and rock samples 60 days after submission of report covering those samples. Further storage or transfer of samples can be made at Client's expense upon Client's prior written request.

4.3 Samples which are contaminated by petroleum products or other chemical waste will be returned to Client for treatment or disposal, consistent with all appropriate federal, state, or local regulations.

SECTION 5: BILLING AND PAYMENT

5.1 UES will submit invoices to Client monthly or upon completion of services. Invoices will show charges for different personnel and expense classifications.

5.2 Payment is due 30 days after presentation of invoice and is past due 31 days from invoice date. Client agrees to pay a finance charge of one and one-half percent (1 ½ %) per month, or the maximum rate allowed by law, on past due accounts.

5.3 If UES incurs any expenses to collect overdue billings on invoices, the sums paid by UES for reasonable attorneys' fees, court costs, UES's time, UES's expenses, and interest will be due and owing by the Client.

SECTION 6: OWNERSHIP AND USE OF DOCUMENTS

6.1 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by UES, as instruments of service, shall remain the property of UES.

6.2 Client agrees that all reports and other work furnished to the Client or his agents, which are not paid for, will be returned upon demand and will not be used by the Client for any purpose.

6.3 UES will retain all pertinent records relating to the services performed for a period of five years following submission of the report, during which period the records will be made available to the Client at all reasonable times.

6.4 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by UES, are prepared for the sole and exclusive use of Client, and may not be given to any other party or used or relied upon by any such party without the express written consent of UES.

SECTION 7: DISCOVERY OF UNANTICIPATED HAZARDOUS MATERIALS

7.1 Client warrants that a reasonable effort has been made to inform UES of known or suspected hazardous materials on or near

7.2 Under this agreement, the term hazardous materials include hazardous materials (40 CFR 172.01), hazardous wastes (40 CFR 261.2), hazardous substances (40 CFR 300.6), petroleum products, polychlorinated biphenyls, and asbestos.

7.3 Hazardous materials may exist at a site where there is no reason to believe they could or should be present. UES and Client agree that the discovery of unanticipated hazardous materials constitutes a changed condition mandating a renegotiation of the scope of work. UES and Client also agree that the discovery of unanticipated hazardous materials may make it necessary for UES to take immediate measures to protect health and safety. Client agrees to compensate UES for any equipment decontamination or other costs incident to the discovery of unanticipated hazardous waste.

7.4 UES agrees to notify Client when unanticipated hazardous materials or suspected hazardous materials are encountered. Client agrees to make any disclosures required by law to the appropriate governing agencies. Client also agrees to hold UES harmless for any and all consequences of disclosures made by UES which are required by governing law. In the event the project site is not owned by Client, Client recognizes that it is the Client's responsibility to inform the property owner of the discovery of unanticipated hazardous materials or suspected hazardous materials.

7.5 Notwithstanding any other provision of the Agreement, Client waives any claim against UES, and to the maximum extent permitted by law, agrees to defend, indemnify, and save UES harmless from any claim, liability, and/or defense costs for injury or loss arising from UES's discovery of unanticipated hazardous materials or suspected hazardous materials including any costs created by delay of the project and any cost associated with possible reduction of the property's value. Client will be responsible for ultimate disposal of any samples secured by UES which are found to be contaminated.

SECTION 8: RISK ALLOCATION

8.1 Client agrees that UES's liability for any damage on account of any breach of contract, error, omission or other professional negligence will be limited to a sum not to exceed $50,000 or UES's fee, whichever is greater. If Client prefers to have higher limits on contractual or professional liability, UES agrees to increase the limits up to a maximum of $1,000,000.00 upon Client's written request at the time of accepting our proposal provided that Client agrees to pay an additional consideration of four percent of the total fee, or $400.00, whichever is greater. The additional charge for the higher liability limits is because of the greater risk assumed and is not strictly a charge for additional professional liability insurance.

SECTION 9: INSURANCE

9.1 UES represents and warrants that it and its agents, staff and consultants employed by it, is and are protected by worker's compensation insurance and that UES has such coverage under public liability and property damage insurance policies which UES deems to be adequate. Certificates for all such policies of insurance shall be provided to Client upon request in writing. Within the limits and conditions of such insurance, UES agrees to indemnify and save Client harmless from and against loss, damage, or liability arising from negligent acts by UES, its agents, staff, and consultants employed by it. UES shall not be responsible for any loss, damage or liability beyond the amounts, limits, and conditions of such insurance or the limits described in Section 8, whichever is less. The Client agrees to defend, indemnify and save UES harmless for loss, damage or liability arising from acts by Client, Client's agent, staff, and other UESs employed by Client.

SECTION 10: DISPUTE RESOLUTION

10.1 All claims, disputes, and other matters in controversy between UES and Client arising out of or in any way related to this Agreement will be submitted to alternative dispute resolution (ADR) such as mediation or arbitration, before and as a condition precedent to other remedies provided by law, including the commencement of litigation.

10.2 If a dispute arises related to the services provided under this Agreement and that dispute requires litigation instead of ADR as provided above, then:

(a) the claim will be brought and tried in judicial jurisdiction of the court of the county where UES's principal place of business is located and Client waives the right to remove the action to any other county or judicial jurisdiction, and

(b) The prevailing party will be entitled to recovery of all reasonable costs incurred, including staff time, court costs, attorneys' fees, and other claim related expenses.

SECTION 11: TERMINATION

11.1 This agreement may be terminated by either party upon seven (7) days written notice in the event of substantial failure by the other party to perform in accordance with the terms hereof. Such termination shall not be effective if that substantial failure has been remedied before expiration of the period specified in the written notice. In the event of termination, UES shall be paid for services performed to the termination notice date plus reasonable termination expenses.

11.2 In the event of termination, or suspension for more than three (3) months, prior to completion of all reports contemplated by the Agreement, UES may complete such analyses and records as are necessary to complete its files and may also complete a report on the services performed to the date of notice of termination or suspension. The expense of termination or suspension shall include all direct costs of UES in completing such analyses, records and reports.

SECTION 12: ASSIGNS

12.1 Neither the Client nor UES may delegate, assign, sublet or transfer their duties or interest in this Agreement without the written consent of the other party.

SECTION 13. GOVERNING LAW AND SURVIVAL

13.1 The laws of the State of Florida will govern the validity of these Terms, their interpretation and performance.

13.2 If any of the provisions contained in this Agreement are held illegal, invalid, or unenforceable, the enforceability of the remaining provisions will not be impaired. Limitations of liability and indemnities will survive termination of this Agreement for any cause.

SECTION 14. INTEGRATION CLAUSE

14.1 This Agreement represents and contains the entire and only agreement and understanding among the parties with respect to the subject matter of this Agreement, and supersedes any and all prior and contemporaneous oral and written agreements, understandings, representations, inducements, promises, warranties, and conditions among the parties. No agreement, understanding, representation, inducement, promise, warranty, or condition of any kind with respect to the subject matter of this Agreement shall be relied upon by the parties unless expressly incorporated herein.

14.2 This Agreement may not be amended or modified except by an agreement in writing signed by the party against whom the enforcement of any modification or amendment is sought.

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

Geotechnical Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a civil engineer may not fulfill the needs of a constructor — a construction contractor — or even another civil engineer. Because each geotechnical- engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. No one except you should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one — not even you* — should apply this report for any purpose or project except the one originally contemplated.

Read the Full Report

Serious problems have occurred because those relying on a geotechnical-engineering report did not read it all. Do not rely on an executive summary. Do not read selected elements only.

Geotechnical Engineers Base Each Report on a Unique Set of Project-Specific Factors

Geotechnical engineers consider many unique, project-specific factors when establishing the scope of a study. Typical factors include: the client's goals, objectives, and risk-management preferences; the general nature of the structure involved, its size, and configuration; the location of the structure on the site; and other planned or existing site improvements, such as access roads, parking lots, and underground utilities. Unless the geotechnical engineer who conducted the study specifically indicates otherwise, do not rely on a geotechnical-engineering report that was:

- not prepared for you;
- not prepared for your project;
- not prepared for the specific site explored; or
- completed before important project changes were made.

Typical changes that can erode the reliability of an existing geotechnical-engineering report include those that affect:

- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes—even minor ones—and request an assessment of their impact. *Geotechnical engineers cannot accept responsibility or liability for problems that occur because their reports do not consider developments of which they were not informed.*

Subsurface Conditions Can Change

A geotechnical-engineering report is based on conditions that existed at the time the geotechnical engineer performed the study. *Do not rely on a geotechnical-engineering report whose adequacy may have been affected by*: the passage of time; man-made events, such as construction on or adjacent to the site; or natural events, such as floods, droughts, earthquakes, or groundwater fluctuations. *Contact the geotechnical engineer before applying this report to determine if it is still reliable.* A minor amount of additional testing or analysis could prevent major problems.

Most Geotechnical Findings Are Professional Opinions

Site exploration identifies subsurface conditions only at those points where subsurface tests are conducted or samples are taken. Geotechnical engineers review field and laboratory data and then apply their professional judgment to render an opinion about subsurface conditions throughout the site. Actual subsurface conditions may differ — sometimes significantly — from those indicated in your report. Retaining the geotechnical engineer who developed your report to provide geotechnical-construction observation is the most effective method of managing the risks associated with unanticipated conditions.

A Report's Recommendations Are Not Final

Do not overrely on the confirmation-dependent recommendations included in your report. *Confirmation-dependent recommendations are not final,* because geotechnical engineers develop them principally from judgment and opinion. Geotechnical engineers can finalize their recommendations *only* by observing actual subsurface conditions revealed during construction. *The geotechnical engineer who developed your report cannot assume responsibility or liability for the report's confirmation-dependent recommendations if that engineer does not perform the geotechnical-construction observation required to confirm the recommendations' applicability.*

A Geotechnical-Engineering Report Is Subject to Misinterpretation

Other design-team members' misinterpretation of geotechnical-engineering reports has resulted in costly

problems. Confront that risk by having your geotechnical engineer confer with appropriate members of the design team after submitting the report. Also retain your geotechnical engineer to review pertinent elements of the design team's plans and specifications. Constructors can also misinterpret a geotechnical-engineering report. Confront that risk by having your geotechnical engineer participate in prebid and preconstruction conferences, and by providing geotechnical construction observation.

Do Not Redraw the Engineer's Logs

Geotechnical engineers prepare final boring and testing logs based upon their interpretation of field logs and laboratory data. To prevent errors or omissions, the logs included in a geotechnical-engineering report should *never* be redrawn for inclusion in architectural or other design drawings. Only photographic or electronic reproduction is acceptable, *but recognize that separating logs from the report can elevate risk.*

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can make constructors liable for unanticipated subsurface conditions by limiting what they provide for bid preparation. To help prevent costly problems, give constructors the complete geotechnical-engineering report, *but* preface it with a clearly written letter of transmittal. In that letter, advise constructors that the report was not prepared for purposes of bid development and that the report's accuracy is limited; encourage them to confer with the geotechnical engineer who prepared the report (a modest fee may be required) and/or to conduct additional study to obtain the specific types of information they need or prefer. A prebid conference can also be valuable. *Be sure constructors have sufficient time* to perform additional study. Only then might you be in a position to give constructors the best information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions.

Read Responsibility Provisions Closely

Some clients, design professionals, and constructors fail to recognize that geotechnical engineering is far less exact than other engineering disciplines. This lack of understanding has created unrealistic expectations that have led to disappointments, claims, and disputes. To help reduce the risk of such outcomes, geotechnical engineers commonly include a variety of explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely.* Ask questions. Your geotechnical engineer should respond fully and frankly.

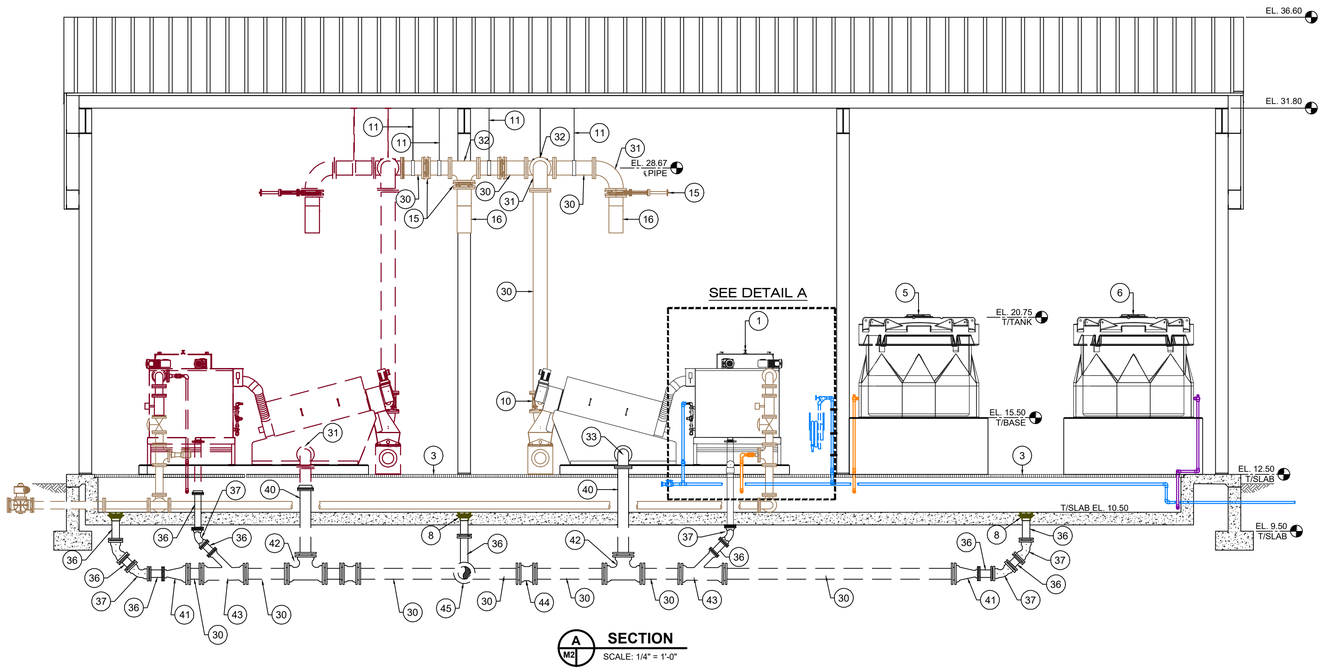
Environmental Concerns Are Not Covered

The equipment, techniques, and personnel used to perform an *environmental* study differ significantly from those used to perform a *geotechnical* study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated environmental problems have led to numerous project failures.* If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. *Do not rely on an environmental report prepared for someone else.*

Obtain Professional Assistance To Deal with Mold

Diverse strategies can be applied during building design, construction, operation, and maintenance to prevent significant amounts of mold from growing on indoor surfaces. To be effective, all such strategies should be devised for the *express purpose* of mold prevention, integrated into a comprehensive plan, and executed with diligent oversight by a professional mold-prevention consultant. Because just a small amount of water or moisture can lead to the development of severe mold infestations, many mold- prevention strategies focus on keeping building surfaces dry. While groundwater, water infiltration, and similar issues may have been addressed as part of the geotechnical- engineering study whose findings are conveyed in this report, the geotechnical engineer in charge of this project is not a mold prevention consultant; *none of the services performed in connection with the geotechnical engineer's study were designed or conducted for the purpose of mold prevention. Proper implementation of the recommendations conveyed in this report will not of itself be sufficient to prevent mold from growing in or on the structure involved.*

Rely, on Your GBC-Member Geotechnical Engineer for Additional Assistance



Membership in the Geotechnical Business Council of the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project. Confer with you GBC-Member geotechnical engineer for more information.

STAFF REPORT

City Commission Regular Meeting

February 13, 2025

To: Elected Officials

From: Dale L. Martin, City Manager

Date: February 7, 2025

Item Name: Resolution 2025-09. A Resolution by the City Commission of the City of Flagler Beach, Florida to close out the Beach Management Reserve and move funds to the Dune Protection Reserve and redesignate the Dune Protection Reserve as the Dune Walkover Reserve; providing for conflict and an effective date.

Background: The Beach Management Reserve was a reserve that was set up several years ago for a beach study that was conducted. The remaining balance in the reserve is $2,582.00. Staff is requesting to close the Beach Management Reserve and transfer the funds to the Dune Protection Reserve.

Additionally, the general intent of the of the Dune Protection Reserve was to provide funding to repair/replace dune walkovers since the City cannot obtain insurance for the dune walkovers. Staff recommends that the Dune Protection Reserve may redesignated as the Dune Walkover Reserve to more clearly identify the purpose and use of the reserve funds.

Fiscal Impact: Reserve balances at conclusion of FY 2023/2024: Beach Management Reserve, $2,582; Dune Protection Reserve, $120,000.

Staff Recommendation: Staff recommends approval of Resolution 2025-09.

Attachment:

Resolution 2025-09

RESOLUTION 2025-09

A RESOLUTION BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, FLORIDA TO CLOSE OUT THE BEACH MANAGEMENT RESERVE AND MOVE FUNDS TO THE DUNE PROTECTION RESERVE AND REDESIGNATE THE DUNE PROTECTION RESERVE AS THE DUNE WALKOVER RESERVE; PROVIDING FOR CONFLICT AND AN EFFECTIVE DATE.

WHEREAS, the City previously created a Beach Management Reserve, appropriating funds to undertake a beach study; and,

WHEREAS, said beach study was conducted and completed by Daytona State College in 2013 ; and,

WHEREAS, City staff seeks to reduce the number of funds and reserves (especially those that are dormant) to provide for more efficient financial reporting;

NOW THEREFORE BE IT RESOLVED BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, AS FOLLOWS:

SECTION 1. The City of Flagler Beach City Commission authorizes the Finance Director to transfer the current funds in the Beach Management Reserve to the Dune Protection Reserve.

FUND	DESCRIPTION	FY25 RESERVE BALANCE AS OF JANUARY 2025
GENERAL	**BEACH MANAGEMENT RESERVE**	**2,582.00**
GENERAL	**BEACH MANAGEMENT RESERVE**	**(2,582.00)**
GENERAL	**DUNE PROTECTION RESERVE**	**120,000.00**
GENERAL	**DUNE PROTECTION RESERVE**	**122,582.00**

SECTION 2. The City Commission approves the redesignation of the Dune Protection Reserve to the Dune Walkover Reserve, clarifying the intent and the use of the reserve funds for dune walkover repair and replacement.

SECTION 3. All resolutions or parts of resolutions in conflict herewith are hereby repealed.

SECTION 4. This Resolution shall become effective immediately upon passage as provided by law.

PASSED AND ADOPTED THIS 13th DAY OF FEBUARY, 2025.

CITY OF FLAGLER BEACH, FLORIDA
CITY COMMISSION

City Commission Regular Meeting

February 13, 2025

To: Elected Officials

From: Dale L. Martin, City Manager

Date: February 7, 2025

Item Name: Resolution 2025 - 10. A Resolution by the City Commission of the City of Flagler Beach, Florida, to award a contract to England-Thims & Miller, Inc. in an amount not to exceed $826,586.66 to be the Construction Manager Adviser (CMA) and serve as the City's on-site representative overseeing the construction of the Flagler Beach Pier; providing for conflict and an effective date.

Background: Flagler Beach Pier is located at 215 South Ocean Shore Boulevard in Flagler Beach, Florida. The project consists of the demolition and reconstruction of the historic Flagler Beach Pier that was initially built in 1928. The pier has suffered significant damage due to several storms and hurricanes and was deemed inoperable in 2022.

The scope of this project is complicated and likely requires a full-time, on-site representative (beyond the City staff's capacity). Throughout the project, the Construction Manager Adviser (CMA) will provide the City with professional construction management adviser services and represent the City's interests in completing the project on time, within budget, and as planned with a minimum of difficulties. The American Institute of Architects Document A133-2009 (the Form Contract) will form the basis of the agreement for the CMA Services to be entered into for the project.

Since the City does not have the personnel to serve in this capacity, the City published a Request for Qualifications for qualified CMAs. The submissions were due January 15 and the City received three responsive submissions. A Selection Committee composed of the City Engineer and two additional staff reviewed and scored the submissions in accordance with the procedure originally described in the Request for Qualifications.

Fiscal Impact: Funding for this project will be drawn from the City's Unrestricted Reserves and then reimbursed (75% Federal, 12.5% State).

Staff Recommendation: Staff recommends approval of Resolution 2025-10.

MEMO

DATE: February 03, 2025
TO: Bid Package Holders City of Flagler Beach RFQ NO. FB-242911 Construction Manager Adviser for the construction of Flagler Beach Fishing Pier replacement City Project No. 260
FROM: Penny Overstreet, City Clerk
SUBJECT: Recommendation to award Bid

Memo containing the recommendation of award for the Construction Manager Adviser for the construction of Flagler Beach Fishing Pier replacement City Project No. 260, RFQ NO. FB-242911.
The advertisement for the Request for Qualifications on the above referenced project ran as a legal ad one time in a newspaper of general circulation, the Daytona Beach News Journal, on Tuesday, December 17, 2024, as well as on the City's website, and Demand Star. The number of vendors the City directed the RFQ to was sixty-two of those recipients three (3) responded with qualifications. After a detailed review by Staff of the respondents' qualifications packages and supporting documents, Staff recommends the City Commission award the Project to England-Thims & Miller, Inc. in an amount not to exceed $ 826,586.66. The Flagler Beach City Commission will consider this recommendation at their February 13, 2025, meeting.

RESOLUTION 2025-10

A RESOLUTION BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, FLORIDA, TO AWARD A CONTRACT TO ENGLAND-THIMS & MILLER, INC. IN AN AMOUNT NOT TO EXCEED $826,586.66 TO BE THE CONSTRUCTION MANAGER ADVISER (CMA) AND SERVE AS THE CITY'S ON-SITE REPRESENTATIVE OVERSEEING THE CONSTRUCTION OF THE FLAGLER BEACH PIER, PROVIDING FOR CONFLICT AND AN EFFECTIVE DATE.

WHEREAS, the City's nearly one-hundred-year-old Pier has been damaged sufficiently enough to require its closure; and,

WHEREAS, the City contracted with Moffatt & Nichol to assist the City with design and permitting for the demolition of the existing Pier and reconstruction of a new Pier;

WHEREAS, the City awarded the contract for the demolition and reconstruction to Vecillio & Grogan; and,

WHEREAS, the required oversight necessary to ensure appropriate management is beyond the capacity of City staff; and,

WHEREAS, the City solicited qualifications from interested Construction Manager Advisors, receiving, reviewing, and scoring the three submissions received;

NOW THEREFORE BE IT RESOLVED BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, AS FOLLOWS:

SECTION 1. The City Commission authorizes City staff to issue the Notice to Proceed to England, Thims & Miller to be the City's on-site Construction Manager Advisor overseeing the Contractor awarded the demolition and reconstruction of the pier in an amount not to exceed $862,586.66**.**

SECTION 2. All resolutions or parts of resolutions in conflict herewith be and the same are hereby repealed.

SECTION 3. This Resolution shall become effective immediately upon passage as provided by law.

PASSED AND ADOPTED THIS 13th DAY OF FEBRUARY, 2025.

CITY OF FLAGLER BEACH, FLORIDA
CITY COMMISSION

The City of Flagler Beach
105 South 2nd Avenue
Flagler Beach, Florida 32136

Dear Members of the Selection Committee,

England-Thims & Miller, Inc. (ETM) is excited to offer our specialized expertise in Construction Management and Administration (CMA) services for the City of Flagler Beach Pier Replacement project. Our team's proactive engagement with the Engineer-of-Record (EOR) throughout the design phase has provided us with a thorough understanding of the project's unique challenges, including compliance, safety, access, and minimizing disruptions. Our promise is to provide reliable and efficient CMA services for the City of Flagler Beach, while serving as Trusted Advisors, Creating Community.

ETM brings unparalleled experience to this critical endeavor, including successful completion of similar projects like the Jacksonville Beach Pier Reconstruction project, and various historical bridge rehabilitation projects. With nearly 70 CEI staff in Northeast Florida, we are well-equipped to address all aspects of the project, from critical inspections and maintenance of traffic to environmental compliance and community engagement.

Key advantages of selecting ETM include:

- **Proven Expertise:** Extensive technical and practical experience with pier and structural projects.
- **Strong Relationships:** Established partnerships with the EOR, Moffatt & Nichol, and likely Contractors.
- **Local Presence:** Our team is embedded in the community, with key personnel located within five miles of the site.
- **Team Continuity:** Leverage the expertise of a cohesive team with proven success on comparable pier and structural projects.
- **Resource Readiness:** CTQP-qualified inspectors and FDOT prequalification in key CMA categories ensure seamless project execution.
- **Community Understanding:** We understand local nuances, like the Funky Monkey bartender placing grenadine on the pier rail to manage an annual beehive and protect customers.
- **Managing Expectations:** Engaging with the community to ensure the project aligns with their interests and values.

ETM is committed to innovation, proactive issue resolution, and maintaining the highest standards of safety and compliance. We understand the significance of this project to the City of Flagler Beach and its residents, and we are dedicated to delivering solutions that align with community expectations and values.

As Principal-in-Charge, I am authorized to represent and legally bind ETM. We respectfully request your consideration and look forward to the opportunity to support the successful completion of this landmark project. Please contact us with any questions.

Sincerely,
ENGLAND-THIMS & MILLER, INC.

Project Name: SR 5/Broward Creek Bridge Replacement

Project Location: Duval County

General Scope of Work: Concrete piles, , concrete beams, retaining walls, sand cement rip rap, barrier wall, roadway widening with column supported soil stabilization, multi-phase MOT, asphalt overbuild, turnout construction, milling and resurfacing, drainage, traffic separators, C&G, sidewalk, guardrail, watermain with bridge attachments and coordination with CSX.

Client Name and Address: FDOT, District 2

2198 Edison Avenue

Jacksonville, Florida 32204

Client Contact Phone: (904) 360-5557

Client Contact Email: sam.lansdale@dot.state.fl.us

Was the project completed on schedule? X Yes No

Total Amount of Change Orders: $ 1,784,171.18

Reasons for Change Orders: Added Grout Inclusion Columns for Pile Supported Pavement Extension, JEA Temporary Watermain Redesign, Impacts Associated with Hurricane Milton, Fire Hydrant Relocations, Bridge Deck Grooving and Type 'F' Curb & Gutter.

Please attach photos of the finished project.

ATTACHMENT F
SWORN STATEMENT UNDER SECTION 287.133(3) (a),
FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

This sworn statement is submitted to: **The City of Flagler Beach** (Public entity)

By: George Miller, PE, Executive Vice President
(Individual's name and title)

For: England-Thims & Miller, Inc.
(Name of entity submitting sworn statement)

Whose business address is: 14775 Old St. Augustine Road
Jacksonville, Florida 32258

Federal Employer Identification Number (FEIN): 59-1773930

(If the entity has no FEIN, include the Social Security Number of the individual signing this sworn statement)

1. I understand that a "public entity crime" as defined in Section 287.133(1)(g), Florida Statutes, means a violation of any State or Federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or of the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy, or material misrepresentation.
2. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1) (b), Florida Statutes, means a finding of guilt or a conviction of a public entity crimes, with or without an adjudication of guilt, in any Federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, non-jury trial, or entry of a plea of guilty or nolo contendere.

3. I understand that an "affiliate" as defined in Section 287.133(1)(a), Florida Statutes, means: A predecessor or successor of a person convicted of a public entity crime: or an entity under the control of any natural person who is active in the management of the entity and how has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in the management of an affiliate. The ownership by one (1) person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.

4. I understand that a "person" as defined in Section 287.133(1) (e), Florida Statutes, means any natural person or entity organized under the laws of any state or of the United States with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

X Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members, or agent who is active in management of the entity, nor the affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agent who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agents who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

However, there has been a subsequent proceeding before an Administrative Law Jury of the State of Florida, Division of Administrative Hearings and the Final Order entered by the Administrative Law Jury

determined that it was not in the public interest to place the entity submitting this sworn statement on the convicted vendor list. (Attach a copy of the final order.)

I UNDERSTAND THAT THE SUBMISSION OF THIS FORM TO THE CITY OF FLAGLER IS FOR THE CITY ONLY AND, THAT THIS FORM IS VALID THROUGH DECEMBER 31, OF THE CALENDAR YEAR IN WHICH IT IS FILED. I ALSO UNDERSTAND THAT I AM REQUIRED TO INFORM THE CITY PRIOR TO ENTERING IN TO A CONTRACT IN EXCESS OF THE THRESHOLD AMOUNT PROVIDED IN SECTION 287.017, FLORIDA STATUES, FOR CATEGORY TWO OF ANY CHANGE IN THE INFORMATION CONTAINED IN THIS FORM.

CERTIFICATION OF NON-SEGREGATED FACILITIES

The Bidder certifies that they do not maintain or provide for their employees any segregated facilities at any of his establishments, and that they do not permit their employees to perform their services at any location, under their control, where segregated facilities are maintained. The Bidder certifies further that they will not maintain or provide for their employees any segregated facilities at any location under their control where segregated facilities are maintained. The Bidder agrees that a breach of this certification will be a violation of the Equal Opportunity clause in any contract resulting from acceptance of this Bid. As used in this certification, the term "segregated facilities" means any waiting rooms, work areas, restrooms and washrooms, restaurants and other eating areas, time clocks, locker rooms and other storage and dressing areas, parking lots, drinking fountains, recreation or entertainment area, transportation and housing facilities provided for employees which are segregated by explicit directive, or are in fact segregated on the basis of race, color, religious disability or national origin, because of habit, local custom, or otherwise. The Bidder agrees that (except where they have obtained identical certifications from proposed subcontractors for specific time periods) they will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding $10,000 which are not exempt from the provisions of the Equal Opportunity clause, and that he will retain such certifications in his files.

The nondiscriminatory guidelines as promulgated in Section 202, Executive Order 11246, and as amended by Executive Order 11375 and as amended, relative to Equal Opportunity for all persons and implementations of rules and regulations prescribed by the United States Secretary of Labor are incorporated herein.

DRUG-FREE WORKPLACE

The undersigned vendor in accordance with Florida Statute 287.087 hereby certifies that

England-Thims & Miller, Inc. does hereby: (Name of Business)

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are proposed a copy of the statement specified in subsection (1).

4. In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under proposal, the employee will propose by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contender to, any violation of Chapter 893, Florida Statutes, or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of the matters set forth above.

As the person authorized to sign the statement, I certify that this firm complies fully with the above requirements.

COMPLIANCE WITH THE PUBLIC RECORDS LAW

Upon award recommendation or thirty (30) days after receiving submittals, they become "public records" and shall be subject to public disclosure consistent with Chapter 119, Florida Statutes. Proposers must invoke the exemptions to disclosure provided by law in the response to the solicitation and must identify the data or other materials to be protected, and must state the reasons why such exclusion from public disclosure is necessary.

If the company submits information exempt from public disclosure, the company must identify with specificity which pages/paragraphs of their bid/proposal package are exempt from the Public Records Act, identifying the specific exemption section that applies to each. The protected information must be submitted to the City of Flagler Beach in a separate envelope marked accordingly.

COMPANY PROFILE

3 COMPANY PROFILE

FIRM'S HISTORY

ETM is a full-service engineering and consulting firm located in Northeast and Central Florida. When our founders established ETM in Jacksonville in 1977, they had a vision to raise the standard of service within the civil engineering industry. Doing what is best for the client became ETM's corporate identity and ultimately resulted in our competitive advantage. Our 48 years of commitment to high standards, coupled with our ability to generate technical solutions, empower clients to respond with repeat business, allowing our company to grow and expand our services. As we grew, so did our clients and our reputation, and we became known for providing innovative, quality engineering services for a broad spectrum of infrastructure projects. With a focus on boutique, customer-centric, best-in-class services, ETM has built a business centered around taking care of our client partners, team members, and the communities we call home. Partnering with local clients to shape communities helped our company to grow into a full-service civil engineering firm, where we are dedicated to serving as Trusted Advisors, Creating Community.

FIRM'S SIZE & RESOURCES

Our firm maintains a staff of over 360 Florida-based professionals, and our services encompass the entire duration of the project, beginning with planning and project strategy development, continuing with engineering design and environmental permitting, and culminating with construction inspection post-design services and asset management. ETM's expertise spans the full lifecycle of infrastructure and development projects, offering a comprehensive range of services that include construction management, civil engineering, urban planning, landscape architecture, geospatial technologies, surveying, water and utilities. ETM has the required expertise needed to meet the objectives of this contract.

ETM is the ideal-sized firm - large enough to provide technical expertise to address any item contained in the scope of services, yet small enough to allow direct access to our executive leadership. ETM will effectively manage resources and coordinate between consecutive or interrelated projects, while meeting milestones on time and on budget. If unanticipated items arise on a project or within the City, we will realign our team resources to ensure the right people are available to support you and best address the challenge. ETM has the required expertise and capacity to meet the needs and schedule of the City. ETM's employees consist of:

- 52 Civil Engineers
- 25 Project Managers
- 45 CAD Technicians/Designers
- 70 Construction Inspectors/Managers
- 8 Landscape Architects
- 6 Planners
- 85 Survey Personnel
- 19 GIS Specialists
- 20 Technicians/Analysts
- 40 Administrative Personnel

Structure

ETM currently offers the following expertise:

- Construction Management
- Construction, Engineering & Inspection (CEI)
- Traffic & Transportation Engineering
- Transportation Planning
- Development Consulting & Entitlements
- Geospatial Technologies
- ITS
- Placemaking & Landscape Architecture
- Program Management
- Site Design
- Surveying & Mapping
- Utility Design & Coordination
- SUE

Our CEI Department specifically provides the following services:

- Construction Management
- Roadway and Bridge Inspection
- Project Representation
- Hybrid Inspection Services
- Construction Contract Administration
- Constructibility Reviews
- Bidding Support Services
- Inspection and System Testing of Paving, Drainage, Water, Sewer, Signalization, etc.
- Monitoring and Documentation
- Public Involvement
- ADA Compliance
- Analyzing Critical Path Construction Schedules
- Drainage Improvements
- Maintenance of Traffic Inspection

Effective/Efficient Resource Allocation

ETM strikes the perfect balance in size. Our firm can offer a team of skilled professionals equipped to handle all aspects of the project deliverables while maintaining a size that ensures the City benefits from collaboration with our executive leadership. We regularly complete projects with compressed schedules, and if necessary, can assign multiple teams and resources to ensure project milestones are maintained.

The City will receive technically-sound, efficiently-produced work products because ETM considers four critical factors when assigning staff to a project. We ensure that every team member has:

1. The technical capabilities to perform the assigned task.
2. The appropriate level of experience to efficiently perform the scope of services.
3. The availability to see the assignment through to completion.
4. The interpersonal skills to effectively work as a valued team member.

PHILOSOPHY OF SERVICES

While our firm has experienced tremendous growth over the past four decades, our philosophy has always remained the same. We believe integrity is vital to every project, however large or small. And for every client and project, we are committed to upholding integrity, honesty, and our commitment to client satisfaction.

TYPICAL VOLUME OF WORK

Ability to Maintain Project Schedules

ETM promotes timely project delivery by maintaining project schedules that minimize delays and reduce costs. Without reservation, it is ETM's primary goal on every project to meet our client's time and budget requirements. Our ability to meet project deadlines and maintain a high level of customer service allows us to develop lasting relationships with our clients. This is reflected in the high percentage of repeat business ETM receives from our clients. To deliver projects consistently and reliably, we rigorously track a large number of interim milestones so that we can detect schedule variances while there is still time for course correction. We have successfully employed this approach on similar contracts. For example, ETM recently completed a Continuing Services Contract for FDOT District 2 which included more than 170 Task Work Orders within a five-year period.

Ability to Execute Multiple Concurrent Projects

Our ability to execute multiple projects concurrently is attributed to the size and depth of our staff. Our firm responds to more than 300 new projects every year and regardless of a project's size, each is afforded the same sensitivity to budget and schedule requirements. We include principal involvement in every project and commit the best available managers who maintain constant communication with all the dedicated team members to ensure projects proceed on schedule.

FINANCIAL STABILITY

ETM was founded in Jacksonville, Florida in 1977. The ownership of the firm is dispersed among 33 shareholders. The Executive Leadership team is comprised of ETM's Chief Executive Officer, President, Chief Financial Officer, and seven Executive Vice Presidents. Each Executive Leadership Team member is responsible for managing a team of professionals and overseeing department resources, project schedules, and budgets.

ETM is financially stable and has the necessary resources, human and financial, to provide the services at the level required by the City of Flagler Beach.

Neither ETM nor our subconsultants have failed to complete any contracted work. ETM does not have any outstanding debt and has a strong credit rating of 3A1.

ETM'S BASIC CONSTRUCTION MANAGEMENT TECHNIQUES AND METHODS

ETM employs a proven, comprehensive approach to Construction Management that ensures high-quality project delivery, minimized risks, and streamlined processes. Our methodology focuses on three core principles:

1. **Thorough Understanding of Project Requirements:** From project initiation to completion, we ensure every stakeholder is aligned on goals, scope, and deliverables.
2. **Leveraging Available Resources:** We assess and utilize the most effective tools, technologies, and personnel to meet client needs efficiently.
3. **Strategic Work Planning:** Through clear task division, team expertise alignment, and eliminating redundancies, we create a structured plan that emphasizes communication, accountability, and precision.

General Transition Plan

Under the leadership of Kent Ponder, PE, ETM's transition plan prioritizes seamless coordination with City staff and stakeholders. Key steps include:

- **Communication Protocols:** Establishing open, transparent communication channels.
- **Scope Review:** Analyzing the contractor's CPM schedule to optimize staffing for evolving project needs.
- **Personnel Assignments:** Aligning field personnel with individual strengths to maximize efficiency.
- **Equipment Readiness:** Providing advanced tools (laptops, cell phones) to enhance productivity.
- **Lessons Learned Integration:** Leveraging insights from past projects to preempt challenges.
- **Cost Proposal Development:** Delivering detailed proposals for City review and approval.

Pre-Construction Phase

A structured pre-construction process is vital to set the foundation for project success:

- **Constructability Reviews:** Identifying potential issues early to avoid cost and schedule overruns.
- **Pre-Construction Surveys:** Documenting existing conditions thoroughly with video, photos, and field measurements.
- **Submittal Matrix:** Creating and distributing a comprehensive matrix of contractor deliverables.
- **Pre-Work Meetings:** Hosting meetings to address milestones, pay items, and key project aspects.
- **Community Outreach:** Facilitating communication with stakeholders, schools, emergency services, and residents to ensure minimal disruptions.

Construction Phase

ETM's robust oversight during construction ensures quality and accountability:

- **Daily Inspections:** Monitoring contractor work to ensure compliance with project documents.
- **Submittal Tracking:** Streamlining submittal and shop drawing reviews to avoid delays.
- **Material Testing:** Ensuring quality through rigorous verification testing.
- **Safety and Compliance:** Monitoring MOT and erosion control to protect the public and meet regulatory standards.
- **Contractor Coordination:** Conducting regular meetings to address scheduling, safety, and problem-solving.
- **Cost Control:** Managing budgets and ensuring contractor payments align with work performed.

Post-Construction Phase

ETM focuses on a smooth project close-out and knowledge transfer:

- **As-Built Documentation:** Compiling field changes and EOR updates.
- **Permit Close-Out:** Ensuring all regulatory requirements are met.
- **Final Estimate Preparation:** Aligning quantities and documentation for project closure.
- **Lessons Learned Review:** Capturing insights for future improvements.

ETM's commitment to excellence in construction management ensures that projects like the Flagler Beach City Pier are delivered on time, within budget, and to the highest standards. Our CEI team's expertise in addressing complex challenges, managing community impacts, and ensuring public safety makes us a trusted partner for delivering high-quality pier projects.

LEVERAGING ETM'S EXPERTISE TO ADVANCE THE FLAGLER BEACH CITY PIER PROJECT

In response to the RFQ, the City requested that our team highlight our unique expertise, experience, and techniques that could serve as advantages in completing this project. ETM's extensive track record with similar high-profile pier projects positions us as an ideal partner for the Flagler Beach City Pier. Below, we present two examples from the Jacksonville Beach Pier project that illustrate our ability to anticipate challenges, deliver innovative solutions, and safeguard project success.

Example 1: Transition to Precast Pier Bent Caps

The Jacksonville Beach Pier was initially designed with cast-in-place pier bent caps. However, the contractor submitted a Request for Modification (RFM) proposing a transition to precast pier bent caps. ETM played a pivotal role in reviewing and approving the contractor's Specialty Engineer's shop drawings for this modification. This change delivered significant time savings and improved quality, as the precast caps were manufactured in a controlled facility, ensuring superior product consistency. The time saved was critical to maintaining the project schedule despite delays caused by two hurricanes during construction.

ETM's proactive approach included a rigorous inspection process after the first closure pour for the precast bent caps. During our inspection, we identified voids between the piles and the precast caps. Collaborating with the Contractor, Engineer-of-Record (EOR), and the City of Jacksonville, ETM spearheaded the development and implementation of a revised placement procedure. This included:

- Initiating pours from the interior portion of the bent.
- Utilizing additional placement chutes.
- Adjusting the concrete slump to the upper allowable limits.

These modifications resolved the issue, with subsequent pours achieving the desired quality. By addressing potential challenges early and implementing effective corrective actions, ETM not only minimized project risks but also eliminated additional costs for the City. Our expertise in managing repair procedures, always at the contractor's expense, further demonstrates our commitment to reducing liability and ensuring quality outcomes.

Example 2: Innovative Cost Mitigation for Production Piles

During the Pre-Bid Vendor Question Period for the Jacksonville Beach Pier project, contractors expressed concerns about the lump-sum pricing structure for production piles. This structure posed risks of cost variability due to potential differences in pile lengths. Recognizing the contractors' concerns and the City's interest in cost predictability, ETM recommended a change to a unit rate pricing model based on linear feet.

This strategic adjustment:

- Allowed bidders to submit more accurate pricing.
- Protected the City by ensuring it would receive credit for shorter piles or incur only minimal additional costs for longer piles at a predetermined rate.
- Reduced the risk of claims and disputes related to unknown cost factors during the project.

By fostering transparency and creating a win-win scenario, ETM's recommendation enhanced bidder confidence and controlled financial risk for the City.

Why ETM?

ETM's proactive problem-solving, technical expertise, and ability to innovate under complex conditions make us a valuable asset for the Flagler Beach City Pier project. Our proven success in managing high-stakes projects like the Jacksonville Beach Pier ensures that we can deliver results efficiently, cost-effectively, and with minimal risk to the City.

FIRM'S RELEVANT EXPERIENCE

ETM has proudly provided CMA services for a variety of local agencies for over 30 years. In fact, ETM's CMA department has grown into one of the largest groups in the State of Florida and currently provides services for roadway and bridge construction, paving, drainage, water, sewer and reuse inspection, materials testing, full-time construction contract administration, and bidding services, as well as monitoring and documentation throughout all phases of construction.

Our team of experts boasts 48 years in the industry and an unparalleled knowledge of infrastructure projects. We guarantee peak performance, technical mastery, and a swift response to all your needs, so you can rest assured that this project will run smoothly from start to finish. Our versatility and depth of CMA experience, wealth of FDOT/CTQP qualified staff, essential knowledge and expertise gained through our decades of experience administering multiple projects simultaneously, and our experience with pier and infrastructure projects has uniquely provided us with the skills necessary to service this contract.

Our team has significant expertise providing specialized services that are applicable to the type of project under this contract. Specifically, our project team's experience in the following areas ensures that this type of project will be completed professionally and efficiently.

Preconstruction

This initial phase is crucial as it establishes a comprehensive roadmap for both the construction team, and client. During this stage, we meticulously outline the project's entire scope, detailing every aspect from design specifications to resource allocation. By discussing contract and plan details during this meeting, we set the project up for success and leave nothing for interpretation.

Owners Representation

At ETM, we prioritize our clients' needs and visibility at every stage of a project. We take great care to represent our clients with the utmost professionalism and integrity, ensuring their interests are always at the forefront and their brand and values are prominently showcased, reflecting their investment and importance in the project's success.

Submittal Review

We will evaluate all submittals for compliance with our clients' project specifications. Our process begins with a detailed review of all documentation, including drawings, material samples, product data, and test reports. We meticulously compare these submittals against the established project criteria to verify that they adhere to the specified quality, performance, and regulatory standards.

Closeout

Project closeout is the last major hurdle in the construction process, representing the culmination of months or even years of hard work and collaboration. During this critical phase, our team conducts comprehensive inspections and evaluations to verify that all work has been completed to the highest standards and in accordance with the project specifications and facilitate the preparation and submission of all necessary closeout documentation.

AWARDS AND ACCOMPLISHMENTS IN PREVIOUS SIMILAR PROJECTS

ETM has worked hard to earn our reputation as a firm that provides outstanding service and quality product delivery and this project will be no exception. A measurement of our firm's success is symbolized in the recognition we have received for similar projects through various awards from well-recognized industry associations. These awards embody the long-standing relationships and mutual respect that our team has fostered with Northeast Florida clients and contractors who recognize our staff as problem solvers, and work with us towards mutually beneficial award-winning project solutions.

ETM was ranked in the 2024 Top 500 Design Firms by the Engineering News Record and was recognized by The Jacksonville Business Journal 2024 Book of Lists as one of the Top 5 Engineering Firms, Best Places to Work, as well as, one of the Top 40 Private Companies in 2022.

Florida Transportation Builders' Association (FTBA)

Best in Construction

- Newnan Street Historical Bridge Replacement (w/Hal Jones)
- I-295/Heckscher Drive Interchange (w/Superior Construction)
  SR 50 from Hernando/Sumter County Line
  to East of CR 478A
- SR 21 (Blanding Boulevard) Resurfacing
- I-95/Old St. Augustine Road Interchange
- US 17/Doctor's Inlet Bridge Widening

American Council of Engineering Companies Florida (ACEC FL)

Engineering Excellence Awards; Statewide Grand Special Projects Award

- Graham Swamp Trail and Pedestrian Bridge
  over SR 100

Outstanding Bridge Award

- SR 15 (US 17) 4-Laning over Dunns Creek

Outstanding Design Build

- SR 9B Phase 3 New Alignment

Florida American Concrete Institute (ACI)

Significant Concrete Structure

- I-295/Heckscher Drive Interchange
- SR 9B Phase II System Interchange

Design/Build Institute of America Transportation

- I-95/SR 9B Phase II System Interchange (w/ Superior Construction)
- SR 9B Phase III New Alignment (w/ Superior Construction)

American Public Works Assocation (APWA)

National Award for Historical and Restoration Project

- City of St. Augustine's Downtown Improvements District

Project of the Year for Roads & Highways

- Graham Swamp Trail and Pedestrian Bridge
  over SR 100

American Council of Engineering Company (ACEC)

National Recognition Award

- Graham Swamp Trail and Pedestrian Trail Bridge
  over SR 100

Tab 4
PROJECT APPROACH

4 PROJECT APPROACH

This iconic project has been a focus of ours for some time. To provide effective Construction Management and Administration (CMA) services, our team engaged early with the Engineer-of-Record, Brian Shaw, PE, and Gabriel Perdomo, PE, of Moffatt & Nichol, Inc., to track plan development and finalize the construction timeline. Our approach involves reviewing plans, consulting stakeholders, analyzing contract documents, performing field inspections, and comparing field conditions with contract plans and specifications to ensure a comprehensive understanding of the project scope.

ETM understands that the Contractor is responsible for obtaining all necessary permits, except for environmental permits, which have already been secured from the U.S. Army Corps of Engineers, FDEP, and FWC. No additional FEMA approvals are expected. Coordination with the Volusia and Flagler Turtle Patrols will be essential to ensure compliance with environmental and wildlife regulations during construction.

Based on our experience with the Jacksonville Beach Pier Replacement, we anticipate the Contractor may also need to obtain building permits, which could be an unexpected cost. However, the Building Department's active involvement during the design phase should help streamline the process, if needed. ETM is prepared to support the City and Contractor in effectively navigating these permitting requirements.

After hurricanes damaged portions of the pier, a survey revealed a smaller-than-expected debris field compared to the Jacksonville Beach Pier. This may be due to material differences, with concrete settling beneath the pier while wood was carried away by currents or buried. Regardless, the Contractor must ensure all obstructions are cleared to allow unobstructed pile driving to maintain structural stability.

ETM understands that Hal Jones Contractor - Vecellio & Grogan, Inc., was the sole bidder among the four pre-qualified firms to submit a cost proposal. We have a proven, long-standing partnership with this contractor, highlighted by multiple award-winning projects recognized statewide by the FTBA. Our collaboration on the Jacksonville Beach Pier Replacement project demonstrated our ability to deliver exceptional results together, meeting or exceeding stakeholder expectations. This strong relationship will benefit the Flagler Beach Pier project, ensuring effective collaboration and successful, timely completion.

ETM's approach to the Flagler Beach Pier Replacement project is thorough and multi-faceted, ensuring effective oversight and meticulous execution at every stage. Our strategy is designed to handle the project's complexity, enhance communication, and deliver a high-quality result on time and within budget.

Mobilize & Assemble Cranes

Equipment & Material Deliveries

A key aspect of our process is gaining a comprehensive understanding of the project scope. This includes technical specifications, design requirements, community goals, environmental factors, and local regulations. By addressing all elements proactively, we minimize risks and resolve challenges efficiently.

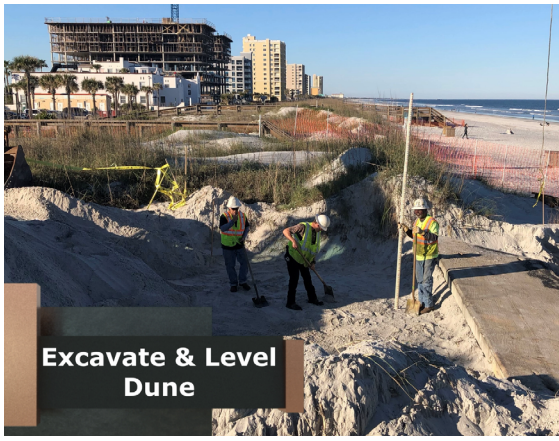
The Flagler Beach Pier replacement involves reconstructing the historic pier, originally built in 1928 and heavily damaged by storms and hurricanes, leading to its closure in 2022. The project's goal is to modernize the pier while preserving its historical character. The westernmost 113-feet of the original timber pier will be retained and restored, while the remaining 715 feet will be replaced with a resilient, modern structure, resulting in a total pier length of 828 feet and 10 inches.

The new design incorporates several upgrades. The pier's width will increase from 20 feet to 25 feet, enhancing visitor space. The iconic T-head will be reconstructed at the easternmost end, measuring 32 feet by 20 feet. Unlike the original all-timber construction, the new pier will use 24-inch square prestressed concrete piles, concrete pile caps, and beams, with timber decking to maintain its traditional appearance. The deck elevation will be raised by 10.2 feet, greatly improving resilience to future storms.

Modern utilities such as power, low-voltage A/V systems, lighting, potable water, and fire line will be installed, alongside architectural features like lighting, binocular platforms, fish cleaning stations, shade canopies, and benches with end tables. These enhancements will preserve the pier's historic charm while delivering a durable and functional design for future generations.

Understanding and addressing the logistical challenges of the Flagler Beach Pier Replacement is a critical component of ETM's approach. Working in a coastal environment requires careful planning to manage complexities, coordinate concurrent construction activities, and ensure public safety and access.

Originally, three projects were planned within the pier footprint: the beach nourishment project, the A1A resurfacing, and the pier reconstruction. While the beach nourishment project has been completed, there is uncertainty regarding whether the FDOT resurfacing project will proceed concurrently with the pier reconstruction. Ideally, delaying the resurfacing project until after the pier project would prevent potential damage to newly paved surfaces, reduce overlapping operations, and allow for a cohesive finish to the area, creating a seamless, polished outcome for the community.



Regardless of the timing, ETM is committed to ensuring smooth coordination between multiple contractors to avoid production disruptions and minimize unnecessary claims. Drawing on our experience with similar projects, such as the Jacksonville Beach Pier reconstruction, we will proactively anticipate and address logistical challenges to keep the project on track and ensure its success.

Equipment & Material Deliveries

A cornerstone of our CMA approach is maintaining continuous communication with all stakeholders. ETM will establish clear and effective lines of communication with key individuals, including City officials, such as Mr. Bill Freeman (City Engineer), Dr. Lee Richards (Engineering Coordinator), and Ms. Christine Novak (Project Manager). Coordination will also extend to Mr. Brian Shaw (Engineer-of-Record), Gabriel Perdomo of Moffatt & Nichol, Inc., the Contractor, subcontractors, and the community. Regular updates and meetings will ensure alignment among all parties, enabling prompt identification and resolution of any issues that arise. This proactive communication strategy is integral to the seamless execution of the Flagler Beach Pier Replacement project.

CASE STUDY

For example, our proficiency in public relations and communication is demonstrated by the success of the $31 Million Doctor's Inlet Bridge Widening Project. The FDOT entrusted us with managing public complaints and specifically requested that our field office number be listed on the Project Information signs, rather than the typical FDOT project hotline. This endorsement highlights our ability to effectively address public concerns, ensuring a transparent and positive project experience for all stakeholders.

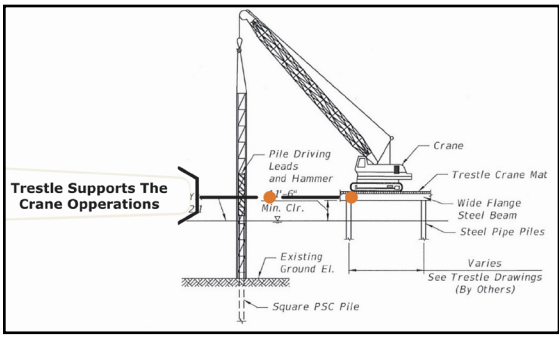
Quality control and risk management are integral components of ETM's approach. We will conduct daily inspections, ensure compliance with safety standards, and address any potential risks promptly to ensure the long-term success of the project. Our comprehensive approach guarantees that every aspect of the project, technical, logistical, and managerial, is handled efficiently and effectively.

Our goal is to deliver a high-quality project within budget and on schedule, which is achieved through robust quality control. ETM employs proven resources for project-specific QA, including FDOT guidelines for inspection procedures, multi-step documentation checks, and reviews by internal and third-party experts (such as Melinda Rainwater of (JEAces) for Project Quality Assurance Reviews.

CASE STUDY

For example, our three-step process starts with the Senior Inspector reviewing all daily reports and quantities, then the Contract Support Specialist (CSS) utilizes a secondary marker to review field book quantity tracking logs and then submits to our PA for a final full document review prior to approval for payment and finalizing the as-built certification. This process has resulted in our Jacksonville Beach Pier estimates being submitted ahead of schedule with no noteworthy issues!

In summary, ETM provides the City of Flagler Beach with a reliable, experienced partner, using a comprehensive, multi-pronged strategy to successfully guide the Flagler Beach Pier Replacement project from start to finish.



Dry Assembly of Trestle Sections

Construct Temporary Trestle

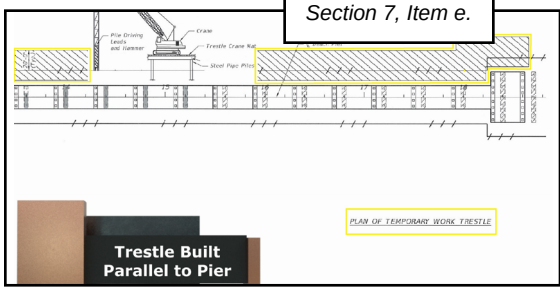
A. PRECONSTRUCTION SERVICES

ETM's Preconstruction Services will establish a strong foundation for the Flagler Beach Pier reconstruction by fostering collaboration, ensuring compliance, and anticipating challenges:

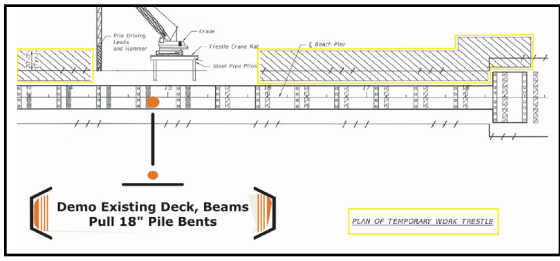
1. Planning and Coordination:

- Collaborate with the City and design team to finalize any last-minute project plan changes or revisions, including architectural features such as fish cleaning stations, shade canopies, and binocular platform.
- Review construction documents for clarity and constructability, ensuring consistency with FEMA, City, and Moffatt & Nichol's design and project specifications/standards.

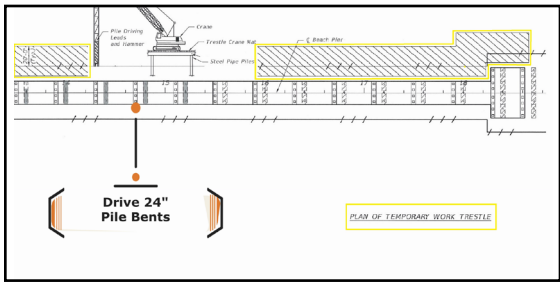
2. Permitting and Environmental Compliance:



- Assist the Contractor in obtaining necessary permits, i.e. environmental permits, and building permits, including FDOT permitting, as FDOT requires the contractor to submit Signed and Sealed MOT plans for approval to ensure MOT on A1A complies with FDOT Standards.
- Coordinate with FDEP, FWC, and other regulatory agencies to implement measures protecting marine life and turtle nesting habitats.



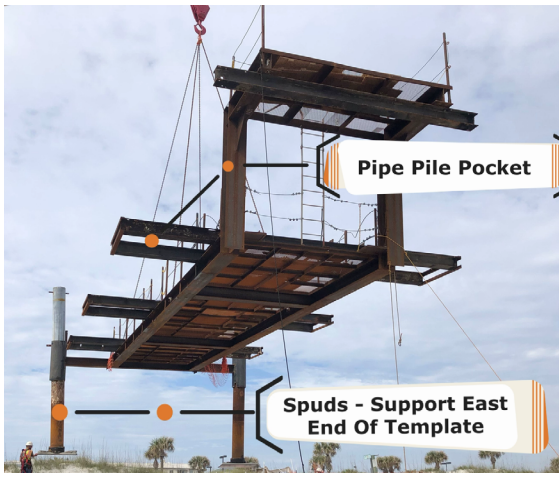
3. Cost and Schedule Management:



- Evaluate contractor cost proposals to ensure alignment with the Lump Sum contract and identify opportunities for cost efficiency.
- Develop a comprehensive project schedule, accounting for dependencies and potential conflicts with concurrent projects such as FDOT resurfacing.

4. Construction Methodology Review:

- Assess and recommend construction methodologies, such as cast-in-place versus precast pier caps, to optimize timelines and mitigate risks.
- Validate plans for temporary trestles, crane assembly, and pile installation to ensure compliance with safety standards including but not limited to high seas and or high winds.



Drive Temporary Trestle Pipe Piles

B. CONSTRUCTION SERVICES AS CMA

92% percent of our business comes from repeat clients, including reputable entities like the FDOT, JTA, JEA, and numerous local municipalities. This high percentage of return business is a testament to the effectiveness of our project approach and methodology, demonstrating the trust and confidence clients place in us to consistently deliver successful projects. It highlights our commitment to excellence, reliability, and building enduring partnerships based on quality work and strong project management.

As the Construction Management Advisor for the Flagler Beach Pier project, ETM will provide leadership and expertise to ensure a successful outcome. Our approach is built on the following principles:

1. Teamwork and Communication:

- Act as the City's representative, ensuring seamless communication among stakeholders, including the Contractor, City officials, FEMA, and local businesses and surrounding community.
- Conduct regular progress meetings to address issues and foster transparency.

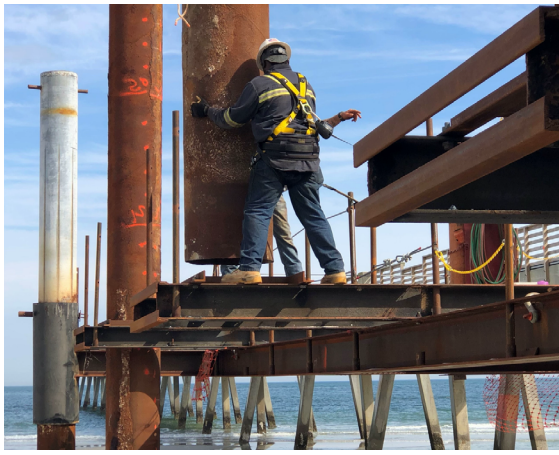
2. Leadership in Construction Oversight:

- Oversee the installation of 24" square prestressed concrete piles, concrete caps, and beams, ensuring compliance with contract specifications and safety standards.
- Monitor the assembly and placement of architectural features, including benches, shade canopies, and utilities (lighting, power, potable water, and fire systems).
- Provide detailed daily reports documenting progress, compliance, and challenges.

3. Stakeholder and Community Coordination:

- Engage with local businesses, residents, and recreational users (e.g., surfers) to address concerns and minimize disruptions.
- Coordinate with Flagler Beach Fire & Rescue and other emergency services to ensure safety and accessibility throughout construction.

4. Quality Control and Compliance:

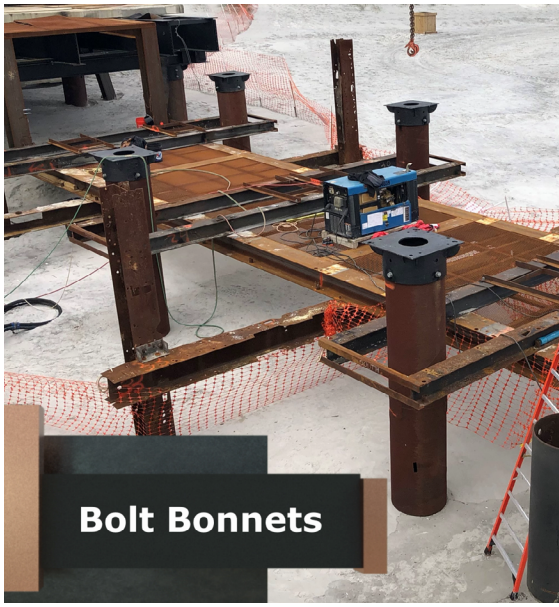


- Ensure the Contractor adheres to approved shop drawings and specifications, including tension dowel bar testing and proper pile installation.
- Maintain environmental compliance, including turbidity monitoring and fencing placement, to protect coastal ecosystems.

5. Documentation and Reporting:

- Maintain meticulous records, including progress logs, compliance reports, and photographic evidence.
- Deliver as-built documentation and FEMA-compliant reports to the City upon project completion.

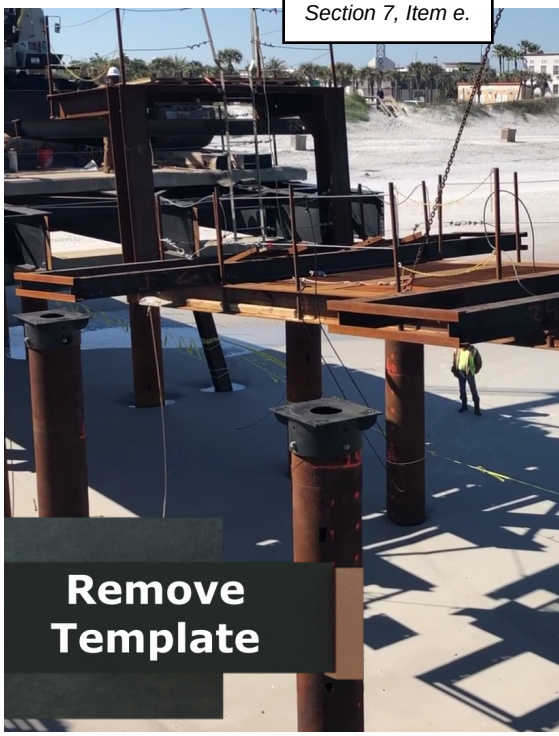
ETM's proven approach ensures the Flagler Beach Pier Replacement project will be executed efficiently, safely, and with high-quality results.This pier closely mirrors the successful Jacksonville Beach Pier reconstruction project in scope, challenges, and objectives. Both projects involve the reconstruction of iconic coastal structures designed to withstand harsh marine environments while meeting the community's aesthetic and functional needs.



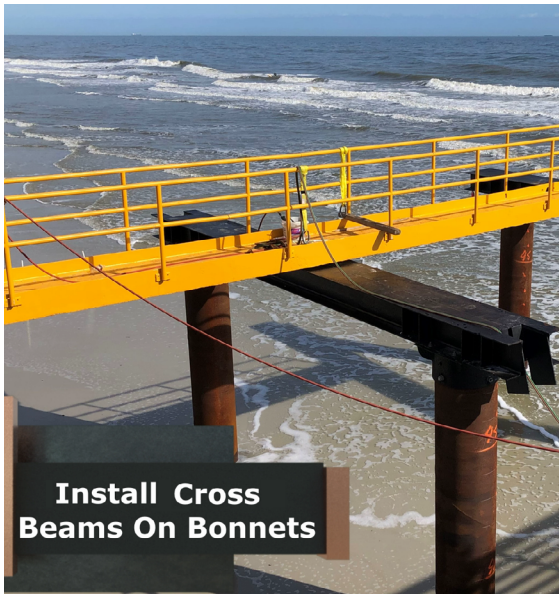
Key similarities include:

1. Material Selection and Durability: Both projects used corrosion-resistant materials to ensure long-term durability against saltwater, high winds, and storm surges.
2. Structural Design for Resilience: Each pier incorporated advanced design elements to meet or exceed FEMA flood and wind design standards for coastal infrastructure.
3. Community-Centric Approach: Both projects focused on stakeholder engagement to ensure the finished product served local residents, businesses, and visitors effectively.
4. Environmental Considerations: Similar to Jacksonville Beach Pier, the Flagler Beach Pier prioritizes sustainable construction practices to protect marine ecosystems.
5. Construction Phasing and Challenges: The two projects faced similar logistical challenges, including maintaining safe access, managing pile delivery within tight city limits, addressing pedestrian and traffic management, minimizing disruptions to nearby businesses, and working within tight timelines and budgets.
6. ETM's anticipated sequencing for the Flagler Beach Pier Replacement mirrors the successful approach used in the Jacksonville Beach Pier Reconstruction, ensuring efficient execution and on-time delivery. To meet the 18-month construction timeline, we plan for the Contractor to mobilize two cranes to boost production and maintain steady progress across all project phases.
7. The first crane will be mobilized early for equipment and material deliveries, initiating the construction of the temporary trestle and starting the demolition of the existing pier. Once sufficient progress is made eastward, the second crane will take over critical tasks, including deliveries, demolition, and permanent construction. This phased crane utilization allows for concurrent operations, with the first crane focusing on trestle construction and the second on demolition and new construction.
8. The process begins with mobilizing specialized equipment, such as a Link-Belt LS-248HII crane, and delivering critical materials like pipe piles and vibratory hammers. Public safety is maintained by securing the work area with fencing to prevent unauthorized access. The controlled dry assembly of trestle sections ensures seamless fitting before installation, improving efficiency and reducing construction risks.
9. A temporary trestle provides a stable platform for crane operations and worker access, facilitating safe, phased demolition of the existing pier. Public safety is prioritized with pedestrian access below the trestle and overhead debris protection. Demolition activities, including the removal of old piles, caps, and debris, are carried out methodically to clear the path for new pile installation.
10. ETM's expertise in pile installation, using jetting techniques and diesel hammers, ensures precise placement. Precast bent caps, beams, and slabs are carefully transported and set to maintain structural integrity. The final stages involve constructing wood deck panels, installing handrails, plumbing, electrical systems, and amenities like fish cleaning stations, binocular platforms, and shade canopies. Comprehensive inspections and FEMA compliant as-built documentation ensure the project meets the highest standards of quality and resilience.
11. The dual-crane strategy maximizes productivity and minimizes downtime, ensuring smooth transitions between phases and faster project completion. The temporary trestle provides a stable platform for efficient material handling, while phased demolition and pile installation proceed systematically. Debris removal will clear obstructions, facilitating continuous progress.
12. By leveraging ETM's proven methodology, the City of Flagler Beach will benefit from a streamlined construction process prioritizing safety, environmental stewardship, and structural quality. The success of the Jacksonville Beach Pier Reconstruction project demonstrates ETM's capability to manage similar complexities, ensuring the Flagler Beach Pier Replacement is delivered on time, within budget, and built to last for generations.

LEADERSHIP, TEAMWORK, AND COMMUNICATIONS



ETM's leadership approach is grounded in a program of principles designed to manage professional services in transportation projects effectively. At the heart of our management methods is the Team Approach, known as the ETM Way. This approach fosters a deep sense of "Ownership" and is supported by the key principles of Team Building, Problem Solving, and Effective Communication. Through the professional execution of these principles, ETM can meet the specific needs of the City with both flexibility and accountability.



Our sense of "Ownership" extends to a collaborative partnership with all stakeholders. We understand that the Contractor's challenges are also ours, as well as those of the Client and the Community. We work in a spirit of cooperation with the Contractor to reduce their exposure, which in turn mitigates or eliminates the City's exposure. This proactive leadership approach reflects our commitment to ensuring the project's success and minimizing risks for all involved parties.

ETM has earned a reputation for being an "extension of staff" for our clients. This recognition is primarily due to our demonstrated sense of "Pride" and "Ownership" in our projects. We approach every project with the same level of commitment as if it were our own, ensuring that we manage the project lifecycle with a strong sense of responsibility. This mindset enables us to communicate effectively with all levels of the client's organization whether it's the Board of City Commissioners, Engineering Personnel, Procurement, Public Relations, or Maintenance Departments. We adapt our communication style to fit the needs of each stakeholder, ensuring that their perspectives are understood and that our services align seamlessly with their expectations.

Our expertise also extends to managing community concerns. We understand the importance of keeping the public informed about project schedules, milestones, and potential impacts. Our commitment to timely communication, as well as taking and returning calls, helps ensure that adjacent landowners and the public remain informed and confident in the project's progress. This transparency strengthens our relationships with the community and reinforces our accountability to all stakeholders.

At ETM, we lead with a commitment to success, understanding that true achievement occurs when both the Client and Contractor succeed together. Our collaborative approach ensures that every project milestone contributes to shared goals and mutual prosperity. By prioritizing the success of all stakeholders, we build lasting partnerships based on trust, excellence, and a shared vision for success.

C. PROPOSED TEAM

ETM's proposed team brings a wealth of expertise and experience specifically designed to address the complexities of infrastructure projects like the Flagler Beach City Pier Replacement. Our team's experience spans multiple disciplines, allowing us to approach projects with both technical proficiency and a deep understanding of community and environmental considerations.

A key area of our expertise is historical preservation, as demonstrated through our successful projects such as the Jacksonville Beach Pier Replacement and the Historical Newnan and Main Street Historical Bridge Restoration projects. These projects highlight our capability to preserve the historical elements of iconic structures while seamlessly integrating modern construction techniques. Our team excels at balancing the need to maintain the integrity of historical landmarks with the need for structural resilience, durability, and compliance with current safety standards.

By leveraging this unique blend of experience in both preservation and modern construction, ETM is uniquely qualified to manage the Flagler Beach Pier Replacement project with the care and precision it requires. Our team's ability to navigate the challenges of historical preservation, combined with our innovative construction practices, positions us to deliver a project that honors the legacy of the pier while meeting the needs of the community and ensuring the long-term sustainability of the structure.

Kent Ponder, PE
Senior Project Engineer/Team Leader/Primary Point-of-Contact

Years of Experience: 25
Education: BS, Civil Engineering, University of Florida, 1998

Registrations: FL PE, No. 60217
Certifications: (TIN: P53650165): QC Manager, Stormwater Insp., Advanced MOT, Critical Structures, Drilled Shaft, Auger Cast Pile

Mr. Ponder has been a licensed Engineer since 2002 and is well versed in an extensive assortment of complex transportation construction projects. He began his career in the US Navy then transitioned to FDOT where his focus on quality, attention to detail, and ability to lead and communicate well with others helped him advance quickly in the field. His diverse construction experience include major bridges, pile and drilled shaft foundations, fender construction, complex roadway/interchanges, utilities, bridge culverts, mechanically stabilized earthwalls (MSE), high mast lighting, signalization, overhead sign installation and beach pier reconstruction. Mr. Ponder has broad experience managing Task Work Order type assignments on residency and area-wide projects - providing exceptional service in this capacity specifiaclly for the FDOT District 2 and Nassau County. Mr. Ponder is highly regarded for his leadership, ensuring that Contractors are performing satisfactory work and properly submitting necessary project documentation and correspondence in accordance with plans, specifications, and contract documents.

Similar Project Experience:

- Jacksonville Beach Pier, City of Jacksonville
- SR 5/Broward Creek Bridge Replacement, FDOT District 2
- Newnan Street/Hubbard Street Bridge Rehabilitation, FDOT District 2

Set Trestle Section

Tim Thacker
Project Administrator

Years of Experience: 33
Education: High School Diploma

Certifications: (TIN: T26081267): Asphalt Paving 1 & 2, Earthwork 1 & 2, Final Estimate 1 & 2, QC Manager, Concrete Spec., Drilled Shaft, Pile Driving, Concrete Tech 1 & 2, Field Testing Tech, CTCI, PCC Pavement, PCC Grinding/Joints, PCC Paving Insp., Fiber Optics 1 & 2, CCTV, DMS, MFES, MVDS, RWIS, Advance MOT, HAZMAT, Stormwater Insp., MSE Wall, Auger Cast Pile, Critical Structures, FEMA ICS-100-C, 200, 700-B, SSTC High-Strength Bolting

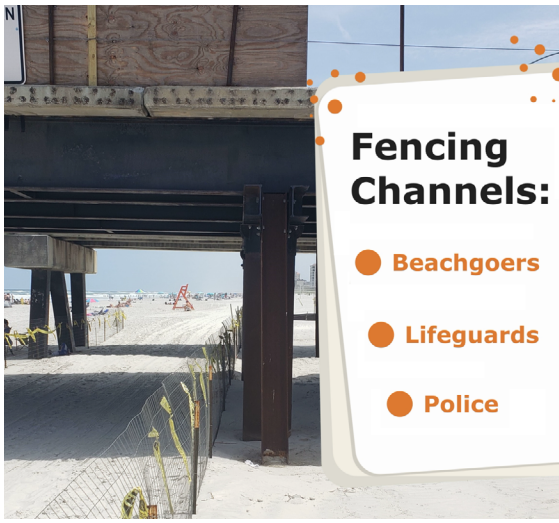
Mr. Thacker specializes in administering major highway and bridge construction projects. He began his career as an airplane mechanic but transitioned to construction where he rapidly advanced to a project Superintendent. His background as a Superintendent on the Constructor side of the industry provides him with valuable insights and knowledge of construction means and methods. He then transitioned to CEI in 1993 and has worked his way from an Inspector to Senior Inspector to Project Administrator. With combined Project Administrator and Senior Inspector positional experience, Mr. Thacker has completed over 40 bridge projects that include new bridge construction, bridge removal/ widening/replacement, pedestrian bridges, and beach pier reconstruction.

Similar Project Experience:

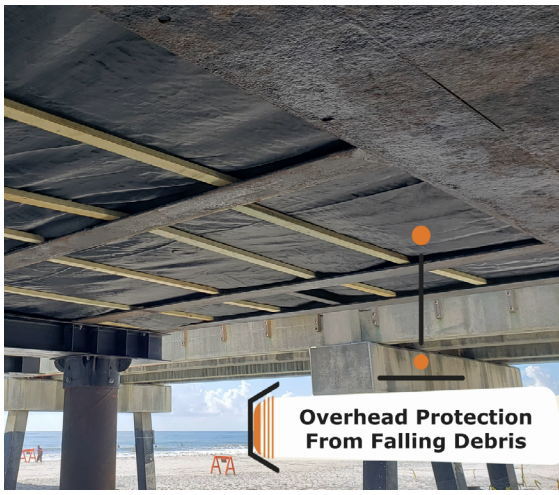
- Jacksonville Beach Pier Replacement, City of Jacksonville
- SR 9B, Ph. I-III, New Interstate Facility, FDOT District 2

Robert Mullin
Assistant Project Administrator

Years of Experience: 21
Education: High School Diploma



Certifications: (TIN: M45077883): Asphalt Paving 1 & 2, Earthwork 1 & 2, Final Estimate 1 & 2, QC Manager, Concrete Spec., Drilled Shaft, Pile Driving, Concrete Tech 1 & 2, Field Testing Tech, CTCI, PCC Pavement, PCC Grinding/Joints, PCC Paving Insp., IMSA 1 & 2, Fiber Optics 1 & 2, CCTV, DMS, MFES, MVDS, RWIS, Advanced MOT, MSE Wall, HAZMAT, Stormwater Insp., Auger Cast Pile, Critical Structures, FEMA ICS-100, 200, 700



Mr. Mullin is highly skilled in inspection and administering major highway and bridge construction projects, including considerable experience working on bridge construction including bascule bridges. Progressing to roles such as Senior Inspector and Project Administrator, he discovered his true passion as a Lead Bridge Inspector, where he could make the most significant impact on project quality and team development. His bridge expertise spans the rehabilitation of existing concrete and steel structures, constructing new steel trusses, post-tensioned structures, AASHTO, FIBs, mechanical rack and pinion lift spans, hydraulic single-leaf cylinder lift bridges, precast footings, cast-in-place footings both on land and in water, and foundations including piles and drilled shafts.

Similar Project Experience:

- SR 9B, Ph. III, New Interstate Facility, FDOT District 2
- Newnan Street/Hubbard Street Bridge Rehabilitation, FDOT District 2

Install Pedestrian Safety Measures

Demolition of Existing Pier

Clint Proveaux
Senior Bridge Inspector

Years of Experience: 9
Education: SSS, Florida Gateway College

Certifications: (TIN: P61211393): Asphalt Paving 1 & 2, Earthwork 1 & 2, Final Estimate 1 & 2, Drilled Shaft, Pile Driving, Concrete Tech, Field Testing Tech, CTCI - In Training, CCTV, DMS, MFES, MVDS, RWIS, Advance MOT, MSE Wall, HAZMAT, Stormwater Insp., FEMA ICS-100, 200, 700

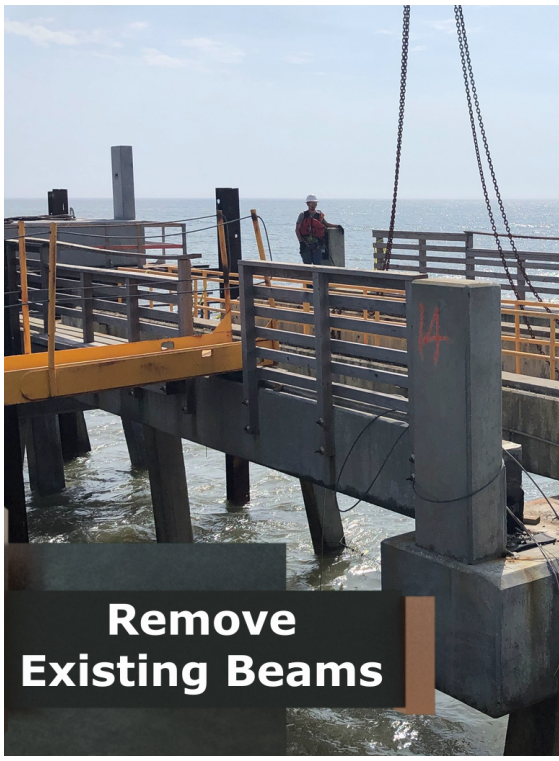
Mr. Proveaux began his career working as a QC Technician where he quickly honed his skills with material testing. Driven for additional challenges he joined ETM and has been working as a field inspector on complex heavy civil projects. He has been honing his craft to specialize in Bridge construction while continuing to advance his knowledge in road, signalization, and ITS work. He has worked on 11 different structures and his attention to detail assists the team by performing thorough inspections while communicating with the team and Contractor areas of concern. His experience has paired him up with many different contractors creating a diverse background in various construction methods and activities including earthwork, utilities, bridge construction, roadway construction, and signalization.

Similar Project Experience:

- SR 9B, Ph. II-III, New Interstate Facility, FDOT District 2
- SR 5/Broward Creek Bridge Replacement, FDOT District 2

Vicki Bowen
Contract Support Specialist

Years of Experience: 9
Education: High School Diploma



Certifications: (TIN: B50086962): Final Estimates 1, Final Estimates 2, Concrete Tech 1, Construction Math, Contract Plans Reading, Successfully Managing, , FDOT EDMS, EQP Final Measurements, FDOT PrC, FDOT MAC, Adobe, Bluebeam, Microsoft Office

Ms. Bowen's experience includes bridge, design build, and reconstruction projects. She began her career as an Administrative Assistant and through her own initiative advanced to CSS. Her former years of service in the US Navy instilled in her a keen focus of attention to detail that she leverages to the client's advantage in maintaining detailed project records and closing out projects without errors or omissions. Ms. Bowen addresses issues directly and honestly to enhance her relationships with her clients, teams, and contractors. Her duties include daily communication with the inspection staff regarding quantities, producing error free estimates, verifying material certifications, and ensuring the accuracy of project documentation. In addition, she prepares the project final acceptance documentation which includes pay item quantity certification, final offer letter to the contractor and the Final As-Builts. She works effectively as part of an entire project team and independently, with little supervision, to achieve quality results in a timely manner.

Similar Project Experience:

- SR 5/Broward Creek Bridge Replacement, FDOT District 2
- Newnan Street/Hubbard Street Bridge Rehabilitation, FDOT District 2

ETM's team, consisting of Kent, Tim, Robert, Clint, and Vicki, has a deep understanding of the procedural intricacies, guidelines, and requirements essential for ensuring the Flagler Beach City Pier Replacement project aligns with City and FDOT standards. Their expertise is evident in their ability to prepare error-free final estimates, maintain daily documentation, secure FHWA approval, and create Work Orders (WOs) and Supplemental Agreements (SAs). Proficient in utilizing tools like BlueBeam, they ensure that all work aligns with project plans, specifications, and standard plan stipulations.

In terms of compliance, our team prioritizes the implementation of Compliance Process and Procedures Reviews, adhering to project specifications, special provisions, and Statewide and Critical Requirement Guidelists. This process guarantees a high level of quality and compliance throughout project administration, supported by a dedicated inspection staff that ensures project requirements are met efficiently and effectively.

Our construction project management methods are based on structured communication and coordination. Key practices include:

1. **Bi-weekly Meetings:** These meetings bring together representatives from the City, EOR, FDOT, Public Information Office (PIO), utilities, local agencies, and contractors, fostering collaboration, addressing project requirements, and providing a platform for real-time communication.
2. **Pre-Operation Meetings:** Before any significant construction activities - such as MOT installation, temporary trestle installation, pier demolition, pile driving, our team conducts pre-operation meetings to ensure clarity, safety protocols, and smooth execution.
3. **Issue Tracking:** We maintain detailed logs for key project issues, including Notices of Intent (NOI), Requests for Information (RFI), Requests for Clarification (RFC), and Requests for Modification (RFM). This systematic approach ensures timely responses and issue resolution.
4. **Quantity Verification:** To ensure accuracy and compliance, we use a triple-check approach to verify quantities, ensuring that proper payment is made for completed work.

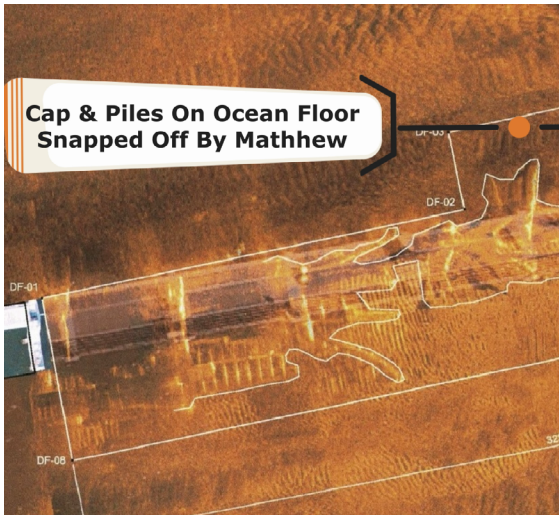
ETM's approach to proactive issue resolution ensures that unforeseen conditions do not disrupt the project's schedule. Kent and Tim lead the team in embracing challenges, making informed decisions, and resolving issues swiftly, ensuring that the project stays on track. By identifying potential issues early and addressing them head-on, our team minimizes disruptions, allowing for smooth and uninterrupted progress throughout the project lifecycle.

CASE STUDY

For example, on the CR 200A JEA Pages Dairy Road project, for approximately 285 LF, there were several very large, old, and majestic oak trees that could be lost due to the alignment of the new main that would compromise the existing root sections of the trees when trenching commenced. The ETM team reviewed the site and proposed shifting the main away from the trees to mitigate possible root damage. ETM reviewed the proposed realignment with the Designer, Nassau County, JEA and the property owner. Upon review, JEA agreed to implement ETM's suggested realignment. This did 3 things: first of which mitigated potential root damage to the existing large oak trees within this corridor; secondly, the elimination of 2 16" 22.5-degree bends provided JEA a cost savings of $1,500; and thirdly, established a working relationship with the property owner that alleviated any possible future complaints.

Teams Ability to Make Decisions and Facilitate Resolution

Our team embraces opportunities to solve problems, make decisions and facilitate resolutions because these opportunities (some may call them challenges) are what sets us apart. Our ability to resolve issues and keep them "under the radar" is a testament to our ability to make decisions and facilitate resolutions.

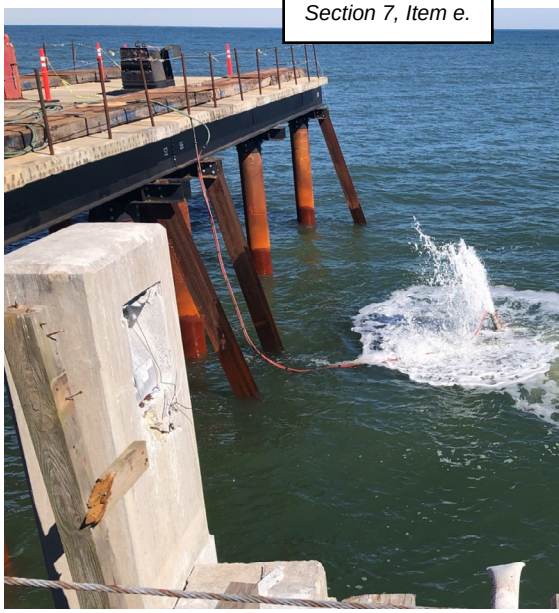


CASE STUDY

One illustrative example, during our past US 1 project for FDOT (FIN 423408-1-52- 01), it became apparent that the depth of the milling at the lane interfaces was much deeper than anticipated and should have been associated with a different typical section. We performed a full project field review and found this affected approximately 50% of the project. Our resolution was to change the milling control point for the remainder of the project and apply a combination of additional milling and overbuild to bring the affected roadway back to its original state. Because of our proactive efforts and decisions, costs associated with this field change were minimal.

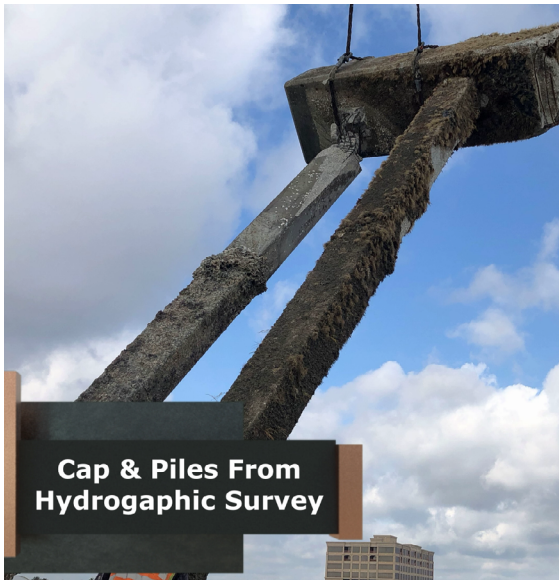
These are only a few of the practices that reflect our commitment to effective project management, open communication, issue resolution, and rigorous quality control, all of which contribute to successful project execution and stakeholder satisfaction.

Remove Debris from Ocean Floor to Eliminate Obstructions to Pile Driving



D. INNOVATIVE METHODS/PROCEDURES AND COST EFFICIENCIES

Building upon the innovative strategies outlined earlier, ETM's project management approach emphasizes rigorous project controls and cost containment methods. By proactively addressing challenges and ensuring transparency, we aim to safeguard the project's success while mitigating risks for all stakeholders involved. Below are some key strategies we implement:



Effective Project Controls

1. **Pre-Construction Survey:** ETM conducts extensive pre-construction surveys that include photographic documentation, video recording, and field measurements of existing conditions. These surveys also assess private improvements within public right-of-ways and existing utilities. Engaging in this thorough documentation process before construction begins helps protect the City from potential claims from Contractors or residents. By establishing a clear record of existing conditions, we minimize disputes and ensure that any changes during construction are clearly documented, reducing the risk of misunderstandings and additional costs.
2. **Submittal Matrix:** We provide Contractors with a comprehensive submittal matrix that outlines all required documentation based on Contract Documents. This includes schedules, QC plans, affidavits, certifications, and shop drawings, among others. The matrix ensures that there is full transparency regarding what is required, improving communication among all project stakeholders, including City staff. This proactive measure fosters alignment and minimizes delays associated with submittal approvals.
3. **Pre-Work Meetings:** ETM prioritizes comprehensive pre-work coordination by scheduling and administering Pre-Construction, Pre-Utility, and Pre-Pile Driving meetings. These meetings address key elements of the construction process and ensures that all team members are aligned. In addition, we hold internal pay item review and documentation meetings to ensure that financial considerations are managed effectively and accurately throughout the project.
4. **Detailed Project Documentation:** Maintaining a comprehensive set of project documents is a cornerstone of ETM's approach. This includes Daily Work Reports (DWRs), correspondence tracking, RFI (Request for Information) and submittal tracking logs, and other relevant documentation. These records provide a transparent and accurate account of project activities and decisions, enabling efficient project management and smooth progress throughout the construction phase.
5. **Internal Project Review Meetings:** ETM conducts regular internal project review meetings to assess project progress and proactively address potential issues. These meetings provide a platform for team collaboration, ensuring that we anticipate challenges and respond effectively before they escalate. By aligning resources, making informed decisions, and staying ahead of upcoming construction activities, we can optimize project outcomes. This ongoing assessment fosters continuous improvement, minimizes risks, and helps to ensure that the Flagler Beach Pier Replacement project remains on track and delivers successful results.

Through these strategies, ETM reinforces its commitment to project efficiency, cost control, and risk management, ensuring that the Flagler Beach Pier Replacement is completed on time, within budget, and to the highest standards of quality.

Schedule Management

ETM's approach to schedule management is built around a commitment to efficiency and proactive management, particularly in projects like the Flagler Beach Pier Replacement. With our dual-crane strategy and phased construction schedule, we ensure that every step is meticulously planned to maximize production while reducing the potential for delays.

CPM Schedule Reviews

ETM employs a team-based approach for the review and management of schedules, incorporating feedback from both management and inspection personnel. This ensures that the perspectives and insights of all team members are considered when evaluating the timeline. Our collaborative approach focuses on:

- **Logical Sequence of Work:** We assess the sequence of construction activities to ensure that they align with the overall project timeline. This allows us to identify any inefficiencies or dependencies early on.
- **Evaluation of Durations:** We closely examine the estimated durations for each task, ensuring that they align with realistic field production rates and contractor resources.
- **Key Milestone Dates:** We prioritize the identification of key project milestones and deadlines, ensuring that these critical points are met on time.
- **Stakeholder Responsibilities:** We track the responsibilities of all stakeholders, providing clarity and accountability throughout the project's lifecycle.
- **Early Identification of Delays:** By taking a proactive approach, we can anticipate potential delays and take corrective action before they impact the overall schedule.

While the contractor retains control over the means and methods of construction, ETM's proactive questioning approach helps keep the project moving forward. Our focus on transparency and collaboration ensures that all stakeholders are aligned and that the project remains on track.

Critical Path Method (CPM) Schedule Analysis

A meticulous analysis of the Critical Path Method (CPM) schedule is essential to ensuring that the Flagler Beach Pier Replacement project is completed on time, or even ahead of schedule. Kent is responsible for conducting and documenting these reviews. The process includes:

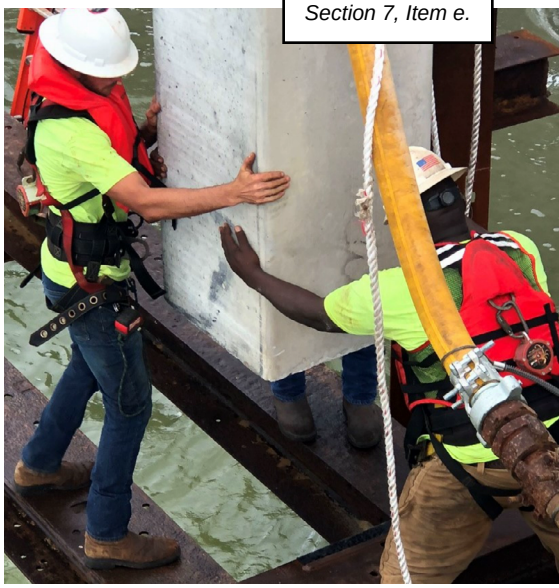
- **Comprehensive Schedule Review:** ETM conducts activity-to-activity, resource loading, and logic reviews to assess the accuracy and feasibility of the schedule. We rely on industry-standard tools such as P6 and Claim Digger software for these analyses.
- **Real-World Perspective:** Our field experience plays a crucial role in ensuring that schedules reflect real-world conditions. We use this knowledge to identify potential risks, such as material delivery times or the coordination of complex tasks, and ensure that adequate lead times are factored in.
- **Logical Construction Sequences:** We evaluate the construction sequence for efficiency, ensuring that critical path tasks are given the necessary time to avoid delays downstream.
- **Allocation for Technical Specifications:** We ensure that the schedule accounts for all technical specifications and requirements, including any specific regulatory or safety protocols that may affect the timeline.

Drive Production Piles

Commitment to Ongoing Schedule Review

ETM's commitment to schedule management extends beyond the initial baseline schedule submission. Our ongoing schedule reviews occur at critical junctures throughout the project:

- **Baseline Schedule:** Our review begins with the baseline schedule submission, ensuring that it provides a realistic and achievable timeline.
- **Monthly Estimate Submissions:** We continue to review the schedule after each monthly estimate submission, making adjustments as necessary based on the progress of the work.
- **Supplemental Agreements and Time Requests:** If additional time is requested through Supplemental Agreements or other time adjustments, we thoroughly assess these changes and incorporate them into the overall schedule review.



This ongoing process of schedule analysis ensures that the Flagler Beach Pier Replacement project stays on track, enabling timely completion while minimizing disruptions or delays. Through our collaborative approach and commitment to real-world experience, ETM consistently delivers projects with precision and efficiency, meeting the expectations of both the City and the community.

CASE STUDY

One illustrative example of our schedule review efforts is derived from our work on the I-295/Heckscher Interchange project. In this case, the Cost Saving Initiatives (CSI) procedure permitted the Department to grant time for the development of a CSI, as stipulated in Specification 4-3.9.1(4), prior to commencing construction. The Department chose to initiate construction and CSI development concurrently, rendering the originally submitted baseline schedule ineffective. Through numerous iterations and detailed reviews, ETM ensured the contractor developed a pre-CSI baseline. This baseline accurately accounted for the CSI design and submittal timelines, and it accurately represented the limited field work that could be executed during the CSI's development and submission phases. This effort is emblematic of our commitment to meticulous schedule management and our ability to adapt to dynamic scenarios.

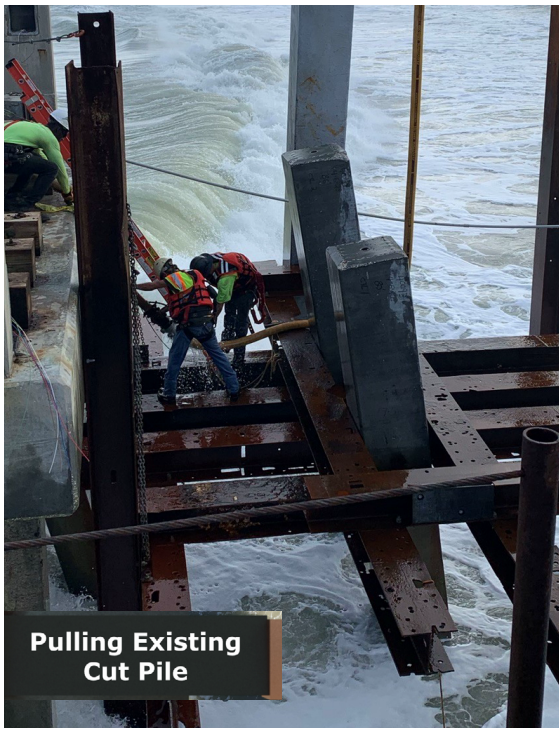
Cost Management

ETM's approach to cost management centers on meticulous oversight and proactive measures to ensure the Flagler Beach Pier Replacement project remains within budget and meets all financial goals. Our experienced project managers are dedicated to tracking expenditures, managing change orders, and overseeing every aspect of budgeting. This comprehensive approach guarantees that financial management is handled effectively throughout the project lifecycle.

CMA Cost Estimate Savings Methodology

To provide an accurate and competitive CMA Cost Estimate, we follow a structured methodology that begins with a thorough understanding of the project requirements and scope. Our process includes:

1. **Obtaining Detailed Plans and Conducting Site Visits:** We start by reviewing detailed plans and conducting comprehensive site visits. This helps us gain a deep understanding of the site conditions and any potential challenges, allowing us to tailor our estimate to the project's unique needs.
2. **Aligning Resources with the Project Scope:** With a clear understanding of the project, we align our resources strategically, ensuring that personnel with relevant expertise are assigned to specific tasks. This allows us to efficiently manage the project and provide high-quality service to the City.
3. **Identifying Phases and Timing Requirements:** We carefully assess the project's phasing and identify key elements that require specific timing, such as critical path activities or tasks that must be completed within certain windows. This insight enables us to accurately calculate manhours and costs, ensuring that our estimate reflects the full scope and complexities of the project.
4. **Efficiency and Cost Savings:** We look for opportunities to drive efficiencies throughout the project. Our commitment to maximizing value is reflected in every aspect of the CMA Cost Estimate, ensuring that the City receives the best possible return on investment.



Efficient and Scalable Staffing Strategy

In addition to our precise cost estimating approach, we also propose a staffing strategy designed to maximize efficiency and minimize costs while maintaining high-quality service delivery:

1. **Streamlined On-Site Staffing:** We propose reducing the number of on-site personnel to only one person per day. Rather than billing for an entire team, we will utilize an Assistant Project Administrator, a skilled individual with years of field inspection experience who is also proficient in the administrative side of project management. This role combines both inspection and administrative duties, optimizing staffing costs while ensuring the project remains on track.
2. **Oversight from Senior Engineer and Project Administrator:** The Senior Engineer and Project Administrator will continue to provide oversight for the project, ensuring that all tasks are managed effectively, and the project progresses according to plan. By focusing on a lean, efficient staffing structure, we can keep costs low without sacrificing quality or service.
3. **Scalable Staffing Capacity:** We advocate for a scalable staffing strategy that enables us to quickly adjust the workforce based on the Contractor's needs and schedule. Whether there's a need for additional personnel during critical phases or a lull in activity, we can quickly scale up or down to meet the project's demands.
4. **Optimized Cost-to-Value Ratio:** Our staffing strategy ensures that the City receives high-quality services while minimizing overhead costs. By using a smaller, more efficient team, we can provide all necessary support without unnecessary billing for additional staff.

In summary, ETM's cost management strategy combines precise cost estimating, efficient staffing practices, and a commitment to delivering the project on time and within budget. By aligning our resources with the project's specific needs, we ensure that every aspect of the Flagler Beach Pier Replacement project is executed with financial discipline and strategic oversight. Our approach is designed to provide maximum value to the City, enhancing project outcomes while maintaining cost-effectiveness.

Pulling Existing Cut Pile

Tim Teaching Interns

ETM COST SAVINGS METHODOLOGY - CONTRACTOR'S REQUEST FOR EXTRA COMPENSATION

When a Contractor submits a request for extra compensation, our first step is to determine the legitimacy of the request. We approach this process with a comprehensive evaluation to ensure that any extra compensation is reasonable, substantiated, and in alignment with the project's scope and contractual obligations.

Step 1: Assessing the Legitimacy of the Request

The initial task is to evaluate whether the contractor's request is legitimate. ETM reviews the request by asking the following key questions:

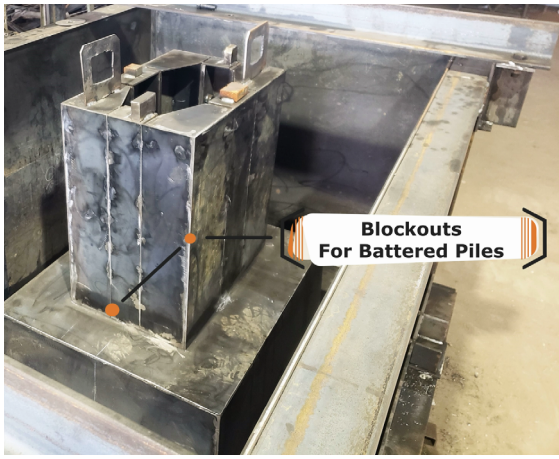
- Does the Contractor's request align with the terms and conditions outlined in the contract?
- Is the additional work or cost truly necessary due to unforeseen conditions or changes in scope?
- Has the Contractor provided adequate documentation to support their request?

If the request is deemed legitimate, we move forward with our internal cost estimation process.

Step 2: Independent Engineering Cost Estimate

Before receiving the Contractor's official submittal, ETM will perform an independent engineering cost estimate to assess the request accurately. This step helps us ensure that any compensation granted is reasonable and fair, avoiding the acceptance of potentially inflated claims.

Step 3: ETM's Multifaceted Cost Estimation Approach



Our cost estimation methodology employs a combination of various data sources and techniques to arrive at an accurate, well-supported estimate:

1. **Actual Costs:** When possible, ETM relies on actual cost data, such as historical project costs, market rates, and real-time pricing, to generate accurate estimates. This data helps us compare the contractor's request against industry standards and the specific conditions of the project.
2. **Historical Data:** We draw from a wide range of historical cost data, such as:
    - **FDOT's Historical Statewide and Areawide Unit Cost Averages:** These cost averages provide valuable benchmarks for assessing the reasonableness of the contractor's request.
    - **Equipment Watch:** We utilize detailed information about equipment costs and usage, allowing for accurate estimations of equipment-related expenses.
    - **US Department of Labor's Annual Wage Rate Information:** Labor rates are a key component of cost calculations, and we use up-to-date data from trusted sources to ensure accuracy.
    - **FDOT's Production Rate Guidelines:** These guidelines help determine the efficiency and expected productivity levels for various construction tasks.
3. **Combination Approach:** Depending on the nature of the request, ETM may combine the above sources of information to create a comprehensive cost estimate. This combined approach is useful for handling complex situations where a simple unit cost or time-and-material estimate may not be sufficient.

Precast Bent Cap Form Construction

Step 4: Accounting for Key Variables

In addition to the primary data sources mentioned, ETM takes several other factors into account to refine our cost estimates, including:

- **Cost Inflation/Deflation:** We account for the potential impact of inflation or deflation over the course of the project, ensuring that pricing is up to date and reflects current economic conditions.
- **Overhead and Profit Allowances:** We assess the Contractor's overhead and profit margin to ensure they are in line with industry norms and the project's financial constraints.
- **Small vs. Large Quantities:** For larger quantities, we may apply unit cost discounts or adjust the estimate to reflect economies of scale.

Step 5: Evaluation and Negotiation

Once the independent cost estimate is complete, ETM compares it to the contractor's request. If the request is found to be inflated, we will engage in a negotiation process with the Contractor to reach a fair and reasonable amount of compensation. This ensures that the Contractor is paid appropriately for the work performed, while also safeguarding the project's budget and financial goals.

ETM's comprehensive and detailed approach to cost estimation ensures that contractor requests for extra compensation are handled fairly and efficiently. Our commitment to accuracy, transparency, and accountability protects the interests of the City and ensures that all claims are substantiated and reasonable.

CASE STUDY

As an example of our multifaceted approach, on our recent FDOT SR 200 widening project, the Contractor encountered existing concrete under the existing southbound roadway that was not shown in the plans. ETM reviewed the 1974 roadway plan as-builts, used a plotting program to plot the past roadway plan top of concrete elevations and current plans bottom of subgrade elevations and plotted where existing concrete was expected to be encountered and require removal, used time and material logs to document concrete removals during the investigation period, as not to delay the contractor, and ultimately calculated the additional concrete removals necessary within 0.7% accuracy. It was estimated that 38,008 SY of existing concrete would need to be removed. At the end of the day, the actual amount removed was 37,754 SY. During negotiations with the contractor ETM also secured the addition of 111 non-compensable contract days, resulting in substantial cost savings of over $403,000.

PROACTIVE ENGINEERING COST ESTIMATE PROCESSES FOR FLAGLER BEACH PIER REPLACEMENT

ETM's Proactive Engineering Cost Estimate processes are custom-tailored to meet the specific needs of each project, ensuring both efficiency and effectiveness while providing cost savings. We bring forward methodologies honed through our experience with past pier projects, such as the Jacksonville Beach Pier Replacement. Below are some direct applications from our past projects that will benefit the Flagler Beach Pier Replacement:

DIRECT CITY OF FLAGLER BEACH PIER REPLACEMENT APPLICATIONS

1. Precast Pier Caps

- **Innovation:** During the Jacksonville Beach Pier Replacement, ETM coordinated the switch from cast-in-place pier caps to precast pier caps. This adjustment expedited the construction timeline and saved on labor costs, without compromising the structural integrity of the pier.
- **Application to Flagler Beach:** ETM will evaluate the use of precast pier caps for the Flagler Beach Pier Replacement to reduce construction time and associated costs.

Set Precast Bent Caps

2. Temporary Trestle Oversight

- **Innovation:** ETM ensured that the temporary trestle construction followed approved shop drawings and met all steel pipe pile driving resistance and blow count requirements, ensuring public safety and minimizing risks.
- **Application to Flagler Beach:** ETM will ensure that the temporary trestle is constructed in compliance with safety standards and will closely monitor any deviations from the plans to mitigate delays.

3. Turtle Nesting Protection

- **Innovation:** ETM worked with the Florida Department of Environmental Protection (FDEP), Florida Fish and Wildlife Conservation Commission (FWC), and marine experts to ensure the proper placement of construction fencing and the protection of turtle nesting areas.
- **Application to Flagler Beach:** ETM will collaborate with relevant local agencies to implement similar turtle nesting protection measures, ensuring minimal impact on local wildlife.

4. Turbidity Monitoring and Reporting

- **Innovation:** ETM ensured compliance with FDEP's turbidity monitoring requirements during the Jacksonville Beach project, submitting weekly documentation to authorities.
- **Application to Flagler Beach:** We will apply the same level of detailed monitoring to Flagler Beach's construction activities, submitting reports to ensure environmental compliance.

5. Fireworks Coordination During Construction

- **Innovation:** ETM coordinated with the City of Jacksonville Beach and the Fire Marshal to accommodate public events such as fireworks displays, ensuring minimal disruption to construction activities.
- **Application to Flagler Beach:** ETM will work with the City of Flagler Beach and other local stakeholders to minimize disruption during public events, keeping construction schedules intact.

6. Pile Tension Dowel Bar Testing

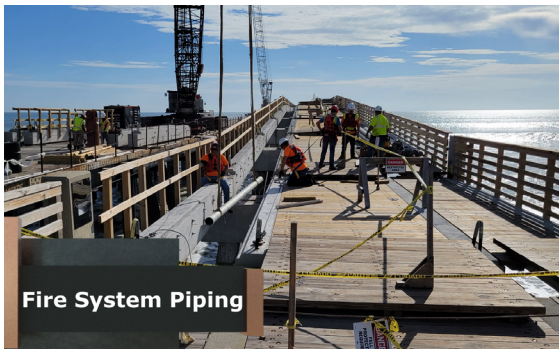
- **Innovation:** ETM facilitated pile tension dowel bar testing in the Jacksonville Beach project to ensure compliance with project specifications, contributing to the pier's structural integrity.
- **Application to Flagler Beach:** ETM will ensure the same rigorous testing processes are implemented on the Flagler Beach Pier to maintain structural integrity and compliance with specifications.

7. Regulatory Collaboration

- **Innovation:** ETM maintained proactive communication with FDEP, the U.S. Army Corps of Engineers, and other agencies, ensuring timely approvals and providing as-built documents to the City of Jacksonville Beach.
- **Application to Flagler Beach:** ETM will proactively collaborate with all necessary agencies, ensuring all permits and approvals are obtained in a timely manner.

8. Multi-Agency Coordination

- **Innovation:** ETM coordinated efforts with a wide range of stakeholders including local event organizers, nearby hotel developers, and environmental groups to avoid conflicts and ensure smooth project operations.
- **Application to Flagler Beach:** ETM will manage relationships with all relevant stakeholders, ensuring seamless coordination and minimizing project delays.



Set Precast Beams

Plumbing, Electrical, & Fire Break Slab Installation

9. Proactive Inspection Management

- **Innovation:** ETM worked with the City of Jacksonville Beach's Building Department and Fire Marshal to ensure timely inspections, which prevented delays in the project schedule.
- **Application to Flagler Beach:** ETM will work with the City of Flagler Beach's local departments to ensure inspections are conducted promptly, keeping the project on schedule.

10. Fish Cleaning Station Design Interpretation

- **Innovation:** ETM demonstrated problem-solving expertise during the Jacksonville Beach project by navigating design ambiguities in the fish cleaning stations, ensuring the project moved forward smoothly.
- **Application to Flagler Beach:** ETM's problem-solving approach will be applied if any ambiguities arise during the Flagler Beach Pier project, minimizing delays and ensuring the correct execution of designs.

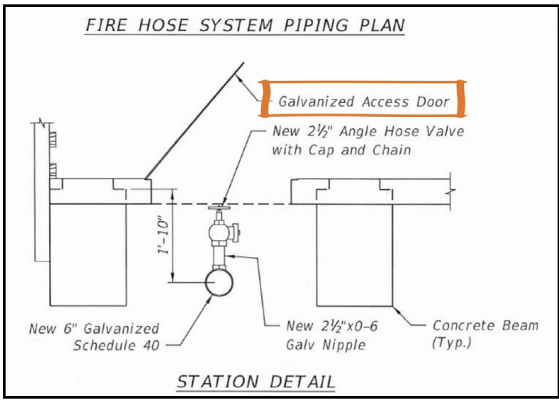
11. Cost Efficiencies through Communication

- **Innovation:** ETM's proactive approach to resolving design and coordination issues helped minimize costly delays. By ensuring clear communication with Contractors, suppliers, and stakeholders, ETM kept costs under control.
- **Application to Flagler Beach:** ETM will continue this proactive communication strategy for the Flagler Beach Pier Replacement, addressing potential issues before they lead to project delays or cost overruns.

COMMITMENT TO SCHEDULE AND BUDGET MANAGEMENT

ETM's seasoned management approach ensures vigilant monitoring of both the project's construction budget and our internal budget. We are committed to proactively addressing any issues that may lead to cost overruns or schedule delays, safeguarding the financial and timeline integrity of the project.

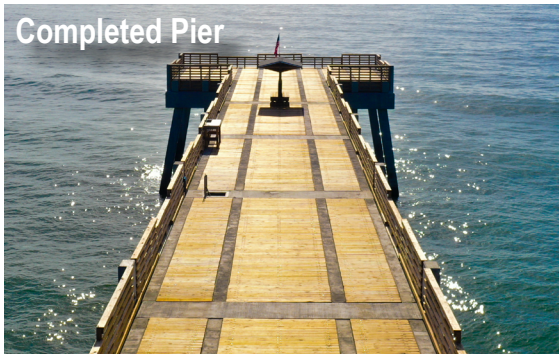
By applying these time-tested practices from previous successful pier projects, ETM is confident in our ability to deliver the Flagler Beach Pier Replacement project efficiently, within budget, and on time.



CLOSING THE APPROACH SECTION: OUR COLLABORATIVE RELATIONSHIP WITH MOFFATT & NICHOL

In closing, we would be remiss if we didn't mention the invaluable partnership ETM has established with Moffatt & Nichol, the project's design team. Over the years, we have fostered a close collaboration built on mutual respect and trust. The significance of this relationship cannot be overstated, as it provides the City of Flagler Beach with a proven and effective partnership capable of addressing unforeseen challenges and resolving issues quickly.

This long-standing trust between ETM and Moffatt & Nichol ensures a cooperative and solution-oriented environment throughout the project. Rather than engaging in disputes over potential errors or omissions, our history of collaboration promotes effective problem-solving, keeping the focus on the success of the Flagler Beach Pier Replacement project.



With this partnership, combined with our innovative methods, cost-saving strategies, and the unique qualifications of our team, ETM is fully committed to delivering the Flagler Beach Pier Replacement on time, within budget, and with minimal disruption. We will preserve the pier's historical significance while ensuring the project meets the City's objectives and high standards of excellence.

Kent Ponder, PE
Senior Project Engineer

Mr. Ponder has been a licensed Engineer since 2002 and is well versed in an extensive assortment of complex transportation construction projects. He began his career in the US Navy then transitioned to FDOT where his focus on quality, attention to detail, and ability to lead and communicate well with others helped him advance quickly in the field. His diverse construction experience includ major bridges, pile and drilled shaft foundations, fender construction, complex roadway/interchanges, utilities, bridge culverts, mechanically stabilized earthwalls (MSE), high mast lighting, signalization, and overhead sign installation. Mr. Ponder has broad experience managing Task Work Order type assignments on residency and area-wide projects - providing exceptional service in this capacity specifiaclly for the FDOT District 2 and Nassau County. Mr. Ponder is highly regarded for his leadership, ensuring that Contractors are performing satisfactory work and properly submitting necessary project documentation and correspondence in accordance with plans, specifications, and contract documents.

PROJECT EXPERIENCE:

Senior Project Engineer, Jacksonville Beach Pier Project No. 9925-03, City of Jacksonville (COJ), $9.9 Million, Duval County, Florida - The project demolished, removed, and replaced the Jacksonville Beach Public Fishing Pier damaged during Hurricane Matthew in October 2016. Approximately 350 LF of the pier was destroyed, and an additional 450 LF of the structure was damaged. Reconstruction of the damaged and destroyed portions of the pier occurred within the alignment of the previous structure starting at Bent 12 and continued to Bent 34. The project scope consisted of removal of the existing damaged pier still standing, removal of submerged pier debris from ocean floor, installation of 8,568 LF of 24" pre-stressed concrete pile foundation, over 300 CY of mass concrete, 2,640 LF of 24" pre-stressed beams, and over 3,000 LF of wooden walkways and handrails. Responsibilities included administering the contract in accordance with the plans and specifications, review of plan and shop drawing submittals, reviewing RFI's, provide daily technical assistance in the field, monthly pay request and reviewing pricing submitted by contractor for additional work. **Service:** 10/2019 to 07/2022; **Reference:** Tom Goldsbury, P.E., City of Jacksonville Project Manager, (904) 255-8799.

Senior Project Engineer, SR 5/Broward Creek Bridge Replacement, FDOT District 2, $14 Million, FIN: 437441-1-52-01 & 437441-1-56-01, Duval County, Florida - The project consisted of removing two existing aging bridges and replacing them with one structure. The work includes 4,052 LF of 24" concrete piles, 2,814 LF of Type-2 concrete beams, 456 LF of retaining walls, 30.9 CY of sand cement rip rap,1,783 LF of barrier wall, approximately ½ mile of roadway widening with column supported soil stabilization consisting of 12" diameter grout columns installed to a minimum tip elevation of minus 33 or refusal with a load transfer platform, multiphase MOT, asphalt overbuild, turnout construction, milling and resurfacing, drainage, traffic separators, C&G, sidewalk, guardrail, watermain with bridge attachments and coordination with CSX. Early in the project, Mr. Ponder and his team identified and investigated voids under the existing northbound roadway that were not included in the design and worked closely with FDOT Geotech office to identify the best solution and prevent future failures. The team coordinated closely with FDOT and CSX, providing and executing an approved plan of action that avoided delays to the project schedule. **Service:** 06/2022 to Present; **Reference:** Sam Lansdale, Project Manager, FDOT, (904) 360-5557.

Senior Project Engineer, Newnan Street/Hubbard Street; From Just South of Orange Street to a Point South of Confederate Street, FDOT District 2, $1.5 Million, FIN: 415254-1-52-01 & 415254-1-56-01, Duval County, Florida - This 250-day federally funded project, an extension of ETM's SR 200 CEI contract by the Department, encompassed milling and resurfacing, base work, curb and gutters, bridges, sidewalks/bicycle paths, and the preservation of historical bridge elements. Situated in Duval County, the JEA water main work spanned Newnan Street/Hubbard Street, featuring the historically significant Hubbard/Newnan Street Bridge, designed by renowned architect Henry John Klutho. Due to soil contamination, the City of Jacksonville

collaborated with the Department for oversight. This off-system bridge rehabilitation project, in partnership with FDOT and the City, addressed contaminated soils, with FDOT's CAR Contractor handling excavations and the City handling soil disposal. Notably, the project involved close coordination with the Florida Department of the Interior State Historic Preservation Officer (SHPO) and necessitated meticulous restoration of historical elements, verified through 3D scans. The project also managed tight tolerances during construction, conducting vibration monitoring to prevent delays while adhering to specifications. Project won the Florida Transportation Builders Association (FTBA) award as Florida's Best in Construction for Bridge. **Service:** 02/2016 to 10/2016; **Reference:** Jessica Tippett, P.E., Project Manager, FDOT, (904) 360-5504.

Senior Project Engineer, SR 117/Moncrief Creek Bridge Replacement, FDOT District 2, $6 Million, FIN: 437438-1-52-01, Duval County, Florida - This project consisted of removing two existing deficient bridges and replacing them with one structure, roadway widening, milling and resurfacing, drainage, curb & gutter, sidewalk, installation of a temporary acrow panel bridge with pedestrian walkway, phased MOT with pedestrian detours, new light pole installations, utility coordination and adjustment. Work included 1,574 LF of 24". concrete piles, 1,612 LF of concrete slab beams, 380 LF of concrete traffic railing. **Service:** 11/2021 to 3/2023; **Reference:** Jessica Tippett, P.E., Project Manager, FDOT, (904) 360-5504

Senior Project Engineer, Lofton Creek Bridge Replacement, FDOT District 2, $4.5 Million, FIN: 437407-1-52-01 & 437407-1-56-01, Nassau County, Florida - This 300-day Federally Funded, off system, unit price project, which included Rural Economic Development Initiative (REDI) funds consisted of replacement of the CR 200A bridge over Lofton Creek on Pages Dairy Road in Nassau County using an acrow panel bridge, reconstruction of the approaches and new 16" water main installation on the utility shelf of the new bridge in an environmentally sensitive area. Work included 1,574 LF of 24" concrete piles, 1,612 LF of concrete slab beams, 380 LF of concrete traffic railing, and 673 LF of ductile iron water main installed on extended bridge utility shelf. Mr. Ponder's team identified a conflict within the Project MOT Plans that interfered with construction of the Nassau County roadway project. This required collaborative negotiations between the Department, Nassau County, JEA and two separate contractors that resulted in the process and execution of two Change Orders and a Supplemental Agreement. Early discovery and the due diligence of his team prevented a 300-day delay in both roadway and utility completion while saving Nassau County unbudgeted funds and preventing the Department from encumbering additional funds. While continuing contract progress, a significant limestone layer was noted at an elevation that would not allow Intermediate Bent 2 and 3 to be driven at a compliance minimum tip depth. Proactive communications with the Contractor and providing possible solutions enabled the Engineer-of-Record to develop and implement a redesign in time to seamlessly integrate changes to the existing schedule at no additional costs to the Department. **Service:** 06/2021 to 01/2023; **Reference:** Jessica Tippett, P.E., Project Manager, FDOT, (904) 360-5504

CEI Consultant Engineer, CEI Districtwide Continuing Services Contract, FDOT District 2, $7.5 Million/5 Years, FIN: 433811-1-62-22, CAJ10, Clay, Duval, Nassau, and St. Johns County, Florida - This contract completed dozens of projects to support FDOT mission to provide a safe transportation system that ensures the mobility of people and goods, enhances economic prosperity, and preserves the quality of Florida's environment and communities. The projects included resurfacing, ITS, Safety Improvements (Pedestrian, Bicycle, and Vehicle), Signalization, and High Friction Surface Treatment. Kent was responsible for coordination and execution of FDOT's Continuing Services CEI contract. He worked closely with key team members, apply a hands-on approach to understanding the ever-changing need of FDOT's work program, collaborated with Department personnel in navigating staffing and funding requirements, and assists in performing Quality Assurance reviews for ETM and subconsultant inspection personnel. Additional responsibilities included monitoring of budgets to ensure adequate funding throughout each project timeline and at critical fiscal times in the Department's funding cycle. Mr. Ponder fosters great communication channels with FDOT Project Administrators and is a cohesive point of contact internal at ETM and with both the Jacksonville and Palatka Resident Offices that fall under this contract. **Service:** 08/2022 to Present; **Reference:** Sandy Douglas, CPM, FDOT CSS II, (904) 360-5548, Brian Kirts, PE, Program Manager, FDOT, (904) 360-5556

Tim Thacker
Project Administrator

Mr. Thacker specializes in administering major highway and bridge construction projects. He began his career as an airplane mechanic but quickly transitioned to construction where he rapidly advanced to a project Superintendent. His background as a Superintendent on the Constructor side of the industry provides him with valuable insights and knowledge of construction means and methods. He then transitioned to CEI in 1993 and has worked his way from an Inspector to Senior Inspector to Project Administrator. With combined Project Administrator and Senior Inspector positional experience, Mr. Thacker has seen to completion over 40 bridge projects that include new bridge construction, bridge removal/widening/replacement, and pedestrian bridges. From these bridge projects Mr. Thacker has gained invaluable experience with driven piles, drilled shaft foundations, steel structural beams, concrete girders and bridge demolition. Additionally Mr. Thacker has extensive roadway experience which includes both asphalt and concrete roadways, box culverts, mechanically stabilized earth walls, sound walls, drilled shafts, high mast lighting, conventional lighting, overhead signs, mast arm / span wire signalization, and utility construction for large diameter water, reuse, and force mains. Mr. Thacker's strong CPM schedule analysis background, expertise Supplemental Agreement and Work Order negotiating skills, and professional addressing of public concerns makes him an anchor on any CEI team.

PROJECT EXPERIENCE:

Project Administrator, Jacksonville Beach Pier, City of Jacksonville (COJ), $9.9 Million, Project No. 9925-03, Duval County, Florida - The project demolished, removed, and replaced the Jacksonville Beach Public Fishing Pier damaged during Hurricane Matthew in October 2016. Approximately 350 LF of the pier was destroyed, and an additional 450 LF of the structure was damaged. Reconstruction of the damaged and destroyed portions of the pier occurred within the alignment of the previous structure starting at Bent 12 and continued to Bent 34. The project scope consisted of removal of the existing damaged pier still standing, removal of submerged pier debris from ocean floor, installation of 8,568 LF of 24" pre-stressed concrete pile foundation, over 300 CY of mass concrete, 2,640 LF of 24" pre-stressed beams, and over 3,000 LF of wooden walkways and handrails. Responsibilities included administering the contract in accordance with the plans and specifications, review of plan and shop drawing submittals, reviewing RFI's, provide daily technical assistance in the field, monthly pay request and reviewing pricing submitted by contractor for additional work. **Service:** 10/2019 to 07/2022; **Reference:** Tom Goldsbury, P.E., City of Jacksonville Project Manager, (904) 255-8799.

Project Administrator, SR 9B Phase III: I-95 to CR 2209, Design/Build - New Interstate Facility, FDOT District 2, $79.7 Million, FIN: 431418-2-52-01 & 431418-2-56-01, Duval & St. John's County, Florida - This project was Design/Build of a new multi-lane facility that completed the SR 9B corridor from I-95 to CR 2209 and provided a new vital link to I-95 for St. Johns County residents. The 9B corridor pavement design consisted of 141,155 SY of jointed plan PCCP with thickness ranging from 8.5" to 11.5". Significant project scope elements include a new Single Point Urban Interchange (SPUI) at Peyton Parkway, full reconstruction of CR 2209, construction of twin 900 LF bridge structures over the environmentally sensitive Durbin Creek and its adjoining wetland, and substantial JPA relocations of water main (16" and 24"), force main (20") and reuse main (12"). This project features the placement of 1.7 million CY embankment, 21,381 tons of asphalt, 37,304 LF of storm pipe up to 72" diameter, full ITS feature integration including a DMS sign, multiple microwave vehicle detection devices, CCTV's and BlueTOAD devices, 22 overhead sign structures, 7 new high mast lights, and a new 136 LF single span steel truss pedestrian bridge over CR 2209. This project also consisted of construction for 8 new bride structures with 20,147 LF of driven 18" and 24" pile foundations, 15,974 LF of FIB girders with 36", 45", and 84" girder depths, 49,413 SF of MSE Walls, and 7,150 CY of structural concrete. A special project highlight includes the construction of a temporary truss founded upon steel pipe piles and utilizing top-down construction for the full length of the Durbin Creek bridge. Direct responsibilities on this project included oversight of inspection personnel responsible for quality assurance inspection of the project construction which includes the new Verification Testing Procedures in District 2. **Service:** 06/2015 to 01/2018; **Reference:** Jeff Williams, P.E., Resident Engineer, FDOT, (386) 312-4831.

Tim Thacker
Project Administrator

Project Administrator, SR 9B Phase II: US 1 to I-95, Design/Build/Finance, New Interstate Facility, FDOT District 2, $94.9 Million, FIN: 209294-9-52-01 & 209294-9-56-01, Duval County, Florida - This new multi-lane interstate facility extended the existing SR 9B corridor from north of US 1 to south of I-95, completed the full directional interchange at US 1, and provided a new interchange at I-95. Due to the increased demand for this project, the Department implemented this project via entering into a public-private partnership where the project funding was financed by the design/build team, being the first of its kind in Northeast Florida. Significant project scope elements include completion of the full interchange connection at US 1, full reconstruction of US 1 to a 6-lane urban section and widening/reconstruction of I-95 to an 8-lane section within the project limits. These elements comprised of 2.18 million CY embankment, 476,085 SY of asphalt or limerock base, 88,434 tons of asphalt, 186,645 SY of PCCP, 40,473 LF of storm drainpipe, 221,720 SY of sound walls, jack and bore of 24" and 36" steel casing across I-95, multiple over span and truss signs, relocation of an existing DMS sign, and a full conventional lighting system installation. Bridge construction on the project consisted of 18,381 LF of 45", 54", or 78" FIB's, 13,085 LF of 24" prestressed concrete piles, 9,770 CY of cast-in-place structural concrete, and 101,595 SF of MSE Retaining Walls. **Service:** 08/2012 to 06/2015; **Reference:** Jeff Williams, P.E., Resident Engineer, FDOT, (386) 312-4831.

Project Administrator, SR 9B, Phase I: US 1 to SR9A, Design/Build, New Interstate Facility, FDOT District 2, $68.4 Million, FIN: 209293-2-52-01 & 209294-1-52-01, Duval County, Florida - This new alignment interstate facility, funded by the American Recovery and Reinvestment Act of 2009 (ARRA), provided a new connection from I-295 to US 1 and began the new SR 9B corridor. At the time, this project was one of the largest design/build projects implemented in the Northeast Florida area. Mr. Hansgen served as the lead for all project issues that included design reviews, design changes, bridge construction aspects, MSE construction aspects and negotiating all contract changes. During the project, FDOT requested an increase of the roadway construction from the original planned 4-lanes to 6-lanes, resulting in a $6 million Supplemental Agreement (SA) to the contract. Major project features included 125,000 CY of subsoil excavation, 1.68 million CY of embankment, 17,150 LF of storm drainpipe, 142,089 SY of 11.5" concrete pavement, 13 bridge structures utilizing 31,285 LF of 45", 54", and 78" FIB for their superstructure framing, 24" driven pile foundations, MSE wall bridge abutments, as well as signal installations, and milling and resurfacing along US 1. JPA work included the installation/relocation of a 20" force main and a 24" water main via installation of 36" and 42" steel casing. Project responsibilities included, but were not limited to, administering the contract in accordance with the plans and specifications, review of plan and shop drawing submittals, reviewing RFIs, provide daily technical assistance in the field, monthly pay request, and reviewing pricing submitted by Contractor for additional work. **Service:** 02/2010 to 08/2012; **Reference:** Jeff Williams, P.E., Resident Support Engineer, FDOT, (386) 312-4831.

Project Administrator, I-95 & SR 115 (MLK Expressway) Interchange, FDOT District 2, $80 Million, FIN: 433899-2-52-01 & 433899-2-56-01, T2891, Duval County, Florida - The purpose of the project is to increase the bridge clearance under I-95 along MLK to 16'8" by raising I-95 approximately 3', replacing the adjacent pedestrian bridge to increase the clearance to 17'-6", and improve the community driven aspects including aesthetics and noise walls. The existing I-95 bridge clearance is 13'-9" and is the most struck bridge in NE Florida. To minimize the elevation change on I-95 the (2) new I-95 bridges are constructed using (64) 70' long 2' tall weathering steel plate girders beams (4.480'). The project includes removal of both existing I-95 bridges and pedestrian bridge, 6,345 LF of 18" concrete piles, 632,699 lbs of reinforcing steel, 3,670 CY of structural concrete, 27,392 SF of MSE walls, Prefabricated Pedestrian Bridge with laser cut window accents and Architectural Gateway Icon Signs, bridge construction, 59,312 SY of milling, 29,091 tons of Asphalt Pavement, 1,882 SY of High Friction Surface Coarse, 44,986 CY of embankment, 50,241 CY of Subsoil Excavation, 51,929 SY of Type B Stabilization, 46,100 SY of Base Work, 111 drainage structures, 10,785 LF of Drainage pipe, 1,401 LF of Jack and bore drainage pipe, 7,286 LF of Curb & Gutter, 12,157 of Barrier Wall that included 14' noise wall, 47,066 SF of Sound Walls, 61,045 SY of performance turf, 31 Overhead sign structures, 61,551 LF of street lighting conductor cable, 167 overhead street lights, removal and installation of 2 new traffic signals on 6 prestressed concrete poles, 13,463 LF of fiber optic cable, 7 vehicle detection systems, ITS, 2,216 LF of 20" JEA waterline, 20 EA fittings, 303 LF of Jack and bore under pipe, and utility work. **Service:** 08/2023 to Present; **Reference:** Jessica Tippett, P.E., Resident Engineer, (904) 360-5504.

Project Administrator, SR 13 San Jose Boulevard - Driveway Modification, FDOT District 2, $0.2 Million, FIN: 4454262-2-52-01, Duval County, Florida - This project provided highly needed driveway improvements to facilitate safer ingress/egress on SR 13. Project included selective clearing and grubbing, removal of concrete pavement, excavation and truck borrow embankment, stabilized subgrade, limerock base, structural and friction asphalt, signage, and thermoplastic pavement markings. **Service:** 11/2022 to 03/2023; **Reference:** Brian Kirts, P.E., Resident Engineer, (904) 360-5556.

ENGLAND-THIMS & MILLER

Robert Mullin
Senior Inspector

Mr. Mullin is dedicated and highly skilled in inspection and administering major highway and bridge construction projects, including considerable experience working on bridge construction including bascule bridges. Starting his career as an Inspector in 2003, Mr. Mullin's journey has been characterized by an unwavering attention to detail, a strong work ethic, and a commitment to continuous self-improvement through education and experience. Progressing to roles such as Senior Inspector and Project Administrator, he discovered his true passion as a Lead Bridge Inspector, where he could make the most significant impact on project quality and team development. His bridge expertise spans the rehabilitation of existing concrete and steel structures, constructing new steel trusses, post-tensioned structures, AASHTO, FIBs, mechanical rack and pinion lift spans, hydraulic single-leaf cylinder lift bridges, precast footings, cast-in-place footings both on land and in water, and foundations including piles and drilled shafts. Leveraging his experience and in-depth knowledge of project administration, final estimate documentation, and project closeout requirements, Mr. Mullins guides and trains his field staff, ensuring seamless collaboration between the office and the field. Mr. Mullin's personal focus centers on ensuring contractor compliance with plans and specifications, aiming for the highest quality of work and meeting client expectations.

PROJECT EXPERIENCE:

Assistant Project Administrator, Starke Railroad Overpass from US-301 to East of CSX Railroad, FDOT District 2, $25 Million, FIN: 436558-1-52-01 & 436558-1-56-01, Bradford County, Starke, Florida - The project improves the emergency service response time by constructing a bridge over CSX railroad and eliminating an at grade crossing. The project includes reconstructing SR 100 from undivided to divided while constructing a 1,038 LF concrete bridge spanning over the Railroad in the downtown district. This complex and aesthetically featured project includes an eight-span bridge supported on over 4,000 LF of 42" drilled shafts, decorative substructure, and 42'-wide superstructure supported on Florida I beams including 45", 53", and 63". Additional highlights include over 9,000 SF of retaining walls on the approach, four new PCCP stamped concrete roundabouts, pattern banded sidewalks, uniquely imprinted brick railings, pier rustifications, railroad coordination, custom lighting, utility work, and signalizations. Contamination removals, 7,500 CY of subsoil excavation, two new ponds, and added parking lots all in part to beautify the area. **Service:** 7/2020 to Present; **Reference:** Patrick Gallagher, PE Project Manager (352) 494-5240.

Senior Bridge Inspector, Timucuan Trail Bridge Over Haulover Creek, FDOT District 2, $2.7 Million, FIN: 434028-1-52-01, Duval County, Jacksonville, Florida - The Timucuan Trail provides unmatched coastal cycling opportunities through Amelia Island State Park and is connected to the 3,000-mile East Coast Greenway that runs along the Atlantic Coast. The project separated bicycle and pedestrian traffic from vehicle traffic to improve safe access to Huguenot Memorial Park. The project consisting of a new 248' long pedestrian bridge within space constraints of an existing 71-year-old SR A1A Heckscher Drive bridge. The new pedestrian bridge structure included AASHTO beams spanning Haulover creek, five bents of substructure, and 24x24 prestressed concrete piling foundations, permanent steel sheetpile walls, gravity walls, new guardrails, aluminum handrailing, drainage, striping, signage, and sodding all in part to connect this paved shared use path to Huguenot Memorial Park. **Service:** 8/2018 to 5/2019; **Reference:** James Salter, FDOT Project Manager, (904) 497-2369.

Senior Bridge Inspector, SR 9B Phase III: I-95 to CR 2209, Design-Build - New Interstate Facility, FDOT District 2, $79.7 Million, FIN: 431418-2-52-01 & 431418-2-56-01, Duval & St. John's County, Florida - This project was Design/Build of a new multi-lane facility that completed the SR 9B corridor from I-95 to CR 2209 and provided a new vital link to I-95 for St. Johns County residents. The 9B corridor pavement design consisted of 141,155 SY of jointed plan PCCP with thickness ranging from 8.5" to 11.5". Significant project scope elements include a new Single Point Urban Interchange (SPUI) at Peyton Parkway, full reconstruction of CR 2209, construction of twin 900 LF bridge structures over the environmentally sensitive Durbin Creek and its

adjoining wetland, and substantial JPA relocations of water main (16" and 24"), force main (20") and reuse main (12"). This project features the placement of 1.7 million CY embankment, 21,381 tons of asphalt, 37,304 LF of storm pipe up to 72" diameter, full ITS feature integration including a DMS sign, multiple microwave vehicle detection devices, CCTV's and BlueTOAD devices, 22 overhead sign structures, 7 new high mast lights, and a new 136 LF single span steel truss pedestrian bridge over CR 2209. This project also consisted of construction for 8 new bride structures with 20,147 LF of driven 18"and 24" pile foundations, 15,974 LF of FIB girders with 36", 45", and 84" girder depths, 49,413 SF of MSE Walls, and 7,150 CY of structural concrete. A special project highlight includes the construction of a temporary truss founded upon steel pipe piles and utilizing top-down construction for the full length of the Durbin Creek bridge. Direct responsibilities on this project included oversight of inspection personnel responsible for quality assurance inspection of the project construction which includes the new Verification Testing Procedures in District 2. **Service:** 06/2015 to 01/2018; **Reference:** Jeff Williams, P.E., Resident Engineer, FDOT, (386) 312-4831.

Assistant Project Administrator, I-10/US-301 Ramp Modifications, FIN 428865-1-52-01/428865-1-56-03, FDOT District 2, $107 Million, Duval County, Florida - The project replaces 4 existing bridges deemed structurally deficient and increases capacity on I-10 to accommodate population growth on the west side of Jacksonville while improving traffic flow for a major hurricane evacuation route and eases congestion of the US 301 interchange which is a major truck route. This project consists of four bridge removals and the construction of eight new bridges with concrete beams over US 301 and steel beams spanning 235' over CSX Baldwin Railroad Yard all supported on concrete pilings. Project highlights include 603,000 CY of embankment, 310,000 CY of regular excavation, subsoil excavations, 2-stage MSE walls with settlement monitoring, construction of four new ponds, 3.4 miles of drainage improvements, railroad coordination, high mast lighting, signalizations, guardrails, box culvert rehabilitations, 24,000 LF of driven piles, ITS, wrong-way detection, and contamination removals. **Service:** 7/2022 to Present; **Reference:** Maksim Milovidov, PE, Project Manager (904) 625-5074

Senior Bridge Inspector, Newnan Street/Hubbard Street; from Just South of Orange Street to a Pt. S. of Confederate Street, FDOT District 2, $1.5 Million, FIN: 415254-1-52-01, Jacksonville, Florida - This 250-day, federally funded, unit price project and consisted of milling and resurfacing, base work, curb and gutters, bridges, sidewalks/bicycle path, and other incidental construction including preservation of historical bridge elements and JEA water main work on Newnan Street/Hubbard Street in Duval County, just south of Orange Street to approximately 200' south of Confederate Street. He was responsible for the intense coordination required between all stakeholders, documentation, and testing on the project. This project was an off-system bridge rehabilitation project that was federally funded in cooperation with FDOT and the City of Jacksonville. Major elements of work revolved around contaminated soil removal in which FDOT's CAR contractor performed all soil excavations and the City of Jacksonville participated with taking ownership and proper disposal thereof. **Service:** 2/2016 to 10/2016; **Reference:** Jessica Tippett, PE, Project Manager, FDOT, (904) 360-5504

Project Administrator, SR 15 (US 17) Dunn's Creek Road and Bridge Reconstruction, FDOT District 2, $36.5 Million, FIN:435444-1-52-01, Palatka County, Florida - The project reconstructed US 17 from a 2-lane to a 4-lane expressway in South Palatka. The new bridge consisted of 27,000 LF of a 24" concrete pile foundation, 3,900 CY of mass concrete, and 14,000 LF of 78"-tall Florida-I beams to provide a minimum of 45 LF clearance over the navigable waterway. The roadway included construction of column supported embankment for the approach to the bridges, 47,000 CY of subsoil excavation, 219,000 CY of embankment, drainage installation, and construction of the shared use path throughout the US 17 project. **Service:** 01/2018 to 01/2019; **Reference:** Taylor Byrd, (386) 312-4826

Senior Inspector, CR 315 (Sharron Road), Bridge Replacement, (RFP No. 11/12-5), Clay County, Florida - This 270-day design/build bridge replacement over Green's Creek increased the vertical height of the bridge to raise it above flood level. This project involved complete removal of an existing timber bridge supported on timber piling and replacing it with a modern concrete span superstructure supported on 18" prestressed pilings. Safety improvements included rip rap protection for each end bent, W-beam guardrail at end approaches, concrete barriers each side of the bridge, and roadway elevations raised to comply with flood stage demands. **Service:** 2/2013 to 5/2013; **Reference:** Warrick L. Sams, Senior Project Manager, 904-759-4469.

Senior Inspector, US 1 Resurfacing and SR 13 Safety Improvements at I-295, FDOT District 2, $13.6 Million, FIN :423922-1-52-0 & 423922-1-56-0, Jacksonville, Florida - This 270-day, federally funded, unit price project that consists of milling and resurfacing, base work, shoulder treatment, drainage improvements, curb and gutter, traffic signals, highway signing, guardrail, sidewalks/bicycle paths, utility work, and other incidental construction along SR 13 San Jose Boulevard/Claire Lane. This contract also includes a lump sum, Joint Project Agreement (JPA) with JEA for utility adjustments, and installations of a 10" force main and 8" watermain. **Service:** 9/2012 to 2/2013; **Reference:** Jessica Tippett, PE, Project Manager, FDOT, (904) 360-5504.

ENGLAND-THIMS & MILLER

Clint Proveaux
Senior Inspector

Mr. Proveaux began his career working as a QC Technician where he quickly honed his skills with material testing. Driven for additional challenges he joined ETM and has been working as a field inspector on complex heavy civil projects. Mr. Proveaux has been honing his craft to specialize in Bridge construction while continuing to advance his knowledge in road, signalization, and ITS work. He has worked on 11 different structures and his attention to detail assists the team by performing thorough inspections while communicating with the team and contractor areas of concern. His experience has paired him up with many different contractors creating a diverse background in various construction methods and activities including earthwork, utilities, bridge construction, roadway construction, and signalization. While exceedingly competent in material sampling and testing, he also demonstrates efficient prioritization for daily tasks, contributes to the team and pitches in on project assignments when other areas of the project need additional support. His initiative for professional growth drives him to continue expanding his construction skills, knowledge, and certifications.

PROJECT EXPERIENCE:

Senior Inspector, SR 5/Broward Creek Bridge Replacement, FDOT District 2, $14 Million, FIN: 437441-1-52-01 & 437441-1-56-01, Duval County, Florida - The purpose of the project is to replace the aging bridge over Broward River. Work consist of removing two existing bridges and is replacing them with one structure, 4052 LF of 24-inch concrete piles, 2814 LF of Type-2 concrete beams, 456 LF of retaining walls, 30.9 CY of sand cement rip rap,1,783 LF of barrier wall, approximately ½ mile of roadway widening with column supported soil stabilization consisting of 1286 CY, 16" 45 LF long columns including a load transfer platform, multiphase MOT, 1,451-TN of asphalt overbuild, turnout construction, milling and resurfacing, drainage, traffic separators, C&G, sidewalk and guardrail, watermain with bridge attachments and coordination with CSX FDOT District Rail Administrators. Mr. Proveaux is currently serving as the bridge and pile driving inspector for phase 3, performing material sampling and verification, assisting with reinforcement sampling and verification, and more. **Service:** 02/2023 to Present; **Reference:** Samuel Lansdale, P.E., (904) 360-5557

Senior Inspector, SR 115/Moncrief Creek Bridge Replacement, FDOT District 2, $5.7 Million, FIN: 437438-1-52-01, Duval County, Florida - Improvements under this contract consist of bridge removal and replacement, roadway widening, milling and resurfacing, drainage, curb & gutter, sidewalk, installation of a temporary acrow panel bridge with pedestrian walkway, phased MOT with pedestrian detours, utility coordination and adjustment. This Contract includes 2,500 LF of 24" concrete pile, 1,978 LF of Prestressed Florida Slab Beams, 6,240 SF of Temporary Sheet piling, 471.4 CY of Class 4 Concrete, 226.4 CY of Class 2 Concrete, 115,828 lbs of Reinforcing Steel. Mr. Proveaux was responsible for providing as-built drawings of field changes for PA/PM review, assisted the APA with wet check of deck, created the 90%/final project punch lists, supporting the PA/CSS administratively and with project close-out. **Service:** 12/2022 to 03/2023; **Reference:** Jessica Tippett, P.E., Project Manager, FDOT, (904) 360-5504

Inspector, Lofton Creek Bridge Replacement, FDOT District 2, $4.2 Million, FIN: 437407-1-52-01, Nassau County, Florida - Improvements under this contract consist of replacement of the SR 200A bridge over Lofton Creek, reconstruction of the approaches and new 16" water main installed on the utility shelf of the new bridge. This Contract includes 1,663 LF of 18" concrete pile, 1,612 LF of Prestressed Florida Slab Beams, 1,790 SF Temporary Sheet Pile, 67.2 CY of Class 4 Concrete, 285.9 CY of Class 2 Concrete, 59,118 lbs of Reinforcing Steel. Mr. Cronk was the Assistant Project Administrator overseeing all inspection personnel responsible for the inspection, documentation, and testing on the project. Mr. Proveaux was responsible for 15 pile logs, assisted with inspecting reinforcing steel, material sampling and verification of concrete, earthwork, and asphalt, ensure conformance of bullet rail and guardrail installations, and assisted with project close-out. **Service:** 07/2021 to 12/2022; **Reference:** Jessica Tippett, P.E., Project Manager, FDOT, (904) 360-5504

Clint Proveaux
Senior Inspector

Inspector, Nassau County Pages Dairy Road, Nassau County, $3.5 Million, Contract No. CM2923, Florida - Resurfaced the existing lanes and widening approximately 1 LF on both sides of Pages Dairy Road in Nassau County. Additional work items include constructing new 5 LF paved shoulders, re-grading ditches, intersection improvements at Pages Dairy Road and Felmor Road to include turn lanes, replacing existing driveways, and constructing new asphalt driveways. The work to be performed is generally described as resurfacing and includes resurfacing of existing pavement, constructing roadside swales, constructing cross drain extensions and side drains, construction box culvert extensions, asphalt and concrete driveway construction, clearing and grubbing, placing performance turf and sod, MOT, installing pavement marking, roadway signage and new JEA water main construction. Mr. Proveaux was responsible for completing accurate and timely asphalt reports, rolling straight edge verification, earthwork material sampling and verification, provided precise monthly/weekly quantities, completed final punch list with the County, and assisted PA/PM with project closeout. **Service:** 05/2021 to 03/2022; **Reference:** Robert Companion, Nassau County Engineer, (904) 530-6225

Inspector, SR 200 Reconstruction, Phase II; from West of Rubin Davis Lane to East of O'Neil Scott Road, FDOT District 2, $60 Million, FIN: 210712-4-52-01, Duval County, Florida - The scope specifically includes the reconstruction of 5.5 miles of 4-lane rural to a 6-lane urban arterial roadway including the replacement of the mainline bridges over Lofton Creek. The conversion to a curb and gutter section will require a higher profile grade line in order to capture and convey drainage to 9 ponds. The main drainage trunk line will run on the north side. Other incidental work on this project includes box culvert extensions, 28 drilled shafts, 9 interconnected signalized intersections actuated by advanced traffic loops and video detection, and directional drill at Lofton Creek to replace both the water and sewer mains that are currently attached to the existing bridges. Mr. Proveaux assisted with project close-out, completed the final punch list, entering accurate material sampling information, assisted in completing the pile driving logs, completed weekly/monthly estimate documentation, and more. **Service:** 12/2015 to 5/2021; **Reference:** John Patterson, P.E., Project Manager, FDOT, (904) 360-5576

QC Technician, SR 9B Phase III: I-95 to CR 2209, Design-Build - New Interstate Facility, FDOT District 2, $79.7 Million, FIN: 431418-2-52-01 & 431418-2-56-01, Duval & St. John's County, Florida - This project was Design/Build of a new multi-lane facility that completed the SR 9B corridor from I-95 to CR 2209 and provided a new vital link to I-95 for St. Johns County residents. The 9B corridor pavement design consisted of 141,155 SY of jointed plan PCCP with thickness ranging from 8.5" to 11.5". Significant project scope elements include a new Single Point Urban Interchange (SPUI) at Peyton Parkway, full reconstruction of CR 2209, construction of twin 900 LF bridge structures over the environmentally sensitive Durbin Creek and its adjoining wetland, and substantial JPA relocations of water main (16" and 24"), force main (20") and reuse main (12"). This project features the placement of 1.7 million CY embankment, 21,381 tons of asphalt, 37,304 LF of storm pipe up to 72" diameter, full ITS feature integration including a DMS sign, multiple microwave vehicle detection devices, CCTV's and BlueTOAD devices, 22 overhead sign structures, 7 new high mast lights, and a new 136 LF single span steel truss pedestrian bridge over CR 2209. This project also consisted of construction for 8 new bride structures with 20,147 LF of driven 18" and 24" pile foundations, 15,974 LF of FIB girders with 36", 45", and 84" girder depths, 49,413 SF of MSE Walls, and 7,150 CY of structural concrete. A special project highlight includes the construction of a temporary truss founded upon steel pipe piles and utilizing top-down construction for the full length of the Durbin Creek bridge. Mr. Proveaux prepared various QC reports and formulated specific recommendations to resolve or correct quality issues. **Service:** 2016 to 2018; **Reference:** Jeff Williams, P.E., Resident Engineer, FDOT, (386) 312-4831.

QC Technician, SR 9B Phase II: US 1 to I-95, Design-Build-Finance, New Interstate Facility, FDOT District 2, $94.9 Million, FIN: 209294-9-52-01 & 209294-9-56-01, Duval County, Florida - This new multi-lane interstate facility extended the existing SR 9B corridor from north of US 1 to south of I-95, completed the full directional interchange at US 1, and provided a new interchange at I-95. Due to the increased demand for this project, the Department implemented this project via entering into a public-private partnership where the project funding was financed by the design/build team, being the first of its kind in Northeast Florida. Significant project scope elements include completion of the full interchange connection at US 1, full reconstruction of US 1 to a 6-lane urban section and widening/reconstruction of I-95 to an 8-lane section within the project limits. These elements comprised of 2.18 million CY embankment, 476,085 SY of asphalt or limerock base, 88,434 tons of asphalt, 186,645 SY of PCCP, 40,473 LF of storm drainpipe, 221,720 SY of sound walls, jack and bore of 24" and 36" steel casing across I-95, multiple over span and truss signs, relocation of an existing DMS sign, and a full conventional lighting system installation. Bridge construction on the project consisted of 18,381 LF of 45", 54" or 78" FIB's, 13,085 LF of 24" prestressed concrete piles, 9,770 CY of cast-in-place structural concrete and 101,595 SF of MSE Retaining Walls. Mr. Proveaux ensured density of the roadway, asphalt thickness and determined deficiencies located in the wheel paths. **Service:** 2016 to 2017; **Reference:** Jeff Williams, P.E., Resident Engineer, FDOT, (386) 312-4831.

Vicki Bowen
Contract Support Specialist

Ms. Bowen's diversified project and administrative experience includes bridge, design build, and reconstruction projects. She began her career as an Administrative Assistant and through her own initiative advanced to CSS. Her former years of service in the US Navy instilled in her a keen focus of attention to detail that she leverages to the client's advantage in maintaining detailed project records and closing out projects without errors or omissions. Ms. Bowen addresses issues directly and honestly to enhance her relationships with her clients, teams, and contractors. Her duties include daily communication with the inspection staff regarding quantities, producing error free estimates, verifying material certifications, and ensuring the accuracy of project documentation. In addition, she prepares the project final acceptance documentation which includes pay item quantity certification, final offer letter to the contractor and the Final As-Builts. She works effectively as part of an entire project team and independently, with little supervision, to achieve quality results in a timely manner.

PROJECT EXPERIENCE:

Contract Support Specialist, SR 5/Broward Creek Bridge Replacement, FDOT District 2, $14 Million, FIN: 437441-1-52-01 & 437441-1-56-01, Duval County, Florida - The purpose of this project is to replace the aging infrastructure including the bridge over Broward River. Work consist of removing two existing bridges and is replacing them with one structure, 40,52 LF of 24" concrete piles, 2,814 LF of Type 2 concrete beams, 456 LF of retaining walls, 30.9 CY of sand cement rip rap,1,783 LF of barrier wall, approximately ½ mile of roadway widening with column supported soil stabilization consisting of 1,286 CY, 16" 45 LF long columns including a load transfer platform, multiphase MOT, 1,451-TN of asphalt overbuild, turnout construction, milling and resurfacing, drainage, traffic separators, C&G, sidewalk and guardrail, watermain with bridge attachments and coordination with CSX FDOT District Rail Administrators. **Service:** 06/2022 to Present; **Reference:** Sam Lansdale, PE, FDOT Project Manager, (904) 360-5557.

Administrative Assistant, Newnan Street/Hubbard Street; From Just South of Orange Street to a Point South of Confederate Street, FDOT District 2, $1.5 Million, FIN: 415254-1-52-01 & 415254-1-56-01, Duval County, Florida - This 250-day, federally funded, unit price project consisted of milling and resurfacing, base work, curb and gutters, bridges, sidewalks/bicycle path, preservation of historical bridge elements, and JEA water main work on Newnan Street/Hubbard Street in Duval County. This project was a federally funded, off-system bridge rehabilitation project in cooperation with FDOT and the City of Jacksonville. Major elements of work revolved around contaminated soils in which FDOT's CAR Contractor performed all soil excavations and the City of Jacksonville participated with the scheduling and payment of all roll off containers. In addition, the City of Jacksonville was responsible for removal and disposal of excavated soils. Responsibilities include assisted field and office staff as needed by scanning and attributing all project related documents and correspondence into EDMS, as well as organizing and maintaining the official project files, processing incoming and outgoing mail and project submittals, attending weekly progress meetings, taking minutes for distribution, and maintaining office and breakroom supplies. **Service**: 02/2016 to 10/2016**; Reference**: Jessica Tippett, PE, Project Manager, FDOT Project Manager, (904) 360-5504.

Contract Support Specialist, SR 115/Moncrief Creek Bridge Replacement, FDOT District 2, $5.7 Million, FIN: 437438-1-52-01, Duval County, Florida - The purpose of this project is to replace the aging infrastructure removing two existing deficient bridges and replacing them with one structure. Improvements under this contract consist of bridge removal and replacement, roadway widening, milling, and resurfacing, drainage, curb & gutter, sidewalk, installation of a temporary Acrow panel bridge with pedestrian walkway, phased MOT with pedestrian detours, utility coordination and adjustment. This project includes 2,500 LF of 24" concrete pile, 1,978 LF of prestressed Florida slab beams, 6,240 SF of temporary sheet piling, 471.4 CY of Class 4 Concrete, 226.4 CY of Class 2 Concrete, 115,828 lbs. of reinforcing steel. **Service:** 11/2021 to 03/2023; **Reference:** Jessica Tippett, PE, FDOT Project Manager, (904) 360-5504.

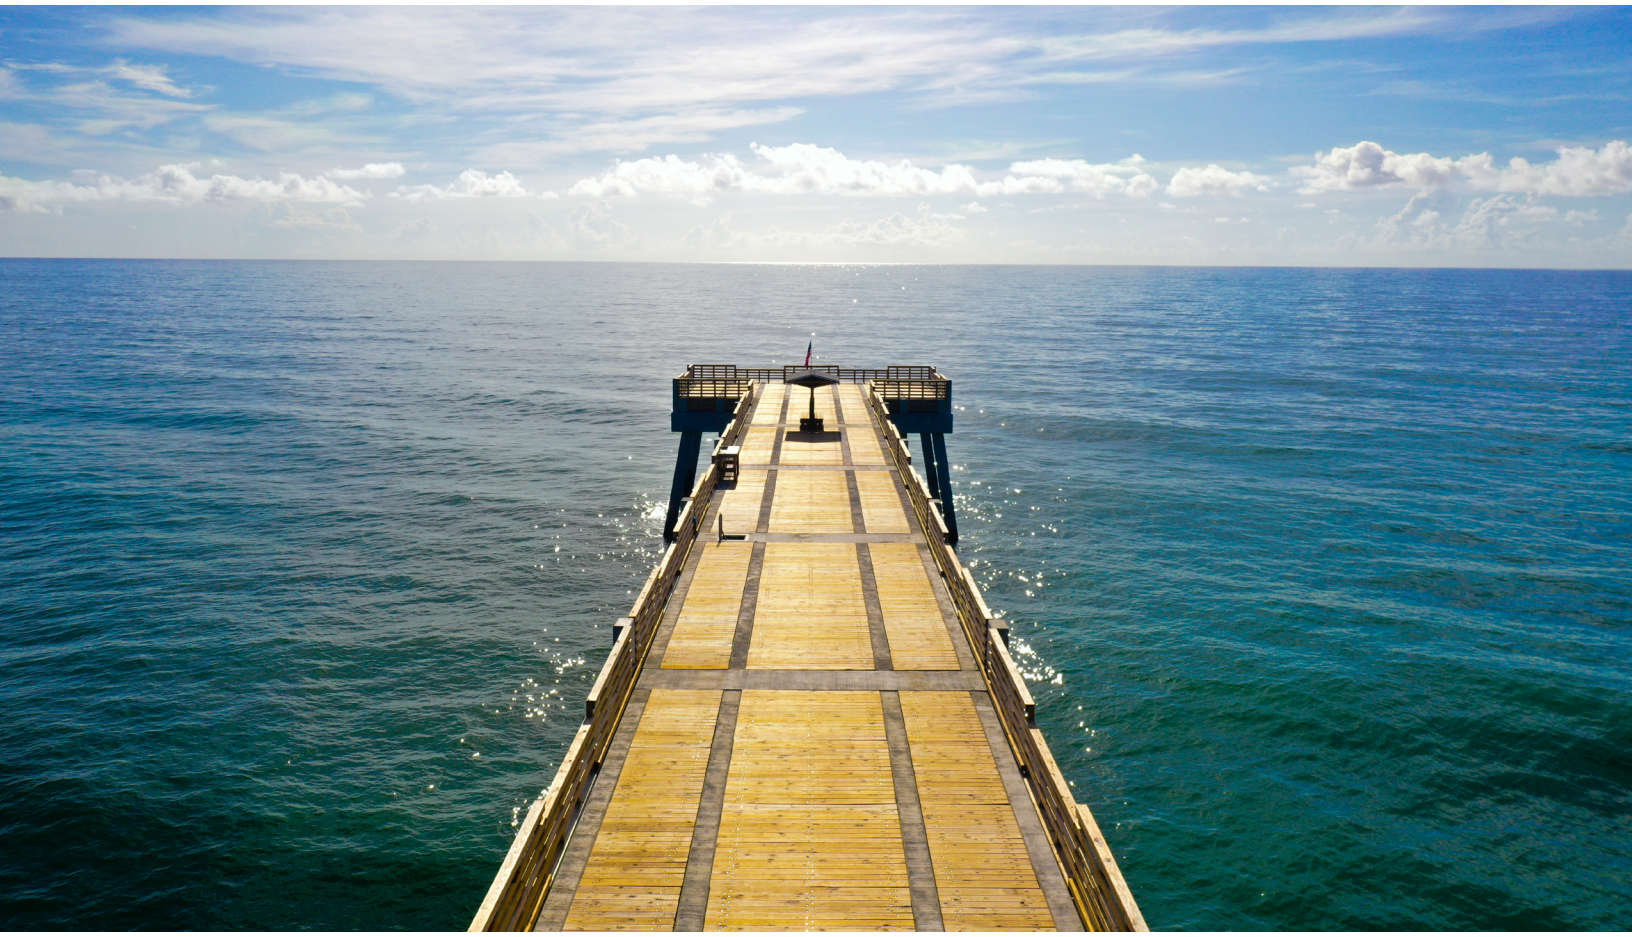
ENGLAND-THIMS & MILLER

Vicki Bowen
Contract Support Specialist

Contract Support Specialist, Lofton Creek Bridge Replacement, FDOT District 2, $4.5 Million, FIN: 437407-1-52-01 & 437407-1-56-01, Nassau County, Florida - The purpose of this project was to replace and widen an aging bridge and relocating/replacing a watermain to a utility shelf. Improvements under this contract consist of replacement of the SR 200A bridge over Lofton Creek, reconstruction of the approaches and a new 16" water main installed on the utility shelf of the new bridge. This Contract includes 1,663 LF of 18" concrete pile, 1,612 LF of prestressed Florida slab beams, 1,790 SF temporary sheet pile, 67.2 CY of Class 4 concrete, 285.9 CY of Class 2 concrete, 59,118 lbs. of reinforcing steel**.** Ms. Bowen was responsible for preparing the final offer letter to the Contractor and final estimate package to the Department, both were turned in on time. **Service:** 06/2021 to 12/2022; **Reference:** Jessica Tippett, PE, FDOT Project Manager, (904) 360-5504.

Contract Support Specialist, JEA Pages Dairy Road, JEA, $ 2.2 Million, Contract No. CM2923, Nassau County, Florida - This project provided approximately 2,221 LF of 16" ductile iron water main along Felmor Road, which will included approximately 160 LF of a 30" cased railroad crossing from the 12" water main termination on Felmor Road to Pages Dairy Road (200A). Additionally, improvements included approximately 13,489 LF of 16" ductile iron water main from Felmor Road along Pages Dairy Road (200A) to Chester Road and approximately 520 LF of open cut 16" water main for tying in the new 16" water main to the existing 16" water main along Chester Road. **Service:** 01/2021 to 03/2022**; Reference:** Tom Hamilton, JEA Project Manager, (904) 544-1883.

Contract Support Specialist, Nassau County Pages Dairy Road, Nassau County, $3.5 Million, Contract No. CM2923, Florida - Due to heavy use and a growing population, Nassau County needed to resurface and widen 5-miles of Pages Dairy from 22 LF to 32 LF. This project included resurfacing the existing lanes and widening approximately 1 LF on both sides of Pages Dairy Road, constructing new 5' paved shoulders, re-grading ditches, intersection improvements at Pages Dairy Road and Felmor Road to include turn lanes, replacing existing driveways, and constructing new asphalt driveways, cross drain extensions and side drains, box culvert extensions, clearing and grubbing, MOT, pavement marking, roadway signage and new JEA 12" water main. **Service:** 01/2021 to 03/2022; **Reference:** Robert Companion, Nassau County Engineer, (904) 468-0005.



Contract Support Specialist & Administrative Assistant, SR 200 Reconstruction Phase II; from West of Rubin Davis Lane to East of O'Neil Scott Road, FDOT District 2, $60 Million, FIN: 210712-4-52-01, Duval County, Florida - The purpose of this project was the reconstruction of 5.5 miles of a 4-lane rural to 6-lane urban arterial roadway including the replacement of the mainline bridges over Lofton Creek. Project includes the conversion to a curb and gutter section requiring a higher profile grade line to capture and convey drainage to nine new ponds. Other work on this project includes box culvert extensions, 28 drilled shafts, nine interconnected signalized intersections actuated by advanced traffic loops and video detection, and a directional drill at Lofton Creek to replace both the water and sewer mains that are currently attached to the existing bridges. Responsibilities include monthly and final estimates, checking of field books, maintaining computation books and as-builts, checking and maintaining asphalt records, maintaining SA/WO and time files, helping in the process of preparing the Monthly CPPR, preparing Weather/Holiday Letters, working within Site Manager for estimates, Change Orders, DWRs, and various other duties. **Service**: 12/2015 to 06/2021; **Reference**: John Patterson, PE, FDOT Project Manager, (904) 360-5576.

Administrative Assistant, Main Street over Hogan's Creek SR 5/US 17, FDOT District 2, $2.1 Million w/$250,000 Incentive Clause, FIN: 439601-1-52-01, Duval County, Florida - This 280-day lump sum emergency design-build with incentive bonus project consisted of design, removal, replacement, and disposal of the existing 17' 9" long reinforced concrete structure over Hogan's Creek in Duval County. The project replaced the concrete structure, existing roadway, sidewalks, curb and gutter, bridge railing removal/rehabilitation/reinstallation, including preservation of historical bridge elements, utilities, storm sewer, and lighting necessary to restore the facility to its original condition. The utility relocations (water and sewer) were included as a Joint Participation Agreement (JPA) with the JEA. Responsibilities included assisted field and office staff as needed by scanning and attributing all project related documents and correspondence into EDMS, as well as organizing and maintaining the official project files. Responsible for processing incoming and outgoing mail and project submittals, attending weekly progress meetings, taking minutes for distribution, and maintaining office and breakroom supplies. **Service**: 07/2016 to 04/2017**; Reference**: Brian Kirts, PE, Project Management, (904) 271-1585.

PAST PERFORMANCE

5 PAST PERFORMANCE

ETM has proudly provided CMA services for a variety of local agencies for over 30 years. Our CEI department has grown into one of the largest groups in Florida and currently provides services for roadway and bridge construction, paving, drainage, water, sewer and reuse inspection, materials testing, full-time construction contract administration, and bidding services, as well as monitoring and documentation throughout all phases of construction.

Our team of experts boasts 48 years in the industry and an unparalleled knowledge of infrastructure projects. We guarantee peak performance, technical mastery, and a swift response to all your needs - so that you can rest assured that the projects under this contract will run smoothly from start to finish. ETM has proven that we can muster the resources when needed and/or scale them back to meet the changing demands of different project types and award timings. Our clients have come to trust us to deliver on our promises and we are proud of being selected for repeat work on these types of contracts.

SIMILAR PROJECTS

We highlight relevant projects of similar scope which were completed within the past ten years on the following pages, demonstrate our competency and experience in the specified work areas as defined in the scope of services for this contract, and have included applicable reference information for each project listed. In addition, we identify team members that were part of the referenced projects and will be involved with this project.

ATTACHMENT E
EXPERIENCE OF BIDDER

Bidder Name: England-Thims & Miller, Inc.

Authorized Signature: Geory R. Miller Date: January 15, 2025

Is your company currently involved in any active litigation? X Yes ____No

If Yes, explain: See attached list of litigation.

Has your company ever been sued? X Yes ____No

If Yes, explain and/or submit court decision or judgment, as applicable:

See attached list of litigation.

The Bidder must demonstrate the successful completion of four (4) projects of similar complexity, nature, size, and dollar amount in the capacity of CMA. Any material misrepresentation, as determined by the City of Flagler Beach, shall result in disqualification.

On the following pages, provide the requested information regarding experience within the past ten (10) years on four (4) projects. These projects must be new or rehabilitation projects. Preferred projects should be for a coastal community on or near the beach. Additional credit will be awarded for Fishing Piers, either concrete or wood.

LITIGATION HISTORY

Project: Briar Oaks; Briar Oaks HOA

- Case Number: NA
- Alleged Claim: Construction Defects
- Final Outcome: ETM was excluded from this case.
- Date Settled: January 2019

Project: Bartram Office Park; Bartram Park HOA

- Case Number: 16-2019-CA-1251
- Alleged Claim: Construction Defects
- Final Outcome: Settled out of court
- Date Settled: February 2019

Project: Cobblestone Publix v. May

- Case Number: 162018CA006979XXXXMA
- Alleged Claim: Slip and Fall
- Final Outcome: Settled out of court - confidential agreement
- Date Settled: May 2021

Project: Posley [Donetia as PNG Jamael Butler, a minor] v. Jackson, Butler

- Case Number: 162020CA000236XXXXMA
- Alleged Claim: Negligence
- Final Outcome: Settled out of court - confidential agreement Date Settled: February 2021

England, Thims & Miller, Inc. v. Honan Development, LLC

- Amount: $45,000
- Alleged Claim: England, Thims & Miller, Inc. sued Honan Development, LLC for non-payment.
- Final Outcome: N/A
- Date Settled: N/A

England, Thims & Miller, Inc. v. Montevilla at Bartram Lakes Association

- Amount: $TBD
- Alleged Claim: Construction Defects
- Final Outcome: Pending
- Date Settled: Pending

Project #1:

Contract Date: 2020 - 2022

Contract Amount: $ $9.9 Million

Project Name: Jacksonville Beach Pier

Project Location: Jacksonville Beach, Florida

General Scope of Work: Monitoring and inspecting the construction contract to ensure that the project is constructed in reasonable conformity with the plans, specifications, and special provisions for the construction contract. Reviewing of plans, submittals, and pay requests. Overseeing installation of 96 prestressed concrete piles as well as monitoring of erosion control measures and conducting daily turbidity readings during demolition and construction of extension.

Client Name and Address: City of Jacksonville/City of Jacksonville Beach

555 West 4th Street

Jacksonville, Florida 32208

Client Contact Phone: (904) 255-8763

Client Contact Email: joyce@coj.net

Was the project completed on schedule? X Yes No

Total Amount of Change Orders: $ 75,011.71

Reasons for Change Orders: Standby costs due to delay in COE permit, adjustments to test and production pile lengths.

Please attach photos of the finished project.

JACKSONVILLE BEACH PIER REPLACEMENT

General Scope of Work:
ETM provided CEI services for the Jacksonville Beach Pier project. The scope of the project included coordination with the City of Jacksonville/City of Jacksonville Beach and includes the planned demolition, debris removal from ocean floor, and reconstruction of the sub and super structure of the pier. Responsibilities include monitoring and inspecting the construction contract to ensure that the project is constructed in reasonable conformity with the plans, specifications, and special provisions for the construction contract. Reviewing of plans, submittals, and pay requests. Overseeing installation of 96 prestressed concrete piles as well as monitoring of erosion control measures and conducting daily turbidity readings during demolition and construction of extension.

After Hurricane Matthew wreaked havoc on the Jacksonville Beach Pier, ETM provided CEI services to repair 350' of the destroyed pier along with an additional 450' that suffered damage. The project included the removal of the existing pier, the removal of submerged debris from the ocean floor, the installation of 8,568 LF of 24" pre-stressed concrete pile foundation, over 300 CY of mass concrete, 2,640 LF of 24" pre-stressed beams, and over 3,000 LF of wooden walkways and handrails, including ADA compliant fishing sections. ETM was responsible for coordinating with the City of Jacksonville, City of Jacksonville Beach, FDEP, Florida Fish and Wildlife Conservation Commission, and the USACE to ensure permits were complied with and that the project was constructed in reasonable conformity with the plans, specifications, and special provisions. This project included contract administration, plan, and shop drawing submittal reviews, RFIs reviews, daily technical assistance in the field, monthly pay requests, and the review of pricing submitted by the Contractor for additional work.

SR 9B PHASES I, II, III NEW CONSTRUCTION

General Scope of Work:
In 2009, Congress passed "The American Recovery and Reinvestment Act" (ARRA). This bill, also known as the "Stimulus Package," funded federal infrastructure projects across the US. The first phase of SR 9B was one of the largest funded by ARRA, with a total cost of $68 Million. When all three phases are completed, the SR will connect the counties of Duval and St. Johns, and run as a 4 lane, divided highway from CR 2209 to SR 9A (I-295 Outer Beltway). The initial planning stages for the project, which included a Project Development and Environmental (PD&E) Study, had begun as early as 2002, but stalled due to the lack of funding.In 2010, ETM was contracted by the FDOT to provide professional CEI services for the first phase of the project. We then won the CEI bid for each of the two remaining phases. As CEI Managers, ETM provided onsite inspection and engineering services for the FDOT, and coordinated with the Federal Highway Administration, Resident, District and Central Office FDOT personnel. This design-build project completed the new multi-lane limited access facility, providing a most anticipated and new vital link to I-95 for St. Johns County residents. Significant project elements included the placement of approximately 1.7 million CY of embankment, over six miles of new stormwater drainage system, a new Single Point Urban Interchange (SPUI) at Peyton Parkway, full reconstruction of CR 2209, construction of eight new bridge structures, including a pedestrian bridge over CR 2209 and twin 900' structures over the environmentally sensitive Durbin Creek and adjoining wetland, 101,595 SY of MSE walls, and significant water and sewer force main JPA relocations on Race Track Road, Russell Sampson Road, and CR 2209. Project responsibilities included representing the best interests of the FDOT, St. Johns County and its community, proactively identifying and resolving issues, reviewing and responding to submittals, shop drawings, and RFIs, negotiating extra and unforeseeable work, tracking costs and processing estimates, and managing our inspection staff who were accountable for quality and timely completion of the work. Project challenges included installing the bridges in the environmentally sensitive Durbin Creek, which required top-down bridge construction.

Key Team Members:
- Tim Thacker
- Robert Mullin
- Clint Proveaux
- Vicki Brown

Similar Project Elements:
- Construction Management
- CEI Services

Project #3:

Contract Date: 2016

Contract Amount: $ $1.5 Million

Project Name: Newnan Street/Hubbard Street Bridge Rehabilitation

Project Location: Jacksonville, Florida

General Scope of Work: Milling and resurfacing, base work, curb and gutters, bridges, sidewalks/bicycle path, and other incidental construction including preservation of historical bridge elements and JEA water main work on Newnan Street/Hubbard Street in Duval County from just south of Orange Street to approximately 200-feet south of Confederate Street.

Client Name and Address: FDOT, District 2
2198 Edison Avenue
Jacksonville, Florida 32204

Client Contact Phone: (904) 360-5504

Client Contact Email: jessica.tippett@dot.state.fl.us

Was the project completed on schedule? X Yes No

Total Amount of Change Orders: $ 113,104.49

Reasons for Change Orders: Added pile lengths and limited pile driving allowances due to existing soil contamination, added bulkhead, gravity wall and pipe railing.

Please attach photos of the finished project.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

NEWNAN STREET/HUBBARD STREET BRIDGE REHABILITATION

General Scope of Work:
This was a 250-day, federally funded, unit price project that the FDOT added to ETM's SR 200 CEI contract and consisted of milling and resurfacing, base work, curb and gutters, bridges, sidewalks/bicycle path, and other incidental construction including preservation of historical bridge elements and JEA water main work on Newnan Street/Hubbard Street in Duval County from just south of Orange Street to approximately 200' south of Confederate Street. This project was an off-system bridge rehabilitation project that is federally funded in cooperation with the FDOT and the City of Jacksonville. Major elements of work revolved around contaminated soils removals in which FDOT's CAR Contractor performed all soil excavations and the City of Jacksonville participated with the scheduling and payment of all roll off containers and was responsible for removing and disposing of excavated soils.

Key Team Members:
- Kent Ponder, PE
- Robert Mullin
- Vlcki Brown

Similar Project Elements:
- Construction Management
- CEI Services

Project #4:

Contract Date: 2022 - 2024

Contract Amount: $ $14 Million

Project Name: SR 5/Broward Creek Bridge Replacement

Project Location: Duval County

General Scope of Work: Concrete piles, , concrete beams, retaining walls, sand cement rip rap, barrier wall, roadway widening with column supported soil stabilization, multi-phase MOT, asphalt overbuild, turnout construction, milling and resurfacing, drainage, traffic separators, C&G, sidewalk, guardrail, watermain with bridge attachments and coordination with CSX.

END OF ATTACHMENT E

SR 5/BROWARD CREEK BRIDGE REPLACEMENT

General Scope of Work:
The project consisted of removing two existing aging bridges and replacing them with one structure. The work includes 4052 LF of 24 in. concrete piles, 2814 LF of Type-2 concrete beams, 456 LF of retaining walls, 30.9 CY of sand cement rip rap,1,783 LF of barrier wall, approximately ½ mile of roadway widening with column supported soil stabilization consisting of 12 in. diameter grout columns installed to a minimum tip elevation of minus 33 or refusal with a load transfer platform, multiphase MOT, asphalt overbuild, turnout construction, milling and resurfacing, drainage, traffic separators, C&G, sidewalk, guardrail, watermain with bridge attachments and coordination with CSX. Early in the project, Ms. Smithheart and her team identified and investigated voids under the existing northbound roadway that interfered with planned progress. With coordination with FDOT and CSX, she provided and executed an approved plan of action that avoided delays to the project schedule.

Key Team Members:
- Kent Ponder, PE
- Clint Proveaux
- Vicki Bowen

RE: Construction Manager Adviser for the Construction of Flagler Beach Fishing Pier Replacement, RFQ No. FB-242911 (City Project No. 260)

Dear Ms. Overstreet:

Procon, a Top 100 Nationally Recognized Construction Advisory firm with 25 years of experience in construction management, is excited to submit our proposal for the City of Flagler Beach Fishing Pier Replacement project. Our extensive history of partnering with municipal and federal clients positions us uniquely to deliver exceptional results for this historic and community-centered endeavor.

One of our flagship projects is the Construction Management and Inspection Services for the U.S. Coast Guard. Procon provided on-site inspection for the replacement and demolition of floating docks, rehabilitation of a concrete wharf, waterfront repairs, and demolition of hurricane-damaged day beacons. Such expertise mirrors the challenges and opportunities of reconstructing the Flagler Beach fishing pier and exemplifies our capability to manage projects with historic significance. Procon is also supporting the National Park Service with Construction Management Services to Rehabilitate Seawalls and Shoreline.

Our team brings a full suite of construction management services, from acting as the Owner's Representative to conducting submittal reviews, progress payment evaluations, and detailed schedule analyses. We excel in negotiating contractor and subcontractor proposals, coordinating with diverse stakeholders, ensuring quality inspections, and managing project closeout—all essential for the success of this historic pier replacement.

We are eager to collaborate with the City of Flagler Beach to restore this iconic community asset. Please contact me or Jason Lopez if you have any questions.

Sincerely,

Procon Consulting LLC

Company Profile

FIRM PROFILE

Firm History, Size, and Philosophy

As an industry leader, we provide our clients with technical and professional services for all phases of a project lifecycle; from project planning, design, construction, and commissioning, to ongoing facility maintenance and operations. We have provided these services for the past 25 years. With headquarters in McLean, Virginia, and offices in Florida, Texas, California, Colorado, Illinois, and Delaware to serve a broad range of municipal government, and federal clients. We have successfully delivered projects in almost all 50 states including Alaska and Hawaii. Our nationwide network of nearly 200 professionals ensures projects and clients are well supported regardless of their location.

Procon offers comprehensive construction, program, project, and facility management services, as well as commissioning, project controls and technology services for a range of project sizes, from small remodeling projects up to the $4.6B renovation of the historic St. Elizabeths' campus for the Department of Homeland Security's headquarters. Our broad range of projects includes renovations and modernizations in occupied buildings, and new construction, utilities infrastructure, and large-scale site work, with an emphasis on maximizing the usefulness of BIM, GIS, electronic project management, augmented reality, and other technology to deliver successful projects for our clients. Staff Resources and Approach to Managing Workload

Procon has a deep pool of internal resources to support the various roles/positions anticipated under this contract. With nearly 200 multi-disciplinary staff, and a local office in Cocoa, Florida, Procon is in a great position to resource this contract if selected for this project. One of our benefits is the ability to multi-task by leveraging our staff's multiple skill sets. Over the years, as Procon has grown as a firm, we have developed a team of staff trained in multiple service areas and have become accustomed to serving in multiple roles. For example, a number of our project control staff can perform as schedulers, estimators, contract administrators, and document control specialists; this allows us to consolidate positions and do more with less budget depending on the degree of engagement required for the project.

Financial Stability

As a 25-year-old established firm, Procon is financially stable and fully capable of efficiently allocating resources, and assessing and managing any foreseeable financial risks, while maintaining our current employment levels.

Volume of Work

Procon's staff and resources provide maximum flexibility to meet our clients' scheduling needs. The nature of our work requires us to typically provide services on an expedited basis. Our typical backlog is made up of many short duration assignments and therefore our workload varies on a weekly basis. Furthermore, long-term contracts are of indefinite quantity making workload dependent upon individual work orders, and difficult to predict. Our personnel have the flexibility, ability and capacity to handle all the services required and to meet the scheduling requirements for this project. Our team has the capacity to perform this work based on actual and projected workload. If Supplemental Services are required, we are committed to increasing staff levels and provide additional resources to provide these services.

Basic Construction Management Techniques and Methods

At Procon Consulting, we deliver superior construction management services by combining best practices, innovative tools, and a commitment to quality. Our team excels in creating efficient workflows, reducing risks, and ensuring each project phase is executed seamlessly. With our holistic approach, we consistently meet client expectations for time, cost, and quality.

Scheduling

Proactive scheduling is essential to the success of any construction project. At Procon Consulting, we utilize advanced scheduling techniques and tools to plan, monitor, and adjust timelines effectively. Our schedules ensure that resources are optimized, milestones are met, and potential delays are mitigated to maintain project momentum.

Key Components:

- Detailed Project Scheduling
- Critical Path Analysis
- Resource Allocation Planning
- Milestone Tracking
- Progress Monitoring

Cost Estimating

Accurate cost estimating is the foundation of successful project execution. We employ state-of-the-art tools and industry expertise to deliver precise, realistic estimates that align with project goals and market conditions. Our estimates enable clients to make informed decisions, optimize budgets, and manage financial risks effectively.

Key Components:
- Budget Development
- Quantity Takeoffs
- Cost Forecasting
- Risk-Based Estimating
- Value Engineering

Inspections for Quality Assurance

Maintaining high standards of quality is a cornerstone of our construction management approach. Our team conducts rigorous inspections throughout the project lifecycle to ensure compliance with design specifications, industry standards, and client expectations. Our thorough quality assurance process reduces rework, enhances safety, and delivers superior outcomes.

Key Components:
- Pre-Construction Site Inspections
- Material and Equipment Verification
- Workmanship Standards Checks
- Safety Compliance Audits
- Documentation and Reporting

Risk Management

Effective risk management minimizes uncertainties and safeguards project objectives. Our team will apply a structured approach to identify, analyze, and mitigate risks at every stage of the project. By proactively addressing potential challenges, we ensure projects remain on track and within budget.

Key Components:
- Risk Identification Workshops
- Risk Register Development
- Mitigation Strategies
- Contingency Planning
- Monitoring and Updating Risks
- Stakeholder Communication Plans

Collaboration and Communication

Seamless collaboration and communication are vital to the success of any construction project. Our team will leverage platforms and tools to ensure transparency, coordination, and accountability among all stakeholders. Our communication strategies keep projects organized and ensure real-time decision-making.

Key Components:

- Document Management Systems
- Stakeholder Coordination
- Digital Collaboration Platforms
- Reporting Dashboards

BENEFITS OF SELECTING PROCON

Procon can execute large complex CMa contracts as demonstrated in our relevant project examples. Throughout our firm's history, we have proven our ability to handle similar contracts and our dedication to providing quality services to clients is exemplified through:

- **Technical Knowledge:** Previous CMa experience, and comprehensive knowledge and understanding of constructions standards and requirements.

- **Ability to Meet Deadlines and Address Project Challenges:** Highly skilled and experienced project and construction management, and quality professionals capable of overcoming any project challenge, and meet multiple project deadlines.

- **Value-Added Services:** If desired, Procon can assist with Supplementary Services listed in the RFQ. Procon provides cost estimating, scheduling, and risk management and comprehensive Commissioning, Building Automation, and Energy Services.

Our integrated and flexible approach enables us to effectively meet the City of Flagler Beach's requirements. Procon will maintain continuous collaboration and communication with the City, and other stakeholders.

procon consulting

CONSTRUCTION MANAGER ADVISER

City of Flagler Beach, FL

Project Approach

PROJECT UNDERSTANDING

We understand that the historic Flagler Beach Fishing Pier has suffered significant damage due to storms and hurricanes. Procon has extensive experience managing similar projects, including assisting the U.S. Coast Guard with construction management services to address hurricane damages at the Sector Field Office in Fort Macon and Emerald Isle, North Carolina.

Our team has nearby resources available through our office in Cocoa Beach, Florida, and Project Manager **Casey Cloonan, LEED GA, CAPM,** who is based locally. This proximity ensures timely support, rapid response, and seamless coordination with stakeholders and contractors. Casey's local presence, combined with the oversight of our experienced Project Executive, **Sean Person, PMP, LEED AP,** strengthens our ability to address the unique challenges of this project while maintaining efficient communication and effective project management.

Procon's proven experience in hurricane damage restoration, access to local resources, and strong leadership from Sean Person and Casey Cloonan ensure a reliable and results-driven approach for this important project.

PRECONSTRUCTION SERVICES

Procon's approach to similar projects will include construction staging, scope planning & definition, and development of a management plan.

Communication and Coordination

Procon will work with project stakeholders to establish roles, responsibilities, and lines of communication that optimize the collective expertise of the project team and provide transparency and accountability at all levels. Getting early buy-in supports cooperative teamwork, fosters an open environment of proactive problem-solving, and focuses everyone on the success of the project and the objectives of the client.

As part of our communications management process, Procon will develop project-specific communication protocols, including means and methods, scheduled document exchange, and document identification among all team members, as well as routine and emergency contact information. Procon's team will also provide the City with the support needed to keep customers and property managers well-informed before, during, and after construction. We will prepare and post advisory notices before construction commencement, issue periodic construction updates, ensure that adequate signage, impermeable partitions, and barricades are provided where needed, and work with the subcontractors to develop contingency plans to handle disruptions and work environment concerns.

Meetings

Procon will coordinate and facilitate a kick-off meeting to discuss key elements of the project, which include validating the project scope and client expectations, discussing project communication protocols and the nature of collaboration, identifying key stakeholders who should be engaged in the process, discussing milestones and deliverables for each of the initiatives, and agreeing on critical success factors for the project, technical direction, and logistics.

Procon will conduct project meetings regularly that will cover the budget, schedule, scope, quality, safety, proper use of ePM, and many other critical categories. These meetings will be the primary means of direct exchange among the project stakeholders. In advance of each project meeting a preliminary agenda will be circulated so that all participants can adequately prepare for items related to their scope of service. Within 72 hours Procon will issue meeting minutes for review and comment.

The team will schedule mini-kick-off meetings at important project milestones to clarify expectations and allow team members to ask questions before the next phase of the project begins. Our team will also regularly conduct informal status checks with all parties. These discussions often lead to problem avoidance and establish a firm foundation for mutual commitment and trust. Information from formal and informal meetings will be regularly communicated to the City's Project Manager in detailed progress.

Progress Reports

Procon will provide regular reports that track project status during all phases of work. Our Project Manager will provide regularly scheduled briefings to the City's Project Manager and appropriate team members and will be responsible for all report preparation and documentation submitted to the City. Project reporting will provide a formal means of recording ongoing progress, measuring the differences between planned and actual, and when there is a negative variance, identifying corrective actions to realign the project plan. Procon will produce accurate, detailed reports to track project status at every phase. Reports will be provided in situation-specific format: monthly reports for management review and tracking, weekly reports with one and two-week look-ahead forecasts, daily reporting for more detailed labor and trade progress, and extemporaneous reports for non-routine events or issues analysis. Reporting frequency will be consistent with the project scope.

CONSTRUCTION SERVICES AS CONSTRUCTION MANAGER AS ADVISER

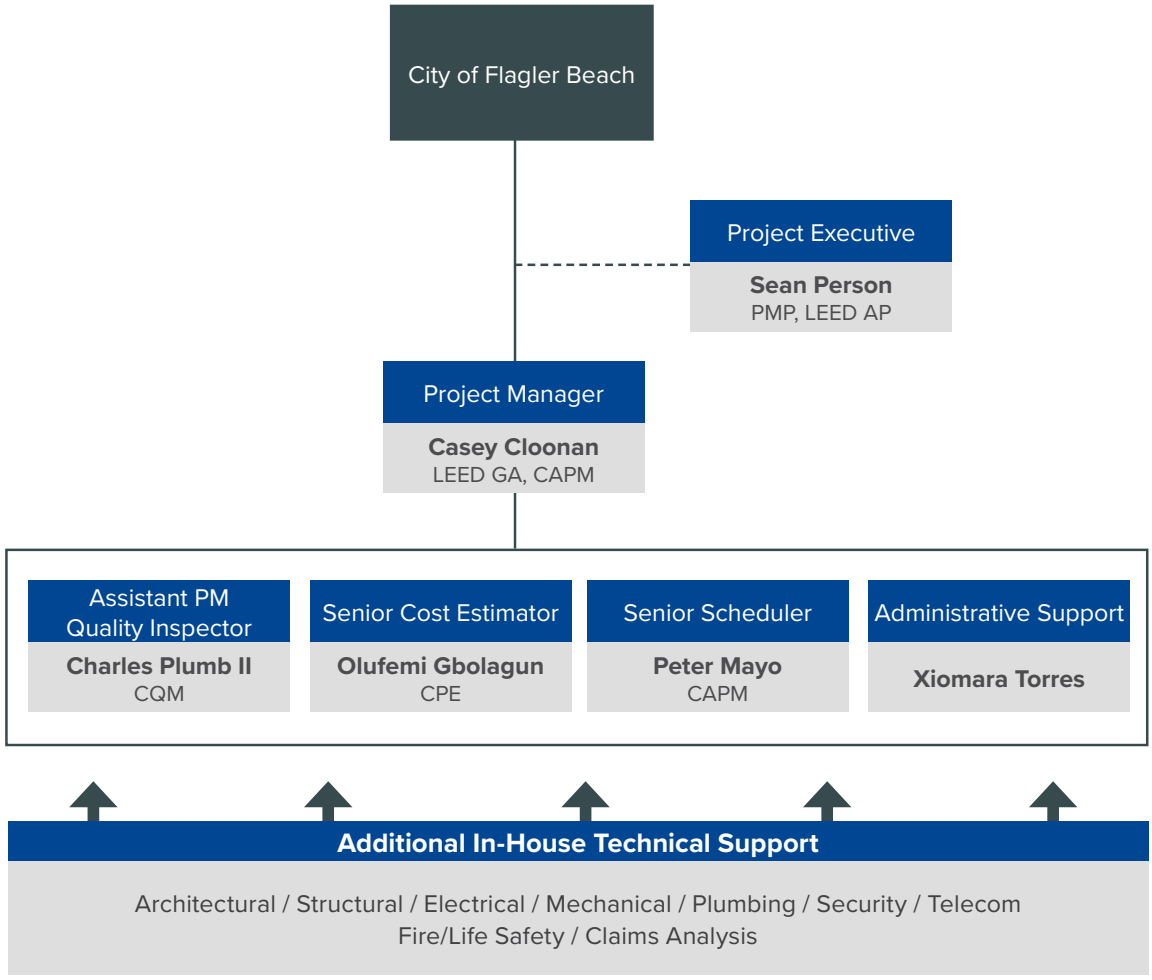
Based in McLean, Virginia with a local office in Cocoa, FL, Procon was established in 2000 and brings the expertise and capability to perform all the required Construction Manager as Adviser services for this contract. Our successful project experience providing comprehensive construction, program and project management services include design management, procurement, construction services, quality monitoring and inspection, commissioning, and closeout for a broad range of projects.

Procon has successfully executed hundreds of CMa projects across the country for municipal, and federal government clients including NASA's Kennedy Space Center in Merritt Island, Orange County Government, and the University of Central Florida in Orlando, Florida. A sampling of our national client based include all Regions of the U.S. General Services Administration, U.S. Architect of the Capitol, National Park Service, and the Federal Deposit Insurance Corporation. We have also provided construction management, cost estimating, and commissioning services as a sub-consultant to numerous engineering firms.

Leadership and Teamwork Facilitation

Procon understands that successful project delivery depends on fostering collaboration and open communication among all stakeholders, including architects, engineers, general contractors, subcontractors, and consultants. Our team provides strong leadership to establish a unified vision and align the efforts of diverse parties. By creating an environment of trust, accountability, and shared objectives, we ensure that each stakeholder works cohesively toward project success.

Our leadership approach is built on:



- **Establishing a Shared Vision:** We work with all parties to define clear project goals and priorities, ensuring alignment from the outset.
- **Structured Communication Plans:** Our team develops comprehensive communication protocols, including regular meetings, progress updates, and centralized reporting tools to keep everyone informed.
- **Conflict Resolution:** We proactively address potential conflicts through mediation and collaborative problem-solving, minimizing disruptions and fostering cooperation.
- **Team Integration:** By bringing together diverse stakeholders in workshops and planning sessions, we promote mutual understanding and cohesive project execution.
- **Technology-Driven Collaboration:** Utilizing platforms such as Procore, Kahua, and Smartsheet, we streamline communication and provide real-time access to project data for all team members.
- **Leadership by Example:** Our project managers lead with integrity and professionalism, setting a standard for teamwork, accountability, and efficiency.

This holistic approach to leadership ensures that every party involved remains engaged, aligned, and motivated, driving the project forward with precision and excellence.

PROJECT STAFFING PLAN AND ORGANIZATIONAL CHART

Our team is structured to provide comprehensive support throughout the duration of the project, ensuring successful delivery from construction commencement in January 2025 through closeout in 100 percent construction completion. Over this period, Procon will deploy a highly experienced team tailored to meet the needs of the project timeline and objectives.

Our Project Executive, **Sean Person, PMP, LEED AP** will provide oversight to ensure the overall success of the project, offering strategic guidance and leadership throughout all phases. C**asey Cloonan, LEED GA, CAPM, our Project Manager,** will play a pivotal role in managing construction activities, overseeing schedule and budget reviews, participating in project meetings, and managing contract deliverables to ensure all goals are achieved. **Charles Plumb, II, CQM,** our Assistant Project Manager and Quality Inspector, will be full-time on-site, conducting inspections, overseeing day-to-day project activities, and ensuring safety and effective coordination among stakeholders.

Use or disclosure of data contained on this sheet is subject to the restriction on the title page of this proposal.

To support these efforts, our administrative assistant, scheduler, and cost estimator will handle support services, including monthly schedule and change order reviews, invoice and pay application review, and document management. This structured approach ensures that all aspects of the project, from day-to-day operations to high-level oversight, are managed with precision and attention to detail.

This well-rounded team is dedicated to delivering the project's milestones, through 100 percent construction completion by June 2026, include part-time support through Project Closeout in September 2026.

PROPOSED TEAM'S EXPERIENCE

Table 1 on the following page provides qualifications of the project team responsible for the successful execution of this contract, followed by resumes.

Table 1 Proposed Team's Qualifications and Experience			
Name	Title/Role	Qualifications	Experience
Sean Person, PMP, LEED AP	Project Executive	MBA, Business Analytics Juris Doctor, International Law, BS, Business	• Senior Project Executive, City of Pensacola, Pensacola Bridge, Pensacola Beach, FL - managed 13 engineers, 12 divisions, and over 300 construction operations • Engineering Officer, USACE, Tyndall Air Force Base Reconstruction, Panama City, FL - Directed multi-disciplinary teams for reconstruction of Tyndall AFB
Casey Cloonan, LEED GA, CAPM	Project Manager	BS, Civil Engineering CAPM Certification Cryogenics Single Walled Stainless Steel & Vacuum Jacketed Piping Inspection Certification	• Assistant Project Manager, NASA, Kennedy Space Center (KSC) Upgrade LH2 System Launch Complex 39 Vent Line Replacement, Merritt Island, FL - supporting project management and coordinating visits, and updates with QA Inspector • Assistant Project Manager, National Park Service (Denver Service Center) CM Services, Selma, AL - redevelopment of several historic properties on Broad Street, and 1119 Water Avenue into the new Selma Interpretive Center for the Selma to Alabama National Historic Trail
Charles Plumb II, CQM	Quality Inspector	Procore Superintendent Certification Army Corps CQM Certified	• Inspector, NASA, KSC, Modify Vehicle Assembly Building for SLS Platforms, Merritt Island, FL - managing schedule, cost estimate, risk assessment, coordinating and tracking • Backup Inspector, NASA, KSC, Install Liquid Nitrogen System at LC-39B, Merritt Island, FL - assisted in oversight of general contractor daily progress and provided daily construction reports to project stakeholders

Use or disclosure of data contained on this sheet is subject to the restriction on the title page of this proposal.

Table 1 Proposed Team's Qualifications and Experience			
Name	Title/Role	Qualifications	Experience
Olufemi Gbolagun, CPE	Senior Cost Estimator	BS, Quantity Surveying Certified Professional Estimator	• Senior Cost Estimator, NASA, KSC, Solid Rocket Motor (SRM) Rail Study, FL - provided cost estimates for the study which evaluated options to deliver SRM segments (included repair or replace bridge, establish rail yard as a barge terminal, install a new rail spur, and rail to ground support equipment • Senior Cost Estimator, USDOT, Suitland Parkway Design, Washington, DC & Maryland - provided cost estimates for trail options that included identifying potentially sensitive areas, and developing schematic designs
Peter Mayo, CAPM, PMI-SP	Senior Scheduler	BS, Construction Management CAPM Certification PMI-SP Certification	• Scheduler, FBI, Redstone Arsenal North Campus FBI Innovation Center & Central Utility Plant, Huntsville, AL - monitor and review contractor project master schedule and contractor payment applications • Transmission Operations Scheduler (Pegasus Organization) Duke Energy Tarpon Springs, FL - schedule development and progress updates, resource loading, lookaheads, workload forecasting, time impact analysis
Xiomara Torres	Administrative Support	BBA, Business Administration & Management	• Administrative Assistant, Orange County Government, OCCC, Cost Estimating, Scheduling and Project Management Services IDIQ: Phase 5A Building Expansion Project, Orlando, FL - administrative support to staff at the construction project field office • Project Assistant II, FDOT District 5, Direct Connect Ramps to/from I-4 and Turnpike Mainline and Express Lanes on Turnpike Mainline (Beachline to I-4) - administrative support to staff at the construction project field office

Use or disclosure of data contained on this sheet is subject to the restriction on the title page of this proposal.

Sean Person, PMP, LEED AP

Project Executive

QUALIFICATIONS

Sean Person is a seasoned Project Executive and Senior Project Manager with a proven track record in construction, excelling in strategic project management and team leadership. Sean recently joined Procon as a Senior Project Manager and has extensive experience managing complex, high-budget projects across the U.S. and internationally. He is an expert in regulatory compliance, stakeholder engagement, and fostering cross-functional collaboration. Sean spearheaded a $5.2B healthcare campus project, achieving a 15% cost reduction and has managed multiple phases of other large-scale endeavors.

EDUCATION AND CERTIFICATIONS

MBA, Business Analytics, Indiana University, Bloomington, IN
Juris Doctor, International Law, Indiana University, Bloomington, IN
BS, Business, Indiana University, Bloomington, IN
Project Management Institute (PMI), Project Management Professional (PMP)
LEED Accredited Professional, U.S. Green Building Council (USGBC)
EPA Asbestos Certification (All Levels), Environmental Protection Agency (EPA)
EPA Lead-Based Paint Certification, Environmental Protection Agency (EPA)
Procore Certified Project Manager (Multiple Specializations), Procore Technologies
OSHA 30-Hour (ID:14-602255897)
FAA Private Pilot License (Instrument & Commercial Ratings in Progress)
CPR & First Aid Trainer Certification (Previously Held)

RELEVANT PROFESSIONAL EXPERIENCE

City of Pensacola, Pensacola Bridge, Pensacola Beach, FL ($850M) ***Senior Project Executive.*** Built Florida's second-largest bridge, managing 13 engineers, 12 divisions, and over 300 construction operations personnel. Enhanced storm resistance through innovative design solutions.

Greg Brothers, Majestic Oaks, Crestview, FL ($130M) ***Senior Project Manager.*** Constructed 205 homes with infrastructure and sitework, including landscaping design. Developed low-cost solutions during the 2008 market downturn to maximize profitability.

Xiuang Brothers, Fort Walton Beach Mall-Resort, Fort Walton, FL ($205M) ***Senior Project Executive.*** Developed 567-acre mixed-use resort community. Delivered the project on schedule and under budget.

U.S. Army Corps of Engineers, Fort Benning Training Grounds Modernization, Fort Moore, GA ($750M) ***Engineering Officer.*** Upgraded training facilities, shooting ranges, and base infrastructure to meet modern Army training requirements. Delivered innovative designs to enhance training efficiency and safety.

U.S. Army Corps of Engineers, Tyndall Air Force Base Reconstruction, Panama City, FL ($4B) ***Engineering Officer.*** Comprehensive reconstruction of Tyndall Air Force Base following hurricane damage, including resilient infrastructure upgrades for long-term sustainability. Directed multi-disciplinary teams to deliver state-of-the-art facilities while ensuring military readiness.

Use or disclosure of data contained on this sheet is subject to the restriction on the title page of this proposal.

Sean Person, PMP, LEED AP (continued)

Project Executive

U.S. Army Corps of Engineers, Eglin Air Force Base Expansion, FL ($1B) ***Engineering Officer.*** Expansion of test ranges and advanced weapons systems infrastructure. Led teams to integrate innovative solutions for advanced testing capabilities.

U.S. Navy, Pensacola Naval Station Facility Enhancements, Pensacola, FL ($500M) ***Engineering Officer.*** Infrastructure modernization and coastal protection upgrades to sustain mission-critical operations. Ensured seamless coordination across stakeholders, maintaining operational continuity.

CK Construction, Columbus, OH. ***Vice President.*** Directed all company operations, including the management of multimillion-dollar projects across commercial, residential, and public infrastructure sectors. Designed and implemented company-wide project management tools, reducing inefficiencies by thirty percent and enhancing project tracking accuracy. Led cross-departmental teams in planning and executing construction activities, ensuring compliance with LEED and sustainability standards. Spearheaded budgeting processes for over $100M in annual projects, optimizing resource allocation and cutting overhead expenses by twenty percent. Established and nurtured long-term relationships with clients, stakeholders, and government agencies, contributing to repeat business growth by forty percent.

Gilbane/FA Wilhelm, Indianapolis, IN. ***Senior Project Executive.*** Directed procurement and operations for a $5.2B healthcare campus project, ensuring compliance with all safety and operational standards. Conducted comprehensive facility assessments and audits, identifying key deficiencies and developing strategic plans for sustainable modernization. Streamlined procurement processes, reducing project costs by fifteen percent and improving vendor reliability through performance-based contracts. Led a multidisciplinary team of engineers, architects, and contractors, fostering collaboration to ensure project milestones were achieved on time and within budget. Oversaw the development of facility databases, enabling efficient tracking of work orders, maintenance schedules, and associated costs.

GBS Global, Bloomington, IN. ***Founder & Principal Consultant.*** Established and managed GBS Global, a consultancy, specializing in providing strategic advisory services for USAID-funded projects and international development initiatives ($300M). Secured and successfully executed a high-profile USAID contract to oversee strategic and operational development in Ukraine. Designed and implemented capacity-building programs in collaboration with host-country government officials, U.S. Embassy representatives, and key stakeholders. Directed all operational aspects of the consultancy, including program design, budget allocation, and staff recruitment, ensuring adherence to USAID and federal standards. Represented USAID and GBS Global at executive levels with host-country leadership, advocating for sustainable development priorities and mutual goals. Oversaw risk management strategies, ensuring program safety and operational continuity amidst complex geopolitical challenges. Developed comprehensive program evaluations to measure impact and inform future policy and programmatic decisions. Successfully planned and executed a multi-million-dollar USAID-funded development program in Ukraine, meeting key milestones ahead of schedule. Enhanced interagency collaboration through innovative policy advisement and stakeholder engagement frameworks. Implemented financial strategies that optimized resource allocation, saving 20% of projected operational costs without compromising program quality.

Sean Person, PMP, LEED AP (continued)

Project Executive

IU Health, IU Health Hospital, Indianapolis, IN ($3B) ***Senior Project Executive.*** Designed and constructed a state-of-the-art medical campus featuring 864 private patient beds, advanced outpatient services, and a medical education building. Successfully contributed to the scaling and implementation of the project, ensuring the infrastructure met current and future healthcare demands.

Skanska Corporation, Parsippany, NJ. ***Senior Project Executive.*** Managed infrastructure projects valued at over $100M, ensuring safety compliance and alignment with regulatory requirements. Directed a team of 50+ engineers, contractors, and subcontractors, promoting collaboration to achieve on-time project delivery. Achieved $2M in savings over five years through the adoption of innovative value engineering strategies. Conducted detailed inspections and quality assurance checks, ensuring high standards across all project phases. Championed sustainability efforts by incorporating energy-efficient designs and materials, reducing environmental impact by 25 percent.

U.S. Army Corps of Engineers, Fort Leonard Wood Modernization, MO ($800M) ***Engineering Officer.*** Upgraded operational and training facilities, housing, and utilities infrastructure to support U.S. Army readiness. Ensured the selection of highly skilled teams to meet specific military requirements and timelines.

PROJECT EXPERIENCE

NASA, Kennedy Space Center (KSC), Replace O&C South Wing Electrical Distribution Equipment, Merritt Island, FL ($13.9M / 295,000 SF) ***Assistant Project Manager.*** Providing construction management services that include coordinating RFIs and documentation processing. Conduct submittal reviews and formally captures meeting decisions.

NASA, Kennedy Space Center (KSC), Upgrade LH2 System Launch Complex 39 Vent Line Replacement, Merritt Island, FL. ***Assistant Project Manager.*** Liquid Hydrogen (LH2) Vent Line Replacement project at KSC's Launch Complex 39B. Provide project correspondence documentation for all weekly meetings. Coordinate site visits and progress updating with the QA Inspector.

National Park Services (NPS), Denver Service Center CM Services, Selma, AL ($10M / 27,000SF) ***Assistant Project Manager.*** Redevelopment of the historic properties at 2, 4, 6, 8, 10, and 12 Broad Street, and 1119 Water Avenue into the new Selma Interpretive Center for the Selma to Alabama National Historic

Casey Cloonan, LEED GA, CAPM (continued)

Project Manager

Trail. The rehabilitation will include structural improvements to provide universal accessibility, a theater for 100 people, exterior rehabilitation to the floors and roof, fire suppression, and enhancement to mechanical, electrical, and plumbing system to support the improvements. Project duties include initial setup and training of personnel for use of PMIS software (ProjectTeam), and submittal and RFI review/control.

GSA Region 11, Ronald Reagan Building Phase 7, USAID, Washington, DC ($1M / 62,000SF) ***Project Manager.*** Complete demolition and renovation of the 3rd floor. Scope of work includes professional Architect/Engineer services, contract management, and construction services. Construction services include supervision of labor and materials, professional inspection and testing services per commissioning requirements, systems and equipment start-up, functional performance testing, documentation of tests, procedures and installations, and coordination and requirements of training events. Responsible for the execution of the CMa scope of services including but not limited to; document control (RFIs, submittals) using PMIS software, design review comment tracking and coordination, running weekly progress meetings and preparation of meeting minutes, coordinating access and security requirements for contractors, monitoring the change control process, schedule review and analysis, and reviewing payment applications and monthly schedule updates.

FDIC, Headquarters Realignment, Arlington, VA ($26.9M / 260,000 SF) ***Project Engineer.*** Developed cost effective plan and generated master schedule that incorporated planned projects, future projects, and various projects and contract initiatives for holistic approach for FDIC planning. Interviewed staff and contractors for incorporation of all key activities and milestones. Reviewed and provided comments on A/E procurement contract documents. Assisted in development of a general contractor multiple award contract solicitation. Assisted in developing Program Management, Capital Improvement Plan, and Headquarters Realignment for FDIC assets in the Washington, DC metro area.

GSA Region 1, New Madawaska Land Port of Entry Project (LPOE), Madawaska, ME ($60M / 76,717 SF) ***Project Engineer.*** The new LPOE will contain facilities placed on a 10.73-acre site between Mill Street and Main Street. The program facilities include a Main Port Building (MPB), Commercial Inspection Building (CIB), Canopies, Booths, 3 primary inspection lanes, a bypass lane and Surface Parking. The project is required to achieve LEED Gold and SITES Silver Certifications. Responsibilities included, but are not limited to project and document controls of RFIs and Submittals, change order management and cost generation, preparation of meeting minutes and quality assurance documents, and schedule management and development.

Grunley Construction Company, Rockville, MD. ***Senior Project Engineer.*** Responsible for determining scope, compiling pricing, and managing the change order process for change documents issued by the Owner/ Architect and change orders resulting from unforeseen conditions. Formulated and submitted Request for Information (RFIs) to clarify discrepancies in the project drawings and/or specifications. Communicated with the Architect. Engineers. and Consultants when unforeseen existing conditions arise. and assisted with problem-solving and analysis to develop design solutions that are constructible, cost-effective, and schedule-friendly. Coordinated with the Owner, Architects, Engineers, and Consultants to work through complex unforeseen conditions in order to create an end-product that is historically accurate and fully functional. Coordinated and directed contractors on site to ensure completion of work per the project drawings and

Casey Cloonan, LEED GA, CAPM (continued)

Project Manager

specifications, as well as organized and posted change-documents to drawings and specifications. Project Engineer performed QC on site to ensure materials are installed per project drawings and specifications, and ran meetings and completed/distributed meeting minutes. Project Engineer was responsible for completing project close-out and turnover including submission of operation and maintenance manuals and warranty documentation, coordination for completion of training for facilities management to operate systems, and gathering of extra stock materials for turnover to the client. Project Engineer completed punch-lists and assigned tasks for contractors to complete to deliver a complete product to the client. Project Engineer completed daily field reports to document manpower on site and tasks completed by contractors.

The U.S. Foundation for the Commemoration of World Wars & The National Park Service (NPS), New National WWI Memorial, Washington, DC ($20M / 1.78 Acres) ***Project Engineer.*** Responsible for integrating existing park features constructed on the historic Pershing Park. The statue to General John J. Pershing, commander of the American Expeditionary Forces, was protected during construction and remains as part of the fabric of the memorial. Project included the cataloging, restoration, and re-installation of existing granite stone on site, demolition, new landscaping, drainage, utilities, lighting, irrigation, and signage. A new below-grade space houses the controls for the fountain, irrigation, security, and lighting systems. The focal-point of the memorial is a complex fountain system that feeds a custom granite-clad feature wall. The feature wall showcased an approximately 70' long bronze relief sculpture titled "A Soldier's Journey." Read and interpreted technical drawing sets, reviewed material product data and shop/ fabrication drawings to verify conformance with design requirements, and procured specified materials for on-time delivery to the job site.

Charles Plumb II, CQM

Quality Inspector

QUALIFICATIONS

Charles Plumb II is a Quality Inspector with more than 15 years of hands-on leadership experience in fabrication, welding, structural systems, site safety, and quality assurance. Charles has a strong track record as a Superintendent leading teams to achieve project goals while maintaining a strong focus on quality control and safety. He has the ability to forecast the work and identify discrepancies ahead of time, to minimize any potential delays. He has experience producing look ahead schedules, laying out the scheduled work, reviewing submittals, material verification, and coordinating with all trades. Charles' knowledge of site safety protocols has led to numerous projects being completed with zero incidents. His quality control protocols has reduced the need to correct non-compliant installation of work. In addition, Charles has created training programs to improve the quality and efficiency of the project team. He is proficient in the following software packages: Microsoft Office, Procore, Submittal Exchange, BIM 360, and NavisWorks.

Journeyman Pipefitter

RELEVANT PROJECT EXPERIENCE

NASA, Kennedy Space Center, Modify Vehicle Assembly Building (VAB) for SLS Platforms, Merritt Island, FL ($53M / 130M CF) ***Inspector.*** Entails fabrication and installation of four new extensible vehicle platform halves, six new vehicle platform inserts, and two new vehicle platform outer mold lines (OMLs). Includes modification of High Bay (HB) three of the existing VAB to accommodate the new platforms and inserts, and additional structural assemblies that provide access to the platform levels (elevator landing platforms, fixed landing platforms, and egress ramps). Also includes reinforcement of existing structure in the VAB that must be installed prior to installing any new extensible platforms or relocating any existing extensible platforms. Responsibilities include managing shcedule, cost estimate, risk assessment, coordinating and tracking. Tracked financial obligations and monitored implications of change proposals. Led daily site inspections to monitor activity and ensure quality. Coordinated approval and regulatory processes with clients and external agencies. Coordinated scheduling for special inspections.

NASA, Kennedy Space Center, Install the Liquid Nitrogen System at LC-39B, Merritt Island, FL ($6M) CWI SME. ***Backup Inspector.*** Assisted in oversight of general contractor daily progress and provide

Charles Plumb II, CQM (continued)

Quality Inspector

daily construction reports to project stakeholders. Review project submittals and RFI's, review materials upon arrival to the site and ensure the materials were the correct, approved product. Review contractor work installation for quality and conformance with project requirements.

Boiler Replacement, Altoona, PA ($8M) ***Project Superintendent/SSHO/QC Manager.*** Scope of work to install two temporary boilers, demo and replace existing boilers and associated equipment. Developed field activity schedule, managed Subcontractor's daily activities to maintain schedule, verified installed work in compliance with the contract documents, conducted preparatory phase meetings, and maintained safety standards as required by contract and OSHA. Inspected structural foundations for new boilers, and structural support systems for overhead 12" black iron piping systems.

Reverse Osmosis Boiler Water Supply System, Norfolk, VA ($4.5M) ***Project Superintendent/SSHO/QC Manager.*** Scope of work to demo existing water filtration system and install a reverse osmosis system that feeds the boiler plant. Developed field activity schedule, managed Subcontractor's daily activities to maintain schedule, verified installed work were following compliance with the contract documents, conducted preparatory phase meetings, and maintained safety standards as required by contract and OSHA. Inspected structural reinforcements for new equipment and structural stands for 10-12 piping systems.

Air Handler Unit (AHU) and VAV Replacement, Richmond, VA ($5.5M) ***Project Superintendent/SSHO/QC Manager.*** A phased demolition and replacement of 6 AHUs and 210 VAVs. Developed field activity schedule, managed Subcontractor's daily activities to maintain schedule, verified installed work met contract documents, conducted preparatory phase meetings, and maintained safety standards as required by contract and OSHA. Inspected structural reinforcements for new equipment and structural supports for all VAVs installed.

Chillers Replacement. Hillard, FL ($1.2M) ***Project Superintendent/SSHO/QC Manager.*** Scope of work includes replacing Chiller 300 and 400 and the installation of additional distribution piping. Developed field activity schedule, managed Subcontractor's daily activities, verified installed work met contract documents, conducted preparatory phase meetings, and maintained safety standards as required by contract and OSHA. Inspected temporary structural supports for lifting and setting chillers into the basement for installation.

Boilers Replacement, Gainesville, FL ($16M) ***Project Superintendent/SSHO/QC Manager.*** Ground up construction of a new boiler plant for hospital to include a tunnel and installation of 70k underground fuel storage tank for the existing generator facility. Developed field activity schedule, managed Subcontractor's daily activities, verified installed work met contract documents, conducted preparatory phase meetings, and maintained safety standards as required by contract and OSHA. Inspected materials, equipment, and installation that included the underground storm water system, tunnel, fuel tank, and the concrete/steel structure of the boiler plant. Also inspected electrical, mechanical, structural, and interior components.

Boilers and Chillers Replacement, Charlottesville, VA ($3M) ***Project Superintendent/SSHO/QC Manager.*** Scope of work includes the installation of three, small new boilers, and three, medium-sized chillers, one York 1300 chillers, and 4 pumps. Developed field activity schedule, managed Subcontractor's daily activities to maintain schedule, verified installed work met contract documents, conducted preparatory

Charles Plumb II, CQM (continued)

Quality Inspector

phase meetings, and maintained safety standards as required by contract and OSHA. Inspected structural reinforcements for new equipment and structural supports for the piping system.

Water Softening System, New Orleans, LA ($1.5M) ***Project Superintendent/SSHO/QC Manager.*** The installation of two stage redundant water softening systems to include a 12k gallon brine storage tank. Developed field activity schedule, managed Subcontractor's daily activities to maintain schedule, verified installed work met contract documents, conducted preparatory phase meetings, and maintained safety standards as required by contract and OSHA. Inspected installation of 20" piping support system that included wall penetrations and structural adjustments as needed to keep the integrity of the building intact.

Boilers Replacement, Alexandria, LA ($14M) ***QC Manager.*** Scope of work to include the installation of new boilers, DA package, CST package, and associated equipment. Reviewed submittals and RFIs. Inspected all installed work to include the steel/cinder block addition for the new control room, generator housing, and the offices and telecom space. Performed preparatory phase meetings, witnessed all testing, and verified conformance to contract documents and specifications.

EMPLOYMENT HISTORY

Superintendent — **Feb 2024 - Present**
Procon Consulting, McLean, VA

Superintendent/QC Manager/Site Safety & Health Officer — **Sep 2016 - Apr 2023**
Greenland Enterprises

Quality Assurance/Welding Inspector — **Aug 2015 - May 2016**
AM Technical Solutions, Frederick, MD

Quality Assurance/Welding Inspector — **Dec 2014 - Aug 2015**
Total Facility Solutions, Conyers, GA

QA Manager/Welding & Piping Inspector — **Sep 2012 - Dec 2014**

Olufemi Gbolagun, CPE

Senior Cost Estimator

QUALIFICATIONS

Olufemi Gbolagun, a Senior Cost Estimator with more than 20 years of expertise, provides construction cost estimating, quantity surveying, and construction management for projects ranging from $10M to $4.5B. He specializes in cost estimating and lifecycle costing, constructability reviews, market analysis, project controls, and providing reconciliations as a third-party Cost Estimator. He has provided estimates for numerous private, institutional, and governmental agency construction programs and is well versed in various industry standards including CSI and Uniformat. Femi's experience includes preconstruction and construction services including conceptual estimates and detailed cost estimates. He has substantial experience completing cost estimating on both new construction and renovation of office buildings and various commercial projects and facilities.

EDUCATION AND CERTIFICATIONS

BS, Quantity Surveying, Obafemi Awolowo University, Ile-Ife, Nigeria
Certified Professional Estimator, American Society of Professional Estimators
Association for the Advancement of Cost Engineering (AACE International), Member

RELEVANT PROFESSIONAL EXPERIENCE

University of Central Florida, Lake Nona Cancer Center Renovation, Orlando, FL (44,356 SF) ***Senior Cost Estimator.*** Provided design review estimates for the renovation of cancer research wet laboratories. Project included build-out of three faculty offices, a dedicated generator and associated infrastructure to support critical research equipment, electrical modifications, fume hood installations, access control and security camera installations, and telecom infrastructure upgrades and modifications.

U.S. Department of Transportation (DOT), Suitland Parkway Design, Washington, DC & Maryland. ***Project Estimator.*** The Volpe National Transportation Center sought the assistance in development and feasibility analysis of at least three conceptual alignments to extend the Suitland Parkway Trail approximately 2.4 miles from the DC/Maryland border to the Henson Creek Trail. Evaluated potential trail options, including determining the area of disturbance, identifying potentially sensitive areas, and ultimately developing schematic designs that met a 30% conceptual design standard for future potential alignments. Provided an evaluation of the constructability and areas of disturbance for each conceptual alignment, a cost analysis of each proposed conceptual alignment, incorporated pedestrian, bicycle, and equestrian access considerations from the existing Henson Creek Trail, provided a summary of the major findings and conclusions associated with the preceding tasks in the form of a project technical memorandum, and prepared a detailed listing of additional information requirements needed for the completion of construction documents: permits, survey, geotechnical analysis, hydraulic analysis, and traffic analysis.

FDA NE Quadrant, Campus Transit East Access Road and Bridge, White Oak, MD, ($19M) Provided construction cost estimating services on a multi-phase new access road and bridges connecting the FDA White Oak Campus to Cherry Hill Road. Construction consisted of building and surface demolition, roadways, earthwork, and utility relocation for electrical distribution, telecommunication distribution, waterlines, and sanitary sewer systems; relocation/support of steam line and nitrogen gas systems in addition to security installations including fencing, barriers, and guard booths; electrical overhead and underground

Olufemi Gbolagun, CPE (continued)

Senior Cost Estimator

power and lighting, guardrails, bridges, concrete blast wall, and earth berms; and landscaping and storm water management piping and systems.

NASA, Kennedy Space Center, Solid Rocket Motor (SRM) Rail Study, FL, *Senior Cost Estimator.* The study's focus was to evaluate options to deliver SRM segments to the rotation, processing, and surge facility. Options evaluated include, but are not limited to, repair or replace bridge, establish rail yard as a barge terminal, install a new rail spur, and rail to ground support equipment. Revalidation of existing cost data, rough order of magnitude lifecycle costs included parametric cost estimating, detailed cost estimates, and quantity take-off.

(Affilliated Engineers) U.S. Architect of the Capitol (AOC), Power Plant PH06 Cost Estimate Washington, DC. ***Senior Cost Estimator.*** Included the replacement of the switchgear, the removal of three condenser water pumps, the installation of two new condenser water pumps, two new variable primary chilled water pumps, and the associated variable speed drives. Provided detailed cost estimates.

U.S. Architect of the Capitol (AOC), Task 014 James Madison Memorial Building (JMMB) Generator Risk Review, Washington, DC. ***Project Estimator.*** Construction management services during the design of the emergency generator replacement. Provided third-party cost estimate and reconciliation, constructability review, quantitative risk assessment, cost loaded schedule, and commissioning review.

Architect of the Capitol (AOC), James Madison Memorial Building (JMMB) Fire Alarm & Audibility Upgrade, Washington, DC. ***Senior Cost Estimator.*** Design construction management services consisting of a Constructability Provided review, development, and reconciliation of construction cost estimates.

Architect of the Capitol (AOC), Thurgood Marshall Federal Judiciary Building (TMFJB) Facade Stabilization, Washington, DC. ***Senior Cost Estimator.*** Provided services to include third-party cost estimate and reconciliation, and Constructability Review for the façade stabilization project.

Architect of the Capitol (AOC), Hart Senate Office Building (HSOB) Prescriptive Egress, Washington, DC. ***Senior Cost Estimator.*** Design phase construction management services for prescriptive egress improvements.

Architect of the Capitol (AOC), U.S. Capitol Police (USCP) K9 Training Storage Facility, Washington, DC (1,262 SF) ***Senior Cost Estimator.*** Peer review services for the latest design documents submitted for the construction of the training storage facility. The current design documents are for the construction of new one-story free standing metal framed, slab on grade structure to be used as a canine food storage facility with support spaces. The project site work included asphalt paving, concrete walks, patterned concrete, planters, pea gravel, benches, and a fence.

GSA Region 11, U.S. Department of Homeland Security (DHS) Headquarters at St. Elizabeths, Washington, DC ($4.6B / 4.5M SF) ***Senior Cost Estimator.*** Prepared cost estimates for the redevelopment projects at the DHS' headquarters. The 176-acre project site includes four million square feet of office space in new construction and renovation of 50 historic buildings, as well as major infrastructure projects, barriers, guard booths, and high speed overhead doors.

Use or disclosure of data contained on this sheet is subject to the restriction on the title page of this proposal.

Olufemi Gbolagun, CPE (continued)

Senior Cost Estimator

GSA Region 11, Building 54 West Addition at St. Elizabeths, Washington, DC ($45M / 97,000 SF) ***Cost Estimator.*** Multiple projects. Supported consultants, provided scheduling support, performed reconciliations between Construction Manager and Design team, provided construction administration, and miscellaneous tenant activities between government agencies.

GSA Region 11, U.S. Citizenship and Immigration Service (USCIS), Camp Springs, MD ($116M / 547,767 SF) ***Cost Estimator.*** Design and construction of new headquarters building, including secure work area, data center, state-of-the-art auditorium, fitness center, emergency generator, and enhanced electronic and physical security.

FDIC, Construction Management Services, Arlington, VA ($17.9M / 150,000 SF) ***Senior Cost Estimator.*** Multiple, simultaneous projects under a single contract in occupied, secure federal facilities. Projects included refurbishment of four air handlers, replacement of chilled water plant, refurbishment of mechanical/HVAC, electrical equipment and controls, replacement of electrical equipment (switchgear, MCC, ATS), BAS control upgrades, and security vehicular.

MIT, U.S. Department of Transportation Volpe Center, Cambridge, MA ($545M / 400,000 SF) ***Cost Estimator.*** Construction of new federal facility that includes workspaces, laboratory spaces, child care center, dining facility, and structured parking. Laboratory spaces include transportation simulation spaces with high bay facilities with heavy floor loading and at grade access.

EMPLOYMENT HISTORY

Senior Cost Estimator — **June 2016 - Present**
Procon Consulting, McLean, VA

Senior Cost Estimator — **Apr 2007 - Jun 2016**
Project Cost, Alexandria, VA

Senior Cost Consultant — **Dec 2004 - Apr 2007**
Faithful+Gould, Alexandria, VA

Cost Estimator Consultant — **Aug 2002 - Feb 2005**
Construction Cost Systems, Bethesda, MD, U.S. Cost, Arlington, VA,
SC Myers & Associates, and Washington, DC

Project Quantity Surveyor — **Feb 1998 - Jul 2002**
PIVOT Engineering Company, Lagos, Nigeria

Peter Mayo, CAPM

Senior Scheduler

QUALIFICATIONS

Peter Mayo has over 10 years of experience successfully working in project controls and project management in all phases of multi- million-dollar commercial construction, infrastructure, and industrial projects for government and private-sector clients. As Senior Scheduler, Peter performs a variety of scheduling services for projects including detailed analysis of contractor prepared construction schedules, creation of integrated master schedules, identifying variances and proactively developing mitigation strategies, utilizing Claim Digger, forecasting, developing WBS and activity coding, and detailed cost and resource loading as well as the analysis of their trend. Peter's support for the DOD and DOS make him an important part of our expert team in Project Controls. Other capabilities include project management of large projects, estimating and EV management.

EDUCATION AND CERTIFICATIONS

BS, Construction Management, Arizona State University Del E Webb School of Construction
CAPM Certification

RELEVANT PROJECT EXPERIENCE

FBI, Redstone Arsenal North Campus FBI Innovation Center & Central Utility Plant, Huntsville, AL ($390M / 240,000 SF) ***Scheduler.*** The project includes construction management for 240,000 square feet of office space and a training complex with two parking garages. Responsible for monitoring and reviewing contractor project master schedule and contractor payment applications.

Acuity International, Djibouti, Djibouti, US Embassy Ambassador's Residence Compound ($10M/10,000GSF) ***Project Manager and Scheduling Coordinator*** for greenfield building of USG Ambassador's residence including all phases of construction from demolition to project closeout on 10,000SF residence. US Embassy Photovoltaic Power Installation, (1M) Project manager for installation of solar power at US Embassy designed to power one quarter of the facility power requirements. Scheduling responsibilities included performance monitoring, identifying issues and providing constructive solutions for their mitigation, schedule analysis, trend evaluation, comparative analysis, forecasting, time impact analysis, and creating milestone schedules including cost and execution milestones, furniture acquisition, alternate workspace design and construction.

PAE Global Services, Andros, Bahamas, USN AUTEC facility ($250K/100,000GSF) ***Scheduler and Estimator*** for prime contractor. Scheduling responsibilities included baseline development, cost-loading, creating milestones, creating and assigning activity codes and calendars, close communication with site team to develop the feasible and realistic sequencing in compliance with CPM and scheduling specification. Progress schedule updates, look- ahead, time impact analysis development, identifying variances and proactively developing mitigation strategies to keep project on schedule.

1099 Independent Project Manager and Scheduling Services, Residential Housing Interior Improvements, Tampa FL ($100K / 5,000 GSF) ***Scheduler*** whose responsibilities included managing and planning the project. Scheduling duties included baseline development, identifying variances and

Peter Mayo, CAPM (continued)

Senior Scheduler

proactively developing mitigation strategies, utilizing Claim Digger, forecasting, look-aheads, and time impact analysis.

(Pegasus Organization) Duke Energy Tarpon Springs, FL. ***Transmission Operations Scheduler*** for multiple crew operation for transition site maintenance and line relay control. Scheduling responsibilities included schedule development and progress updates, resource loading, look-aheads, workload forecasting, time impact analysis.

DynCorp International, Kandahar Afghanistan, LOGCAP5 ($100M) ***Estimator and Project Controls Lead*** on a multi- billion-dollar project. Primary responsibilities included maintenance of the Base Operations Services of the USG personnel in the South theatre of the US operations in Afghanistan, led the group of estimators and schedulers to produce estimates and plans for any new proposed work during operations to assure the scheduling requirements of the war effort are met.

RELEVANT PROJECT EXPERIENCE

Orange County Government, Orange County Convention Center (OCCC), Cost Estimating, Scheduling and Project Management Services IDIQ: Phase 5A Building Expansion Project, Orlando, FL Procon is serving as the Owner Representative for the OCCC's Phase 5A Building Expansion Project. Xiomara is working closely with the Project Administrator and Senior Project Managers to provide administrative support for the construction project field office. Prepares, maintains, and organizes contract records (correspondence, contractor documents, meeting minutes, daily inspection reports, specifications, and non-compliance notices). Coordinates project task schedules, attends progress meetings, reviews minutes, and systematically manages transmittal documents by copying, scanning, and filing them into a database for efficient tracking and copying, scanning, and filing them into a database for efficient tracking and retrieval.

Florida Department of Transportation, District 5, Direct Connect Ramps to/from I-4 (SR 400) and Turnpike ML (SR 91) & Express Lanes on Turnpike ML (SR 91) from Beachline (SR 528) to I-4 (SR 400) (Contract) 437166-2-52-01 (E8Q38) (JMT), Orlando, FL ($84M) ***Project Assistant II.*** JMT provided construction inspection services for the construction of direct connectivity ramps from the Turnpike Mainline (SR 91) to and from I-4 (SR 400) to improve traffic operations and safety at the interchange. The project included replacing six existing toll sites within the project limits with AET. The project also included express lanes on the Turnpike Mainline between the Beachline (SR 528) and I-4, and operational improvements at the Consulate Drive southbound off-ramp with AET and intersection improvements. As the Project Assistant II, Xiomara worked closely with Project Administrator and Senior Project Engineer assisting with the construction project field office, preparing, maintaining and/or securing contract records including correspondence, contractor documents, meeting minutes, daily inspection reports, specifications, non-compliance notices, etc. Assisted with scheduling project tasks, attending project progress meetings and reviewing minutes, systematically obtaining and tracking all applicable transmittals document management; copying, scanning and filling into database.

Xiomara Torres (continued)

Administrative Support

Ultimate Staffing Agency, Orlando, FL ***General Administrative Support.*** Coordinated office activities and operations to secure efficiency and compliance to company policies. Managed agendas/travel arrangements/appointments, etc. for upper management. Managed phone calls and correspondence (e-mail, letters, packages etc.). Supported budgeting and bookkeeping procedures. Created and updated records and databases with personnel, financial, and other data. Tracked inventory of office supplies and placed orders when necessary. Submitted timely reports and prepared presentations/proposals as assigned. Assisted colleagues whenever necessary.

Full Tilt, Sanford, FL ***Human Resources Generalist.*** Performed timely processing of accurate time and quantity. Communicated with Project/Field Leads to collect time, material quantities, and executed accurate data entry. Created adjustments/shortages as necessary to correct payroll errors and issued field checks as appropriate. Communicated with appropriate roles to execute the subsistence process - Per Diem, Rapid Pay Cards, Expense Reports. Conducted new hire orientations and concisely delivered all information regarding benefits, policies, and procedures to new and existing coworkers and engaged to validate comprehension. Completed I-9 and E-Verify paperwork accurately and in accordance with government rules and regulations in a timely manner.

DRMP, CEI Group, Orlando, FL ***Administrative Assistant.*** Responsible for providing advanced correspondence including letters, memoranda, and reports. Becoming familiar with a variety of the field's concepts, practices, and procedures. Relied on experience and judgment to plan and accomplish goals with ability to work independently. At times, responsible for confidential material. Prepared monthly expense reports for corporate credit cards. Monitored inspectors' certifications. Created weekly, monthly, quarterly, and annual reports.

CONSTRUCTION MANAGER ADVISER

City of Flagler Beach, FL

Past Performance

Project #1:

Contract Date: May 20, 2024 - Ongoing

Contract Amount: $1,685,885.26

Project Name: Construction Management Services to Rehabilitate Seawalls and Shoreline, Washington DC

Project Location: Tidal Pool adjacent to the Jefferson Memorial, Washington, DC

General Scope of Work: Providing construction management services for the NPS NAMA Park concerning the Tidal Wall Project. The phase of this project is a $168 million design-build marine civil infrastructure improvement by Cianbro, the largest design-build project procured by the NPS Denver Service Center to date.

The project includes raising the Tidal Wall by 4 feet. This work includes the driving of 455 piles over a linear horizontal foot length of 6,663 feet. Once completed, this build will lower the NAMA Parks operating and maintenance costs by 8%.

Project #4:

Contract Date: April 1, 2015 – July 31, 2018

Contract Amount: $20M

Project Name: St. Elizabeths Stream Restoration and Wetland Mitigation Project

Project Location: Washington, DC

General Scope of Work: Procon prepared the St. Elizabeths Campus Stormwater Master Plan designed to comply with EPA regulation 438. This Stormwater Masterplan was the first such document to be jointly approved by both DC Water and DDOE and was later used by the same team to be granted 650,000 SRCs by the DC DOEE for the outstanding campus stormwater reduction program. SRCs are offsite stormwater credits that are awarded if a project site achieves stormwater reduction above the local District of Columbia regulations. This level of runoff reduction was achieved by complying with the federal regulations.

PROCON ATTACHMENT B AMENDMENT

Construction Manager Adviser for the Construction of Flagler Beach Fishing Pier Replacement | City Project No. 260 | RFQ NO. FB-242911

PROJECT #1
Name: Tidal Pool adjacent to the Jefferson Memorial, Washington DC
Project Dates: 05/20/2024 - Ongoing
Owner: National Park Service, Denver Service Center
Contact: Marcello Arroiobebiannosimoes
Phone: 720.701.0146
Email: marcello_arroiobebiannosimoes@nps.gov

Description: Providing construction management services for the NPS NAMA Park for the Tidal Wall Project. This project phase includes a $168M design-build marine civil infrastructure improvement by Cianbro. Currently, this is the largest design-build project issued by the NPS Denver Service Center.

PROJECT #2
Name: Construction Management Services at Sector Field Office, Fort Macon, Beaufort, and Emerald Isle, NC
Project Dates: 08/15/2020 - 08/14/2023
Owner: U.S. Coast Guard
Contact: Clayton McBeth, Project Manager
Phone: 503.508.6344 (W) | 216.339.1783 (M)
Email: Clayton.P.McBeth@uscg.mil

Description: Provided construction inspection services that included conducting in-field construction site inspections of contractor-installed work, assessing project progress, and providing project reporting on a daily, weekly, and monthly basis. The Procon team also served as the communication liaison between contractors and government personnel.

PROJECT #3
Name: Construction Management Services, Atlantic Intracoastal Waterway (AIWW) Bridge Replacement at Deep Creek, Chesapeake, VA
Project Dates: 01/16/2024 – Ongoing (2026 anticipated completion)
Owner: U.S. Army Corps of Engineers, Norfolk District
Contact: Stephen Reed, USACE NAO
Phone: 757.201.7740
Email: stephen.w.reed@usace.army.mil

Description: Through the Hana-Procon 8(a) JV, Procon is delivering Construction Management (CMa) and Quality Assurance (QA) services for the replacement of the functionally obsolete Atlantic Intracoastal Waterway (AIWW) Deep Creek Bridge. These services will support USACE in ensuring compliance with contract plans, specifications, safety regulations (such as EM 385-1-1 and OSHA requirements), and industry best practices.

PROCON ATTACHMENT B AMENDMENT

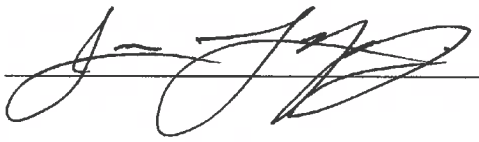
Construction Manager Adviser for the Construction of Flagler Beach Fishing Pier Replacement | City Project No. 260 | RFQ NO. FB-242911

Complete with sidewalks on both sides, the new 144-foot long, 60-foot wide five-lane drawbridge bridge will include approach slabs, abutments, supporting piers, piles, pile caps, bulkheads, a fender system, mechanical and electrical systems, lighting, emergency power generation, controls, radio systems, signage, and an operator's control house equipped with HVAC, lighting, a restroom, and parking.

The new bridge will be constructed 100 feet south of the current structure and includes upgrades to surrounding roadways to enhance traffic flow and access. With an estimated cost of $59M, the project addresses growing traffic demands in the region. Traffic management plans are in place to minimize disruption throughout construction.

PROJECT #4

Name: St. Elizabeths Stream Restoration and Wetland Mitigation Project
Project Dates: 04/01/2015 – 07/31/2018
Owner: GSA Region 11
Contact: Jim Fortinksy, Project Manager
Phone: 202.329.1545
Email: james.fortinsky@gsa.gov



Description: Procon provided construction management services and prepared the St. Elizabeths Campus Stormwater Master Plan designed to comply with EPA regulation 438. This Stormwater Masterplan was the first such document to be jointly approved by both DC Water and DDOE and was later used by the same team to be granted 650,000 SRCs by the DC DOEE for the outstanding campus stormwater reduction program. SRCs are offsite stormwater credits that are awarded if a project site achieves stormwater reduction above the local District of Columbia regulations. This level of runoff reduction was achieved by complying with the federal regulations.

Has your company ever been sued? ____Yes ✓ No

If Yes, explain and/or submit court decision or judgment, as applicable: _____

The Bidder must demonstrate the successful completion of four (4) projects of similar complexity, nature, size, and dollar amount in the capacity of CMA. Any material misrepresentation, as determined by the City of Flagler Beach, shall result in disqualification.

On the following pages, provide the requested information regarding experience within the past ten (10) years on four (4) projects. These projects must be new or rehabilitation projects. Preferred projects should be for a coastal community on or near the beach. Additional credit will be awarded for Fishing Piers, either concrete or wood.

ATTACHMENT F
SWORN STATEMENT UNDER SECTION 287.133(3) (a), FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

This sworn statement is submitted to: **The City of Flagler Beach** (Public entity)

By: Jason Lopez, Senior Vice President
(Individual's name and title)

For: Procon Consulting LLC
(Name of entity submitting sworn statement)

Whose business address is: 113 King Street, Cocoa, FL 32922
Corporate: 1800 Tysons Boulevard, Suite 620, McLean, VA 22102

Federal Employer Identification Number (FEIN): 54-1981434

(If the entity has no FEIN, include the Social Security Number of the individual signing this sworn statement)

1. I understand that a "public entity crime" as defined in Section 287.133(1)(g), Florida Statutes, means a violation of any State or Federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or of the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy, or material misrepresentation.
2. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1) (b), Florida Statutes, means a finding of guilt or a conviction of a public entity crimes, with or without an adjudication of guilt, in any Federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, non-jury trial, or entry of a plea of guilty or nolo contendere.

3. I understand that an "affiliate" as defined in Section 287.133(1)(a), Florida Statutes, means: A predecessor or successor of a person convicted of a public entity crime: or an entity under the control of any natural person who is active in the management of the entity and how has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in the management of an affiliate. The ownership by one (1) person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.

4. I understand that a "person" as defined in Section 287.133(1) (e), Florida Statutes, means any natural person or entity organized under the laws of any state or of the United States with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members, or agent who is active in management of the entity, nor the affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agent who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agents who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

However, there has been a subsequent proceeding before an Administrative Law Jury of the State of Florida, Division of Administrative Hearings and the Final Order entered by the Administrative Law Jury

determined that it was not in the public interest to place the entity submitting this sworn statement on the convicted vendor list. (Attach a copy of the final order.)

I UNDERSTAND THAT THE SUBMISSION OF THIS FORM TO THE CITY OF FLAGLER IS FOR THE CITY ONLY AND, THAT THIS FORM IS VALID THROUGH DECEMBER 31, OF THE CALENDAR YEAR IN WHICH IT IS FILED. I ALSO UNDERSTAND THAT I AM REQUIRED TO INFORM THE CITY PRIOR TO ENTERING IN TO A CONTRACT IN EXCESS OF THE THRESHOLD AMOUNT PROVIDED IN SECTION 287.017, FLORIDA STATUES, FOR CATEGORY TWO OF ANY CHANGE IN THE INFORMATION CONTAINED IN THIS FORM.

ATTACHMENT H
CERTIFICATION OF NON-SEGREGATED FACILITIES

The Bidder certifies that they do not maintain or provide for their employees any segregated facilities at any of his establishments, and that they do not permit their employees to perform their services at any location, under their control, where segregated facilities are maintained. The Bidder certifies further that they will not maintain or provide for their employees any segregated facilities at any location under their control where segregated facilities are maintained. The Bidder agrees that a breach of this certification will be a violation of the Equal Opportunity clause in any contract resulting from acceptance of this Bid. As used in this certification, the term "segregated facilities" means any waiting rooms, work areas, restrooms and washrooms, restaurants and other eating areas, time clocks, locker rooms and other storage and dressing areas, parking lots, drinking fountains, recreation or entertainment area, transportation and housing facilities provided for employees which are segregated by explicit directive, or are in fact segregated on the basis of race, color, religious disability or national origin, because of habit, local custom, or otherwise. The Bidder agrees that (except where they have obtained identical certifications from proposed subcontractors for specific time periods) they will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding $10,000 which are not exempt from the provisions of the Equal Opportunity clause, and that he will retain such certifications in his files.

The nondiscriminatory guidelines as promulgated in Section 202, Executive Order 11246, and as amended by Executive Order 11375 and as amended, relative to Equal Opportunity for all persons and implementations of rules and regulations prescribed by the United States Secretary of Labor are incorporated herein.

ATTACHMENT I
DRUG-FREE WORKPLACE

The undersigned vendor in accordance with Florida Statute 287.087 hereby certifies that

Procon Consulting LLC does hereby: (Name of Business)

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are proposed a copy of the statement specified in subsection (1).

4. In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under proposal, the employee will propose by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contender to, any violation of Chapter 893, Florida Statutes, or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of the matters set forth above.

As the person authorized to sign the statement, I certify that this firm complies fully with the above requirements.

CONFLICT OF INTEREST STATEMENT

Before me, the undersigned authority, personally appeared ,
who was duly sworn, deposes, and states:

1. I am the Senior Vice President of Procon Consulting LLC with a local office in Cocoa, FL and principal office in McLean, VA.
2. The above-named entity is submitting an Expression of Interest for the City of Flagler Beach project described as bid number RFQ NO. FB-242911 ,
3. The Affiant has made diligent inquiry and provides the information contained in this Affidavit based upon his own knowledge.
4. The Affiant states that only one submittal for the above project is being submitted and that the above-named entity has no financial interest in other entities submitting proposals for the same project.
5. Neither the Affiant nor the above-named entity has directly or indirectly entered into any agreement, participated in any collusion, or otherwise taken any action in restraint of free competitive pricing in connection with the entity's submittal for the above project. This statement restricts the discussion of pricing data until the completion of negotiations and execution of the Agreement for this project.
6. Neither the entity nor its affiliates, nor anyone associated with them, is presently suspended or otherwise ineligible from participating in contract lettings by any local, state, or federal agency.
7. Neither the entity, nor its affiliates, nor anyone associated with them have any potential conflict of interest due to any other clients, contracts, or property interests for this project.
8. I certify that no member of the entity's ownership, management, or staff has a vested interest in any aspect of or Department of the City of Flagler Beach.
9. I certify that no member of the entity's ownership or management is presently applying for an employee position or actively seeking an elected position with City of Flagler Beach.
10. In the event that a conflict of interest is identified in the provision of services, I, on behalf of the above-named entity, will immediately notify the City of Flagler Beach in writing.

COMPLIANCE WITH THE PUBLIC RECORDS LAW

Upon award recommendation or thirty (30) days after receiving submittals, they become "public records" and shall be subject to public disclosure consistent with Chapter 119, Florida Statutes. Proposers must invoke the exemptions to disclosure provided by law in the response to the solicitation and must identify the data or other materials to be protected, and must state the reasons why such exclusion from public disclosure is necessary.

If the company submits information exempt from public disclosure, the company must identify with specificity which pages/paragraphs of their bid/proposal package are exempt from the Public Records Act, identifying the specific exemption section that applies to each. The protected information must be submitted to the City of Flagler Beach in a separate envelope marked accordingly.

CERTIFICATE OF LIABILITY INSURANCE

DATE (MM/DD/YYYY) 05/13/2024

THIS CERTIFICATE IS ISSUED AS A MATTER OF INFORMATION ONLY AND CONFERS NO RIGHTS UPON THE CERTIFICATE HOLDER. THIS CERTIFICATE DOES NOT AFFIRMATIVELY OR NEGATIVELY AMEND, EXTEND OR ALTER THE COVERAGE AFFORDED BY THE POLICIES BELOW. THIS CERTIFICATE OF INSURANCE DOES NOT CONSTITUTE A CONTRACT BETWEEN THE ISSUING INSURER(S), AUTHORIZED REPRESENTATIVE OR PRODUCER, AND THE CERTIFICATE HOLDER.

IMPORTANT: If the certificate holder is an ADDITIONAL INSURED, the policy(ies) must have ADDITIONAL INSURED provisions or be endorsed. If SUBROGATION IS WAIVED, subject to the terms and conditions of the policy, certain policies may require an endorsement. A statement on this certificate does not confer rights to the certificate holder in lieu of such endorsement(s).

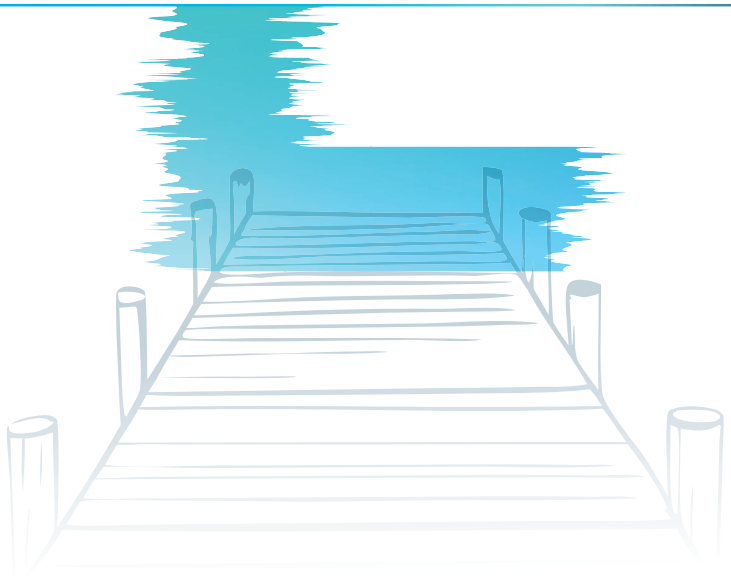
Re: RFQ Response, City Project No: 260, Flagler Beach Fishing Pier

Dear Selection Committee,

We are grateful for the opportunity to partner with you on the Flagler Beach Fishing Pier project. We recently completed a very similar project - The Pompano Beach Fishing Pier which won the Construction Management Association of American 2021 award for Florida municipal projects. We are excited to bring that expertise to your project.

We have a long history of Construction Manager Adviser experience. Our team understands the importance of this project to The City of Flagler Beach and appreciates your need for a true partner in the planning and execution of the work. My promise to you is that Whiting-Turner will be that partner. We will roll up our sleeves and become an active, trustworthy, and capable team member with you, the general contractor and the design team.



Thank you for your consideration, and we look forward to our partnership on this project.

Very Truly Yours,
THE WHITING-TURNER CONTRACTING COMPANY

JEFF MCPHAUL
Vice President

ATTACHMENT A
CERTIFICATE OF CORPORATION

Please include a copy of your Certificate of Corporation from the State of Florida with this attachment.

STATE OF FLORIDA

COUNTY OF Duval

I HEREBY CERTIFY that a meeting of the Board of Directors of The Whiting-Turner Contracting Company, a corporation under the laws of the State of Maryland, was held on 4/30, 20 24. The following resolution was duly passed and adopted:

"RESOLVED, that Brent Voyles as Senior Vice President of the corporation is hereby authorized to execute the Contract dated tbd 20 _____, between The City of Flagler Beach, a municipal corporation and this corporation, and that execution thereof, attested by the Secretary of the corporation and with corporate seal affixed, shall be the official act and deed of this corporation."

I further certify that said resolution is now in full force and effect.

IN WITNESS THEREOF, I have hereunto set my hand and affixed the official seal of the corporation

This 15th day of January, 20 25.

ATTACHMENT F
SWORN STATEMENT UNDER SECTION 287.133(3) (a),
FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

This sworn statement is submitted to: **The City of Flagler Beach** (Public entity)

By: Brent Voyles, Senior Vice President
(Individual's name and title)

For: The Whiting-Turner Contracting Company
(Name of entity submitting sworn statement)

Whose business address is: 10407 Centurion Parkway N., Suite 110
Jacksonville, Florida 32256

Federal Employer Identification Number (FEIN): 52-0529450

(If the entity has no FEIN, include the Social Security Number of the individual signing this sworn statement)

1. I understand that a "public entity crime" as defined in Section 287.133(1)(g), Florida Statutes, means a violation of any State or Federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or of the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy, or material misrepresentation.
2. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1) (b), Florida Statutes, means a finding of guilt or a conviction of a public entity crimes, with or without an adjudication of guilt, in any Federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, non-jury trial, or entry of a plea of guilty or nolo contendere.

3. I understand that an "affiliate" as defined in Section 287.133(1)(a), Florida Statutes, means: A predecessor or successor of a person convicted of a public entity crime: or an entity under the control of any natural person who is active in the management of the entity and how has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in the management of an affiliate. The ownership by one (1) person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.

4. I understand that a "person" as defined in Section 287.133(1) (e), Florida Statutes, means any natural person or entity organized under the laws of any state or of the United States with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

____X____ Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members, or agent who is active in management of the entity, nor the affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

_____ The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agent who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

_____ The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agents who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

However, there has been a subsequent proceeding before an Administrative Law Jury of the State of Florida, Division of Administrative Hearings and the Final Order entered by the Administrative Law Jury

determined that it was not in the public interest to place the entity submitting this sworn statement on the convicted vendor list. (Attach a copy of the final order.)

I UNDERSTAND THAT THE SUBMISSION OF THIS FORM TO THE CITY OF FLAGLER IS FOR THE CITY ONLY AND, THAT THIS FORM IS VALID THROUGH DECEMBER 31, OF THE CALENDAR YEAR IN WHICH IT IS FILED. I ALSO UNDERSTAND THAT I AM REQUIRED TO INFORM THE CITY PRIOR TO ENTERING IN TO A CONTRACT IN EXCESS OF THE THRESHOLD AMOUNT PROVIDED IN SECTION 287.017, FLORIDA STATUES, FOR CATEGORY TWO OF ANY CHANGE IN THE INFORMATION CONTAINED IN THIS FORM.

CERTIFICATION OF NON-SEGREGATED FACILITIES

The Bidder certifies that they do not maintain or provide for their employees any segregated facilities at any of his establishments, and that they do not permit their employees to perform their services at any location, under their control, where segregated facilities are maintained. The Bidder certifies further that they will not maintain or provide for their employees any segregated facilities at any location under their control where segregated facilities are maintained. The Bidder agrees that a breach of this certification will be a violation of the Equal Opportunity clause in any contract resulting from acceptance of this Bid. As used in this certification, the term "segregated facilities" means any waiting rooms, work areas, restrooms and washrooms, restaurants and other eating areas, time clocks, locker rooms and other storage and dressing areas, parking lots, drinking fountains, recreation or entertainment area, transportation and housing facilities provided for employees which are segregated by explicit directive, or are in fact segregated on the basis of race, color, religious disability or national origin, because of habit, local custom, or otherwise. The Bidder agrees that (except where they have obtained identical certifications from proposed subcontractors for specific time periods) they will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding $10,000 which are not exempt from the provisions of the Equal Opportunity clause, and that he will retain such certifications in his files.

The nondiscriminatory guidelines as promulgated in Section 202, Executive Order 11246, and as amended by Executive Order 11375 and as amended, relative to Equal Opportunity for all persons and implementations of rules and regulations prescribed by the United States Secretary of Labor are incorporated herein.

DRUG-FREE WORKPLACE

The undersigned vendor in accordance with Florida Statute 287.087 hereby certifies that

The Whiting-Turner Contracting Company does hereby: (Name of Business)

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.
2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.
3. Give each employee engaged in providing the commodities or contractual services that are proposed a copy of the statement specified in subsection (1).
4. In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under proposal, the employee will propose by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contender to, any violation of Chapter 893, Florida Statutes, or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.
5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.
6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of the matters set forth above.

As the person authorized to sign the statement, I certify that this firm complies fully with the above requirements.

CONFLICT OF INTEREST STATEMENT

Before me, the undersigned authority, ~~personally appeared~~ personally known by me Brent Voyles, who was duly sworn, deposes, and states:

1. I am the Senior Vice President of Whiting-Turner Contracting Co. with a local office in Jacksonville, FL and principal office in Baltimore, MD.
2. The above-named entity is submitting an Expression of Interest for the City of Flagler Beach project described as bid number 260.
3. The Affiant has made diligent inquiry and provides the information contained in this Affidavit based upon his own knowledge.
4. The Affiant states that only one submittal for the above project is being submitted and that the above-named entity has no financial interest in other entities submitting proposals for the same project.
5. Neither the Affiant nor the above-named entity has directly or indirectly entered into any agreement, participated in any collusion, or otherwise taken any action in restraint of free competitive pricing in connection with the entity's submittal for the above project. This statement restricts the discussion of pricing data until the completion of negotiations and execution of the Agreement for this project.
6. Neither the entity nor its affiliates, nor anyone associated with them, is presently suspended or otherwise ineligible from participating in contract lettings by any local, state, or federal agency.
7. Neither the entity, nor its affiliates, nor anyone associated with them have any potential conflict of interest due to any other clients, contracts, or property interests for this project.
8. I certify that no member of the entity's ownership, management, or staff has a vested interest in any aspect of or Department of the City of Flagler Beach.
9. I certify that no member of the entity's ownership or management is presently applying for an employee position or actively seeking an elected position with City of Flagler Beach.
10. In the event that a conflict of interest is identified in the provision of services, I, on behalf of the above-named entity, will immediately notify the City of Flagler Beach in writing.

COMPLIANCE WITH THE PUBLIC RECORDS LAW

Upon award recommendation or thirty (30) days after receiving submittals, they become "public records" and shall be subject to public disclosure consistent with Chapter 119, Florida Statutes. Proposers must invoke the exemptions to disclosure provided by law in the response to the solicitation and must identify the data or other materials to be protected, and must state the reasons why such exclusion from public disclosure is necessary.

If the company submits information exempt from public disclosure, the company must identify with specificity which pages/paragraphs of their bid/proposal package are exempt from the Public Records Act, identifying the specific exemption section that applies to each. The protected information must be submitted to the City of Flagler Beach in a separate envelope marked accordingly.

STANDARD FORM OF AGREEMENT
BETWEEN OWNER AND CONSTRUCTION MANAGER AS ADVISER

CM Agency Addendum:

Our addendum to A133 are on the following pages.

AIA A232 Comments:

Whiting-Turner will need to review this document prior to award

June 4, 2020

CM AGENCY ADDENDUM

Notwithstanding any other provision in the Contract, the following provisions supersede all provisions in the Contract and shall govern in the event of any inconsistent or contrary language in the Contract with respect to liability, insurance coverage and/or indemnification obligations of the Construction Manager.

Notwithstanding anything to the contrary contained in this Agreement, to the fullest extent permitted by law, the Owner, the Owner's separate contractors, the Owner's General Contractor, if any, and any Trade Contractors or Subcontractors whether employed directly by the Owner or through a General Contractor, and/or Tenants of the Owner and their respective General Contractors, Trade Contractors or Subcontractors (hereinafter "Indemnifying Parties") shall indemnify, defend, and hold harmless the Construction Manager and Construction Manager's consultants, and their respective agents and employees from and against claims, damages, losses and expenses, including but not limited to attorneys' fees, arising out of or resulting in whole or in part from performance of the Work, and from any other work being performed at or near the Project by any of the Indemnifying Parties, provided that such claim, damage, loss or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself). Nothing contained herein is intended to nor shall be construed to seek indemnity for a claim, damage, loss, or expense arising from the sole negligence of the Construction Manager or Construction Manager's consultants. In claims against any person or entity indemnified under this Section by an employee of any of the Indemnifying Parties, anyone directly or indirectly employed by them or anyone for whose acts they may be liable, the indemnification obligation shall not be limited by a limitation on amount or type of damages, compensation or benefits payable by or for any of them under workers' compensation acts, disability benefit acts or other employee benefit acts.

The Indemnifying Parties shall cause any commercial liability coverage required by the Contract Documents (and/or shall otherwise separately obtain commercial liability insurance with limits similar to those required by the Contract Documents) to: 1) include the Construction Manager and the Construction Manager's consultants, as additional insureds on a primary and non-contributory basis as to any insurance carried by Construction Manager or Construction Manager's consultants and for claims caused in whole or in part by the negligent acts or omissions during the operations or completed operations of any of the Indemnifying Parties, and 2) provide waivers of subrogation for such insurance coverage in favor of Construction Manager and Construction Manager's consultants. Owner shall provide endorsements and insurance certificates from all Indemnifying Parties, confirming same within 10 days of execution of this Agreement, such obligation being a material term of this Contract.

Owner shall require that the above indemnity and insurance requirements be included in all contracts entered into for or about the Project with the Indemnifying Parties. Owner shall also include the following language in all contracts entered into for or about the Project with the Indemnifying Parties:

> It is hereby agreed and understood that any Contract Documents that are included in or part of any contracts between the Owner and the Contractor [This term should be modified as appropriate to reference the specific Indemnifying Party with whom Contractor is contracting everywhere it appears] with respect to this project are being provided by the Owner and that nothing included therein shall constitute a warranty or representation to the Contractor by the Construction Manager, or its consultants, employees or representatives. Any such Contract Documents or information supplied in connection with this Project, including any deficiency, inconsistency or misrepresentation therein, shall not create any direct cause of action in favor of Contractor against Construction Manager, or any of its consultants, employees or representatives, whether such action may be for breach of contract, breach of warranty, negligence, misrepresentation or other tort, and specifically including but not limited to those claims otherwise permitted by applicable law. Contractor further agrees that it shall file no claims or legal action of any kind against the Construction Manager or any of its consultants, employees, or representatives, including but not limited to those claims otherwise permitted by any applicable law Contractor agrees that this Subparagraph shall survive termination of this Contract. Contractor also agrees that this Subparagraph shall be binding whether or not Contractor claims prior breach of this Contract and that this Subparagraph shall apply to any and all claims including breach of contract, breach of warranty, negligence, misrepresentation or other tort, or otherwise.

Notwithstanding any provision in this Agreement to the contrary, Owner acknowledges and agrees that in consideration for the above protections being granted to Construction Manager, Owner is not being charged the Construction Manager's normal fixed rate for commercial liability insurance on the cost of work performed by other Contractors and/or Subcontractors not under a direct contract with the Construction Manager on the condition that Owner complies fully with the above obligations and on the condition that the Owner guarantees compliance with these obligations by all of the Indemnifying Parties. In the event that any of the Indemnifying Parties fail to comply fully with their obligations under the Contract, in addition to the recovery of all damages, losses, and legal fees incurred by Construction Manager, Construction Manager shall be entitled to immediate payment of all reasonable attorneys' fees incurred in the enforcement of these provisions and shall be entitled to payment by Owner of a fixed rate of _____% of the total Cost of the Work performed by other Contractors and/or Subcontractors not under direct contract with the Construction Manager, which represents the insurance rate normally charged for work performed on a Construction Management at Risk basis.

Notwithstanding anything to the contrary contained in this Agreement, to the fullest extent permitted by law, the Owner shall indemnify, defend, and hold harmless the Construction Manager and Construction Manager's consultants, and their respective agents and employees from and against claims, damages, losses and expenses, including but not limited to attorneys' fees, arising out of or resulting in whole or in part from any losses, disputes, claims, legal proceedings or lawsuits arising out of or related to the performance of the Work by Owner's General Contractors, Trade Contractors Subcontractors and/or Consultants, provided that such loss, dispute, claim, legal proceeding or lawsuit does not arise or result solely from Construction Manager's negligence or solely from Construction Manager's failure to perform its obligations under this Contract. Owner hereby further agrees to reimburse Construction Manager for any and all costs incurred by Construction Manager in connection with any loss, dispute, claim, legal proceeding or lawsuit between or among Owner Owner's General Contractors, Trade Contractors Subcontractors and/or Consultants, in connection with performance of the Work, including but not limited to time expended at rates set forth in the Contract Documents, or as otherwise mutually agreed, and costs incurred by Construction Manager in its support of and assistance to Owner in the defense and/or prosecution of any claims, legal proceedings and/or lawsuits, provided that such claim, legal proceeding or lawsuit does not arise or result solely from Construction Manager's negligence or solely from Construction Manager's failure to perform its obligations under this Contract.

The Whiting-Turner Advantage

The new Flagler Beach Fishing Pier will be an iconic symbol and a destination point, constructed to withstand the extreme forces of nature – from the inevitable hurricane force winds to the more subtle forces of saltwater corrosiveness and the Florida sun. Whiting-Turner is excited about the possibility of participating in this iconic element. Within this RFQ response, we have thoughtfully presented a detailed plan to manage the construction of the Flagler Beach Fishing Pier project. We would be honored to be selected as your CMA; some of our particular expertise, experience and/or techniques that will be an advantage to Flagler Beach in assuring the success of your project are our:

Overall Approach, Methodology.

Whiting-Turner is founded on the core values of integrity, excellence, experience, and leadership. With Whiting-Turner performing a majority of our work for repeat clientele, it is clear that we have succeeded in providing qualified and experienced managers to run our projects, providing a true teaming environment with the Owner and design team, and ultimately providing our client with a high-quality project. Whiting-Turner is recognized as a national leader in Construction, and as such, we are familiar with the latest scheduling, cost control and project management software and techniques. Section 4 of this response explains our approach to construction management and highlights the key factors for consideration in managing this project.

Experience & Personnel Qualifications.

Whiting-Turner is celebrating 116 years of construction excellence and employs nearly 5,000 construction professionals working out of over 30 regional offices.

The core staff that we have proposed for this project work out of our Jacksonville office; our team includes long time employees who have fishing pier experience.

Financial Capability.

Whiting-Turner proudly enjoys a 5A-1 Dun & Bradstreet Rating – the only top 25 Engineering News Record domestic builder with this highest rating –as well as a $4 billion bonding capacity. We have not borrowed any working capital since 1938. You can be confident in the longevity and dependability of our firm.

Safety.

The elimination of accidents on our projects is among our greatest responsibilities. It is our policy that every reasonable effort be taken to eliminate recognized hazards from our operations; we will assist the Contractor to develop a project specific safety program that addresses the hazards and risks Inherent in fishing pier construction. The safety program will include a project hazard assessment with considerations such as: working within the narrow boundaries of a pier, crane critical load lift plans, height exposure, pile driving over water, surf precautions, and the weather.

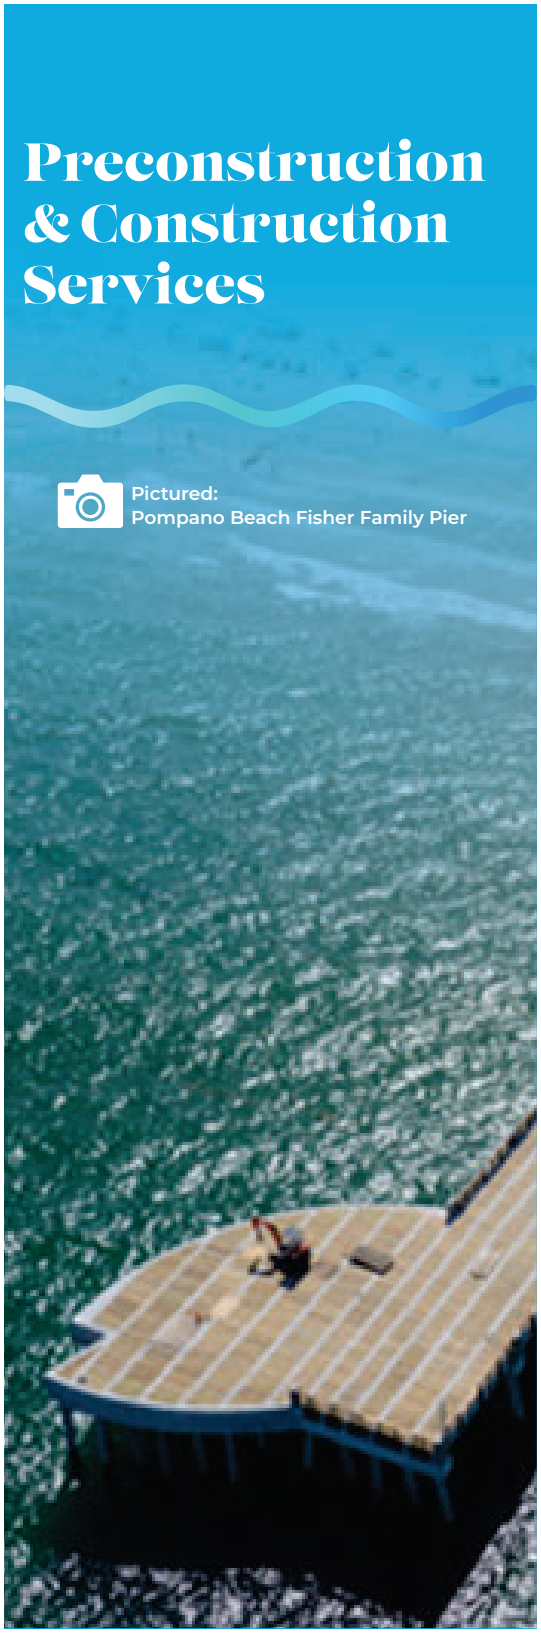
Understanding & Commitment.

The City of Flagler Beach's Fishing Pier will serve as the centerpiece to the development of surrounding restaurants and retail establishments. The professionalism of the team that you select for this important phase of the development will influence the overall outcome of the project.

With the selection of Whiting-Turner, you can be assured that our qualified team will be dedicated to completing your vision for the Flagler Beach Fishing Pier.

four

PROJECT APPROACH



Pictured:
Pompano Beach
Fisher Family Pier

Project Approach

The Whiting-Turner approach to managing this project will be the same, proven approach, that we have successfully utilized both locally and nationally:

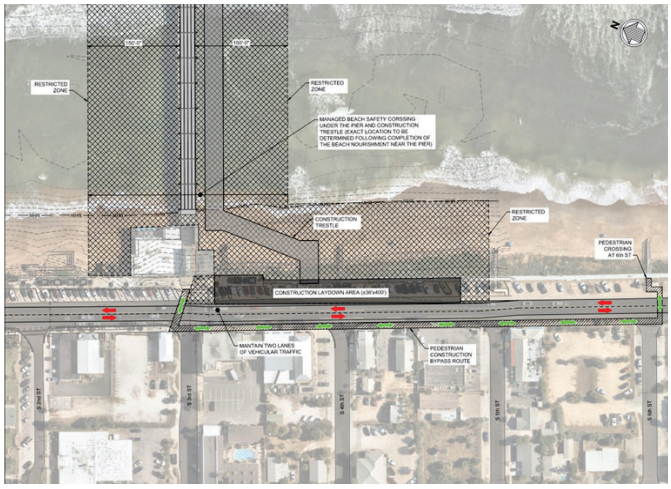
- The project will be staffed with a dedicated Project Manager and Superintendent.
- The most current management tools such as CMiC and Primavera (P6) will be utilized to track the project.
- We will immediately address any concerns that the City or Community may have throughout the CMA process.

Preconstruction & Construction Services

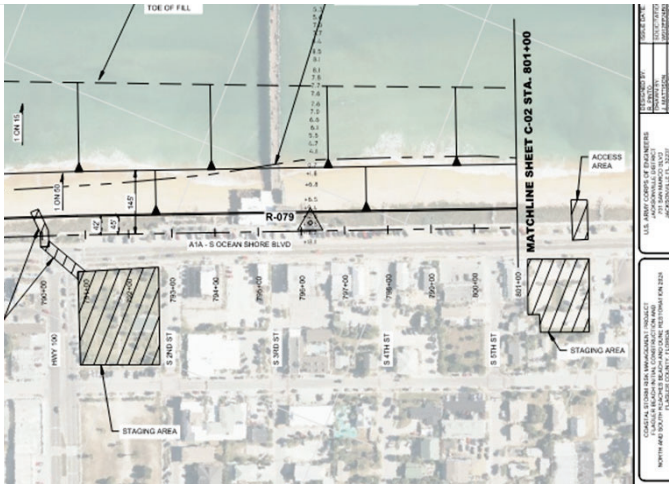
Pictured:
Pompano Beach Fisher Family Pier

Although “Preconstruction” Services are not included in our scope of work for this project, many of the steps for organization and planning that generally take place during “preconstruction” will need to be reviewed and discussed to make sure that the project is following agreed upon protocols and that there is good communication among all parties.

Our approach to providing leadership to facilitate teamwork and communications among all parties involved in the project is as follows:



1. Assembly of Project Documents, and Kickoff Meeting with Flagler Beach, the Design Team, the Contractor & Whiting-Turner



As soon as practical, after having selected Whiting-Turner as the CMA, provide us with all applicable documents including items such as the Contractor’s bid response, the Contractor’s drawings, all permits and permit applications, requirements from the funding source, specifications and other bid documents issued to the Contractor, any documentation of public outreach meetings and commitments, etc. An opportunity to review this information at least briefly will assist us in preparing for our project responsibilities.

2. Creating a Plan of Attack

Key to the success of the project is regularly scheduled progress meetings. To be effective, the decision makers representing the City, the Design Team, the General Contractor, and Whiting-Turner will be in attendance. The meetings are critical in identifying key issues and alternatives. The minutes that we issue after each meeting are formatted so that all team members are clear as to their immediate and long- term responsibilities. These minutes are a valuable tool for maintaining the project’s direction and focus.

Approvals to design alternatives are often provided immediately, in this arena, thereby keeping the CMA process running efficiently to meet the strict time constraints of a project. Whiting-Turner’s consistent use of this process has allowed this process to develop to an elevated level, so that the project will enjoy the benefits of efficient coordination.

3. Staging / Sequencing Plans

To expand upon the documents provided in their bid package, the Contractor will prepare detailed phasing and sequencing plans for review; the phasing plans will depict the flow of traffic, pedestrian access, staging areas, work areas, and available/unavailable parking.

There will be many variable factors to consider and discuss to arrive at staging and sequencing plans that best suit the project.

Some of the factors to consider include:

a. Safety: Safety is always the first consideration. As an example, the suggested staging/ MOT plan provided to the Contractor in their bid documents shows routing the pedestrians from the east side of A1A to the west side, to safely guide them around the work zone that will include the sidewalk and parking on the east side of A1A.

b. Impact: What is the impact to the community and what have they been promised?

c. Season: There may be some factors related to the season that impact our planning, for example, how might the traffic vary from season to season, and how might our efforts affect visitors to Flagler Beach?

d. Community Coordination: Through whom does the team communicate with to understand the concerns of the local businesses, residents, and visitors?

e. Deliveries: There will be piles as long as 110 foot long delivered to the project, concrete trucks, and other heavy equipment. We will evaluate the Contractor's plan for deliveries within the tight confines of available space. It is challenging to envision how the Contractor will safely offload deliveries as long as 110' in the shaded parking area provided for as staging in their bid document, and then transport them along the conceptual configuration of the temporary construction trestle also shown on their bid document.

f. Planning: With laydown area at such a premium, careful planning and near "Just-in-Time" delivery of material will be crucial.

g. Staging: Are nearby undeveloped properties available for pier construction purposes? The bid documents provided to the Contractor show two staging areas to be used for beach re-nourishment, just off A1A to the north and south side of the pier. When are these properties needed for the Beach Fill? Are they available otherwise for use by the Pier Project? Are these areas available for us to setup a construction trailer?

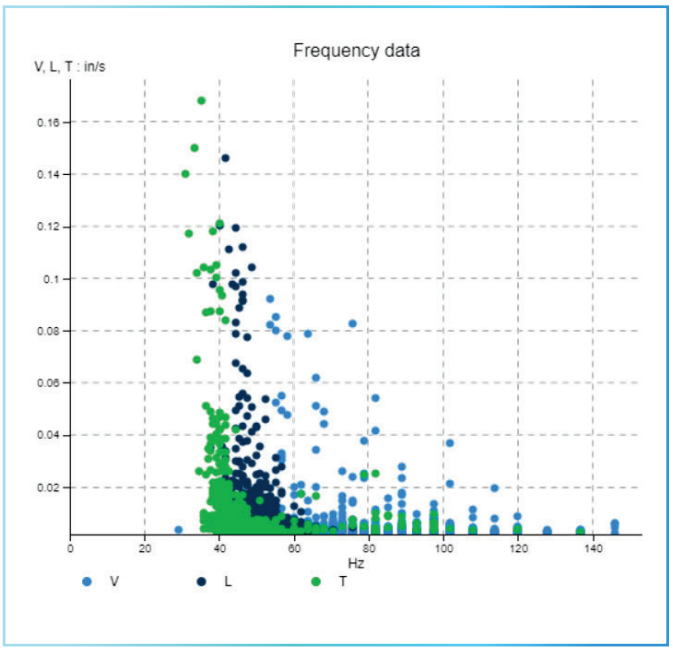
h. Parking: Where is the best location for construction worker parking?

4. Permits

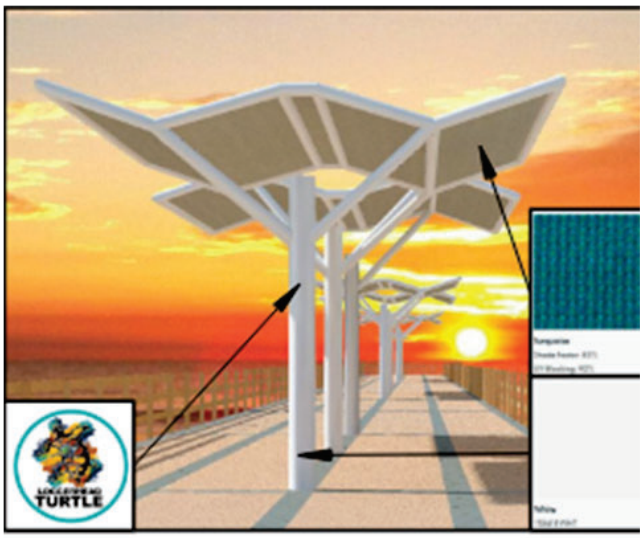
a. Building Department Permit

Ideally, the current pier plans have been reviewed and conditionally approved by the Flagler Beach Building Department, so that when the General Contractor submits to the building department for a permit, the permit is approved in an expedited way. If the building department is not already adequately familiar with the project so that a building department permit can be issued timely to the General Contractor, the building department may consider issuing partial permits to start the structural work (reinforcing the existing structure to remain, the new piles/ bent assembly, and construct the working platform (Trestle) – possibly separating the electrical, fire, plumbing and any landscaping for later approval.

b. Remaining Applicable Permits



Aside from the Building Department Permit, there are no doubt multiple permits that should be tracked and accounted for; these might include permits from: the Army Corp of Engineers, U.S. Coast Guard, Florida Department of Environmental Protection, Florida Wildlife Conservation, and possibly a County surface water management permit, among others.



5. Vibration Monitoring

With the pile driving operation beginning very close to the existing structures, the opinion of a structural engineer might be necessary as to what a safe level of vibration might be for the structures, and it might be prudent to then monitor the initial pile driving operation to confirm compliance with the established safe level.

On the Pompano Beach Pier, the first few bents were constructed using auger cast piles to avoid the possibility of damaging the existing nearby restaurant.

Sample Report

6. Lightening Protection

Covered structures will provide both an important functional capability to the pier as well as an atheistic one.

After substantial completion of the Pompano Beach Fishing Pier, in an abundance of caution, lightening protection was added to the shade structures and metal handrail – has lightening protection for the proposed shade structures been evaluated?

Environmental Considerations

Fishing pier construction and operation must not harm or damage protected wildlife or important marine resources, such as coral or marine turtles.

Pollution

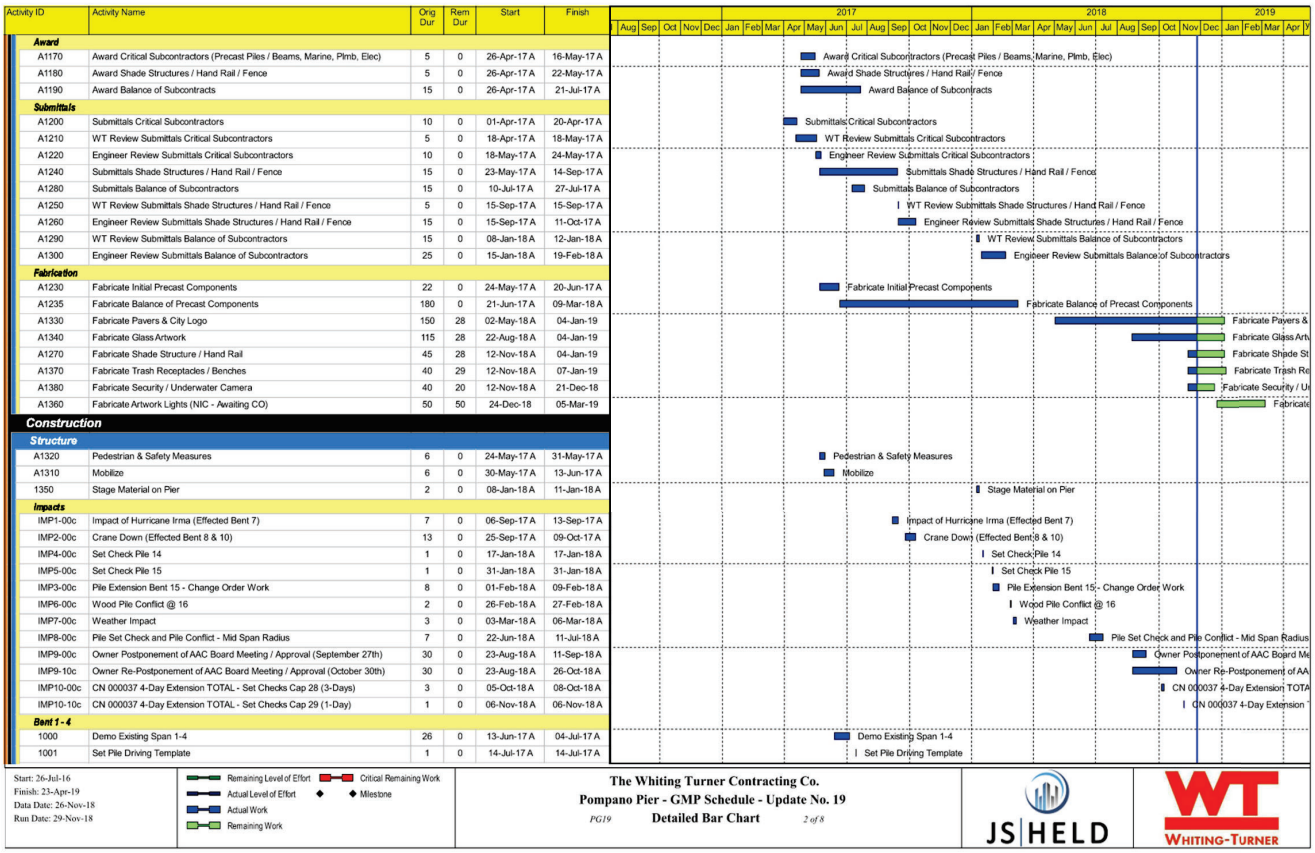
During preconstruction, our team will monitor procedures to be used for discarding and controlling trash and debris from construction activities to ensure that our project does not negatively impact the environment.

When the new pier is open to the public, the major debris issue becomes the inadvertent discarding of trash, fishing tackle, and fishing line into the ocean by the public. Trash receptacles, fishing line disposal bins, and signage encouraging their use will be installed.

Turbidity

It is likely that during all pile driving operations, water samples will be required to be taken by a third-party testing company, and should the turbidity exceed the allowable tolerances, work will be stopped.

Sea Turtle Protection



During Sea Turtle nesting season, the permit requirements may require that the nearby beach be evaluated for new sea turtle nests before pile driving operations begin each day, and if a nest should be discovered within a specified distance from construction, then that nest(s) may need to be relocated prior to resuming work.

After construction, signage will be provided to the public providing the public with the proper procedures for both avoiding interaction with sea turtles, and also, including procedures to follow in the event that sea turtles are hooked or otherwise disturbed.

Sea Turtle Friendly Lighting

During construction, the pier and work area will be illuminated only to the minimum as required by the authorities for safety and navigation requirements. After construction is complete, the walking surface of the fishing pier will be illuminated at night for the security and safety of its patrons and as required for navigation purposes; however, deck lighting will be limited to that which is deemed safe for nearby sea turtles. Careful consideration of the pier lighting is necessary so that turtles do not mistake the fishing pier's lighting for the illumination of the moon, which the adult turtles use in navigating, and new hatchlings use to orient themselves when emerging from their nests. The deck lighting will be shielded from spilling off of the deck platform, and will conform to other permit specifications regarding type and brightness of the light.

Sample Schedule from Pompano Pier Project

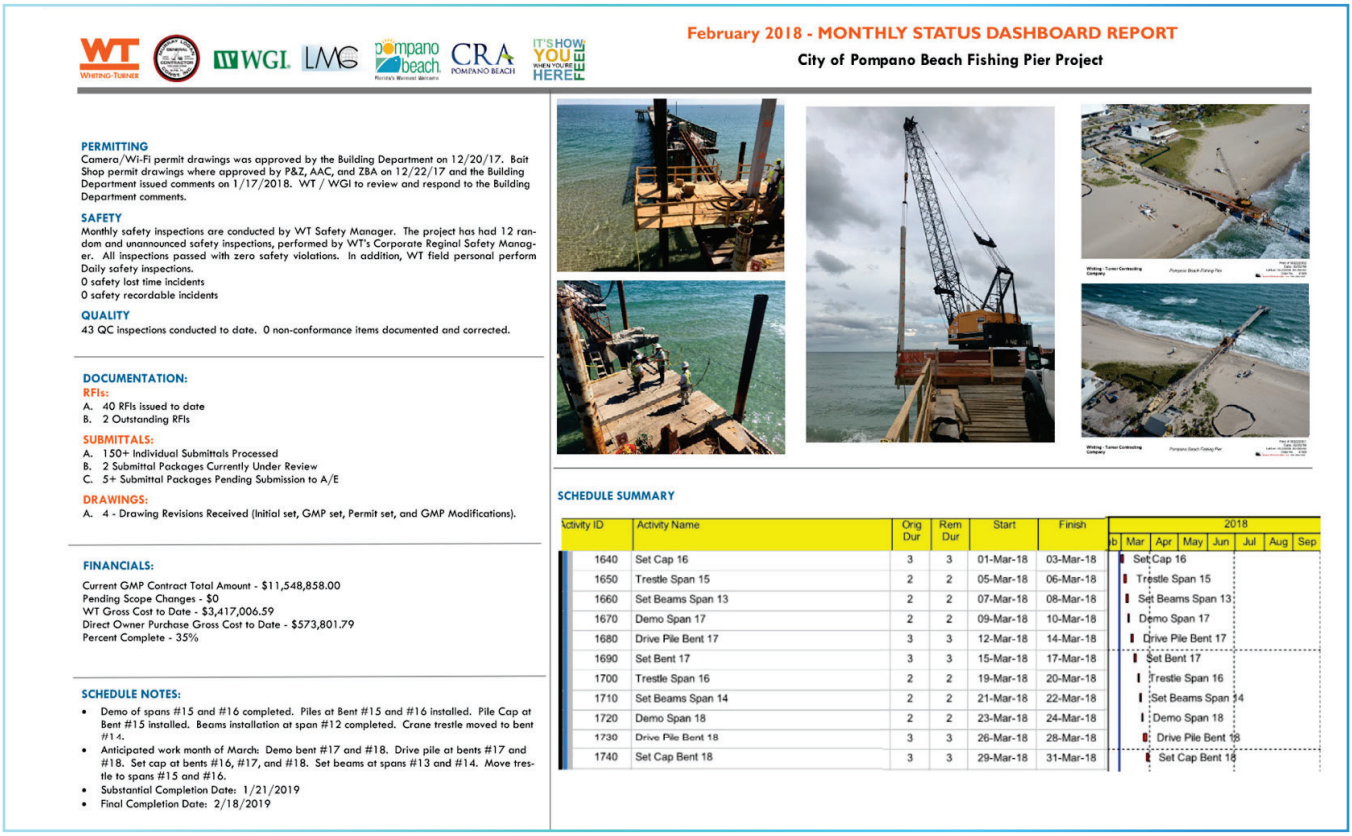
7. Schedule

The expectations for schedule development and monitoring need to be clarified; Paragraph 3.3.5 which reads, “The Construction Manager Adviser shall review and analyze the construction schedules provided by the General Contractor to update the Project schedule, incorporating the activities of the Owner, Engineer, and General Contractor on the Project, including activity sequences and durations, allocation of labor and materials, processing of Shop Drawings, Product Data and Samples, and delivery and procurement of products, including those that must be ordered in advance of construction. The Project schedule shall include the Owner’s occupancy requirements showing portions of the Project having occupancy priority. The Construction Manager Adviser shall update and reissue the Project schedule as required to show current conditions.

If an update indicates that the previously approved Project schedule may not be met, the Construction Manager Adviser shall recommend corrective action to the Owner and Engineer.”

This indicates the CMA will both review the General Contractor’s schedule and maintain a separate schedule that perhaps includes some information not required in the Contractor’s schedule. If the General Contractor is not capable of, or refuses to adhere to schedule development and protocol, maintaining two separate schedules may be necessary; however, if the contractor is cooperative and competent in scheduling, two separate schedules seem unnecessary, and having our scheduling department assist our onsite team in evaluating the contractor’s initial schedule setup and then performing monthly “Schedule Health Checks” might be the best approach.

8. Procurement



Delivery of long lead time items such as piles, beams, pile caps shade structures and light fixtures will be incorporated into the schedule. The delivery of these materials will be tracked by the Contractor's procurement log and reviewed regularly by our staff.

Pile fabrication may be released in segmented groups, sequential with construction. In this way, pile lengths will be manufactured based on actual field conditions being encountered. This will reduce the possibility of cost or schedule delay due to subsurface variations.

9. Borings

Only one boring was provided to the Contractor in the bid documents. As the construction of the pier progresses, the Contractor will make provisions for the testing company to take additional borings. The project team should discuss the possibility of the boring result impacting pile length, and its ramifications if pile length is affected.

Sample Report from Pompano Pier Project

February 2018 - MONTHLY STATUS DASHBOARD REPORT

City of Pompano Beach Fishing Pier Project

PERMITTING
Camera/Wi-Fi permit drawings was approved by the Building Department on 12/20/17. Bait Shop permit drawings where approved by P&Z, AAC, and ZBA on 12/22/17 and the Building Department issued comments on 1/17/2018. WT / WGI to review and respond to the Building Department comments.

SAFETY
Monthly safety inspections are conducted by WT Safety Manager. The project has had 12 random and unannounced safety inspections, performed by WT's Corporate Reginal Safety Manager. All inspections passed with zero safety violations. In addition, WT field personal perform Daily safety inspections.
0 safety lost time incidents
0 safety recordable incidents

QUALITY
43 QC inspections conducted to date. 0 non-conformance items documented and corrected.

DOCUMENTATION:
RFIs:
A. 40 RFIs issued to date
B. 2 Outstanding RFIs

SUBMITTALS:
A. 150+ Individual Submittals Processed
B. 2 Submittal Packages Currently Under Review
C. 5+ Submittal Packages Pending Submission to A/E

DRAWINGS:
A. 4 - Drawing Revisions Received (Initial set, GMP set, Permit set, and GMP Modifications).

FINANCIALS:
Current GMP Contract Total Amount - $11,548,858.00
Pending Scope Changes - $0
WT Gross Cost to Date - $3,417,006.59
Direct Owner Purchase Gross Cost to Date - $573,801.79
Percent Complete - 35%

SCHEDULE NOTES:
- Demo of spans #15 and #16 completed. Piles at Bent #15 and #16 installed. Pile Cap at Bent #15 installed. Beams installation at span #12 completed. Crane trestle moved to bent #14.
- Anticipated work month of March: Demo bent #17 and #18. Drive pile at bents #17 and #18. Set cap at bents #16, #17, and #18. Set beams at spans #13 and #14. Move trestle to spans #15 and #16.
- Substantial Completion Date: 1/21/2019
- Final Completion Date: 2/18/2019

SCHEDULE SUMMARY

10. Monthly Status Report

As summarized in paragraph 3.3.21.2 of the proposed contract, Whiting-Turner will record the progress of the Project. On a monthly basis, we will submit written progress reports showing percentages of completion and other information identified below:

1. Work completed for the period;
2. Project schedule status;
3. Submittal schedule and status report, including a summary of remaining and outstanding submittals;
4. Request for information, Change Order, and Construction Change Directive status reports;
5. Tests and inspection reports;
6. Status report of nonconforming and rejected Work;
7. Daily logs;
8. Summary of all General Contractor' Applications for Payment;
9. Cumulative total of the Cost of the Work to date including the Construction Manager Adviser's compensation and reimbursable expenses at the job site, if any;
10. Cash-flow and forecast reports;
11. Photographs to document the progress of the Project;
12. Status reports on permits and approvals of authorities having jurisdiction; and
13. Any other items the Owner may require

Maintenance of Traffic (M.O.T.)

The Contractor will detour traffic only as per an agency approved M.O.T plan. Variable Message Boards will be strategically positioned in advance of the M.O.T. installation, to inform vehicular traffic of the forthcoming closures. Residents, business owners, and customers affected by the road closure in these areas will be notified ahead of time. Pedestrians will be informed by means of construction signs indicating sidewalk closure and the alternate routes to be used. Two-way traffic on A1A will be maintained at all times.

Surveying

How will layout for the base line of the new pier be planned? on the deck of the existing pier, since the new fishing pier will generally occupy the same footprint as the existing fishing pier? We will request that drafts of as-builts be submitted with monthly pay requests to ensure that they are being prepared in a format acceptable to the authorities, and as a quality control procedure to avoid any unnecessary surprises at project completion, although we are uncertain as to whether the Contractor is required to do so in their Contract with Flagler Beach.

Testing and Inspection

During the initial Kickoff meetings, all testing and inspection procedures will be reviewed and summarized. The testing agency and inspectors will be involved during driving of the piles, prior to any back fill operation, during the pressure testing of water lines, and while pouring/ pumping concrete caps.

Quality Control

The quality of the project will result in great part from Whiting- Turner's proven leadership. Our team will instill a positive attitude in the work force and establish an atmosphere where individuals make quality performance a personal goal.

Our superintendents and subcontractors have the experience necessary to avoid quality deficiencies by looking ahead.

The focus will be to avoid deficiencies caused by scheduling conflicts, unanticipated field conditions, tolerance or materials incompatibilities, improper installation methods, etc. As materials arrive at the jobsite, they will be inspected for compliance and logged. Work-in-place will be inspected daily.

We understand and encourage your involvement throughout the process to assure that all completed work meets your standards. It is, therefore, important to our team to review your expectations, to add to our process any procedures not already included, and to coordinate the total quality assurance effort.

Community Outreach and Involvement

We did not see any mention of how the project will interact with the Community, or whose responsibility it will be to do so; however, it is a given that the project success will rely on providing nearby businesses and the people who use the surrounding facilities with clear, reliable project information.
We look forward to better understanding your expectation for community involvement of the project should we be selected as your CMA.

Public Safety & Community Coordinator

Luke Budorick will be assigned full time as the Whiting-Turner Superintendent. Luke will monitor the General Contractor's coordination efforts in terms of resident and local business concerns, access, and safety. Luke's daily routine will include confirming that deliveries are made in the locations and time slots as agreed with the community, sidewalks are open, work hours begin and complete as agreed upon with the neighborhood, the parking plan is being followed, all fences, barricades and proper protection is in place, and that any community concern is either: (1) immediately addressed or that (2) the concern is immediately logged in and forwarded to Flagler Beach with a copy to the General Contractor for their prompt review and discussion of the specific challenge.

Hurricane Preparedness

Whiting-Turner will review the Contractor's Hurricane Preparedness Manual which will be relied upon as a guide in those critical hours just prior to, and immediately following, a hurricane.

The essence of this plan should be comprised of four stages: planning, initiation, final preparations completion, and post- storm procedures. The planning takes place prior to the commencement of the hurricane season on June 1st. During the planning stage the Contractor must have assigned individuals responsibilities by name to ensure sufficient manpower and equipment are available to safeguard lives and property should a tropical storm/ hurricane be predicted for the area. The initiation stage typically requires release of emergency personnel to prepare their personal homes and families for the predicted storm while work on site is adjusted to prepare for the storm.

During the final preparation stage, the emergency personnel typically return to the site to make the final storm preparations as the other personnel evacuate the site until the storm passes and it is safe to return to work. Upon the return of personnel to the jobsite, the final post-storm procedure phase begins. This phase describes responsibilities and guidelines for the safe return of all employees to the jobsite. The emergency personnel should complete their tasks to secure loose materials and equipment within eight hours and they also evacuate the site.

The timing of these four phases for the Project will follow the timing decisions of the National Hurricane Center.

We have included in this section a sample checklist for this plan.

TROPICAL STORM/HURRICANE PREPAREDNESS INSPECTION REPORT
(To be completed by all Safety Representatives)

No.	Inspection Checklist	Yes	No
1.	Have all storm preparation requirements been identified in coordination with the General Contractor and the Owner?		
2.	Do you have necessary materials and equipment on site?		
3.	Is the equipment fueled or will it be refueled at completion of preparations?		
4.	Are the workers on the emergency final preparation team correctly skilled?		
5.	Are there adequate numbers of workers on the emergency final preparation team?		
6.	Do the workers know that they will be given time for personal preparation of their homes?		
7.	Are the trailers secure with cables and the windows/openings boarded?		
8.	Have you removed all debris and loose lumber from the area and secured and protected all building materials stored on site?		
9.	Have you moved any materials stored in low areas that are subject to flooding to higher elevations?		
10.	Have you photographed the entire job site inside and outside? Are they dated and annotated?		
11.	Have you inspected all fire protection devices for proper storage?		
12.	Have you ensured that all drainage areas are cleaned out?		
13.	Has the job been electrically saved?		
14.	Are you prepared for post storm period with backup lights stored offsite and emergency generators?		
15.	Have you boomed down and/or freewheeled all cranes? If operating a tower crane, have you disconnected power?		

A CULTURE OF SAFETY

The elimination of accidents related to Whiting-Turner operations is one of our greatest responsibilities and should be treated in the same manner as our productive business procedures. It is our policy that every reasonable effort be taken to eliminate recognized hazards from our operations."

TIM REGAN
President and CEO

Safety

Preplanning for safety will ensure everyone's well-being, help to maximize productivity, and reduce cost associated with risk. At the onset of the project, our team will encourage the Contractor to conduct a project hazard assessment. They will identify the normal and extraordinary risks at each stage of the fishing pier construction process, and will develop a Project Safety Program that addresses the identified hazards and risks.

They will consider:

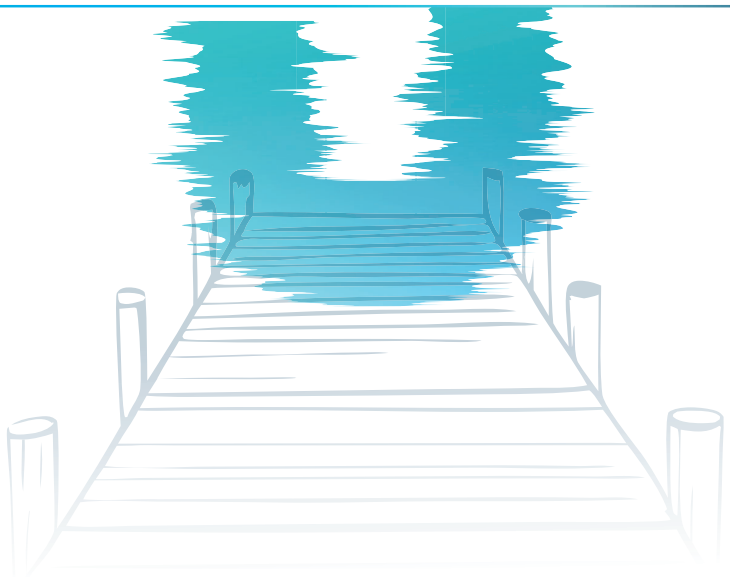
- The narrow work environment of a fishing pier
- Crane critical load lift plans
- Height exposure
- Pile driving over water
- Surf precautions
- Weather – procedures for rain, wind, lightening, etc.
- Flagler Beach's safety requirements and concerns
- Insurer involvements
- Third party liabilities
- Procedures for working near occupied areas
- Site access, environmental, security, posting
- Project Safety Team organization
- Incident investigation and reporting approach
- Safety measurements (e.g., RIR, LTAIR)
- OSHA

Safety Program Goals

Whiting-Turner's corporate and project goals are very simple – zero accidents. Regardless of our project role, this is our goal and we will not stop trying to get there. Other safety and loss prevention goals include:

- Zero fatalities
- Zero permanent injuries
- Zero impact on public personnel or property
- Prevention of any incident that would adversely impact the City, cost, schedule or quality

All accidents are preventable and avoidable, and we will never stop trying to eliminate them.



Cut Walk Jetty at Bal Harbour Village
Project Location: Bal Harbour, FL
Client: Village of Bal Harbour

Whiting-Turner is currently working with Moffat Nichol on the Bal Harbor Cut Walk Jetty. The project is in preconstruction.

INVOLVEMENT & ROLES

JEFF MCPHAUL, VICE PRESIDENT

Role On This Project: ***Project Executive:*** Jeff has led the Jacksonville office for 9 of his 21 years with Whiting-Turner. Jeff will support Project Manager Lindsey Griffin and Superintendent Luke Budorick by providing any additional corporate and/or project resources necessary to ensure our commitments to the City are met. Additionally, Jeff will provide oversight and guidance to the team and be the escalation point for the City as needed.

FRANK ZAREMBA, SENIOR PROJECT MANAGER

Role On This Project: ***Subject Matter Expert:*** For almost 40 years, Frank has worked on numerous Florida infrastructure projects that include roadwork, water main's, undergrounding of overhead utilities, along with bridge and pier work. Frank was the lead manager on 2 of the highlighted projects in Tab 5, one of which, the Pompano Beach Fisher Family Pier, was awarded the CMAA project of the year for the Local Government category. Frank will lend his expertise to the proposed team to ensure Flagler Beach Pier is constructed properly and efficiently, making this a go-to while visiting the City.

RESTORATION HARDWARE

Restoration Hardware
West Palm Beach, FL // $33.4M

The Restoration Hardware West Palm Beach project is a four-story, 60,000 SF new construction retail project located in West Palm Beach, FL. The high-end furniture gallery will include a roof top Restaurant and Kitchen with pyramidal skylight courtyard and vaulted ceiling wine rooms, roof-top paver system, grand staircase with radius stingers and railing system, balcony and awning structures at all elevations, exterior ground-level courtyards with vertical and radius water features, interior and exterior staged furniture displays and showrooms, and polished concrete floors.

UNITED THERAPEUTICS

Discovery and Innovation Building
Jacksonville, FL // $52.7M

The Discovery and Innovation Building is a 75,000 SF, net-zero, three-story facility that includes shared spaces for United Therapeutics and Mayo Clinic. This building includes support spaces for the ex vivo process; open offices for support personnel; back of house MEP; shelled space for future cGMP laboratories; Mayo's Life Sciences Incubator; wet laboratory space; office and co-located spaces; café and lounge; conference rooms; shelled space for future Mayo cGMP laboratories.

Cell Therapy Production Facility at Mayo Clinic
Jacksonville, FL // $13.5M

A 24,000 SF interior renovation of the Discovery & Innovation building on Mayo Clinic's campus. It included cGMP laboratories, offices and support spaces and were constructed for two clients (United Therapeutics & Mayo Clinic). The building was fully occupied during construction so work was phased to accommodate the needs of multiple tenants.

VLP & Administration Renovation
Jacksonville, FL // $13M

This project included phased construction. Phase 1 was demolition of the existing second floor cGMP laboratories and construction of new offices. After the offices were completed Phase 2 commenced. Phase 2 included moving the first floor employees to the new offices on the second floor and constructing new lung suites adjacent to existing suites. The entire building was occupied and the existing lung suites were fully functional during construction

ANNE ARUNDEL COMMUNITY COLLEGE

Health and Life Sciences Building • Arnold, MD // $96 M

This 170,000 SF building supports all departments within the School of Health Sciences and Biology. The building contains 19 biology laboratories, 20 health science laboratories, laboratory support spaces, a greenhouse, computer laboratories, simulation laboratories, classrooms and study and meeting rooms.

Student Union Bridge Repairs • Arnold, MD // $386k

This project consisted of a demolition and replacement of the deck on the existing pedestrian bridge that spanned 110 LF between Student Services Center (SSVC) and Student Union (SUN) located on the Arnold Campus of Anne Arundel Community College. To ensure the entrances remained open in a safe manner, a pedestrian tunnel was constructed beneath the bridge that allowed workers to complete work underneath the bridge and protected pedestrians from falling debris while walking beneath.

Careers Center Pedestrian Bridge Repair • Arnold, MD // $790k

This project consisted of repairs to the deteriorated structure of the Anne Arundel Community College - Careers Center bridge and concrete stairs, located on the Arnold Campus.

JOHNS HOPKINS APPLIED PHYSICS LABORATORY

Applied Physics Lab - AEF Facility Renewal • Laurel, MD // $3.2M

The Johns Hopkins University Applied Physics Laboratory Advanced Electrical Fabrication Facility is operated by the Research and Exploratory Development Department to provide capabilities in the fabrication and assembly of circuit boards and microelectronics. The AEF Facility is located in Building 13 on the Laurel Campus.

SEASONS HOSPICE & PALLIATIVE CARE OF SOUTHERN FLORIDA

Seasons Hospice at Harbor Hospital • Baltimore, MD // $96 million

This project was a renovation of the 3rd floor wing of the Med Star Harbor Hospital Seasons Hospice Suite. Renovations will include minor demolition, upgrade of patient rooms and nurses station. Upgrades included flooring, lighting, plumbing fixtures and select doors.

ATTACHMENT E
EXPERIENCE OF BIDDER

Bidder Name: The Whiting-Turner Contracting Company

Authorized Signature: _____ Date: _____

Is your company currently involved in any active litigation? X Yes ____ No

If Yes, explain: Please reference the following page.

Has your company ever been sued? X Yes ____ No

If Yes, explain and/or submit court decision or judgment, as applicable: Please reference the following page.

The Bidder must demonstrate the successful completion of four (4) projects of similar complexity, nature, size, and dollar amount in the capacity of CMA. Any material misrepresentation, as determined by the City of Flagler Beach, shall result in disqualification.

On the following pages, provide the requested information regarding experience within the past ten (10) years on four (4) projects. These projects must be new or rehabilitation projects. Preferred projects should be for a coastal community on or near the beach. Additional credit will be awarded for Fishing Piers, either concrete or wood.

Applicable Owner & Subcontractor Claims

.112%
of Contracts Result in Litigation Claims

Whiting-Turner is rarely involved in litigation. However, since the Company is typically engaged in approximately 800 to over 1000 projects at any given time, and is party to well over 15,000 subcontracts in any given year, there are obviously bound to be some disagreements which reach the litigation stage.

Also, there are occasional accidents and claims of injuries, principally by employees of subcontractors, which result in litigation. These matters are typically defended by the various insurance carriers involved.
Please note that many recent cases involving both project owners and subcontractors are related to the fluctuation in the real estate and construction markets and its effect on an owner's ability to pay amounts owed to Whiting-Turner.

The submitting office has not been a party to any litigation or claims.

LITIGATION Last 5 Years *(Owners)*

Plaintiff (P) & Defendant (D)	Court where filed	Case #	Date Filed	Nature of Case	Current Status
Loft Downtown II Condominium Association, Inc. etc. (P) v. Whiting-Turner, etc. and Weathertrol Maintenance Corp., etc. (D)	Miami-Dade County Circuit Court, Florida	Case #1236112CA32	Served 9/17/12 Closed 1/9/22	Claim for breach of warranty regarding alleged defect in pipe installed by Subcontractor	Settled
Manganaro v. FRIT; Whiting-Turner (P) v. Manganaro (D); Baltimore Steel, et al.	Circuit Court for Montgomery County, Maryland	Case #413072-V	March, 2016 Closed 10/4/21	Claim against Owner for extra work in connection with masonry repairs related to alleged design defects and counter-claims	Settled

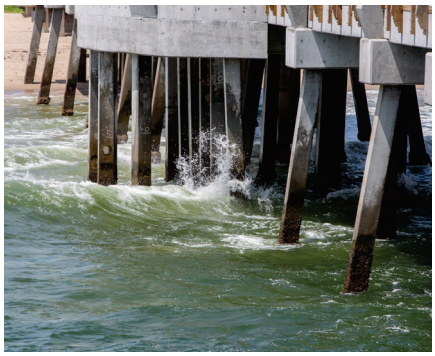
PROJECT 1

City of Pompano Beach
Fisher Family Fishing Pier

This project won the
PROJECT ACHIEVEMENT AWARD
Government - Local Category

CMAA
Florida Chapter



Project #1:

Contract Date: 04.26.2016 - 7.31.2020

Contract Amount: $ $9,964,551 *(Excluding the precast concrete PO that was deleted from our contract so the Owner could purchase directly for tax savings)*

Project Name: Fisher Family Pier

Project Location: 222 North Pompano Beach Blvd. Pompano Beach, FL 33062

General Scope of Work: Please see following page for scope.

Client Name and Address: City of Pompano Beach
100 West Atlantic Blvd.
Pompano Beach, FL 33060

Client Contact Phone: (954) 786-7834 (O)/ (954) 980-2208

Client Contact Email: Horacio.danovich@copbfl.com

Was the project completed on schedule? X Yes ____ No

Total Amount of Change Orders: $ 0

Reasons for Change Orders: *Project was completed under budget with savings returned to the Owner.*

Please attach photos of the finished project.

Please see previous page.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

City of Pompano Beach
Fisher Family Fishing Pier

General Scope of Work: Originally built in 1963 and opened to the public in early 1964, the City's Fishing Pier stood to be an iconic feature. Unfortunately, damage sustained during Hurricane Sandy in 2012 forced closure of the easternmost end.

The team adopted a top-down construction methodology to demolish and replace one span section at a time, working from the west to the east. It took approximately 15 days to replace each span. The design was based on building an 896-feet long pier (same length as the original pier).

The City's vision for the "Fisher Family Pier," was to build a structure that would be able to withstand the impacts and pressures of Florida's harsh weather and local environment. The pier was raised four feet higher than the old one to withstand sea level rise and storm surges. In addition, the new pier is wider than the old one to provide extra space between fishermen and visitors. This helps reduce the risk of people being hooked by fishermen casting their lines.

The width expands from 18' to 30' about 300' east of the Bait and Tackle Shop. And, the pier added four (4) shaded areas with shade structures similar to those installed at the adjacent playground as well as benches and trash receptacles strategically placed throughout the facility.

Art was a very important element as well. The team installed 30 interchangeable marine-related artwork panels lit from behind depicting local species. The panels are being used as educational components to children and adults alike. Moreover, a wall panel featuring local seashells specimens was placed on one of the Bait and Tackle shop walls.

The pier features Wi-Fi service throughout and a sophisticated security camera system was installed to help monitor activity while the pier is open to the public. Lastly, the end of the new pier features a shape like the head of a pompano fish with an "eye" for people to look down into the ocean and see marine life underneath. To support fishermen, the team constructed a Bait and Tackle Shop.

PROJECT 2

City of West Palm Beach

City Commons Waterfront Docks

Project #2:

Contract Date: 06.01.2008 - 03.11.2009

Contract Amount: $ $8,274,255 *(Excluding the purchase of the floating dock material, which was deleted from our scope of work so that the Owner could realize the tax)*

Project Name: West Palm Beach Waterfront Commons Dock Project

Project Location: 150 S Flagler Dr. West Palm Beach, FL 33401

General Scope of Work: See scope on following page.

Client Name and Address: City of West Palm Beach
401 Clematis St
West Palm Beach, FL 33401

Client Contact Phone: Joan Goldberg (561) 319-0285

Client Contact Email: fjgoldberg@bellsouth.net

Was the project completed on schedule? X Yes ____ No

Total Amount of Change Orders: $ 0

Reasons for Change Orders:

Completed within the GMP budget with savings returned to the Owner.

Please attach photos of the finished project.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

City of West Palm Beach
City Commons Waterfront Docks

General Scope of Work: The Work consisted of value engineering, permitting, site preparation, and construction necessary to construct a municipal floating dock system in the intercoastal waterways in downtown West Palm Beach, Florida.

The project consisted of floating docks, marina utilities, steel pilings, land connection structures, and aluminum gangways. The project included three dock structures totaling 26,000sqft: North Clematis Dock, South Clematis Dock, and Evernia Street Dock. The project was designed by CH2MHill, project Architect, Michael Singer Studios, Conceptual Architect, and Taylor Engineering, Engineer of record.

The project had a 12-month schedule. We were successful in completing the project on time with savings returned to the City upon project completion. The project was profitable and a positive experience for the Owner, Architects, Subcontractors, Vendors, and Whiting-Turner. West Palm Beach Marine Industry Project of the Year (2009).

Relevant Pier Work: 20"x.500 Round Steel Pipe 60' length each – combined total of 2,400 feet for the project, docks total combined length 1,278 feet and 10' – 30' wide, docks structure marine aluminum alloy 6061-T6, Floating dock IPE Hardwood grooved decking 1-1/4" x 6", floating docks designed for 93 mph wind "sustained 1 min average", 3.5 feet wave, unoccupied (no vessel loading).

Relevant Pier Utilities: Utilities installed on the floating dock system: 3" HDPE Wet fire line, 1" HDPE Potable water line and hose bibbs, Irrigation system for planter beds, Fiberglass fire dept. hose connection pedestals, Fire extinguishers and cabinets, LED lighted handrail, Pedestrian light poles and bollard lighting, Emergency Float Step Ladder. Relevant Seawall / Bulkhead: ADA compliant 10'width x 76'long aluminum gangway, ADA compliant 18" square concrete piles, pile cap, and concrete decking.

Relevant Building / Facility: Decorative stainless steel cable handrail, decorative IPE wood benches, Tucci Umbrellas, Floating Oyster bed incorporated into the floating dock system, Floating Mangrove beds incorporated into the floating docks.

Relevant Sitework / Utilities: Landside ADA ramp include concrete footings, Landscaping, Water main tap and connection.

Relevant Environmental / Permitting: Army Corp of Engineers, FDEP.

Relevant Sustainability: As noted in GreenSource Magazine, The Magazine of Sustainable Design, the project features "... the historic ecology of the Florida Shoreline and a contemporary view to sustainability... a living dock in which native mangroves, spartina grass, and oysters thrive."

PROJECT 3

Park Hotels & Resorts
Signia by Hilton & Waldorf Astoria Bonnet Creek

Project #3:

Contract Date: 02.04.2019 - 02.06.2024

Contract Amount: $ $91,211,256

Project Name: Signia by Hilton & Waldorf Astoria Bonnet Creek

Project Location: 14100 Bonnet Creek Resort Ln., Orlando, FL 32821

General Scope of Work: See scope on following page.

Client Name and Address: Park Hotels and Resorts
1775 Tysons Blvd., 7th Floor
Tysons Corner, VA 22102

Client Contact Phone: Carl Mayfield, 571-302-5760

Client Contact Email: cmayfield@pkhotelsandresorts.com

Was the project completed on schedule? X Yes ____ No

Total Amount of Change Orders: $ $7,291,129

Reasons for Change Orders:

Change orders were primarily from Owner added scope and design changes for brand standards, unforeseen conditions in the field such as extended pile depths for the Hilton Ballroom, extended time on the project due to the pile issue, schedule acceleration and code interpretation changes due to the authority having jurisdiction.

Please attach photos of the finished project.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Park Hotels & Resorts
Signia by Hilton & Waldorf Astoria Bonnet Creek

General Scope of Work: This project is distinctive because the ballroom is being built over a pond. A pre-mobilization plan was critical for the early work to get the deck level on the second floor finished which eliminated several safety hazards. Sheet piles, pipe piles, concrete pile caps, steel pile caps, steel erection, scaffold installation, fireproofing and exterior skin trade partners had to work over and around the water hazards on both sides of the project. The trades were creative in their approach to the work, including the use of crane mats to create floating walkways to access some of these areas.

The team also used a suspended scaffolding system over the water to install fireproofing, thermal insulation and MEP work under the building. The suspended scaffold deck on the underside of the structure was used to cantilever out and support the vertical scaffold to complete the exterior skin installation, both occurring over water. In addition, the team built two temporary timber bridges at the start of the project for logistics access to the golf course side of the site, two new fireman's walkway bridges for pedestrian egress and firefighter access at completion, a connector bridge connecting the new building to the existing building and a recently added enhancement bridge to access existing areas.

PROJECT 4

Schussler Creative / Creative Attractions, LLC

The Boat House Restaurant

Project #4:

Contract Date: 11.01.2013 - 03.20.2015

Contract Amount: $16,799,190

Project Name: The Boat House Restaurant

Project Location: 1620 E. Buena Vista Drive Lake Buena Vista, FL 32830

General Scope of Work: See scope on following page.

Client Name and Address: Schussler Creative
858 Decatur Ave North
Golden Valley MN 55427

Client Contact Phone: Steve Schussler, 612-751-3600

Client Contact Email: steven@schusslercreative.com

Was the project completed on schedule? X Yes ____ No

Total Amount of Change Orders: $ $100,000

Reasons for Change Orders:
Scope changes were owner additions dealing with final theming and jurisdictional required modifications

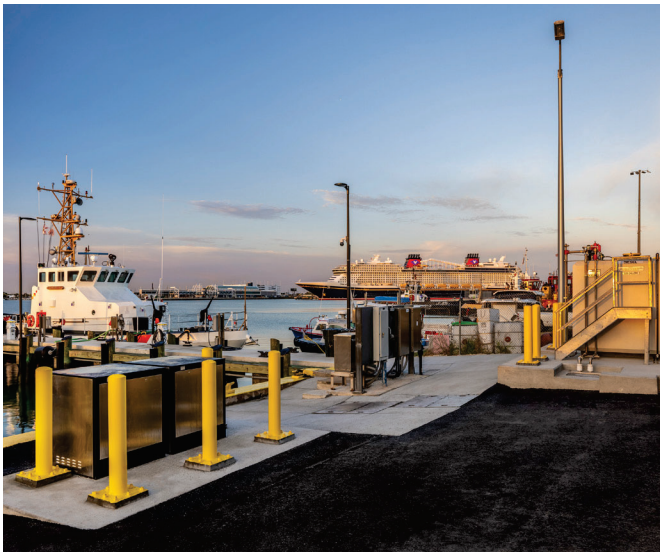
Please attach photos of the finished project.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

END OF ATTACHMENT E

Schussler Creative / Creative Attractions, LLC

The Boat House Restaurant



General Scope of Work: The Boathouse is an 18,000 SF, themed restaurant at Disney Springs that includes a 5,000 SF kitchen and 1,000 SF of retail space. The facility can seat over 400 people in six themed dining rooms, and an additional 200 exterior seats are located on the boardwalk and floating docks.

There are three bars, including a raw bar, a more intimate library bar, and an exterior dock bar overlooking marina. The Boathouse also features a $2 million inventory of dream boats from the 30s, 40s and 50s on display, along with amphicar and Italian water taxi rides.

PROJECT 5

United States Coast Guard
Rebuild Station Port Canaveral & Waterfront

Project #~~5~~4:

Contract Date: 04.15.2021 - 03.13.2024

Contract Amount: $ $26,837,623

Project Name: Rebuild Station Port Canaveral and Waterfront

Project Location: 9235 Grouper Rd. Cape Canaveral, FL 32920

General Scope of Work: See scope on following page.

Client Name and Address: USCG - FDCC Norfolk
5505 Robin Hood Rd. Suite K
Norfolk, VA 2353

Client Contact Phone: LCDR Meghan Lynster, 757-641-4261

Client Contact Email: _____

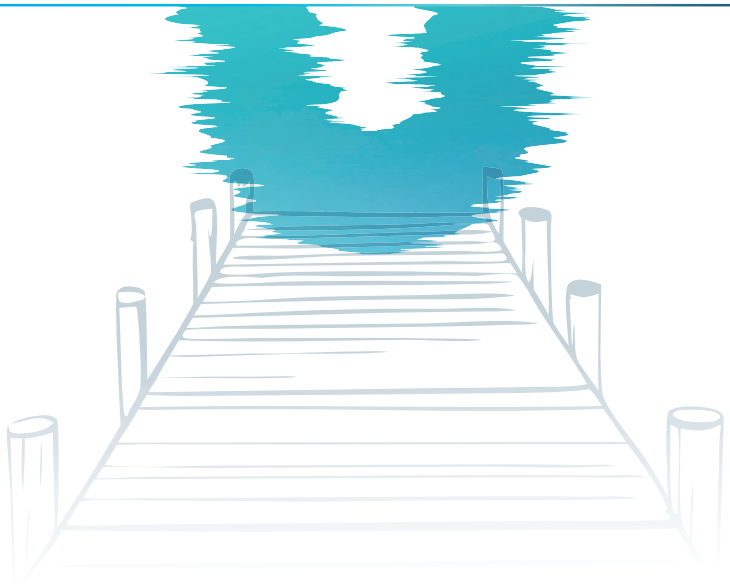
Was the project completed on schedule? X Yes ____ No Per agreed upon owner change order dates.

Total Amount of Change Orders: $ $2,163,814

Reasons for Change Orders: _____
Unforeseen Conditions which resulted in schedule delays. Owner Added Scope of Work

Please attach photos of the finished project.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK



END OF ATTACHMENT E

United States Coast Guard
Rebuild Station Port Canaveral & Waterfront

General Scope of Work: This phased, design-build project rebuilt the U.S. Coast Guard Station Port Canaveral. A focal point of the project is the Mission Building, a 28,000 SF, two-story facility consisting of a command center, administration space, a kitchen, boat maintenance bays and sleeping quarters.

The scope also included a pier, phased site development throughout an active military base, a retail exchange building and the renovation of marine elements. The base was occupied during construction; safety and minimal disruptions were a main focus. The Mission Building is Green Building Initiative certified.

ENGINEERING DEPARTMENT

CMA Contract for the Pier Construction
ADDENDUM NO. 1

1. Add this paragraph before Paragraph 5 in the RFQ:

BID FORM

The work write-up / bid form is a general outline of the work to be performed. The total price of this project shall include:

DATE: 1.15.2025

TOTAL FEE: $ 1,866,244.00

IN WORDS: One Million Eight Hundred Sixty Six Thousand Two Hundred Forty Four Dollars

All work to be performed in a professional manner, in accordance with the Scope of Work as outlined in the Form Contract. The contractor shall be responsible for all of the services required from the date of Notice to Proceed until the Pier Construction project is officially closed out and 100% complete.

I hereby certify that I am licensed by the State of Florida, Department of Business and Professional Regulation.

CONTRACTOR'S SIGNATURE: BAVoyles

CONTRACTOR'S PRINTED NAME: Brent Voyles

CONTRACTOR'S BUSINESS ADDRESS: 10407 Centurion Pkwy N., Ste. 110
Jacksonville, FL 32256

CONTRACTOR'S PHONE NUMBER: brent.voyles@whiting-turner.com

CONTRACTOR'S EMAIL ADDRESS: brent.voyles@whiting-turner.com

Pricing Notes:
1 - Includes General Liability Insurance on our costs only. CMA Addendum needs to be included in the contractors' agreement. If not included, GLI will be charged on the entire project amount. Estimated add of $156,837 on $18,000,000 project. Reference pages 34-35 for Addendum.

2 - Includes full time staff onsite during construction duration of 18-months and reasonable general requirement assumptions. We are open to discussions to help firm up these assumptions and potentially reduce project costs for The City of Flagler Beach.

Receipt is acknowledged of the following addenda:

No. 1 Dated No date given for addendum online or on the form.

No. _____ Dated Whiting-Turner downloaded it on 1.08.25

No. _____ Dated _____

Bidder agrees that the Owner has the right to waive informalities in any bid; reject any or all proposals, in whole or in part; re-bid a project, in whole or in part; and to accept a proposal that in its judgment is the lowest responsive bid.

2. Replace paragraph 5 in the RFQ with the following:

5. RESPONSE, FORMAT, CONTENT, AND EVALUATION CRITERIA

Responses must include the following information in this sequence. Respondents are invited to include innovative methods and/or procedures, which they can provide to assist in ensuring successful completion of the project. Unique qualities and/or capabilities and cost efficiencies may be identified. For each of the specific areas listed below, your responses should include a description of responders' qualification to service as a CMA.

Written Requirements for Responses to Request for Qualifications	Possible Points For Each Section of Proposal
1. Cover Letter (limit to one page)	0 points
2. Complete the Forms as provided on Attachments A through D	5 points
3. COMPANY PROFILE. Describe your firm's history, size, resources, philosophy of service, typical volume of work, financial stability, and basic construction management techniques and methods. Describe how your particular expertise, experience and/or techniques can be an advantage to the District in completing the projects.	15 points
4. PROJECT APPROACH. Describe your approach to Providing CMA Services described in the Form Contract. a. Preconstruction Services, b. Construction Services as CM/A. Discuss how you would provide leadership to facilitate teamwork and communications among all parties involved in the project. c. Proposed Team: Identify personnel to whom construction management responsibilities will be assigned by names, titles, roles, qualifications, and experience.	30 points
5. PAST PERFORMANCE. Per Attachment E, list four (4) recent and relevant projects where your firm provided CMA services, demonstrating your firm's ability to serve as the City's representative for project construction oversight and performing all of the duties listed in the Form Contract. Additional points will be awarded for direct experience constructing concrete and/or wood fishing piers.	35 points
6. COST PROPOSAL. Provide a lump sum price to perform all of the services provided in the RFQ/Form Contract	15 points maximum as calculated: $\frac{Lowest\ Bid}{Bidder's\ Bid} \times 15 = Score$
TOTAL POSSIBLE SCORE	**100 POINTS**

Disclaimer: It is the sole responsibility of bidder to confirm that all addenda have been received prior to submitting bid and acknowledge such in bid documents

SCOPE OF CONSTRUCTION MANAGER'S BASIC SERVICES

§ 3.3 Construction Phase

§ 3.3.1 The Construction Manager shall provide on-site administration of the Contracts for Construction in cooperation with the Architect as set forth below and in AIA Document A232™–2019, General Conditions of the Contract for Construction, Construction Manager as Adviser Edition. If the Owner and Contractor modify AIA Document A232–2019, those modifications shall not affect the Construction Manager's services under this Agreement unless the Owner and the Construction Manager amend this Agreement.

§ 3.3.2 Subject to Section 4.2 and except as provided in Section 3.3.30, the Construction Manager's responsibility to provide Construction Phase Services commences with the award of the initial Contract for Construction and terminates on the date the Architect issues the final Certificate for Payment.

§ 3.3.3 The Construction Manager shall provide a staffing plan to include one or more representatives who shall be in attendance at the Project site whenever the Work is being performed.

§ 3.3.4 The Construction Manager shall provide administrative, management and related services to coordinate scheduled activities and responsibilities of the Contractors with each other and with those of the Construction Manager, the Owner and the Architect. The Construction Manager shall coordinate the activities of the Contractors in accordance with the latest approved Project schedule and the Contract Documents.

§ 3.3.5 The Construction Manager shall review and analyze the construction schedules provided by the Contractors to update the Project schedule, incorporating the activities of the Owner, Architect, and Contractors on the Project, including activity sequences and durations, allocation of labor and materials, processing of Shop Drawings, Product Data and Samples, and delivery and procurement of products, including those that must be ordered in advance of construction. The Project schedule shall include the Owner's occupancy requirements showing portions of the Project having occupancy priority. The Construction Manager shall update and reissue the Project schedule as required to show current conditions. If an update indicates that the previously approved Project schedule may not be met, the Construction Manager shall recommend corrective action to the Owner and Architect.

§ 3.3.6 The Construction Manager shall schedule and conduct meetings to discuss matters such as procedures, progress, coordination, and scheduling of the Work, and to develop solutions to issues identified. The Construction Manager shall prepare and promptly distribute minutes to the Owner, Architect and Contractors.

§ 3.3.7 In accordance with the Contract Documents and the latest approved Project schedule, and utilizing information from the Contractors, the Construction Manager shall review, analyze, schedule and coordinate the overall sequence of construction and assignment of space in areas where the Contractors are performing Work.

§ 3.3.8 The Construction Manager shall coordinate all tests and inspections required by the Contract Documents or governmental authorities, observe the on-site testing and inspections, and arrange for the delivery of test and inspection reports to the Owner and Architect.

§ 3.3.9 The Construction Manager shall endeavor to obtain satisfactory performance from each of the Contractors. The Construction Manager shall recommend courses of action to the Owner when requirements of a Contract are not being fulfilled.

§ 3.3.10 The Construction Manager shall monitor and evaluate actual costs for activities in progress and estimates for uncompleted tasks and advise the Owner and Architect as to variances between actual costs and budgeted or estimated costs. If a Contractor is required to submit a Control Estimate, the Construction Manager shall meet with the Owner and Contractor to review the Control Estimate. The Construction Manager shall promptly notify the Contractor if there are any inconsistencies or inaccuracies in the information presented. The Construction Manager shall also report the Contractor's cost control information to the Owner.

§ 3.3.11 The Construction Manager shall develop cash flow reports and forecasts for the Project and include them in the Construction Manager's progress reports.

§ 3.3.12 The Construction Manager shall maintain accounting records on authorized Work performed under unit costs, additional Work performed on the basis of actual costs of labor and materials, and other Work requiring accounting records.

§ 3.3.12.1 The Construction Manager shall develop and implement procedures for the review and processing of Applications for Payment by Contractors for progress and final payments.

§ 3.3.12.2 Not more frequently than monthly, the Construction Manager shall review and certify the amounts due the respective Contractors as follows:

.1 Where there is only one Contractor responsible for performing the Work, the Construction Manager shall, within seven days after the Construction Manager receives the Contractor's Application for Payment, review the Application, certify the amount the Construction Manager determines is due the Contractor, and forward the Contractor's Application and Certificate for Payment to the Architect.

.2 Where there is more than one Contractor responsible for performing different portions of the Project, the Construction Manager shall, within seven days after the Construction Manager receives each Contractor's Application for Payment: (1) review the Applications and certify the amount the Construction Manager determines is due each Contractor; (2) prepare a Summary of Contractors' Applications for Payment by summarizing information from each Contractor's Application for Payment; (3) prepare a Project Application and Certificate for Payment; (4) certify the total amount the Construction Manager determines is due all Contractors collectively; and (5) forward the Summary of Contractors' Applications for Payment and Project Application and Certificate for Payment to the Architect.

§ 3.3.12.3 The Construction Manager's certification for payment shall constitute a representation to the Owner, based on the Construction Manager's evaluations of the Work and on the data comprising the Contractors' Applications for Payment, that, to the best of the Construction Manager's knowledge, information and belief, the Work has progressed to the point indicated, the quality of the Work is in accordance with the Contract Documents, and the Contractors are entitled to payment in the amount certified. The foregoing representations are subject to (1) an evaluation of the Work for conformance with the Contract Documents upon Substantial Completion; (2) results of subsequent tests and inspections; (3) correction of minor deviations from the Contract Documents prior to completion; and (4) specific qualifications expressed by the Construction Manager. The issuance of a Certificate for Payment shall further constitute a recommendation to the Architect and Owner that the Contractor be paid the amount certified.

§ 3.3.12.4 The certification of an Application for Payment or a Project Application for Payment by the Construction Manager shall not be a representation that the Construction Manager has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work; (2) reviewed construction means, methods, techniques, procedures, or sequences for a Contractor's own Work; (3) reviewed copies of requisitions received from Subcontractors and suppliers and other data requested by the Owner to substantiate each Contractor's right to payment; or (4) ascertained how or for what purpose that Contractor has used money previously paid on account of the Contract Sum.

§ 3.3.13 The Construction Manager shall obtain and review the safety programs developed by each Contractor solely and exclusively for purposes of coordinating the safety programs with those of the other Contractors and for making recommendations for any additional safety measures to be considered in the Work of the Contractors. The Construction Manager's responsibilities for coordination of safety programs shall not extend to direct control over or charge of the acts or omissions of the Contractors, Subcontractors, agents or employees of the Contractors or Subcontractors, or any other persons performing portions of the Work and not directly employed by the Construction Manager.

§ 3.3.14 The Construction Manager shall determine in general that the Work of each Contractor is being performed in accordance with the requirements of the Contract Documents and notify the Owner, Contractor and Architect of defects and deficiencies in the Work. The Construction Manager shall have the authority to reject Work that does not conform to the Contract Documents and shall notify the Architect about the rejection. The failure of the Construction Manager to reject Work shall not constitute acceptance of the Work. The Construction Manager shall record any rejection of Work in its daily log and include information regarding the rejected Work in its progress reports to the Architect and Owner pursuant to Section 3.3.22.1. Upon written authorization from the Owner, the Construction Manager may require and make arrangements for additional inspection or testing of the Work in accordance with the provisions of the Contract Documents, whether or not the Work is fabricated, installed or completed, and the Construction Manager shall give timely notice to the Architect of when and where the tests and inspections are to be made so that the Architect may be present for such procedures.

§ 3.3.15 The Construction Manager shall advise and consult with the Owner and Architect during the performance of its Construction Phase Services. The Construction Manager shall have authority to act on behalf of the Owner only to the extent provided in this Agreement. The Construction Manager shall not have control over, charge of, or responsibility for the construction means, methods, techniques, sequences or procedures, or for safety precautions and programs in connection with the Work of each of the Contractors, since these are solely the Contractor's rights and responsibilities under the Contract Documents. The Construction Manager shall not be responsible for a Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. The Construction Manager shall be responsible for the Construction Manager's negligent acts or omissions, but shall not have control over or charge of, and shall not be responsible for, acts or omissions of the Contractors, Subcontractors, or their agents or employees, or any other persons or entities performing portions of the Work.

§ 3.3.16 The Construction Manager shall transmit to the Architect requests for interpretations, and requests for information of the meaning and intent of the Drawings and Specifications, and provide its written recommendation. The Construction Manager shall assist in the resolution of questions that may arise.

§ 3.3.17 The Construction Manager shall review requests for changes, assist in negotiating Contractors' proposals, submit recommendations to the Architect and Owner, and, if the proposed changes are accepted or required by the Owner, prepare Change Orders or Construction Change Directives that incorporate the Architect's modifications to the Contract Documents.

§ 3.3.18 The Construction Manager shall assist the Initial Decision Maker in the review, evaluation and documentation of Claims, subject to Section 4.2.2.7.

§ 3.3.19 Utilizing the submittal schedules provided by each Contractor, the Construction Manager shall prepare, and revise as necessary, a Project submittal schedule incorporating information from the Owner, Owner's consultants, Owner's Separate Contractors and vendors, governmental agencies, and participants in the Project under the management of the Construction Manager. The Project submittal schedule and any revisions shall be submitted to the Architect for approval.

§ 3.3.20 The Construction Manager shall promptly review all Shop Drawings, Product Data, Samples, and other submittals from the Contractors for compliance with the submittal requirements of the Contract, coordinate submittals with information contained in related documents, and transmit to the Architect those that the Construction Manager recommends for approval. The Construction Manager's actions shall be taken in accordance with the Project submittal schedule approved by the Architect, or in the absence of an approved Project submittal schedule, with such reasonable promptness as to cause no delay in the Work or in the activities of the Contractors, the Owner, or the Architect.

§ 3.3.20.1 If professional design services or certifications by a design professional related to systems, materials, or equipment are specifically required of the Contractors by the Contract Documents, the Construction Manager shall review those submittals for sequencing, constructability, and coordination

impacts on the other Contractors. The Construction Manager shall discuss its findings with the Owner and the Architect, and coordinate resolution, as necessary, of any such impacts.

§ 3.3.21 The Construction Manager shall keep a daily log containing a record of weather, each Contractor's Work on the site, number of workers, identification of equipment, Work accomplished, problems encountered, and other similar relevant data as the Owner may require.

§ 3.3.21.1 The Construction Manager shall collect, review for accuracy, and compile the Contractors' daily logs; and include them in the Construction Manager's reports prepared and submitted in accordance with section 3.3.21.2.

§ 3.3.21.2 The Construction Manager shall record the progress of the Project. On a monthly basis, or otherwise as agreed to by the Owner, the Construction Manager shall submit written progress reports to the Owner and Architect, showing percentages of completion and other information identified below:

.1 Work completed for the period;
.2 Project schedule status;
.3 Submittal schedule and status report, including a summary of remaining and outstanding submittals;
.4 Request for information, Change Order, and Construction Change Directive status reports;
.5 Tests and inspection reports;
.6 Status report of nonconforming and rejected Work;
.7 Daily logs;
.8 Summary of all Contractors' Applications for Payment;
.9 Cumulative total of the Cost of the Work to date including the Construction Manager's compensation and reimbursable expenses at the job site, if any;
.10 Cash-flow and forecast reports;
.11 Photographs to document the progress of the Project;
.12 Status reports on permits and approvals of authorities having jurisdiction; and
.13 Any other items the Owner may require.

§ 3.3.21.3 In addition, for Projects constructed on the basis of the Cost of the Work, the Construction Manager shall include the following additional information in its progress reports:

.1 Contractors' work force reports;
.2 Equipment utilization report;
.3 Cost summary, comparing actual costs to updated cost estimates; and
.4 Any other items as the Owner may require.

§ 3.3.22 Utilizing the documents provided by the Contractors, the Construction Manager shall make available, at the Project site, the Contract Documents, including Change Orders, Construction Change Directives, and other Modifications, in good order and marked currently to indicate field changes and selections made during construction, and the approved Shop Drawings, Product Data, Samples, and similar required submittals. These shall be in electronic form or paper copy, available to the Owner, Architect, and Contractors. Upon completion of the Project, the Construction Manager shall deliver them to the Owner.

§ 3.3.23 The Construction Manager shall arrange for the delivery, storage, protection and security of Owner-purchased materials, systems and equipment that are a part of the Project until such items are incorporated into the Work.

§ 3.3.24 With the Owner's maintenance personnel, the Construction Manager shall observe the Contractors' final testing and start-up of utilities, operational systems and equipment and observe any commissioning as the Contract Documents may require.

§ 3.3.25 When the Construction Manager considers each Contractor's Work or a designated portion thereof substantially complete, the Construction Manager shall, jointly with that Contractor, prepare for the Architect a list of incomplete or unsatisfactory items and a schedule for their completion. The Construction Manager shall assist the Architect in conducting inspections to determine whether the Work or designated portion thereof is substantially complete.

§ 3.3.26 When the Work of all of the Contractors, or designated portion thereof, is substantially complete, the Construction Manager shall prepare, and the Construction Manager and Architect shall execute, a Certificate of Substantial Completion. The Construction Manager shall submit the executed Certificate to the Owner and Contractors. The Construction Manager shall coordinate the correction and completion of the Work. Following issuance of a Certificate of Substantial Completion of the Work or a designated portion thereof, the Construction Manager shall perform an inspection to confirm the completion of the Work of the Contractors and make recommendations to the Architect when the Work of all of the Contractors is ready for final inspection. The Construction Manager shall assist the Architect in conducting the final inspection.

§ 3.3.27 The Construction Manager shall forward to the Owner, with a copy to the Architect, the following information received from the Contractors: (1) certificates of insurance ; (2) consent of surety or sureties, if any, to reduction in or partial release of retainage or the making of final payment; (3) affidavits, receipts, releases and waivers of liens or bonds indemnifying the Owner against liens; and (4) any other documentation required of the Contractors under the Contract Documents, including warranties and similar submittals.

§ 3.3.28 The Construction Manager shall coordinate receipt, and delivery to the Owner, of other items provided by the Contractors, such as keys, manuals, and record drawings. The Construction Manager shall forward to the Architect a final Project Application for Payment and Project Certificate for Payment, or a final Application for Payment and final Certificate for Payment, upon the Contractors' compliance with the requirements of the Contract Documents.

§ 3.3.29 Duties, responsibilities and limitations of authority of the Construction Manager as set forth in the Contract Documents shall not be restricted, modified or extended without written consent of the Owner, Construction Manager, Architect, and Contractors. Consent shall not be unreasonably withheld.

§ 3.3.30 Upon request of the Owner, and prior to the expiration of one year from the date of Substantial Completion, the Construction Manager shall, without additional compensation, conduct a meeting with the Owner and Architect to review the facility operations and performance.

STAFF REPORT

City Commission Regular Meeting

February 13, 2025

To: Elected Officials

From: Dale L. Martin, City Manager

Date: February 7, 2025

Item Name: Resolution 2025-11. A Resolution by the City Commission of the City of Flagler Beach, to award a contract to Lads Construction Services, LLC for an amount not to exceed $34,440.00 to repair damages incurred to the Flagler Beach Public Library during Hurricane Milton; providing for conflict and an effective date

Background: Hurricane Milton reached the east coast of Florida on Wednesday, October 9, 2024. The Flagler Beach Library sustained damages due to wind and rain penetration. These damages included wet drywall and baseboard, rain penetration around the entry doors, laminated flooring warping due to standing water, and fascia damages to the east side of the building.

This project, if approved, will repair all of the aforementioned hurricane-related damage. The Request for Proposals (RFP) for the project was published on January 6, 2025, in accordance with the City's Procurement Policy. The City received two bids which were publicly opened on January 20, 2025. The bidder with the higher bid was disqualified because they did not attend the mandatory pre-bid meeting. The bid by the lowest responsive bidder was Lads Construction Services, LLC.

The City requested a bid additive for additional preventative measures to avoid any future roof damage and leakage through the skylights – remove the skylights, repair the roof deck, and replace both roofing systems. Staff is seeking Federal Emergency Management Agency (FEMA) assistance for additional funding for this mitigation effort. If FEMA approves the scope of work, the City Commission will be presented with a Change Order for consideration.

Fiscal Impact: Funding for this project will be drawn from the City's Unrestricted Reserves and then reimbursed (75% Federal, 12.5% State).

Staff Recommendation: Staff recommends approval of Resolution 2025-09.

Attachment:

Resolution 2025-11

RESOLUTION 2025-11

A RESOLUTION BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, TO AWARD A CONTRACT TO LADS CONSTRUCTION SERVICES, LLC FOR THE FEE OF $34,440.00 TO REPAIR DAMAGES INCURRED TO THE FLAGLER BEACH PUBLIC LIBRARY DURING HURRICANE MILTON; PROVIDING FOR CONFLICT AND AN EFFECTIVE DATE.

WHEREAS, the City owns and operates the Flagler Beach Public Library; and,

WHEREAS, the Library incurred wind and water intrusion damages as a result of Major Hurricane Milton as it reached the east coast of Florida on Wednesday, October 9, 2024; and,

WHEREAS, City staff developed construction documents and a bid package to repair the damages; and,

WHEREAS, the project was publicly bid and the City received two bids, of which only one was fully responsive; and,

WHEREAS the project is eligible for reimbursement funding (Federal and State) due to Hurricane Milton;

NOW THEREFORE BE IT RESOLVED BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, AS FOLLOWS:

SECTION 1. The City of Flagler Beach City Commission approves the base bid submitted by Lad Construction Services, LLC in an amount not to exceed $34,440 for construction services related to the library damages.

SECTION 2. The City Commission authorizes City Staff to issue a Notice to Proceed.

SECTION 3. All resolutions or parts of resolutions in conflict herewith be and the same are hereby repealed.

SECTION 4. This Resolution shall become effective immediately upon passage as provided by law.

Hurricane Milton Repairs to the FB Public Library

Summary of Work

The building sustained extensive water damages due to Hurricane Milton. The Project consists of miscellaneous interior and exterior repairs to the City of Flagler Beach Public Library building located at 315 South 7th Street in Flagler Beach, Florida. These include:

A. PRE-CONSTRUCTION WORK:

1. Contractor shall field verify all conditions and dimensions prior to performing demolition. Contractor is required to do demolition of all items required to accomplish the new work, whether or not shown or noted;
2. The Contractor shall be responsible for the removal and proper disposal of all materials as called for in the contract documents. The placement and access to waste receptacles for demolition/construction debris shall be coordinated with the Owner. Contractor to coordinate the demolition of all utilities with Owner prior to commencing demolition. Contractor is responsible for providing the name, address, and GPS coordinates of final disposal site of all debris in accordance with FEMA requirements;
3. The Owner has the first right of refusal on all salvaged equipment;
4. The Contractor shall notify and await approval from the owner before interruption of any utilities;
5. Facilities or portions of facilities shall not be occupied during construction, unless exits, fire detection, early warning systems and any safety barriers are continuously maintained and clearly marked at all times.
6. Prior to the issuance of the notice to proceed, a safety plan shall be provided by the Contractor which clearly delineates area(s) for construction, safety barriers, construction traffic during all phases, and conditions of construction.

B. INTERIOR WORK – INCLUDED IN BASE BID:

1. Replace all drywall on surfaces where previously removed – match thickness of existing;
2. Tape and mud all drywall joints and sand to a smooth finish – match texture of existing;
3. Replace all baseboard with new wood to match existing in species and profile;

EXHIBIT A

4. Remove automatic door operator, push button, and all associated conduit/wiring – to be reinstalled after entry wall construction;
5. Remove exit sign and conduit – to be reinstalled after entry wall construction;
6. Remove doors and reinstall after new framing is constructed;
7. Remove framed wall from slab to underside of roof (approximately 10'-0" high) and from masonry wall to masonry wall (approximately 10'-8" wide);
8. Reconstruct removed framed wall as shown on Details 2 and 4 on Sheet A-2. Add R-19 batt insulation;
9. Remove existing laminate flooring at the entry doors and install new, owner-supplied ceramic tile (approximately 50 SF);
10. Paint all new surfaces to match existing;
11. Caulk all interior surfaces around windows and main entry doors.

C. EXTERIOR WORK – INCLUDED IN BASE BID:

1. On east wall only, completely remove the aluminum fascia covering and drip edge and the pressure-treated 2" x 6" wood fascia board along gable rake.
2. Rebuild the fascia as shown on Detail 5, Sheet A-2.
3. Remove push button for door opener and all conduit/wiring – to be reinstalled after entry wall construction;
4. Remove or secure existing camera located at northeast underside of canopy so as to be safeguarded from demolition/new construction while still remaining operational at all times – reinstall after exterior work is completed in the entrance area;
5. Remove existing outdoor carpeting, including metal edge-strips, located directly outside the double entry doors as shown on Detail 1, Sheet A-2. Remove any adhesive residue, thoroughly clean substrate concrete;
6. Caulk exterior surfaces around all windows and double entry doors;
7. Remove excess built-up soil above the slab level along the east and north walls. Regrade and provide new sod per Detail 6, Sheet A-2.

D. EXTERIOR WORK – ADD ALTERNATE – 1:

1. Remove completely the existing modified bitumen roof on entire building.

EXHIBIT A

2. Remove all skylights on flat roof. Install new decking and insulation to match existing. These openings, once properly installed and inspected, will be covered by new roof.
3. Remove all skylights on elevated structure at the west end of the Library. Close with new deck material and insulation to match surrounding area. These openings, once properly installed and inspected, will be covered by new roof.

SWORN STATEMENT UNDER SECTION 287.133(3) (a), FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

This sworn statement is submitted to: **The City of Flagler Beach** (Public entity)

By: _____
(Individual's name and title)

For: _____
(Name of entity submitting sworn statement)

Whose business address is: _____

_____

Federal Employer Identification Number (FEIN): _____

(If the entity has no FEIN, include the Social Security Number of the individual signing this sworn statement)

1. I understand that a "public entity crime" as defined in Section 287.133(1)(g), Florida Statutes, means a violation of any State or Federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or of the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy, or material misrepresentation.
2. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1) (b), Florida Statutes, means a finding of guilt or a conviction of a public entity crimes, with or without an adjudication of guilt, in any Federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, non-jury trial, or entry of a plea of guilty or nolo contendere.

3. I understand that an "affiliate" as defined in Section 287.133(1)(a), Florida Statutes, means: A predecessor or successor of a person convicted of a public entity crime: or an entity under the control of any natural person who is active in the management of the entity and how has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in the management of an affiliate. The ownership by one (1) person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.
4. I understand that a "person" as defined in Section 287.133(1) (e), Florida Statutes, means any natural person or entity organized under the laws of any state or of the United States with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

_____Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members, or agent who is active in management of the entity, nor the affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

_____The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agent who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

_____The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agents who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

However, there has been a subsequent proceeding before an Administrative Law Jury of the State of Florida, Division of Administrative Hearings and the Final Order entered by the Administrative Law Jury

determined that it was not in the public interest to place the entity submitting this sworn statement on the convicted vendor list. (Attach a copy of the final order.)

I UNDERSTAND THAT THE SUBMISSION OF THIS FORM TO THE CITY OF FLAGLER IS FOR THE CITY ONLY AND, THAT THIS FORM IS VALID THROUGH DECEMBER 31, OF THE CALENDAR YEAR IN WHICH IT IS FILED. I ALSO UNDERSTAND THAT I AM REQUIRED TO INFORM THE CITY PRIOR TO ENTERING IN TO A CONTRACT IN EXCESS OF THE THRESHOLD AMOUNT PROVIDED IN SECTION 287.017, FLORIDA STATUES, FOR CATEGORY TWO OF ANY CHANGE IN THE INFORMATION CONTAINED IN THIS FORM.

SECTION 00 11 53
REQUEST FOR QUALIFICATION FORMS

The undersigned bidder or agent, being duly sworn on oath, says that he/she has not, nor has any other member, representative, or agent of the firm, company, corporation or partnership represented by him, entered into any combination, collusion or agreement with any person relative to the price to be bid by anyone at such letting nor to prevent any person from bidding nor to include anyone to refrain from bidding, and that this bid is made without reference to any other bid and without any agreement, understanding or combination with any other person in reference to such bidding. He/She further says that no person or persons, firms, or corporation has, have or will receive directly or indirectly, any rebate, fee gift, commission or thing of value on account of such sale.

OATH AND AFFIRMATION

I HEREBY AFFIRM UNDER THE PENALTIES FOR PERJURY THAT THE FACTS AND INFORMATION CONTAINED IN THE FOREGOING BID FOR PUBLIC WORKS ARE TRUE AND CORRECT.

ATTACHMENT H
CERTIFICATION OF NON-SEGREGATED FACILITIES

SECTION 00 11 53
REQUEST FOR QUALIFICATION FORMS

The Bidder certifies that they do not maintain or provide for their employees any segregated facilities at any of his establishments, and that they do not permit their employees to perform their services at any location, under their control, where segregated facilities are maintained. The Bidder certifies further that they will not maintain or provide for their employees any segregated facilities at any location under their control where segregated facilities are maintained. The Bidder agrees that a breach of this certification will be a violation of the Equal Opportunity clause in any contract resulting from acceptance of this Bid. As used in this certification, the term "segregated facilities" means any waiting rooms, work areas, restrooms and washrooms, restaurants and other eating areas, time clocks, locker rooms and other storage and dressing areas, parking lots, drinking fountains, recreation or entertainment area, transportation and housing facilities provided for employees which are segregated by explicit directive, or are in fact segregated on the basis of race, color, religious disability or national origin, because of habit, local custom, or otherwise. The Bidder agrees that (except where they have obtained identical certifications from proposed subcontractors for specific time periods) they will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding $10,000 which are not exempt from the provisions of the Equal Opportunity clause, and that he will retain such certifications in his files.

The nondiscriminatory guidelines as promulgated in Section 202, Executive Order 11246, and as amended by Executive Order 11375 and as amended, relative to Equal Opportunity for all persons and implementations of rules and regulations prescribed by the United States Secretary of Labor are incorporated herein.

ATTACHMENT I DRUG-FREE WORK PLACE

SECTION 00 11 53

REQUEST FOR QUALIFICATION FORMS

The undersigned vendor in accordance with Florida Statute 287.087 hereby certifies that

_____does hereby: (Name of Business)

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are proposed a copy of the statement specified in subsection (1).

4. In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under proposal, the employee will propose by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contender to, any violation of Chapter 893, Florida Statutes, or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of the matters set forth above.

As the person authorized to sign the statement, I certify that this firm complies fully with the above requirements.

ATTACHMENT J CONFLICT OF INTEREST STATEMENT

SECTION 00 11 53

REQUEST FOR QUALIFICATION FORMS

Before me, the undersigned authority, personally appeared _____, who was duly sworn, deposes, and states:

1. I am the _____of _____with a local office in _____and principal office in _____ .
2. The above-named entity is submitting an Expression of Interest for the City of Flagler Beach project described as bid number _____.
3. The Affiant has made diligent inquiry and provides the information contained in this Affidavit based upon his own knowledge.
4. The Affiant states that only one submittal for the above project is being submitted and that the above-named entity has no financial interest in other entities submitting proposals for the same project.
5. Neither the Affiant nor the above-named entity has directly or indirectly entered into any agreement, participated in any collusion, or otherwise taken any action in restraint of free competitive pricing in connection with the entity's submittal for the above project. This statement restricts the discussion of pricing data until the completion of negotiations and execution of the Agreement for this project.
6. Neither the entity nor its affiliates, nor any one associated with them, is presently suspended or otherwise ineligible from participating in contract lettings by any local, state, or federal agency.
7. Neither the entity, nor its affiliates, nor any one associated with them have any potential conflict of interest due to any other clients, contracts, or property interests for this project.
8. I certify that no member of the entity's ownership, management, or staff has a vested interest in any aspect of or Department of the City of Flagler Beach.
9. I certify that no member of the entity's ownership or management is presently applying for an employee position or actively seeking an elected position with City of Flagler Beach.
10. In the event that a conflict of interest is identified in the provision of services, I, on behalf of the above-named entity, will immediately notify the City of Flagler Beach in writing.

COMPLIANCE WITH THE PUBLIC RECORDS LAW

SECTION 00 11 53
REQUEST FOR QUALIFICATION FORMS

Upon award recommendation or thirty (30) days after receiving submittals, they become "public records" and shall be subject to public disclosure consistent with Chapter 119, Florida Statutes. Proposers must invoke the exemptions to disclosure provided by law in the response to the solicitation, and must identify the data or other materials to be protected, and must state the reasons why such exclusion from public disclosure is necessary.

If the company submits information exempt from public disclosure, the company must identify with specificity which pages/paragraphs of their bid/proposal package are exempt from the Public Records Act, identifying the specific exemption section that applies to each. The protected information must be submitted to the City of Flagler Beach in a separate envelope marked accordingly.

AMERICANS WITH DISABILITIES ACT AFFIDAVIT
SECTION 00 11 53
REQUEST FOR QUALIFICATION FORMS

The undersigned CONTRACTOR swears that the information herein contained is true and correct and that none of the information supplied was for the purpose of defrauding the CITY.

The CONTRACTOR will not discriminate against any employee or applicant for employment because of physical or mental handicap in regard to any position for which the employee or applicant for employment is qualified. The CONTRACTOR agrees to comply with the rules, regulations and relevant orders issued pursuant to the Americans with Disabilities Act (ADA), 42 USC s. 12101 et seq. It is understood that in no event shall the CITY be held liable for the actions or omissions of the CONTRACTOR or any other party or parties to the Agreement for failure to comply with the ADA. The CONTRACTOR agrees to hold harmless and indemnify the CITY, its agents, officers or employees from any and all claims, demands, debts, liabilities or causes of action of every kind or character, whether in law or equity, resulting from the CONTRACTOR's acts or omissions in connection with the ADA.

ADDITIONAL PROCUREMENT CLAUSES FOR FEMA-RELATED PROJECTS

REQUEST FOR QUALIFICATION FORMS

TERMINATION FOR CAUSE AND CONVENIENCE

1. Contractor shall be considered in material default of the Agreement and such default shall be considered cause for the City to terminate the Agreement, in whole or in part, as further set forth in this Section 17, if Contractor: (i) fails to begin the Work under the Contract Documents within the time specified herein; (ii) fails to properly and timely perform the Work as directed by the City or as provided for in the approved Progress Schedule; (iii) performs the Work unsuitably or neglects or refuses to remove materials or to correct or replace such Work as may be rejected as unacceptable or unsuitable; (iv) discontinues the prosecution of the Work; (v) fails to resume Work which has been suspended within a reasonable time after being notified to resume Work; (vi) becomes insolvent or is declared bankrupt, or commits any act of bankruptcy; (vii) allows any final judgment to stand against it unsatisfied for more than ten (10) days; (viii) makes an assignment for the benefit of creditors; (ix) fails to obey any applicable codes, laws, ordinances, rules or regulations with respect to the Work; and/or (x) materially breaches any other provision of the Contract Documents.

2. City shall notify Contractor in writing of Contractor's default(s). If the City determines that Contractor has not remedied and cured the default(s) within seven (7) calendar days following receipt by Contractor of said written notice, then the City, at its option, without releasing or waiving its rights and remedies against the Contractor's sureties and without prejudice to any other right or remedy it may be entitled to hereunder or by law, may terminate all or any portion of the Work and any materials, tools, equipment, and appliances of Contractor, take assignments of any of Contractor's subcontracts and purchase orders, and complete all or any portion of Contractor's Work by whatever means, method or agency which the City, in its sole discretion, may choose.

3. If the City deems any of the foregoing remedies necessary, Contractor agrees that it shall not be entitled to receive any further payments hereunder until after the Project is completed. All monies expended and all of the costs, losses, damages, and extra expenses, including all management, administrative and other overhead and other direct and indirect expenses (including attorneys' fees) or damages incurred by the City incident to such completion, shall be deducted from the Contract Amount, and if such expenditures exceed the unpaid balance of the Contract Amount, Contractor agrees to pay promptly to City, on demand, the full amount of such excess, including costs of collection, attorneys' fee (including appeals) and interest thereon at the maximum legal rate of interest until paid. If the unpaid balance of the Contract Amount exceeds all such costs, expenditures and damages incurred by the City to complete the Work, such excess shall be paid to the Contractor. The amount to be paid to the Contractor or the City, as the case may be, and this obligation for payment shall survive termination of the Agreement.

4. The liability of Contractor hereunder shall extend to and include the full amount of any and all sums paid, expenses and losses incurred, damages sustained, and obligations assumed by the City in good faith under the belief that such payments or assumptions were necessary or required, in completing the Work and providing labor, materials, equipment, supplies, and other items therefore or re-letting the Work, in settlement, discharge or compromise of any claims, demands, suits and judgments pertaining to or arising out of the Work hereunder.

5. If, after notice of termination of Contractor's right to proceed pursuant to this Section 17, it is determined for any reason that Contractor was not in default, or that its default was excusable, or that the City is not entitled to the remedies against Contractor provided herein, then Contractor's remedies against the City shall be the same as and

limited to those afforded Contractor below under Subsection 18.1, below, regarding termination of the Agreement for convenience.

BUILD AMERICA BUY AMERICA ACT (BABAA)

The Office of Management and Budget (OMB) has revised its guidance in Title 2 of the Code of Federal Regulations (2 CFR) to add a new part 184 and revise 2 CFR § 200.322. The new part 184 provides guidance to federal agencies on how to apply the domestic content procurement preference as set forth in the Build America, Buy America Act (BABAA) to federal financial assistance for infrastructure projects.

The revised provision in 2 CFR § 200.322 specifies that federal agencies providing federal financial assistance for infrastructure projects must implement the BABAA requirements set forth in 2 CFR part 184. This link's URL is https://www.ecfr.gov/current/title-2/subtitle-A/chapter-I/part-184.

DEBARMENT AND SUSPENSION

1. The City shall have the right to terminate the Agreement without cause upon seven (7) calendar days written notice to Contractor. In the event of such termination for convenience, Contractor's recovery against City shall be limited to (i) that portion of the Contract Amount earned through the date of termination; (ii) any retainage withheld up to the date of termination, and (iii) actual out-of-pocket costs arising directly and solely from termination of this Agreement not to exceed under any circumstance five percent (5%) of that portion of the Contract Amount earned through the date of termination. Contractor shall not be entitled to any other or further recovery against the City, including, but not limited to, damages or any anticipated profit on portions of the Work not performed.

2. The City shall have the right to suspend all or any portions of the Work upon giving Contractor two (2) calendar days' prior written notice of such suspension. If all or any portion of the Work is so suspended, Contractor's sole and exclusive remedy shall be to seek an extension of time to its schedule in accordance with the procedures set forth in the Contract Documents. In no event shall the Contractor be entitled to any additional compensation or damages. Provided, however, if the ordered suspension exceeds three (3) months, the Contractor shall have the right to terminate the Agreement with respect to that portion of the Work which is subject to the ordered suspension.

BYRD ANTI-LOBBYING AMENDMENT

Contractors who apply or bid for an award of more than $100,000 shall file the required certification. Each tier certifies to the tier above that it will not and has not used federally appropriated funds to pay any person or organization for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, officer or employee of Congress, or an employee of a Member of Congress in connection with obtaining any federal contract, grant, or any other award covered by 31 U.S.C. § 1352. Each tier shall also disclose any lobbying with non-federal funds that takes place in connection with obtaining any federal award. Such disclosures are forwarded from tier to tier up to the recipient who in turn will forward the certification(s) to the federal awarding agency."

DAVIS-BACON ACT

As amended (40 U.S.C. 3141-3148). When required by Federal program legislation, all prime construction contracts in excess of $2,000 awarded by non-Federal entities must include a provision for compliance with the Davis-Bacon Act (40 U.S.C. 3141-3144, and 3146-3148) as supplemented by Department of Labor regulations (29 CFR Part 5, "Labor Standards Provisions Applicable to Contracts Covering Federally Financed and Assisted Construction"). In accordance with the statute, contractors must be required to pay wages to laborers and mechanics at a rate not less than the prevailing wages specified in a wage determination made by the Secretary of Labor. In addition, contractors must be required to pay wages not less than once a week. The non-Federal entity must place a copy of the current prevailing wage determination issued by the Department of Labor in each solicitation. The decision to award a contract or subcontract must be conditioned upon the acceptance of the wage determination. The non-Federal entity must report all suspected or reported violations to the Federal awarding agency. The contracts must also include a provision for compliance with the Copeland "Anti-Kickback" Act (40 U.S.C. 3145), as supplemented by Department of Labor regulations (29 CFR Part 3, "Contractors and Subcontractors on Public Building or Public Work Financed in Whole or in Part by Loans or Grants from the United States"). The Act provides that each contractor or sub recipient must be prohibited from inducing, by any means, any person employed in the construction, completion, or repair of public work, to give up any part of the compensation to which he or she is otherwise entitled. The non-Federal entity must report all suspected or reported violations to the Federal awarding agency.

CERTIFICATION

The undersigned certifies, to the best of his or her knowledge and belief, that:
No federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any federal contract, the making of any federal grant, the making of any federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any federal contract, grant, loan, or cooperative agreement.

If any funds other than federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.

The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, Title 31, U.S.C. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure."

"The Contractor, CPH, LLC, certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. Chap. 38, Administrative Remedies for False Claims and Statements, apply to this certification and disclosure, if any.

Prohibition on Contracting for Covered Telecommunications Equipment or Services

(a) *Definitions.* As used in this clause, the terms backhaul; covered foreign country; covered telecommunications equipment or services; interconnection arrangements; roaming; substantial or essential component; and telecommunications equipment or services have the meaning as defined in FEMA Policy 405-143-1, Prohibitions on Expending FEMA Award Funds for Covered Telecommunications Equipment or Services (Interim), as used in this clause—

(b) *Prohibitions.*

(1) Section 889(b) of the John S. McCain National Defense Authorization Act for Fiscal Year 2019, Pub. L. No. 115-232, and 2 C.F.R. § 200.216 prohibit the head of an executive agency on or after Aug.13, 2020, from obligating or expending grant, cooperative agreement, loan, or loan guarantee funds on certain telecommunications products or from certain entities for national security reasons.

(2) Unless an exception in paragraph (c) of this clause applies, the contractor and its subcontractors may not use grant, cooperative agreement, loan, or loan guarantee funds from the Federal Emergency Management Agency to:

(i) Procure or obtain any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology of any system;

(ii) Enter into, extend, or renew a contract to procure or obtain any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology of any system;

(iii) Enter into, extend, or renew contracts with entities that use covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system; or

(iv) Provide, as part of its performance of this contract, subcontract, or other contractual instrument, any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system.

(c) *Exceptions.*

(1) This clause does not prohibit contractors from providing—

(i) A service that connects to the facilities of a third-party, such as backhaul, roaming, or interconnection arrangements; or

(ii) Telecommunications equipment that cannot route or redirect user data traffic or permit visibility into any user data or packets that such equipment transmits or otherwise handles.

(2) By necessary implication and regulation, the prohibitions also do not apply to:
(i) Covered telecommunications equipment or services that: i. Are *not used* as a substantial or essential component of any system; *and*

(ii). Are *not used* as critical technology of any system.

(Iii) Other telecommunications equipment or services that are not considered covered telecommunications equipment or services.

(d) *Reporting requirement.*

(1) In the event the contractor identifies covered telecommunications equipment or services used as a substantial or essential component of any system, or as critical technology as part of any system, during contract performance, or the contractor is notified of such by a subcontractor at any tier or by any other source, the contractor shall report the information in paragraph (d)(2) of this clause to the recipient or subrecipient, unless elsewhere in this contract are established procedures for reporting the information.

(2) The Contractor shall report the following information pursuant to paragraph (d)(1) of this clause: (i) Within one business day from the date of such identification or notification: The contract number; the order number(s), if applicable; supplier name; supplier unique entity identifier (if known); supplier Commercial and Government Entity (CAGE) code (if known); brand; model number (original equipment manufacturer number, manufacturer part number, or wholesaler number); item description; and any readily available information about mitigation actions undertaken or recommended.

(ii) Within 10 business days of submitting the information in paragraph (d)(2)(i) of this clause: Any further available information about mitigation actions undertaken or recommended. In addition, the contractor shall describe the efforts it undertook to prevent use or submission of covered telecommunications equipment or services, and any additional efforts that will be incorporated to prevent future use or submission of covered telecommunications equipment or services.

(e) *Subcontracts.*
The Contractor shall insert the substance of this clause, including this paragraph (e), in all subcontracts and other contractual instruments."

Domestic Preferences for Procurements

As appropriate, and to the extent consistent with law, the contractor should, to the greatest extent practicable, provide a preference for the purchase, acquisition, or use of goods, products, or materials produced in the United States. This includes, but is not limited to iron, aluminum, steel, cement, and other manufactured products.

For purposes of this clause:
Produced in the United States means, for iron and steel products, that all manufacturing processes, from the initial melting stage through the application of coatings, occurred in the United States.

Manufactured products mean items and construction materials composed in whole or in part of non-ferrous metals such as aluminum; plastics and polymer-based products such as polyvinyl chloride pipe; aggregates such as concrete; glass, including optical fiber; and lumber."
Copyright and Data Rights

The Contractor grants to the City of Flagler Beach, a paid-up, royalty-free, nonexclusive, irrevocable, worldwide license in data first produced in the performance of this contract to reproduce, publish, or otherwise use, including prepare derivative works, distribute copies to the public, and perform publicly and display publicly such data. For data required by the contract but not first produced in the performance of this contract, the Contractor will identify such data and grant to the City of Flagler Beach or acquires on its behalf a license of the same scope as for data first produced in the performance of this contract. Data, as used herein, shall include any work subject to copyright under 17 U.S.C. § 102, for example, any written reports or literary works, software and/or source code, music, choreography, pictures or images, graphics, sculptures, videos, motion pictures or other audiovisual works, sound and/or video recordings, and architectural works. Upon or before the completion of this contract, the Contractor will deliver to the City of Flagler Beach data first produced in the performance of this contract and data required by the contract but not first produced in the performance of this contract in formats acceptable by the City of Flagler Beach.

ARTICLE 1 – DEFINED TERMS

1.01 Terms used in these Instructions to Bidders have the meanings indicated in the General Conditions and Supplementary Conditions. Additional terms used in these Instructions to Bidders have the meanings indicated below:

A. *Issuing Office* – The office from which the Bidding Documents are to be issued.

NOTE(S) TO USER:

1. *In addition to terms specifically defined, terms with initial capital letters in the Bidding Requirements include references to identified articles and paragraphs, and the titles of other documents or forms.*
2. *Additional defined terms applicable to the Bidding Requirements should be included here and should be used uniformly throughout the Bidding Requirements with initial capitals. Additional defined terms applicable to the Contract Documents should be included in the Supplementary Conditions. Note the difference in the meanings of the terms "Bidding Requirements" and "Bidding Documents," as defined in the General Conditions, Paragraph 1.01.A.*
3. *It is strongly recommended that the Issuing Office be identified in the invitation to bid or advertisement. See EJCDC® C-111, Suggested Advertisement for Bids for Construction Contracts. If not, it should be identified in these Instructions.*

ARTICLE 2 – COPIES OF BIDDING DOCUMENTS

2.01 Complete sets of the Bidding Documents may be obtained from the Issuing Office as stated in the advertisement or invitation to bid.

2.02 Complete sets of Bidding Documents shall be used in preparing Bids; neither Owner nor Engineer assumes any responsibility for errors or misinterpretations resulting from the use of incomplete sets of Bidding Documents.

2.03 Owner and Engineer, in making copies of Bidding Documents available on the above terms, do so only for the purpose of obtaining Bids for the Work and do not authorize or confer a license for any other use.

ARTICLE 3 – QUALIFICATIONS OF BIDDERS

3.01 To demonstrate Bidder's qualifications to perform the Work, Bidder shall submit all qualification forms listed below which are included in the bid documents:

A. Attachment A - Certificate of Corporation

B. Attachment B – Contractor Questionnaire

C. Attachment C - Required Disclosure

D. Attachment D - Bidder Information

E. Attachment E - Experience of Bidder

F. Attachment F – Sworn Statement Under Section 287.133(3) (A), Florida Statutes, on Public Entity Crimes

G. Attachment G - Affidavit of Non-Collusion

H. Attachment H - Certification of Non-Segregated Facilities

I. Attachment I - Drug-Free Workplace

J. Attachment J - Conflict of Interest Statement

K. Attachment K - Compliance with Public Records Law

L. Attachment L - Americans with Disabilities Act Affidavit

M. Attachment M - List of Licenses and Certifications

N. Attachment N - List of Proposed Subcontractors/Suppliers

O. Attachment O - List of Proposed Equipment

3.02 A Bidder's failure to submit required qualification information shall disqualify Bidder from receiving an award of the Contract.

3.03 No requirement in this Article 3 to submit information will prejudice the right of Owner to seek additional pertinent information regarding Bidder's qualifications.

3.04 Bidder is advised to carefully review those portions of the Bid Form requiring Bidder's representations and certifications.

ARTICLE 4 – SITE AND OTHER AREAS; EXISTING SITE CONDITIONS; EXAMINATION OF SITE; OWNER'S SAFETY PROGRAM; OTHER WORK AT THE SITE

4.01 *Site and Other Areas*

A. The Site is identified in the Bidding Documents. By definition, the Site includes rights-of-way, easements, and other lands furnished by Owner for the use of the Contractor. Any additional lands required for temporary construction facilities, construction equipment, or storage of materials and equipment, and any access needed for such additional lands, are to be obtained and paid for by Contractor.

4.02 *Existing Site Conditions*

A. Subsurface and Physical Conditions; Hazardous Environmental Conditions

1. The Supplementary Conditions identify:

a. those reports known to Owner of explorations and tests of subsurface conditions at or adjacent to the Site.

b. those drawings known to Owner of physical conditions relating to existing surface or subsurface structures at the Site (except Underground Facilities).

c. reports and drawings known to Owner relating to Hazardous Environmental

Conditions that have been identified at or adjacent to the Site.

d. Technical Data contained in such reports and drawings.

2. The Technical Data contained therein upon whose accuracy Bidder is entitled to rely, as provided in the General Conditions, has been identified and established in the Supplementary Conditions. Bidder is responsible for any interpretation or conclusion Bidder draws from any Technical Data or any other data, interpretations, opinions, or information contained in such reports or shown or indicated in such drawings. If the Supplementary Conditions do not identify Technical Data, the default definition Technical Data set forth in Article 1 of the General Conditions will apply.

3. Geotechnical Baseline Report: The Bidding Documents contain a Geotechnical Baseline Report (GBR). The GBR describes certain select subsurface conditions that are anticipated to be encountered by Contractor during construction in specified locations ("Baseline Conditions"). The GBR is a Contract Document.

The Baseline Conditions in the GBR are intended to reduce uncertainty and the degree of contingency in submitted Bids. However, Bidders cannot rely solely on the Baseline Conditions. Bids should be based on a comprehensive approach that includes an independent review and analysis of the GBR, all other Contract Documents, Technical Data, other available information, and observable surface conditions. Not all potential subsurface conditions are baselined.

Nothing in the GBR is intended to relieve Bidders of the responsibility to make their own determinations regarding construction costs, bidding strategies, and Bid prices, nor of the responsibility to select and be responsible for the means, methods, techniques, sequences, and procedures of construction, and for safety precautions and programs incident thereto.

B. Underground Facilities: Information and data shown or indicated in the Bidding Documents with respect to existing Underground Facilities at or adjacent to the Site are set forth in the Contract Documents and are based upon information and data furnished to Owner and Engineer by owners of such Underground Facilities, including Owner, or others.

C. Adequacy of Data: Provisions concerning responsibilities for the adequacy of data furnished to prospective Bidders with respect to subsurface conditions, other physical conditions, and Underground Facilities, and possible changes in the Bidding Documents due to differing or unanticipated subsurface or physical conditions appear in Paragraphs 5.03, 5.04, and 5.05 of the General Conditions. Provisions concerning responsibilities for the adequacy of data furnished to prospective Bidders with respect to a Hazardous Environmental Condition at the Site, if any, and possible changes in the Contract Documents due to any Hazardous Environmental Condition uncovered or revealed at the Site which was not shown or indicated in the Drawings or Specifications or identified in the Contract Documents to be within the scope of the Work, appear in Paragraph 5.06 of the General Conditions.

4.03 *Site Visit and Testing by Bidders*

A. Bidder shall conduct the required Site visit during normal working hours, and shall not disturb any ongoing operations at the Site.

B. Bidder is not required to conduct any subsurface testing, or exhaustive investigations of Site conditions.

C. On request, and to the extent Owner has control over the Site, and schedule permitting, the Owner will provide Bidder access to the Site to conduct such additional examinations, investigations, explorations, tests, and studies as Bidder deems necessary for preparing and submitting a successful Bid. Owner will not have any obligation to grant such access if doing so is not practical because of existing operations, security or safety concerns, or restraints on Owner's authority regarding the Site.

D. Bidder shall comply with all applicable Laws and Regulations regarding excavation and location of utilities, obtain all permits, and comply with all terms and conditions established by Owner or by property owners or other entities controlling the Site with respect to schedule, access, existing operations, security, liability insurance, and applicable safety programs.

E. Bidder shall fill all holes and clean up and restore the Site to its former condition upon completion of such explorations, investigations, tests, and studies.

4.04 *Owner's Safety Program*

A. Site visits and work at the Site may be governed by an Owner safety program. As the General Conditions indicate, if an Owner safety program exists, it will be noted in the Supplementary Conditions.

4.05 *Other Work at the Site*

A. Reference is made to Article 8 of the Supplementary Conditions for the identification of the general nature of other work of which Owner is aware (if any) that is to be performed at the Site by Owner or others (such as utilities and other prime contractors) and relates to the Work contemplated by these Bidding Documents. If Owner is party to a written contract for such other work, then on request, Owner will provide to each Bidder access to examine such contracts (other than portions thereof related to price and other confidential matters), if any.

ARTICLE 5 – BIDDER'S REPRESENTATIONS

5.01 It is the responsibility of each Bidder before submitting a Bid to:

A. examine and carefully study the Bidding Documents, and any data and reference items identified in the Bidding Documents;

B. visit the Site, conduct a thorough, alert visual examination of the Site and adjacent areas, and become familiar with and satisfy itself as to the general, local, and Site conditions that may affect cost, progress, and performance of the Work;

C. become familiar with and satisfy itself as to all Laws and Regulations that may affect cost, progress, and performance of the Work;

D. carefully study all: (1) reports of explorations and tests of subsurface conditions at or adjacent to the Site and all drawings of physical conditions relating to existing surface or subsurface structures at the Site that have been identified in the Supplementary Conditions,

especially with respect to Technical Data in such reports and drawings, and (2) reports and drawings relating to Hazardous Environmental Conditions, if any, at or adjacent to the Site that have been identified in the Supplementary Conditions, especially with respect to Technical Data in such reports and drawings;

E. consider the information known to Bidder itself; information commonly known to contractors doing business in the locality of the Site; information and observations obtained from visits to the Site; the Bidding Documents; and the Site-related reports and drawings identified in the Bidding Documents, with respect to the effect of such information, observations, and documents on (1) the cost, progress, and performance of the Work; (2) the means, methods, techniques, sequences, and procedures of construction to be employed by Bidder; and (3) Bidder's safety precautions and programs;

agree, based on the information and observations referred to in the preceding paragraph, that at the time of submitting its Bid no further examinations, investigations, explorations, tests, studies, or data are necessary for the determination of its Bid for performance of the Work athe price bid and within the times required, and in accordance with the other terms and conditions of the Bidding Documents;

F. become aware of the general nature of the work to be performed by Owner and others at the Site that relates to the Work as indicated in the Bidding Documents;

G. promptly give Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder discovers in the Bidding Documents and confirm that the written resolution thereof by Engineer is acceptable to Bidder;

H. determine that the Bidding Documents are generally sufficient to indicate and convey understanding of all terms and conditions for the performance and furnishing of the Work; and

I. agree that the submission of a Bid will constitute an incontrovertible representation by Bidder that Bidder has complied with every requirement of this Article, that without exception the Bid and all prices in the Bid are premised upon performing and furnishing the Work required by the Bidding Documents.

ARTICLE 6 – PRE-BID CONFERENCE

6.01 There will be a **Mandatory** Pre-Bid Meeting on **Thursday January 9, 2025** at 10:00 am eastern standard time. Meeting to be held at Flagler Beach Library located at:

315 7th Street South
Flagler Beach, FL 32136

ARTICLE 7 – INTERPRETATIONS AND ADDENDA

7.01 All questions about the meaning or intent of the Bidding Documents are to be submitted to the City Clerk's office in writing (via email):

Penny Overstreet

Email: poverstreet@cityofflaglerbeach.com

Interpretations or clarifications considered necessary in response to such questions will be issued by Addenda delivered to all parties recorded as having received the Bidding Documents. The last day to submit questions is **Thursday January 4, 2024**. Questions received after that date and time may not be answered. Only questions answered by Addenda will be binding. Oral, emailed and other interpretations or clarifications will be without legal effect.

7.02 Addenda may be issued to clarify, correct, supplement, or change the Bidding Documents.

ARTICLE 8 – BID SECURITY

8.01 A Bid must be accompanied by Bid security made payable to Owner in an amount of five (5) percent of Bidder's maximum Bid price (determined by adding the base bid and all alternates) and in the form of a certified check, bank money order, or a Bid bond (on the form included in the Bidding Documents) issued by a surety meeting the requirements of Paragraphs 6.01 and 6.02 of the General Conditions.

8.02 The Bid security of the apparent Successful Bidder will be retained until Owner awards the contract to such Bidder, and such Bidder has executed the Contract Documents, furnished the required

contract security, and met the other conditions of the Notice of Award, whereupon the Bid security will be released. If the Successful Bidder fails to execute and deliver the Contract Documents and furnish the required contract security within 15 days after the Notice of Award, Owner may consider Bidder to be in default, annul the Notice of Award, and the Bid security of that Bidder will be forfeited. Such forfeiture shall be Owner's exclusive remedy if Bidder defaults.

8.03 The Bid security of other Bidders that Owner believes to have a reasonable chance of receiving the award may be retained by Owner until the earlier of seven days after the Effective Date of the Contract or 61 days after the Bid opening, whereupon Bid security furnished by such Bidders will be released.

8.04 Bid security of other Bidders that Owner believes do not have a reasonable chance of receiving the award will be released within seven days after the Bid opening.

ARTICLE 9 – CONTRACT TIMES

9.01 The number of days within which, or the dates by which the Work is to be substantially completed, and completed and ready for final payment, are set forth in the Agreement.

ARTICLE 10 – LIQUIDATED DAMAGES

10.01 Provisions for liquidated damages, if any, for failure to timely attain a Milestone, Substantial Completion, or completion of the Work in readiness for final payment, are set forth in the Agreement.

ARTICLE 11 – SUBSTITUTE AND "OR-EQUAL" ITEMS

11.01 The Contract for the Work, as awarded, will be on the basis of materials and equipment specified

or described in the Bidding Documents without consideration during the bidding and Contract award process of possible substitute or "or-equal" items. In cases in which the Contract allows the Contractor to request that Engineer authorize the use of a substitute or "or-equal" item of material or equipment, application for such acceptance may not be made to and will not be considered by Engineer until after the Effective Date of the Contract.

11.02 All prices that Bidder sets forth in its Bid shall be based on the presumption that the Contractor will furnish the materials and equipment specified or described in the Bidding Documents, as supplemented by Addenda. Any assumptions regarding the possibility of post-Bid approvals of "or- equal" or substitution requests are made at Bidder's sole risk.

ARTICLE 12 – SUBCONTRACTORS, SUPPLIERS, AND OTHERS

12.01 A Bidder shall be prepared to retain specific Subcontractors, Suppliers, or other individuals or entities for the performance of the Work if required by the Bidding Documents (most commonly in the Specifications) to do so. If a prospective Bidder objects to retaining any such Subcontractor, Supplier, or other individual or entity, and the concern is not relieved by an Addendum, then the prospective Bidder should refrain from submitting a Bid.

12.02 Subsequent to the submittal of the Bid, Owner may not require the Successful Bidder or Contractor to retain any Subcontractor, Supplier, or other individual or entity against which Contractor has reasonable objection.

12.03 The apparent Successful Bidder, and any other Bidder so requested, shall within five days after Bid opening, submit to Owner a list of the Subcontractors or Suppliers proposed. If requested by Owner, such list shall be accompanied by an experience statement with pertinent information regarding similar projects and other evidence of qualification for each such Subcontractor, Supplier, or other individual or entity. If Owner or Engineer, after due investigation, has reasonable objection to any proposed Subcontractor, Supplier, individual, or entity, Owner may, before the Notice of Award is given, request apparent Successful Bidder to submit an acceptable substitute, in which case apparent Successful Bidder shall submit a substitute, Bidder's Bid price will be increased (or decreased) by the difference in cost occasioned by such substitution, and Owner may consider such price adjustment in evaluating Bids and making the Contract award.

12.04 If apparent Successful Bidder declines to make any such substitution, Owner may award the Contract to the next lowest Bidder that proposes to use acceptable Subcontractors, Suppliers, or other individuals or entities. Declining to make requested substitutions will constitute grounds for forfeiture of the Bid security of any Bidder. Any Subcontractor, Supplier, individual, or entity so listed and against which Owner or Engineer makes no written objection prior to the giving of the Notice of Award will be deemed acceptable to Owner and Engineer subject to subsequent revocation of such acceptance as provided in Paragraph 7.06 of the General Conditions.

ARTICLE 13 – PREPARATION OF BID

13.01 The Bid Form is included with the Bidding Documents.

A. All blanks on the Bid Form shall be completed in ink and the Bid Form signed in ink. Erasures or alterations shall be initialed in ink by the person signing the Bid Form. A Bid price shall be indicated for each section, Bid item, alternate, adjustment unit price item, and unit price item listed therein.

B. If the Bid Form expressly indicates that submitting pricing on a specific alternate item is optional, and Bidder elects to not furnish pricing for such optional alternate item, then Bidder may enter the words "No Bid" or "Not Applicable."

13.02 A Bid by a corporation shall be executed in the corporate name by a corporate officer (whose title must appear under the signature), accompanied by evidence of authority to sign. The corporate address and state of incorporation shall be shown.

13.03 A Bid by a partnership shall be executed in the partnership name and signed by a partner (whose title must appear under the signature), accompanied by evidence of authority to sign. The partnership's address for receiving notices shall be shown.

13.04 A Bid by a limited liability company shall be executed in the name of the firm by a member or other authorized person and accompanied by evidence of authority to sign. The state of formation of the firm and the firm's address for receiving notices shall be shown.

13.05 A Bid by an individual shall show the Bidder's name and address for receiving notices.

13.06 A Bid by a joint venture shall be executed by an authorized representative of each joint venturer in the manner indicated on the Bid Form. The joint venture's address for receiving notices shall be shown.

13.07 All names shall be printed in ink below the signatures.

13.08 The Bid shall contain an acknowledgment of receipt of all Addenda, the numbers of which shall be filled in on the Bid Form.

13.09 Postal and e-mail addresses and telephone number for communications regarding the Bid shall be shown.

13.10 The Bid shall contain evidence of Bidder's authority and qualification to do business in the state where the Project is located, or Bidder shall covenant in writing to obtain such authority and qualification prior to award of the Contract and attach such covenant to the Bid. Bidder's state contractor license number, if any, shall also be shown on the Bid Form.

ARTICLE 14 – BASIS OF BID

14.01 *Lump Sum*

A. Bidders shall submit a Bid on a lump sum Basis for both the Base Bid and Alternate #1.

14.02 *Unit Price (if used)*

A. Bidders shall submit a Bid on a unit price basis for each item of Work listed in the unit price section of the Bid Form.

B. The "Bid Price" (sometimes referred to as the extended price) for each unit price Bid item will be the product of the "Estimated Quantity" (which Owner or its representative has set forth in the Bid Form) for the item and the corresponding "Bid Unit Price" offered by the Bidder. The total of all unit price Bid items will be the sum of these "Bid Prices"; such total will be used by Owner for Bid comparison purposes. The final quantities and Contract Price will be determined in accordance with Paragraph 13.03 of the General Conditions.

C. Discrepancies between the multiplication of units of Work and unit prices will be resolved in

favor of the unit prices. Discrepancies between the indicated sum of any column of figures and the correct sum thereof will be resolved in favor of the correct sum.

ARTICLE 15 – SUBMITTAL OF BID

15.01 A Bid shall be received no later than the date and time prescribed and at the place indicated in the advertisement or invitation to bid and shall be enclosed in a plainly marked package with the Project title (and, if applicable, the designated portion of the Project for which the Bid is submitted), the name and address of Bidder, and shall be accompanied by the Bid security and other required documents. If a Bid is sent by mail or other delivery system, the sealed envelope containing the Bid shall be enclosed in a separate package plainly marked on the outside with the notation "BID ENCLOSED."

15.02 Bids received after the date and time prescribed for the opening of bids, or not submitted at the correct location or in the designated manner, will not be accepted and will be returned to the Bidder unopened.

15.03 A Bid shall be received no later than the date and time prescribed and at the place indicated in the advertisement or invitation to bid and shall be enclosed in a plainly marked package with the Project title (and, if applicable, the designated portion of the Project for which the Bid is submitted), the name and address of Bidder, and shall be accompanied by the Bid security and other required documents. If a Bid is sent by mail or other delivery system, the sealed envelope containing the Bid shall be enclosed in a separate package plainly marked on the outside with the notation "BID ENCLOSED."

15.04 Bids received after the date and time prescribed for the opening of bids, or not submitted at the correct location or in the designated manner, will not be accepted and will be returned to the Bidder unopened.

ARTICLE 16 – MODIFICATION AND WITHDRAWAL OF BID

16.01 A Bid may be withdrawn by an appropriate document duly executed in the same manner that a Bid must be executed and delivered to the place where Bids are to be submitted prior to the date and time for the opening of Bids. Upon receipt of such notice, the unopened Bid will be returned to the Bidder

16.02 If a Bidder wishes to modify its Bid prior to Bid opening, Bidder must withdraw its initial Bid in the manner specified in Paragraph 16.01 and submit a new Bid prior to the date and time for the opening of Bids.

16.03 If within 24 hours after Bids are opened any Bidder files a duly signed written notice with Owner and promptly thereafter demonstrates to the reasonable satisfaction of Owner that there was a material and substantial mistake in the preparation of its Bid, that Bidder may withdraw its Bid, and the Bid security will be returned. Thereafter, if the Work is rebid, that Bidder will be disqualified from further bidding on the Work.

ARTICLE 17 – OPENING OF BIDS

17.01 Bids will be opened at the time and place indicated in the advertisement or invitation to bid and, unless obviously non-responsive, read aloud publicly. An abstract of the amounts of the base Bids

and major alternates, if any, will be made available to Bidders after the opening of Bids.

ARTICLE 18 – BIDS TO REMAIN SUBJECT TO ACCEPTANCE

18.01 All Bids will remain subject to acceptance for the period of time stated in the Bid Form, but Owner may, in its sole discretion, release any Bid and return the Bid security (if any) prior to the end of this period.

ARTICLE 19 – EVALUATION OF BIDS AND AWARD OF CONTRACT

19.01 Owner reserves the right to reject any or all Bids, including without limitation, nonconforming, nonresponsive, unbalanced, or conditional Bids. Owner will reject the Bid of any Bidder that Owner finds, after reasonable inquiry and evaluation, to not be responsible. If Bidder purports to add terms or conditions to its Bid, takes exception to any provision of the Bidding Documents, or attempts to alter the contents of the Contract Documents for purposes of the Bid, then the Owner will reject the Bid as nonresponsive; provided that Owner also reserves the right to waive all minor informalities not involving price, time, or changes in the Work.

19.02 If Owner awards the contract for the Work, such award shall be to the responsible Bidder submitting the lowest responsive Bid.

19.03 Evaluation of Bids

A. In evaluating Bids, Owner will consider whether or not the Bids comply with the prescribed requirements, and such alternates, unit prices, and other data, as may be requested in the Bid Form or prior to the Notice of Award.

B. For the determination of the apparent low Bidder when unit price bids are submitted, Bids will be compared on the basis of the total of the products of the estimated quantity of each item and unit price Bid for that item, together with any lump sum items.

19.04 In evaluating whether a Bidder is responsible, Owner will consider the qualifications of the Bidder and may consider the qualifications and experience of Subcontractors and Suppliers proposed for those portions of the Work for which the identity of Subcontractors and Suppliers must be submitted as provided in the Bidding Documents.

19.05 Owner may conduct such investigations as Owner deems necessary to establish the responsibility, qualifications, and financial ability of Bidders and any proposed Subcontractors or Suppliers.

ARTICLE 20 – BONDS AND INSURANCE

20.01 Article 6 of the General Conditions, as may be modified by the Supplementary Conditions, sets forth Owner's requirements as to performance and payment bonds and insurance. When the Successful Bidder delivers the Agreement (executed by Successful Bidder) to Owner, it shall be accompanied by required bonds and insurance documentation.

ARTICLE 21 – SIGNING OF AGREEMENT

21.01 When Owner issues a Notice of Award to the Successful Bidder, it shall be accompanied by the unexecuted counterparts of the Agreement along with the other Contract Documents as identified in the Agreement. Within 15 days thereafter, Successful Bidder shall execute and deliver the required number of counterparts of the Agreement (and any bonds and insurance documentation required to be delivered by the Contract Documents) to Owner. Within ten days thereafter, Owner shall deliver one fully executed counterpart of the Agreement to Successful Bidder, together with printed and electronic copies of the Contract Documents as stated in Paragraph 2.02 of the General Conditions.

ARTICLE 22 – ALIEN WORKERS

22.01 The City of Flagler Beach does not award publicly funded Contracts to those who knowingly employ unauthorized alien workers in violation of section 274A of the Immigration and Naturalization Act. 8 United States Code §132a. Such employment deprives legal workers of job opportunities. Violation of section 274A shall be grounds for unilateral cancellation of the Contract, Agreement, Bid or Quote for purchase of services and goods by the City of Flagler Beach.

ARTICLE 23 – E-VERIFY

23.01 The Contractor shall utilize the U.S. Department of Homeland Security's E-Verify system, in accordance with the terms governing use of the system, to confirm the employment eligibility of all persons employed by the Contractor during the term of the Contract to perform employment duties within Florida and all persons, including subcontractors, assigned by the Contractor to perform work pursuant to the Contract with the Department.

ARTICLE 1 – DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

A. Wherever used in the Bidding Requirements or Contract Documents, a term printed with initial capital letters, including the term's singular and plural forms, will have the meaning indicated in the definitions below. In addition to terms specifically defined, terms with initial capital letters in the Contract Documents include references to identified articles and paragraphs, and the titles of other documents or forms.

1. *Addenda*—Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the proposed Contract Documents.

2. *Agreement*—The written instrument, executed by Owner and Contractor, that sets forth the Contract Price and Contract Times, identifies the parties and the Engineer, and designates the specific items that are Contract Documents.

3. *Application for Payment*—The form acceptable to Engineer which is to be used by Contractor during the course of the Work in requesting progress or final payments and which is to be accompanied by such supporting documentation as is required by the Contract Documents.

4. *Bid*—The offer of a Bidder submitted on the prescribed form setting forth the prices for the Work to be performed.

5. *Bidder*—An individual or entity that submits a Bid to Owner.

6. *Bidding Documents*—The Bidding Requirements, the proposed Contract Documents, and all Addenda.

7. *Bidding Requirements*—The advertisement or invitation to bid, Instructions to Bidders, Bid Bond or other Bid security, if any, the Bid Form, and the Bid with any attachments.

8. *Change Order*—A document which is signed by Contractor and Owner and authorizes an addition, deletion, or revision in the Work or an adjustment in the Contract Price or the Contract Times, or other revision to the Contract, issued on or after the Effective Date of the Contract.

9. *Change Proposal*—A written request by Contractor, duly submitted in compliance with the procedural requirements set forth herein, seeking an adjustment in Contract Price or Contract Times, or both; contesting an initial decision by Engineer concerning the requirements of the Contract Documents or the acceptability of Work under the Contract Documents; challenging a set-off against payments due; or seeking other relief with respect to the terms of the Contract.

10. *Claim*—(a) A demand or assertion by Owner directly to Contractor, duly submitted in compliance with the procedural requirements set forth herein: seeking an adjustment of Contract Price or Contract Times, or both; contesting an initial decision by Engineer concerning the requirements of the Contract Documents or the acceptability of Work under the Contract Documents; contesting Engineer's decision regarding a Change Proposal; seeking resolution of a contractual issue that Engineer has declined to

11. address; or seeking other relief with respect to the terms of the Contract; or (b) a demand or assertion by Contractor directly to Owner, duly submitted in compliance with the procedural requirements set forth herein, contesting Engineer's decision regarding a Change Proposal; or seeking resolution of a contractual issue that Engineer has declined to address. A demand for money or services by a third party is not a Claim.

12. *Constituent of Concern*—Asbestos, petroleum, radioactive materials, polychlorinated biphenyls (PCBs), hazardous waste, and any substance, product, waste, or other material of any nature whatsoever that is or becomes listed, regulated, or addressed pursuant to (a) the Comprehensive Environmental Response, Compensation and Liability Act, 42 U.S.C. §§9601 et seq. ("CERCLA"); (b) the Hazardous Materials Transportation Act, 49 U.S.C. §§5101 et seq.; (c) the Resource Conservation and Recovery Act, 42 U.S.C. §§6901 et seq. ("RCRA"); (d) the Toxic Substances Control Act, 15 U.S.C. §§2601 et seq.; (e) the Clean Water Act, 33 U.S.C. §§1251 et seq.; (f) the Clean Air Act, 42 U.S.C. §§7401 et seq.; or (g) any other federal, state, or local statute, law, rule, regulation, ordinance, resolution, code, order, or decree regulating, relating to, or imposing liability or standards of conduct concerning, any hazardous, toxic, or dangerous waste, substance, or material.

13. *Contract*—The entire and integrated written contract between the Owner and Contractor concerning the Work.

14. *Contract Documents*—Those items so designated in the Agreement, and which together comprise the Contract.

15. *Contract Price*—The money that Owner has agreed to pay Contractor for completion of the Work in accordance with the Contract Documents.

16. *Contract Times*—The number of days or the dates by which Contractor shall: (a) achieve Milestones, if any; (b) achieve Substantial Completion; and (c) complete the Work.

17. *Contractor*—The individual or entity with which Owner has contracted for performance of the Work.

18. *Cost of the Work*—See Paragraph 13.01 for definition.

19. *Drawings*—The part of the Contract that graphically shows the scope, extent, and character of the Work to be performed by Contractor.

20. *Effective Date of the Contract*—The date, indicated in the Agreement, on which the Contract becomes effective.

21. *Engineer*—The individual or entity named as such in the Agreement.

22. *Field Order*—A written order issued by Engineer which requires minor changes in the Work but does not change the Contract Price or the Contract Times.

23. *Hazardous Environmental Condition*—The presence at the Site of Constituents of Concern in such quantities or circumstances that may present a danger to persons or property exposed thereto. The presence at the Site of materials that are necessary for the execution of the Work, or that are to be incorporated in the Work, and that are

controlled and contained pursuant to industry practices, Laws and Regulations, and the requirements of the Contract, does not establish a Hazardous Environmental Condition.

24. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, statutes, rules, regulations, ordinances, codes, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.
25. *Liens*—Charges, security interests, or encumbrances upon Contract-related funds, real property, or personal property.
26. *Milestone*—A principal event in the performance of the Work that the Contract requires Contractor to achieve by an intermediate completion date or by a time prior to Substantial Completion of all the Work.
27. *Notice of Award*—The written notice by Owner to a Bidder of Owner's acceptance of the Bid.
28. *Notice to Proceed*—A written notice by Owner to Contractor fixing the date on which the Contract Times will commence to run and on which Contractor shall start to perform the Work.
29. *Owner*—The individual or entity with which Contractor has contracted regarding the Work, and which has agreed to pay Contractor for the performance of the Work, pursuant to the terms of the Contract.
30. *Progress Schedule*—A schedule, prepared and maintained by Contractor, describing the sequence and duration of the activities comprising the Contractor's plan to accomplish the Work within the Contract Times.
31. *Project*—The total undertaking to be accomplished for Owner by engineers, contractors, and others, including planning, study, design, construction, testing, commissioning, and start-up, and of which the Work to be performed under the Contract Documents is a part.
32. *Project Manual*—The written documents prepared for, or made available for, procuring and constructing the Work, including but not limited to the Bidding Documents or other construction procurement documents, geotechnical and existing conditions information, the Agreement, bond forms, General Conditions, Supplementary Conditions, and Specifications. The contents of the Project Manual may be bound in one or more volumes.
33. *Resident Project Representative*—The authorized representative of Engineer assigned to assist Engineer at the Site. As used herein, the term Resident Project Representative or "RPR" includes any assistants or field staff of Resident Project Representative.
34. *Samples*—Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and that establish the standards by which such portion of the Work will be judged.
35. *Schedule of Submittals*—A schedule, prepared and maintained by Contractor, of required submittals and the time requirements for Engineer's review of the submittals and the performance of related construction activities.
36. *Schedule of Values*—A schedule, prepared and maintained by Contractor, allocating portions of the Contract Price to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

37. *Shop Drawings*—All drawings, diagrams, illustrations, schedules, and other data or information that are specifically prepared or assembled by or for Contractor and submitted by Contractor to illustrate some portion of the Work. Shop Drawings, whether approved or not, are not Drawings and are not Contract Documents.

38. *Site*—Lands or areas indicated in the Contract Documents as being furnished by Owner upon which the Work is to be performed, including rights-of-way and easements, and such other lands furnished by Owner which are designated for the use of Contractor.

39. *Specifications*—The part of the Contract that consists of written requirements for materials, equipment, systems, standards, and workmanship as applied to the Work, and certain administrative requirements and procedural matters applicable to the Work.

40. *Subcontractor*—An individual or entity having a direct contract with Contractor or with any other Subcontractor for the performance of a part of the Work.

41. *Substantial Completion*—The time at which the Work (or a specified part thereof) has progressed to the point where, in the opinion of Engineer, the Work (or a specified part thereof) is sufficiently complete, in accordance with the Contract Documents, so that the Work (or a specified part thereof) can be utilized for the purposes for which it is intended. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion thereof.

42. *Successful Bidder*—The Bidder whose Bid the Owner accepts, and to which the Owner makes an award of contract, subject to stated conditions.

43. *Supplementary Conditions*—The part of the Contract that amends or supplements these General Conditions.

44. *Supplier*—A manufacturer, fabricator, supplier, distributor, materialman, or vendor having a direct contract with Contractor or with any Subcontractor to furnish materials or equipment to be incorporated in the Work by Contractor or a Subcontractor.

45. *Technical Data*—Those items expressly identified as Technical Data in the Supplementary Conditions, with respect to either (a) subsurface conditions at the Site, or physical conditions relating to existing surface or subsurface structures at the Site (except Underground Facilities) or (b) Hazardous Environmental Conditions at the Site. If no such express identifications of Technical Data have been made with respect to conditions at the Site, then the data contained in boring logs, recorded measurements of subsurface water levels, laboratory test results, and other factual, objective information regarding conditions at the Site that are set forth in any geotechnical or environmental report prepared for the Project and made available to Contractor are hereby defined as Technical Data with respect to conditions at the Site under Paragraphs 5.03, 5.04, and 5.06.

46. *Underground Facilities*—All underground pipelines, conduits, ducts, cables, wires, manholes, vaults, tanks, tunnels, or other such facilities or attachments, and any encasements containing such facilities, including but not limited to those that convey electricity, gases, steam, liquid petroleum products, telephone or other communications, fiber optic transmissions, cable television, water, wastewater, storm

47. water, other liquids or chemicals, or traffic or other control systems.

48. *Unit Price Work*—Work to be paid for on the basis of unit prices.

49. *Work*—The entire construction or the various separately identifiable parts thereof required to be provided under the Contract Documents. Work includes and is the result of performing or providing all labor, services, and documentation necessary to produce such construction; furnishing, installing, and incorporating all materials and equipment into such construction; and may include related services such as testing, start-up, and commissioning, all as required by the Contract Documents.

50. *Work Change Directive*—A written directive to Contractor issued on or after the Effective Date of the Contract, signed by Owner and recommended by Engineer, ordering an addition, deletion, or revision in the Work.

1.02 *Terminology*

A. The words and terms discussed in the following paragraphs are not defined but, when used in the Bidding Requirements or Contract Documents, have the indicated meaning.

B. *Intent of Certain Terms or Adjectives*:

1. The Contract Documents include the terms “as allowed,” “as approved,” “as ordered,” “as directed” or terms of like effect or import to authorize an exercise of professional judgment by Engineer. In addition, the adjectives “reasonable,” “suitable,” “acceptable,” “proper,” “satisfactory,” or adjectives of like effect or import are used to describe an action or determination of Engineer as to the Work. It is intended that such exercise of professional judgment, action, or determination will be solely to evaluate, in general, the Work for compliance with the information in the Contract Documents and with the design concept of the Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective is not intended to and shall not be effective to assign to Engineer any duty or authority to supervise or direct the performance of the Work, or any duty or authority to undertake responsibility contrary to the provisions of Article 10 or any other provision of the Contract Documents.

C. *Day*:

1. The word “day” means a calendar day of 24 hours measured from midnight to the next midnight.

D. *Defective*:

1. The word “defective,” when modifying the word “Work,” refers to Work that is unsatisfactory, faulty, or deficient in that it:

a. does not conform to the Contract Documents; or

b. does not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Contract Documents; or

c. has been damaged prior to Engineer’s recommendation of final payment (unless responsibility for the protection thereof has been assumed by Owner at Substantial Completion in accordance with Paragraph 15.03 or 15.04).

E. *Furnish*, *Install*, *Perform*, *Provide*:

1. The word "furnish," when used in connection with services, materials, or equipment, shall mean to supply and deliver said services, materials, or equipment to the Site (orsome other specified location) ready for use or installation and in usable or operable condition.

2. The word "install," when used in connection with services, materials, or equipment, shall mean to put into use or place in final position said services, materials, or equipment complete and ready for intended use.

3. The words "perform" or "provide," when used in connection with services, materials, or equipment, shall mean to furnish and install said services, materials, or equipment complete and ready for intended use.

4. If the Contract Documents establish an obligation of Contractor with respect to specific services, materials, or equipment, but do not expressly use any of the four words "furnish," "install," "perform," or "provide," then Contractor shall furnish and install said services, materials, or equipment complete and ready for intended use.

F. Unless stated otherwise in the Contract Documents, words or phrases that have a well-known technical or construction industry or trade meaning are used in the Contract Documents in accordance with such recognized meaning.

ARTICLE 2 – PRELIMINARY MATTERS

2.01 *Delivery of Bonds and Evidence of Insurance*

A. *Bonds*: When Contractor delivers the executed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner such bonds as Contractor may be required to furnish.

B. *Evidence of Contractor's Insurance*: When Contractor delivers the executed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner, with copies to each named insured and additional insured (as identified in the Supplementary Conditions or elsewhere in the Contract), the certificates and other evidence of insurance required to be provided by Contractor in accordance with Article 6.

C. *Evidence of Owner's Insurance*: After receipt of the executed counterparts of the Agreement and all required bonds and insurance documentation, Owner shall promptly deliver to Contractor, with copies to each named insured and additional insured (as identified in the Supplementary Conditions or otherwise), the certificates and other evidence of insurance required to be provided by Owner under Article 6.

2.02 *Copies of Documents*

A. Owner shall furnish to Contractor four printed copies of the Contract (including one fully executed counterpart of the Agreement), and one copy in electronic portable document format (PDF). Additional printed copies will be furnished upon request at the cost of reproduction.

B. Owner shall maintain and safeguard at least one original printed record version of the

C. Contract, including Drawings and Specifications signed and sealed by Engineer and other design professionals. Owner shall make such original printed record version of the Contract available to Contractor for review. Owner may delegate the responsibilities under this provision to Engineer.

2.03 *Before Starting Construction*

A. *Preliminary Schedules*: Within 10 days after the Effective Date of the Contract (or as otherwise specifically required by the Contract Documents), Contractor shall submit to Engineer for timely review:

1. a preliminary Progress Schedule indicating the times (numbers of days or dates) for starting and completing the various stages of the Work, including any Milestones specified in the Contract;

2. a preliminary Schedule of Submittals; and

3. a preliminary Schedule of Values for all of the Work which includes quantities and prices of items which when added together equal the Contract Price and subdivides the Work into component parts in sufficient detail to serve as the basis for progress payments during performance of the Work. Such prices will include an appropriate amount of overhead and profit applicable to each item of Work.

2.04 *Preconstruction Conference; Designation of Authorized Representatives*

A. Before any Work at the Site is started, a conference attended by Owner, Contractor, Engineer, and others as appropriate will be held to establish a working understanding among the parties as to the Work and to discuss the schedules referred to in Paragraph 2.03.A, procedures for handling Shop Drawings, Samples, and other submittals, processing Applications for Payment, electronic or digital transmittals, and maintaining required records.

B. At this conference Owner and Contractor each shall designate, in writing, a specific individual to act as its authorized representative with respect to the services and responsibilities under the Contract. Such individuals shall have the authority to transmit and receive information, render decisions relative to the Contract, and otherwise act on behalf of each respective party.

2.05 *Initial Acceptance of Schedules*

A. At least 10 days before submission of the first Application for Payment a conference, attended by Contractor, Engineer, and others as appropriate, will be held to review for acceptability to Engineer as provided below the schedules submitted in accordance with Paragraph 2.03.A. Contractor shall have an additional 10 days to make corrections and adjustments and to complete and resubmit the schedules. No progress payment shall be made to Contractor until acceptable schedules are submitted to Engineer.

1. The Progress Schedule will be acceptable to Engineer if it provides an orderly progression of the Work to completion within the Contract Times. Such acceptance will not impose on Engineer responsibility for the Progress Schedule, for sequencing, scheduling, or progress of the Work, nor interfere with or relieve Contractor from Contractor's full responsibility therefor.

2. Contractor's Schedule of Submittals will be acceptable to Engineer if it provides a workable arrangement for reviewing and processing the required submittals.

3. Contractor's Schedule of Values will be acceptable to Engineer as to form and substance if it provides a reasonable allocation of the Contract Price to the component parts of the Work.

2.06 *Electronic Transmittals*

A. Except as otherwise stated elsewhere in the Contract, the Owner, Engineer, and Contractor may transmit, and shall accept, Project-related correspondence, text, data, documents, drawings, information, and graphics, including but not limited to Shop Drawings and other submittals, in electronic media or digital format, either directly, or through access to a secure Project website.

B. If the Contract does not establish protocols for electronic or digital transmittals, then Owner, Engineer, and Contractor shall jointly develop such protocols.

C. When transmitting items in electronic media or digital format, the transmitting party makes no representations as to long term compatibility, usability, or readability of the items resulting from the recipient's use of software application packages, operating systems, or computer hardware differing from those used in the drafting or transmittal of the items, or from those established in applicable transmittal protocols.

ARTICLE 3 – DOCUMENTS: INTENT, REQUIREMENTS, REUSE

3.01 *Intent*

A. The Contract Documents are complementary; what is required by one is as binding as if required by all.

B. It is the intent of the Contract Documents to describe a functionally complete project (or part thereof) to be constructed in accordance with the Contract Documents.

C. Unless otherwise stated in the Contract Documents, if there is a discrepancy between the electronic or digital versions of the Contract Documents (including any printed copies derived from such electronic or digital versions) and the printed record version, the printed record version shall govern.

D. The Contract supersedes prior negotiations, representations, and agreements, whether written or oral.

E. Engineer will issue clarifications and interpretations of the Contract Documents as provided herein.

3.02 *Reference Standards*

A. Standards Specifications, Codes, Laws and Regulations

1. Reference in the Contract Documents to standard specifications, manuals, reference standards, or codes of any technical society, organization, or association, or to Laws or Regulations, whether such reference be specific or by implication, shall mean the standard specification, manual, reference standard, code, or Laws or Regulations in effect at the time of opening of Bids (or on the Effective Date of the Contract if there

2. were no Bids), except as may be otherwise specifically stated in the Contract Documents.

3. No provision of any such standard specification, manual, reference standard, or code, or any instruction of a Supplier, shall be effective to change the duties or responsibilities of Owner, Contractor, or Engineer, or any of their subcontractors, consultants, agents, or employees, from those set forth in the part of the Contract Documents prepared by or for Engineer. No such provision or instruction shall be effective to assign to Owner, Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, any duty or authority to supervise or direct the performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the part of the Contract Documents prepared by or for Engineer.

3.03 *Reporting and Resolving Discrepancies*

A. *Reporting Discrepancies*:

1. *Contractor's Verification of Figures and Field Measurements*: Before undertaking each part of the Work, Contractor shall carefully study the Contract Documents, and check and verify pertinent figures and dimensions therein, particularly with respect to applicable field measurements. Contractor shall promptly report in writing to Engineer any conflict, error, ambiguity, or discrepancy that Contractor discovers, or has actual knowledge of, and shall not proceed with any Work affected thereby until the conflict, error, ambiguity, or discrepancy is resolved, by a clarification or interpretation by Engineer, or by an amendment or supplement to the Contract Documents issued pursuant to Paragraph 11.01.

2. *Contractor's Review of Contract Documents*: If, before or during the performance of the Work, Contractor discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents, or between the Contract Documents and (a) any applicable Law or Regulation, (b) actual field conditions, (c) any standard specification, manual, reference standard, or code, or (d) any instruction of any Supplier, then Contractor shall promptly report it to Engineer in writing. Contractor shall not proceed with the Work affected thereby (except in an emergency as required by Paragraph 7.15) until the conflict, error, ambiguity, or discrepancy is resolved, by a clarification or interpretation by Engineer, or by an amendment or supplement to the Contract Documents issued pursuant to Paragraph 11.01.

3. Contractor shall not be liable to Owner or Engineer for failure to report any conflict, error, ambiguity, or discrepancy in the Contract Documents unless Contractor had actual knowledge thereof.

B. *Resolving Discrepancies*:

1. Except as may be otherwise specifically stated in the Contract Documents, the provisions of the part of the Contract Documents prepared by or for Engineer shall take precedence in resolving any conflict, error, ambiguity, or discrepancy between such provisions of the Contract Documents and:

a. the provisions of any standard specification, manual, reference standard, or code,

b. or the instruction of any Supplier (whether or not specifically incorporated by reference as a Contract Document); or

c. the provisions of any Laws or Regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such Law or Regulation).

3.04 *Requirements of the Contract Documents*

A. During the performance of the Work and until final payment, Contractor and Owner shall submit to the Engineer all matters in question concerning the requirements of the Contract Documents (sometimes referred to as requests for information or interpretation—RFIs), or relating to the acceptability of the Work under the Contract Documents, as soon as possible after such matters arise. Engineer will be the initial interpreter of the requirements of the Contract Documents, and judge of the acceptability of the Work thereunder.

B. Engineer will, with reasonable promptness, render a written clarification, interpretation, or decision on the issue submitted, or initiate an amendment or supplement to the Contract Documents. Engineer's written clarification, interpretation, or decision will be final and binding on Contractor, unless it appeals by submitting a Change Proposal, and on Owner, unless it appeals by filing a Claim.

C. If a submitted matter in question concerns terms and conditions of the Contract Documents that do not involve (1) the performance or acceptability of the Work under the Contract Documents, (2) the design (as set forth in the Drawings, Specifications, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly give written notice to Owner and Contractor that Engineer is unable to provide a decision or interpretation. If Owner and Contractor are unable to agree on resolution of such a matter in question, either party may pursue resolution as provided in Article 12.

3.05 *Reuse of Documents*

A. Contractor and its Subcontractors and Suppliers shall not:

1. have or acquire any title to or ownership rights in any of the Drawings, Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Engineer or its consultants, including electronic media editions, or reuse any such Drawings, Specifications, other documents, or copies thereof on extensions of the Project or any other project without written consent of Owner and Engineer and specific written verification or adaptation by Engineer; or

2. have or acquire any title or ownership rights in any other Contract Documents, reuse any such Contract Documents for any purpose without Owner's express written consent, or violate any copyrights pertaining to such Contract Documents.

B. The prohibitions of this Paragraph 3.05 will survive final payment, or termination of the Contract. Nothing herein shall preclude Contractor from retaining copies of the Contract Documents for record purposes.

ARTICLE 4 – COMMENCEMENT AND PROGRESS OF THE WORK

4.01 *Commencement of Contract Times; Notice to Proceed*

A. The Contract Times will commence to run on the day indicated in the Notice to Proceed. A Notice to Proceed may be given at any time within 30 days after the Effective Date of the Contract. In no event will the Contract Times commence to run later than the sixtieth day after the day of Bid opening or the thirtieth day after the Effective Date of the Contract, whichever date is earlier.

4.02 *Starting the Work*

A. Contractor shall start to perform the Work on the date when the Contract Times commence to run. No Work shall be done at the Site prior to such date.

4.03 *Reference Points*

A. Owner shall provide engineering surveys to establish reference points for construction which in Engineer's judgment are necessary to enable Contractor to proceed with the Work. Contractor shall be responsible for laying out the Work, shall protect and preserve the established reference points and property monuments, and shall make no changes or relocations without the prior written approval of Owner. Contractor shall report to Engineer whenever any reference point or property monument is lost or destroyed or requires relocation because of necessary changes in grades or locations and shall be responsible for the accurate replacement or relocation of such reference points or property monuments by professionally qualified personnel.

4.04 *Progress Schedule*

A. Contractor shall adhere to the Progress Schedule established in accordance with Paragraph 2.05 as it may be adjusted from time to time as provided below.

1. Contractor shall submit to Engineer for acceptance (to the extent indicated in Paragraph 2.05) proposed adjustments in the Progress Schedule that will not result in changing the Contract Times.

2. Proposed adjustments in the Progress Schedule that will change the Contract Times shall be submitted in accordance with the requirements of Article 11.

B. Contractor shall carry on the Work and adhere to the Progress Schedule during all disputes or disagreements with Owner. No Work shall be delayed or postponed pending resolution of any disputes or disagreements, or during any appeal process, except as permitted by Paragraph 16.04, or as Owner and Contractor may otherwise agree in writing.

4.05 *Delays in Contractor's Progress*

A. If Owner, Engineer, or anyone for whom Owner is responsible, delays, disrupts, or interferes with the performance or progress of the Work, then Contractor shall be entitled to an equitable adjustment in the Contract Times and Contract Price. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times.

B. Contractor shall not be entitled to an adjustment in Contract Price or Contract Times for delay, disruption, or interference caused by or within the control of Contractor. Delay, disruption, and interference attributable to and within the control of a Subcontractor or Supplier shall be deemed to be within the control of Contractor.

C. If Contractor's performance or progress is delayed, disrupted, or interfered with by unanticipated causes not the fault of and beyond the control of Owner, Contractor, and those for which they are responsible, then Contractor shall be entitled to an equitable adjustment in Contract Times. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times. Such an adjustment shall be Contractor's sole and exclusive remedy for the delays, disruption, and interference described in this paragraph. Causes of delay, disruption, or interference that may give rise to an adjustment in Contract Times under this paragraph include but are not limited to the following:

1. severe and unavoidable natural catastrophes such as fires, floods, epidemics, and earthquakes;
2. abnormal weather conditions;
3. acts or failures to act of utility owners (other than those performing other work at or adjacent to the Site by arrangement with the Owner, as contemplated in Article 8); and
4. acts of war or terrorism.

D. Delays, disruption, and interference to the performance or progress of the Work resulting from the existence of a differing subsurface or physical condition, an Underground Facility that was not shown or indicated by the Contract Documents, or not shown or indicated with reasonable accuracy, and those resulting from Hazardous Environmental Conditions, are governed by Article 5.

E. Paragraph 8.03 governs delays, disruption, and interference to the performance or progress of the Work resulting from the performance of certain other work at or adjacent to the Site.

F. Contractor shall not be entitled to an adjustment in Contract Price or Contract Times for any delay, disruption, or interference if such delay is concurrent with a delay, disruption, or interference caused by or within the control of Contractor.

G. Contractor must submit any Change Proposal seeking an adjustment in Contract Price or Contract Times under this paragraph within 30 days of the commencement of the delaying, disrupting, or interfering event.

ARTICLE 5 – AVAILABILITY OF LANDS; SUBSURFACE AND PHYSICAL CONDITIONS; HAZARDOUS ENVIRONMENTAL CONDITIONS

5.01 *Availability of Lands*

A. Owner shall furnish the Site. Owner shall notify Contractor of any encumbrances or restrictions not of general application but specifically related to use of the Site with which Contractor must comply in performing the Work.

B. Upon reasonable written request, Owner shall furnish Contractor with a current statement of record legal title and legal description of the lands upon which permanent improvements are to be made and Owner's interest therein as necessary for giving notice of or filing a mechanic's or construction lien against such lands in accordance with applicable Laws and Regulations.

C. Contractor shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

5.02 *Use of Site and Other Areas*

A. *Limitation on Use of Site and Other Areas*:

1. Contractor shall confine construction equipment, temporary construction facilities, the storage of materials and equipment, and the operations of workers to the Site, adjacent areas that Contractor has arranged to use through construction easements or otherwise, and other adjacent areas permitted by Laws and Regulations, and shall not unreasonably encumber the Site and such other adjacent areas with construction equipment or other materials or equipment. Contractor shall assume full responsibility for (a) damage to the Site; (b) damage to any such other adjacent areas used for Contractor's operations; (c) damage to any other adjacent land or areas; and (d) for injuries and losses sustained by the owners or occupants of any such land or areas; provided that such damage or injuries result from the performance of the Work or from other actions or conduct of the Contractor or those for which Contractor is responsible.

2. If a damage or injury claim is made by the owner or occupant of any such land or area because of the performance of the Work, or because of other actions or conduct of the Contractor or those for which Contractor is responsible, Contractor shall (a) take immediate corrective or remedial action as required by Paragraph 7.12, or otherwise; (b) promptly attempt to settle the claim as to all parties through negotiations with such owner or occupant, or otherwise resolve the claim by arbitration or other dispute resolution proceeding, or at law; and (c) to the fullest extent permitted by Laws and Regulations, indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against any such claim, and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any claim or action, legal or equitable, brought by any such owner or occupant against Owner, Engineer, or any other party indemnified hereunder to the extent caused directly or indirectly, in whole or in part by, or based upon, Contractor's performance of the Work, or because of other actions or conduct of the Contractor or those for which Contractor is responsible.

B. *Removal of Debris During Performance of the Work*: During the progress of the Work the Contractor shall keep the Site and other adjacent areas free from accumulations of waste materials, rubbish, and other debris. Removal and disposal of such waste materials, rubbish, and other debris shall conform to applicable Laws and Regulations.

C. *Cleaning*: Prior to Substantial Completion of the Work Contractor shall clean the Site and the Work and make it ready for utilization by Owner. At the completion of the Work Contractor shall remove from the Site and adjacent areas all tools, appliances, construction equipment and machinery, and surplus materials and shall restore to original condition all property not designated for alteration by the Contract Documents.

D. *Loading of Structures*: Contractor shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall Contractor subject any

part
of the Work or adjacent structures or land to stresses or pressures that will endanger them.

5.03 *Subsurface and Physical Conditions*

A. *Reports and Drawings*: The Supplementary Conditions identify:

1. those reports known to Owner of explorations and tests of subsurface conditions at or adjacent to the Site;

2. those drawings known to Owner of physical conditions relating to existing surface or subsurface structures at the Site (except Underground Facilities); and

3. Technical Data contained in such reports and drawings.

B. *Reliance by Contractor on Technical Data Authorized*: Contractor may rely upon the accuracy of the Technical Data expressly identified in the Supplementary Conditions with respect to such reports and drawings, but such reports and drawings are not Contract Documents. If no such express identification has been made, then Contractor may rely upon the accuracy of the Technical Data (as defined in Article 1) contained in any geotechnical or environmental report prepared for the Project and made available to Contractor. Except for such reliance on Technical Data, Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor, and safety precautions and programs incident thereto; or

2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings; or

3. any Contractor interpretation of or conclusion drawn from any Technical Data or any such other data, interpretations, opinions, or information.

5.04 *Differing Subsurface or Physical Conditions*

A. *Notice by Contractor*: If Contractor believes that any subsurface or physical condition that is uncovered or revealed at the Site either:

1. is of such a nature as to establish that any Technical Data on which Contractor is entitled to rely as provided in Paragraph 5.03 is materially inaccurate; or

2. is of such a nature as to require a change in the Drawings or Specifications; or

3. differs materially from that shown or indicated in the Contract Documents; or

4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents;

then Contractor shall, promptly after becoming aware thereof and before further disturbing the subsurface or physical conditions or performing any Work in connection therewith (except in an emergency as required by Paragraph 7.15), notify Owner and

Engineer in writing about such condition. Contractor shall not further disturb such condition or perform Work in connection therewith (except with respect to an emergency) until receipt of a written statement permitting Contractor to do so.

B. *Engineer's Review*: After receipt of written notice as required by the preceding paragraph, Engineer will promptly review the subsurface or physical condition in question; determine the necessity of Owner's obtaining additional exploration or tests with respect to the condition; conclude whether the condition falls within any one or more of the differing site condition categories in Paragraph 5.04.A above; obtain any pertinent cost or schedule information from Contractor; prepare recommendations to Owner regarding the Contractor's resumption of Work in connection with the subsurface or physical condition in question and the need for any change in the Drawings or Specifications; and advise Owner in writing of Engineer's findings, conclusions, and recommendations.

C. *Owner's Statement to Contractor Regarding Site Condition*: After receipt of Engineer's written findings, conclusions, and recommendations, Owner shall issue a written statement to Contractor (with a copy to Engineer) regarding the subsurface or physical condition in question, addressing the resumption of Work in connection with such condition, indicating whether any change in the Drawings or Specifications will be made, and adopting or rejecting Engineer's written findings, conclusions, and recommendations, in whole or in part.

D. *Possible Price and Times Adjustments*:

1. Contractor shall be entitled to an equitable adjustment in Contract Price or Contract Times, or both, to the extent that the existence of a differing subsurface or physical condition, or any related delay, disruption, or interference, causes an increase or decrease in Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:

    a. such condition must fall within any one or more of the categories described in Paragraph 5.04.A;

    b. with respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraph 13.03; and,

    c. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times.

2. Contractor shall not be entitled to any adjustment in the Contract Price or Contract Times with respect to a subsurface or physical condition if:

    a. Contractor knew of the existence of such condition at the time Contractor made a commitment to Owner with respect to Contract Price and Contract Times by the submission of a Bid or becoming bound under a negotiated contract, or otherwise; or

    b. the existence of such condition reasonably could have been discovered or revealed as a result of any examination, investigation, exploration, test, or study of the Site and contiguous areas expressly required by the Bidding Requirements or Contract

Documents to be conducted by or for Contractor prior to Contractor's making such commitment; or

c. Contractor failed to give the written notice as required by Paragraph 5.04.A.

3. If Owner and Contractor agree regarding Contractor's entitlement to and the amount or extent of any adjustment in the Contract Price or Contract Times, or both, then any such adjustment shall be set forth in a Change Order.

4. Contractor may submit a Change Proposal regarding its entitlement to or the amount or extent of any adjustment in the Contract Price or Contract Times, or both, no later than 30 days after Owner's issuance of the Owner's written statement to Contractor regarding the subsurface or physical condition in question.

5.05 *Underground Facilities*

A. *Contractor's Responsibilities*: The information and data shown or indicated in the Contract Documents with respect to existing Underground Facilities at or adjacent to the Site is based on information and data furnished to Owner or Engineer by the owners of such Underground Facilities, including Owner, or by others. Unless it is otherwise expressly provided in the Supplementary Conditions:

1. Owner and Engineer do not warrant or guarantee the accuracy or completeness of any such information or data provided by others; and

2. the cost of all of the following will be included in the Contract Price, and Contractor shall have full responsibility for:

a. reviewing and checking all information and data regarding existing Underground Facilities at the Site;

b. locating all Underground Facilities shown or indicated in the Contract Documents as being at the Site;

c. coordination of the Work with the owners (including Owner) of such Underground Facilities, during construction; and

d. the safety and protection of all existing Underground Facilities at the Site, and repairing any damage thereto resulting from the Work.

B. *Notice by Contractor*: If Contractor believes that an Underground Facility that is uncovered or revealed at the Site was not shown or indicated in the Contract Documents, or was not shown or indicated with reasonable accuracy, then Contractor shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by Paragraph 7.15), identify the owner of such Underground Facility and give written notice to that owner and to Owner and Engineer.

C. *Engineer's Review*: Engineer will promptly review the Underground Facility and conclude whether such Underground Facility was not shown or indicated in the Contract Documents, or was not shown or indicated with reasonable accuracy; obtain any pertinent cost or schedule information from Contractor; prepare recommendations to Owner regarding the Contractor's resumption of Work in connection with the Underground Facility in question; determine the extent, if any, to which a change is required in the Drawings or Specifications

to reflect and document the consequences of the existence or location of the Underground Facility; and advise Owner in writing of Engineer's findings, conclusions, and recommendations. During such time, Contractor shall be responsible for the safety and protection of such Underground Facility.

D. *Owner's Statement to Contractor Regarding Underground Facility*: After receipt of Engineer's written findings, conclusions, and recommendations, Owner shall issue a written statement to Contractor (with a copy to Engineer) regarding the Underground Facility in question, addressing the resumption of Work in connection with such Underground Facility, indicating whether any change in the Drawings or Specifications will be made, and adopting or rejecting Engineer's written findings, conclusions, and recommendations in whole or in part.

E. *Possible Price and Times Adjustments*:

1. Contractor shall be entitled to an equitable adjustment in the Contract Price or Contract Times, or both, to the extent that any existing Underground Facility at the Site that was not shown or indicated in the Contract Documents, or was not shown or indicated with reasonable accuracy, or any related delay, disruption, or interference, causes an increase or decrease in Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:
   a. Contractor did not know of and could not reasonably have been expected to be aware of or to have anticipated the existence or actual location of the Underground Facility in question;
   b. With respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraph 13.03;
   c. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times; and
   d. Contractor gave the notice required in Paragraph 5.05.B.
2. If Owner and Contractor agree regarding Contractor's entitlement to and the amount or extent of any adjustment in the Contract Price or Contract Times, or both, then any such adjustment shall be set forth in a Change Order.
3. Contractor may submit a Change Proposal regarding its entitlement to or the amount or extent of any adjustment in the Contract Price or Contract Times, or both, no later than 30 days after Owner's issuance of the Owner's written statement to Contractor regarding the Underground Facility in question.

5.06 *Hazardous Environmental Conditions at Site*

A. *Reports and Drawings*: The Supplementary Conditions identify:

1. those reports and drawings known to Owner relating to Hazardous Environmental Conditions that have been identified at or adjacent to the Site; and
2. Technical Data contained in such reports and drawings.

B. *Reliance by Contractor on Technical Data Authorized*: Contractor may rely upon the accuracy of the Technical Data expressly identified in the Supplementary Conditions with

respect to such reports and drawings, but such reports and drawings are not Contract Documents. If no such express identification has been made, then Contractor may rely on the accuracy of the Technical Data (as defined in Article 1) contained in any geotechnical or environmental report prepared for the Project and made available to Contractor. Except for such reliance on Technical Data, Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by Contractor and safety precautions and programs incident thereto; or
2. other data, interpretations, opinions and information contained in such reports or shown or indicated in such drawings; or
3. any Contractor interpretation of or conclusion drawn from any Technical Data or any such other data, interpretations, opinions or information.

C. Contractor shall not be responsible for removing or remediating any Hazardous Environmental Condition encountered, uncovered, or revealed at the Site unless such removal or remediation is expressly identified in the Contract Documents to be within the scope of the Work. Contractor shall be responsible for controlling, containing, and duly removing all Constituents of Concern brought to the Site by Contractor, Subcontractors, Suppliers, or anyone else for whom Contractor is responsible, and for any associated costs; and for the costs of removing and remediating any Hazardous Environmental Condition created by the presence of any such Constituents of Concern.

D. If Contractor encounters, uncovers, or reveals a Hazardous Environmental Condition whose removal or remediation is not expressly identified in the Contract Documents as being within the scope of the Work, or if Contractor or anyone for whom Contractor is responsible creates a Hazardous Environmental Condition, then Contractor shall immediately: (1) secure or otherwise isolate such condition; (2) stop all Work in connection with such condition and in any area affected thereby (except in an emergency as required by Paragraph 7.15); and (3) notify Owner and Engineer (and promptly thereafter confirm such notice in writing). Owner shall promptly consult with Engineer concerning the necessity for Owner to retain a qualified expert to evaluate such condition or take corrective action, if any. Promptly after consulting with Engineer, Owner shall take such actions as are necessary to permit Owner to timely obtain required permits and provide Contractor the written notice required by Paragraph 5.06.F. If Contractor or anyone for whom Contractor is responsible created the Hazardous Environmental Condition in question, then Owner may remove and remediate the Hazardous Environmental Condition, and impose a set-off against payments to account for the associated costs.

E. Contractor shall not resume Work in connection with such Hazardous Environmental Condition or in any affected area until after Owner has obtained any required permits related thereto, and delivered written notice to Contractor either (1) specifying that such condition and any affected area is or has been rendered safe for the resumption of Work, or (2) specifying any special conditions under which such Work may be resumed safely.

F. If Owner and Contractor cannot agree as to entitlement to or on the amount or extent, if

any, of any adjustment in Contract Price or Contract Times, or both, as a result of such Work stoppage or such special conditions under which Work is agreed to be resumed by Contractor, then within 30 days of Owner's written notice regarding the resumption of Work, Contractor may submit a Change Proposal, or Owner may impose a set-off.

G. If after receipt of such written notice Contractor does not agree to resume such Work based on a reasonable belief it is unsafe or does not agree to resume such Work under such special conditions, then Owner may order the portion of the Work that is in the area affected by such condition to be deleted from the Work, following the contractual change procedures in Article 11. Owner may have such deleted portion of the Work performed by Owner's own forces or others in accordance with Article 8.

H. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition, provided that such Hazardous Environmental Condition (1) was not shown or indicated in the Drawings, Specifications, or other Contract Documents, identified as Technical Data entitled to limited reliance pursuant to Paragraph 5.06.B, or identified in the Contract Documents to be included within the scope of the Work, and (2) was not created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 5.06.I shall obligate Owner to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

I. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the failure to control, contain, or remove a Constituent of Concern brought to the Site by Contractor or by anyone for whom Contractor is responsible, or to a Hazardous Environmental Condition created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 5.06.J shall obligate Contractor to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

J. The provisions of Paragraphs 5.03, 5.04, and 5.05 do not apply to the presence of Constituents of Concern or to a Hazardous Environmental Condition uncovered or revealed at the Site.

ARTICLE 6 – BONDS AND INSURANCE

6.01 *Performance, Payment, and Other Bonds*

A. Contractor shall furnish a performance bond and a payment bond, each in an amount at least equal to the Contract Price, as security for the faithful performance and payment of all of Contractor's obligations under the Contract. These bonds shall remain in effect until one

year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 15.08, whichever is later, except as provided otherwise by Laws or Regulations, the Supplementary Conditions, or other specific provisions of the Contract. Contractor shall also furnish such other bonds as are required by the Supplementary Conditions or other specific provisions of the Contract.

B. All bonds shall be in the form prescribed by the Contract except as provided otherwise by Laws or Regulations, and shall be executed by such sureties as are named in "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Circular 570 (as amended and supplemented) by the Financial Management Service, Surety Bond Branch, U.S. Department of the Treasury. A bond signed by an agent or attorney-in-fact must be accompanied by a certified copy of that individual's authority to bind the surety. The evidence of authority shall show that it is effective on the date the agent or attorney-in-fact signed the accompanying bond.

C. Contractor shall obtain the required bonds from surety companies that are duly licensed or authorized in the jurisdiction in which the Project is located to issue bonds in the required amounts.

D. If the surety on a bond furnished by Contractor is declared bankrupt or becomes insolvent, or its right to do business is terminated in any state or jurisdiction where any part of the Project is located, or the surety ceases to meet the requirements above, then Contractor shall promptly notify Owner and Engineer and shall, within 20 days after the event giving rise to such notification, provide another bond and surety, both of which shall comply with the bond and surety requirements above.

E. If Contractor has failed to obtain a required bond, Owner may exclude the Contractor from the Site and exercise Owner's termination rights under Article 16.

F. Upon request, Owner shall provide a copy of the payment bond to any Subcontractor, Supplier, or other person or entity claiming to have furnished labor or materials used in the performance of the Work.

6.02 *Insurance—General Provisions*

A. Owner and Contractor shall obtain and maintain insurance as required in this Article and in the Supplementary Conditions.

B. All insurance required by the Contract to be purchased and maintained by Owner or Contractor shall be obtained from insurance companies that are duly licensed or authorized, in the state or jurisdiction in which the Project is located, to issue insurance policies for the required limits and coverages. Unless a different standard is indicated in the Supplementary Conditions, all companies that provide insurance policies required under this Contract shall have an A.M. Best rating of A-VII or better.

C. Contractor shall deliver to Owner, with copies to each named insured and additional insured (as identified in this Article, in the Supplementary Conditions, or elsewhere in the Contract), certificates of insurance establishing that Contractor has obtained and is maintaining the policies, coverages, and endorsements required by the Contract. Upon request by Owner or any other insured, Contractor shall also furnish other evidence of such required insurance, including but not limited to copies of policies and endorsements, and

documentation of applicable self-insured retentions and deductibles. Contractor may block out (redact) any confidential premium or pricing information contained in any policy or endorsement furnished under this provision.

D. Owner shall deliver to Contractor, with copies to each named insured and additional insured (as identified in this Article, the Supplementary Conditions, or elsewhere in the Contract), certificates of insurance establishing that Owner has obtained and is maintaining the policies, coverages, and endorsements required of Owner by the Contract (if any). Upon request by Contractor or any other insured, Owner shall also provide other evidence of such required insurance (if any), including but not limited to copies of policies and endorsements, and documentation of applicable self-insured retentions and deductibles. Owner may block out (redact) any confidential premium or pricing information contained in any policy or endorsement furnished under this provision.

E. Failure of Owner or Contractor to demand such certificates or other evidence of the other party's full compliance with these insurance requirements, or failure of Owner or Contractor to identify a deficiency in compliance from the evidence provided, shall not be construed as a waiver of the other party's obligation to obtain and maintain such insurance.

F. If either party does not purchase or maintain all of the insurance required of such party by the Contract, such party shall notify the other party in writing of such failure to purchase prior to the start of the Work, or of such failure to maintain prior to any change in the required coverage.

G. If Contractor has failed to obtain and maintain required insurance, Owner may exclude the Contractor from the Site, impose an appropriate set-off against payment, and exercise Owner's termination rights under Article 16.

H. Without prejudice to any other right or remedy, if a party has failed to obtain required insurance, the other party may elect to obtain equivalent insurance to protect such other party's interests at the expense of the party who was required to provide such coverage, and the Contract Price shall be adjusted accordingly.

I. Owner does not represent that insurance coverage and limits established in this Contract necessarily will be adequate to protect Contractor or Contractor's interests.

J. The insurance and insurance limits required herein shall not be deemed as a limitation on Contractor's liability under the indemnities granted to Owner and other individuals and entities in the Contract.

6.03 *Contractor's Insurance*

A. *Workers' Compensation*: Contractor shall purchase and maintain workers' compensation and employer's liability insurance for:

1. claims under workers' compensation, disability benefits, and other similar employee benefit acts.

2. United States Longshoreman and Harbor Workers' Compensation Act and Jones Act coverage (if applicable).

3. claims for damages because of bodily injury, occupational sickness or disease, or death of Contractor's employees (by stop-gap endorsement in monopolist worker's compensation states).

4. Foreign voluntary worker compensation (if applicable).

B. *Commercial General Liability—Claims Covered*: Contractor shall purchase and maintain commercial general liability insurance, covering all operations by or on behalf of Contractor, on an occurrence basis, against:

1. claims for damages because of bodily injury, sickness or disease, or death of any person other than Contractor's employees.
2. claims for damages insured by reasonably available personal injury liability coverage.
3. claims for damages, other than to the Work itself, because of injury to or destruction of tangible property wherever located, including loss of use resulting therefrom.

C. *Commercial General Liability—Form and Content*: Contractor's commercial liability policy shall be written on a 1996 (or later) ISO commercial general liability form (occurrence form) and include the following coverages and endorsements:

1. Products and completed operations coverage:
   a. Such insurance shall be maintained for three years after final payment.
   b. Contractor shall furnish Owner and each other additional insured (as identified in the Supplementary Conditions or elsewhere in the Contract) evidence of continuation of such insurance at final payment and three years thereafter.
2. Blanket contractual liability coverage, to the extent permitted by law, including but not limited to coverage of Contractor's contractual indemnity obligations in Paragraph 7.18.
3. Broad form property damage coverage.
4. Severability of interest.
5. Underground, explosion, and collapse coverage.
6. Personal injury coverage.
7. Additional insured endorsements that include both ongoing operations and products and completed operations coverage through ISO Endorsements CG 20 10 10 01 and CG 20 37 10 01 (together); or CG 20 10 07 04 and CG 20 37 07 04 (together); or their equivalent.
8. For design professional additional insureds, ISO Endorsement CG 20 32 07 04, "Additional Insured—Engineers, Architects or Surveyors Not Engaged by the Named Insured" or its equivalent.

D. *Automobile liability*: Contractor shall purchase and maintain automobile liability insurance against claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance, or use of any motor vehicle. The automobile liability policy shall be written on an occurrence basis.

E. *Umbrella or excess liability*: Contractor shall purchase and maintain umbrella or excess liability insurance written over the underlying employer's liability, commercial general liability, and automobile liability insurance described in the paragraphs above. Subject to industry-standard exclusions, the coverage afforded shall follow form as to each and every

one of the underlying policies.

F. *Contractor's pollution liability insurance*: Contractor shall purchase and maintain a policy covering third-party injury and property damage claims, including clean-up costs, as a result of pollution conditions arising from Contractor's operations and completed operations. This insurance shall be maintained for no less than three years after final completion.

G. *Additional insureds*: The Contractor's commercial general liability, automobile liability, umbrella or excess, and pollution liability policies shall include and list as additional insureds Owner and Engineer, and any individuals or entities identified in the Supplementary Conditions; include coverage for the respective officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of all such additional insureds; and the insurance afforded to these additional insureds shall provide primary coverage for all claims covered thereby (including as applicable those arising from both ongoing and completed operations) on a non-contributory basis. Contractor shall obtain all necessary endorsements to support these requirements.

H. *Contractor's professional liability insurance*: If Contractor will provide or furnish professional services under this Contract, through a delegation of professional design services or otherwise, then Contractor shall be responsible for purchasing and maintaining applicable professional liability insurance. This insurance shall provide protection against claims arising out of performance of professional design or related services, and caused by a negligent error, omission, or act for which the insured party is legally liable. It shall be maintained throughout the duration of the Contract and for a minimum of two years after Substantial Completion. If such professional design services are performed by a Subcontractor, and not by Contractor itself, then the requirements of this paragraph may be satisfied through the purchasing and maintenance of such insurance by such Subcontractor.

I. *General provisions*: The policies of insurance required by this Paragraph 6.03 shall:

1. include at least the specific coverages provided in this Article.
2. be written for not less than the limits of liability provided in this Article and in the Supplementary Conditions, or required by Laws or Regulations, whichever is greater.
3. contain a provision or endorsement that the coverage afforded will not be canceled, materially changed, or renewal refused until at least 10 days prior written notice has been given to Contractor. Within three days of receipt of any such written notice, Contractor shall provide a copy of the notice to Owner, Engineer, and each other insured under the policy.
4. remain in effect at least until final payment (and longer if expressly required in this Article) and at all times thereafter when Contractor may be correcting, removing, or replacing defective Work as a warranty or correction obligation, or otherwise, or returning to the Site to conduct other tasks arising from the Contract Documents.
5. be appropriate for the Work being performed and provide protection from claims that may arise out of or result from Contractor's performance of the Work and Contractor's other obligations under the Contract Documents, whether it is to be performed by Contractor, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform any of the Work, or by anyone for whose acts

any of them may be liable.

J. The coverage requirements for specific policies of insurance must be met by such policies, and not by reference to excess or umbrella insurance provided in other policies.

6.04 *Owner's Liability Insurance*

A. In addition to the insurance required to be provided by Contractor under Paragraph 6.03, Owner, at Owner's option, may purchase and maintain at Owner's expense Owner's own liability insurance as will protect Owner against claims which may arise from operations under the Contract Documents.

B. Owner's liability policies, if any, operate separately and independently from policies required to be provided by Contractor, and Contractor cannot rely upon Owner's liability policies for any of Contractor's obligations to the Owner, Engineer, or third parties.

6.05 *Property Insurance*

A. *Builder's Risk*: Unless otherwise provided in the Supplementary Conditions, Contractor shall purchase and maintain builder's risk insurance upon the Work on a completed value basis, in the amount of the full insurable replacement cost thereof (subject to such deductible amounts as may be provided in the Supplementary Conditions or required by Laws and Regulations). This insurance shall:

1. include the Owner and Contractor as named insureds, and all Subcontractors, and any individuals or entities required by the Supplementary Conditions to be insured under such builder's risk policy, as insureds or named insureds. For purposes of the remainder of this Paragraph 6.05, Paragraphs 6.06 and 6.07, and any corresponding Supplementary Conditions, the parties required to be insured shall collectively be referred to as "insureds."

2. be written on a builder's risk "all risk" policy form that shall at least include insurance for physical loss or damage to the Work, temporary buildings, falsework, and materials and equipment in transit, and shall insure against at least the following perils or causes of loss: fire; lightning; windstorm; riot; civil commotion; terrorism; vehicle impact; aircraft; smoke; theft; vandalism and malicious mischief; mechanical breakdown, boiler explosion, and artificially generated electric current; earthquake; volcanic activity, and other earth movement; flood; collapse; explosion; debris removal; demolition occasioned by enforcement of Laws and Regulations; water damage (other than that caused by flood); and such other perils or causes of loss as may be specifically required by the Supplementary Conditions. If insurance against mechanical breakdown, boiler explosion, and artificially generated electric current; earthquake; volcanic activity, and other earth movement; or flood, are not commercially available under builder's risk policies, by endorsement or otherwise, such insurance may be provided through other insurance policies acceptable to Owner and Contractor.

3. cover, as insured property, at least the following: (a) the Work and all materials, supplies, machinery, apparatus, equipment, fixtures, and other property of a similar nature that are to be incorporated into or used in the preparation, fabrication, construction, erection, or completion of the Work, including Owner-furnished or

assigned property; (b) spare parts inventory required within the scope of the Contract; and (c) temporary works which are not intended to form part of the permanent constructed Work but which are intended to provide working access to the Site, or to the Work under construction, or which are intended to provide temporary support for the Work under construction, including scaffolding, form work, fences, shoring, falsework, and temporary structures.

4. cover expenses incurred in the repair or replacement of any insured property (including but not limited to fees and charges of engineers and architects).
5. extend to cover damage or loss to insured property while in temporary storage at the Site or in a storage location outside the Site (but not including property stored at the premises of a manufacturer or Supplier).
6. extend to cover damage or loss to insured property while in transit.
7. allow for partial occupation or use of the Work by Owner, such that those portions of the Work that are not yet occupied or used by Owner shall remain covered by the builder's risk insurance.
8. allow for the waiver of the insurer's subrogation rights, as set forth below.
9. provide primary coverage for all losses and damages caused by the perils or causes of loss covered.
10. not include a co-insurance clause.
11. include an exception for ensuing losses from physical damage or loss with respect to any defective workmanship, design, or materials exclusions.
12. include performance/hot testing and start-up.
13. be maintained in effect, subject to the provisions herein regarding Substantial Completion and partial occupancy or use of the Work by Owner, until the Work is complete.

B. *Notice of Cancellation or Change*: All the policies of insurance (and the certificates or other evidence thereof) required to be purchased and maintained in accordance with this Paragraph 6.05 will contain a provision or endorsement that the coverage afforded will not be canceled or materially changed or renewal refused until at least 10 days prior written notice has been given to the purchasing policyholder. Within three days of receipt of any such written notice, the purchasing policyholder shall provide a copy of the notice to each other insured.

C. *Deductibles*: The purchaser of any required builder's risk or property insurance shall pay for costs not covered because of the application of a policy deductible.

D. *Partial Occupancy or Use by Owner*: If Owner will occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work as provided in Paragraph 15.04, then Owner (directly, if it is the purchaser of the builder's risk policy, or through Contractor) will provide notice of such occupancy or use to the builder's risk insurer. The builder's risk insurance shall not be canceled or permitted to lapse on account of any such partial use or occupancy; rather, those portions of the Work that are occupied or used by Owner may come off the builder's risk policy, while those portions of the Work not yet occupied or

used by Owner shall remain covered by the builder's risk insurance.

E. *Additional Insurance*: If Contractor elects to obtain other special insurance to be included in or supplement the builder's risk or property insurance policies provided under this Paragraph 6.05, it may do so at Contractor's expense.

F. *Insurance of Other Property*: If the express insurance provisions of the Contract do not require or address the insurance of a property item or interest, such as tools, construction equipment, or other personal property owned by Contractor, a Subcontractor, or an employee of Contractor or a Subcontractor, then the entity or individual owning such property item will be responsible for deciding whether to insure it, and if so in what amount.

6.06 *Waiver of Rights*

A. All policies purchased in accordance with Paragraph 6.05, expressly including the builder's risk policy, shall contain provisions to the effect that in the event of payment of any loss or damage the insurers will have no rights of recovery against any insureds thereunder, or against Engineer or its consultants, or their officers, directors, members, partners, employees, agents, consultants, or subcontractors. Owner and Contractor waive all rights against each other and the respective officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, for all losses and damages caused by, arising out of, or resulting from any of the perils or causes of loss covered by such policies and any other property insurance applicable to the Work; and, in addition, waive all such rights against Engineer, its consultants, all Subcontractors, all individuals or entities identified in the Supplementary Conditions as insureds, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, under such policies for losses and damages so caused. None of the above waivers shall extend to the rights that any party making such waiver may have to the proceeds of insurance held by Owner or Contractor as trustee or fiduciary, or otherwise payable under any policy so issued.

B. Owner waives all rights against Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, for:

1. loss due to business interruption, loss of use, or other consequential loss extending beyond direct physical loss or damage to Owner's property or the Work caused by, arising out of, or resulting from fire or other perils whether or not insured by Owner; and

2. loss or damage to the completed Project or part thereof caused by, arising out of, or resulting from fire or other insured peril or cause of loss covered by any property insurance maintained on the completed Project or part thereof by Owner during partial occupancy or use pursuant to Paragraph 15.04, after Substantial Completion pursuant to Paragraph 15.03, or after final payment pursuant to Paragraph 15.06.

C. Any insurance policy maintained by Owner covering any loss, damage or consequential loss referred to in Paragraph 6.06.B shall contain provisions to the effect that in the event of payment of any such loss, damage, or consequential loss, the insurers will have no rights of recovery against Contractor, Subcontractors, or Engineer, or the officers, directors,

members, partners, employees, agents, consultants, or subcontractors of each and any of them.

D. Contractor shall be responsible for assuring that the agreement under which a Subcontractor performs a portion of the Work contains provisions whereby the Subcontractor waives all rights against Owner, Contractor, all individuals or entities identified in the Supplementary Conditions as insureds, the Engineer and its consultants, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, for all losses and damages caused by, arising out of, relating to, or resulting from any of the perils or causes of loss covered by builder's risk insurance and any other property insurance applicable to the Work.

6.07 *Receipt and Application of Property Insurance Proceeds*

A. Any insured loss under the builder's risk and other policies of insurance required by Paragraph 6.05 will be adjusted and settled with the named insured that purchased the policy. Such named insured shall act as fiduciary for the other insureds, and give notice to such other insureds that adjustment and settlement of a claim is in progress. Any other insured may state its position regarding a claim for insured loss in writing within 15 days after notice of such claim.

B. Proceeds for such insured losses may be made payable by the insurer either jointly to multiple insureds, or to the named insured that purchased the policy in its own right and as fiduciary for other insureds, subject to the requirements of any applicable mortgage clause. A named insured receiving insurance proceeds under the builder's risk and other policies of insurance required by Paragraph 6.05 shall distribute such proceeds in accordance with such agreement as the parties in interest may reach, or as otherwise required under the dispute resolution provisions of this Contract or applicable Laws and Regulations.

C. If no other special agreement is reached, the damaged Work shall be repaired or replaced, the money so received applied on account thereof, and the Work and the cost thereof covered by Change Order, if needed.

ARTICLE 7 – CONTRACTOR'S RESPONSIBILITIES

7.01 *Supervision and Superintendence*

A. Contractor shall supervise, inspect, and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents. Contractor shall be solely responsible for the means, methods, techniques, sequences, and procedures of construction.

B. At all times during the progress of the Work, Contractor shall assign a competent resident superintendent who shall not be replaced without written notice to Owner and Engineer except under extraordinary circumstances.

7.02 *Labor; Working Hours*

A. Contractor shall provide competent, suitably qualified personnel to survey and lay out the Work and perform construction as required by the Contract Documents. Contractor shall at all times maintain good discipline and order at the Site.

B. Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise stated in the Contract Documents, all Work at the Site may be performed during the hours of 7:00 am to 10:00 pm, seven days a week.

7.03 *Services, Materials, and Equipment*

A. Unless otherwise specified in the Contract Documents, Contractor shall provide and assume full responsibility for all services, materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities, and all other facilities and incidentals necessary for the performance, testing, start up, and completion of the Work, whether or not such items are specifically called for in the Contract Documents.

B. All materials and equipment incorporated into the Work shall be of good quality and new, except as otherwise provided in the Contract Documents. All special warranties and guarantees required by the Specifications shall expressly run to the benefit of Owner. If required by Engineer, Contractor shall furnish satisfactory evidence (including reports of required tests) as to the source, kind, and quality of materials and equipment.

C. All materials and equipment shall be stored, applied, installed, connected, erected, protected, used, cleaned, and conditioned in accordance with instructions of the applicable Supplier, except as otherwise may be provided in the Contract Documents.

7.04 *"Or Equals"*

A. Whenever an item of material or equipment is specified or described in the Contract Documents by using the name of a proprietary item or the name of a particular Supplier, the Contract Price has been based upon Contractor furnishing such item as specified. The specification or description of such an item is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or equal" item is permitted, Contractor may request that Engineer authorize the use of other items of material or equipment, or items from other proposed suppliers under the circumstances described below.

1. If Engineer in its sole discretion determines that an item of material or equipment proposed by Contractor is functionally equal to that named and sufficiently similar so that no change in related Work will be required, Engineer shall deem it an "or equal" item. For the purposes of this paragraph, a proposed item of material or equipment will be considered functionally equal to an item so named if:

a. in the exercise of reasonable judgment Engineer determines that:

1) it is at least equal in materials of construction, quality, durability, appearance, strength, and design characteristics;

2) it will reliably perform at least equally well the function and achieve the results imposed by the design concept of the completed Project as a functioning whole;

3) it has a proven record of performance and availability of responsive service; and

4) it is not objectionable to Owner.

b. Contractor certifies that, if approved and incorporated into the Work:

1) there will be no increase in cost to the Owner or increase in Contract Times; and

2) it will conform substantially to the detailed requirements of the item named in the Contract Documents.

B. *Contractor's Expense*: Contractor shall provide all data in support of any proposed "or equal" item at Contractor's expense.

C. *Engineer's Evaluation and Determination*: Engineer will be allowed a reasonable time to evaluate each "or-equal" request. Engineer may require Contractor to furnish additional data about the proposed "or-equal" item. Engineer will be the sole judge of acceptability. No "or-equal" item will be ordered, furnished, installed, or utilized until Engineer's review is complete and Engineer determines that the proposed item is an "or-equal", which will be evidenced by an approved Shop Drawing or other written communication. Engineer will advise Contractor in writing of any negative determination.

D. *Effect of Engineer's Determination*: Neither approval nor denial of an "or-equal" request shall result in any change in Contract Price. The Engineer's denial of an "or-equal" request shall be final and binding, and may not be reversed through an appeal under any provision of the Contract Documents.

E. *Treatment as a Substitution Request*: If Engineer determines that an item of material or equipment proposed by Contractor does not qualify as an "or-equal" item, Contractor may request that Engineer considered the proposed item as a substitute pursuant to Paragraph 7.05.

7.05 *Substitutes*

A. Unless the specification or description of an item of material or equipment required to be furnished under the Contract Documents contains or is followed by words reading that no substitution is permitted, Contractor may request that Engineer authorize the use of other items of material or equipment under the circumstances described below. To the extent possible such requests shall be made before commencement of related construction at the Site.

1. Contractor shall submit sufficient information as provided below to allow Engineer to determine if the item of material or equipment proposed is functionally equivalent to that named and an acceptable substitute therefor. Engineer will not accept requests for review of proposed substitute items of material or equipment from anyone other than Contractor.

2. The requirements for review by Engineer will be as set forth in Paragraph 7.05.B, as supplemented by the Specifications, and as Engineer may decide is appropriate under the circumstances.

3. Contractor shall make written application to Engineer for review of a proposed substitute item of material or equipment that Contractor seeks to furnish or use. The application:

a. hall certify that the proposed substitute item will:

1) perform adequately the functions and achieve the results called for by the general design,

2) be similar in substance to that specified, and

3) be suited to the same use as that specified.

b. will state:

1) the extent, if any, to which the use of the proposed substitute item will necessitate a change in Contract Times,

2) whether use of the proposed substitute item in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with Owner for other work on the Project) to adapt the design to the proposed substitute item, and

3) whether incorporation or use of the proposed substitute item in connection with the Work is subject to payment of any license fee or royalty.

c. will identify:

1) all variations of the proposed substitute item from that specified, and

2) available engineering, sales, maintenance, repair, and replacement services.

d. shall contain an itemized estimate of all costs or credits that will result directly or indirectly from use of such substitute item, including but not limited to changes in Contract Price, shared savings, costs of redesign, and claims of other contractors affected by any resulting change.

B. *Engineer's Evaluation and Determination*: Engineer will be allowed a reasonable time to evaluate each substitute request, and to obtain comments and direction from Owner. Engineer may require Contractor to furnish additional data about the proposed substitute item. Engineer will be the sole judge of acceptability. No substitute will be ordered, furnished, installed, or utilized until Engineer's review is complete and Engineer determines that the proposed item is an acceptable substitute. Engineer's determination will be evidenced by a Field Order or a proposed Change Order accounting for the substitution itself and all related impacts, including changes in Contract Price or Contract Times. Engineer will advise Contractor in writing of any negative determination.

C. *Special Guarantee*: Owner may require Contractor to furnish at Contractor's expense a special performance guarantee or other surety with respect to any substitute.

D. *Reimbursement of Engineer's Cost*: Engineer will record Engineer's costs in evaluating a substitute proposed or submitted by Contractor. Whether or not Engineer approves a substitute so proposed or submitted by Contractor, Contractor shall reimburse Owner for the reasonable charges of Engineer for evaluating each such proposed substitute. Contractor shall also reimburse Owner for the reasonable charges of Engineer for making changes in the Contract Documents (or in the provisions of any other direct contract with Owner) resulting from the acceptance of each proposed substitute.

E. *Contractor's Expense*: Contractor shall provide all data in support of any proposed

substitute at Contractor's expense.

F. *Effect of Engineer's Determination*: If Engineer approves the substitution request, Contractor shall execute the proposed Change Order and proceed with the substitution. The Engineer's denial of a substitution request shall be final and binding, and may not be reversed through an appeal under any provision of the Contract Documents. Contractor may challenge the scope of reimbursement costs imposed under Paragraph 7.05.D, by timely submittal of a Change Proposal.

7.06 *Concerning Subcontractors, Suppliers, and Others*

A. Contractor may retain Subcontractors and Suppliers for the performance of parts of the Work. Such Subcontractors and Suppliers must be acceptable to Owner.

B. Contractor shall retain specific Subcontractors, Suppliers, or other individuals or entities for the performance of designated parts of the Work if required by the Contract to do so.

C. Subsequent to the submittal of Contractor's Bid or final negotiation of the terms of the Contract, Owner may not require Contractor to retain any Subcontractor, Supplier, or other individual or entity to furnish or perform any of the Work against which Contractor has reasonable objection.

D. Prior to entry into any binding subcontract or purchase order, Contractor shall submit to Owner the identity of the proposed Subcontractor or Supplier (unless Owner has already deemed such proposed Subcontractor or Supplier acceptable, during the bidding process or otherwise). Such proposed Subcontractor or Supplier shall be deemed acceptable to Owner unless Owner raises a substantive, reasonable objection within five days.

E. Owner may require the replacement of any Subcontractor, Supplier, or other individual or entity retained by Contractor to perform any part of the Work. Owner also may require Contractor to retain specific replacements; provided, however, that Owner may not require a replacement to which Contractor has a reasonable objection. If Contractor has submitted the identity of certain Subcontractors, Suppliers, or other individuals or entities for acceptance by Owner, and Owner has accepted it (either in writing or by failing to make written objection thereto), then Owner may subsequently revoke the acceptance of any such Subcontractor, Supplier, or other individual or entity so identified solely on the basis of substantive, reasonable objection after due investigation. Contractor shall submit an acceptable replacement for the rejected Subcontractor, Supplier, or other individual or entity.

F. If Owner requires the replacement of any Subcontractor, Supplier, or other individual or entity retained by Contractor to perform any part of the Work, then Contractor shall be entitled to an adjustment in Contract Price or Contract Times, or both, with respect to the replacement; and Contractor shall initiate a Change Proposal for such adjustment within 30 days of Owner's requirement of replacement.

G. No acceptance by Owner of any such Subcontractor, Supplier, or other individual or entity, whether initially or as a replacement, shall constitute a waiver of the right of Owner to the completion of the Work in accordance with the Contract Documents.

H. On a monthly basis Contractor shall submit to Engineer a complete list of all Subcontractors and Suppliers having a direct contract with Contractor, and of all other Subcontractors and

Suppliers known to Contractor at the time of submittal.

I. Contractor shall be fully responsible to Owner and Engineer for all acts and omissions of the Subcontractors, Suppliers, and other individuals or entities performing or furnishing any of the Work just as Contractor is responsible for Contractor's own acts and omissions.

J. Contractor shall be solely responsible for scheduling and coordinating the work of Subcontractors, Suppliers, and all other individuals or entities performing or furnishing any of the Work.

K. Contractor shall restrict all Subcontractors, Suppliers, and such other individuals or entities performing or furnishing any of the Work from communicating with Engineer or Owner, except through Contractor or in case of an emergency, or as otherwise expressly allowed herein.

L. The divisions and sections of the Specifications and the identifications of any Drawings shall not control Contractor in dividing the Work among Subcontractors or Suppliers or delineating the Work to be performed by any specific trade.

M. All Work performed for Contractor by a Subcontractor or Supplier shall be pursuant to an appropriate contractual agreement that specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract Documents for the benefit of Owner and Engineer.

N. Owner may furnish to any Subcontractor or Supplier, to the extent practicable, information about amounts paid to Contractor on account of Work performed for Contractor by the particular Subcontractor or Supplier.

O. Nothing in the Contract Documents:

1. shall create for the benefit of any such Subcontractor, Supplier, or other individual or entity any contractual relationship between Owner or Engineer and any such Subcontractor, Supplier, or other individual or entity; nor
2. shall create any obligation on the part of Owner or Engineer to pay or to see to the payment of any money due any such Subcontractor, Supplier, or other individual or entity except as may otherwise be required by Laws and Regulations.

7.07 *Patent Fees and Royalties*

A. Contractor shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation in the Work of any invention, design, process, product, or device which is the subject of patent rights or copyrights held by others. If a particular invention, design, process, product, or device is specified in the Contract Documents for use in the performance of the Work and if, to the actual knowledge of Owner or Engineer, its use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights shall be disclosed by Owner in the Contract Documents.

B. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, and its officers, directors, members, partners, employees, agents, consultants, and subcontractors from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) arising

out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device specified in the Contract Documents, but not identified as being subject to payment of any license fee or royalty to others required by patent rights or copyrights.

C. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device not specified in the Contract Documents.

7.08 *Permits*

A. Unless otherwise provided in the Contract Documents, Contractor shall obtain and pay for all construction permits and licenses. Owner shall assist Contractor, when necessary, in obtaining such permits and licenses. Contractor shall pay all governmental charges and inspection fees necessary for the prosecution of the Work which are applicable at the time of the submission of Contractor's Bid (or when Contractor became bound under a negotiated contract). Owner shall pay all charges of utility owners for connections for providing permanent service to the Work

7.09 *Taxes*

A. Contractor shall pay all sales, consumer, use, and other similar taxes required to be paid by Contractor in accordance with the Laws and Regulations of the place of the Project which are applicable during the performance of the Work.

7.10 *Laws and Regulations*

A. Contractor shall give all notices required by and shall comply with all Laws and Regulations applicable to the performance of the Work. Except where otherwise expressly required by applicable Laws and Regulations, neither Owner nor Engineer shall be responsible for monitoring Contractor's compliance with any Laws or Regulations.

B. If Contractor performs any Work or takes any other action knowing or having reason to know that it is contrary to Laws or Regulations, Contractor shall bear all resulting costs and losses, and shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such Work or other action. It shall not be Contractor's responsibility to make certain that the Work described in the Contract Documents is in accordance with Laws and Regulations, but this shall not relieve Contractor of Contractor's obligations under Paragraph 3.03.

C. Owner or Contractor may give notice to the other party of any changes after the submission of Contractor's Bid (or after the date when Contractor became bound under a

negotiated contract) in Laws or Regulations having an effect on the cost or time of performance of the Work, including but not limited to changes in Laws or Regulations having an effect on procuring permits and on sales, use, value-added, consumption, and other similar taxes. If Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times resulting from such changes, then within 30 days of such notice Contractor may submit a Change Proposal, or Owner may initiate a Claim.

7.11 *Record Documents*

A. Contractor shall maintain in a safe place at the Site one printed record copy of all Drawings, Specifications, Addenda, Change Orders, Work Change Directives, Field Orders, written interpretations and clarifications, and approved Shop Drawings. Contractor shall keep such record documents in good order and annotate them to show changes made during construction. These record documents, together with all approved Samples, will be available to Engineer for reference. Upon completion of the Work, Contractor shall deliver these record documents to Engineer.

7.12 *Safety and Protection*

A. Contractor shall be solely responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the Work. Such responsibility does not relieve Subcontractors of their responsibility for the safety of persons or property in the performance of their work, nor for compliance with applicable safety Laws and Regulations. Contractor shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury, or loss to:

1. all persons on the Site or who may be affected by the Work;
2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the Site; and
3. other property at the Site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, other work in progress, utilities, and Underground Facilities not designated for removal, relocation, or replacement in the course of construction.

B. Contractor shall comply with all applicable Laws and Regulations relating to the safety of persons or property, or to the protection of persons or property from damage, injury, or loss; and shall erect and maintain all necessary safeguards for such safety and protection. Contractor shall notify Owner; the owners of adjacent property, Underground Facilities, and other utilities; and other contractors and utility owners performing work at or adjacent to the Site, when prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation, and replacement of their property or work in progress.

C. Contractor shall comply with the applicable requirements of Owner's safety programs, if any. The Supplementary Conditions identify any Owner's safety programs that are applicable to the Work.

D. Contractor shall inform Owner and Engineer of the specific requirements of Contractor's

safety program with which Owner's and Engineer's employees and representatives must comply while at the Site.

E. All damage, injury, or loss to any property referred to in Paragraph 7.12.A.2 or 7.12.A.3 caused, directly or indirectly, in whole or in part, by Contractor, any Subcontractor, Supplier, or any other individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, shall be remedied by Contractor at its expense (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of Owner or Engineer or anyone employed by any of them, or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of Contractor or any Subcontractor, Supplier, or other individual or entity directly or indirectly employed by any of them).

F. Contractor's duties and responsibilities for safety and protection shall continue until such time as all the Work is completed and Engineer has issued a notice to Owner and Contractor in accordance with Paragraph 15.06.B that the Work is acceptable (except as otherwise expressly provided in connection with Substantial Completion).

G. Contractor's duties and responsibilities for safety and protection shall resume whenever Contractor or any Subcontractor or Supplier returns to the Site to fulfill warranty or correction obligations, or to conduct other tasks arising from the Contract Documents.

7.13 *Safety Representative*

A. Contractor shall designate a qualified and experienced safety representative at the Site whose duties and responsibilities shall be the prevention of accidents and the maintaining and supervising of safety precautions and programs.

7.14 *Hazard Communication Programs*

A. Contractor shall be responsible for coordinating any exchange of material safety data sheets or other hazard communication information required to be made available to or exchanged between or among employers at the Site in accordance with Laws or Regulations.

7.15 *Emergencies*

A. In emergencies affecting the safety or protection of persons or the Work or property at the Site or adjacent thereto, Contractor is obligated to act to prevent threatened damage, injury, or loss. Contractor shall give Engineer prompt written notice if Contractor believes that any significant changes in the Work or variations from the Contract Documents have been caused thereby or are required as a result thereof. If Engineer determines that a change in the Contract Documents is required because of the action taken by Contractor in response to such an emergency, a Work Change Directive or Change Order will be issued.

7.16 *Shop Drawings, Samples, and Other Submittals*

A. *Shop Drawing and Sample Submittal Requirements*:

1. Before submitting a Shop Drawing or Sample, Contractor shall have:

a. reviewed and coordinated the Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract

Documents;

b. determined and verified all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect thereto;

c. determined and verified the suitability of all materials and equipment offered with respect to the indicated application, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of the Work; and

d. determined and verified all information relative to Contractor's responsibilities for means, methods, techniques, sequences, and procedures of construction, and safety precautions and programs incident thereto.

2. Each submittal shall bear a stamp or specific written certification that Contractor has satisfied Contractor's obligations under the Contract Documents with respect to Contractor's review of that submittal, and that Contractor approves the submittal.

3. With each submittal, Contractor shall give Engineer specific written notice of any variations that the Shop Drawing or Sample may have from the requirements of the Contract Documents. This notice shall be set forth in a written communication separate from the Shop Drawings or Sample submittal; and, in addition, in the case of Shop Drawings by a specific notation made on each Shop Drawing submitted to Engineer for review and approval of each such variation.

B. *Submittal Procedures for Shop Drawings and Samples*: Contractor shall submit Shop Drawings and Samples to Engineer for review and approval in accordance with the accepted Schedule of Submittals. Each submittal will be identified as Engineer may require.

1. *Shop Drawings*:

a. Contractor shall submit the number of copies required in the Specifications.

b. Data shown on the Shop Drawings will be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show Engineer the services, materials, and equipment Contractor proposes to provide and to enable Engineer to review the information for the limited purposes required by Paragraph 7.16.D.

2. *Samples*:

a. Contractor shall submit the number of Samples required in the Specifications.

b. Contractor shall clearly identify each Sample as to material, Supplier, pertinent data such as catalog numbers, the use for which intended and other data as Engineer may require to enable Engineer to review the submittal for the limited purposes required by Paragraph 7.16.D.

3. Where a Shop Drawing or Sample is required by the Contract Documents or the Schedule of Submittals, any related Work performed prior to Engineer's review and approval of the pertinent submittal will be at the sole expense and responsibility of Contractor.

C. *Other Submittals*: Contractor shall submit other submittals to Engineer in accordance with the accepted Schedule of Submittals, and pursuant to the applicable terms of the

Specifications.

D. *Engineer's Review*:

1. Engineer will provide timely review of Shop Drawings and Samples in accordance with the Schedule of Submittals acceptable to Engineer. Engineer's review and approval will be only to determine if the items covered by the submittals will, after installation or incorporation in the Work, conform to the information given in the Contract Documents and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents.

2. Engineer's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction or to safety precautions or programs incident thereto.

3. Engineer's review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.

4. Engineer's review and approval of a Shop Drawing or Sample shall not relieve Contractor from responsibility for any variation from the requirements of the Contract Documents unless Contractor has complied with the requirements of Paragraph 7.16.A.3 and Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample. Engineer will document any such approved variation from the requirements of the Contract Documents in a Field Order.

5. Engineer's review and approval of a Shop Drawing or Sample shall not relieve Contractor from responsibility for complying with the requirements of Paragraph 7.16.A and B.

6. Engineer's review and approval of a Shop Drawing or Sample, or of a variation from the requirements of the Contract Documents, shall not, under any circumstances, change the Contract Times or Contract Price, unless such changes are included in a Change Order.

7. Neither Engineer's receipt, review, acceptance or approval of a Shop Drawing, Sample, or other submittal shall result in such item becoming a Contract Document.

8. Contractor shall perform the Work in compliance with the requirements and commitments set forth in approved Shop Drawings and Samples, subject to the provisions of Paragraph 7.16.D.4.

E. *Resubmittal Procedures*:

1. Contractor shall make corrections required by Engineer and shall return the required number of corrected copies of Shop Drawings and submit, as required, new Samples for review and approval. Contractor shall direct specific attention in writing to revisions other than the corrections called for by Engineer on previous submittals.

2. Contractor shall furnish required submittals with sufficient information and accuracy to obtain required approval of an item with no more than three submittals. Engineer will record Engineer's time for reviewing a fourth or subsequent submittal of a Shop Drawings, sample, or other item requiring approval, and Contractor shall be responsible for Engineer's charges to Owner for such time. Owner may impose a set-

off against payments due to Contractor to secure reimbursement for such charges.

3. If Contractor requests a change of a previously approved submittal item, Contractor shall be responsible for Engineer's charges to Owner for its review time, and Owner may impose a set-off against payments due to Contractor to secure reimbursement for such charges, unless the need for such change is beyond the control of Contractor.

7.17 *Contractor's General Warranty and Guarantee*

A. Contractor warrants and guarantees to Owner that all Work will be in accordance with the Contract Documents and will not be defective for a period of one year. The pump supplier shall provide a two-year warranty on the Pumps, Electrical Control Panel and any supplied appurtenances with the pump package that shall be transferred to the City. Engineer and its officers, directors, members, partners, employees, agents, consultants, and subcontractors shall be entitled to rely on Contractor's warranty and guarantee.

B. Contractor's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, modification, or improper maintenance or operation by persons other than Contractor, Subcontractors, Suppliers, or any other individual or entity for whom Contractor is responsible; or

2. normal wear and tear under normal usage.

C. Contractor's obligation to perform and complete the Work in accordance with the Contract Documents shall be absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents or a release of Contractor's obligation to perform the Work in accordance with the Contract Documents:

1. observations by Engineer;

2. recommendation by Engineer or payment by Owner of any progress or final payment;

3. the issuance of a certificate of Substantial Completion by Engineer or any payment related thereto by Owner;

4. use or occupancy of the Work or any part thereof by Owner;

5. any review and approval of a Shop Drawing or Sample submittal;

6. the issuance of a notice of acceptability by Engineer;

7. any inspection, test, or approval by others; or

8. any correction of defective Work by Owner.

D. If the Contract requires the Contractor to accept the assignment of a contract entered into by Owner, then the specific warranties, guarantees, and correction obligations contained in the assigned contract shall govern with respect to Contractor's performance obligations to Owner for the Work described in the assigned contract.

7.18 *Indemnification*

A. To the fullest extent permitted by Laws and Regulations, and in addition to any other obligations of Contractor under the Contract or otherwise, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and

against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the performance of the Work, provided that any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom but only to the extent caused by any negligent act or omission of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work or anyone for whose acts any of them may be liable.

B. In any and all claims against Owner or Engineer or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors by any employee (or the survivor or personal representative of such employee) of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 7.18.A shall not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for Contractor or any such Subcontractor, Supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

C. The indemnification obligations of Contractor under Paragraph 7.18.A shall not extend to the liability of Engineer and Engineer's officers, directors, members, partners, employees, agents, consultants and subcontractors arising out of:

1. the preparation or approval of, or the failure to prepare or approve maps, Drawings, opinions, reports, surveys, Change Orders, designs, or Specifications; or

2. giving directions or instructions, or failing to give them, if that is the primary cause of the injury or damage.

7.19 *Delegation of Professional Design Services*

A. Contractor will not be required to provide professional design services unless such services are specifically required by the Contract Documents for a portion of the Work or unless such services are required to carry out Contractor's responsibilities for construction means, methods, techniques, sequences and procedures. Contractor shall not be required to provide professional services in violation of applicable Laws and Regulations.

B. If professional design services or certifications by a design professional related to systems, materials, or equipment are specifically required of Contractor by the Contract Documents, Owner and Engineer will specify all performance and design criteria that such services must satisfy. Contractor shall cause such services or certifications to be provided by a properly licensed professional, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, and other submittals prepared by such professional. Shop Drawings and other submittals related to the Work designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to Engineer.

C. Owner and Engineer shall be entitled to rely upon the adequacy, accuracy, and completeness of the services, certifications, or approvals performed by such design professionals, provided Owner and Engineer have specified to Contractor all performance

and design criteria that such services must satisfy.

D. Pursuant to this paragraph, Engineer's review and approval of design calculations and design drawings will be only for the limited purpose of checking for conformance with performance and design criteria given and the design concept expressed in the Contract Documents. Engineer's review and approval of Shop Drawings and other submittals (except design calculations and design drawings) will be only for the purpose stated in Paragraph 7.16.D.1.

E. Contractor shall not be responsible for the adequacy of the performance or design criteria specified by Owner or Engineer.

ARTICLE 8 – OTHER WORK AT THE SITE

8.01 *Other Work*

A. In addition to and apart from the Work under the Contract Documents, the Owner may perform other work at or adjacent to the Site. Such other work may be performed by Owner's employees, or through contracts between the Owner and third parties. Owner may also arrange to have third-party utility owners perform work on their utilities and facilities at or adjacent to the Site.

B. If Owner performs other work at or adjacent to the Site with Owner's employees, or through contracts for such other work, then Owner shall give Contractor written notice thereof prior to starting any such other work. If Owner has advance information regarding the start of any utility work at or adjacent to the Site, Owner shall provide such information to Contractor.

C. Contractor shall afford each other contractor that performs such other work, each utility owner performing other work, and Owner, if Owner is performing other work with Owner's employees, proper and safe access to the Site, and provide a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work. Contractor shall do all cutting, fitting, and patching of the Work that may be required to properly connect or otherwise make its several parts come together and properly integrate with such other work. Contractor shall not endanger any work of others by cutting, excavating, or otherwise altering such work; provided, however, that Contractor may cut or alter others' work with the written consent of Engineer and the others whose work will be affected.

D. If the proper execution or results of any part of Contractor's Work depends upon work performed by others under this Article 8, Contractor shall inspect such other work and promptly report to Engineer in writing any delays, defects, or deficiencies in such other work that render it unavailable or unsuitable for the proper execution and results of Contractor's Work. Contractor's failure to so report will constitute an acceptance of such other work as fit and proper for integration with Contractor's Work except for latent defects and deficiencies in such other work.

8.02 *Coordination*

A. If Owner intends to contract with others for the performance of other work at or adjacent

to the Site, to perform other work at or adjacent to the Site with Owner's employees, or to arrange to have utility owners perform work at or adjacent to the Site, the following will be set forth in the Supplementary Conditions or provided to Contractor prior to the start of any such other work:

1. the identity of the individual or entity that will have authority and responsibility for coordination of the activities among the various contractors;
2. an itemization of the specific matters to be covered by such authority and responsibility; and
3. the extent of such authority and responsibilities.

B. Unless otherwise provided in the Supplementary Conditions, Owner shall have sole authority and responsibility for such coordination.

8.03 *Legal Relationships*

A. If, in the course of performing other work at or adjacent to the Site for Owner, the Owner's employees, any other contractor working for Owner, or any utility owner for whom the Owner is responsible causes damage to the Work or to the property of Contractor or its Subcontractors, or delays, disrupts, interferes with, or increases the scope or cost of the performance of the Work, through actions or inaction, then Contractor shall be entitled to an equitable adjustment in the Contract Price or the Contract Times, or both. Contractor must submit any Change Proposal seeking an equitable adjustment in the Contract Price or the Contract Times under this paragraph within 30 days of the damaging, delaying, disrupting, or interfering event. The entitlement to, and extent of, any such equitable adjustment shall take into account information (if any) regarding such other work that was provided to Contractor in the Contract Documents prior to the submittal of the Bid or the final negotiation of the terms of the Contract. When applicable, any such equitable adjustment in Contract Price shall be conditioned on Contractor assigning to Owner all Contractor's rights against such other contractor or utility owner with respect to the damage, delay, disruption, or interference that is the subject of the adjustment. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times.

B. Contractor shall take reasonable and customary measures to avoid damaging, delaying, disrupting, or interfering with the work of Owner, any other contractor, or any utility owner performing other work at or adjacent to the Site. If Contractor fails to take such measures and as a result damages, delays, disrupts, or interferes with the work of any such other contractor or utility owner, then Owner may impose a set-off against payments due to Contractor, and assign to such other contractor or utility owner the Owner's contractual rights against Contractor with respect to the breach of the obligations set forth in this paragraph.

C. When Owner is performing other work at or adjacent to the Site with Owner's employees, Contractor shall be liable to Owner for damage to such other work, and for the reasonable direct delay, disruption, and interference costs incurred by Owner as a result of Contractor's failure to take reasonable and customary measures with respect to Owner's other work. In response to such damage, delay, disruption, or interference, Owner may

impose a set-off against payments due to Contractor.

D. If Contractor damages, delays, disrupts, or interferes with the work of any other contractor, or any utility owner performing other work at or adjacent to the Site, through Contractor's failure to take reasonable and customary measures to avoid such impacts, or if any claim arising out of Contractor's actions, inactions, or negligence in performance of the Work at or adjacent to the Site is made by any such other contractor or utility owner against Contractor, Owner, or Engineer, then Contractor shall (1) promptly attempt to settle the claim as to all parties through negotiations with such other contractor or utility owner, or otherwise resolve the claim by arbitration or other dispute resolution proceeding or at law, and (2) indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against any such claims, and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such damage, delay, disruption, or interference.

ARTICLE 9 – OWNER'S RESPONSIBILITIES

9.01 *Communications to Contractor*

A. Except as otherwise provided in these General Conditions, Owner shall issue all communications to Contractor through Engineer.

9.02 *Replacement of Engineer*

A. Owner may at its discretion appoint an engineer to replace Engineer, provided Contractor makes no reasonable objection to the replacement engineer. The replacement engineer's status under the Contract Documents shall be that of the former Engineer.

9.03 *Furnish Data*

A. Owner shall promptly furnish the data required of Owner under the Contract Documents.

9.04 *Pay When Due*

A. Owner shall make payments to Contractor when they are due as provided in the Agreement.

9.05 *Lands and Easements; Reports, Tests, and Drawings*

A. Owner's duties with respect to providing lands and easements are set forth in Paragraph 5.01.

B. Owner's duties with respect to providing engineering surveys to establish reference points are set forth in Paragraph 4.03.

C. Article 5 refers to Owner's identifying and making available to Contractor copies of reports of explorations and tests of conditions at the Site, and drawings of physical conditions relating to existing surface or subsurface structures at the Site.

9.06 *Insurance*

A. Owner's responsibilities, if any, with respect to purchasing and maintaining liability and property insurance are set forth in Article 6.

9.07 *Change Orders*

A. Owner's responsibilities with respect to Change Orders are set forth in Article 11.

9.08 *Inspections, Tests, and Approvals*

A. Owner's responsibility with respect to certain inspections, tests, and approvals is set forth in Paragraph 14.02.B.

9.09 *Limitations on Owner's Responsibilities*

A. The Owner shall not supervise, direct, or have control or authority over, nor be responsible for, Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Owner will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

9.10 *Undisclosed Hazardous Environmental Condition*

A. Owner's responsibility in respect to an undisclosed Hazardous Environmental Condition is set forth in Paragraph 5.06.

9.11 *Evidence of Financial Arrangements*

A. Upon request of Contractor, Owner shall furnish Contractor reasonable evidence that financial arrangements have been made to satisfy Owner's obligations under the Contract Documents (including obligations under proposed changes in the Work).

9.12 *Safety Programs*

A. While at the Site, Owner's employees and representatives shall comply with the specific applicable requirements of Contractor's safety programs of which Owner has been informed.

B. Owner shall furnish copies of any applicable Owner safety programs to Contractor.

ARTICLE 10 – ENGINEER'S STATUS DURING CONSTRUCTION

10.01 *Owner's Representative*

A. Engineer will be Owner's representative during the construction period. The duties and responsibilities and the limitations of authority of Engineer as Owner's representative during construction are set forth in the Contract.

10.02 *Visits to Site*

A. Engineer will make visits to the Site at intervals appropriate to the various stages of construction as Engineer deems necessary in order to observe as an experienced and qualified design professional the progress that has been made and the quality of the various aspects of Contractor's executed Work. Based on information obtained during such visits and observations, Engineer, for the benefit of Owner, will determine, in general, if the Work is proceeding in accordance with the Contract Documents. Engineer will not be required to make exhaustive or continuous inspections on the Site to check the quality or quantity of the Work. Engineer's efforts will be directed toward providing for Owner a

greater degree of confidence that the completed Work will conform generally to the Contract Documents. On the basis of such visits and observations, Engineer will keep Owner informed of the progress of the Work and will endeavor to guard Owner against defective Work.

B. Engineer's visits and observations are subject to all the limitations on Engineer's authority and responsibility set forth in Paragraph 10.08. Particularly, but without limitation, during or as a result of Engineer's visits or observations of Contractor's Work, Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work.

10.03 *Project Representative*

A. This project was designed in-house by the City Engineer. The Project Representative will be the City-assigned Project Manager. This person will be assigned and present at the Mandatory Pre-Bid conference and will remain in that period for the duration of the project.

B. The RPR shall not:

1 Authorize any deviation from the Contract Documents or substitution of materials or equipment (including "or-equal" items).

2 Exceed limitations of Engineer's authority as set forth in the Contract Documents.

3 Undertake any of the responsibilities of Contractor, Subcontractors, or Suppliers.

4 Advise on, issue directions relative to, or assume control over any aspect of the means, methods, techniques, sequences or procedures of Contractor's work.

5 Advise on, issue directions regarding, or assume control over security or safety practices, precautions, and programs in connection with the activities or operations of Owner or Contractor.

6 Participate in specialized field or laboratory tests or inspections conducted off-site by others except as specifically authorized by City Project Manager.

7 Accept Shop Drawing or Sample submittals from anyone other than Contractor.

8 Authorize Owner to occupy the Project in whole or in part.

10.04 *Rejecting Defective Work*

B. Engineer has the authority to reject Work in accordance with Article 14.

10.05 *Shop Drawings, Change Orders and Payments*

B. Engineer's authority, and limitations thereof, as to Shop Drawings and Samples, are set forth in Paragraph 7.16.

C. Engineer's authority, and limitations thereof, as to design calculations and design drawings submitted in response to a delegation of professional design services, if any, are set forth in Paragraph 7.19.

D. Engineer's authority as to Change Orders is set forth in Article 11.

E. Engineer's authority as to Applications for Payment is set forth in Article 15.

10.06 *Determinations for Unit Price Work*

B. Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor as set forth in Paragraph 13.03.

10.07 *Decisions on Requirements of Contract Documents and Acceptability of Work*

B. Engineer will render decisions regarding the requirements of the Contract Documents, and judge the acceptability of the Work, pursuant to the specific procedures set forth herein for initial interpretations, Change Proposals, and acceptance of the Work. In rendering such decisions and judgments, Engineer will not show partiality to Owner or Contractor, and will not be liable to Owner, Contractor, or others in connection with any proceedings, interpretations, decisions, or judgments conducted or rendered in good faith.

10.08 *Limitations on Engineer's Authority and Responsibilities*

B. Neither Engineer's authority or responsibility under this Article 10 or under any other provision of the Contract, nor any decision made by Engineer in good faith either to exercise or not exercise such authority or responsibility or the undertaking, exercise, or performance of any authority or responsibility by Engineer, shall create, impose, or give rise to any duty in contract, tort, or otherwise owed by Engineer to Contractor, any Subcontractor, any Supplier, any other individual or entity, or to any surety for or employee or agent of any of them.

C. Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Engineer will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

D. Engineer will not be responsible for the acts or omissions of Contractor or of any Subcontractor, any Supplier, or of any other individual or entity performing any of the Work.

E. Engineer's review of the final Application for Payment and accompanying documentation and all maintenance and operating instructions, schedules, guarantees, bonds, certificates of inspection, tests and approvals, and other documentation required to be delivered by Paragraph 15.06.A will only be to determine generally that their content complies with the requirements of, and in the case of certificates of inspections, tests, and approvals, that the results certified indicate compliance with the Contract Documents.

F. The limitations upon authority and responsibility set forth in this Paragraph 10.08 shall also apply to the Resident Project Representative, if any.

10.09 *Compliance with Safety Program*

B. While at the Site, Engineer's employees and representatives will comply with the specific applicable requirements of Owner's and Contractor's safety programs (if any) of which Engineer has been informed.

ARTICLE 11 – AMENDING THE CONTRACT DOCUMENTS; CHANGES IN THE WORK

11.01 *Amending and Supplementing Contract Documents*

A. The Contract Documents may be amended or supplemented by a Change Order, a Work Change Directive, or a Field Order.

1. *Change Orders*:

a. If an amendment or supplement to the Contract Documents includes a change in the Contract Price or the Contract Times, such amendment or supplement must be set forth in a Change Order. A Change Order also may be used to establish amendments and supplements of the Contract Documents that do not affect the Contract Price or Contract Times.

b. Owner and Contractor may amend those terms and conditions of the Contract Documents that do not involve (1) the performance or acceptability of the Work, **(2)** the design (as set forth in the Drawings, Specifications, or otherwise), or (3) other engineering or technical matters, without the recommendation of the Engineer. Such an amendment shall be set forth in a Change Order.

2. *Work Change Directives*: A Work Change Directive will not change the Contract Price or the Contract Times but is evidence that the parties expect that the modification ordered or documented by a Work Change Directive will be incorporated in a subsequently issued Change Order, following negotiations by the parties as to the Work Change Directive's effect, if any, on the Contract Price and Contract Times; or, if negotiations are unsuccessful, by a determination under the terms of the Contract Documents governing adjustments, expressly including Paragraph 11.04 regarding change of Contract Price. Contractor must submit any Change Proposal seeking an adjustment of the Contract Price or the Contract Times, or both, no later than 30 days after the completion of the Work set out in the Work Change Directive. Owner must submit any Claim seeking an adjustment of the Contract Price or the Contract Times, or both, no later than 60 days after issuance of the Work Change Directive.

3. *Field Orders*: Engineer may authorize minor changes in the Work if the changes do not involve an adjustment in the Contract Price or the Contract Times and are compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. Such changes will be accomplished by a Field Order and will be binding on Owner and also on Contractor, which shall perform the Work involved promptly. If Contractor believes that a Field Order justifies an adjustment in the Contract Price or Contract Times, or both, then before proceeding with the Work at issue, Contractor shall submit a Change Proposal as provided herein.

11.02 *Owner-Authorized Changes in the Work*

A. Without invalidating the Contract and without notice to any surety, Owner may, at any time or from time to time, order additions, deletions, or revisions in the Work. Such changes shall be supported by Engineer's recommendation, to the extent the change involves the design (as set forth in the Drawings, Specifications, or otherwise), or other engineering or technical matters. Such changes may be accomplished by a Change Order, if Owner and Contractor have agreed as to the effect, if any, of the changes on Contract Times or Contract Price; or by a Work Change Directive. Upon receipt of any such document, Contractor shall promptly proceed with the Work involved; or, in the case of a

deletion in the Work, promptly cease construction activities with respect to such deleted Work. Added or revised Work shall be performed under the applicable conditions of the Contract Documents. Nothing in this paragraph shall obligate Contractor to undertake work that Contractor reasonably concludes cannot be performed in a manner consistent with Contractor's safety obligations under the Contract Documents or Laws and Regulations.

11.03 *Unauthorized Changes in the Work*

A. Contractor shall not be entitled to an increase in the Contract Price or an extension of the Contract Times with respect to any work performed that is not required by the Contract Documents, as amended, modified, or supplemented, except in the case of an emergency as provided in Paragraph 7.15 or in the case of uncovering Work as provided in Paragraph 14.05.

11.04 *Change of Contract Price*

A. The Contract Price may only be changed by a Change Order. Any Change Proposal for an adjustment in the Contract Price shall comply with the provisions of Paragraph 11.06. Any Claim for an adjustment of Contract Price shall comply with the provisions of Article 12.

B. An adjustment in the Contract Price will be determined as follows:

1. where the Work involved is covered by unit prices contained in the Contract Documents, then by application of such unit prices to the quantities of the items involved (subject to the provisions of Paragraph 13.03); or

2. where the Work involved is not covered by unit prices contained in the Contract Documents, then by a mutually agreed lump sum (which may include an allowance for overhead and profit not necessarily in accordance with Paragraph 11.04.C.2); or

3. where the Work involved is not covered by unit prices contained in the Contract Documents and the parties do not reach mutual agreement to a lump sum, then on the basis of the Cost of the Work (determined as provided in Paragraph 13.01) plus a Contractor's fee for overhead and profit (determined as provided in Paragraph 11.04.C).

C. *Contractor's Fee*: When applicable, the Contractor's fee for overhead and profit shall be determined as follows:

1. a mutually acceptable fixed fee; or

2. if a fixed fee is not agreed upon, then a fee based on the following percentages of the various portions of the Cost of the Work:

a. for costs incurred under Paragraphs 13.01.B.1 and 13.01.B.2, the Contractor's fee shall be 15 percent;

b. for costs incurred under Paragraph 13.01.B.3, the Contractor's fee shall be five percent;

c. where one or more tiers of subcontracts are on the basis of Cost of the Work plus a fee and no fixed fee is agreed upon, the intent of Paragraphs 11.04.C.2.a and 11.04.C.2.b is that the Contractor's fee shall be based on: (1) a fee of 15 percent of the costs incurred under Paragraphs 13.01.A.1 and 13.01.A.2 by the Subcontractor that actually performs the Work, at whatever tier, and (2) with

respect to Contractor itself and to any Subcontractors of a tier higher than that of the Subcontractor that actually performs the Work, a fee of five percent of the amount (fee plus underlying costs incurred) attributable to the next lower tier Subcontractor; provided, however, that for any such subcontracted work the maximum total fee to be paid by Owner shall be no greater than 27 percent of the costs incurred by the Subcontractor that actually performs the work;

d. no fee shall be payable on the basis of costs itemized under Paragraphs 13.01.B.4, 13.01.B.5, and 13.01.C;

e. the amount of credit to be allowed by Contractor to Owner for any change which results in a net decrease in cost will be the amount of the actual net decrease in cost plus a deduction in Contractor's fee by an amount equal to five percent of such net decrease; and

f. when both additions and credits are involved in any one change, the adjustment in Contractor's fee shall be computed on the basis of the net change in accordance with Paragraphs 11.04.C.2.a through 11.04.C.2.e, inclusive.

11.05 *Change of Contract Times*

A. The Contract Times may only be changed by a Change Order. Any Change Proposal for an adjustment in the Contract Times shall comply with the provisions of Paragraph 11.06. Any Claim for an adjustment in the Contract Times shall comply with the provisions of Article 12.

B. An adjustment of the Contract Times shall be subject to the limitations set forth in Paragraph 4.05, concerning delays in Contractor's progress.

11.06 *Change Proposals*

A. Contractor shall submit a Change Proposal to Engineer to request an adjustment in the Contract Times or Contract Price; appeal an initial decision by Engineer concerning the requirements of the Contract Documents or relating to the acceptability of the Work under the Contract Documents; contest a set-off against payment due; or seek other relief under the Contract. The Change Proposal shall specify any proposed change in Contract Times or Contract Price, or both, or other proposed relief, and explain the reason for the proposed change, with citations to any governing or applicable provisions of the Contract Documents.

1. *Procedures*: Contractor shall submit each Change Proposal to Engineer promptly (but in no event later than 30 days) after the start of the event giving rise thereto, or after such initial decision. The Contractor shall submit supporting data, including the proposed change in Contract Price or Contract Time (if any), to the Engineer and Owner within 15 days after the submittal of the Change Proposal. The supporting data shall be accompanied by a written statement that the supporting data are accurate and complete, and that any requested time or price adjustment is the entire adjustment to which Contractor believes it is entitled as a result of said event. Engineer will advise Owner regarding the Change Proposal, and consider any comments or response from Owner regarding the Change Proposal.

2. *Engineer's Action*: Engineer will review each Change Proposal and, within 30 days after receipt of the Contractor's supporting data, either deny the Change Proposal in whole, approve it in whole, or deny it in part and approve it in part. Such actions shall be in

writing, with a copy provided to Owner and Contractor. If Engineer does not take action on the Change Proposal within 30 days, then either Owner or Contractor may at any time thereafter submit a letter to the other party indicating that as a result of Engineer's inaction the Change Proposal is deemed denied, thereby commencing the time for appeal of the denial under Article 12.

3. *Binding Decision*: Engineer's decision will be final and binding upon Owner and Contractor, unless Owner or Contractor appeals the decision by filing a Claim under Article 12.

B. *Resolution of Certain Change Proposals*: If the Change Proposal does not involve the design (as set forth in the Drawings, Specifications, or otherwise), the acceptability of the Work, or other engineering or technical matters, then Engineer will notify the parties that the Engineer is unable to resolve the Change Proposal. For purposes of further resolution of such a Change Proposal, such notice shall be deemed a denial, and Contractor may choose to seek resolution under the terms of Article 12.

11.07 *Execution of Change Orders*

A. Owner and Contractor shall execute appropriate Change Orders covering:

1. changes in the Contract Price or Contract Times which are agreed to by the parties, including any undisputed sum or amount of time for Work actually performed in accordance with a Work Change Directive;

2. changes in Contract Price resulting from an Owner set-off, unless Contractor has duly contested such set-off;

3. changes in the Work which are: (a) ordered by Owner pursuant to Paragraph 11.02, (b) required because of Owner's acceptance of defective Work under Paragraph 14.04 or Owner's correction of defective Work under Paragraph 14.07, or (c) agreed to by the parties, subject to the need for Engineer's recommendation if the change in the Work involves the design (as set forth in the Drawings, Specifications, or otherwise), or other engineering or technical matters; and

4. changes in the Contract Price or Contract Times, or other changes, which embody the substance of any final and binding results under Paragraph 11.06, or Article 12.

B. If Owner or Contractor refuses to execute a Change Order that is required to be executed under the terms of this Paragraph 11.07, it shall be deemed to be of full force and effect, as if fully executed.

11.08 *Notification to Surety*

A. If the provisions of any bond require notice to be given to a surety of any change affecting the general scope of the Work or the provisions of the Contract Documents (including, but not limited to, Contract Price or Contract Times), the giving of any such notice will be Contractor's responsibility. The amount of each applicable bond will be adjusted to reflect the effect of any such change.

ARTICLE 12 – CLAIMS

12.01 *Claims*

A. *Claims Process*: The following disputes between Owner and Contractor shall be submitted to the Claims process set forth in this Article:

1. Appeals by Owner or Contractor of Engineer's decisions regarding Change Proposals;
2. Owner demands for adjustments in the Contract Price or Contract Times, or other relief under the Contract Documents; and
3. Disputes that Engineer has been unable to address because they do not involve the design (as set forth in the Drawings, Specifications, or otherwise), the acceptability of the Work, or other engineering or technical matters.

B. *Submittal of Claim*: The party submitting a Claim shall deliver it directly to the other party to the Contract promptly (but in no event later than 30 days) after the start of the event giving rise thereto; in the case of appeals regarding Change Proposals within 30 days of the decision under appeal. The party submitting the Claim shall also furnish a copy to the Engineer, for its information only. The responsibility to substantiate a Claim shall rest with the party making the Claim. In the case of a Claim by Contractor seeking an increase in the Contract Times or Contract Price, or both, Contractor shall certify that the Claim is made in good faith, that the supporting data are accurate and complete, and that to the best of Contractor's knowledge and belief the amount of time or money requested accurately reflects the full amount to which Contractor is entitled.

C. *Review and Resolution*: The party receiving a Claim shall review it thoroughly, giving full consideration to its merits. The two parties shall seek to resolve the Claim through the exchange of information and direct negotiations. The parties may extend the time for resolving the Claim by mutual agreement. All actions taken on a Claim shall be stated in writing and submitted to the other party, with a copy to Engineer.

D. *Mediation*:

1. At any time after initiation of a Claim, Owner and Contractor may mutually agree to mediation of the underlying dispute. The agreement to mediate shall stay the Claim submittal and response process.
2. If Owner and Contractor agree to mediation, then after 60 days from such agreement, either Owner or Contractor may unilaterally terminate the mediation process, and the Claim submittal and decision process shall resume as of the date of the termination. If the mediation proceeds but is unsuccessful in resolving the dispute, the Claim submittal and decision process shall resume as of the date of the conclusion of the mediation, as determined by the mediator.
3. Owner and Contractor shall each pay one-half of the mediator's fees and costs.

E. *Partial Approval*: If the party receiving a Claim approves the Claim in part and denies it in part, such action shall be final and binding unless within 30 days of such action the other party invokes the procedure set forth in Article 17 for final resolution of disputes.

F. *Denial of Claim*: If efforts to resolve a Claim are not successful, the party receiving the Claim may deny it by giving written notice of denial to the other party. If the receiving party does not take action on the Claim within 90 days, then either Owner or Contractor may at any time thereafter submit a letter to the other party indicating that as a result of the inaction, the Claim is deemed denied, thereby commencing the time for appeal of the denial. A

denial of the Claim shall be final and binding unless within 30 days of the denial the other party invokes the procedure set forth in Article 17 for the final resolution of disputes.

G. *Final and Binding Results*: If the parties reach a mutual agreement regarding a Claim, whether through approval of the Claim, direct negotiations, mediation, or otherwise; or if a Claim is approved in part and denied in part, or denied in full, and such actions become final and binding; then the results of the agreement or action on the Claim shall be incorporated in a Change Order to the extent they affect the Contract, including the Work, the Contract Times, or the Contract Price.

ARTICLE 13 – COST OF THE WORK; ALLOWANCES; UNIT PRICE WORK

13.01 *Cost of the Work*

A. *Purposes for Determination of Cost of the Work*: The term Cost of the Work means the sum of all costs necessary for the proper performance of the Work at issue, as further defined below. The provisions of this Paragraph 13.01 are used for two distinct purposes:

1. To determine Cost of the Work when Cost of the Work is a component of the Contract Price, under cost-plus-fee, time-and-materials, or other cost-based terms; or

2. To determine the value of a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price. When the value of any such adjustment is determined on the basis of Cost of the Work, Contractor is entitled only to those additional or incremental costs required because of the change in the Work or because of the event giving rise to the adjustment.

B. *Costs Included*: Except as otherwise may be agreed to in writing by Owner, costs included in the Cost of the Work shall be in amounts no higher than those prevailing in the locality of the Project, shall not include any of the costs itemized in Paragraph 13.01.C, and shall include only the following items:

1. Payroll costs for employees in the direct employ of Contractor in the performance of the Work under schedules of job classifications agreed upon by Owner and Contractor. Such employees shall include, without limitation, superintendents, foremen, and other personnel employed full time on the Work. Payroll costs for employees not employed full time on the Work shall be apportioned on the basis of their time spent on the Work. Payroll costs shall include, but not be limited to, salaries and wages plus the cost of fringe benefits, which shall include social security contributions, unemployment, excise, and payroll taxes, workers' compensation, health and retirement benefits, bonuses, sick leave, and vacation and holiday pay applicable thereto. The expenses of performing Work outside of regular working hours, on Saturday, Sunday, or legal holidays, shall be included in the above to the extent authorized by Owner.

2. Cost of all materials and equipment furnished and incorporated in the Work, including costs of transportation and storage thereof, and Suppliers' field services required in connection therewith. All cash discounts shall accrue to Contractor unless Owner deposits funds with Contractor with which to make payments, in which case the cash discounts shall accrue to Owner. All trade discounts, rebates, and refunds and returns from sale of surplus materials and equipment shall accrue to Owner, and Contractor

shall make provisions so that they may be obtained.

3. Payments made by Contractor to Subcontractors for Work performed by Subcontractors. If required by Owner, Contractor shall obtain competitive bids from subcontractors acceptable to Owner and Contractor and shall deliver such bids to Owner, who will then determine, with the advice of Engineer, which bids, if any, will be acceptable. If any subcontract provides that the Subcontractor is to be paid on the basis of Cost of the Work plus a fee, the Subcontractor's Cost of the Work and fee shall be determined in the same manner as Contractor's Cost of the Work and fee as provided in this Paragraph 13.01.

4. Costs of special consultants (including but not limited to engineers, architects, testing laboratories, surveyors, attorneys, and accountants) employed for services specifically related to the Work.

5. Supplemental costs including the following:
   a. The proportion of necessary transportation, travel, and subsistence expenses of Contractor's employees incurred in discharge of duties connected with the Work.

   b. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office, and temporary facilities at the Site, and hand tools not owned by the workers, which are consumed in the performance of the Work, and cost, less market value, of such items used but not consumed which remain the property of Contractor.

   c. Rentals of all construction equipment and machinery, and the parts thereof, whether rented from Contractor or others in accordance with rental agreements approved by Owner with the advice of Engineer, and the costs of transportation, loading, unloading, assembly, dismantling, and removal thereof. All such costs shall be in accordance with the terms of said rental agreements. The rental of any such equipment, machinery, or parts shall cease when the use thereof is no longer necessary for the Work.

   d. Sales, consumer, use, and other similar taxes related to the Work, and for which Contractor is liable, as imposed by Laws and Regulations.

   e. Deposits lost for causes other than negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, and royalty payments and fees for permits and licenses.

   f. Losses and damages (and related expenses) caused by damage to the Work, not compensated by insurance or otherwise, sustained by Contractor in connection with the performance of the Work (except losses and damages within the deductible amounts of property insurance established in accordance with Paragraph 6.05), provided such losses and damages have resulted from causes other than the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable. Such losses shall include settlements made with the written consent and approval of Owner. No such losses, damages, and expenses shall be included in the Cost of the Work for the purpose of determining Contractor's fee.

g. The cost of utilities, fuel, and sanitary facilities at the Site.

h. Minor expenses such as communication service at the Site, express and courier services, and similar petty cash items in connection with the Work.

i. The costs of premiums for all bonds and insurance that Contractor is required by the Contract Documents to purchase and maintain.

C. *Costs Excluded*: The term Cost of the Work shall not include any of the following items:

1. Payroll costs and other compensation of Contractor's officers, executives, principals (of partnerships and sole proprietorships), general managers, safety managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expediters, timekeepers, clerks, and other personnel employed by Contractor, whether at the Site or in Contractor's principal or branch office for general administration of the Work and not specifically included in the agreed upon schedule of job classifications referred to in Paragraph 13.01.B.1 or specifically covered by Paragraph 13.01.B.4. The payroll costs and other compensation excluded here are to be considered administrative costs covered by the Contractor's fee.

2. Expenses of Contractor's principal and branch offices other than Contractor's office at the Site.

3. Any part of Contractor's capital expenses, including interest on Contractor's capital employed for the Work and charges against Contractor for delinquent payments.

4. Costs due to the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including but not limited to, the correction of defective Work, disposal of materials or equipment wrongly supplied, and making good any damage to property.

5. Other overhead or general expense costs of any kind and the costs of any item not specifically and expressly included in Paragraph 13.01.B.

D. *Contractor's Fee*: When the Work as a whole is performed on the basis of cost-plus, Contractor's fee shall be determined as set forth in the Agreement. When the value of any Work covered by a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price is determined on the basis of Cost of the Work, Contractor's fee shall be determined as set forth in Paragraph 11.04.C.

E. *Documentation*: Whenever the Cost of the Work for any purpose is to be determined pursuant to this Article 13, Contractor will establish and maintain records thereof in accordance with generally accepted accounting practices and submit in a form acceptable to Engineer an itemized cost breakdown together with supporting data.

13.02 *Allowances*

A. It is understood that Contractor has included in the Contract Price all allowances so named in the Contract Documents and shall cause the Work so covered to be performed for such sums and by such persons or entities as may be acceptable to Owner and Engineer.

B. *Cash Allowances*: Contractor agrees that:

1. the cash allowances include the cost to Contractor (less any applicable trade discounts) of materials and equipment required by the allowances to be delivered at

the Site, and all applicable taxes; and

2. Contractor's costs for unloading and handling on the Site, labor, installation, overhead, profit, and other expenses contemplated for the cash allowances have been included in the Contract Price and not in the allowances, and no demand for additional payment on account of any of the foregoing will be valid.

C. *Contingency Allowance*: Contractor agrees that a contingency allowance, if any, is for the sole use of Owner to cover unanticipated costs.

D. Prior to final payment, an appropriate Change Order will be issued as recommended by Engineer to reflect actual amounts due Contractor on account of Work covered by allowances, and the Contract Price shall be correspondingly adjusted.

13.03 *Unit Price Work (if used)*

A. Where the Contract Documents provide that all or part of the Work is to be Unit Price Work, initially the Contract Price will be deemed to include for all Unit Price Work an amount equal to the sum of the unit price for each separately identified item of Unit Price Work times the estimated quantity of each item as indicated in the Agreement.

B. The estimated quantities of items of Unit Price Work are not guaranteed and are solely for the purpose of comparison of Bids and determining an initial Contract Price. Payments to Contractor for Unit Price Work will be based on actual quantities.

C. Each unit price will be deemed to include an amount considered by Contractor to be adequate to cover Contractor's overhead and profit for each separately identified item.

D. Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor. Engineer will review with Contractor the Engineer's preliminary determinations on such matters before rendering a written decision thereon (by recommendation of an Application for Payment or otherwise). Engineer's written decision thereon will be final and binding (except as modified by Engineer to reflect changed factual conditions or more accurate data) upon Owner and Contractor, subject to the provisions of the following paragraph.

E. Within 30 days of Engineer's written decision under the preceding paragraph, Contractor may submit a Change Proposal, or Owner may file a Claim, seeking an adjustment in the Contract Price if:

1. the quantity of any item of Unit Price Work performed by Contractor differs materially and significantly from the estimated quantity of such item indicated in the Agreement;

2. there is no corresponding adjustment with respect to any other item of Work; and

3. Contractor believes that it is entitled to an increase in Contract Price as a result of having incurred additional expense or Owner believes that Owner is entitled to a decrease in Contract Price, and the parties are unable to agree as to the amount of any such increase or decrease.

ARTICLE 14 – TESTS AND INSPECTIONS; CORRECTION, REMOVAL OR ACCEPTANCE OF DEFECTIVE WORK

14.01 *Access to Work*

A. Owner, Engineer, their consultants and other representatives and personnel of Owner, independent testing laboratories, and authorities having jurisdiction will have access to the Site and the Work at reasonable times for their observation, inspection, and testing. Contractor shall provide them proper and safe conditions for such access and advise them of Contractor's safety procedures and programs so that they may comply therewith as applicable.

14.02 *Tests, Inspections, and Approvals*

A. Contractor shall give Engineer timely notice of readiness of the Work (or specific parts thereof) for all required inspections and tests, and shall cooperate with inspection and testing personnel to facilitate required inspections and tests.

B. Owner shall retain and pay for the services of an independent inspector, testing laboratory, or other qualified individual or entity to perform all inspections and tests expressly required by the Contract Documents to be furnished and paid for by Owner, except that costs incurred in connection with tests or inspections of covered Work shall be governed by the provisions of Paragraph 14.05.

C. If Laws or Regulations of any public body having jurisdiction require any Work (or part thereof) specifically to be inspected, tested, or approved by an employee or other representative of such public body, Contractor shall assume full responsibility for arranging and obtaining such inspections, tests, or approvals, pay all costs in connection therewith, and furnish Engineer the required certificates of inspection or approval.

D. Contractor shall be responsible for arranging, obtaining, and paying for all inspections and tests required:

1. by the Contract Documents, unless the Contract Documents expressly allocate responsibility for a specific inspection or test to Owner;

2. to attain Owner's and Engineer's acceptance of materials or equipment to be incorporated in the Work;

3. by manufacturers of equipment furnished under the Contract Documents;

4. for testing, adjusting, and balancing of mechanical, electrical, and other equipment to be incorporated into the Work; and

5. for acceptance of materials, mix designs, or equipment submitted for approval prior to Contractor's purchase thereof for incorporation in the Work.

Such inspections and tests shall be performed by independent inspectors, testing laboratories, or other qualified individuals or entities acceptable to Owner and Engineer.

E. If the Contract Documents require the Work (or part thereof) to be approved by Owner, Engineer, or another designated individual or entity, then Contractor shall assume full responsibility for arranging and obtaining such approvals.

F. If any Work (or the work of others) that is to be inspected, tested, or approved is covered by Contractor without written concurrence of Engineer, Contractor shall, if requested by Engineer, uncover such Work for observation. Such uncovering shall be at Contractor's expense unless Contractor had given Engineer timely notice of Contractor's intention to cover the same and Engineer had not acted with reasonable promptness in response to

such notice.

14.03 *Defective Work*

A. *Contractor's Obligation*: It is Contractor's obligation to assure that the Work is not defective for a period of one year. The pump supplier shall provide a two-year warranty on the Pumps, Electrical Control Panel and any supplied appurtenances with the pump package that shall be transferred to the City.

B. *Engineer's Authority*: Engineer has the authority to determine whether Work is defective, and to reject defective Work.

C. *Notice of Defects*: Prompt notice of all defective Work of which Owner or Engineer has actual knowledge will be given to Contractor.

D. *Correction, or Removal and Replacement*: Promptly after receipt of written notice of defective Work, Contractor shall correct all such defective Work, whether or not fabricated, installed, or completed, or, if Engineer has rejected the defective Work, remove it from the Project and replace it with Work that is not defective.

E. *Preservation of Warranties*: When correcting defective Work, Contractor shall take no action that would void or otherwise impair Owner's special warranty and guarantee, if any, on said Work.

F. *Costs and Damages*: In addition to its correction, removal, and replacement obligations with respect to defective Work, Contractor shall pay all claims, costs, losses, and damages arising out of or relating to defective Work, including but not limited to the cost of the inspection, testing, correction, removal, replacement, or reconstruction of such defective Work, fines levied against Owner by governmental authorities because the Work is defective, and the costs of repair or replacement of work of others resulting from defective Work. Prior to final payment, if Owner and Contractor are unable to agree as to the measure of such claims, costs, losses, and damages resulting from defective Work, then Owner may impose a reasonable set-off against payments due under Article 15.

14.04 *Acceptance of Defective Work*

A. If, instead of requiring correction or removal and replacement of defective Work, Owner prefers to accept it, Owner may do so (subject, if such acceptance occurs prior to final payment, to Engineer's confirmation that such acceptance is in general accord with the design intent and applicable engineering principles, and will not endanger public safety). Contractor shall pay all claims, costs, losses, and damages attributable to Owner's evaluation of and determination to accept such defective Work (such costs to be approved by Engineer as to reasonableness), and for the diminished value of the Work to the extent not otherwise paid by Contractor. If any such acceptance occurs prior to final payment, the necessary revisions in the Contract Documents with respect to the Work shall be incorporated in a Change Order. If the parties are unable to agree as to the decrease in the Contract Price, reflecting the diminished value of Work so accepted, then Owner may impose a reasonable set-off against payments due under Article 15. If the acceptance of defective Work occurs after final payment, Contractor shall pay an appropriate amount to Owner.

14.05 *Uncovering Work*

A. Engineer has the authority to require additional inspection or testing of the Work, whether or not the Work is fabricated, installed, or completed.

B. If any Work is covered contrary to the written request of Engineer, then Contractor shall, if requested by Engineer, uncover such Work for Engineer's observation, and then replace the covering, all at Contractor's expense.

C. If Engineer considers it necessary or advisable that covered Work be observed by Engineer or inspected or tested by others, then Contractor, at Engineer's request, shall uncover, expose, or otherwise make available for observation, inspection, or testing as Engineer may require, that portion of the Work in question, and provide all necessary labor, material, and equipment.

1. If it is found that the uncovered Work is defective, Contractor shall be responsible for all claims, costs, losses, and damages arising out of or relating to such uncovering, exposure, observation, inspection, and testing, and of satisfactory replacement or reconstruction (including but not limited to all costs of repair or replacement of work of others); and pending Contractor's full discharge of this responsibility the Owner shall be entitled to impose a reasonable set-off against payments due under Article 15.

2. If the uncovered Work is not found to be defective, Contractor shall be allowed an increase in the Contract Price or an extension of the Contract Times, or both, directly attributable to such uncovering, exposure, observation, inspection, testing, replacement, and reconstruction. If the parties are unable to agree as to the amount or extent thereof, then Contractor may submit a Change Proposal within 30 days of the determination that the Work is not defective.

14.06 *Owner May Stop the Work*

A. If the Work is defective, or Contractor fails to supply sufficient skilled workers or suitable materials or equipment, or fails to perform the Work in such a way that the completed Work will conform to the Contract Documents, then Owner may order Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, this right of Owner to stop the Work shall not give rise to any duty on the part of Owner to exercise this right for the benefit of Contractor, any Subcontractor, any Supplier, any other individual or entity, or any surety for, or employee or agent of any of them.

14.07 *Owner May Correct Defective Work*

A. If Contractor fails within a reasonable time after written notice from Engineer to correct defective Work, or to remove and replace rejected Work as required by Engineer, or if Contractor fails to perform the Work in accordance with the Contract Documents, or if Contractor fails to comply with any other provision of the Contract Documents, then Owner may, after seven days written notice to Contractor, correct or remedy any such deficiency.

B. In exercising the rights and remedies under this Paragraph 14.07, Owner shall proceed expeditiously. In connection with such corrective or remedial action, Owner may exclude Contractor from all or part of the Site, take possession of all or part of the Work and suspend Contractor's services related thereto, and incorporate in the Work all materials and equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere. Contractor shall allow Owner, Owner's representatives, agents and

employees, Owner's other contractors, and Engineer and Engineer's consultants access to the Site to enable Owner to exercise the rights and remedies under this paragraph.

C. All claims, costs, losses, and damages incurred or sustained by Owner in exercising the rights and remedies under this Paragraph 14.07 will be charged against Contractor as set-offs against payments due under Article 15. Such claims, costs, losses and damages will include but not be limited to all costs of repair, or replacement of work of others destroyed or damaged by correction, removal, or replacement of Contractor's defective Work.

D. Contractor shall not be allowed an extension of the Contract Times because of any delay in the performance of the Work attributable to the exercise by Owner of Owner's rights and remedies under this Paragraph 14.07.

ARTICLE 15 – PAYMENTS TO CONTRACTOR; SET-OFFS; COMPLETION; CORRECTION PERIOD

15.01 *Progress Payments*

A. *Basis for Progress Payments*: The Schedule of Values established as provided in Article 2 will serve as the basis for progress payments and will be incorporated into a form of Application for Payment acceptable to Engineer. Progress payments on account of Unit Price Work will be based on the number of units completed during the pay period, as determined under the provisions of Paragraph 13.03. Progress payments for cost-based Work will be based on Cost of the Work completed by Contractor during the pay period.

B. *Applications for Payments*:

1. At least 20 days before the date established in the Agreement for each progress payment (but not more often than once a month), Contractor shall submit to Engineer for review an Application for Payment filled out and signed by Contractor covering the Work completed as of the date of the Application and accompanied by such supporting documentation as is required by the Contract Documents. If payment is requested on the basis of materials and equipment not incorporated in the Work but delivered and suitably stored at the Site or at another location agreed to in writing, the Application for Payment shall also be accompanied by a bill of sale, invoice, or other documentation warranting that Owner has received the materials and equipment free and clear of all Liens, and evidence that the materials and equipment are covered by appropriate property insurance, a warehouse bond, or other arrangements to protect Owner's interest therein, all of which must be satisfactory to Owner.

2. Beginning with the second Application for Payment, each Application shall include an affidavit of Contractor stating that all previous progress payments received on account of the Work have been applied on account to discharge Contractor's legitimate obligations associated with prior Applications for Payment.

3. The amount of retainage with respect to progress payments will be as stipulated in the Agreement.

C. *Review of Applications*:

1. Engineer will, within 10 business days after receipt of each Application for Payment, including each resubmittal, either indicate in writing a recommendation of payment

and present the Application to Owner, or return the Application to Contractor indicating in writing Engineer's reasons for refusing to recommend payment. In the latter case, Contractor may make the necessary corrections and resubmit the Application.

2. Engineer's recommendation of any payment requested in an Application for Payment will constitute a representation by Engineer to Owner, based on Engineer's observations of the executed Work as an experienced and qualified design professional, and on Engineer's review of the Application for Payment and the accompanying data and schedules, that to the best of Engineer's knowledge, information and belief:

    a. the Work has progressed to the point indicated;

    b. the quality of the Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, the results of any subsequent tests called for in the Contract Documents, a final determination of quantities and classifications for Unit Price Work under Paragraph 13.03, and any other qualifications stated in the recommendation); and

    c. the conditions precedent to Contractor's being entitled to such payment appear to have been fulfilled in so far as it is Engineer's responsibility to observe the Work.

3. By recommending any such payment Engineer will not thereby be deemed to have represented that:

    a. inspections made to check the quality or the quantity of the Work as it has been performed have been exhaustive, extended to every aspect of the Work in progress, or involved detailed inspections of the Work beyond the responsibilities specifically assigned to Engineer in the Contract; or

    b. there may not be other matters or issues between the parties that might entitle Contractor to be paid additionally by Owner or entitle Owner to withhold payment to Contractor.

4. Neither Engineer's review of Contractor's Work for the purposes of recommending payments nor Engineer's recommendation of any payment, including final payment, will impose responsibility on Engineer:

    a. to supervise, direct, or control the Work, or

    b. for the means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or

    c. for Contractor's failure to comply with Laws and Regulations applicable to Contractor's performance of the Work, or

    d. to make any examination to ascertain how or for what purposes Contractor has used the money paid on account of the Contract Price, or

    e. to determine that title to any of the Work, materials, or equipment has passed to Owner free and clear of any Liens.

5. Engineer may refuse to recommend the whole or any part of any payment if, in Engineer's opinion, it would be incorrect to make the representations to Owner stated in Paragraph 15.01.C.2.

6. Engineer will recommend reductions in payment (set-offs) necessary in Engineer's opinion to protect Owner from loss because:

   a. the Work is defective, requiring correction or replacement;

   b. the Contract Price has been reduced by Change Orders;

   c. Owner has been required to correct defective Work in accordance with Paragraph 14.07, or has accepted defective Work pursuant to Paragraph 14.04;

   d. Owner has been required to remove or remediate a Hazardous Environmental Condition for which Contractor is responsible; or

   e. Engineer has actual knowledge of the occurrence of any of the events that would constitute a default by Contractor and therefore justify termination for cause under the Contract Documents.

D. *Payment Becomes Due*:

1. Thirty (30) days after presentation of the Application for Payment to Owner with Engineer's recommendation, the amount recommended (subject to any Owner set-offs) will become due, and when due will be paid by Owner to Contractor.

E. *Reductions in Payment by Owner*:

1. In addition to any reductions in payment (set-offs) recommended by Engineer, Owner is entitled to impose a set-off against payment based on any of the following:

   a. claims have been made against Owner on account of Contractor's conduct in the performance or furnishing of the Work, or Owner has incurred costs, losses, or damages on account of Contractor's conduct in the performance or furnishing of the Work, including but not limited to claims, costs, losses, or damages from workplace injuries, adjacent property damage, non-compliance with Laws and Regulations, and patent infringement;

   b. Contractor has failed to take reasonable and customary measures to avoid damage, delay, disruption, and interference with other work at or adjacent to the Site;

   c. Contractor has failed to provide and maintain required bonds or insurance;

   d. Owner has been required to remove or remediate a Hazardous Environmental Condition for which Contractor is responsible;

   e. Owner has incurred extra charges or engineering costs related to submittal reviews, evaluations of proposed substitutes, tests and inspections, or return visits to manufacturing or assembly facilities;

   f. the Work is defective, requiring correction or replacement;

   g. Owner has been required to correct defective Work in accordance with Paragraph 14.07, or has accepted defective Work pursuant to Paragraph 14.04;

h. the Contract Price has been reduced by Change Orders;

i. an event that would constitute a default by Contractor and therefore justify a termination for cause has occurred;

j. liquidated damages have accrued as a result of Contractor's failure to achieve Milestones, Substantial Completion, or final completion of the Work;

k. Liens have been filed in connection with the Work, except where Contractor has delivered a specific bond satisfactory to Owner to secure the satisfaction and discharge of such Liens;

l. there are other items entitling Owner to a set off against the amount recommended.

2. If Owner imposes any set-off against payment, whether based on its own knowledge or on the written recommendations of Engineer, Owner will give Contractor immediate written notice (with a copy to Engineer) stating the reasons for such action and the specific amount of the reduction, and promptly pay Contractor any amount remaining after deduction of the amount so withheld. Owner shall promptly pay Contractor the amount so withheld, or any adjustment thereto agreed to by Owner and Contractor, if Contractor remedies the reasons for such action. The reduction imposed shall be binding on Contractor unless it duly submits a Change Proposal contesting the reduction.

3. Upon a subsequent determination that Owner's refusal of payment was not justified, the amount wrongfully withheld shall be treated as an amount due as determined by Paragraph 15.01.C.1 and subject to interest as provided in the Agreement.

15.02 *Contractor's Warranty of Title*

A. Contractor warrants and guarantees that title to all Work, materials, and equipment furnished under the Contract will pass to Owner free and clear of (1) all Liens and other title defects, and (2) all patent, licensing, copyright, or royalty obligations, no later than seven days after the time of payment by Owner.

15.03 *Substantial Completion*

A. When Contractor considers the entire Work ready for its intended use Contractor shall notify Owner and Engineer in writing that the entire Work is substantially complete and request that Engineer issue a certificate of Substantial Completion. Contractor shall at the same time submit to Owner and Engineer an initial draft of punch list items to be completed or corrected before final payment.

B. Promptly after Contractor's notification, Owner, Contractor, and Engineer shall make an inspection of the Work to determine the status of completion. If Engineer does not consider the Work substantially complete, Engineer will notify Contractor in writing giving the reasons therefor.

C. If Engineer considers the Work substantially complete, Engineer will deliver to Owner a preliminary certificate of Substantial Completion which shall fix the date of Substantial Completion. Engineer shall attach to the certificate a punch list of items to be completed or corrected before final payment. Owner shall have seven days after receipt of the

preliminary certificate during which to make written objection to Engineer as to any provisions of the certificate or attached punch list. If, after considering the objections to the provisions of the preliminary certificate, Engineer concludes that the Work is not substantially complete, Engineer will, within 14 days after submission of the preliminary certificate to Owner, notify Contractor in writing that the Work is not substantially complete, stating the reasons therefor. If Owner does not object to the provisions of the certificate, or if despite consideration of Owner's objections Engineer concludes that the Work is substantially complete, then Engineer will, within said 14 days, execute and deliver to Owner and Contractor a final certificate of Substantial Completion (with a revised punch list of items to be completed or corrected) reflecting such changes from the preliminary certificate as Engineer believes justified after consideration of any objections from Owner.

D. At the time of receipt of the preliminary certificate of Substantial Completion, Owner and Contractor will confer regarding Owner's use or occupancy of the Work following Substantial Completion, review the builder's risk insurance policy with respect to the end of the builder's risk coverage, and confirm the transition to coverage of the Work under a permanent
property insurance policy held by Owner. Unless Owner and Contractor agree otherwise in writing, Owner shall bear responsibility for security, operation, protection of the Work, property insurance, maintenance, heat, and utilities upon Owner's use or occupancy of the Work.

E. After Substantial Completion the Contractor shall promptly begin work on the punch list of items to be completed or corrected prior to final payment. In appropriate cases Contractor may submit monthly Applications for Payment for completed punch list items, following the progress payment procedures set forth above.

F. Owner shall have the right to exclude Contractor from the Site after the date of Substantial Completion subject to allowing Contractor reasonable access to remove its property and complete or correct items on the punch list.

15.04 *Partial Use or Occupancy*

A. Prior to Substantial Completion of all the Work, Owner may use or occupy any substantially completed part of the Work which has specifically been identified in the Contract Documents, or which Owner, Engineer, and Contractor agree constitutes a separately functioning and usable part of the Work that can be used by Owner for its intended purpose without significant interference with Contractor's performance of the remainder of the Work, subject to the following conditions:

1. At any time Owner may request in writing that Contractor permit Owner to use or occupy any such part of the Work that Owner believes to be substantially complete. If and when Contractor agrees that such part of the Work is substantially complete, Contractor, Owner, and Engineer will follow the procedures of Paragraph 15.03.A through E for that part of the Work.

2. At any time Contractor may notify Owner and Engineer in writing that Contractor considers any such part of the Work substantially complete and request Engineer to issue a certificate of Substantial Completion for that part of the Work.

3. Within a reasonable time after either such request, Owner, Contractor, and Engineer

shall make an inspection of that part of the Work to determine its status of completion. If Engineer does not consider that part of the Work to be substantially complete, Engineer will notify Owner and Contractor in writing giving the reasons therefor. If Engineer considers that part of the Work to be substantially complete, the provisions of Paragraph 15.03 will apply with respect to certification of Substantial Completion of that part of the Work and the division of responsibility in respect thereof and access thereto.

4. No use or occupancy or separate operation of part of the Work may occur prior to compliance with the requirements of Paragraph 6.05 regarding builder's risk or other property insurance.

15.05 *Final Inspection*

A. Upon written notice from Contractor that the entire Work or an agreed portion thereof is complete, Engineer will promptly make a final inspection with Owner and Contractor and will notify Contractor in writing of all particulars in which this inspection reveals that the Work, or agreed portion thereof, is incomplete or defective. Contractor shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

15.06 *Final Payment*

A. *Application for Payment*:

1. After Contractor has, in the opinion of Engineer, satisfactorily completed all corrections identified during the final inspection and has delivered, in accordance with the Contract Documents, all maintenance and operating instructions, schedules, guarantees, bonds, certificates or other evidence of insurance, certificates of inspection, annotated record documents (as provided in Paragraph 7.11), and other documents, Contractor may make application for final payment.

2. The final Application for Payment shall be accompanied (except as previously delivered) by:

a. all documentation called for in the Contract Documents;

b. consent of the surety, if any, to final payment;

c. satisfactory evidence that all title issues have been resolved such that title to all Work, materials, and equipment has passed to Owner free and clear of any Liens or other title defects, or will so pass upon final payment.

d. a list of all disputes that Contractor believes are unsettled; and

e. complete and legally effective releases or waivers (satisfactory to Owner) of all Lien rights arising out of the Work, and of Liens filed in connection with the Work.

3. In lieu of the releases or waivers of Liens specified in Paragraph 15.06.A.2 and as approved by Owner, Contractor may furnish receipts or releases in full and an affidavit of Contractor that: (a) the releases and receipts include all labor, services, material, and equipment for which a Lien could be filed; and (b) all payrolls, material and equipment bills, and other indebtedness connected with the Work for which Owner might in any way be responsible, or which might in any way result in liens or other

burdens on Owner's property, have been paid or otherwise satisfied. If any Subcontractor or Supplier fails to furnish such a release or receipt in full, Contractor may furnish a bond or other collateral satisfactory to Owner to indemnify Owner against any Lien, or Owner at its option may issue joint checks payable to Contractor and specified Subcontractors and Suppliers.

B. *Engineer's Review of Application and Acceptance*:

1. If, on the basis of Engineer's observation of the Work during construction and final inspection, and Engineer's review of the final Application for Payment and accompanying documentation as required by the Contract Documents, Engineer is satisfied that the Work has been completed and Contractor's other obligations under the Contract have been fulfilled, Engineer will, within ten days after receipt of the final Application for Payment, indicate in writing Engineer's recommendation of final payment and present the Application for Payment to Owner for payment. Such recommendation shall account for any set-offs against payment that are necessary in Engineer's opinion to protect Owner from loss for the reasons stated above with respect to progress payments. At the same time Engineer will also give written notice to Owner and Contractor that the Work is acceptable, subject to the provisions of Paragraph 15.07. Otherwise, Engineer will return the Application for Payment to Contractor, indicating in writing the reasons for refusing to recommend final payment, in which case Contractor shall make the necessary corrections and resubmit the Application for Payment.

C. *Completion of Work*: The Work is complete (subject to surviving obligations) when it is ready for final payment as established by the Engineer's written recommendation of final payment.

D. *Payment Becomes Due*: Thirty days after the presentation to Owner of the final Application for Payment and accompanying documentation, the amount recommended by Engineer (less any further sum Owner is entitled to set off against Engineer's recommendation, including but not limited to set-offs for liquidated damages and set-offs allowed under the provisions above with respect to progress payments) will become due and shall be paid by Owner to Contractor.

15.07 *Waiver of Claims*

A. The making of final payment will not constitute a waiver by Owner of claims or rights against Contractor. Owner expressly reserves claims and rights arising from unsettled Liens, from defective Work appearing after final inspection pursuant to Paragraph 15.05, from Contractor's failure to comply with the Contract Documents or the terms of any special guarantees specified therein, from outstanding Claims by Owner, or from Contractor's continuing obligations under the Contract Documents.

B. The acceptance of final payment by Contractor will constitute a waiver by Contractor of all claims and rights against Owner other than those pending matters that have been duly submitted or appealed under the provisions of Article 17.

15.08 *Correction Period*

A. If within one year after the date of Substantial Completion (or such longer period of time as may be prescribed by the terms of any applicable special guarantee required by the

Contract Documents, or by any specific provision of the Contract Documents), any Work is found to be defective, or if the repair of any damages to the Site, adjacent areas that Contractor has arranged to use through construction easements or otherwise, and other adjacent areas used by Contractor as permitted by Laws and Regulations, is found to be defective, then Contractor shall promptly, without cost to Owner and in accordance with Owner's written instructions:

1. correct the defective repairs to the Site or such other adjacent areas;
2. correct such defective Work;
3. if the defective Work has been rejected by Owner, remove it from the Project and replace it with Work that is not defective, and
4. satisfactorily correct or repair or remove and replace any damage to other Work, to the work of others, or to other land or areas resulting therefrom.

B. If Contractor does not promptly comply with the terms of Owner's written instructions, or in an emergency where delay would cause serious risk of loss or damage, Owner may have the defective Work corrected or repaired or may have the rejected Work removed and replaced. Contractor shall pay all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such correction or repair or such removal and replacement (including but not limited to all costs of repair or replacement of work of others).

C. In special circumstances where a particular item of equipment is placed in continuous service before Substantial Completion of all the Work, the correction period for that item may start to run from an earlier date if so provided in the Specifications.

D. Where defective Work (and damage to other Work resulting therefrom) has been corrected or removed and replaced under this paragraph, the correction period hereunder with respect to such Work will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.

E. Contractor's obligations under this paragraph are in addition to all other obligations and warranties. The provisions of this paragraph shall not be construed as a substitute for, or a waiver of, the provisions of any applicable statute of limitation or repose.

ARTICLE 16 – SUSPENSION OF WORK AND TERMINATION

16.01 *Owner May Suspend Work*

A. At any time and without cause, Owner may suspend the Work or any portion thereof for a period of not more than 90 consecutive days by written notice to Contractor and Engineer. Such notice will fix the date on which Work will be resumed. Contractor shall resume the Work on the date so fixed. Contractor shall be entitled to an adjustment in the Contract Price or an extension of the Contract Times, or both, directly attributable to any such suspension. Any Change Proposal seeking such adjustments shall be submitted no later than 30 days after the date fixed for resumption of Work.

16.02 *Owner May Terminate for Cause*

A. The occurrence of any one or more of the following events will constitute a default by Contractor and justify termination for cause:

1. Contractor's persistent failure to perform the Work in accordance with the Contract Documents (including, but not limited to, failure to supply sufficient skilled workers or suitable materials or equipment or failure to adhere to the Progress Schedule);
2. Failure of Contractor to perform or otherwise to comply with a material term of the Contract Documents;
3. Contractor's disregard of Laws or Regulations of any public body having jurisdiction; or
4. Contractor's repeated disregard of the authority of Owner or Engineer.

B. If one or more of the events identified in Paragraph 16.02.A occurs, then after giving Contractor (and any surety) ten days written notice that Owner is considering a declaration that Contractor is in default and termination of the contract, Owner may proceed to:

1. declare Contractor to be in default, and give Contractor (and any surety) notice that the Contract is terminated; and
2. enforce the rights available to Owner under any applicable performance bond.

C. Subject to the terms and operation of any applicable performance bond, if Owner has terminated the Contract for cause, Owner may exclude Contractor from the Site, take possession of the Work, incorporate in the Work all materials and equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere, and complete the Work as Owner may deem expedient.

D. Owner may not proceed with termination of the Contract under Paragraph 16.02.B if Contractor within seven days of receipt of notice of intent to terminate begins to correct its failure to perform and proceeds diligently to cure such failure.

E. If Owner proceeds as provided in Paragraph 16.02.B, Contractor shall not be entitled to receive any further payment until the Work is completed. If the unpaid balance of the Contract Price exceeds the cost to complete the Work, including all related claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals) sustained by Owner, such excess will be paid to Contractor. If the cost to complete the Work including such related claims, costs, losses, and damages exceeds such unpaid balance, Contractor shall pay the difference to Owner. Such claims, costs, losses, and damages incurred by Owner will be reviewed by Engineer as to their reasonableness and, when so approved by Engineer, incorporated in a Change Order. When exercising any rights or remedies under this paragraph, Owner shall not be required to obtain the lowest price for the Work performed.

F. Where Contractor's services have been so terminated by Owner, the termination will not affect any rights or remedies of Owner against Contractor then existing or which may thereafter accrue, or any rights or remedies of Owner against Contractor or any surety under any payment bond or performance bond. Any retention or payment of money due Contractor by Owner will not release Contractor from liability.

G. If and to the extent that Contractor has provided a performance bond under the provisions of Paragraph 6.01.A, the provisions of that bond shall govern over any inconsistent

provisions of Paragraphs 16.02.B and 16.02.D.

16.03 *Owner May Terminate For Convenience*

A. Upon seven days written notice to Contractor and Engineer, Owner may, without cause and without prejudice to any other right or remedy of Owner, terminate the Contract. In such case, Contractor shall be paid for (without duplication of any items):

1. completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such Work;

2. expenses sustained prior to the effective date of termination in performing services and furnishing labor, materials, or equipment as required by the Contract Documents in connection with uncompleted Work, plus fair and reasonable sums for overhead and profit on such expenses; and

3. other reasonable expenses directly attributable to termination, including costs incurred to prepare a termination for convenience cost proposal.

B. Contractor shall not be paid on account of loss of anticipated overhead, profits, or revenue, or other economic loss arising out of or resulting from such termination.

16.04 *Contractor May Stop Work or Terminate*

A. If, through no act or fault of Contractor, (1) the Work is suspended for more than 90 consecutive days by Owner or under an order of court or other public authority, or (2) Engineer fails to act on any Application for Payment within 30 days after it is submitted, or **(3)** Owner fails for 30 days to pay Contractor any sum finally determined to be due, then Contractor may, upon seven days written notice to Owner and Engineer, and provided Owner or Engineer do not remedy such suspension or failure within that time, terminate the contract and recover from Owner payment on the same terms as provided in Paragraph 16.03.

B. In lieu of terminating the Contract and without prejudice to any other right or remedy, if Engineer has failed to act on an Application for Payment within 30 days after it is submitted, or Owner has failed for 30 days to pay Contractor any sum finally determined to be due, Contractor may, seven days after written notice to Owner and Engineer, stop the Work until payment is made of all such amounts due Contractor, including interest thereon. The provisions of this paragraph are not intended to preclude Contractor from submitting a Change Proposal for an adjustment in Contract Price or Contract Times or otherwise for expenses or damage directly attributable to Contractor's stopping the Work as permitted by this paragraph.

ARTICLE 17 – FINAL RESOLUTION OF DISPUTES

17.01 *Methods and Procedures*

A. *Disputes Subject to Final Resolution*: The following disputed matters are subject to final resolution under the provisions of this Article:

1. A timely appeal of an approval in part and denial in part of a Claim, or of a denial in full; and

2. Disputes between Owner and Contractor concerning the Work or obligations under the Contract Documents, and arising after final payment has been made.

B. *Final Resolution of Disputes*: For any dispute subject to resolution under this Article, Owner or Contractor may:

1. elect in writing to invoke the dispute resolution process provided for in the Supplementary Conditions; or

2. agree with the other party to submit the dispute to another dispute resolution process; or

3. if no dispute resolution process is provided for in the Supplementary Conditions or mutually agreed to, give written notice to the other party of the intent to submit the dispute to a court of competent jurisdiction.

ARTICLE 18 – MISCELLANEOUS

18.01 *Giving Notice*

A. Whenever any provision of the Contract Documents requires the giving of written notice, it will be deemed to have been validly given if: delivered in person, by a commercial courier service or otherwise, to the individual or to a member of the firm or to an officer of the corporation for which it is intended; or

1. delivered at or sent by registered or certified mail, postage prepaid, to the last business address known to the sender of the notice.

B. When any period of time is referred to in the Contract by days, it will be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

18.02 *Cumulative Remedies*

A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee, or by other provisions of the Contract. The provisions of this paragraph will be as effective as if repeated specifically in the Contract Documents in connection with each particular duty, obligation, right, and remedy to which they apply.

18.03 *Limitation of Damages*

A. With respect to any and all Change Proposals, Claims, disputes subject to final resolution, and other matters at issue, neither Owner nor Engineer, nor any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, shall be liable to Contractor for any claims, costs, losses, or damages sustained by Contractor on or in connection with any other project or anticipated project.

18.04 *No Waiver*

A. A party's non-enforcement of any provision shall not constitute a waiver of that provision, nor shall it affect the enforceability of that provision or of the remainder of this Contract.

18.05 *Survival of Obligations*

A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Contract, as well as all continuing obligations indicated in the Contract, will survive final payment, completion, and acceptance of the Work or termination or completion of the Contract or termination of the services of Contractor.

18.06 *Controlling Law*

A. This Contract is to be governed by the law of the state in which the Project is located.

18.07 *Headings*

A. Article and paragraph headings are inserted for convenience only and do not constitute parts of these General Conditions.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 00 22 15

SUPPLEMENTARY CONDITIONS

These Supplementary Conditions amend or supplement the Standard General Conditions of the Construction Contract, EJCDC® C-700 (2013 Edition). All provisions that are not so amended or supplemented remain in full force and effect.

The terms used in these Supplementary Conditions have the meanings stated in the General Conditions. Additional terms used in these Supplementary Conditions have the meanings stated below, which are applicable to both the singular and plural thereof.

The address system used in these Supplementary Conditions is the same as the address system used in the General Conditions, with the prefix "SC" added thereto.

ARTICLE 5 – AVAILABILITY OF LANDS; SUBSURFACE AND PHYSICAL CONDITIONS; HAZARDOUS ENVIRONMENTAL CONDITIONS

SC-5.06 Hazardous Environmental Conditions

SC 5.06 Delete Paragraphs 5.06.A and 5.06.B in their entirety and insert the following:

A. No reports or drawings related to Hazardous Environmental Conditions at the Site are known to Owner.

ARTICLE 6 – BONDS AND INSURANCE

SC-6.02 Insurance—General Provisions

SC-6.02 Add the following paragraph immediately after Paragraph 6.02.B:

1. Contractor may obtain worker's compensation insurance from an insurance company that has not been rated by A.M. Best, provided that such company (a) is domiciled in the state in which the project is located, (b) is certified or authorized as a worker's compensation insurance provider by the appropriate state agency, and (c) has been accepted to provide worker's compensation insurance for similar projects by the state within the last 12 months.

SC-6.03 Contractor's Liability Insurance

SC 6.03 Add the following new paragraph immediately after Paragraph 6.03.J:

K. The limits of liability for the insurance required by Paragraph 6.03 of the General Conditions shall provide coverage for not less than the following amounts or greater where required by Laws and Regulations:

1. Workers' Compensation, and related coverages under Paragraphs 6.03.A.1 and A.2 of the General Conditions:

State:	Statutory
Federal, if applicable (e.g., Longshoreman's):	Statutory
Jones Act coverage, if applicable:	
Bodily injury by accident, each accident	$ NA
Bodily injury by disease, aggregate	$ NA
Employer's Liability:	
Bodily injury, each accident	$ 500,000.00
Bodily injury by disease, each employee	$ 500,000.00
Bodily injury/disease aggregate	$ 1,000,000.00
Foreign voluntary worker compensation	Statutory

2. Contractor's Commercial General Liability under Paragraphs 6.03.B and 6.03.C of the General Conditions:

General Aggregate	$ 2,000,000.00
Products - Completed Operations Aggregate	$ 1,000,000.00
Personal and Advertising Injury	$ 1,000,000.00
Each Occurrence (Bodily Injury and Property Damage)	$ 1,000,000.00

3. Automobile Liability under Paragraph 6.03.D. of the General Conditions:

Bodily Injury:	
Each person	$ 500,000.00
Each accident	$ 1,000,000.00
Property Damage:	
Combined Single Limit of	$ 1,000,000.00

4. Excess or Umbrella Liability:

General Aggregate	**$**	**1,000,000.00**

5. Contractor's Professional Liability:

Each Claim	**$**	**1,000,000.00**
Annual Aggregate	**$**	**2,000,000.00**

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

ARTICLE 7 – CONTRACTOR'S RESPONSIBILITIES

A. If the Owner has no objections to the Contractor working multiple shifts, weekends, and legal holidays, use the following:

SC-7.02.B. Delete Paragraph 7.02 B. in its entirety, and insert the following:

B. In the absence of any Laws or Regulations to the contrary, Contractor may perform the Work on holidays, during any or all hours of the day, and on any or all days of the week, at Contractor's sole discretion.

SC-7.02.C. Add the following new paragraph immediately after Paragraph 7.02.B:

Contractor shall be responsible for the cost of any overtime pay or other expense incurred by the Owner for Engineer's services (including those of the Resident Project Representative, if any), Owner's representative, and construction observation services, occasioned by the performance of Work on Saturday or as overtime on any regular work day. If Contractor is responsible but does not pay, or if the parties are unable to agree as to the amount owed, then Owner may impose a reasonable set-off against payments due under Article 15.

ARTICLE 15 – PAYMENTS TO CONTRACTOR; SET-OFFS; COMPLETION; CORRECTION PERIOD

SC-15.03 Substantial Completion

SC 15.03.B Add the following new subparagraph to Paragraph 15.03.B:

1. If some or all of the Work has been determined not to be at a point of Substantial Completion and will require re-inspection or re-testing by Engineer, the cost of such re-inspection or re-testing, including the cost of time, travel and living expenses, shall be paid by Contractor to Owner. If Contractor does not pay, or the parties are unable to agree as to the amount owed, then Owner may impose a reasonable set-off against payments due under Article 15.

ARTICLE 17 – FINAL RESOLUTION OF DISPUTES

SC-17.02 Add the following new paragraph immediately after Paragraph 17.01.

SC-17.02 Arbitration

A. All matters subject to final resolution under this Article will be decided by arbitration in accordance with the Florida Rules of Civil Procedure, subject to the conditions and limitations of this paragraph. This agreement to arbitrate and any other agreement or consent to arbitrate entered into will be specifically enforceable under the prevailing law of any court having jurisdiction.

B. The demand for arbitration will be filed in writing with the other party to the Contract and with the selected arbitrator or arbitration provider, and a copy will be sent to Engineer for information. The demand for arbitration will be made within the specific time required in this Article, or if no specified time is applicable within a reasonable time after the matter in question has arisen, and in no event shall any such demand be made after the date when institution of

legal or

equitable proceedings based on such matter in question would be barred by the applicable statute of limitations. The demand for arbitration should include specific reference to Paragraph SC-17.02.D below.

C. No arbitration arising out of or relating to the Contract shall include by consolidation, joinder, or in any other manner any other individual or entity (including Engineer, and Engineer's consultants and the officers, directors, partners, agents, employees or consultants of any of them) who is not a party to this Contract unless:

1. the inclusion of such other individual or entity is necessary if complete relief is to be afforded among those who are already parties to the arbitration; and

2. such other individual or entity is substantially involved in a question of law or fact which is common to those who are already parties to the arbitration and which will arise in such proceedings.

D. The award rendered by the arbitrator(s) shall be consistent with the agreement of the parties, in writing, and include a concise breakdown of the award, and a written explanation of the award specifically citing the Contract provisions deemed applicable and relied on in making the award.

E. The award will be final. Judgment may be entered upon it in any court having jurisdiction thereof, and it will not be subject to modification or appeal, subject to provisions of the Laws and Regulations relating to vacating or modifying an arbitral award.

F. The fees and expenses of the arbitrators and any arbitration service shall be shared equally by Owner and Contractor.

END OF SECTION

SECTION 00 26 00 AGREEMENT BETWEEN OWNER AND CONTRACTOR FOR CONSTRUCTION CONTRACT

THIS AGREEMENT is by and between **The City of Flagler Beach** ("Owner") and _____ ("Contractor").

Owner and Contractor hereby agree as follows:

ARTICLE 1 – WORK

1.01 Contractor shall complete all Work as specified or indicated in the Contract Documents. The Work is generally described as follows: Hurricane Milton Damage Repairs to Flagler Beach Public Library.

ARTICLE 2 – THE PROJECT

2.01 The Project, of which the Work under the Contract Documents is a part, is generally described as follows: Hurricane Milton Damage Repairs to Flagler Beach Public Library.

ARTICLE 3 – ENGINEER

3.01 The part of the Project that pertains to the Work has been designed by the City of Flagler Beach.

ARTICLE 4 – CONTRACT TIMES

4.01 *Time of the Essence*

A. All time limits for Substantial Completion, and Final Completion and readiness for final payment as stated in the Contract Documents are of the essence of the Contract.

4.02 *Contract Times: Days*

A. The Work will be substantially completed within Ninety (90) days after the date when the Contract Times commence to run as provided in Paragraph 4.01 of the General Conditions, and completed and ready for final payment in accordance with Paragraph 15.06 of the General Conditions within One Hundred Twenty (120) days after the date when the Contract Times commence to run.

4.03 *Liquidated Damages*

A. Contractor and Owner recognize that time is of the essence as stated in Paragraph 4.01 above and that Owner will suffer financial and other losses if the Work is not completed and Milestones not achieved within the times specified in Paragraph 4.02 above, plus any extensions thereof allowed in accordance with the Contract. The parties also recognize the delays, expense, and difficulties involved in proving in a legal or arbitration proceeding the actual loss suffered by Owner if the Work is not completed on time. Accordingly, instead of requiring any such proof, Owner and Contractor agree that as liquidated damages for delay (but not as a penalty):

1. Substantial Completion: Contractor shall pay Owner $500.00 for each day that expires after the time (as duly adjusted pursuant to the Contract) specified in Paragraph 4.02.A above for Substantial Completion until the Work is substantially complete.
2. Completion of Remaining Work: After Substantial Completion, if Contractor shall neglect, refuse, or fail to complete the remaining Work within the Contract Times (as duly adjusted pursuant to the Contract) for completion and readiness for final payment, Contractor shall pay Owner $1,000.00 for each day that expires after such time until the Work is completed and ready for final payment.
3. Liquidated damages for failing to timely attain Substantial Completion and final completion are not additive and will not be imposed concurrently.

ARTICLE 5 – CONTRACT PRICE

5.01 Owner shall pay Contractor for completion of the Work in accordance with the Contract Documents the amounts that follow, subject to adjustment under the Contract:

ARTICLE 6 – PAYMENT PROCEDURES

6.01 *Submittal and Processing of Payments*

A. Contractor shall submit Applications for Payment in accordance with Article 15 of the General Conditions. Applications for Payment will be processed by Engineer as provided in the General Conditions.

6.02 *Progress Payments; Retainage*

A. Owner shall make progress payments on account of the Contract Price on the basis of Contractor's Applications for Payment on or about the 15th day of each month during performance of the Work as provided in Paragraph 6.02.A.1 below, provided that such Applications for Payment have been submitted in a timely manner and otherwise meet the requirements of the Contract. All such payments will be measured by the Schedule of Values established as provided in the General Conditions (and in the case of Unit Price Work based on the number of units completed) or, in the event there is no Schedule of Values, as provided elsewhere in the Contract.

1. Prior to Substantial Completion, progress payments will be made in an amount equal to the percentage indicated below but, in each case, less the aggregate of payments previously made and less such amounts as Owner may withhold, including but not limited to liquidated damages, in accordance with the Contract

a. 95 percent of Work completed (with the balance being retainage). If the Work has been 50 percent completed as determined by Engineer, and if the character and progress of the Work have been satisfactory to Owner and Engineer, then as long as the character and progress of the Work remain satisfactory to Owner and Engineer, there will be no additional retainage; and

B. Upon Substantial Completion, Owner shall pay an amount sufficient to increase total payments to Contractor to 100 percent of the Work completed, less such amounts set off by Owner pursuant to Paragraph 15.01.E of the General Conditions, and less 200 percent of

Engineer's estimate of the value of Work to be completed or corrected as shown on the punch list of items to be completed or corrected prior to final payment.

6.03 *Final Payment*

A. Upon final completion and acceptance of the Work in accordance with Paragraph 15.06 of the General Conditions, Owner shall pay the remainder of the Contract Price as recommended by Engineer as provided in said Paragraph 15.06.

ARTICLE 7 – INTEREST

7.01 All amounts not paid when due shall bear interest at the rate of 3 percent per annum.

ARTICLE 8 – CONTRACTOR'S REPRESENTATIONS

8.01 In order to induce Owner to enter into this Contract, Contractor makes the following representations:

A. Contractor has examined and carefully studied the Contract Documents, and any data and reference items identified in the Contract Documents.

B. Contractor has visited the Site, conducted a thorough, alert visual examination of the Site and adjacent areas, and become familiar with and is satisfied as to the general, local, and Site conditions that may affect cost, progress, and performance of the Work.

C. Contractor is familiar with and is satisfied as to all Laws and Regulations that may affect cost, progress, and performance of the Work.

D. Contractor has carefully studied all reports of explorations and tests of subsurface conditions at or adjacent to the Site and all drawings of physical conditions relating to existing surface or subsurface structures at the Site that have been identified in the Supplementary Conditions, especially with respect to Technical Data in such reports and drawings.

E. Contractor has considered the information known to Contractor itself; information commonly known to contractors doing business in the locality of the Site; information and observations obtained from visits to the Site; the Contract Documents; and the Site-related reports and drawings identified in the Contract Documents, with respect to the effect of such information, observations, and documents on (1) the cost, progress, and performance of the Work; (2) the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor; and (3) Contractor's safety precautions and programs.

F. Based on the information and observations referred to in the preceding paragraph, Contractor agrees that no further examinations, investigations, explorations, tests, studies, or data are necessary for the performance of the Work at the Contract Price, within the Contract Times, and in accordance with the other terms and conditions of the Contract.

G. Contractor is aware of the general nature of work to be performed by Owner and others at the Site that relates to the Work as indicated in the Contract Documents.

H. Contractor has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Contractor has discovered in the Contract Documents, and the written resolution thereof by Engineer is acceptable to Contractor.

I. The Contract Documents are generally sufficient to indicate and convey understanding of all terms and conditions for performance and furnishing of the Work.

J. Contractor's entry into this Contract constitutes an incontrovertible representation by Contractor that without exception all prices in the Agreement are premised upon performing and furnishing the Work required by the Contract Documents.

ARTICLE 9 – CONTRACT DOCUMENTS

9.01 *Contents*

A. The Contract Documents consist of the following:

1. This Agreement (pages 132 to 137, inclusive).
2. The Drawings (Sheets A1 – A2, attached separately).
3. Performance bond (pages 144 to 146, inclusive).
4. General Conditions (pages *i* to *v* and pages 59 to 125, inclusive).
5. Supplementary Conditions (pages 127 to 131, inclusive).
6. Specifications as listed in the table of contents of the Project Manual.
7. Issued Addenda
8. Exhibits to this Agreement (enumerated as follows):
   a. Contractor's Bid Form (pages *i* to *ii* and pages 138 to 143, inclusive).
9. The following which may be delivered or issued on or after the Effective Date of the Contract and are not attached hereto:
   a. Notice to Proceed.
   b. Work Change Directives.
   c. Change Orders.
   d. Field Orders.

B. The documents listed in Paragraph 9.01.A are attached to this Agreement (except as expressly noted otherwise above).

C. There are no Contract Documents other than those listed above in this Article 9.

D. The Contract Documents may only be amended, modified, or supplemented as provided in the General Conditions.

ARTICLE 10 – MISCELLANEOUS

10.01 *Terms*

A. Terms used in this Agreement will have the meanings stated in the General Conditions and the Supplementary Conditions. *Assignment of Contract*

B. Unless expressly agreed to elsewhere in the Contract, no assignment by a party hereto of any rights under or interests in the Contract will be binding on another party hereto without the written consent of the party sought to be bound; and, specifically but without limitation, money that may become due and money that is due may not be assigned without such consent (except to the extent that the effect of this restriction may be limited by law), and unless specifically stated to the contrary in any written consent to an assignment, no assignment will release or discharge the assignor from any duty or responsibility under the Contract Documents.

10.02 *Successors and Assigns*

A. Owner and Contractor each binds itself, its successors, assigns, and legal representatives to the other party hereto, its successors, assigns, and legal representatives in respect to all covenants, agreements, and obligations contained in the Contract Documents.

10.03 *Severability*

A. Any provision or part of the Contract Documents held to be void or unenforceable under any Law or Regulation shall be deemed stricken, and all remaining provisions shall continue to be valid and binding upon Owner and Contractor, who agree that the Contract Documents shall be reformed to replace such stricken provision or part thereof with a valid and enforceable provision that comes as close as possible to expressing the intention of the stricken provision.

10.04 *Contractor's Certifications*

A. Contractor certifies that it has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for or in executing the Contract. For the purposes of this Paragraph 10.05:

1. "corrupt practice" means the offering, giving, receiving, or soliciting of any thing of value likely to influence the action of a public official in the bidding process or in the Contract execution;

2. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process or the execution of the Contract to the detriment of Owner, (b) to establish Bid or Contract prices at artificial non-competitive levels, or (c) to deprive Owner of the benefits of free and open competition;

3. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Owner, a purpose of which is to establish Bid prices at artificial, non-competitive levels; and

4. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the execution of the Contract.

END OF TABLE OF CONTENTS

ARTICLE 1 – BID RECIPIENT

1.01 This Bid is submitted to:

City of Flagler Beach
105 S 2nd Street
Flagler Beach, FL 32136

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into an Agreement with Owner in the form included in the Bidding Documents to perform all Work as specified or indicated in the Bidding Documents for the prices and within the times indicated in this Bid and in accordance with the other terms and conditions of the Bidding Documents.

ARTICLE 2 – BIDDER'S ACKNOWLEDGEMENTS

2.01 Bidder accepts all of the terms and conditions of the Instructions to Bidders, including without limitation those dealing with the disposition of Bid security. This Bid will remain subject to acceptance for 60 days after the Bid opening, or for such longer period of time that Bidder may agree to in writing upon request of Owner.

ARTICLE 3 – BIDDER'S REPRESENTATIONS

3.01 In submitting this Bid, Bidder represents that:

A. Bidder has examined and carefully studied the Bidding Documents, and any data and reference items identified in the Bidding Documents, and hereby acknowledges receipt of the following Addenda:

Addendum No.	Addendum, Date
_____	_____
_____	_____
_____	_____
_____	_____

B. Bidder (or authorized representative) has attended the Mandatory Pre-Bid Conference.

C. Bidder has visited the Site, conducted a thorough, alert visual examination of the Site and adjacent areas, and become familiar with and satisfied itself as to the general, local, and Site conditions that may affect cost, progress, and performance of the Work.

D. Bidder is familiar with and has satisfied itself as to all Laws and Regulations that may affect cost, progress, and performance of the Work.

E. Bidder has carefully studied all: (1) reports of explorations and tests of subsurface conditions at or adjacent to the Site and all drawings of physical conditions relating to existing surface or subsurface structures at the Site that have been identified in the Supplementary Conditions, especially with respect to Technical Data in such reports and drawings.

F. Bidder has considered the information known to Bidder itself; information commonly known to contractors doing business in the locality of the Site; information and observations

obtained from visits to the Site; the Bidding Documents; and any Site-related reports and drawings identified in the Bidding Documents, with respect to the effect of such information, observations, and documents on (1) the cost, progress, and performance of the Work; (2) the means, methods, techniques, sequences, and procedures of construction to be employed by Bidder; and (3) Bidder's safety precautions and programs.

G. Bidder agrees, based on the information and observations referred to in the preceding paragraph, that no further examinations, investigations, explorations, tests, studies, or data are necessary for the determination of this Bid for performance of the Work at the price bid and within the times required, and in accordance with the other terms and conditions of the Bidding Documents.

H. Bidder is aware of the general nature of work to be performed by Owner and others at the Site that relates to the Work as indicated in the Bidding Documents.

I. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Bidding Documents, and confirms that the written resolution thereof by Engineer is acceptable to Bidder.

J. The Bidding Documents are generally sufficient to indicate and convey understanding of all terms and conditions for the performance and furnishing of the Work.

K. The submission of this Bid constitutes an incontrovertible representation by Bidder that Bidder has complied with every requirement of this Article, and that without exception the Bid and all prices in the Bid are premised upon performing and furnishing the Work required by the Bidding Documents.

ARTICLE 4 – BIDDER'S CERTIFICATION

4.01 Bidder certifies that:

A. This Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any collusive agreement or rules of any group, association, organization, or corporation;

B. Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid;

C. Bidder has not solicited or induced any individual or entity to refrain from bidding; and

D. Bidder has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for the Contract. For the purposes of this Paragraph 4.01.D:

1. "corrupt practice" means the offering, giving, receiving, or soliciting of any thing of value likely to influence the action of a public official in the bidding process;

2. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process to the detriment of Owner, (b) to establish bid prices at artificial non-competitive levels, or (c) to deprive Owner of the benefits of free and open competition;

3. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Owner, a purpose of which is to establish bid prices at artificial, non-competitive levels; and

4. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the e execution of the Contract.

ARTICLE 5 – BASIS OF BID

5.01 **BASE BID:** Bidder will complete the Base Bid Work in accordance with the Contract Documents for the following price(s):

Base Bid Lump Sum Bid Price	$

5.02 **ALTERNATE 1:** Replace Roof.

A. See Drawings Sheet A-2, Remediation Work for details.

B. See Section 01110, Summary of Work for the full scope.

Alternate #1 Remove Skylights & Replace Roofs	$

Total of Lump Sum + Alternate #1 = Total Bid **$**

ARTICLE 6 – TIME OF COMPLETION

6.01 The Project shall be substantially completed within Ninety (90) days from the Notice to Proceed. An additional Thirty (30) days shall be used to complete any outstanding issues or punch-list items. Final Completion shall be One Hundred Twenty (120) days from Notice to Proceed.

6.02 Bidder agrees that the Work will be substantially complete and will be completed and ready for final payment in accordance with Paragraph 15.06 of the General Conditions on or before the dates or within the number of calendar days indicated.

6.03 Bidder accepts the provisions of the Agreement as to liquidated damages established as Five Hundred ($500) per day beyond the 120 days of total project time.

ARTICLE 7 – ATTACHMENTS TO THIS BID

7.01 The following documents are submitted with and made a condition of this Bid:

A. Required Performance security;

B. List of Proposed Subcontractors;

C. List of Proposed Suppliers;

D. List of Project References;

E. Evidence of authority to do business in the state of the Project; or a written covenant to obtain such license within the time for acceptance of Bids;

F. Required Bidder Qualification Statement with supporting Attachments A through O; and

G. Submit sealed bids including one (1) original copy and one (1) electronic copy in pdf format on USB thumb drive.

ARTICLE 8 – DEFINED TERMS

8.01 The terms used in this Bid with initial capital letters have the meanings stated in the Instructions to Bidders, the General Conditions, and the Supplementary Conditions.

Notes: (1) Provide supplemental execution by any additional parties, such as joint venturers. (2) Any singular reference to Contractor, Surety, Owner, or other party shall be considered plural where applicable.

1. The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to the Owner for the performance of the Construction Contract, which is incorporated herein by reference.

2. If the Contractor performs the Construction Contract, the Surety and the Contractor shall have no obligation under this Bond, except when applicable to participate in a conference as provided in Paragraph 3.

3. If there is no Owner Default under the Construction Contract, the Surety's obligation under this Bond shall arise after:

3.1 The Owner first provides notice to the Contractor and the Surety that the Owner is considering declaring a Contractor Default. Such notice shall indicate whether the Owner is requesting a conference among the Owner, Contractor, and Surety to discuss the Contractor's performance. If the Owner does not request a conference, the Surety may, within five (5) business days after receipt of the Owner's notice, request such a conference. If the Surety timely requests a conference, the Owner shall attend. Unless the Owner agrees otherwise, any conference requested under this Paragraph 3.1 shall be held within ten (10) business days of the Surety's receipt of the Owner's notice. If the Owner, the Contractor, and the Surety agree, the Contractor shall be allowed a reasonable time to perform the Construction Contract, but such an agreement shall not waive the Owner's right, if any, subsequently to declare a Contractor Default;

3.2 The Owner declares a Contractor Default, terminates the Construction Contract and notifies the Surety; and

3.3 The Owner has agreed to pay the Balance of the Contract Price in accordance with the terms of the Construction Contract to the Surety or to a contractor selected to perform the Construction Contract.

4. Failure on the part of the Owner to comply with the notice requirement in Paragraph 3.1 shall not constitute a failure to comply with a condition precedent to the Surety's obligations, or release the Surety from its obligations, except to the extent the Surety demonstrates actual prejudice.

5. When the Owner has satisfied the conditions of Paragraph 3, the Surety shall promptly and at the Surety's expense take one of the following actions:

5.1 Arrange for the Contractor, with the consent of the Owner, to perform and complete the Construction Contract;

5.2 Undertake to perform and complete the Construction Contract itself, through its agents or independent contractors;

5.3 Obtain bids or negotiated proposals from qualified contractors acceptable to the Owner for a contract for performance and completion of the Construction Contract, arrange for a contract to be prepared for execution by the Owner and a contractor selected with the Owners concurrence, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Construction Contract, and pay to the Owner the amount of damages as described in Paragraph 7 in excess of the Balance of the Contract Price incurred by the Owner as a result of the Contractor Default; or

5.4 Waive its right to perform and complete, arrange for completion, or obtain a new contractor, and with reasonable promptness under the circumstances:

5.4.1 After investigation, determine the amount for which it may be liable to the Owner and, as soon as practicable after the amount is determined, make payment to the Owner; or

5.4.2 Deny liability in whole or in part and notify the Owner, citing the reasons for denial.

6. If the Surety does not proceed as provided in Paragraph 5 with reasonable promptness, the Surety shall be deemed to be in default on this Bond seven days after receipt of an additional written notice from the Owner to the Surety demanding that the Surety perform its obligations under this Bond, and the Owner shall be entitled to enforce any remedy available to the Owner. If the Surety proceeds as provided in Paragraph 5.4, and the Owner refuses the payment or the Surety has denied liability, in whole or in part, without further notice the Owner shall be entitled to enforce any remedy available to the Owner.

7. If the Surety elects to act under Paragraph 5.1, 5.2, or 5.3, then the responsibilities of the Surety to the Owner shall not be greater than those of the Contractor under the Construction Contract, and the responsibilities of the Owner to the Surety shall not be greater than those of the Owner under the Construction Contract. Subject to the commitment by the Owner to pay the Balance of the Contract Price, the Surety is obligated, without duplication for:

7.1 the responsibilities of the Contractor for correction of defective work and completion of the Construction Contract;

7.2 additional legal, design professional, and delay costs resulting from the Contractor's Default, and resulting from the actions or failure to act of the Surety under Paragraph 5; and

7.3 liquidated damages, or if no liquidated damages are specified in the Construction Contract, actual damages caused by delayed performance or non-performance of the Contractor.

8. If the Surety elects to act under Paragraph 5.1, 5.3, or 5.4, the Surety's liability is limited to the amount of this Bond.

9. The Surety shall not be liable to the Owner or others for obligations of the Contractor that are unrelated to the Construction Contract, and the Balance of the Contract Price shall not be reduced

or set off on account of any such unrelated obligations. No right of action shall accrue on this Bond to any person or entity other than the Owner or its heirs, executors, administrators, successors, and assigns.

10. The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders, and other obligations.

11. Any proceeding, legal or equitable, under this Bond may be instituted in any court of competent jurisdiction in the location in which the work or part of the work is located and shall be instituted within two years after a declaration of Contractor Default or within two years after the Contractor ceased working or within two years after the Surety refuses or fails to perform its obligations under this Bond, whichever occurs first. If the provisions of this paragraph are void or prohibited by law, the minimum periods of limitations available to sureties as a defense in the jurisdiction of the suit shall be applicable.

12. Notice to the Surety, the Owner, or the Contractor shall be mailed or delivered to the address shown on the page on which their signature appears.

13. When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted here from and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

14. Definitions

14.1 Balance of the Contract Price: The total amount payable by the Owner to the Contractor under the Construction Contract after all proper adjustments have been made including allowance for the Contractor for any amounts received or to be received by the Owner in settlement of insurance or other claims for damages to which the Contractor is entitled, reduced by all valid and proper payments made to or on behalf of the Contractor under the Construction Contract.

14.2 Construction Contract: The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and changes made to the agreement and the Contract Documents.

14.3 Contractor Default: Failure of the Contractor, which has not been remedied or waived, to perform or otherwise to comply with a material term of the Construction Contract.

14.4 Owner Default: Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

14.5 Contract Documents: All the documents that comprise the agreement between the Owner and Contractor.

15. If this Bond is issued for an agreement between a contractor and subcontractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

The Engineer hereby gives notice to the above Owner and Contractor that Engineer has recommended final payment of Contractor, and that the Work furnished and performed by Contractor under the above Construction Contract is acceptable, expressly subject to the provisions of the related Contract Documents, the Agreement between Owner and Engineer for Professional Services dated _____, 20___, and the following terms and conditions of this Notice:

CONDITIONS OF NOTICE OF ACCEPTABILITY OF WORK

The Notice of Acceptability of Work ("Notice") is expressly made subject to the following terms and conditions to which all those who receive said Notice and rely thereon agree:

1. This Notice is given with the skill and care ordinarily used by members of the engineering profession practicing under similar conditions at the same time and in the same locality.

2. This Notice reflects and is an expression of the Engineer's professional opinion.

3. This Notice is given as to the best of Engineer's knowledge, information, and belief as of the Notice Date.

4. This Notice is based entirely on and expressly limited by the scope of services Engineer has been employed by Owner to perform or furnish during construction of the Project (including observation of the Contractor's work) under Engineer's Agreement with Owner, and applies only to facts that are within Engineer's knowledge or could reasonably have been ascertained by Engineer as a result of carrying out the responsibilities specifically assigned to Engineer under such Agreement.

5. This Notice is not a guarantee or warranty of Contractor's performance under the Construction Contract, an acceptance of Work that is not in accordance with the related Contract Documents, including but not limited to defective Work discovered after final inspection, nor an assumption of responsibility for any failure of Contractor to furnish and perform the Work thereunder in accordance with the Construction Contract Documents, or to otherwise comply with the Construction Contract Documents or the terms of any special guarantees specified therein.

6. This Notice does not relieve Contractor of any surviving obligations under the Construction Contract, and is subject to Owner's reservations of rights with respect to completion and final payment.

SECTION 01110

SUMMARY OF WORK

PART 1 GENERAL

1.01 Section Includes

Summary of work, other contracts, work sequence, operation of existing facilities, use of premises, coordination, cutting and patching.

1.02 Summary of Work

The building sustained extensive water damages due to Hurricane Milton. The Project consists of miscellaneous interior and exterior repairs to the City of Flagler Beach Public Library building located at 315 South 7th Street in Flagler Beach, Florida. These include:

A. PRE-CONSTRUCTION WORK:

1. Contractor shall field verify all conditions and dimensions prior to performing demolition. Contractor is required to do demolition of all items required to accomplish the new work, whether or not shown or noted;
2. The Contractor shall be responsible for the removal and proper disposal of all materials as called for in the contract documents. The placement and access to waste receptacles for demolition/construction debris shall be coordinated with the Owner. Contractor to coordinate the demolition of all utilities with Owner prior to commencing demolition. Contractor is responsible for providing the name, address, and GPS coordinates of final disposal site of all debris in accordance with FEMA requirements;
3. The Owner has the first right of refusal on all salvaged equipment;
4. The Contractor shall notify and await approval from the owner before interruption of any utilities;
5. Facilities or portions of facilities shall not be occupied during construction, unless exits, fire detection, early warning systems and any safety barriers are continuously maintained and clearly marked at all times.
6. Prior to the issuance of the notice to proceed, a safety plan shall be provided by the Contractor which clearly delineates area(s) for construction, safety barriers, construction traffic during all phases, and conditions of construction.

B. INTERIOR WORK – INCLUDED IN BASE BID:

1. Replace all drywall on surfaces where previously removed – match thickness of existing;
2. Tape and mud all drywall joints and sand to a smooth finish – match texture of existing;
3. Replace all baseboard with new wood to match existing in species and profile;
4. Remove automatic door operator, push button, and all associated conduit/wiring – to be reinstalled after entry wall construction;
5. Remove exit sign and conduit – to be reinstalled after entry wall construction;

6. Remove doors and reinstall after new framing is constructed;
7. Remove framed wall from slab to underside of roof (approximately 10'-0" high) and from masonry wall to masonry wall (approximately 10'-8" wide);
8. Reconstruct removed framed wall as shown on Details 2 and 4 on Sheet A-2. Add R-19 batt insulation;
9. Remove existing laminate flooring at the entry doors and install new, owner-supplied ceramic tile (approximately 50 SF);
10. Paint all new surfaces to match existing;
11. Caulk all interior surfaces around windows and main entry doors.

C. EXTERIOR WORK – INCLUDED IN BASE BID:

1. On east wall only, completely remove the aluminum fascia covering and drip edge and the pressure-treated 2" x 6" wood fascia board along gable rake.
2. Rebuild the fascia as shown on Detail 5, Sheet A-2.
3. Remove push button for door opener and all conduit/wiring – to be reinstalled after entry wall construction;
4. Remove or secure existing camera located at northeast underside of canopy so as to be safeguarded from demolition/new construction while still remaining operational at all times – reinstall after exterior work is completed in the entrance area;
5. Remove existing outdoor carpeting, including metal edge-strips, located directly outside the double entry doors as shown on Detail 1, Sheet A-2. Remove any adhesive residue, thoroughly clean substrate concrete;
6. Caulk exterior surfaces around all windows and double entry doors;
7. Remove excess built-up soil above the slab level along the east and north walls. Regrade and provide new sod per Detail 6, Sheet A-2.

D. EXTERIOR WORK – ADD ALTERNATE – 1:

1. Remove completely the existing modified bitumen roof on entire building.
2. Remove all skylights on flat roof. Install new decking and insulation to match existing. These openings, once properly installed and inspected, will be covered by new roof.
3. Remove all skylights on elevated structure at the west end of the Library. Close with new deck material and insulation to match surrounding area. These openings, once properly installed and inspected, will be covered by new roof.

1.04 Work Sequence

The Contractor's sequence of work may be of his choosing in order to complete the work in the allowed time frame while accommodating other contractors on site.

1.05 Contractor Use of Premises

Confine operations at the site to areas permitted by applicable laws, ordinances, permits, and by the Contract Documents. Do not unreasonably encumber the site with materials or equipment. Do not load structures with weight that will endanger the structure. The Contractor shall assume full responsibility for protection and safekeeping of products stored on the job site.

1.06 Coordination

A. The Contractor shall be fully responsible for the coordination of its work and the work of its employees, subcontractors, and suppliers and to assure compliance with schedules.

B. The coordination requirements of this Section are in addition to the requirements of the front-end bidding documents issued by the City.

C. It is the Contractor's responsibility to coordinate with all the utilities regarding locates, testing, or relocations.

1.07 Cutting and Patching

A. The Contractor shall, at no additional expense to the City, perform cutting and patching necessary to the completion of the Project. Perform cutting and patching in a manner to prevent damage to the structure or previously completed work.

B. Refinish surfaces as necessary to provide an even finish.

PART 2 PRODUCTS - Not Used

PART 3 EXECUTION - Not Used

END OF SECTION

SECTION 01270

MEASUREMENT AND PAYMENT - LUMP SUM CONTRACTS

PART 1 GENERAL

1.01 GENERAL

A. Payment for all work done in compliance with the Contract Documents, inclusive of furnishing all manpower, equipment, materials, and performance of all operations relative to construction of this project, will be made under Pay Items. Work for which there is not a pay item will be considered incidental to the Contract and no additional compensation will be allowed.

B. The Owner reserves the right to modify work as may be necessary and increase or decrease quantities of work to be performed, including deduction or cancellation of any one or more of the Pay Items. Changes in the work shall not be considered as a waiver of any conditions of the Contract nor invalidate any provisions thereof.

C. The Contractor's attention is again called to the fact that the quotations for the various items of work are intended to establish a total price cost for completing the work in its entirety. Should the Contractor feel that the cost of any item of the work has not been established by the Bid Form, he shall include the cost for the work in some other applicable bid item, so that his proposal for the project does reflect his total price for completing the work in its entirety.

D. The quantities for payment under this Contract shall be determined by actual measurement and payment of the completed items, in place, ready for service and accepted by the Owner, in accordance with the applicable method of measurement therefore contained herein. A representative of the Contractor shall witness all field measurements.

E. Work performed by the Contractor outside the limits of construction shall be at the Contractor's expense.

2.01 MEASUREMENT

A. The quantities for payment under this Contract shall be determined by actual measurement of the completed items, in place, ready for service and accepted by the Owner, in accordance with the applicable method of measurement therefore contained herein.

3.01 PAYMENT ITEMS

A. Items are as enumerated on the bid form and the lump sums provided encompass the entire scope of work as described herein.

END OF SECTION

SECTION 01320

PROJECT COMPLETION SCHEDULE

PART 1 GENERAL

1.01 Section Includes

Project completion scheduling

1.02 Submittals

A. Prior to construction, prepare a schedule showing all major activities needed to complete project. Include major material and equipment order and delivery times. Submit to Owner no later than the date of the preconstruction conference. Update the schedule if any major events occur that would alter the previously submitted schedule.

B. Include on the schedule a minimum float of 1 day every 3 weeks during construction.

C. Project substantial and final completion dates shown on schedule shall be same as or earlier than the contractual dates.

PART 2 PRODUCTS - Not Used

PART 3 EXECUTION

3.01 Monitoring and Updating of Schedule

A. Float shown on the schedule belongs to the project.

B. Progress data shall be accumulated to update the schedule on a monthly basis, prior to submittal of the application for payment. Progress data shall include:
1. Activities started
2. Activities completed
3. Predicted activity starts and predicted activity completions
4. Changes in original duration for specific activities
5. Changes in activity sequences
6. Percent complete on activities

END OF SECTION

SECTION 01410

REGULATORY REQUIREMENTS AND PERMITS

PART 1 GENERAL

1.01 Section Includes

Regulatory requirements, project permits

1.02 Requirements of Regulatory Agencies

A. Whenever the Drawings and Specifications conflict with the requirements of the permit, then the requirements of the permit shall govern and the cost of abiding by the provisions of the permit shall be considered incidental to the Contract.

B. All electrical apparatus and wiring pertaining to a piece of equipment or an appliance furnished and installed under this Contract shall comply with the National Electrical Code and shall be listed by Underwriters Laboratories or bear the approval of a recognized Testing Laboratory approved by the Engineer.

1.03 Project Permits

A. Prior to construction, the Contractor shall apply for a separate Building Permit for each pump station from the City of Flagler Beach Building Department. Signed and sealed construction plans will be provided to the Contractor for its use in applying for the above permits. The Contractor is to coordinate with each permitting agency in order to determine the number of sets of signed and sealed construction plans that are required and the required sheet size (full size 22”x34” or half size 11”x17”).

B. The Contractor shall review and become familiar with all permits for the Project, complete with all conditions, attachments, exhibits and permit modifications. A copy of all permits for the Project shall be maintained by the Contractor at the project site, and shall be available for review upon request.

C. The Contractor shall be fully responsible to abide by all provisions of the permits. The Contractor is responsible for the selection, implementation and operation of all measures required by the permits, including the maintenance of said measures as necessary during construction. No additional compensation will be allowed for any work associated with permit requirements.

PART 2 PRODUCTS - Not Used

PART 3 EXECUTION - Not Used

END OF SECTION

SECTION 01420

ABBREVIATIONS

PART 1 GENERAL

1.01 Reference to Standards and Specifications of Technical Societies

A. Definitions and interpretations shall be as provided in Section 1 of the General Conditions.

B. Work specified by reference to published standard or specification of government agency, technical association, trade association, professional society or institute, testing agency, or other organization shall meet requirements or surpass minimum standards of quality for materials and workmanship established by designated standard or specification.

C. Where so specified, products or workmanship shall also meet or exceed additional prescriptive or performance requirements included within Contract Documents to establish a higher or more stringent standard of quality than required by referenced standard.

D. Where two or more standards are specified to establish quality, product and workmanship shall meet or exceed requirements of most stringent.

E. Where both a standard and a brand name are specified for a product in Contract Documents, proprietary product named shall meet or exceed requirements of specified reference standard.

F. Copies of standards and specifications of technical societies and copies of applicable referenced standards have not been bound in these Contract Documents.

G. Where copies of standards are needed by Contractor, obtain a copy or copies directly from publication source and maintain in an orderly manner at the Site as Work Site records, available to Contractor's personnel, Subcontractors, Owner, and Engineer.

1.02 Abbreviations

A. Following is a list of abbreviations for trade organizations, government agencies, and construction industry organizations to which references may be made in the Contract Documents, with abbreviations used.

AA	Aluminum Association
AABC	Associated Air Balance Council
AAMA	American Architectural Manufacturers Association
AASHTO	American Association of State Highway and Transportation Officials

SECTION 01450

QUALITY CONTROL

PART 1 GENERAL

1.01 Section Includes

Quality control, quality assurance.

1.02 Quality Control

A. It is the Contractor's responsibility to perform all work in conformance with the Plans and Specifications. In order to fulfill this responsibility, the Contractor is required to have an approved Quality Control Program, including testing (if required by the permit), as part of its Contract work in accordance with the Contract Documents and to submit details of its Program to the City for review and approval prior to commencing any construction operations. The submittal shall include detailed information on locations and number of all tests, etc., that will be necessary for the Contractor to make its own determination that the work is being performed in compliance with the Project requirements.

B. In addition to Quality Control Testing, the Contractor shall be responsible for required testing or approvals for any work (or any part thereof) if laws or regulations of any public body having jurisdiction specifically require testing, inspections or approval. The Contractor shall pay all costs in connection therewith and shall furnish the City the required certificates of inspection, testing or approval. The Contractor shall also be responsible for and shall pay all costs in connection with any inspection or testing required in connection with City acceptance of a supplier of materials or equipment proposed to be incorporated into the work.

C. Any design or testing laboratory utilized by the Contractor shall be an independent laboratory acceptable to the City, approved in writing, and complying with the latest edition of the "Recommended Requirements for Independent Laboratory Qualification", published by the American Council of Independent Laboratories.

D. Testing laboratories, whether provided by the City or the Contractor, shall promptly notify the City and the Contractor of irregularities or deficiencies of work that are observed during performance of services. Laboratories shall submit electronic copies (PDF format) of all reports directly to the City and the Contractor.

1.03 Testing of Materials

A. Unless otherwise specified, all materials shall be sampled and tested in accordance with the latest published standard methods of ASTM in effect at the time bids are received.

B. Test of materials shall be made by a representative of the Contractor, unless otherwise provided. Testing of equipment shall be the responsibility of the Contractor or an authorized manufacturer's representative. All test results shall be furnished to the City in

writing. The Contractor shall provide facilities required to collect and forward samples. The Contractor shall furnish the required samples without charge.

C. The Contractor shall not make use of or incorporate in the work, the materials represented by the sample until tests have been made and the material found to be in accordance with the requirements of the Specifications.

D. Materials to be tested and the applicable test procedure shall be as outlined in the individual sections of these Specifications.

1.04 Source and Quality of Materials and Equipment

A. The source of materials to be used shall be in accordance with the Contract Documents and as approved by the City before delivery. The approval of the source of any material shall continue as long as the material conforms to the Specifications.

B. All material not conforming to the requirements of the Specifications shall be considered as defective and shall be removed from the work. If in place, faulty materials shall be removed by the Contractor at its expense and replaced with acceptable material unless permitted otherwise by the City. No defective materials that have been subsequently corrected shall be reused until approval has been given.

C. Upon failure of the Contractor to comply immediately with any order of the City to remove and replace defective material, the City shall have authority to remove and replace defective materials, and to deduct the cost of removal and replacement from any monies due or to become due to the Contractor. Failure to reject any defective materials or work at the time of installation shall in no way prevent later rejection when such defects are discovered, nor obligate the City to final acceptance.

1.05 Additional Testing

The Contractor shall perform other testing called for in the Contract Documents including but not limited to piping, pressure, leakage, infiltration and exfiltration, as required.

PART 3 EXECUTION - Not Used

END OF SECTION

SECTION 01520

TEMPORARY FACILITIES AND CONTROLS

PART 1 GENERAL

1.01 Section Includes

Construction facilities, temporary utilities, project identification signs, field office and storage sheds, storage of materials and equipment.

1.02 Construction Facilities

All construction facilities remain the property of the Contractor establishing them and shall be maintained in a safe and useful condition until removed from the construction site.

1.03 Removal of Temporary Construction

Remove the various temporary facilities, services, and legally dispose of them as soon as the Owner deems permissible. Portions of the site and areas used for temporary facilities shall be restored to existing or better condition, including but not limited to fill replacement, regrading, compaction, and sodding.

1.04 Transportation and Handling

A. Manufactured materials and products shall be delivered to the project site as needed for installation, undamaged, in original packages, containers, or bundles, as packaged by the manufacturer with manufacturer's name, brand, seals, and labels intact.

B. Materials other than those designated within the Specifications or approved by the Owner shall not be delivered to the project site.

1.05 Storage and Protection

A. The Contractor shall be responsible for protection and preservation of all materials until final acceptance of the Project. Any damage to work prior to acceptance shall be remedied by the Contractor at no additional cost to the Owner.

B. Provide temporary weather-tight enclosures to protect work from damage by the elements, and protect finished surfaces to prevent any damage resulting from the work of any trade.

1.06 Security

A. Contractor shall, at all times, be responsible for the security required in all project areas and shall provide all reasonable protection to prevent damage, injury or loss to employees on the Work and all other persons who may be affected thereby; all the work materials and equipment to be incorporated therein, whether in storage on or off the project site, under the care, custody or control of the Contractor or any subcontractors; and any other property under the care, custody or control of the Contractor or any

subcontractors. Contractor shall be responsible for such security and safety until final acceptance of the Work.

B. Full time watchmen will not be specifically required as a part of the Contract, but the Contractor shall provide inspection of work area daily and shall take whatever measures are necessary to protect the safety of the public, workmen, and materials, and provide for the security of the site, both day and night.

PART 2 PRODUCTS

2.01 Temporary Electric Service

A. Furnish and maintain temporary lighting and power required to perform the Work. Include in the Bid all costs for providing temporary electrical service.

B. Temporary service shall include protective enclosures, branch wiring, outlets, lamps, and grounding as required by NEC and Local Electrical Codes.

2.02 Temporary Heating

The Contractor shall furnish fuel or power and provide and operate all temporary heating units. Heat shall be provided as necessary to perform the Work. Temporary heating units shall be adequately vented and approved devices which will not damage finished areas. The Contractor shall also furnish all tarpaulins and temporary enclosures necessary to provide this protection.

2.03 Temporary Ventilation

The Contractor shall provide, operate, and furnish power for temporary ventilation required for the proper installation and curing of materials and safety of workmen.

2.04 Temporary Sanitary Facilities

Provide temporary toilet facilities as required. Maintain these during the entire period of construction under this Contract for the use of all construction personnel on the job. Enough chemical toilets shall be provided to conveniently serve the needs of all personnel. Chemical toilets and their maintenance shall meet the requirements of State and local health regulations and ordinances.

2.05 Material Hoists and Cranes

A. Provide material hoists required for normal use by all trades and employ skilled hoist operators. Provide all necessary guards, signals, safety devices, etc., required for safe hoist operation. The construction and operation of material hoists shall be in accordance with the applicable ANSI Standards, the "Manual Code of Accident Prevention in Construction" of the Associated General Contractors of America, OSHA, and of other Federal, State, and municipal codes or ordinances. The Contractor shall prohibit the use of hoists for transporting personnel. Hoists shall be located to avoid risk of damage to completed work.

B. Special rigging and hoisting facilities shall be provided by each trade requiring their use.

2.06 Temporary Runways, Scaffolding, and Ladders

A. Provide temporary ladders, ramps, and runways as required for performance and inspection of the work. The above facilities shall be constructed and maintained in accordance with the applicable Federal, State, and Municipal regulations and codes.

B. Furnish, erect, and maintain all scaffolding required for this work. Scaffolding shall be constructed and maintained in accordance with applicable State and Federal laws and local ordinances. Scaffolding shall be promptly removed after serving its purpose.

C. The structural strength and safety of scaffolding, runways, covers, railings, ladders, stairs, etc., and compliance with law shall be the sole responsibility of the Contractor.

2.07 Temporary Chutes

No materials shall be dropped from structures except through enclosed wooden or metal chutes which shall be provided and maintained as required for the performance of the work by the various trades.

PART 3 EXECUTION - Not Used

END OF SECTION

SECTION 01770

CONTRACT CLOSEOUT

PART 1 GENERAL

1.01 Section Includes

Substantial completion requirements, clean-up, final completion requirements, closeout submittals

1.02 Clean-Up Operations

A. The entire project site shall be thoroughly cleaned at the completion of the work.

B. Clean all interior and exterior work areas, plus all adjacent areas affected by construction, as directed by the City or jurisdictional agency. Equipment to clean these surfaces shall be subject to approval by the City.

C. Restore to original condition or better all property not designated for alteration by the Contract Documents, including all areas used for staging and storage. Restoration includes but is not limited to fill replacement, regrading, compaction, and sodding. Conduct inspections of the completed restoration with the City, and conduct additional restoration as directed.

1.03 Substantial Completion Requirements

A. Complete the following before requesting the inspection for certification of substantial completion.

1. Submit record drawings in accordance with section 01780.
2. Complete required cleaning and testing of the completed construction in accordance with the specifications and the Owner's operating and maintenance personnel.

B. Work is not substantially complete until the following have occurred:

1. Flood testing of finished work areas to ensure water-tight installation.
2. All doors and windows are in excellent working order with no air or water penetration.

1.04 Final Completion Requirements

A. Complete the following before requesting the inspection for certification of final completion.

1. All punch list items identified during the substantial completion inspection.
2. Deliver tools, spare parts, extra stocks of material and similar physical items to the Owner.

3. Discontinue or change over and remove temporary facilities and services from the project site, along with construction tools and facilities, mock-ups, and similar elements.
4. Clean all marred surfaces including touch up painting, pressure washing, or other measures as needed as directed by the City.
5. Hose clean sidewalks, parking lot, loading areas, and others contiguous with principal structures.
6. Fully restore all property not designated for construction including all areas used for staging and storage.
7. Provide Final Record Drawings in accordance with Section 01780.

1.05 Closeout Submittals

A. Upon completion of the project, or portions thereof, the Contractor shall transfer to the City all applicable items accumulated throughout construction. These include but are not limited to the following items:

1. Service manuals, installation instructions, maintenance and operating instructions, special tools, and specialties
2. Spare parts ordered as part of this Contract
3. Delivery of any salvaged or borrowed materials or equipment to the Owner
4. All keys to all doors, gates, and equipment
5. Checklist indicating satisfactory completion of all unfinished items from the final inspection
6. Certificate of Substantial Completion
7. Certificate of Final Completion
8. Submittal of the Material and Workmanship Bond
9. Submittal of manufacturers' guarantees, warranties, bonds, and letters of coverage extending beyond the time limitations of the Contractor's guarantee.
10. Contractor’s Final Release of Lien
11. Final Waivers of lien from all Subcontractors and Suppliers
12. Consent of Surety to Final Payment
13. Final Record documents of completed facilities.
14. Certificate of Final Inspection
15. Certificate of Architect/Engineer

B. Closeout submittals provided by others include:

1. Certificate of Engineer/Architect

GENERAL DEMOLITION NOTES:

1. Demolition notes are general in nature only and identify the basic scope and intent of the work.
2. Contractor shall field verify all conditions and dimensions prior to performing demolition - Contractor is required to do all demolition of all items required to acomplish the new construction in this project, whether or not shown or noted.
3. The contractor shall be responsible for the removal and proper disposal of all materials as called for in the contract documents. The placement and access to waste receptacles for demolition/construction debris shall be coordinated with the owner. Contractor to coordinate the demolition of all utilities with owner prior to commencing demolition. Contractor is responsible for providing the name, address, GPS coordinates of final disposal site for all debris, in accordance with FEMA requirements.
4. The owner has first right of refusal on all salvaged equipment.
5. The contractor shall notify and await approval from the owner before interruption of utilities.
6. Facilities or portions of facilities shall not be occupied during construction, unless exits, fire detection and early warning systems, fire protection, and any safety barriers are continuously maintained and clearly marked at all times.
7. Prior to the issuance of the notice to proceed, a safety plan shall be provided by the contractor which clearly delineates areas for construction, safety barriers, construction traffic during all phases and conditions of construction.

SPECIFIC NOTES

1. remove existing exterior carpeting, including metal strip along the edges. clean and remove any excess glue to provide a clean substrate
2. remove automatic door operator and associated wiring, to be reused.
3. remove door and reuse after new framing is installed.
4. remove framed wall from slab to top of opening, approx 10' high.
5. remove alum. fascia covering and drip edge and p.t. 2x6 subfascia along gable rake on the East Wall only.
6. remove excess soil built up above slab level along the east and northern walls. regrade and provide sod on all disturbed areas.

ADDENDUM NUMBER 1

TO THE BIDDING/CONTRACT DOCUMENTS AND SPECIFACATIONS
HURRICANE MILTON DAMAGE REPAIRS TO
FLAGLER BEACH PUBLIC LIBRARY
Bid Number FB-250102

January 13, 2025

To All Plan Holders:
The following changes, clarifications and additions are hereby made a part of the bidding and contract documents for the above referenced project, and prepared by the City of Flagler Beach as fully and completely as if the same were fully set forth therein.

Response to Questions received before the deadline of 5:00 p.m. Monday, January 13, 2025

Responses are below the questions in RED

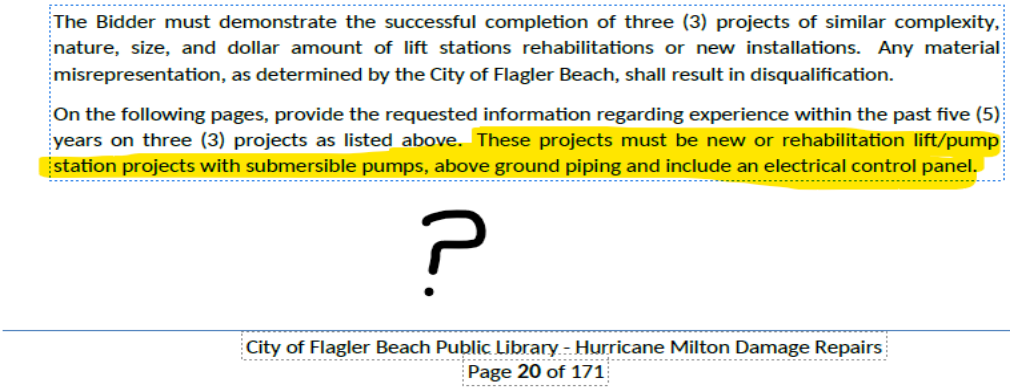
QUESTION 1:

1.03 Project Permits

A. Prior to construction, the Contractor shall apply for a separate Building Permit for each pump station from the City of Flagler Beach Building Department. Signed and sealed construction plans will be provided to the Contractor for its use in applying for the above permits. The Contractor is to coordinate with each permitting agency in order to determine the number of sets of signed and sealed construction plans that are required and the required sheet size (full size 22"x34" or half size 11"x17").

B. The Contractor shall review and become familiar with all permits for the Project, complete with all conditions, attachments, exhibits and permit modifications. A copy of all permits for the Project shall be maintained by the Contractor at the project site, and shall be available for review upon request.

C. The Contractor shall be fully responsible to abide by all provisions of the permits. The Contractor is responsible for the selection, implementation and operation of all measures required by the permits, including the maintenance of said measures as necessary during construction. No additional compensation will be allowed for any work associated with permit requirements.



RESPONSE:

On Page 166 of 171 in the Project Manual, Delete Paragraph 1.03 (A) in its entirety. Substitute with the following: Prior to construction, the Contractor shall apply and pay for a Building Permit issued by the City of Flagler Beach Building Department. Submit the construction plans posted with the bid documents. The document size shall be Tabloid (11" x 17") and, if necessary, a set may be requested from the Engineering Department.

Paragraphs (B) and (C) shall refer to only the one permit issued by the Building Department.

QUESTION 2:

Please see the attached screenshot - I believe this was a copy and paste error, I am going to Fill page 21 out as similar to projects of this scope, however please let me know If I need to do anything else.

The Bidder must demonstrate the successful completion of three (3) projects of similar complexity, nature, size, and dollar amount of lift stations rehabilitations or new installations. Any material misrepresentation, as determined by the City of Flagler Beach, shall result in disqualification.

On the following pages, provide the requested information regarding experience within the past five (5) years on three (3) projects as listed above. These projects must be new or rehabilitation lift/pump station projects with submersible pumps, above ground piping and include an electrical control panel.

?

CERTIFICATE OF CORPORATION

Please include a copy of your Certificate of Corporation from the State of Florida with this attachment.

STATE OF FLORIDA
COUNTY OF FLAGLER

I HEREBY CERTIFY that a meeting of the Board of Directors of Lads Construction Services LLC , a corporation under the laws of the State of Florida , was held on 01/11 , 20 25 . The following resolution was duly passed and adopted:

"RESOLVED, that Lads Construction Services LLC as Jeffrey Lademann President of the corporation is hereby authorized to execute the Contract dated 01/11 , 20 25 , between The City of Flagler Beach, a municipal corporation and this corporation, and that execution thereof, attested by the Secretary of the corporation and with corporate seal affixed, shall be the official act and deed of this corporation."

I further certify that said resolution is now in full force and effect.

IN WITNESS THEREOF, I have hereunto set my hand and affixed the official seal of the corporation

This 11th day of January , 20 25 .

Jeffrey Lademann
Corporate Secretary

CONTRACTOR QUESTIONNAIRE

DATE: 01/11/2025

NAME OF BIDDER: Lads Construction Services LLC

BUSINESS ADDRESS: 6 Maple St Flagler Beach FL 32136

PHONE NUMBER: (386)-793-4342

CONTRACTOR'S FL LICENSE #: CGC:1528439

EXPIRATION DATE: 08/31/2026

The undersigned warrants the truth and accuracy of all statements and answers herein contained. Include additional sheets as necessary.

1. How many years has your organization been in business as a General Contractor?

5 Years - 12/11/2019

2. How many years has your organization been in business as a Subcontractor?

Lads Construction operates as the prime contractor

3. Name of Superintendent and length of time with your company?

Joe Cortese - 4 years

4. Describe in detail and give the date and owner, including phone numbers and contact person(s), of the last five (5) projects that you have completed similar in type, size, and nature as the project proposed?

Frank Johnson - President of - Johnson and Gilbert Law office (386)-852-8281. 170 E Granada BLVD Ormond Beach Fl 32174

Bill McLaughlin - President of - IMCO Independent Medical Co-Op (386)-258-1530. 129 Executive Cir, Daytona Beach FL 32114

David Main - GM / COO of Oceanside Country Club (386)-677-7200. 75 N Halifax Dr Ormond Beach FL 32176

David Main - GM / COO of Oceanside Country Club (386)-677-7200. 75 N Halifax Dr Ormond Beach FL 32176

Marcus Carr - Senior VP of Finance of Planet Bids - (818)-992-1771 x160. 200 E granada BLVD Suite 3003

5. Have you ever failed, or been alleged to have failed, to complete work awarded to you? If so, please list the project and explain the reasons why?

NO

6. Have you ever failed, or been alleged to have failed, to complete work within the Contract Time? If so, please list the project and explain the reasons why?

NO

7. Have you ever been assessed liquidated damages, or had liquidated damages assessed against you? If so, please list the project and explain the reasons why?

NO

8. Have you ever had a bond or letter of credit called by the owner of a project? If so, when?

NO

9. Have you personally inspected the site of the proposed Work? Describe, in full, any anticipated problems with the site and your proposed solutions?

Yes, 10am-11:15 AM on Thursday Jan, 9th 2024. No issues expected besides the future water intrusion / paint peeling off the rest of the building as the current plans are to paint touch up around the lower perimeter and only address peeling paint on the East facing wall. Sealing the whole building with a fresh high quality primer and sealant is key to keeping the building dry from future blowing wind / rain storms. As well as the sidewalk outside the front door - going to the parking lot is at the same elevation as the FFE. Once sod / landscape is lowered below the FFE, ultimately going to cause water to collect between the sidewalk and the building.

Bidder Name: Lads Construction Services LLC - Jeffrey Lademann

Signature: Jeffrey Lademann

Title: President

SWORN STATEMENT UNDER SECTION 287.133(3) (a), FLORIDA STATUTES, ON PUBLIC ENTITY CRIMES

THIS FORM MUST BE SIGNED IN THE PRESENCE OF A NOTARY PUBLIC OR OTHER OFFICER AUTHORIZED TO ADMINISTER OATHS.

This sworn statement is submitted to: **The City of Flagler Beach** (Public entity)

By: Jeffrey Lademann - President
(Individual's name and title)

For: Lads Construction Services LLC
(Name of entity submitting sworn statement)

Whose business address is: 6 Maple St Flagler Beach, FL 32136

Federal Employer Identification Number (FEIN): 84-2700292

(If the entity has no FEIN, include the Social Security Number of the individual signing this sworn statement)

1. I understand that a "public entity crime" as defined in Section 287.133(1)(g), Florida Statutes, means a violation of any State or Federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or of the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy, or material misrepresentation.
2. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1) (b), Florida Statutes, means a finding of guilt or a conviction of a public entity crimes, with or without an adjudication of guilt, in any Federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, non-jury trial, or entry of a plea of guilty or nolo contendere.

3. I understand that an "affiliate" as defined in Section 287.133(1)(a), Florida Statutes, means: A predecessor or successor of a person convicted of a public entity crime: or an entity under the control of any natural person who is active in the management of the entity and how has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in the management of an affiliate. The ownership by one (1) person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.
4. I understand that a "person" as defined in Section 287.133(1) (e), Florida Statutes, means any natural person or entity organized under the laws of any state or of the United States with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in management of an entity.

Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Indicate which statement applies.)

TRUE Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members, or agent who is active in management of the entity, nor the affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

TRUE The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agent who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

TRUE The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agents who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

However, there has been a subsequent proceeding before an Administrative Law Jury of the State of Florida, Division of Administrative Hearings and the Final Order entered by the Administrative Law Jury

determined that it was not in the public interest to place the entity submitting this sworn statement on the convicted vendor list. (Attach a copy of the final order.)

I UNDERSTAND THAT THE SUBMISSION OF THIS FORM TO THE CITY OF FLAGLER IS FOR THE CITY ONLY AND, THAT THIS FORM IS VALID THROUGH DECEMBER 31, OF THE CALENDAR YEAR IN WHICH IT IS FILED. I ALSO UNDERSTAND THAT I AM REQUIRED TO INFORM THE CITY PRIOR TO ENTERING IN TO A CONTRACT IN EXCESS OF THE THRESHOLD AMOUNT PROVIDED IN SECTION 287.017, FLORIDA STATUES, FOR CATEGORY TWO OF ANY CHANGE IN THE INFORMATION CONTAINED IN THIS FORM.

CERTIFICATION OF NON-SEGREGATED FACILITIES

SECTION 00 11 53
REQUEST FOR QUALIFICATION FORMS

The Bidder certifies that they do not maintain or provide for their employees any segregated facilities at any of his establishments, and that they do not permit their employees to perform their services at any location, under their control, where segregated facilities are maintained. The Bidder certifies further that they will not maintain or provide for their employees any segregated facilities at any location under their control where segregated facilities are maintained. The Bidder agrees that a breach of this certification will be a violation of the Equal Opportunity clause in any contract resulting from acceptance of this Bid. As used in this certification, the term "segregated facilities" means any waiting rooms, work areas, restrooms and washrooms, restaurants and other eating areas, time clocks, locker rooms and other storage and dressing areas, parking lots, drinking fountains, recreation or entertainment area, transportation and housing facilities provided for employees which are segregated by explicit directive, or are in fact segregated on the basis of race, color, religious disability or national origin, because of habit, local custom, or otherwise. The Bidder agrees that (except where they have obtained identical certifications from proposed subcontractors for specific time periods) they will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding $10,000 which are not exempt from the provisions of the Equal Opportunity clause, and that he will retain such certifications in his files.

The nondiscriminatory guidelines as promulgated in Section 202, Executive Order 11246, and as amended by Executive Order 11375 and as amended, relative to Equal Opportunity for all persons and implementations of rules and regulations prescribed by the United States Secretary of Labor are incorporated herein.

ATTACHMENT I DRUG-FREE WORK PLACE

SECTION 00 11 53

REQUEST FOR QUALIFICATION FORMS

The undersigned vendor in accordance with Florida Statute 287.087 hereby certifies that

Lads Construction Services LLC does hereby: (Name of Business)

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are proposed a copy of the statement specified in subsection (1).

4. In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under proposal, the employee will propose by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contender to, any violation of Chapter 893, Florida Statutes, or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of the matters set forth above.

As the person authorized to sign the statement, I certify that this firm complies fully with the above requirements.

ATTACHMENT J CONFLICT OF INTEREST STATEMENT
SECTION 00 11 53
REQUEST FOR QUALIFICATION FORMS

Before me, the undersigned authority, personally appeared Jeffrey Lademann, who was duly sworn, deposes, and states:

1. I am the President of Lads Construction Services LLC with a local office in Flagler Beach, FL and principal office in Flagler Beach, FL.
2. The above-named entity is submitting an Expression of Interest for the City of Flagler Beach project described as bid number NO: FB-250102.
3. The Affiant has made diligent inquiry and provides the information contained in this Affidavit based upon his own knowledge.
4. The Affiant states that only one submittal for the above project is being submitted and that the above-named entity has no financial interest in other entities submitting proposals for the same project.
5. Neither the Affiant nor the above-named entity has directly or indirectly entered into any agreement, participated in any collusion, or otherwise taken any action in restraint of free competitive pricing in connection with the entity's submittal for the above project. This statement restricts the discussion of pricing data until the completion of negotiations and execution of the Agreement for this project.
6. Neither the entity nor its affiliates, nor any one associated with them, is presently suspended or otherwise ineligible from participating in contract lettings by any local, state, or federal agency.
7. Neither the entity, nor its affiliates, nor any one associated with them have any potential conflict of interest due to any other clients, contracts, or property interests for this project.
8. I certify that no member of the entity's ownership, management, or staff has a vested interest in any aspect of or Department of the City of Flagler Beach.
9. I certify that no member of the entity's ownership or management is presently applying for an employee position or actively seeking an elected position with City of Flagler Beach.
10. In the event that a conflict of interest is identified in the provision of services, I, on behalf of the above-named entity, will immediately notify the City of Flagler Beach in writing.

COMPLIANCE WITH THE PUBLIC RECORDS LAW

SECTION 00 11 53
REQUEST FOR QUALIFICATION FORMS

Upon award recommendation or thirty (30) days after receiving submittals, they become "public records" and shall be subject to public disclosure consistent with Chapter 119, Florida Statutes. Proposers must invoke the exemptions to disclosure provided by law in the response to the solicitation, and must identify the data or other materials to be protected, and must state the reasons why such exclusion from public disclosure is necessary.

If the company submits information exempt from public disclosure, the company must identify with specificity which pages/paragraphs of their bid/proposal package are exempt from the Public Records Act, identifying the specific exemption section that applies to each. The protected information must be submitted to the City of Flagler Beach in a separate envelope marked accordingly.

ADDITIONAL PROCUREMENT CLAUSES FOR FEMA-RELATED PROJECTS

REQUEST FOR QUALIFICATION FORMS

TERMINATION FOR CAUSE AND CONVENIENCE

1. Contractor shall be considered in material default of the Agreement and such default shall be considered cause for the City to terminate the Agreement, in whole or in part, as further set forth in this Section 17, if Contractor: (i) fails to begin the Work under the Contract Documents within the time specified herein; (ii) fails to properly and timely perform the Work as directed by the City or as provided for in the approved Progress Schedule; (iii) performs the Work unsuitably or neglects or refuses to remove materials or to correct or replace such Work as may be rejected as unacceptable or unsuitable; (iv) discontinues the prosecution of the Work; (v) fails to resume Work which has been suspended within a reasonable time after being notified to resume Work; (vi) becomes insolvent or is declared bankrupt, or commits any act of bankruptcy; (vii) allows any final judgment to stand against it unsatisfied for more than ten (10) days; (viii) makes an assignment for the benefit of creditors; (ix) fails to obey any applicable codes, laws, ordinances, rules or regulations with respect to the Work; and/or (x) materially breaches any other provision of the Contract Documents.

2. City shall notify Contractor in writing of Contractor's default(s). If the City determines that Contractor has not remedied and cured the default(s) within seven (7) calendar days following receipt by Contractor of said written notice, then the City, at its option, without releasing or waiving its rights and remedies against the Contractor's sureties and without prejudice to any other right or remedy it may be entitled to hereunder or by law, may terminate all or any portion of the Work and any materials, tools, equipment, and appliances of Contractor, take assignments of any of Contractor's subcontracts and purchase orders, and complete all or any portion of Contractor's Work by whatever means, method or agency which the City, in its sole discretion, may choose.

3. If the City deems any of the foregoing remedies necessary, Contractor agrees that it shall not be entitled to receive any further payments hereunder until after the Project is completed. All monies expended and all of the costs, losses, damages, and extra expenses, including all management, administrative and other overhead and other direct and indirect expenses (including attorneys' fees) or damages incurred by the City incident to such completion, shall be deducted from the Contract Amount, and if such expenditures exceed the unpaid balance of the Contract Amount, Contractor agrees to pay promptly to City, on demand, the full amount of such excess, including costs of collection, attorneys' fee (including appeals) and interest thereon at the maximum legal rate of interest until paid. If the unpaid balance of the Contract Amount exceeds all such costs, expenditures and damages incurred by the City to complete the Work, such excess shall be paid to the Contractor. The amount to be paid to the Contractor or the City, as the case may be, and this obligation for payment shall survive termination of the Agreement.

4. The liability of Contractor hereunder shall extend to and include the full amount of any and all sums paid, expenses and losses incurred, damages sustained, and obligations assumed by the City in good faith under the belief that such payments or assumptions were necessary or required, in completing the Work and providing labor, materials, equipment, supplies, and other items therefore or re-letting the Work, in settlement, discharge or compromise of any claims, demands, suits and judgments pertaining to or arising out of the Work hereunder.

5. If, after notice of termination of Contractor's right to proceed pursuant to this Section 17, it is determined for any reason that Contractor was not in default, or that its default was excusable, or that the City is not entitled to the remedies against Contractor provided herein, then Contractor's remedies against the City shall be the same as and

limited to those afforded Contractor below under Subsection 18.1, below, regarding termination of the Agreement for convenience.

BUILD AMERICA BUY AMERICA ACT (BABAA)

The Office of Management and Budget (OMB) has revised its guidance in Title 2 of the Code of Federal Regulations (2 CFR) to add a new part 184 and revise 2 CFR § 200.322. The new part 184 provides guidance to federal agencies on how to apply the domestic content procurement preference as set forth in the Build America, Buy America Act (BABAA) to federal financial assistance for infrastructure projects.

The revised provision in 2 CFR § 200.322 specifies that federal agencies providing federal financial assistance for infrastructure projects must implement the BABAA requirements set forth in 2 CFR part 184. This link's URL is https://www.ecfr.gov/current/title-2/subtitle-A/chapter-I/part-184.

DEBARMENT AND SUSPENSION

1. The City shall have the right to terminate the Agreement without cause upon seven (7) calendar days written notice to Contractor. In the event of such termination for convenience, Contractor's recovery against City shall be limited to (i) that portion of the Contract Amount earned through the date of termination; (ii) any retainage withheld up to the date of termination, and (iii) actual out-of-pocket costs arising directly and solely from termination of this Agreement not to exceed under any circumstance five percent (5%) of that portion of the Contract Amount earned through the date of termination. Contractor shall not be entitled to any other or further recovery against the City, including, but not limited to, damages or any anticipated profit on portions of the Work not performed.

2. The City shall have the right to suspend all or any portions of the Work upon giving Contractor two (2) calendar days' prior written notice of such suspension. If all or any portion of the Work is so suspended, Contractor's sole and exclusive remedy shall be to seek an extension of time to its schedule in accordance with the procedures set forth in the Contract Documents. In no event shall the Contractor be entitled to any additional compensation or damages. Provided, however, if the ordered suspension exceeds three (3) months, the Contractor shall have the right to terminate the Agreement with respect to that portion of the Work which is subject to the ordered suspension.

BYRD ANTI-LOBBYING AMENDMENT

Contractors who apply or bid for an award of more than $100,000 shall file the required certification. Each tier certifies to the tier above that it will not and has not used federally appropriated funds to pay any person or organization for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, officer or employee of Congress, or an employee of a Member of Congress in connection with obtaining any federal contract, grant, or any other award covered by 31 U.S.C. § 1352. Each tier shall also disclose any lobbying with non-federal funds that takes place in connection with obtaining any federal award. Such disclosures are forwarded from tier to tier up to the recipient who in turn will forward the certification(s) to the federal awarding agency."

DAVIS-BACON ACT

As amended (40 U.S.C. 3141-3148). When required by Federal program legislation, all prime construction contracts in excess of $2,000 awarded by non-Federal entities must include a provision for compliance with the Davis-Bacon Act (40 U.S.C. 3141-3144, and 3146-3148) as supplemented by Department of Labor regulations (29 CFR Part 5, "Labor Standards Provisions Applicable to Contracts Covering Federally Financed and Assisted Construction"). In accordance with the statute, contractors must be required to pay wages to laborers and mechanics at a rate not less than the prevailing wages specified in a wage determination made by the Secretary of Labor. In addition, contractors must be required to pay wages not less than once a week. The non-Federal entity must place a copy of the current prevailing wage determination issued by the Department of Labor in each solicitation. The decision to award a contract or subcontract must be conditioned upon the acceptance of the wage determination. The non-Federal entity must report all suspected or reported violations to the Federal awarding agency. The contracts must also include a provision for compliance with the Copeland "Anti-Kickback" Act (40 U.S.C. 3145), as supplemented by Department of Labor regulations (29 CFR Part 3, "Contractors and Subcontractors on Public Building or Public Work Financed in Whole or in Part by Loans or Grants from the United States"). The Act provides that each contractor or sub recipient must be prohibited from inducing, by any means, any person employed in the construction, completion, or repair of public work, to give up any part of the compensation to which he or she is otherwise entitled. The non-Federal entity must report all suspected or reported violations to the Federal awarding agency.

CERTIFICATION

The undersigned certifies, to the best of his or her knowledge and belief, that:
No federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any federal contract, the making of any federal grant, the making of any federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any federal contract, grant, loan, or cooperative agreement.

If any funds other than federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.

The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, Title 31, U.S.C. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure."

"The Contractor, CPH, LLC, certifies or affirms the truthfulness and accuracy of each statement of its certification and disclosure, if any. In addition, the Contractor understands and agrees that the provisions of 31 U.S.C. Chap. 38, Administrative Remedies for False Claims and Statements, apply to this certification and disclosure, if any.

Prohibition on Contracting for Covered Telecommunications Equipment or Services

(a) *Definitions.* As used in this clause, the terms backhaul; covered foreign country; covered telecommunications equipment or services; interconnection arrangements; roaming; substantial or essential component; and telecommunications equipment or services have the meaning as defined in FEMA Policy 405-143-1, Prohibitions on Expending FEMA Award Funds for Covered Telecommunications Equipment or Services (Interim), as used in this clause—

(b) *Prohibitions.*

(1) Section 889(b) of the John S. McCain National Defense Authorization Act for Fiscal Year 2019, Pub. L. No. 115-232, and 2 C.F.R. § 200.216 prohibit the head of an executive agency on or after Aug.13, 2020, from obligating or expending grant, cooperative agreement, loan, or loan guarantee funds on certain telecommunications products or from certain entities for national security reasons.

(2) Unless an exception in paragraph (c) of this clause applies, the contractor and its subcontractors may not use grant, cooperative agreement, loan, or loan guarantee funds from the Federal Emergency Management Agency to:

(i) Procure or obtain any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology of any system;

(ii) Enter into, extend, or renew a contract to procure or obtain any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology of any system;

(iii) Enter into, extend, or renew contracts with entities that use covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system; or

(iv) Provide, as part of its performance of this contract, subcontract, or other contractual instrument, any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system.

(c) *Exceptions.*

(1) This clause does not prohibit contractors from providing—

(i) A service that connects to the facilities of a third-party, such as backhaul, roaming, or interconnection arrangements; or

(ii) Telecommunications equipment that cannot route or redirect user data traffic or permit visibility into any user data or packets that such equipment transmits or otherwise handles.

(2) By necessary implication and regulation, the prohibitions also do not apply to:
(i) Covered telecommunications equipment or services that: i. Are *not used* as a substantial or essential component of any system; *and*

(ii). Are *not used* as critical technology of any system.

(Iii) Other telecommunications equipment or services that are not considered covered telecommunications equipment or services.

(d) *Reporting requirement.*

(1) In the event the contractor identifies covered telecommunications equipment or services used as a substantial or essential component of any system, or as critical technology as part of any system, during contract performance, or the contractor is notified of such by a subcontractor at any tier or by any other source, the contractor shall report the information in paragraph (d)(2) of this clause to the recipient or subrecipient, unless elsewhere in this contract are established procedures for reporting the information.

(2) The Contractor shall report the following information pursuant to paragraph (d)(1) of this clause: (i) Within one business day from the date of such identification or notification: The contract number; the order number(s), if applicable; supplier name; supplier unique entity identifier (if known); supplier Commercial and Government Entity (CAGE) code (if known); brand; model number (original equipment manufacturer number, manufacturer part number, or wholesaler number); item description; and any readily available information about mitigation actions undertaken or recommended.

(ii) Within 10 business days of submitting the information in paragraph (d)(2)(i) of this clause: Any further available information about mitigation actions undertaken or recommended. In addition, the contractor shall describe the efforts it undertook to prevent use or submission of covered telecommunications equipment or services, and any additional efforts that will be incorporated to prevent future use or submission of covered telecommunications equipment or services.

(e) *Subcontracts.*
The Contractor shall insert the substance of this clause, including this paragraph (e), in all subcontracts and other contractual instruments."

Domestic Preferences for Procurements

As appropriate, and to the extent consistent with law, the contractor should, to the greatest extent practicable, provide a preference for the purchase, acquisition, or use of goods, products, or materials produced in the United States. This includes, but is not limited to iron, aluminum, steel, cement, and other manufactured products.

For purposes of this clause:
Produced in the United States means, for iron and steel products, that all manufacturing processes, from the initial melting stage through the application of coatings, occurred in the United States.

Manufactured products mean items and construction materials composed in whole or in part of non-ferrous metals such as aluminum; plastics and polymer-based products such as polyvinyl chloride pipe; aggregates such as concrete; glass, including optical fiber; and lumber."
Copyright and Data Rights

The Contractor grants to the City of Flagler Beach, a paid-up, royalty-free, nonexclusive, irrevocable, worldwide license in data first produced in the performance of this contract to reproduce, publish, or otherwise use, including prepare derivative works, distribute copies to the public, and perform publicly and display publicly such data. For data required by the contract but not first produced in the performance of this contract, the Contractor will identify such data and grant to the City of Flagler Beach or acquires on its behalf a license of the same scope as for data first produced in the performance of this contract. Data, as used herein, shall include any work subject to copyright under 17 U.S.C. § 102, for example, any written reports or literary works, software and/or source code, music, choreography, pictures or images, graphics, sculptures, videos, motion pictures or other audiovisual works, sound and/or video recordings, and architectural works. Upon or before the completion of this contract, the Contractor will deliver to the City of Flagler Beach data first produced in the performance of this contract and data required by the contract but not first produced in the performance of this contract in formats acceptable by the City of Flagler Beach.

ARTICLE 1 – DEFINED TERMS

1.01 Terms used in these Instructions to Bidders have the meanings indicated in the General Conditions and Supplementary Conditions. Additional terms used in these Instructions to Bidders have the meanings indicated below:

A. *Issuing Office* – The office from which the Bidding Documents are to be issued.

NOTE(S) TO USER:

1. *In addition to terms specifically defined, terms with initial capital letters in the Bidding Requirements include references to identified articles and paragraphs, and the titles of other documents or forms.*
2. *Additional defined terms applicable to the Bidding Requirements should be included here and should be used uniformly throughout the Bidding Requirements with initial capitals. Additional defined terms applicable to the Contract Documents should be included in the Supplementary Conditions. Note the difference in the meanings of the terms "Bidding Requirements" and "Bidding Documents," as defined in the General Conditions, Paragraph 1.01.A.*
3. *It is strongly recommended that the Issuing Office be identified in the invitation to bid or advertisement. See EJCDC® C-111, Suggested Advertisement for Bids for Construction Contracts. If not, it should be identified in these Instructions.*

ARTICLE 2 – COPIES OF BIDDING DOCUMENTS

2.01 Complete sets of the Bidding Documents may be obtained from the Issuing Office as stated in the advertisement or invitation to bid.

2.02 Complete sets of Bidding Documents shall be used in preparing Bids; neither Owner nor Engineer assumes any responsibility for errors or misinterpretations resulting from the use of incomplete sets of Bidding Documents.

2.03 Owner and Engineer, in making copies of Bidding Documents available on the above terms, do so only for the purpose of obtaining Bids for the Work and do not authorize or confer a license for any other use.

ARTICLE 3 – QUALIFICATIONS OF BIDDERS

3.01 To demonstrate Bidder's qualifications to perform the Work, Bidder shall submit all qualification forms listed below which are included in the bid documents:

A. Attachment A - Certificate of Corporation

B. Attachment B – Contractor Questionnaire

C. Attachment C - Required Disclosure

D. Attachment D - Bidder Information

E. Attachment E - Experience of Bidder

F. Attachment F – Sworn Statement Under Section 287.133(3) (A), Florida Statutes, on Public Entity Crimes

G. Attachment G - Affidavit of Non-Collusion

H. Attachment H - Certification of Non-Segregated Facilities

I. Attachment I - Drug-Free Workplace

J. Attachment J - Conflict of Interest Statement

K. Attachment K - Compliance with Public Records Law

L. Attachment L - Americans with Disabilities Act Affidavit

M. Attachment M - List of Licenses and Certifications

N. Attachment N - List of Proposed Subcontractors/Suppliers

O. Attachment O - List of Proposed Equipment

3.02 A Bidder's failure to submit required qualification information shall disqualify Bidder from receiving an award of the Contract.

3.03 No requirement in this Article 3 to submit information will prejudice the right of Owner to seek additional pertinent information regarding Bidder's qualifications.

3.04 Bidder is advised to carefully review those portions of the Bid Form requiring Bidder's representations and certifications.

ARTICLE 4 – SITE AND OTHER AREAS; EXISTING SITE CONDITIONS; EXAMINATION OF SITE; OWNER'S SAFETY PROGRAM; OTHER WORK AT THE SITE

4.01 *Site and Other Areas*

A. The Site is identified in the Bidding Documents. By definition, the Site includes rights-of-way, easements, and other lands furnished by Owner for the use of the Contractor. Any additional lands required for temporary construction facilities, construction equipment, or storage of materials and equipment, and any access needed for such additional lands, are to be obtained and paid for by Contractor.

4.02 *Existing Site Conditions*

A. Subsurface and Physical Conditions; Hazardous Environmental Conditions

1. The Supplementary Conditions identify:

a. those reports known to Owner of explorations and tests of subsurface conditions at or adjacent to the Site.

b. those drawings known to Owner of physical conditions relating to existing surface or subsurface structures at the Site (except Underground Facilities).

c. reports and drawings known to Owner relating to Hazardous Environmental

Conditions that have been identified at or adjacent to the Site.

d. Technical Data contained in such reports and drawings.

2. The Technical Data contained therein upon whose accuracy Bidder is entitled to rely, as provided in the General Conditions, has been identified and established in the Supplementary Conditions. Bidder is responsible for any interpretation or conclusion Bidder draws from any Technical Data or any other data, interpretations, opinions, or information contained in such reports or shown or indicated in such drawings. If the Supplementary Conditions do not identify Technical Data, the default definition Technical Data set forth in Article 1 of the General Conditions will apply.

3. Geotechnical Baseline Report: The Bidding Documents contain a Geotechnical Baseline Report (GBR). The GBR describes certain select subsurface conditions that are anticipated to be encountered by Contractor during construction in specified locations ("Baseline Conditions"). The GBR is a Contract Document.

   The Baseline Conditions in the GBR are intended to reduce uncertainty and the degree of contingency in submitted Bids. However, Bidders cannot rely solely on the Baseline Conditions. Bids should be based on a comprehensive approach that includes an independent review and analysis of the GBR, all other Contract Documents, Technical Data, other available information, and observable surface conditions. Not all potential subsurface conditions are baselined.

   Nothing in the GBR is intended to relieve Bidders of the responsibility to make their own determinations regarding construction costs, bidding strategies, and Bid prices, nor of the responsibility to select and be responsible for the means, methods, techniques, sequences, and procedures of construction, and for safety precautions and programs incident thereto.

B. Underground Facilities: Information and data shown or indicated in the Bidding Documents with respect to existing Underground Facilities at or adjacent to the Site are set forth in the Contract Documents and are based upon information and data furnished to Owner and Engineer by owners of such Underground Facilities, including Owner, or others.

C. Adequacy of Data: Provisions concerning responsibilities for the adequacy of data furnished to prospective Bidders with respect to subsurface conditions, other physical conditions, and Underground Facilities, and possible changes in the Bidding Documents due to differing or unanticipated subsurface or physical conditions appear in Paragraphs 5.03, 5.04, and 5.05 of the General Conditions. Provisions concerning responsibilities for the adequacy of data furnished to prospective Bidders with respect to a Hazardous Environmental Condition at the Site, if any, and possible changes in the Contract Documents due to any Hazardous Environmental Condition uncovered or revealed at the Site which was not shown or indicated in the Drawings or Specifications or identified in the Contract Documents to be within the scope of the Work, appear in Paragraph 5.06 of the General Conditions.

4.03 *Site Visit and Testing by Bidders*

A. Bidder shall conduct the required Site visit during normal working hours, and shall not disturb any ongoing operations at the Site.

B. Bidder is not required to conduct any subsurface testing, or exhaustive investigations of Site conditions.

C. On request, and to the extent Owner has control over the Site, and schedule permitting, the Owner will provide Bidder access to the Site to conduct such additional examinations, investigations, explorations, tests, and studies as Bidder deems necessary for preparing and submitting a successful Bid. Owner will not have any obligation to grant such access if doing so is not practical because of existing operations, security or safety concerns, or restraints on Owner's authority regarding the Site.

D. Bidder shall comply with all applicable Laws and Regulations regarding excavation and location of utilities, obtain all permits, and comply with all terms and conditions established by Owner or by property owners or other entities controlling the Site with respect to schedule, access, existing operations, security, liability insurance, and applicable safety programs.

E. Bidder shall fill all holes and clean up and restore the Site to its former condition upon completion of such explorations, investigations, tests, and studies.

4.04 *Owner's Safety Program*

A. Site visits and work at the Site may be governed by an Owner safety program. As the General Conditions indicate, if an Owner safety program exists, it will be noted in the Supplementary Conditions.

4.05 *Other Work at the Site*

A. Reference is made to Article 8 of the Supplementary Conditions for the identification of the general nature of other work of which Owner is aware (if any) that is to be performed at the Site by Owner or others (such as utilities and other prime contractors) and relates to the Work contemplated by these Bidding Documents. If Owner is party to a written contract for such other work, then on request, Owner will provide to each Bidder access to examine such contracts (other than portions thereof related to price and other confidential matters), if any.

ARTICLE 5 – BIDDER'S REPRESENTATIONS

5.01 It is the responsibility of each Bidder before submitting a Bid to:

A. examine and carefully study the Bidding Documents, and any data and reference items identified in the Bidding Documents;

B. visit the Site, conduct a thorough, alert visual examination of the Site and adjacent areas, and become familiar with and satisfy itself as to the general, local, and Site conditions that may affect cost, progress, and performance of the Work;

C. become familiar with and satisfy itself as to all Laws and Regulations that may affect cost, progress, and performance of the Work;

D. carefully study all: (1) reports of explorations and tests of subsurface conditions at or adjacent to the Site and all drawings of physical conditions relating to existing surface or subsurface structures at the Site that have been identified in the Supplementary Conditions,

especially with respect to Technical Data in such reports and drawings, and (2) reports and drawings relating to Hazardous Environmental Conditions, if any, at or adjacent to the Site that have been identified in the Supplementary Conditions, especially with respect to Technical Data in such reports and drawings;

E. consider the information known to Bidder itself; information commonly known to contractors doing business in the locality of the Site; information and observations obtained from visits to the Site; the Bidding Documents; and the Site-related reports and drawings identified in the Bidding Documents, with respect to the effect of such information, observations, and documents on (1) the cost, progress, and performance of the Work; (2) the means, methods, techniques, sequences, and procedures of construction to be employed by Bidder; and (3) Bidder's safety precautions and programs;

agree, based on the information and observations referred to in the preceding paragraph, that at the time of submitting its Bid no further examinations, investigations, explorations, tests, studies, or data are necessary for the determination of its Bid for performance of the Work athe price bid and within the times required, and in accordance with the other terms and conditions of the Bidding Documents;

F. become aware of the general nature of the work to be performed by Owner and others at the Site that relates to the Work as indicated in the Bidding Documents;

G. promptly give Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder discovers in the Bidding Documents and confirm that the written resolution thereof by Engineer is acceptable to Bidder;

H. determine that the Bidding Documents are generally sufficient to indicate and convey understanding of all terms and conditions for the performance and furnishing of the Work; and

I. agree that the submission of a Bid will constitute an incontrovertible representation by Bidder that Bidder has complied with every requirement of this Article, that without exception the Bid and all prices in the Bid are premised upon performing and furnishing the Work required by the Bidding Documents.

ARTICLE 6 – PRE-BID CONFERENCE

6.01 There will be a **Mandatory** Pre-Bid Meeting on **Thursday January 9, 2025** at 10:00 am eastern standard time. Meeting to be held at Flagler Beach Library located at:

315 7th Street South
Flagler Beach, FL 32136

ARTICLE 7 – INTERPRETATIONS AND ADDENDA

7.01 All questions about the meaning or intent of the Bidding Documents are to be submitted to the City Clerk's office in writing (via email):

Penny Overstreet

Email: poverstreet@cityofflaglerbeach.com

Interpretations or clarifications considered necessary in response to such questions will be issued by Addenda delivered to all parties recorded as having received the Bidding Documents. The last day to submit questions is **Thursday January 4, 2024**. Questions received after that date and time may not be answered. Only questions answered by Addenda will be binding. Oral, emailed and other interpretations or clarifications will be without legal effect.

7.02 Addenda may be issued to clarify, correct, supplement, or change the Bidding Documents.

ARTICLE 8 – BID SECURITY

8.01 A Bid must be accompanied by Bid security made payable to Owner in an amount of five (5) percent of Bidder's maximum Bid price (determined by adding the base bid and all alternates) and in the form of a certified check, bank money order, or a Bid bond (on the form included in the Bidding Documents) issued by a surety meeting the requirements of Paragraphs 6.01 and 6.02 of the General Conditions.

8.02 The Bid security of the apparent Successful Bidder will be retained until Owner awards the contract to such Bidder, and such Bidder has executed the Contract Documents, furnished the required

contract security, and met the other conditions of the Notice of Award, whereupon the Bid security will be released. If the Successful Bidder fails to execute and deliver the Contract Documents and furnish the required contract security within 15 days after the Notice of Award, Owner may consider Bidder to be in default, annul the Notice of Award, and the Bid security of that Bidder will be forfeited. Such forfeiture shall be Owner's exclusive remedy if Bidder defaults.

8.03 The Bid security of other Bidders that Owner believes to have a reasonable chance of receiving the award may be retained by Owner until the earlier of seven days after the Effective Date of the Contract or 61 days after the Bid opening, whereupon Bid security furnished by such Bidders will be released.

8.04 Bid security of other Bidders that Owner believes do not have a reasonable chance of receiving the award will be released within seven days after the Bid opening.

ARTICLE 9 – CONTRACT TIMES

9.01 The number of days within which, or the dates by which the Work is to be substantially completed, and completed and ready for final payment, are set forth in the Agreement.

ARTICLE 10 – LIQUIDATED DAMAGES

10.01 Provisions for liquidated damages, if any, for failure to timely attain a Milestone, Substantial Completion, or completion of the Work in readiness for final payment, are set forth in the Agreement.

ARTICLE 11 – SUBSTITUTE AND "OR-EQUAL" ITEMS

11.01 The Contract for the Work, as awarded, will be on the basis of materials and equipment specified

or described in the Bidding Documents without consideration during the bidding and Contract award process of possible substitute or "or-equal" items. In cases in which the Contract allows the Contractor to request that Engineer authorize the use of a substitute or "or-equal" item of material or equipment, application for such acceptance may not be made to and will not be considered by Engineer until after the Effective Date of the Contract.

11.02 All prices that Bidder sets forth in its Bid shall be based on the presumption that the Contractor will furnish the materials and equipment specified or described in the Bidding Documents, as supplemented by Addenda. Any assumptions regarding the possibility of post-Bid approvals of "or- equal" or substitution requests are made at Bidder's sole risk.

ARTICLE 12 – SUBCONTRACTORS, SUPPLIERS, AND OTHERS

12.01 A Bidder shall be prepared to retain specific Subcontractors, Suppliers, or other individuals or entities for the performance of the Work if required by the Bidding Documents (most commonly in the Specifications) to do so. If a prospective Bidder objects to retaining any such Subcontractor, Supplier, or other individual or entity, and the concern is not relieved by an Addendum, then the prospective Bidder should refrain from submitting a Bid.

12.02 Subsequent to the submittal of the Bid, Owner may not require the Successful Bidder or Contractor to retain any Subcontractor, Supplier, or other individual or entity against which Contractor has reasonable objection.

12.03 The apparent Successful Bidder, and any other Bidder so requested, shall within five days after Bid opening, submit to Owner a list of the Subcontractors or Suppliers proposed. If requested by Owner, such list shall be accompanied by an experience statement with pertinent information regarding similar projects and other evidence of qualification for each such Subcontractor, Supplier, or other individual or entity. If Owner or Engineer, after due investigation, has reasonable objection to any proposed Subcontractor, Supplier, individual, or entity, Owner may, before the Notice of Award is given, request apparent Successful Bidder to submit an acceptable substitute, in which case apparent Successful Bidder shall submit a substitute, Bidder's Bid price will be increased (or decreased) by the difference in cost occasioned by such substitution, and Owner may consider such price adjustment in evaluating Bids and making the Contract award.

12.04 If apparent Successful Bidder declines to make any such substitution, Owner may award the Contract to the next lowest Bidder that proposes to use acceptable Subcontractors, Suppliers, or other individuals or entities. Declining to make requested substitutions will constitute grounds for forfeiture of the Bid security of any Bidder. Any Subcontractor, Supplier, individual, or entity so listed and against which Owner or Engineer makes no written objection prior to the giving of the Notice of Award will be deemed acceptable to Owner and Engineer subject to subsequent revocation of such acceptance as provided in Paragraph 7.06 of the General Conditions.

ARTICLE 13 – PREPARATION OF BID

13.01 The Bid Form is included with the Bidding Documents.

A. All blanks on the Bid Form shall be completed in ink and the Bid Form signed in ink. Erasures or alterations shall be initialed in ink by the person signing the Bid Form. A Bid price shall be indicated for each section, Bid item, alternate, adjustment unit price item, and unit price item listed therein.

B. If the Bid Form expressly indicates that submitting pricing on a specific alternate item is optional, and Bidder elects to not furnish pricing for such optional alternate item, then Bidder may enter the words "No Bid" or "Not Applicable."

13.02 A Bid by a corporation shall be executed in the corporate name by a corporate officer (whose title must appear under the signature), accompanied by evidence of authority to sign. The corporate address and state of incorporation shall be shown.

13.03 A Bid by a partnership shall be executed in the partnership name and signed by a partner (whose title must appear under the signature), accompanied by evidence of authority to sign. The partnership's address for receiving notices shall be shown.

13.04 A Bid by a limited liability company shall be executed in the name of the firm by a member or other authorized person and accompanied by evidence of authority to sign. The state of formation of the firm and the firm's address for receiving notices shall be shown.

13.05 A Bid by an individual shall show the Bidder's name and address for receiving notices.

13.06 A Bid by a joint venture shall be executed by an authorized representative of each joint venturer in the manner indicated on the Bid Form. The joint venture's address for receiving notices shall be shown.

13.07 All names shall be printed in ink below the signatures.

13.08 The Bid shall contain an acknowledgment of receipt of all Addenda, the numbers of which shall be filled in on the Bid Form.

13.09 Postal and e-mail addresses and telephone number for communications regarding the Bid shall be shown.

13.10 The Bid shall contain evidence of Bidder's authority and qualification to do business in the state where the Project is located, or Bidder shall covenant in writing to obtain such authority and qualification prior to award of the Contract and attach such covenant to the Bid. Bidder's state contractor license number, if any, shall also be shown on the Bid Form.

ARTICLE 14 – BASIS OF BID

14.01 *Lump Sum*

A. Bidders shall submit a Bid on a lump sum Basis for both the Base Bid and Alternate #1.

14.02 *Unit Price (if used)*

A. Bidders shall submit a Bid on a unit price basis for each item of Work listed in the unit price section of the Bid Form.

B. The "Bid Price" (sometimes referred to as the extended price) for each unit price Bid item will be the product of the "Estimated Quantity" (which Owner or its representative has set forth in the Bid Form) for the item and the corresponding "Bid Unit Price" offered by the Bidder. The total of all unit price Bid items will be the sum of these "Bid Prices"; such total will be used by Owner for Bid comparison purposes. The final quantities and Contract Price will be determined in accordance with Paragraph 13.03 of the General Conditions.

C. Discrepancies between the multiplication of units of Work and unit prices will be resolved in

favor of the unit prices. Discrepancies between the indicated sum of any column of figures and the correct sum thereof will be resolved in favor of the correct sum.

ARTICLE 15 – SUBMITTAL OF BID

15.01 A Bid shall be received no later than the date and time prescribed and at the place indicated in the advertisement or invitation to bid and shall be enclosed in a plainly marked package with the Project title (and, if applicable, the designated portion of the Project for which the Bid is submitted), the name and address of Bidder, and shall be accompanied by the Bid security and other required documents. If a Bid is sent by mail or other delivery system, the sealed envelope containing the Bid shall be enclosed in a separate package plainly marked on the outside with the notation "BID ENCLOSED."

15.02 Bids received after the date and time prescribed for the opening of bids, or not submitted at the correct location or in the designated manner, will not be accepted and will be returned to the Bidder unopened.

15.03 A Bid shall be received no later than the date and time prescribed and at the place indicated in the advertisement or invitation to bid and shall be enclosed in a plainly marked package with the Project title (and, if applicable, the designated portion of the Project for which the Bid is submitted), the name and address of Bidder, and shall be accompanied by the Bid security and other required documents. If a Bid is sent by mail or other delivery system, the sealed envelope containing the Bid shall be enclosed in a separate package plainly marked on the outside with the notation "BID ENCLOSED."

15.04 Bids received after the date and time prescribed for the opening of bids, or not submitted at the correct location or in the designated manner, will not be accepted and will be returned to the Bidder unopened.

ARTICLE 16 – MODIFICATION AND WITHDRAWAL OF BID

16.01 A Bid may be withdrawn by an appropriate document duly executed in the same manner that a Bid must be executed and delivered to the place where Bids are to be submitted prior to the date and time for the opening of Bids. Upon receipt of such notice, the unopened Bid will be returned to the Bidder

16.02 If a Bidder wishes to modify its Bid prior to Bid opening, Bidder must withdraw its initial Bid in the manner specified in Paragraph 16.01 and submit a new Bid prior to the date and time for the opening of Bids.

16.03 If within 24 hours after Bids are opened any Bidder files a duly signed written notice with Owner and promptly thereafter demonstrates to the reasonable satisfaction of Owner that there was a material and substantial mistake in the preparation of its Bid, that Bidder may withdraw its Bid, and the Bid security will be returned. Thereafter, if the Work is rebid, that Bidder will be disqualified from further bidding on the Work.

ARTICLE 17 – OPENING OF BIDS

17.01 Bids will be opened at the time and place indicated in the advertisement or invitation to bid and, unless obviously non-responsive, read aloud publicly. An abstract of the amounts of the base Bids

and major alternates, if any, will be made available to Bidders after the opening of Bids.

ARTICLE 18 – BIDS TO REMAIN SUBJECT TO ACCEPTANCE

18.01 All Bids will remain subject to acceptance for the period of time stated in the Bid Form, but Owner may, in its sole discretion, release any Bid and return the Bid security (if any) prior to the end of this period.

ARTICLE 19 – EVALUATION OF BIDS AND AWARD OF CONTRACT

19.01 Owner reserves the right to reject any or all Bids, including without limitation, nonconforming, nonresponsive, unbalanced, or conditional Bids. Owner will reject the Bid of any Bidder that Owner finds, after reasonable inquiry and evaluation, to not be responsible. If Bidder purports to add terms or conditions to its Bid, takes exception to any provision of the Bidding Documents, or attempts to alter the contents of the Contract Documents for purposes of the Bid, then the Owner will reject the Bid as nonresponsive; provided that Owner also reserves the right to waive all minor informalities not involving price, time, or changes in the Work.

19.02 If Owner awards the contract for the Work, such award shall be to the responsible Bidder submitting the lowest responsive Bid.

19.03 Evaluation of Bids

A. In evaluating Bids, Owner will consider whether or not the Bids comply with the prescribed requirements, and such alternates, unit prices, and other data, as may be requested in the Bid Form or prior to the Notice of Award.

B. For the determination of the apparent low Bidder when unit price bids are submitted, Bids will be compared on the basis of the total of the products of the estimated quantity of each item and unit price Bid for that item, together with any lump sum items.

19.04 In evaluating whether a Bidder is responsible, Owner will consider the qualifications of the Bidder and may consider the qualifications and experience of Subcontractors and Suppliers proposed for those portions of the Work for which the identity of Subcontractors and Suppliers must be submitted as provided in the Bidding Documents.

19.05 Owner may conduct such investigations as Owner deems necessary to establish the responsibility, qualifications, and financial ability of Bidders and any proposed Subcontractors or Suppliers.

ARTICLE 20 – BONDS AND INSURANCE

20.01 Article 6 of the General Conditions, as may be modified by the Supplementary Conditions, sets forth Owner's requirements as to performance and payment bonds and insurance. When the Successful Bidder delivers the Agreement (executed by Successful Bidder) to Owner, it shall be accompanied by required bonds and insurance documentation.

ARTICLE 21 – SIGNING OF AGREEMENT

21.01 When Owner issues a Notice of Award to the Successful Bidder, it shall be accompanied by the unexecuted counterparts of the Agreement along with the other Contract Documents as identified in the Agreement. Within 15 days thereafter, Successful Bidder shall execute and deliver the required number of counterparts of the Agreement (and any bonds and insurance documentation required to be delivered by the Contract Documents) to Owner. Within ten days thereafter, Owner shall deliver one fully executed counterpart of the Agreement to Successful Bidder, together with printed and electronic copies of the Contract Documents as stated in Paragraph 2.02 of the General Conditions.

ARTICLE 22 – ALIEN WORKERS

22.01 The City of Flagler Beach does not award publicly funded Contracts to those who knowingly employ unauthorized alien workers in violation of section 274A of the Immigration and Naturalization Act. 8 United States Code §132a. Such employment deprives legal workers of job opportunities. Violation of section 274A shall be grounds for unilateral cancellation of the Contract, Agreement, Bid or Quote for purchase of services and goods by the City of Flagler Beach.

ARTICLE 23 – E-VERIFY

23.01 The Contractor shall utilize the U.S. Department of Homeland Security's E-Verify system, in accordance with the terms governing use of the system, to confirm the employment eligibility of all persons employed by the Contractor during the term of the Contract to perform employment duties within Florida and all persons, including subcontractors, assigned by the Contractor to perform work pursuant to the Contract with the Department.

ARTICLE 1 – DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

A. Wherever used in the Bidding Requirements or Contract Documents, a term printed with initial capital letters, including the term's singular and plural forms, will have the meaning indicated in the definitions below. In addition to terms specifically defined, terms with initial capital letters in the Contract Documents include references to identified articles and paragraphs, and the titles of other documents or forms.

1. *Addenda*—Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the proposed Contract Documents.

2. *Agreement*—The written instrument, executed by Owner and Contractor, that sets forth the Contract Price and Contract Times, identifies the parties and the Engineer, and designates the specific items that are Contract Documents.

3. *Application for Payment*—The form acceptable to Engineer which is to be used by Contractor during the course of the Work in requesting progress or final payments and which is to be accompanied by such supporting documentation as is required by the Contract Documents.

4. *Bid*—The offer of a Bidder submitted on the prescribed form setting forth the prices for the Work to be performed.

5. *Bidder*—An individual or entity that submits a Bid to Owner.

6. *Bidding Documents*—The Bidding Requirements, the proposed Contract Documents, and all Addenda.

7. *Bidding Requirements*—The advertisement or invitation to bid, Instructions to Bidders, Bid Bond or other Bid security, if any, the Bid Form, and the Bid with any attachments.

8. *Change Order*—A document which is signed by Contractor and Owner and authorizes an addition, deletion, or revision in the Work or an adjustment in the Contract Price or the Contract Times, or other revision to the Contract, issued on or after the Effective Date of the Contract.

9. *Change Proposal*—A written request by Contractor, duly submitted in compliance with the procedural requirements set forth herein, seeking an adjustment in Contract Price or Contract Times, or both; contesting an initial decision by Engineer concerning the requirements of the Contract Documents or the acceptability of Work under the Contract Documents; challenging a set-off against payments due; or seeking other relief with respect to the terms of the Contract.

10. *Claim*—(a) A demand or assertion by Owner directly to Contractor, duly submitted in compliance with the procedural requirements set forth herein: seeking an adjustment of Contract Price or Contract Times, or both; contesting an initial decision by Engineer concerning the requirements of the Contract Documents or the acceptability of Work under the Contract Documents; contesting Engineer's decision regarding a Change Proposal; seeking resolution of a contractual issue that Engineer has declined to

11. address; or seeking other relief with respect to the terms of the Contract; or (b) a demand or assertion by Contractor directly to Owner, duly submitted in compliance with the procedural requirements set forth herein, contesting Engineer's decision regarding a Change Proposal; or seeking resolution of a contractual issue that Engineer has declined to address. A demand for money or services by a third party is not a Claim.

12. *Constituent of Concern*—Asbestos, petroleum, radioactive materials, polychlorinated biphenyls (PCBs), hazardous waste, and any substance, product, waste, or other material of any nature whatsoever that is or becomes listed, regulated, or addressed pursuant to (a) the Comprehensive Environmental Response, Compensation and Liability Act, 42 U.S.C. §§9601 et seq. ("CERCLA"); (b) the Hazardous Materials Transportation Act, 49 U.S.C. §§5101 et seq.; (c) the Resource Conservation and Recovery Act, 42 U.S.C. §§6901 et seq. ("RCRA"); (d) the Toxic Substances Control Act, 15 U.S.C. §§2601 et seq.; (e) the Clean Water Act, 33 U.S.C. §§1251 et seq.; (f) the Clean Air Act, 42 U.S.C. §§7401 et seq.; or (g) any other federal, state, or local statute, law, rule, regulation, ordinance, resolution, code, order, or decree regulating, relating to, or imposing liability or standards of conduct concerning, any hazardous, toxic, or dangerous waste, substance, or material.

13. *Contract*—The entire and integrated written contract between the Owner and Contractor concerning the Work.

14. *Contract Documents*—Those items so designated in the Agreement, and which together comprise the Contract.

15. *Contract Price*—The money that Owner has agreed to pay Contractor for completion of the Work in accordance with the Contract Documents.

16. *Contract Times*—The number of days or the dates by which Contractor shall: (a) achieve Milestones, if any; (b) achieve Substantial Completion; and (c) complete the Work.

17. *Contractor*—The individual or entity with which Owner has contracted for performance of the Work.

18. *Cost of the Work*—See Paragraph 13.01 for definition.

19. *Drawings*—The part of the Contract that graphically shows the scope, extent, and character of the Work to be performed by Contractor.

20. *Effective Date of the Contract*—The date, indicated in the Agreement, on which the Contract becomes effective.

21. *Engineer*—The individual or entity named as such in the Agreement.

22. *Field Order*—A written order issued by Engineer which requires minor changes in the Work but does not change the Contract Price or the Contract Times.

23. *Hazardous Environmental Condition*—The presence at the Site of Constituents of Concern in such quantities or circumstances that may present a danger to persons or property exposed thereto. The presence at the Site of materials that are necessary for the execution of the Work, or that are to be incorporated in the Work, and that are

controlled and contained pursuant to industry practices, Laws and Regulations, and the requirements of the Contract, does not establish a Hazardous Environmental Condition.

24. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, statutes, rules, regulations, ordinances, codes, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.

25. *Liens*—Charges, security interests, or encumbrances upon Contract-related funds, real property, or personal property.

26. *Milestone*—A principal event in the performance of the Work that the Contract requires Contractor to achieve by an intermediate completion date or by a time prior to Substantial Completion of all the Work.

27. *Notice of Award*—The written notice by Owner to a Bidder of Owner's acceptance of the Bid.

28. *Notice to Proceed*—A written notice by Owner to Contractor fixing the date on which the Contract Times will commence to run and on which Contractor shall start to perform the Work.

29. *Owner*—The individual or entity with which Contractor has contracted regarding the Work, and which has agreed to pay Contractor for the performance of the Work, pursuant to the terms of the Contract.

30. *Progress Schedule*—A schedule, prepared and maintained by Contractor, describing the sequence and duration of the activities comprising the Contractor's plan to accomplish the Work within the Contract Times.

31. *Project*—The total undertaking to be accomplished for Owner by engineers, contractors, and others, including planning, study, design, construction, testing, commissioning, and start-up, and of which the Work to be performed under the Contract Documents is a part.

32. *Project Manual*—The written documents prepared for, or made available for, procuring and constructing the Work, including but not limited to the Bidding Documents or other construction procurement documents, geotechnical and existing conditions information, the Agreement, bond forms, General Conditions, Supplementary Conditions, and Specifications. The contents of the Project Manual may be bound in one or more volumes.

33. *Resident Project Representative*—The authorized representative of Engineer assigned to assist Engineer at the Site. As used herein, the term Resident Project Representative or "RPR" includes any assistants or field staff of Resident Project Representative.

34. *Samples*—Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and that establish the standards by which such portion of the Work will be judged.

35. *Schedule of Submittals*—A schedule, prepared and maintained by Contractor, of required submittals and the time requirements for Engineer's review of the submittals and the performance of related construction activities.

36. *Schedule of Values*—A schedule, prepared and maintained by Contractor, allocating portions of the Contract Price to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

37. *Shop Drawings*—All drawings, diagrams, illustrations, schedules, and other data or information that are specifically prepared or assembled by or for Contractor and submitted by Contractor to illustrate some portion of the Work. Shop Drawings, whether approved or not, are not Drawings and are not Contract Documents.

38. *Site*—Lands or areas indicated in the Contract Documents as being furnished by Owner upon which the Work is to be performed, including rights-of-way and easements, and such other lands furnished by Owner which are designated for the use of Contractor.

39. *Specifications*—The part of the Contract that consists of written requirements for materials, equipment, systems, standards, and workmanship as applied to the Work, and certain administrative requirements and procedural matters applicable to the Work.

40. *Subcontractor*—An individual or entity having a direct contract with Contractor or with any other Subcontractor for the performance of a part of the Work.

41. *Substantial Completion*—The time at which the Work (or a specified part thereof) has progressed to the point where, in the opinion of Engineer, the Work (or a specified part thereof) is sufficiently complete, in accordance with the Contract Documents, so that the Work (or a specified part thereof) can be utilized for the purposes for which it is intended. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion thereof.

42. *Successful Bidder*—The Bidder whose Bid the Owner accepts, and to which the Owner makes an award of contract, subject to stated conditions.

43. *Supplementary Conditions*—The part of the Contract that amends or supplements these General Conditions.

44. *Supplier*—A manufacturer, fabricator, supplier, distributor, materialman, or vendor having a direct contract with Contractor or with any Subcontractor to furnish materials or equipment to be incorporated in the Work by Contractor or a Subcontractor.

45. *Technical Data*—Those items expressly identified as Technical Data in the Supplementary Conditions, with respect to either (a) subsurface conditions at the Site, or physical conditions relating to existing surface or subsurface structures at the Site (except Underground Facilities) or (b) Hazardous Environmental Conditions at the Site. If no such express identifications of Technical Data have been made with respect to conditions at the Site, then the data contained in boring logs, recorded measurements of subsurface water levels, laboratory test results, and other factual, objective information regarding conditions at the Site that are set forth in any geotechnical or environmental report prepared for the Project and made available to Contractor are hereby defined as Technical Data with respect to conditions at the Site under Paragraphs 5.03, 5.04, and 5.06.

46. *Underground Facilities*—All underground pipelines, conduits, ducts, cables, wires, manholes, vaults, tanks, tunnels, or other such facilities or attachments, and any encasements containing such facilities, including but not limited to those that convey electricity, gases, steam, liquid petroleum products, telephone or other communications, fiber optic transmissions, cable television, water, wastewater, storm

47. water, other liquids or chemicals, or traffic or other control systems.

48. *Unit Price Work*—Work to be paid for on the basis of unit prices.

49. *Work*—The entire construction or the various separately identifiable parts thereof required to be provided under the Contract Documents. Work includes and is the result of performing or providing all labor, services, and documentation necessary to produce such construction; furnishing, installing, and incorporating all materials and equipment into such construction; and may include related services such as testing, start-up, and commissioning, all as required by the Contract Documents.

50. *Work Change Directive*—A written directive to Contractor issued on or after the Effective Date of the Contract, signed by Owner and recommended by Engineer, ordering an addition, deletion, or revision in the Work.

1.02 *Terminology*

A. The words and terms discussed in the following paragraphs are not defined but, when used in the Bidding Requirements or Contract Documents, have the indicated meaning.

B. *Intent of Certain Terms or Adjectives*:

1. The Contract Documents include the terms "as allowed," "as approved," "as ordered," "as directed" or terms of like effect or import to authorize an exercise of professional judgment by Engineer. In addition, the adjectives "reasonable," "suitable," "acceptable," "proper," "satisfactory," or adjectives of like effect or import are used to describe an action or determination of Engineer as to the Work. It is intended that such exercise of professional judgment, action, or determination will be solely to evaluate, in general, the Work for compliance with the information in the Contract Documents and with the design concept of the Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective is not intended to and shall not be effective to assign to Engineer any duty or authority to supervise or direct the performance of the Work, or any duty or authority to undertake responsibility contrary to the provisions of Article 10 or any other provision of the Contract Documents.

C. *Day*:

1. The word "day" means a calendar day of 24 hours measured from midnight to the next midnight.

D. *Defective*:

1. The word "defective," when modifying the word "Work," refers to Work that is unsatisfactory, faulty, or deficient in that it:

a. does not conform to the Contract Documents; or

b. does not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Contract Documents; or

c. has been damaged prior to Engineer's recommendation of final payment (unless responsibility for the protection thereof has been assumed by Owner at Substantial Completion in accordance with Paragraph 15.03 or 15.04).

E. *Furnish, Install, Perform, Provide*:

1. The word "furnish," when used in connection with services, materials, or equipment, shall mean to supply and deliver said services, materials, or equipment to the Site (orsome other specified location) ready for use or installation and in usable or operable condition.

2. The word "install," when used in connection with services, materials, or equipment, shall mean to put into use or place in final position said services, materials, or equipment complete and ready for intended use.

3. The words "perform" or "provide," when used in connection with services, materials, or equipment, shall mean to furnish and install said services, materials, or equipment complete and ready for intended use.

4. If the Contract Documents establish an obligation of Contractor with respect to specific services, materials, or equipment, but do not expressly use any of the four words "furnish," "install," "perform," or "provide," then Contractor shall furnish and install said services, materials, or equipment complete and ready for intended use.

F. Unless stated otherwise in the Contract Documents, words or phrases that have a well-known technical or construction industry or trade meaning are used in the Contract Documents in accordance with such recognized meaning.

ARTICLE 2 – PRELIMINARY MATTERS

2.01 *Delivery of Bonds and Evidence of Insurance*

A. *Bonds*: When Contractor delivers the executed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner such bonds as Contractor may be required to furnish.

B. *Evidence of Contractor's Insurance*: When Contractor delivers the executed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner, with copies to each named insured and additional insured (as identified in the Supplementary Conditions or elsewhere in the Contract), the certificates and other evidence of insurance required to be provided by Contractor in accordance with Article 6.

C. *Evidence of Owner's Insurance*: After receipt of the executed counterparts of the Agreement and all required bonds and insurance documentation, Owner shall promptly deliver to Contractor, with copies to each named insured and additional insured (as identified in the Supplementary Conditions or otherwise), the certificates and other evidence of insurance required to be provided by Owner under Article 6.

2.02 *Copies of Documents*

A. Owner shall furnish to Contractor four printed copies of the Contract (including one fully executed counterpart of the Agreement), and one copy in electronic portable document format (PDF). Additional printed copies will be furnished upon request at the cost of reproduction.

B. Owner shall maintain and safeguard at least one original printed record version of the

C. Contract, including Drawings and Specifications signed and sealed by Engineer and other design professionals. Owner shall make such original printed record version of the Contract available to Contractor for review. Owner may delegate the responsibilities under this provision to Engineer.

2.03 *Before Starting Construction*

A. *Preliminary Schedules*: Within 10 days after the Effective Date of the Contract (or as otherwise specifically required by the Contract Documents), Contractor shall submit to Engineer for timely review:

1. a preliminary Progress Schedule indicating the times (numbers of days or dates) for starting and completing the various stages of the Work, including any Milestones specified in the Contract;

2. a preliminary Schedule of Submittals; and

3. a preliminary Schedule of Values for all of the Work which includes quantities and prices of items which when added together equal the Contract Price and subdivides the Work into component parts in sufficient detail to serve as the basis for progress payments during performance of the Work. Such prices will include an appropriate amount of overhead and profit applicable to each item of Work.

2.04 *Preconstruction Conference; Designation of Authorized Representatives*

A. Before any Work at the Site is started, a conference attended by Owner, Contractor, Engineer, and others as appropriate will be held to establish a working understanding among the parties as to the Work and to discuss the schedules referred to in Paragraph 2.03.A, procedures for handling Shop Drawings, Samples, and other submittals, processing Applications for Payment, electronic or digital transmittals, and maintaining required records.

B. At this conference Owner and Contractor each shall designate, in writing, a specific individual to act as its authorized representative with respect to the services and responsibilities under the Contract. Such individuals shall have the authority to transmit and receive information, render decisions relative to the Contract, and otherwise act on behalf of each respective party.

2.05 *Initial Acceptance of Schedules*

A. At least 10 days before submission of the first Application for Payment a conference, attended by Contractor, Engineer, and others as appropriate, will be held to review for acceptability to Engineer as provided below the schedules submitted in accordance with Paragraph 2.03.A. Contractor shall have an additional 10 days to make corrections and adjustments and to complete and resubmit the schedules. No progress payment shall be made to Contractor until acceptable schedules are submitted to Engineer.

1. The Progress Schedule will be acceptable to Engineer if it provides an orderly progression of the Work to completion within the Contract Times. Such acceptance will not impose on Engineer responsibility for the Progress Schedule, for sequencing, scheduling, or progress of the Work, nor interfere with or relieve Contractor from Contractor's full responsibility therefor.

2. Contractor's Schedule of Submittals will be acceptable to Engineer if it provides a workable arrangement for reviewing and processing the required submittals.

3. Contractor's Schedule of Values will be acceptable to Engineer as to form and substance if it provides a reasonable allocation of the Contract Price to the component parts of the Work.

2.06 *Electronic Transmittals*

A. Except as otherwise stated elsewhere in the Contract, the Owner, Engineer, and Contractor may transmit, and shall accept, Project-related correspondence, text, data, documents, drawings, information, and graphics, including but not limited to Shop Drawings and other submittals, in electronic media or digital format, either directly, or through access to a secure Project website.

B. If the Contract does not establish protocols for electronic or digital transmittals, then Owner, Engineer, and Contractor shall jointly develop such protocols.

C. When transmitting items in electronic media or digital format, the transmitting party makes no representations as to long term compatibility, usability, or readability of the items resulting from the recipient's use of software application packages, operating systems, or computer hardware differing from those used in the drafting or transmittal of the items, or from those established in applicable transmittal protocols.

ARTICLE 3 – DOCUMENTS: INTENT, REQUIREMENTS, REUSE

3.01 *Intent*

A. The Contract Documents are complementary; what is required by one is as binding as if required by all.

B. It is the intent of the Contract Documents to describe a functionally complete project (or part thereof) to be constructed in accordance with the Contract Documents.

C. Unless otherwise stated in the Contract Documents, if there is a discrepancy between the electronic or digital versions of the Contract Documents (including any printed copies derived from such electronic or digital versions) and the printed record version, the printed record version shall govern.

D. The Contract supersedes prior negotiations, representations, and agreements, whether written or oral.

E. Engineer will issue clarifications and interpretations of the Contract Documents as provided herein.

3.02 *Reference Standards*

A. Standards Specifications, Codes, Laws and Regulations

1. Reference in the Contract Documents to standard specifications, manuals, reference standards, or codes of any technical society, organization, or association, or to Laws or Regulations, whether such reference be specific or by implication, shall mean the standard specification, manual, reference standard, code, or Laws or Regulations in effect at the time of opening of Bids (or on the Effective Date of the Contract if there

2. were no Bids), except as may be otherwise specifically stated in the Contract Documents.

3. No provision of any such standard specification, manual, reference standard, or code, or any instruction of a Supplier, shall be effective to change the duties or responsibilities of Owner, Contractor, or Engineer, or any of their subcontractors, consultants, agents, or employees, from those set forth in the part of the Contract Documents prepared by or for Engineer. No such provision or instruction shall be effective to assign to Owner, Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, any duty or authority to supervise or direct the performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the part of the Contract Documents prepared by or for Engineer.

3.03 *Reporting and Resolving Discrepancies*

A. *Reporting Discrepancies*:

1. *Contractor's Verification of Figures and Field Measurements*: Before undertaking each part of the Work, Contractor shall carefully study the Contract Documents, and check and verify pertinent figures and dimensions therein, particularly with respect to applicable field measurements. Contractor shall promptly report in writing to Engineer any conflict, error, ambiguity, or discrepancy that Contractor discovers, or has actual knowledge of, and shall not proceed with any Work affected thereby until the conflict, error, ambiguity, or discrepancy is resolved, by a clarification or interpretation by Engineer, or by an amendment or supplement to the Contract Documents issued pursuant to Paragraph 11.01.

2. *Contractor's Review of Contract Documents*: If, before or during the performance of the Work, Contractor discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents, or between the Contract Documents and (a) any applicable Law or Regulation, (b) actual field conditions, (c) any standard specification, manual, reference standard, or code, or (d) any instruction of any Supplier, then Contractor shall promptly report it to Engineer in writing. Contractor shall not proceed with the Work affected thereby (except in an emergency as required by Paragraph 7.15) until the conflict, error, ambiguity, or discrepancy is resolved, by a clarification or interpretation by Engineer, or by an amendment or supplement to the Contract Documents issued pursuant to Paragraph 11.01.

3. Contractor shall not be liable to Owner or Engineer for failure to report any conflict, error, ambiguity, or discrepancy in the Contract Documents unless Contractor had actual knowledge thereof.

B. *Resolving Discrepancies*:

1. Except as may be otherwise specifically stated in the Contract Documents, the provisions of the part of the Contract Documents prepared by or for Engineer shall take precedence in resolving any conflict, error, ambiguity, or discrepancy between such provisions of the Contract Documents and:

a. the provisions of any standard specification, manual, reference standard, or code,

b. or the instruction of any Supplier (whether or not specifically incorporated by reference as a Contract Document); or

c. the provisions of any Laws or Regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such Law or Regulation).

3.04 *Requirements of the Contract Documents*

A. During the performance of the Work and until final payment, Contractor and Owner shall submit to the Engineer all matters in question concerning the requirements of the Contract Documents (sometimes referred to as requests for information or interpretation—RFIs), or relating to the acceptability of the Work under the Contract Documents, as soon as possible after such matters arise. Engineer will be the initial interpreter of the requirements of the Contract Documents, and judge of the acceptability of the Work thereunder.

B. Engineer will, with reasonable promptness, render a written clarification, interpretation, or decision on the issue submitted, or initiate an amendment or supplement to the Contract Documents. Engineer's written clarification, interpretation, or decision will be final and binding on Contractor, unless it appeals by submitting a Change Proposal, and on Owner, unless it appeals by filing a Claim.

C. If a submitted matter in question concerns terms and conditions of the Contract Documents that do not involve (1) the performance or acceptability of the Work under the Contract Documents, (2) the design (as set forth in the Drawings, Specifications, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly give written notice to Owner and Contractor that Engineer is unable to provide a decision or interpretation. If Owner and Contractor are unable to agree on resolution of such a matter in question, either party may pursue resolution as provided in Article 12.

3.05 *Reuse of Documents*

A. Contractor and its Subcontractors and Suppliers shall not:

1. have or acquire any title to or ownership rights in any of the Drawings, Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Engineer or its consultants, including electronic media editions, or reuse any such Drawings, Specifications, other documents, or copies thereof on extensions of the Project or any other project without written consent of Owner and Engineer and specific written verification or adaptation by Engineer; or

2. have or acquire any title or ownership rights in any other Contract Documents, reuse any such Contract Documents for any purpose without Owner's express written consent, or violate any copyrights pertaining to such Contract Documents.

B. The prohibitions of this Paragraph 3.05 will survive final payment, or termination of the Contract. Nothing herein shall preclude Contractor from retaining copies of the Contract Documents for record purposes.

ARTICLE 4 – COMMENCEMENT AND PROGRESS OF THE WORK

4.01 *Commencement of Contract Times; Notice to Proceed*

A. The Contract Times will commence to run on the day indicated in the Notice to Proceed. A Notice to Proceed may be given at any time within 30 days after the Effective Date of the Contract. In no event will the Contract Times commence to run later than the sixtieth day after the day of Bid opening or the thirtieth day after the Effective Date of the Contract, whichever date is earlier.

4.02 *Starting the Work*

A. Contractor shall start to perform the Work on the date when the Contract Times commence to run. No Work shall be done at the Site prior to such date.

4.03 *Reference Points*

A. Owner shall provide engineering surveys to establish reference points for construction which in Engineer's judgment are necessary to enable Contractor to proceed with the Work. Contractor shall be responsible for laying out the Work, shall protect and preserve the established reference points and property monuments, and shall make no changes or relocations without the prior written approval of Owner. Contractor shall report to Engineer whenever any reference point or property monument is lost or destroyed or requires relocation because of necessary changes in grades or locations and shall be responsible for the accurate replacement or relocation of such reference points or property monuments by professionally qualified personnel.

4.04 *Progress Schedule*

A. Contractor shall adhere to the Progress Schedule established in accordance with Paragraph 2.05 as it may be adjusted from time to time as provided below.

1. Contractor shall submit to Engineer for acceptance (to the extent indicated in Paragraph 2.05) proposed adjustments in the Progress Schedule that will not result in changing the Contract Times.

2. Proposed adjustments in the Progress Schedule that will change the Contract Times shall be submitted in accordance with the requirements of Article 11.

B. Contractor shall carry on the Work and adhere to the Progress Schedule during all disputes or disagreements with Owner. No Work shall be delayed or postponed pending resolution of any disputes or disagreements, or during any appeal process, except as permitted by Paragraph 16.04, or as Owner and Contractor may otherwise agree in writing.

4.05 *Delays in Contractor's Progress*

A. If Owner, Engineer, or anyone for whom Owner is responsible, delays, disrupts, or interferes with the performance or progress of the Work, then Contractor shall be entitled to an equitable adjustment in the Contract Times and Contract Price. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times.

B. Contractor shall not be entitled to an adjustment in Contract Price or Contract Times for delay, disruption, or interference caused by or within the control of Contractor. Delay, disruption, and interference attributable to and within the control of a Subcontractor or Supplier shall be deemed to be within the control of Contractor.

C. If Contractor's performance or progress is delayed, disrupted, or interfered with by unanticipated causes not the fault of and beyond the control of Owner, Contractor, and those for which they are responsible, then Contractor shall be entitled to an equitable adjustment in Contract Times. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times. Such an adjustment shall be Contractor's sole and exclusive remedy for the delays, disruption, and interference described in this paragraph. Causes of delay, disruption, or interference that may give rise to an adjustment in Contract Times under this paragraph include but are not limited to the following:

1. severe and unavoidable natural catastrophes such as fires, floods, epidemics, and earthquakes;
2. abnormal weather conditions;
3. acts or failures to act of utility owners (other than those performing other work at or adjacent to the Site by arrangement with the Owner, as contemplated in Article 8); and
4. acts of war or terrorism.

D. Delays, disruption, and interference to the performance or progress of the Work resulting from the existence of a differing subsurface or physical condition, an Underground Facility that was not shown or indicated by the Contract Documents, or not shown or indicated with reasonable accuracy, and those resulting from Hazardous Environmental Conditions, are governed by Article 5.

E. Paragraph 8.03 governs delays, disruption, and interference to the performance or progress of the Work resulting from the performance of certain other work at or adjacent to the Site.

F. Contractor shall not be entitled to an adjustment in Contract Price or Contract Times for any delay, disruption, or interference if such delay is concurrent with a delay, disruption, or interference caused by or within the control of Contractor.

G. Contractor must submit any Change Proposal seeking an adjustment in Contract Price or Contract Times under this paragraph within 30 days of the commencement of the delaying, disrupting, or interfering event.

ARTICLE 5 – AVAILABILITY OF LANDS; SUBSURFACE AND PHYSICAL CONDITIONS; HAZARDOUS ENVIRONMENTAL CONDITIONS

5.01 *Availability of Lands*

A. Owner shall furnish the Site. Owner shall notify Contractor of any encumbrances or restrictions not of general application but specifically related to use of the Site with which Contractor must comply in performing the Work.

B. Upon reasonable written request, Owner shall furnish Contractor with a current statement of record legal title and legal description of the lands upon which permanent improvements are to be made and Owner's interest therein as necessary for giving notice of or filing a mechanic's or construction lien against such lands in accordance with applicable Laws and Regulations.

C. Contractor shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

5.02 *Use of Site and Other Areas*

A. *Limitation on Use of Site and Other Areas*:

1. Contractor shall confine construction equipment, temporary construction facilities, the storage of materials and equipment, and the operations of workers to the Site, adjacent areas that Contractor has arranged to use through construction easements or otherwise, and other adjacent areas permitted by Laws and Regulations, and shall not unreasonably encumber the Site and such other adjacent areas with construction equipment or other materials or equipment. Contractor shall assume full responsibility for (a) damage to the Site; (b) damage to any such other adjacent areas used for Contractor's operations; (c) damage to any other adjacent land or areas; and (d) for injuries and losses sustained by the owners or occupants of any such land or areas; provided that such damage or injuries result from the performance of the Work or from other actions or conduct of the Contractor or those for which Contractor is responsible.

2. If a damage or injury claim is made by the owner or occupant of any such land or area because of the performance of the Work, or because of other actions or conduct of the Contractor or those for which Contractor is responsible, Contractor shall (a) take immediate corrective or remedial action as required by Paragraph 7.12, or otherwise; (b) promptly attempt to settle the claim as to all parties through negotiations with such owner or occupant, or otherwise resolve the claim by arbitration or other dispute resolution proceeding, or at law; and (c) to the fullest extent permitted by Laws and Regulations, indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against any such claim, and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any claim or action, legal or equitable, brought by any such owner or occupant against Owner, Engineer, or any other party indemnified hereunder to the extent caused directly or indirectly, in whole or in part by, or based upon, Contractor's performance of the Work, or because of other actions or conduct of the Contractor or those for which Contractor is responsible.

B. *Removal of Debris During Performance of the Work*: During the progress of the Work the Contractor shall keep the Site and other adjacent areas free from accumulations of waste materials, rubbish, and other debris. Removal and disposal of such waste materials, rubbish, and other debris shall conform to applicable Laws and Regulations.

C. *Cleaning*: Prior to Substantial Completion of the Work Contractor shall clean the Site and the Work and make it ready for utilization by Owner. At the completion of the Work Contractor shall remove from the Site and adjacent areas all tools, appliances, construction equipment and machinery, and surplus materials and shall restore to original condition all property not designated for alteration by the Contract Documents.

D. *Loading of Structures*: Contractor shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall Contractor subject any

part
of the Work or adjacent structures or land to stresses or pressures that will endanger them.

5.03 *Subsurface and Physical Conditions*

A. *Reports and Drawings*: The Supplementary Conditions identify:

1. those reports known to Owner of explorations and tests of subsurface conditions at or adjacent to the Site;
2. those drawings known to Owner of physical conditions relating to existing surface or subsurface structures at the Site (except Underground Facilities); and
3. Technical Data contained in such reports and drawings.

B. *Reliance by Contractor on Technical Data Authorized*: Contractor may rely upon the accuracy of the Technical Data expressly identified in the Supplementary Conditions with respect to such reports and drawings, but such reports and drawings are not Contract Documents. If no such express identification has been made, then Contractor may rely upon the accuracy of the Technical Data (as defined in Article 1) contained in any geotechnical or environmental report prepared for the Project and made available to Contractor. Except for such reliance on Technical Data, Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor, and safety precautions and programs incident thereto; or
2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings; or
3. any Contractor interpretation of or conclusion drawn from any Technical Data or any such other data, interpretations, opinions, or information.

5.04 *Differing Subsurface or Physical Conditions*

A. *Notice by Contractor*: If Contractor believes that any subsurface or physical condition that is uncovered or revealed at the Site either:

1. is of such a nature as to establish that any Technical Data on which Contractor is entitled to rely as provided in Paragraph 5.03 is materially inaccurate; or
2. is of such a nature as to require a change in the Drawings or Specifications; or
3. differs materially from that shown or indicated in the Contract Documents; or
4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents;

then Contractor shall, promptly after becoming aware thereof and before further disturbing the subsurface or physical conditions or performing any Work in connection therewith (except in an emergency as required by Paragraph 7.15), notify Owner and

Engineer in writing about such condition. Contractor shall not further disturb such condition or perform Work in connection therewith (except with respect to an emergency) until receipt of a written statement permitting Contractor to do so.

B. *Engineer's Review*: After receipt of written notice as required by the preceding paragraph, Engineer will promptly review the subsurface or physical condition in question; determine the necessity of Owner's obtaining additional exploration or tests with respect to the condition; conclude whether the condition falls within any one or more of the differing site condition categories in Paragraph 5.04.A above; obtain any pertinent cost or schedule information from Contractor; prepare recommendations to Owner regarding the Contractor's resumption of Work in connection with the subsurface or physical condition in question and the need for any change in the Drawings or Specifications; and advise Owner in writing of Engineer's findings, conclusions, and recommendations.

C. *Owner's Statement to Contractor Regarding Site Condition*: After receipt of Engineer's written findings, conclusions, and recommendations, Owner shall issue a written statement to Contractor (with a copy to Engineer) regarding the subsurface or physical condition in question, addressing the resumption of Work in connection with such condition, indicating whether any change in the Drawings or Specifications will be made, and adopting or rejecting Engineer's written findings, conclusions, and recommendations, in whole or in part.

D. *Possible Price and Times Adjustments*:

1. Contractor shall be entitled to an equitable adjustment in Contract Price or Contract Times, or both, to the extent that the existence of a differing subsurface or physical condition, or any related delay, disruption, or interference, causes an increase or decrease in Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:

    a. such condition must fall within any one or more of the categories described in Paragraph 5.04.A;

    b. with respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraph 13.03; and,

    c. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times.

2. Contractor shall not be entitled to any adjustment in the Contract Price or Contract Times with respect to a subsurface or physical condition if:

    a. Contractor knew of the existence of such condition at the time Contractor made a commitment to Owner with respect to Contract Price and Contract Times by the submission of a Bid or becoming bound under a negotiated contract, or otherwise; or

    b. the existence of such condition reasonably could have been discovered or revealed as a result of any examination, investigation, exploration, test, or study of the Site and contiguous areas expressly required by the Bidding Requirements or Contract

Documents to be conducted by or for Contractor prior to Contractor's making such commitment; or

c. Contractor failed to give the written notice as required by Paragraph 5.04.A.

3. If Owner and Contractor agree regarding Contractor's entitlement to and the amount or extent of any adjustment in the Contract Price or Contract Times, or both, then any such adjustment shall be set forth in a Change Order.

4. Contractor may submit a Change Proposal regarding its entitlement to or the amount or extent of any adjustment in the Contract Price or Contract Times, or both, no later than 30 days after Owner's issuance of the Owner's written statement to Contractor regarding the subsurface or physical condition in question.

5.05 *Underground Facilities*

A. *Contractor's Responsibilities*: The information and data shown or indicated in the Contract Documents with respect to existing Underground Facilities at or adjacent to the Site is based on information and data furnished to Owner or Engineer by the owners of such Underground Facilities, including Owner, or by others. Unless it is otherwise expressly provided in the Supplementary Conditions:

1. Owner and Engineer do not warrant or guarantee the accuracy or completeness of any such information or data provided by others; and

2. the cost of all of the following will be included in the Contract Price, and Contractor shall have full responsibility for:

a. reviewing and checking all information and data regarding existing Underground Facilities at the Site;

b. locating all Underground Facilities shown or indicated in the Contract Documents as being at the Site;

c. coordination of the Work with the owners (including Owner) of such Underground Facilities, during construction; and

d. the safety and protection of all existing Underground Facilities at the Site, and repairing any damage thereto resulting from the Work.

B. *Notice by Contractor*: If Contractor believes that an Underground Facility that is uncovered or revealed at the Site was not shown or indicated in the Contract Documents, or was not shown or indicated with reasonable accuracy, then Contractor shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by Paragraph 7.15), identify the owner of such Underground Facility and give written notice to that owner and to Owner and Engineer.

C. *Engineer's Review*: Engineer will promptly review the Underground Facility and conclude whether such Underground Facility was not shown or indicated in the Contract Documents, or was not shown or indicated with reasonable accuracy; obtain any pertinent cost or schedule information from Contractor; prepare recommendations to Owner regarding the Contractor's resumption of Work in connection with the Underground Facility in question; determine the extent, if any, to which a change is required in the Drawings or Specifications

to reflect and document the consequences of the existence or location of the Underground Facility; and advise Owner in writing of Engineer's findings, conclusions, and recommendations. During such time, Contractor shall be responsible for the safety and protection of such Underground Facility.

D. *Owner's Statement to Contractor Regarding Underground Facility*: After receipt of Engineer's written findings, conclusions, and recommendations, Owner shall issue a written statement to Contractor (with a copy to Engineer) regarding the Underground Facility in question, addressing the resumption of Work in connection with such Underground Facility, indicating whether any change in the Drawings or Specifications will be made, and adopting or rejecting Engineer's written findings, conclusions, and recommendations in whole or in part.

E. *Possible Price and Times Adjustments*:

1. Contractor shall be entitled to an equitable adjustment in the Contract Price or Contract Times, or both, to the extent that any existing Underground Facility at the Site that was not shown or indicated in the Contract Documents, or was not shown or indicated with reasonable accuracy, or any related delay, disruption, or interference, causes an increase or decrease in Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:
   a. Contractor did not know of and could not reasonably have been expected to be aware of or to have anticipated the existence or actual location of the Underground Facility in question;
   b. With respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraph 13.03;
   c. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times; and
   d. Contractor gave the notice required in Paragraph 5.05.B.
2. If Owner and Contractor agree regarding Contractor's entitlement to and the amount or extent of any adjustment in the Contract Price or Contract Times, or both, then any such adjustment shall be set forth in a Change Order.
3. Contractor may submit a Change Proposal regarding its entitlement to or the amount or extent of any adjustment in the Contract Price or Contract Times, or both, no later than 30 days after Owner's issuance of the Owner's written statement to Contractor regarding the Underground Facility in question.

5.06 *Hazardous Environmental Conditions at Site*

A. *Reports and Drawings*: The Supplementary Conditions identify:

1. those reports and drawings known to Owner relating to Hazardous Environmental Conditions that have been identified at or adjacent to the Site; and
2. Technical Data contained in such reports and drawings.

B. *Reliance by Contractor on Technical Data Authorized*: Contractor may rely upon the accuracy of the Technical Data expressly identified in the Supplementary Conditions with

respect to such reports and drawings, but such reports and drawings are not Contract Documents. If no such express identification has been made, then Contractor may rely on the accuracy of the Technical Data (as defined in Article 1) contained in any geotechnical or environmental report prepared for the Project and made available to Contractor. Except for such reliance on Technical Data, Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by Contractor and safety precautions and programs incident thereto; or
2. other data, interpretations, opinions and information contained in such reports or shown or indicated in such drawings; or
3. any Contractor interpretation of or conclusion drawn from any Technical Data or any such other data, interpretations, opinions or information.

C. Contractor shall not be responsible for removing or remediating any Hazardous Environmental Condition encountered, uncovered, or revealed at the Site unless such removal or remediation is expressly identified in the Contract Documents to be within the scope of the Work. Contractor shall be responsible for controlling, containing, and duly removing all Constituents of Concern brought to the Site by Contractor, Subcontractors, Suppliers, or anyone else for whom Contractor is responsible, and for any associated costs; and for the costs of removing and remediating any Hazardous Environmental Condition created by the presence of any such Constituents of Concern.

D. If Contractor encounters, uncovers, or reveals a Hazardous Environmental Condition whose removal or remediation is not expressly identified in the Contract Documents as being within the scope of the Work, or if Contractor or anyone for whom Contractor is responsible creates a Hazardous Environmental Condition, then Contractor shall immediately: (1) secure or otherwise isolate such condition; (2) stop all Work in connection with such condition and in any area affected thereby (except in an emergency as required by Paragraph 7.15); and (3) notify Owner and Engineer (and promptly thereafter confirm such notice in writing). Owner shall promptly consult with Engineer concerning the necessity for Owner to retain a qualified expert to evaluate such condition or take corrective action, if any. Promptly after consulting with Engineer, Owner shall take such actions as are necessary to permit Owner to timely obtain required permits and provide Contractor the written notice required by Paragraph 5.06.F. If Contractor or anyone for whom Contractor is responsible created the Hazardous Environmental Condition in question, then Owner may remove and remediate the Hazardous Environmental Condition, and impose a set-off against payments to account for the associated costs.

E. Contractor shall not resume Work in connection with such Hazardous Environmental Condition or in any affected area until after Owner has obtained any required permits related thereto, and delivered written notice to Contractor either (1) specifying that such condition and any affected area is or has been rendered safe for the resumption of Work, or (2) specifying any special conditions under which such Work may be resumed safely.

F. If Owner and Contractor cannot agree as to entitlement to or on the amount or extent, if

any, of any adjustment in Contract Price or Contract Times, or both, as a result of such Work stoppage or such special conditions under which Work is agreed to be resumed by Contractor, then within 30 days of Owner's written notice regarding the resumption of Work, Contractor may submit a Change Proposal, or Owner may impose a set-off.

G. If after receipt of such written notice Contractor does not agree to resume such Work based on a reasonable belief it is unsafe or does not agree to resume such Work under such special conditions, then Owner may order the portion of the Work that is in the area affected by such condition to be deleted from the Work, following the contractual change procedures in Article 11. Owner may have such deleted portion of the Work performed by Owner's own forces or others in accordance with Article 8.

H. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition, provided that such Hazardous Environmental Condition (1) was not shown or indicated in the Drawings, Specifications, or other Contract Documents, identified as Technical Data entitled to limited reliance pursuant to Paragraph 5.06.B, or identified in the Contract Documents to be included within the scope of the Work, and (2) was not created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 5.06.I shall obligate Owner to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

I. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the failure to control, contain, or remove a Constituent of Concern brought to the Site by Contractor or by anyone for whom Contractor is responsible, or to a Hazardous Environmental Condition created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 5.06.J shall obligate Contractor to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

J. The provisions of Paragraphs 5.03, 5.04, and 5.05 do not apply to the presence of Constituents of Concern or to a Hazardous Environmental Condition uncovered or revealed at the Site.

ARTICLE 6 – BONDS AND INSURANCE

6.01 *Performance, Payment, and Other Bonds*

A. Contractor shall furnish a performance bond and a payment bond, each in an amount at least equal to the Contract Price, as security for the faithful performance and payment of all of Contractor's obligations under the Contract. These bonds shall remain in effect until one

year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 15.08, whichever is later, except as provided otherwise by Laws or Regulations, the Supplementary Conditions, or other specific provisions of the Contract. Contractor shall also furnish such other bonds as are required by the Supplementary Conditions or other specific provisions of the Contract.

B. All bonds shall be in the form prescribed by the Contract except as provided otherwise by Laws or Regulations, and shall be executed by such sureties as are named in "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Circular 570 (as amended and supplemented) by the Financial Management Service, Surety Bond Branch, U.S. Department of the Treasury. A bond signed by an agent or attorney-in-fact must be accompanied by a certified copy of that individual's authority to bind the surety. The evidence of authority shall show that it is effective on the date the agent or attorney-in-fact signed the accompanying bond.

C. Contractor shall obtain the required bonds from surety companies that are duly licensed or authorized in the jurisdiction in which the Project is located to issue bonds in the required amounts.

D. If the surety on a bond furnished by Contractor is declared bankrupt or becomes insolvent, or its right to do business is terminated in any state or jurisdiction where any part of the Project is located, or the surety ceases to meet the requirements above, then Contractor shall promptly notify Owner and Engineer and shall, within 20 days after the event giving rise to such notification, provide another bond and surety, both of which shall comply with the bond and surety requirements above.

E. If Contractor has failed to obtain a required bond, Owner may exclude the Contractor from the Site and exercise Owner's termination rights under Article 16.

F. Upon request, Owner shall provide a copy of the payment bond to any Subcontractor, Supplier, or other person or entity claiming to have furnished labor or materials used in the performance of the Work.

6.02 *Insurance—General Provisions*

A. Owner and Contractor shall obtain and maintain insurance as required in this Article and in the Supplementary Conditions.

B. All insurance required by the Contract to be purchased and maintained by Owner or Contractor shall be obtained from insurance companies that are duly licensed or authorized, in the state or jurisdiction in which the Project is located, to issue insurance policies for the required limits and coverages. Unless a different standard is indicated in the Supplementary Conditions, all companies that provide insurance policies required under this Contract shall have an A.M. Best rating of A-VII or better.

C. Contractor shall deliver to Owner, with copies to each named insured and additional insured (as identified in this Article, in the Supplementary Conditions, or elsewhere in the Contract), certificates of insurance establishing that Contractor has obtained and is maintaining the policies, coverages, and endorsements required by the Contract. Upon request by Owner or any other insured, Contractor shall also furnish other evidence of such required insurance, including but not limited to copies of policies and endorsements, and

documentation of applicable self-insured retentions and deductibles. Contractor may block out (redact) any confidential premium or pricing information contained in any policy or endorsement furnished under this provision.

D. Owner shall deliver to Contractor, with copies to each named insured and additional insured (as identified in this Article, the Supplementary Conditions, or elsewhere in the Contract), certificates of insurance establishing that Owner has obtained and is maintaining the policies, coverages, and endorsements required of Owner by the Contract (if any). Upon request by Contractor or any other insured, Owner shall also provide other evidence of such required insurance (if any), including but not limited to copies of policies and endorsements, and documentation of applicable self-insured retentions and deductibles. Owner may block out (redact) any confidential premium or pricing information contained in any policy or endorsement furnished under this provision.

E. Failure of Owner or Contractor to demand such certificates or other evidence of the other party's full compliance with these insurance requirements, or failure of Owner or Contractor to identify a deficiency in compliance from the evidence provided, shall not be construed as a waiver of the other party's obligation to obtain and maintain such insurance.

F. If either party does not purchase or maintain all of the insurance required of such party by the Contract, such party shall notify the other party in writing of such failure to purchase prior to the start of the Work, or of such failure to maintain prior to any change in the required coverage.

G. If Contractor has failed to obtain and maintain required insurance, Owner may exclude the Contractor from the Site, impose an appropriate set-off against payment, and exercise Owner's termination rights under Article 16.

H. Without prejudice to any other right or remedy, if a party has failed to obtain required insurance, the other party may elect to obtain equivalent insurance to protect such other party's interests at the expense of the party who was required to provide such coverage, and the Contract Price shall be adjusted accordingly.

I. Owner does not represent that insurance coverage and limits established in this Contract necessarily will be adequate to protect Contractor or Contractor's interests.

J. The insurance and insurance limits required herein shall not be deemed as a limitation on Contractor's liability under the indemnities granted to Owner and other individuals and entities in the Contract.

6.03 *Contractor's Insurance*

A. *Workers' Compensation*: Contractor shall purchase and maintain workers' compensation and employer's liability insurance for:

1. claims under workers' compensation, disability benefits, and other similar employee benefit acts.

2. United States Longshoreman and Harbor Workers' Compensation Act and Jones Act coverage (if applicable).

3. claims for damages because of bodily injury, occupational sickness or disease, or death of Contractor's employees (by stop-gap endorsement in monopolist worker's compensation states).

4. Foreign voluntary worker compensation (if applicable).

B. *Commercial General Liability—Claims Covered*: Contractor shall purchase and maintain commercial general liability insurance, covering all operations by or on behalf of Contractor, on an occurrence basis, against:

1. claims for damages because of bodily injury, sickness or disease, or death of any person other than Contractor's employees.
2. claims for damages insured by reasonably available personal injury liability coverage.
3. claims for damages, other than to the Work itself, because of injury to or destruction of tangible property wherever located, including loss of use resulting therefrom.

C. *Commercial General Liability—Form and Content*: Contractor's commercial liability policy shall be written on a 1996 (or later) ISO commercial general liability form (occurrence form) and include the following coverages and endorsements:

1. Products and completed operations coverage:
   a. Such insurance shall be maintained for three years after final payment.
   b. Contractor shall furnish Owner and each other additional insured (as identified in the Supplementary Conditions or elsewhere in the Contract) evidence of continuation of such insurance at final payment and three years thereafter.
2. Blanket contractual liability coverage, to the extent permitted by law, including but not limited to coverage of Contractor's contractual indemnity obligations in Paragraph 7.18.
3. Broad form property damage coverage.
4. Severability of interest.
5. Underground, explosion, and collapse coverage.
6. Personal injury coverage.
7. Additional insured endorsements that include both ongoing operations and products and completed operations coverage through ISO Endorsements CG 20 10 10 01 and CG 20 37 10 01 (together); or CG 20 10 07 04 and CG 20 37 07 04 (together); or their equivalent.
8. For design professional additional insureds, ISO Endorsement CG 20 32 07 04, "Additional Insured—Engineers, Architects or Surveyors Not Engaged by the Named Insured" or its equivalent.

D. *Automobile liability*: Contractor shall purchase and maintain automobile liability insurance against claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance, or use of any motor vehicle. The automobile liability policy shall be written on an occurrence basis.

E. *Umbrella or excess liability*: Contractor shall purchase and maintain umbrella or excess liability insurance written over the underlying employer's liability, commercial general liability, and automobile liability insurance described in the paragraphs above. Subject to industry-standard exclusions, the coverage afforded shall follow form as to each and every

one of the underlying policies.

F. *Contractor's pollution liability insurance*: Contractor shall purchase and maintain a policy covering third-party injury and property damage claims, including clean-up costs, as a result of pollution conditions arising from Contractor's operations and completed operations. This insurance shall be maintained for no less than three years after final completion.

G. *Additional insureds*: The Contractor's commercial general liability, automobile liability, umbrella or excess, and pollution liability policies shall include and list as additional insureds Owner and Engineer, and any individuals or entities identified in the Supplementary Conditions; include coverage for the respective officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of all such additional insureds; and the insurance afforded to these additional insureds shall provide primary coverage for all claims covered thereby (including as applicable those arising from both ongoing and completed operations) on a non-contributory basis. Contractor shall obtain all necessary endorsements to support these requirements.

H. *Contractor's professional liability insurance*: If Contractor will provide or furnish professional services under this Contract, through a delegation of professional design services or otherwise, then Contractor shall be responsible for purchasing and maintaining applicable professional liability insurance. This insurance shall provide protection against claims arising out of performance of professional design or related services, and caused by a negligent error, omission, or act for which the insured party is legally liable. It shall be maintained throughout the duration of the Contract and for a minimum of two years after Substantial Completion. If such professional design services are performed by a Subcontractor, and not by Contractor itself, then the requirements of this paragraph may be satisfied through the purchasing and maintenance of such insurance by such Subcontractor.

I. *General provisions*: The policies of insurance required by this Paragraph 6.03 shall:

1. include at least the specific coverages provided in this Article.
2. be written for not less than the limits of liability provided in this Article and in the Supplementary Conditions, or required by Laws or Regulations, whichever is greater.
3. contain a provision or endorsement that the coverage afforded will not be canceled, materially changed, or renewal refused until at least 10 days prior written notice has been given to Contractor. Within three days of receipt of any such written notice, Contractor shall provide a copy of the notice to Owner, Engineer, and each other insured under the policy.
4. remain in effect at least until final payment (and longer if expressly required in this Article) and at all times thereafter when Contractor may be correcting, removing, or replacing defective Work as a warranty or correction obligation, or otherwise, or returning to the Site to conduct other tasks arising from the Contract Documents.
5. be appropriate for the Work being performed and provide protection from claims that may arise out of or result from Contractor's performance of the Work and Contractor's other obligations under the Contract Documents, whether it is to be performed by Contractor, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform any of the Work, or by anyone for whose acts

any of them may be liable.

J. The coverage requirements for specific policies of insurance must be met by such policies, and not by reference to excess or umbrella insurance provided in other policies.

6.04 *Owner's Liability Insurance*

A. In addition to the insurance required to be provided by Contractor under Paragraph 6.03, Owner, at Owner's option, may purchase and maintain at Owner's expense Owner's own liability insurance as will protect Owner against claims which may arise from operations under the Contract Documents.

B. Owner's liability policies, if any, operate separately and independently from policies required to be provided by Contractor, and Contractor cannot rely upon Owner's liability policies for any of Contractor's obligations to the Owner, Engineer, or third parties.

6.05 *Property Insurance*

A. *Builder's Risk*: Unless otherwise provided in the Supplementary Conditions, Contractor shall purchase and maintain builder's risk insurance upon the Work on a completed value basis, in the amount of the full insurable replacement cost thereof (subject to such deductible amounts as may be provided in the Supplementary Conditions or required by Laws and Regulations). This insurance shall:

1. include the Owner and Contractor as named insureds, and all Subcontractors, and any individuals or entities required by the Supplementary Conditions to be insured under such builder's risk policy, as insureds or named insureds. For purposes of the remainder of this Paragraph 6.05, Paragraphs 6.06 and 6.07, and any corresponding Supplementary Conditions, the parties required to be insured shall collectively be referred to as "insureds."

2. be written on a builder's risk "all risk" policy form that shall at least include insurance for physical loss or damage to the Work, temporary buildings, falsework, and materials and equipment in transit, and shall insure against at least the following perils or causes of loss: fire; lightning; windstorm; riot; civil commotion; terrorism; vehicle impact; aircraft; smoke; theft; vandalism and malicious mischief; mechanical breakdown, boiler explosion, and artificially generated electric current; earthquake; volcanic activity, and other earth movement; flood; collapse; explosion; debris removal; demolition occasioned by enforcement of Laws and Regulations; water damage (other than that caused by flood); and such other perils or causes of loss as may be specifically required by the Supplementary Conditions. If insurance against mechanical breakdown, boiler explosion, and artificially generated electric current; earthquake; volcanic activity, and other earth movement; or flood, are not commercially available under builder's risk policies, by endorsement or otherwise, such insurance may be provided through other insurance policies acceptable to Owner and Contractor.

3. cover, as insured property, at least the following: (a) the Work and all materials, supplies, machinery, apparatus, equipment, fixtures, and other property of a similar nature that are to be incorporated into or used in the preparation, fabrication, construction, erection, or completion of the Work, including Owner-furnished or

assigned property; (b) spare parts inventory required within the scope of the Contract; and (c) temporary works which are not intended to form part of the permanent constructed Work but which are intended to provide working access to the Site, or to the Work under construction, or which are intended to provide temporary support for the Work under construction, including scaffolding, form work, fences, shoring, falsework, and temporary structures.

4. cover expenses incurred in the repair or replacement of any insured property (including but not limited to fees and charges of engineers and architects).
5. extend to cover damage or loss to insured property while in temporary storage at the Site or in a storage location outside the Site (but not including property stored at the premises of a manufacturer or Supplier).
6. extend to cover damage or loss to insured property while in transit.
7. allow for partial occupation or use of the Work by Owner, such that those portions of the Work that are not yet occupied or used by Owner shall remain covered by the builder's risk insurance.
8. allow for the waiver of the insurer's subrogation rights, as set forth below.
9. provide primary coverage for all losses and damages caused by the perils or causes of loss covered.
10. not include a co-insurance clause.
11. include an exception for ensuing losses from physical damage or loss with respect to any defective workmanship, design, or materials exclusions.
12. include performance/hot testing and start-up.
13. be maintained in effect, subject to the provisions herein regarding Substantial Completion and partial occupancy or use of the Work by Owner, until the Work is complete.

B. *Notice of Cancellation or Change*: All the policies of insurance (and the certificates or other evidence thereof) required to be purchased and maintained in accordance with this Paragraph 6.05 will contain a provision or endorsement that the coverage afforded will not be canceled or materially changed or renewal refused until at least 10 days prior written notice has been given to the purchasing policyholder. Within three days of receipt of any such written notice, the purchasing policyholder shall provide a copy of the notice to each other insured.

C. *Deductibles*: The purchaser of any required builder's risk or property insurance shall pay for costs not covered because of the application of a policy deductible.

D. *Partial Occupancy or Use by Owner*: If Owner will occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work as provided in Paragraph 15.04, then Owner (directly, if it is the purchaser of the builder's risk policy, or through Contractor) will provide notice of such occupancy or use to the builder's risk insurer. The builder's risk insurance shall not be canceled or permitted to lapse on account of any such partial use or occupancy; rather, those portions of the Work that are occupied or used by Owner may come off the builder's risk policy, while those portions of the Work not yet occupied or

used by Owner shall remain covered by the builder's risk insurance.

E. *Additional Insurance*: If Contractor elects to obtain other special insurance to be included in or supplement the builder's risk or property insurance policies provided under this Paragraph 6.05, it may do so at Contractor's expense.

F. *Insurance of Other Property*: If the express insurance provisions of the Contract do not require or address the insurance of a property item or interest, such as tools, construction equipment, or other personal property owned by Contractor, a Subcontractor, or an employee of Contractor or a Subcontractor, then the entity or individual owning such property item will be responsible for deciding whether to insure it, and if so in what amount.

6.06 *Waiver of Rights*

A. All policies purchased in accordance with Paragraph 6.05, expressly including the builder's risk policy, shall contain provisions to the effect that in the event of payment of any loss or damage the insurers will have no rights of recovery against any insureds thereunder, or against Engineer or its consultants, or their officers, directors, members, partners, employees, agents, consultants, or subcontractors. Owner and Contractor waive all rights against each other and the respective officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, for all losses and damages caused by, arising out of, or resulting from any of the perils or causes of loss covered by such policies and any other property insurance applicable to the Work; and, in addition, waive all such rights against Engineer, its consultants, all Subcontractors, all individuals or entities identified in the Supplementary Conditions as insureds, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, under such policies for losses and damages so caused. None of the above waivers shall extend to the rights that any party making such waiver may have to the proceeds of insurance held by Owner or Contractor as trustee or fiduciary, or otherwise payable under any policy so issued.

B. Owner waives all rights against Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, for:

1. loss due to business interruption, loss of use, or other consequential loss extending beyond direct physical loss or damage to Owner's property or the Work caused by, arising out of, or resulting from fire or other perils whether or not insured by Owner; and

2. loss or damage to the completed Project or part thereof caused by, arising out of, or resulting from fire or other insured peril or cause of loss covered by any property insurance maintained on the completed Project or part thereof by Owner during partial occupancy or use pursuant to Paragraph 15.04, after Substantial Completion pursuant to Paragraph 15.03, or after final payment pursuant to Paragraph 15.06.

C. Any insurance policy maintained by Owner covering any loss, damage or consequential loss referred to in Paragraph 6.06.B shall contain provisions to the effect that in the event of payment of any such loss, damage, or consequential loss, the insurers will have no rights of recovery against Contractor, Subcontractors, or Engineer, or the officers, directors,

members, partners, employees, agents, consultants, or subcontractors of each and any of them.

D. Contractor shall be responsible for assuring that the agreement under which a Subcontractor performs a portion of the Work contains provisions whereby the Subcontractor waives all rights against Owner, Contractor, all individuals or entities identified in the Supplementary Conditions as insureds, the Engineer and its consultants, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, for all losses and damages caused by, arising out of, relating to, or resulting from any of the perils or causes of loss covered by builder's risk insurance and any other property insurance applicable to the Work.

6.07 *Receipt and Application of Property Insurance Proceeds*

A. Any insured loss under the builder's risk and other policies of insurance required by Paragraph 6.05 will be adjusted and settled with the named insured that purchased the policy. Such named insured shall act as fiduciary for the other insureds, and give notice to such other insureds that adjustment and settlement of a claim is in progress. Any other insured may state its position regarding a claim for insured loss in writing within 15 days after notice of such claim.

B. Proceeds for such insured losses may be made payable by the insurer either jointly to multiple insureds, or to the named insured that purchased the policy in its own right and as fiduciary for other insureds, subject to the requirements of any applicable mortgage clause. A named insured receiving insurance proceeds under the builder's risk and other policies of insurance required by Paragraph 6.05 shall distribute such proceeds in accordance with such agreement as the parties in interest may reach, or as otherwise required under the dispute resolution provisions of this Contract or applicable Laws and Regulations.

C. If no other special agreement is reached, the damaged Work shall be repaired or replaced, the money so received applied on account thereof, and the Work and the cost thereof covered by Change Order, if needed.

ARTICLE 7 – CONTRACTOR'S RESPONSIBILITIES

7.01 *Supervision and Superintendence*

A. Contractor shall supervise, inspect, and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents. Contractor shall be solely responsible for the means, methods, techniques, sequences, and procedures of construction.

B. At all times during the progress of the Work, Contractor shall assign a competent resident superintendent who shall not be replaced without written notice to Owner and Engineer except under extraordinary circumstances.

7.02 *Labor; Working Hours*

A. Contractor shall provide competent, suitably qualified personnel to survey and lay out the Work and perform construction as required by the Contract Documents. Contractor shall at all times maintain good discipline and order at the Site.

B. Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise stated in the Contract Documents, all Work at the Site may be performed during the hours of 7:00 am to 10:00 pm, seven days a week.

7.03 *Services, Materials, and Equipment*

A. Unless otherwise specified in the Contract Documents, Contractor shall provide and assume full responsibility for all services, materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities, and all other facilities and incidentals necessary for the performance, testing, start up, and completion of the Work, whether or not such items are specifically called for in the Contract Documents.

B. All materials and equipment incorporated into the Work shall be of good quality and new, except as otherwise provided in the Contract Documents. All special warranties and guarantees required by the Specifications shall expressly run to the benefit of Owner. If required by Engineer, Contractor shall furnish satisfactory evidence (including reports of required tests) as to the source, kind, and quality of materials and equipment.

C. All materials and equipment shall be stored, applied, installed, connected, erected, protected, used, cleaned, and conditioned in accordance with instructions of the applicable Supplier, except as otherwise may be provided in the Contract Documents.

7.04 *"Or Equals"*

A. Whenever an item of material or equipment is specified or described in the Contract Documents by using the name of a proprietary item or the name of a particular Supplier, the Contract Price has been based upon Contractor furnishing such item as specified. The specification or description of such an item is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or equal" item is permitted, Contractor may request that Engineer authorize the use of other items of material or equipment, or items from other proposed suppliers under the circumstances described below.

1. If Engineer in its sole discretion determines that an item of material or equipment proposed by Contractor is functionally equal to that named and sufficiently similar so that no change in related Work will be required, Engineer shall deem it an "or equal" item. For the purposes of this paragraph, a proposed item of material or equipment will be considered functionally equal to an item so named if:

a. in the exercise of reasonable judgment Engineer determines that:

1) it is at least equal in materials of construction, quality, durability, appearance, strength, and design characteristics;

2) it will reliably perform at least equally well the function and achieve the results imposed by the design concept of the completed Project as a functioning whole;

3) it has a proven record of performance and availability of responsive service; and

4) it is not objectionable to Owner.

b. Contractor certifies that, if approved and incorporated into the Work:

1) there will be no increase in cost to the Owner or increase in Contract Times; and

2) it will conform substantially to the detailed requirements of the item named in the Contract Documents.

B. *Contractor's Expense*: Contractor shall provide all data in support of any proposed "or equal" item at Contractor's expense.

C. *Engineer's Evaluation and Determination*: Engineer will be allowed a reasonable time to evaluate each "or-equal" request. Engineer may require Contractor to furnish additional data about the proposed "or-equal" item. Engineer will be the sole judge of acceptability. No "or-equal" item will be ordered, furnished, installed, or utilized until Engineer's review is complete and Engineer determines that the proposed item is an "or-equal", which will be evidenced by an approved Shop Drawing or other written communication. Engineer will advise Contractor in writing of any negative determination.

D. *Effect of Engineer's Determination*: Neither approval nor denial of an "or-equal" request shall result in any change in Contract Price. The Engineer's denial of an "or-equal" request shall be final and binding, and may not be reversed through an appeal under any provision of the Contract Documents.

E. *Treatment as a Substitution Request*: If Engineer determines that an item of material or equipment proposed by Contractor does not qualify as an "or-equal" item, Contractor may request that Engineer considered the proposed item as a substitute pursuant to Paragraph 7.05.

7.05 *Substitutes*

A. Unless the specification or description of an item of material or equipment required to be furnished under the Contract Documents contains or is followed by words reading that no substitution is permitted, Contractor may request that Engineer authorize the use of other items of material or equipment under the circumstances described below. To the extent possible such requests shall be made before commencement of related construction at the Site.

1. Contractor shall submit sufficient information as provided below to allow Engineer to determine if the item of material or equipment proposed is functionally equivalent to that named and an acceptable substitute therefor. Engineer will not accept requests for review of proposed substitute items of material or equipment from anyone other than Contractor.

2. The requirements for review by Engineer will be as set forth in Paragraph 7.05.B, as supplemented by the Specifications, and as Engineer may decide is appropriate under the circumstances.

3. Contractor shall make written application to Engineer for review of a proposed substitute item of material or equipment that Contractor seeks to furnish or use. The application:

a. hall certify that the proposed substitute item will:

1) perform adequately the functions and achieve the results called for by the general design,

2) be similar in substance to that specified, and

3) be suited to the same use as that specified.

b. will state:

1) the extent, if any, to which the use of the proposed substitute item will necessitate a change in Contract Times,

2) whether use of the proposed substitute item in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with Owner for other work on the Project) to adapt the design to the proposed substitute item, and

3) whether incorporation or use of the proposed substitute item in connection with the Work is subject to payment of any license fee or royalty.

c. will identify:

1) all variations of the proposed substitute item from that specified, and

2) available engineering, sales, maintenance, repair, and replacement services.

d. shall contain an itemized estimate of all costs or credits that will result directly or indirectly from use of such substitute item, including but not limited to changes in Contract Price, shared savings, costs of redesign, and claims of other contractors affected by any resulting change.

B. *Engineer's Evaluation and Determination*: Engineer will be allowed a reasonable time to evaluate each substitute request, and to obtain comments and direction from Owner. Engineer may require Contractor to furnish additional data about the proposed substitute item. Engineer will be the sole judge of acceptability. No substitute will be ordered, furnished, installed, or utilized until Engineer's review is complete and Engineer determines that the proposed item is an acceptable substitute. Engineer's determination will be evidenced by a Field Order or a proposed Change Order accounting for the substitution itself and all related impacts, including changes in Contract Price or Contract Times. Engineer will advise Contractor in writing of any negative determination.

C. *Special Guarantee*: Owner may require Contractor to furnish at Contractor's expense a special performance guarantee or other surety with respect to any substitute.

D. *Reimbursement of Engineer's Cost*: Engineer will record Engineer's costs in evaluating a substitute proposed or submitted by Contractor. Whether or not Engineer approves a substitute so proposed or submitted by Contractor, Contractor shall reimburse Owner for the reasonable charges of Engineer for evaluating each such proposed substitute. Contractor shall also reimburse Owner for the reasonable charges of Engineer for making changes in the Contract Documents (or in the provisions of any other direct contract with Owner) resulting from the acceptance of each proposed substitute.

E. *Contractor's Expense*: Contractor shall provide all data in support of any proposed

substitute at Contractor's expense.

F. *Effect of Engineer's Determination*: If Engineer approves the substitution request, Contractor shall execute the proposed Change Order and proceed with the substitution. The Engineer's denial of a substitution request shall be final and binding, and may not be reversed through an appeal under any provision of the Contract Documents. Contractor may challenge the scope of reimbursement costs imposed under Paragraph 7.05.D, by timely submittal of a Change Proposal.

7.06 *Concerning Subcontractors, Suppliers, and Others*

A. Contractor may retain Subcontractors and Suppliers for the performance of parts of the Work. Such Subcontractors and Suppliers must be acceptable to Owner.

B. Contractor shall retain specific Subcontractors, Suppliers, or other individuals or entities for the performance of designated parts of the Work if required by the Contract to do so.

C. Subsequent to the submittal of Contractor's Bid or final negotiation of the terms of the Contract, Owner may not require Contractor to retain any Subcontractor, Supplier, or other individual or entity to furnish or perform any of the Work against which Contractor has reasonable objection.

D. Prior to entry into any binding subcontract or purchase order, Contractor shall submit to Owner the identity of the proposed Subcontractor or Supplier (unless Owner has already deemed such proposed Subcontractor or Supplier acceptable, during the bidding process or otherwise). Such proposed Subcontractor or Supplier shall be deemed acceptable to Owner unless Owner raises a substantive, reasonable objection within five days.

E. Owner may require the replacement of any Subcontractor, Supplier, or other individual or entity retained by Contractor to perform any part of the Work. Owner also may require Contractor to retain specific replacements; provided, however, that Owner may not require a replacement to which Contractor has a reasonable objection. If Contractor has submitted the identity of certain Subcontractors, Suppliers, or other individuals or entities for acceptance by Owner, and Owner has accepted it (either in writing or by failing to make written objection thereto), then Owner may subsequently revoke the acceptance of any such Subcontractor, Supplier, or other individual or entity so identified solely on the basis of substantive, reasonable objection after due investigation. Contractor shall submit an acceptable replacement for the rejected Subcontractor, Supplier, or other individual or entity.

F. If Owner requires the replacement of any Subcontractor, Supplier, or other individual or entity retained by Contractor to perform any part of the Work, then Contractor shall be entitled to an adjustment in Contract Price or Contract Times, or both, with respect to the replacement; and Contractor shall initiate a Change Proposal for such adjustment within 30 days of Owner's requirement of replacement.

G. No acceptance by Owner of any such Subcontractor, Supplier, or other individual or entity, whether initially or as a replacement, shall constitute a waiver of the right of Owner to the completion of the Work in accordance with the Contract Documents.

H. On a monthly basis Contractor shall submit to Engineer a complete list of all Subcontractors and Suppliers having a direct contract with Contractor, and of all other Subcontractors and

Suppliers known to Contractor at the time of submittal.

I. Contractor shall be fully responsible to Owner and Engineer for all acts and omissions of the Subcontractors, Suppliers, and other individuals or entities performing or furnishing any of the Work just as Contractor is responsible for Contractor's own acts and omissions.

J. Contractor shall be solely responsible for scheduling and coordinating the work of Subcontractors, Suppliers, and all other individuals or entities performing or furnishing any of the Work.

K. Contractor shall restrict all Subcontractors, Suppliers, and such other individuals or entities performing or furnishing any of the Work from communicating with Engineer or Owner, except through Contractor or in case of an emergency, or as otherwise expressly allowed herein.

L. The divisions and sections of the Specifications and the identifications of any Drawings shall not control Contractor in dividing the Work among Subcontractors or Suppliers or delineating the Work to be performed by any specific trade.

M. All Work performed for Contractor by a Subcontractor or Supplier shall be pursuant to an appropriate contractual agreement that specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract Documents for the benefit of Owner and Engineer.

N. Owner may furnish to any Subcontractor or Supplier, to the extent practicable, information about amounts paid to Contractor on account of Work performed for Contractor by the particular Subcontractor or Supplier.

O. Nothing in the Contract Documents:

1. shall create for the benefit of any such Subcontractor, Supplier, or other individual or entity any contractual relationship between Owner or Engineer and any such Subcontractor, Supplier, or other individual or entity; nor
2. shall create any obligation on the part of Owner or Engineer to pay or to see to the payment of any money due any such Subcontractor, Supplier, or other individual or entity except as may otherwise be required by Laws and Regulations.

7.07 *Patent Fees and Royalties*

A. Contractor shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation in the Work of any invention, design, process, product, or device which is the subject of patent rights or copyrights held by others. If a particular invention, design, process, product, or device is specified in the Contract Documents for use in the performance of the Work and if, to the actual knowledge of Owner or Engineer, its use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights shall be disclosed by Owner in the Contract Documents.

B. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, and its officers, directors, members, partners, employees, agents, consultants, and subcontractors from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) arising

out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device specified in the Contract Documents, but not identified as being subject to payment of any license fee or royalty to others required by patent rights or copyrights.

C. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device not specified in the Contract Documents.

7.08 *Permits*

A. Unless otherwise provided in the Contract Documents, Contractor shall obtain and pay for all construction permits and licenses. Owner shall assist Contractor, when necessary, in obtaining such permits and licenses. Contractor shall pay all governmental charges and inspection fees necessary for the prosecution of the Work which are applicable at the time of the submission of Contractor's Bid (or when Contractor became bound under a negotiated contract). Owner shall pay all charges of utility owners for connections for providing permanent service to the Work

7.09 *Taxes*

A. Contractor shall pay all sales, consumer, use, and other similar taxes required to be paid by Contractor in accordance with the Laws and Regulations of the place of the Project which are applicable during the performance of the Work.

7.10 *Laws and Regulations*

A. Contractor shall give all notices required by and shall comply with all Laws and Regulations applicable to the performance of the Work. Except where otherwise expressly required by applicable Laws and Regulations, neither Owner nor Engineer shall be responsible for monitoring Contractor's compliance with any Laws or Regulations.

B. If Contractor performs any Work or takes any other action knowing or having reason to know that it is contrary to Laws or Regulations, Contractor shall bear all resulting costs and losses, and shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such Work or other action. It shall not be Contractor's responsibility to make certain that the Work described in the Contract Documents is in accordance with Laws and Regulations, but this shall not relieve Contractor of Contractor's obligations under Paragraph 3.03.

C. Owner or Contractor may give notice to the other party of any changes after the submission of Contractor's Bid (or after the date when Contractor became bound under a

negotiated contract) in Laws or Regulations having an effect on the cost or time of performance of the Work, including but not limited to changes in Laws or Regulations having an effect on procuring permits and on sales, use, value-added, consumption, and other similar taxes. If Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times resulting from such changes, then within 30 days of such notice Contractor may submit a Change Proposal, or Owner may initiate a Claim.

7.11 *Record Documents*

A. Contractor shall maintain in a safe place at the Site one printed record copy of all Drawings, Specifications, Addenda, Change Orders, Work Change Directives, Field Orders, written interpretations and clarifications, and approved Shop Drawings. Contractor shall keep such record documents in good order and annotate them to show changes made during construction. These record documents, together with all approved Samples, will be available to Engineer for reference. Upon completion of the Work, Contractor shall deliver these record documents to Engineer.

7.12 *Safety and Protection*

A. Contractor shall be solely responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the Work. Such responsibility does not relieve Subcontractors of their responsibility for the safety of persons or property in the performance of their work, nor for compliance with applicable safety Laws and Regulations. Contractor shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury, or loss to:

1. all persons on the Site or who may be affected by the Work;
2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the Site; and
3. other property at the Site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, other work in progress, utilities, and Underground Facilities not designated for removal, relocation, or replacement in the course of construction.

B. Contractor shall comply with all applicable Laws and Regulations relating to the safety of persons or property, or to the protection of persons or property from damage, injury, or loss; and shall erect and maintain all necessary safeguards for such safety and protection. Contractor shall notify Owner; the owners of adjacent property, Underground Facilities, and other utilities; and other contractors and utility owners performing work at or adjacent to the Site, when prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation, and replacement of their property or work in progress.

C. Contractor shall comply with the applicable requirements of Owner's safety programs, if any. The Supplementary Conditions identify any Owner's safety programs that are applicable to the Work.

D. Contractor shall inform Owner and Engineer of the specific requirements of Contractor's

safety program with which Owner's and Engineer's employees and representatives must comply while at the Site.

E. All damage, injury, or loss to any property referred to in Paragraph 7.12.A.2 or 7.12.A.3 caused, directly or indirectly, in whole or in part, by Contractor, any Subcontractor, Supplier, or any other individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, shall be remedied by Contractor at its expense (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of Owner or Engineer or anyone employed by any of them, or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of Contractor or any Subcontractor, Supplier, or other individual or entity directly or indirectly employed by any of them).

F. Contractor's duties and responsibilities for safety and protection shall continue until such time as all the Work is completed and Engineer has issued a notice to Owner and Contractor in accordance with Paragraph 15.06.B that the Work is acceptable (except as otherwise expressly provided in connection with Substantial Completion).

G. Contractor's duties and responsibilities for safety and protection shall resume whenever Contractor or any Subcontractor or Supplier returns to the Site to fulfill warranty or correction obligations, or to conduct other tasks arising from the Contract Documents.

7.13 *Safety Representative*

A. Contractor shall designate a qualified and experienced safety representative at the Site whose duties and responsibilities shall be the prevention of accidents and the maintaining and supervising of safety precautions and programs.

7.14 *Hazard Communication Programs*

A. Contractor shall be responsible for coordinating any exchange of material safety data sheets or other hazard communication information required to be made available to or exchanged between or among employers at the Site in accordance with Laws or Regulations.

7.15 *Emergencies*

A. In emergencies affecting the safety or protection of persons or the Work or property at the Site or adjacent thereto, Contractor is obligated to act to prevent threatened damage, injury, or loss. Contractor shall give Engineer prompt written notice if Contractor believes that any significant changes in the Work or variations from the Contract Documents have been caused thereby or are required as a result thereof. If Engineer determines that a change in the Contract Documents is required because of the action taken by Contractor in response to such an emergency, a Work Change Directive or Change Order will be issued.

7.16 *Shop Drawings, Samples, and Other Submittals*

A. *Shop Drawing and Sample Submittal Requirements*:

1. Before submitting a Shop Drawing or Sample, Contractor shall have:

a. reviewed and coordinated the Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract

Documents;

b. determined and verified all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect thereto;

c. determined and verified the suitability of all materials and equipment offered with respect to the indicated application, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of the Work; and

d. determined and verified all information relative to Contractor's responsibilities for means, methods, techniques, sequences, and procedures of construction, and safety precautions and programs incident thereto.

2. Each submittal shall bear a stamp or specific written certification that Contractor has satisfied Contractor's obligations under the Contract Documents with respect to Contractor's review of that submittal, and that Contractor approves the submittal.

3. With each submittal, Contractor shall give Engineer specific written notice of any variations that the Shop Drawing or Sample may have from the requirements of the Contract Documents. This notice shall be set forth in a written communication separate from the Shop Drawings or Sample submittal; and, in addition, in the case of Shop Drawings by a specific notation made on each Shop Drawing submitted to Engineer for review and approval of each such variation.

B. *Submittal Procedures for Shop Drawings and Samples*: Contractor shall submit Shop Drawings and Samples to Engineer for review and approval in accordance with the accepted Schedule of Submittals. Each submittal will be identified as Engineer may require.

1. *Shop Drawings*:

a. Contractor shall submit the number of copies required in the Specifications.

b. Data shown on the Shop Drawings will be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show Engineer the services, materials, and equipment Contractor proposes to provide and to enable Engineer to review the information for the limited purposes required by Paragraph 7.16.D.

2. *Samples*:

a. Contractor shall submit the number of Samples required in the Specifications.

b. Contractor shall clearly identify each Sample as to material, Supplier, pertinent data such as catalog numbers, the use for which intended and other data as Engineer may require to enable Engineer to review the submittal for the limited purposes required by Paragraph 7.16.D.

3. Where a Shop Drawing or Sample is required by the Contract Documents or the Schedule of Submittals, any related Work performed prior to Engineer's review and approval of the pertinent submittal will be at the sole expense and responsibility of Contractor.

C. *Other Submittals*: Contractor shall submit other submittals to Engineer in accordance with the accepted Schedule of Submittals, and pursuant to the applicable terms of the

Specifications.

D. *Engineer's Review*:

1. Engineer will provide timely review of Shop Drawings and Samples in accordance with the Schedule of Submittals acceptable to Engineer. Engineer's review and approval will be only to determine if the items covered by the submittals will, after installation or incorporation in the Work, conform to the information given in the Contract Documents and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents.
2. Engineer's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction or to safety precautions or programs incident thereto.
3. Engineer's review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.
4. Engineer's review and approval of a Shop Drawing or Sample shall not relieve Contractor from responsibility for any variation from the requirements of the Contract Documents unless Contractor has complied with the requirements of Paragraph 7.16.A.3 and Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample. Engineer will document any such approved variation from the requirements of the Contract Documents in a Field Order.
5. Engineer's review and approval of a Shop Drawing or Sample shall not relieve Contractor from responsibility for complying with the requirements of Paragraph 7.16.A and B.
6. Engineer's review and approval of a Shop Drawing or Sample, or of a variation from the requirements of the Contract Documents, shall not, under any circumstances, change the Contract Times or Contract Price, unless such changes are included in a Change Order.
7. Neither Engineer's receipt, review, acceptance or approval of a Shop Drawing, Sample, or other submittal shall result in such item becoming a Contract Document.
8. Contractor shall perform the Work in compliance with the requirements and commitments set forth in approved Shop Drawings and Samples, subject to the provisions of Paragraph 7.16.D.4.

E. *Resubmittal Procedures*:

1. Contractor shall make corrections required by Engineer and shall return the required number of corrected copies of Shop Drawings and submit, as required, new Samples for review and approval. Contractor shall direct specific attention in writing to revisions other than the corrections called for by Engineer on previous submittals.
2. Contractor shall furnish required submittals with sufficient information and accuracy to obtain required approval of an item with no more than three submittals. Engineer will record Engineer's time for reviewing a fourth or subsequent submittal of a Shop Drawings, sample, or other item requiring approval, and Contractor shall be responsible for Engineer's charges to Owner for such time. Owner may impose a set-

off against payments due to Contractor to secure reimbursement for such charges.

3. If Contractor requests a change of a previously approved submittal item, Contractor shall be responsible for Engineer's charges to Owner for its review time, and Owner may impose a set-off against payments due to Contractor to secure reimbursement for such charges, unless the need for such change is beyond the control of Contractor.

7.17 *Contractor's General Warranty and Guarantee*

A. Contractor warrants and guarantees to Owner that all Work will be in accordance with the Contract Documents and will not be defective for a period of one year. The pump supplier shall provide a two-year warranty on the Pumps, Electrical Control Panel and any supplied appurtenances with the pump package that shall be transferred to the City. Engineer and its officers, directors, members, partners, employees, agents, consultants, and subcontractors shall be entitled to rely on Contractor's warranty and guarantee.

B. Contractor's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, modification, or improper maintenance or operation by persons other than Contractor, Subcontractors, Suppliers, or any other individual or entity for whom Contractor is responsible; or

2. normal wear and tear under normal usage.

C. Contractor's obligation to perform and complete the Work in accordance with the Contract Documents shall be absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents or a release of Contractor's obligation to perform the Work in accordance with the Contract Documents:

1. observations by Engineer;

2. recommendation by Engineer or payment by Owner of any progress or final payment;

3. the issuance of a certificate of Substantial Completion by Engineer or any payment related thereto by Owner;

4. use or occupancy of the Work or any part thereof by Owner;

5. any review and approval of a Shop Drawing or Sample submittal;

6. the issuance of a notice of acceptability by Engineer;

7. any inspection, test, or approval by others; or

8. any correction of defective Work by Owner.

D. If the Contract requires the Contractor to accept the assignment of a contract entered into by Owner, then the specific warranties, guarantees, and correction obligations contained in the assigned contract shall govern with respect to Contractor's performance obligations to Owner for the Work described in the assigned contract.

7.18 *Indemnification*

A. To the fullest extent permitted by Laws and Regulations, and in addition to any other obligations of Contractor under the Contract or otherwise, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and

against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the performance of the Work, provided that any such claim, cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom but only to the extent caused by any negligent act or omission of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work or anyone for whose acts any of them may be liable.

B. In any and all claims against Owner or Engineer or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors by any employee (or the survivor or personal representative of such employee) of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 7.18.A shall not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for Contractor or any such Subcontractor, Supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

C. The indemnification obligations of Contractor under Paragraph 7.18.A shall not extend to the liability of Engineer and Engineer's officers, directors, members, partners, employees, agents, consultants and subcontractors arising out of:

1. the preparation or approval of, or the failure to prepare or approve maps, Drawings, opinions, reports, surveys, Change Orders, designs, or Specifications; or

2. giving directions or instructions, or failing to give them, if that is the primary cause of the injury or damage.

7.19 *Delegation of Professional Design Services*

A. Contractor will not be required to provide professional design services unless such services are specifically required by the Contract Documents for a portion of the Work or unless such services are required to carry out Contractor's responsibilities for construction means, methods, techniques, sequences and procedures. Contractor shall not be required to provide professional services in violation of applicable Laws and Regulations.

B. If professional design services or certifications by a design professional related to systems, materials, or equipment are specifically required of Contractor by the Contract Documents, Owner and Engineer will specify all performance and design criteria that such services must satisfy. Contractor shall cause such services or certifications to be provided by a properly licensed professional, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, and other submittals prepared by such professional. Shop Drawings and other submittals related to the Work designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to Engineer.

C. Owner and Engineer shall be entitled to rely upon the adequacy, accuracy, and completeness of the services, certifications, or approvals performed by such design professionals, provided Owner and Engineer have specified to Contractor all performance

and design criteria that such services must satisfy.

D. Pursuant to this paragraph, Engineer's review and approval of design calculations and design drawings will be only for the limited purpose of checking for conformance with performance and design criteria given and the design concept expressed in the Contract Documents. Engineer's review and approval of Shop Drawings and other submittals (except design calculations and design drawings) will be only for the purpose stated in Paragraph 7.16.D.1.

E. Contractor shall not be responsible for the adequacy of the performance or design criteria specified by Owner or Engineer.

ARTICLE 8 – OTHER WORK AT THE SITE

8.01 *Other Work*

A. In addition to and apart from the Work under the Contract Documents, the Owner may perform other work at or adjacent to the Site. Such other work may be performed by Owner's employees, or through contracts between the Owner and third parties. Owner may also arrange to have third-party utility owners perform work on their utilities and facilities at or adjacent to the Site.

B. If Owner performs other work at or adjacent to the Site with Owner's employees, or through contracts for such other work, then Owner shall give Contractor written notice thereof prior to starting any such other work. If Owner has advance information regarding the start of any utility work at or adjacent to the Site, Owner shall provide such information to Contractor.

C. Contractor shall afford each other contractor that performs such other work, each utility owner performing other work, and Owner, if Owner is performing other work with Owner's employees, proper and safe access to the Site, and provide a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work. Contractor shall do all cutting, fitting, and patching of the Work that may be required to properly connect or otherwise make its several parts come together and properly integrate with such other work. Contractor shall not endanger any work of others by cutting, excavating, or otherwise altering such work; provided, however, that Contractor may cut or alter others' work with the written consent of Engineer and the others whose work will be affected.

D. If the proper execution or results of any part of Contractor's Work depends upon work performed by others under this Article 8, Contractor shall inspect such other work and promptly report to Engineer in writing any delays, defects, or deficiencies in such other work that render it unavailable or unsuitable for the proper execution and results of Contractor's Work. Contractor's failure to so report will constitute an acceptance of such other work as fit and proper for integration with Contractor's Work except for latent defects and deficiencies in such other work.

8.02 *Coordination*

A. If Owner intends to contract with others for the performance of other work at or adjacent

to the Site, to perform other work at or adjacent to the Site with Owner's employees, or to arrange to have utility owners perform work at or adjacent to the Site, the following will be set forth in the Supplementary Conditions or provided to Contractor prior to the start of any such other work:

1. the identity of the individual or entity that will have authority and responsibility for coordination of the activities among the various contractors;
2. an itemization of the specific matters to be covered by such authority and responsibility; and
3. the extent of such authority and responsibilities.

B. Unless otherwise provided in the Supplementary Conditions, Owner shall have sole authority and responsibility for such coordination.

8.03 *Legal Relationships*

A. If, in the course of performing other work at or adjacent to the Site for Owner, the Owner's employees, any other contractor working for Owner, or any utility owner for whom the Owner is responsible causes damage to the Work or to the property of Contractor or its Subcontractors, or delays, disrupts, interferes with, or increases the scope or cost of the performance of the Work, through actions or inaction, then Contractor shall be entitled to an equitable adjustment in the Contract Price or the Contract Times, or both. Contractor must submit any Change Proposal seeking an equitable adjustment in the Contract Price or the Contract Times under this paragraph within 30 days of the damaging, delaying, disrupting, or interfering event. The entitlement to, and extent of, any such equitable adjustment shall take into account information (if any) regarding such other work that was provided to Contractor in the Contract Documents prior to the submittal of the Bid or the final negotiation of the terms of the Contract. When applicable, any such equitable adjustment in Contract Price shall be conditioned on Contractor assigning to Owner all Contractor's rights against such other contractor or utility owner with respect to the damage, delay, disruption, or interference that is the subject of the adjustment. Contractor's entitlement to an adjustment of the Contract Times is conditioned on such adjustment being essential to Contractor's ability to complete the Work within the Contract Times.

B. Contractor shall take reasonable and customary measures to avoid damaging, delaying, disrupting, or interfering with the work of Owner, any other contractor, or any utility owner performing other work at or adjacent to the Site. If Contractor fails to take such measures and as a result damages, delays, disrupts, or interferes with the work of any such other contractor or utility owner, then Owner may impose a set-off against payments due to Contractor, and assign to such other contractor or utility owner the Owner's contractual rights against Contractor with respect to the breach of the obligations set forth in this paragraph.

C. When Owner is performing other work at or adjacent to the Site with Owner's employees, Contractor shall be liable to Owner for damage to such other work, and for the reasonable direct delay, disruption, and interference costs incurred by Owner as a result of Contractor's failure to take reasonable and customary measures with respect to Owner's other work. In response to such damage, delay, disruption, or interference, Owner may

impose a set-off against payments due to Contractor.

D. If Contractor damages, delays, disrupts, or interferes with the work of any other contractor, or any utility owner performing other work at or adjacent to the Site, through Contractor's failure to take reasonable and customary measures to avoid such impacts, or if any claim arising out of Contractor's actions, inactions, or negligence in performance of the Work at or adjacent to the Site is made by any such other contractor or utility owner against Contractor, Owner, or Engineer, then Contractor shall (1) promptly attempt to settle the claim as to all parties through negotiations with such other contractor or utility owner, or otherwise resolve the claim by arbitration or other dispute resolution proceeding or at law, and (2) indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against any such claims, and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such damage, delay, disruption, or interference.

ARTICLE 9 – OWNER'S RESPONSIBILITIES

9.01 *Communications to Contractor*

A. Except as otherwise provided in these General Conditions, Owner shall issue all communications to Contractor through Engineer.

9.02 *Replacement of Engineer*

A. Owner may at its discretion appoint an engineer to replace Engineer, provided Contractor makes no reasonable objection to the replacement engineer. The replacement engineer's status under the Contract Documents shall be that of the former Engineer.

9.03 *Furnish Data*

A. Owner shall promptly furnish the data required of Owner under the Contract Documents.

9.04 *Pay When Due*

A. Owner shall make payments to Contractor when they are due as provided in the Agreement.

9.05 *Lands and Easements; Reports, Tests, and Drawings*

A. Owner's duties with respect to providing lands and easements are set forth in Paragraph 5.01.

B. Owner's duties with respect to providing engineering surveys to establish reference points are set forth in Paragraph 4.03.

C. Article 5 refers to Owner's identifying and making available to Contractor copies of reports of explorations and tests of conditions at the Site, and drawings of physical conditions relating to existing surface or subsurface structures at the Site.

9.06 *Insurance*

A. Owner's responsibilities, if any, with respect to purchasing and maintaining liability and property insurance are set forth in Article 6.

9.07 *Change Orders*

A. Owner's responsibilities with respect to Change Orders are set forth in Article 11.

9.08 *Inspections, Tests, and Approvals*

A. Owner's responsibility with respect to certain inspections, tests, and approvals is set forth in Paragraph 14.02.B.

9.09 *Limitations on Owner's Responsibilities*

A. The Owner shall not supervise, direct, or have control or authority over, nor be responsible for, Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Owner will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

9.10 *Undisclosed Hazardous Environmental Condition*

A. Owner's responsibility in respect to an undisclosed Hazardous Environmental Condition is set forth in Paragraph 5.06.

9.11 *Evidence of Financial Arrangements*

A. Upon request of Contractor, Owner shall furnish Contractor reasonable evidence that financial arrangements have been made to satisfy Owner's obligations under the Contract Documents (including obligations under proposed changes in the Work).

9.12 *Safety Programs*

A. While at the Site, Owner's employees and representatives shall comply with the specific applicable requirements of Contractor's safety programs of which Owner has been informed.

B. Owner shall furnish copies of any applicable Owner safety programs to Contractor.

ARTICLE 10 – ENGINEER'S STATUS DURING CONSTRUCTION

10.01 *Owner's Representative*

A. Engineer will be Owner's representative during the construction period. The duties and responsibilities and the limitations of authority of Engineer as Owner's representative during construction are set forth in the Contract.

10.02 *Visits to Site*

A. Engineer will make visits to the Site at intervals appropriate to the various stages of construction as Engineer deems necessary in order to observe as an experienced and qualified design professional the progress that has been made and the quality of the various aspects of Contractor's executed Work. Based on information obtained during such visits and observations, Engineer, for the benefit of Owner, will determine, in general, if the Work is proceeding in accordance with the Contract Documents. Engineer will not be required to make exhaustive or continuous inspections on the Site to check the quality or quantity of the Work. Engineer's efforts will be directed toward providing for Owner a

greater degree of confidence that the completed Work will conform generally to the Contract Documents. On the basis of such visits and observations, Engineer will keep Owner informed of the progress of the Work and will endeavor to guard Owner against defective Work.

B. Engineer's visits and observations are subject to all the limitations on Engineer's authority and responsibility set forth in Paragraph 10.08. Particularly, but without limitation, during or as a result of Engineer's visits or observations of Contractor's Work, Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work.

10.03 *Project Representative*

A. This project was designed in-house by the City Engineer. The Project Representative will be the City-assigned Project Manager. This person will be assigned and present at the Mandatory Pre-Bid conference and will remain in that period for the duration of the project.

B. The RPR shall not:

1 Authorize any deviation from the Contract Documents or substitution of materials or equipment (including "or-equal" items).

2 Exceed limitations of Engineer's authority as set forth in the Contract Documents.

3 Undertake any of the responsibilities of Contractor, Subcontractors, or Suppliers.

4 Advise on, issue directions relative to, or assume control over any aspect of the means, methods, techniques, sequences or procedures of Contractor's work.

5 Advise on, issue directions regarding, or assume control over security or safety practices, precautions, and programs in connection with the activities or operations of Owner or Contractor.

6 Participate in specialized field or laboratory tests or inspections conducted off-site by others except as specifically authorized by City Project Manager.

7 Accept Shop Drawing or Sample submittals from anyone other than Contractor.

8 Authorize Owner to occupy the Project in whole or in part.

10.04 *Rejecting Defective Work*

B. Engineer has the authority to reject Work in accordance with Article 14.

10.05 *Shop Drawings, Change Orders and Payments*

B. Engineer's authority, and limitations thereof, as to Shop Drawings and Samples, are set forth in Paragraph 7.16.

C. Engineer's authority, and limitations thereof, as to design calculations and design drawings submitted in response to a delegation of professional design services, if any, are set forth in Paragraph 7.19.

D. Engineer's authority as to Change Orders is set forth in Article 11.

E. Engineer's authority as to Applications for Payment is set forth in Article 15.

10.06 *Determinations for Unit Price Work*

B. Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor as set forth in Paragraph 13.03.

10.07 *Decisions on Requirements of Contract Documents and Acceptability of Work*

B. Engineer will render decisions regarding the requirements of the Contract Documents, and judge the acceptability of the Work, pursuant to the specific procedures set forth herein for initial interpretations, Change Proposals, and acceptance of the Work. In rendering such decisions and judgments, Engineer will not show partiality to Owner or Contractor, and will not be liable to Owner, Contractor, or others in connection with any proceedings, interpretations, decisions, or judgments conducted or rendered in good faith.

10.08 *Limitations on Engineer's Authority and Responsibilities*

B. Neither Engineer's authority or responsibility under this Article 10 or under any other provision of the Contract, nor any decision made by Engineer in good faith either to exercise or not exercise such authority or responsibility or the undertaking, exercise, or performance of any authority or responsibility by Engineer, shall create, impose, or give rise to any duty in contract, tort, or otherwise owed by Engineer to Contractor, any Subcontractor, any Supplier, any other individual or entity, or to any surety for or employee or agent of any of them.

C. Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Engineer will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

D. Engineer will not be responsible for the acts or omissions of Contractor or of any Subcontractor, any Supplier, or of any other individual or entity performing any of the Work.

E. Engineer's review of the final Application for Payment and accompanying documentation and all maintenance and operating instructions, schedules, guarantees, bonds, certificates of inspection, tests and approvals, and other documentation required to be delivered by Paragraph 15.06.A will only be to determine generally that their content complies with the requirements of, and in the case of certificates of inspections, tests, and approvals, that the results certified indicate compliance with the Contract Documents.

F. The limitations upon authority and responsibility set forth in this Paragraph 10.08 shall also apply to the Resident Project Representative, if any.

10.09 *Compliance with Safety Program*

B. While at the Site, Engineer's employees and representatives will comply with the specific applicable requirements of Owner's and Contractor's safety programs (if any) of which Engineer has been informed.

ARTICLE 11 – AMENDING THE CONTRACT DOCUMENTS; CHANGES IN THE WORK

11.01 *Amending and Supplementing Contract Documents*

A. The Contract Documents may be amended or supplemented by a Change Order, a Work Change Directive, or a Field Order.

1. *Change Orders*:

a. If an amendment or supplement to the Contract Documents includes a change in the Contract Price or the Contract Times, such amendment or supplement must be set forth in a Change Order. A Change Order also may be used to establish amendments and supplements of the Contract Documents that do not affect the Contract Price or Contract Times.

b. Owner and Contractor may amend those terms and conditions of the Contract Documents that do not involve (1) the performance or acceptability of the Work, **(2)** the design (as set forth in the Drawings, Specifications, or otherwise), or (3) other engineering or technical matters, without the recommendation of the Engineer. Such an amendment shall be set forth in a Change Order.

2. *Work Change Directives*: A Work Change Directive will not change the Contract Price or the Contract Times but is evidence that the parties expect that the modification ordered or documented by a Work Change Directive will be incorporated in a subsequently issued Change Order, following negotiations by the parties as to the Work Change Directive's effect, if any, on the Contract Price and Contract Times; or, if negotiations are unsuccessful, by a determination under the terms of the Contract Documents governing adjustments, expressly including Paragraph 11.04 regarding change of Contract Price. Contractor must submit any Change Proposal seeking an adjustment of the Contract Price or the Contract Times, or both, no later than 30 days after the completion of the Work set out in the Work Change Directive. Owner must submit any Claim seeking an adjustment of the Contract Price or the Contract Times, or both, no later than 60 days after issuance of the Work Change Directive.

3. *Field Orders*: Engineer may authorize minor changes in the Work if the changes do not involve an adjustment in the Contract Price or the Contract Times and are compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. Such changes will be accomplished by a Field Order and will be binding on Owner and also on Contractor, which shall perform the Work involved promptly. If Contractor believes that a Field Order justifies an adjustment in the Contract Price or Contract Times, or both, then before proceeding with the Work at issue, Contractor shall submit a Change Proposal as provided herein.

11.02 *Owner-Authorized Changes in the Work*

A. Without invalidating the Contract and without notice to any surety, Owner may, at any time or from time to time, order additions, deletions, or revisions in the Work. Such changes shall be supported by Engineer's recommendation, to the extent the change involves the design (as set forth in the Drawings, Specifications, or otherwise), or other engineering or technical matters. Such changes may be accomplished by a Change Order, if Owner and Contractor have agreed as to the effect, if any, of the changes on Contract Times or Contract Price; or by a Work Change Directive. Upon receipt of any such document, Contractor shall promptly proceed with the Work involved; or, in the case of a

deletion in the Work, promptly cease construction activities with respect to such deleted Work. Added or revised Work shall be performed under the applicable conditions of the Contract Documents. Nothing in this paragraph shall obligate Contractor to undertake work that Contractor reasonably concludes cannot be performed in a manner consistent with Contractor's safety obligations under the Contract Documents or Laws and Regulations.

11.03 *Unauthorized Changes in the Work*

A. Contractor shall not be entitled to an increase in the Contract Price or an extension of the Contract Times with respect to any work performed that is not required by the Contract Documents, as amended, modified, or supplemented, except in the case of an emergency as provided in Paragraph 7.15 or in the case of uncovering Work as provided in Paragraph 14.05.

11.04 *Change of Contract Price*

A. The Contract Price may only be changed by a Change Order. Any Change Proposal for an adjustment in the Contract Price shall comply with the provisions of Paragraph 11.06. Any Claim for an adjustment of Contract Price shall comply with the provisions of Article 12.

B. An adjustment in the Contract Price will be determined as follows:

1. where the Work involved is covered by unit prices contained in the Contract Documents, then by application of such unit prices to the quantities of the items involved (subject to the provisions of Paragraph 13.03); or

2. where the Work involved is not covered by unit prices contained in the Contract Documents, then by a mutually agreed lump sum (which may include an allowance for overhead and profit not necessarily in accordance with Paragraph 11.04.C.2); or

3. where the Work involved is not covered by unit prices contained in the Contract Documents and the parties do not reach mutual agreement to a lump sum, then on the basis of the Cost of the Work (determined as provided in Paragraph 13.01) plus a Contractor's fee for overhead and profit (determined as provided in Paragraph 11.04.C).

C. *Contractor's Fee*: When applicable, the Contractor's fee for overhead and profit shall be determined as follows:

1. a mutually acceptable fixed fee; or

2. if a fixed fee is not agreed upon, then a fee based on the following percentages of the various portions of the Cost of the Work:

a. for costs incurred under Paragraphs 13.01.B.1 and 13.01.B.2, the Contractor's fee shall be 15 percent;

b. for costs incurred under Paragraph 13.01.B.3, the Contractor's fee shall be five percent;

c. where one or more tiers of subcontracts are on the basis of Cost of the Work plus a fee and no fixed fee is agreed upon, the intent of Paragraphs 11.04.C.2.a and 11.04.C.2.b is that the Contractor's fee shall be based on: (1) a fee of 15 percent of the costs incurred under Paragraphs 13.01.A.1 and 13.01.A.2 by the Subcontractor that actually performs the Work, at whatever tier, and (2) with

respect to Contractor itself and to any Subcontractors of a tier higher than that of the Subcontractor that actually performs the Work, a fee of five percent of the amount (fee plus underlying costs incurred) attributable to the next lower tier Subcontractor; provided, however, that for any such subcontracted work the maximum total fee to be paid by Owner shall be no greater than 27 percent of the costs incurred by the Subcontractor that actually performs the work;

d. no fee shall be payable on the basis of costs itemized under Paragraphs 13.01.B.4, 13.01.B.5, and 13.01.C;

e. the amount of credit to be allowed by Contractor to Owner for any change which results in a net decrease in cost will be the amount of the actual net decrease in cost plus a deduction in Contractor's fee by an amount equal to five percent of such net decrease; and

f. when both additions and credits are involved in any one change, the adjustment in Contractor's fee shall be computed on the basis of the net change in accordance with Paragraphs 11.04.C.2.a through 11.04.C.2.e, inclusive.

11.05 *Change of Contract Times*

A. The Contract Times may only be changed by a Change Order. Any Change Proposal for an adjustment in the Contract Times shall comply with the provisions of Paragraph 11.06. Any Claim for an adjustment in the Contract Times shall comply with the provisions of Article 12.

B. An adjustment of the Contract Times shall be subject to the limitations set forth in Paragraph 4.05, concerning delays in Contractor's progress.

11.06 *Change Proposals*

A. Contractor shall submit a Change Proposal to Engineer to request an adjustment in the Contract Times or Contract Price; appeal an initial decision by Engineer concerning the requirements of the Contract Documents or relating to the acceptability of the Work under the Contract Documents; contest a set-off against payment due; or seek other relief under the Contract. The Change Proposal shall specify any proposed change in Contract Times or Contract Price, or both, or other proposed relief, and explain the reason for the proposed change, with citations to any governing or applicable provisions of the Contract Documents.

1. *Procedures*: Contractor shall submit each Change Proposal to Engineer promptly (but in no event later than 30 days) after the start of the event giving rise thereto, or after such initial decision. The Contractor shall submit supporting data, including the proposed change in Contract Price or Contract Time (if any), to the Engineer and Owner within 15 days after the submittal of the Change Proposal. The supporting data shall be accompanied by a written statement that the supporting data are accurate and complete, and that any requested time or price adjustment is the entire adjustment to which Contractor believes it is entitled as a result of said event. Engineer will advise Owner regarding the Change Proposal, and consider any comments or response from Owner regarding the Change Proposal.

2. *Engineer's Action*: Engineer will review each Change Proposal and, within 30 days after receipt of the Contractor's supporting data, either deny the Change Proposal in whole, approve it in whole, or deny it in part and approve it in part. Such actions shall be in

writing, with a copy provided to Owner and Contractor. If Engineer does not take action on the Change Proposal within 30 days, then either Owner or Contractor may at any time thereafter submit a letter to the other party indicating that as a result of Engineer's inaction the Change Proposal is deemed denied, thereby commencing the time for appeal of the denial under Article 12.

3. *Binding Decision*: Engineer's decision will be final and binding upon Owner and Contractor, unless Owner or Contractor appeals the decision by filing a Claim under Article 12.

B. *Resolution of Certain Change Proposals*: If the Change Proposal does not involve the design (as set forth in the Drawings, Specifications, or otherwise), the acceptability of the Work, or other engineering or technical matters, then Engineer will notify the parties that the Engineer is unable to resolve the Change Proposal. For purposes of further resolution of such a Change Proposal, such notice shall be deemed a denial, and Contractor may choose to seek resolution under the terms of Article 12.

11.07 *Execution of Change Orders*

A. Owner and Contractor shall execute appropriate Change Orders covering:

1. changes in the Contract Price or Contract Times which are agreed to by the parties, including any undisputed sum or amount of time for Work actually performed in accordance with a Work Change Directive;

2. changes in Contract Price resulting from an Owner set-off, unless Contractor has duly contested such set-off;

3. changes in the Work which are: (a) ordered by Owner pursuant to Paragraph 11.02, (b) required because of Owner's acceptance of defective Work under Paragraph 14.04 or Owner's correction of defective Work under Paragraph 14.07, or (c) agreed to by the parties, subject to the need for Engineer's recommendation if the change in the Work involves the design (as set forth in the Drawings, Specifications, or otherwise), or other engineering or technical matters; and

4. changes in the Contract Price or Contract Times, or other changes, which embody the substance of any final and binding results under Paragraph 11.06, or Article 12.

B. If Owner or Contractor refuses to execute a Change Order that is required to be executed under the terms of this Paragraph 11.07, it shall be deemed to be of full force and effect, as if fully executed.

11.08 *Notification to Surety*

A. If the provisions of any bond require notice to be given to a surety of any change affecting the general scope of the Work or the provisions of the Contract Documents (including, but not limited to, Contract Price or Contract Times), the giving of any such notice will be Contractor's responsibility. The amount of each applicable bond will be adjusted to reflect the effect of any such change.

ARTICLE 12 – CLAIMS

12.01 *Claims*

A. *Claims Process*: The following disputes between Owner and Contractor shall be submitted to the Claims process set forth in this Article:

1. Appeals by Owner or Contractor of Engineer's decisions regarding Change Proposals;
2. Owner demands for adjustments in the Contract Price or Contract Times, or other relief under the Contract Documents; and
3. Disputes that Engineer has been unable to address because they do not involve the design (as set forth in the Drawings, Specifications, or otherwise), the acceptability of the Work, or other engineering or technical matters.

B. *Submittal of Claim*: The party submitting a Claim shall deliver it directly to the other party to the Contract promptly (but in no event later than 30 days) after the start of the event giving rise thereto; in the case of appeals regarding Change Proposals within 30 days of the decision under appeal. The party submitting the Claim shall also furnish a copy to the Engineer, for its information only. The responsibility to substantiate a Claim shall rest with the party making the Claim. In the case of a Claim by Contractor seeking an increase in the Contract Times or Contract Price, or both, Contractor shall certify that the Claim is made in good faith, that the supporting data are accurate and complete, and that to the best of Contractor's knowledge and belief the amount of time or money requested accurately reflects the full amount to which Contractor is entitled.

C. *Review and Resolution*: The party receiving a Claim shall review it thoroughly, giving full consideration to its merits. The two parties shall seek to resolve the Claim through the exchange of information and direct negotiations. The parties may extend the time for resolving the Claim by mutual agreement. All actions taken on a Claim shall be stated in writing and submitted to the other party, with a copy to Engineer.

D. *Mediation*:

1. At any time after initiation of a Claim, Owner and Contractor may mutually agree to mediation of the underlying dispute. The agreement to mediate shall stay the Claim submittal and response process.
2. If Owner and Contractor agree to mediation, then after 60 days from such agreement, either Owner or Contractor may unilaterally terminate the mediation process, and the Claim submittal and decision process shall resume as of the date of the termination. If the mediation proceeds but is unsuccessful in resolving the dispute, the Claim submittal and decision process shall resume as of the date of the conclusion of the mediation, as determined by the mediator.
3. Owner and Contractor shall each pay one-half of the mediator's fees and costs.

E. *Partial Approval*: If the party receiving a Claim approves the Claim in part and denies it in part, such action shall be final and binding unless within 30 days of such action the other party invokes the procedure set forth in Article 17 for final resolution of disputes.

F. *Denial of Claim*: If efforts to resolve a Claim are not successful, the party receiving the Claim may deny it by giving written notice of denial to the other party. If the receiving party does not take action on the Claim within 90 days, then either Owner or Contractor may at any time thereafter submit a letter to the other party indicating that as a result of the inaction, the Claim is deemed denied, thereby commencing the time for appeal of the denial. A

denial of the Claim shall be final and binding unless within 30 days of the denial the other party invokes the procedure set forth in Article 17 for the final resolution of disputes.

G. *Final and Binding Results*: If the parties reach a mutual agreement regarding a Claim, whether through approval of the Claim, direct negotiations, mediation, or otherwise; or if a Claim is approved in part and denied in part, or denied in full, and such actions become final and binding; then the results of the agreement or action on the Claim shall be incorporated in a Change Order to the extent they affect the Contract, including the Work, the Contract Times, or the Contract Price.

ARTICLE 13 – COST OF THE WORK; ALLOWANCES; UNIT PRICE WORK

13.01 *Cost of the Work*

A. *Purposes for Determination of Cost of the Work*: The term Cost of the Work means the sum of all costs necessary for the proper performance of the Work at issue, as further defined below. The provisions of this Paragraph 13.01 are used for two distinct purposes:

1. To determine Cost of the Work when Cost of the Work is a component of the Contract Price, under cost-plus-fee, time-and-materials, or other cost-based terms; or

2. To determine the value of a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price. When the value of any such adjustment is determined on the basis of Cost of the Work, Contractor is entitled only to those additional or incremental costs required because of the change in the Work or because of the event giving rise to the adjustment.

B. *Costs Included*: Except as otherwise may be agreed to in writing by Owner, costs included in the Cost of the Work shall be in amounts no higher than those prevailing in the locality of the Project, shall not include any of the costs itemized in Paragraph 13.01.C, and shall include only the following items:

1. Payroll costs for employees in the direct employ of Contractor in the performance of the Work under schedules of job classifications agreed upon by Owner and Contractor. Such employees shall include, without limitation, superintendents, foremen, and other personnel employed full time on the Work. Payroll costs for employees not employed full time on the Work shall be apportioned on the basis of their time spent on the Work. Payroll costs shall include, but not be limited to, salaries and wages plus the cost of fringe benefits, which shall include social security contributions, unemployment, excise, and payroll taxes, workers' compensation, health and retirement benefits, bonuses, sick leave, and vacation and holiday pay applicable thereto. The expenses of performing Work outside of regular working hours, on Saturday, Sunday, or legal holidays, shall be included in the above to the extent authorized by Owner.

2. Cost of all materials and equipment furnished and incorporated in the Work, including costs of transportation and storage thereof, and Suppliers' field services required in connection therewith. All cash discounts shall accrue to Contractor unless Owner deposits funds with Contractor with which to make payments, in which case the cash discounts shall accrue to Owner. All trade discounts, rebates, and refunds and returns from sale of surplus materials and equipment shall accrue to Owner, and Contractor

shall make provisions so that they may be obtained.

3. Payments made by Contractor to Subcontractors for Work performed by Subcontractors. If required by Owner, Contractor shall obtain competitive bids from subcontractors acceptable to Owner and Contractor and shall deliver such bids to Owner, who will then determine, with the advice of Engineer, which bids, if any, will be acceptable. If any subcontract provides that the Subcontractor is to be paid on the basis of Cost of the Work plus a fee, the Subcontractor's Cost of the Work and fee shall be determined in the same manner as Contractor's Cost of the Work and fee as provided in this Paragraph 13.01.

4. Costs of special consultants (including but not limited to engineers, architects, testing laboratories, surveyors, attorneys, and accountants) employed for services specifically related to the Work.

5. Supplemental costs including the following:
   a. The proportion of necessary transportation, travel, and subsistence expenses of Contractor's employees incurred in discharge of duties connected with the Work.
   b. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office, and temporary facilities at the Site, and hand tools not owned by the workers, which are consumed in the performance of the Work, and cost, less market value, of such items used but not consumed which remain the property of Contractor.
   c. Rentals of all construction equipment and machinery, and the parts thereof, whether rented from Contractor or others in accordance with rental agreements approved by Owner with the advice of Engineer, and the costs of transportation, loading, unloading, assembly, dismantling, and removal thereof. All such costs shall be in accordance with the terms of said rental agreements. The rental of any such equipment, machinery, or parts shall cease when the use thereof is no longer necessary for the Work.
   d. Sales, consumer, use, and other similar taxes related to the Work, and for which Contractor is liable, as imposed by Laws and Regulations.
   e. Deposits lost for causes other than negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, and royalty payments and fees for permits and licenses.
   f. Losses and damages (and related expenses) caused by damage to the Work, not compensated by insurance or otherwise, sustained by Contractor in connection with the performance of the Work (except losses and damages within the deductible amounts of property insurance established in accordance with Paragraph 6.05), provided such losses and damages have resulted from causes other than the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable. Such losses shall include settlements made with the written consent and approval of Owner. No such losses, damages, and expenses shall be included in the Cost of the Work for the purpose of determining Contractor's fee.

g. The cost of utilities, fuel, and sanitary facilities at the Site.

h. Minor expenses such as communication service at the Site, express and courier services, and similar petty cash items in connection with the Work.

i. The costs of premiums for all bonds and insurance that Contractor is required by the Contract Documents to purchase and maintain.

C. *Costs Excluded*: The term Cost of the Work shall not include any of the following items:

1. Payroll costs and other compensation of Contractor's officers, executives, principals (of partnerships and sole proprietorships), general managers, safety managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expediters, timekeepers, clerks, and other personnel employed by Contractor, whether at the Site or in Contractor's principal or branch office for general administration of the Work and not specifically included in the agreed upon schedule of job classifications referred to in Paragraph 13.01.B.1 or specifically covered by Paragraph 13.01.B.4. The payroll costs and other compensation excluded here are to be considered administrative costs covered by the Contractor's fee.

2. Expenses of Contractor's principal and branch offices other than Contractor's office at the Site.

3. Any part of Contractor's capital expenses, including interest on Contractor's capital employed for the Work and charges against Contractor for delinquent payments.

4. Costs due to the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including but not limited to, the correction of defective Work, disposal of materials or equipment wrongly supplied, and making good any damage to property.

5. Other overhead or general expense costs of any kind and the costs of any item not specifically and expressly included in Paragraph 13.01.B.

D. *Contractor's Fee*: When the Work as a whole is performed on the basis of cost-plus, Contractor's fee shall be determined as set forth in the Agreement. When the value of any Work covered by a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price is determined on the basis of Cost of the Work, Contractor's fee shall be determined as set forth in Paragraph 11.04.C.

E. *Documentation*: Whenever the Cost of the Work for any purpose is to be determined pursuant to this Article 13, Contractor will establish and maintain records thereof in accordance with generally accepted accounting practices and submit in a form acceptable to Engineer an itemized cost breakdown together with supporting data.

13.02 *Allowances*

A. It is understood that Contractor has included in the Contract Price all allowances so named in the Contract Documents and shall cause the Work so covered to be performed for such sums and by such persons or entities as may be acceptable to Owner and Engineer.

B. *Cash Allowances*: Contractor agrees that:

1. the cash allowances include the cost to Contractor (less any applicable trade discounts) of materials and equipment required by the allowances to be delivered at

the Site, and all applicable taxes; and

2. Contractor's costs for unloading and handling on the Site, labor, installation, overhead, profit, and other expenses contemplated for the cash allowances have been included in the Contract Price and not in the allowances, and no demand for additional payment on account of any of the foregoing will be valid.

C. *Contingency Allowance*: Contractor agrees that a contingency allowance, if any, is for the sole use of Owner to cover unanticipated costs.

D. Prior to final payment, an appropriate Change Order will be issued as recommended by Engineer to reflect actual amounts due Contractor on account of Work covered by allowances, and the Contract Price shall be correspondingly adjusted.

13.03 *Unit Price Work (if used)*

A. Where the Contract Documents provide that all or part of the Work is to be Unit Price Work, initially the Contract Price will be deemed to include for all Unit Price Work an amount equal to the sum of the unit price for each separately identified item of Unit Price Work times the estimated quantity of each item as indicated in the Agreement.

B. The estimated quantities of items of Unit Price Work are not guaranteed and are solely for the purpose of comparison of Bids and determining an initial Contract Price. Payments to Contractor for Unit Price Work will be based on actual quantities.

C. Each unit price will be deemed to include an amount considered by Contractor to be adequate to cover Contractor's overhead and profit for each separately identified item.

D. Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor. Engineer will review with Contractor the Engineer's preliminary determinations on such matters before rendering a written decision thereon (by recommendation of an Application for Payment or otherwise). Engineer's written decision thereon will be final and binding (except as modified by Engineer to reflect changed factual conditions or more accurate data) upon Owner and Contractor, subject to the provisions of the following paragraph.

E. Within 30 days of Engineer's written decision under the preceding paragraph, Contractor may submit a Change Proposal, or Owner may file a Claim, seeking an adjustment in the Contract Price if:

1. the quantity of any item of Unit Price Work performed by Contractor differs materially and significantly from the estimated quantity of such item indicated in the Agreement;

2. there is no corresponding adjustment with respect to any other item of Work; and

3. Contractor believes that it is entitled to an increase in Contract Price as a result of having incurred additional expense or Owner believes that Owner is entitled to a decrease in Contract Price, and the parties are unable to agree as to the amount of any such increase or decrease.

ARTICLE 14 – TESTS AND INSPECTIONS; CORRECTION, REMOVAL OR ACCEPTANCE OF DEFECTIVE WORK

14.01 *Access to Work*

A. Owner, Engineer, their consultants and other representatives and personnel of Owner, independent testing laboratories, and authorities having jurisdiction will have access to the Site and the Work at reasonable times for their observation, inspection, and testing. Contractor shall provide them proper and safe conditions for such access and advise them of Contractor's safety procedures and programs so that they may comply therewith as applicable.

14.02 *Tests, Inspections, and Approvals*

A. Contractor shall give Engineer timely notice of readiness of the Work (or specific parts thereof) for all required inspections and tests, and shall cooperate with inspection and testing personnel to facilitate required inspections and tests.

B. Owner shall retain and pay for the services of an independent inspector, testing laboratory, or other qualified individual or entity to perform all inspections and tests expressly required by the Contract Documents to be furnished and paid for by Owner, except that costs incurred in connection with tests or inspections of covered Work shall be governed by the provisions of Paragraph 14.05.

C. If Laws or Regulations of any public body having jurisdiction require any Work (or part thereof) specifically to be inspected, tested, or approved by an employee or other representative of such public body, Contractor shall assume full responsibility for arranging and obtaining such inspections, tests, or approvals, pay all costs in connection therewith, and furnish Engineer the required certificates of inspection or approval.

D. Contractor shall be responsible for arranging, obtaining, and paying for all inspections and tests required:

1. by the Contract Documents, unless the Contract Documents expressly allocate responsibility for a specific inspection or test to Owner;
2. to attain Owner's and Engineer's acceptance of materials or equipment to be incorporated in the Work;
3. by manufacturers of equipment furnished under the Contract Documents;
4. for testing, adjusting, and balancing of mechanical, electrical, and other equipment to be incorporated into the Work; and
5. for acceptance of materials, mix designs, or equipment submitted for approval prior to Contractor's purchase thereof for incorporation in the Work.

Such inspections and tests shall be performed by independent inspectors, testing laboratories, or other qualified individuals or entities acceptable to Owner and Engineer.

E. If the Contract Documents require the Work (or part thereof) to be approved by Owner, Engineer, or another designated individual or entity, then Contractor shall assume full responsibility for arranging and obtaining such approvals.

F. If any Work (or the work of others) that is to be inspected, tested, or approved is covered by Contractor without written concurrence of Engineer, Contractor shall, if requested by Engineer, uncover such Work for observation. Such uncovering shall be at Contractor's expense unless Contractor had given Engineer timely notice of Contractor's intention to cover the same and Engineer had not acted with reasonable promptness in response to

such notice.

14.03 *Defective Work*

A. *Contractor's Obligation*: It is Contractor's obligation to assure that the Work is not defective for a period of one year. The pump supplier shall provide a two-year warranty on the Pumps, Electrical Control Panel and any supplied appurtenances with the pump package that shall be transferred to the City.

B. *Engineer's Authority*: Engineer has the authority to determine whether Work is defective, and to reject defective Work.

C. *Notice of Defects*: Prompt notice of all defective Work of which Owner or Engineer has actual knowledge will be given to Contractor.

D. *Correction, or Removal and Replacement*: Promptly after receipt of written notice of defective Work, Contractor shall correct all such defective Work, whether or not fabricated, installed, or completed, or, if Engineer has rejected the defective Work, remove it from the Project and replace it with Work that is not defective.

E. *Preservation of Warranties*: When correcting defective Work, Contractor shall take no action that would void or otherwise impair Owner's special warranty and guarantee, if any, on said Work.

F. *Costs and Damages*: In addition to its correction, removal, and replacement obligations with respect to defective Work, Contractor shall pay all claims, costs, losses, and damages arising out of or relating to defective Work, including but not limited to the cost of the inspection, testing, correction, removal, replacement, or reconstruction of such defective Work, fines levied against Owner by governmental authorities because the Work is defective, and the costs of repair or replacement of work of others resulting from defective Work. Prior to final payment, if Owner and Contractor are unable to agree as to the measure of such claims, costs, losses, and damages resulting from defective Work, then Owner may impose a reasonable set-off against payments due under Article 15.

14.04 *Acceptance of Defective Work*

A. If, instead of requiring correction or removal and replacement of defective Work, Owner prefers to accept it, Owner may do so (subject, if such acceptance occurs prior to final payment, to Engineer's confirmation that such acceptance is in general accord with the design intent and applicable engineering principles, and will not endanger public safety). Contractor shall pay all claims, costs, losses, and damages attributable to Owner's evaluation of and determination to accept such defective Work (such costs to be approved by Engineer as to reasonableness), and for the diminished value of the Work to the extent not otherwise paid by Contractor. If any such acceptance occurs prior to final payment, the necessary revisions in the Contract Documents with respect to the Work shall be incorporated in a Change Order. If the parties are unable to agree as to the decrease in the Contract Price, reflecting the diminished value of Work so accepted, then Owner may impose a reasonable set-off against payments due under Article 15. If the acceptance of defective Work occurs after final payment, Contractor shall pay an appropriate amount to Owner.

14.05 *Uncovering Work*

A. Engineer has the authority to require additional inspection or testing of the Work, whether or not the Work is fabricated, installed, or completed.

B. If any Work is covered contrary to the written request of Engineer, then Contractor shall, if requested by Engineer, uncover such Work for Engineer's observation, and then replace the covering, all at Contractor's expense.

C. If Engineer considers it necessary or advisable that covered Work be observed by Engineer or inspected or tested by others, then Contractor, at Engineer's request, shall uncover, expose, or otherwise make available for observation, inspection, or testing as Engineer may require, that portion of the Work in question, and provide all necessary labor, material, and equipment.

1. If it is found that the uncovered Work is defective, Contractor shall be responsible for all claims, costs, losses, and damages arising out of or relating to such uncovering, exposure, observation, inspection, and testing, and of satisfactory replacement or reconstruction (including but not limited to all costs of repair or replacement of work of others); and pending Contractor's full discharge of this responsibility the Owner shall be entitled to impose a reasonable set-off against payments due under Article 15.

2. If the uncovered Work is not found to be defective, Contractor shall be allowed an increase in the Contract Price or an extension of the Contract Times, or both, directly attributable to such uncovering, exposure, observation, inspection, testing, replacement, and reconstruction. If the parties are unable to agree as to the amount or extent thereof, then Contractor may submit a Change Proposal within 30 days of the determination that the Work is not defective.

14.06 *Owner May Stop the Work*

A. If the Work is defective, or Contractor fails to supply sufficient skilled workers or suitable materials or equipment, or fails to perform the Work in such a way that the completed Work will conform to the Contract Documents, then Owner may order Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, this right of Owner to stop the Work shall not give rise to any duty on the part of Owner to exercise this right for the benefit of Contractor, any Subcontractor, any Supplier, any other individual or entity, or any surety for, or employee or agent of any of them.

14.07 *Owner May Correct Defective Work*

A. If Contractor fails within a reasonable time after written notice from Engineer to correct defective Work, or to remove and replace rejected Work as required by Engineer, or if Contractor fails to perform the Work in accordance with the Contract Documents, or if Contractor fails to comply with any other provision of the Contract Documents, then Owner may, after seven days written notice to Contractor, correct or remedy any such deficiency.

B. In exercising the rights and remedies under this Paragraph 14.07, Owner shall proceed expeditiously. In connection with such corrective or remedial action, Owner may exclude Contractor from all or part of the Site, take possession of all or part of the Work and suspend Contractor's services related thereto, and incorporate in the Work all materials and equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere. Contractor shall allow Owner, Owner's representatives, agents and

employees, Owner's other contractors, and Engineer and Engineer's consultants access to the Site to enable Owner to exercise the rights and remedies under this paragraph.

C. All claims, costs, losses, and damages incurred or sustained by Owner in exercising the rights and remedies under this Paragraph 14.07 will be charged against Contractor as set-offs against payments due under Article 15. Such claims, costs, losses and damages will include but not be limited to all costs of repair, or replacement of work of others destroyed or damaged by correction, removal, or replacement of Contractor's defective Work.

D. Contractor shall not be allowed an extension of the Contract Times because of any delay in the performance of the Work attributable to the exercise by Owner of Owner's rights and remedies under this Paragraph 14.07.

ARTICLE 15 – PAYMENTS TO CONTRACTOR; SET-OFFS; COMPLETION; CORRECTION PERIOD

15.01 *Progress Payments*

A. *Basis for Progress Payments*: The Schedule of Values established as provided in Article 2 will serve as the basis for progress payments and will be incorporated into a form of Application for Payment acceptable to Engineer. Progress payments on account of Unit Price Work will be based on the number of units completed during the pay period, as determined under the provisions of Paragraph 13.03. Progress payments for cost-based Work will be based on Cost of the Work completed by Contractor during the pay period.

B. *Applications for Payments*:

1. At least 20 days before the date established in the Agreement for each progress payment (but not more often than once a month), Contractor shall submit to Engineer for review an Application for Payment filled out and signed by Contractor covering the Work completed as of the date of the Application and accompanied by such supporting documentation as is required by the Contract Documents. If payment is requested on the basis of materials and equipment not incorporated in the Work but delivered and suitably stored at the Site or at another location agreed to in writing, the Application for Payment shall also be accompanied by a bill of sale, invoice, or other documentation warranting that Owner has received the materials and equipment free and clear of all Liens, and evidence that the materials and equipment are covered by appropriate property insurance, a warehouse bond, or other arrangements to protect Owner's interest therein, all of which must be satisfactory to Owner.

2. Beginning with the second Application for Payment, each Application shall include an affidavit of Contractor stating that all previous progress payments received on account of the Work have been applied on account to discharge Contractor's legitimate obligations associated with prior Applications for Payment.

3. The amount of retainage with respect to progress payments will be as stipulated in the Agreement.

C. *Review of Applications*:

1. Engineer will, within 10 business days after receipt of each Application for Payment, including each resubmittal, either indicate in writing a recommendation of payment

and present the Application to Owner, or return the Application to Contractor indicating in writing Engineer's reasons for refusing to recommend payment. In the latter case, Contractor may make the necessary corrections and resubmit the Application.

2. Engineer's recommendation of any payment requested in an Application for Payment will constitute a representation by Engineer to Owner, based on Engineer's observations of the executed Work as an experienced and qualified design professional, and on Engineer's review of the Application for Payment and the accompanying data and schedules, that to the best of Engineer's knowledge, information and belief:

   a. the Work has progressed to the point indicated;

   b. the quality of the Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, the results of any subsequent tests called for in the Contract Documents, a final determination of quantities and classifications for Unit Price Work under Paragraph 13.03, and any other qualifications stated in the recommendation); and

   c. the conditions precedent to Contractor's being entitled to such payment appear to have been fulfilled in so far as it is Engineer's responsibility to observe the Work.

3. By recommending any such payment Engineer will not thereby be deemed to have represented that:

   a. inspections made to check the quality or the quantity of the Work as it has been performed have been exhaustive, extended to every aspect of the Work in progress, or involved detailed inspections of the Work beyond the responsibilities specifically assigned to Engineer in the Contract; or

   b. there may not be other matters or issues between the parties that might entitle Contractor to be paid additionally by Owner or entitle Owner to withhold payment to Contractor.

4. Neither Engineer's review of Contractor's Work for the purposes of recommending payments nor Engineer's recommendation of any payment, including final payment, will impose responsibility on Engineer:

   a. to supervise, direct, or control the Work, or

   b. for the means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or

   c. for Contractor's failure to comply with Laws and Regulations applicable to Contractor's performance of the Work, or

   d. to make any examination to ascertain how or for what purposes Contractor has used the money paid on account of the Contract Price, or

   e. to determine that title to any of the Work, materials, or equipment has passed to Owner free and clear of any Liens.

5. Engineer may refuse to recommend the whole or any part of any payment if, in Engineer's opinion, it would be incorrect to make the representations to Owner stated in Paragraph 15.01.C.2.

6. Engineer will recommend reductions in payment (set-offs) necessary in Engineer's opinion to protect Owner from loss because:

   a. the Work is defective, requiring correction or replacement;

   b. the Contract Price has been reduced by Change Orders;

   c. Owner has been required to correct defective Work in accordance with Paragraph 14.07, or has accepted defective Work pursuant to Paragraph 14.04;

   d. Owner has been required to remove or remediate a Hazardous Environmental Condition for which Contractor is responsible; or

   e. Engineer has actual knowledge of the occurrence of any of the events that would constitute a default by Contractor and therefore justify termination for cause under the Contract Documents.

D. *Payment Becomes Due*:

   1. Thirty (30) days after presentation of the Application for Payment to Owner with Engineer's recommendation, the amount recommended (subject to any Owner set-offs) will become due, and when due will be paid by Owner to Contractor.

E. *Reductions in Payment by Owner*:

   1. In addition to any reductions in payment (set-offs) recommended by Engineer, Owner is entitled to impose a set-off against payment based on any of the following:

      a. claims have been made against Owner on account of Contractor's conduct in the performance or furnishing of the Work, or Owner has incurred costs, losses, or damages on account of Contractor's conduct in the performance or furnishing of the Work, including but not limited to claims, costs, losses, or damages from workplace injuries, adjacent property damage, non-compliance with Laws and Regulations, and patent infringement;

      b. Contractor has failed to take reasonable and customary measures to avoid damage, delay, disruption, and interference with other work at or adjacent to the Site;

      c. Contractor has failed to provide and maintain required bonds or insurance;

      d. Owner has been required to remove or remediate a Hazardous Environmental Condition for which Contractor is responsible;

      e. Owner has incurred extra charges or engineering costs related to submittal reviews, evaluations of proposed substitutes, tests and inspections, or return visits to manufacturing or assembly facilities;

      f. the Work is defective, requiring correction or replacement;

      g. Owner has been required to correct defective Work in accordance with Paragraph 14.07, or has accepted defective Work pursuant to Paragraph 14.04;

h. the Contract Price has been reduced by Change Orders;

i. an event that would constitute a default by Contractor and therefore justify a termination for cause has occurred;

j. liquidated damages have accrued as a result of Contractor's failure to achieve Milestones, Substantial Completion, or final completion of the Work;

k. Liens have been filed in connection with the Work, except where Contractor has delivered a specific bond satisfactory to Owner to secure the satisfaction and discharge of such Liens;

l. there are other items entitling Owner to a set off against the amount recommended.

2. If Owner imposes any set-off against payment, whether based on its own knowledge or on the written recommendations of Engineer, Owner will give Contractor immediate written notice (with a copy to Engineer) stating the reasons for such action and the specific amount of the reduction, and promptly pay Contractor any amount remaining after deduction of the amount so withheld. Owner shall promptly pay Contractor the amount so withheld, or any adjustment thereto agreed to by Owner and Contractor, if Contractor remedies the reasons for such action. The reduction imposed shall be binding on Contractor unless it duly submits a Change Proposal contesting the reduction.

3. Upon a subsequent determination that Owner's refusal of payment was not justified, the amount wrongfully withheld shall be treated as an amount due as determined by Paragraph 15.01.C.1 and subject to interest as provided in the Agreement.

15.02 *Contractor's Warranty of Title*

A. Contractor warrants and guarantees that title to all Work, materials, and equipment furnished under the Contract will pass to Owner free and clear of (1) all Liens and other title defects, and (2) all patent, licensing, copyright, or royalty obligations, no later than seven days after the time of payment by Owner.

15.03 *Substantial Completion*

A. When Contractor considers the entire Work ready for its intended use Contractor shall notify Owner and Engineer in writing that the entire Work is substantially complete and request that Engineer issue a certificate of Substantial Completion. Contractor shall at the same time submit to Owner and Engineer an initial draft of punch list items to be completed or corrected before final payment.

B. Promptly after Contractor's notification, Owner, Contractor, and Engineer shall make an inspection of the Work to determine the status of completion. If Engineer does not consider the Work substantially complete, Engineer will notify Contractor in writing giving the reasons therefor.

C. If Engineer considers the Work substantially complete, Engineer will deliver to Owner a preliminary certificate of Substantial Completion which shall fix the date of Substantial Completion. Engineer shall attach to the certificate a punch list of items to be completed or corrected before final payment. Owner shall have seven days after receipt of the

preliminary certificate during which to make written objection to Engineer as to any provisions of the certificate or attached punch list. If, after considering the objections to the provisions of the preliminary certificate, Engineer concludes that the Work is not substantially complete, Engineer will, within 14 days after submission of the preliminary certificate to Owner, notify Contractor in writing that the Work is not substantially complete, stating the reasons therefor. If Owner does not object to the provisions of the certificate, or if despite consideration of Owner's objections Engineer concludes that the Work is substantially complete, then Engineer will, within said 14 days, execute and deliver to Owner and Contractor a final certificate of Substantial Completion (with a revised punch list of items to be completed or corrected) reflecting such changes from the preliminary certificate as Engineer believes justified after consideration of any objections from Owner.

D. At the time of receipt of the preliminary certificate of Substantial Completion, Owner and Contractor will confer regarding Owner's use or occupancy of the Work following Substantial Completion, review the builder's risk insurance policy with respect to the end of the builder's risk coverage, and confirm the transition to coverage of the Work under a permanent
property insurance policy held by Owner. Unless Owner and Contractor agree otherwise in writing, Owner shall bear responsibility for security, operation, protection of the Work, property insurance, maintenance, heat, and utilities upon Owner's use or occupancy of the Work.

E. After Substantial Completion the Contractor shall promptly begin work on the punch list of items to be completed or corrected prior to final payment. In appropriate cases Contractor may submit monthly Applications for Payment for completed punch list items, following the progress payment procedures set forth above.

F. Owner shall have the right to exclude Contractor from the Site after the date of Substantial Completion subject to allowing Contractor reasonable access to remove its property and complete or correct items on the punch list.

15.04 *Partial Use or Occupancy*

A. Prior to Substantial Completion of all the Work, Owner may use or occupy any substantially completed part of the Work which has specifically been identified in the Contract Documents, or which Owner, Engineer, and Contractor agree constitutes a separately functioning and usable part of the Work that can be used by Owner for its intended purpose without significant interference with Contractor's performance of the remainder of the Work, subject to the following conditions:

1. At any time Owner may request in writing that Contractor permit Owner to use or occupy any such part of the Work that Owner believes to be substantially complete. If and when Contractor agrees that such part of the Work is substantially complete, Contractor, Owner, and Engineer will follow the procedures of Paragraph 15.03.A through E for that part of the Work.

2. At any time Contractor may notify Owner and Engineer in writing that Contractor considers any such part of the Work substantially complete and request Engineer to issue a certificate of Substantial Completion for that part of the Work.

3. Within a reasonable time after either such request, Owner, Contractor, and Engineer

shall make an inspection of that part of the Work to determine its status of completion. If Engineer does not consider that part of the Work to be substantially complete, Engineer will notify Owner and Contractor in writing giving the reasons therefor. If Engineer considers that part of the Work to be substantially complete, the provisions of Paragraph 15.03 will apply with respect to certification of Substantial Completion of that part of the Work and the division of responsibility in respect thereof and access thereto.

4. No use or occupancy or separate operation of part of the Work may occur prior to compliance with the requirements of Paragraph 6.05 regarding builder's risk or other property insurance.

15.05 *Final Inspection*

A. Upon written notice from Contractor that the entire Work or an agreed portion thereof is complete, Engineer will promptly make a final inspection with Owner and Contractor and will notify Contractor in writing of all particulars in which this inspection reveals that the Work, or agreed portion thereof, is incomplete or defective. Contractor shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

15.06 *Final Payment*

A. *Application for Payment*:

1. After Contractor has, in the opinion of Engineer, satisfactorily completed all corrections identified during the final inspection and has delivered, in accordance with the Contract Documents, all maintenance and operating instructions, schedules, guarantees, bonds, certificates or other evidence of insurance, certificates of inspection, annotated record documents (as provided in Paragraph 7.11), and other documents, Contractor may make application for final payment.

2. The final Application for Payment shall be accompanied (except as previously delivered) by:

   a. all documentation called for in the Contract Documents;

   b. consent of the surety, if any, to final payment;

   c. satisfactory evidence that all title issues have been resolved such that title to all Work, materials, and equipment has passed to Owner free and clear of any Liens or other title defects, or will so pass upon final payment.

   d. a list of all disputes that Contractor believes are unsettled; and

   e. complete and legally effective releases or waivers (satisfactory to Owner) of all Lien rights arising out of the Work, and of Liens filed in connection with the Work.

3. In lieu of the releases or waivers of Liens specified in Paragraph 15.06.A.2 and as approved by Owner, Contractor may furnish receipts or releases in full and an affidavit of Contractor that: (a) the releases and receipts include all labor, services, material, and equipment for which a Lien could be filed; and (b) all payrolls, material and equipment bills, and other indebtedness connected with the Work for which Owner might in any way be responsible, or which might in any way result in liens or other

burdens on Owner's property, have been paid or otherwise satisfied. If any Subcontractor or Supplier fails to furnish such a release or receipt in full, Contractor may furnish a bond or other collateral satisfactory to Owner to indemnify Owner against any Lien, or Owner at its option may issue joint checks payable to Contractor and specified Subcontractors and Suppliers.

B. *Engineer's Review of Application and Acceptance*:

1. If, on the basis of Engineer's observation of the Work during construction and final inspection, and Engineer's review of the final Application for Payment and accompanying documentation as required by the Contract Documents, Engineer is satisfied that the Work has been completed and Contractor's other obligations under the Contract have been fulfilled, Engineer will, within ten days after receipt of the final Application for Payment, indicate in writing Engineer's recommendation of final payment and present the Application for Payment to Owner for payment. Such recommendation shall account for any set-offs against payment that are necessary in Engineer's opinion to protect Owner from loss for the reasons stated above with respect to progress payments. At the same time Engineer will also give written notice to Owner and Contractor that the Work is acceptable, subject to the provisions of Paragraph 15.07. Otherwise, Engineer will return the Application for Payment to Contractor, indicating in writing the reasons for refusing to recommend final payment, in which case Contractor shall make the necessary corrections and resubmit the Application for Payment.

C. *Completion of Work*: The Work is complete (subject to surviving obligations) when it is ready for final payment as established by the Engineer's written recommendation of final payment.

D. *Payment Becomes Due*: Thirty days after the presentation to Owner of the final Application for Payment and accompanying documentation, the amount recommended by Engineer (less any further sum Owner is entitled to set off against Engineer's recommendation, including but not limited to set-offs for liquidated damages and set-offs allowed under the provisions above with respect to progress payments) will become due and shall be paid by Owner to Contractor.

15.07 *Waiver of Claims*

A. The making of final payment will not constitute a waiver by Owner of claims or rights against Contractor. Owner expressly reserves claims and rights arising from unsettled Liens, from defective Work appearing after final inspection pursuant to Paragraph 15.05, from Contractor's failure to comply with the Contract Documents or the terms of any special guarantees specified therein, from outstanding Claims by Owner, or from Contractor's continuing obligations under the Contract Documents.

B. The acceptance of final payment by Contractor will constitute a waiver by Contractor of all claims and rights against Owner other than those pending matters that have been duly submitted or appealed under the provisions of Article 17.

15.08 *Correction Period*

A. If within one year after the date of Substantial Completion (or such longer period of time as may be prescribed by the terms of any applicable special guarantee required by the

Contract Documents, or by any specific provision of the Contract Documents), any Work is found to be defective, or if the repair of any damages to the Site, adjacent areas that Contractor has arranged to use through construction easements or otherwise, and other adjacent areas used by Contractor as permitted by Laws and Regulations, is found to be defective, then Contractor shall promptly, without cost to Owner and in accordance with Owner's written instructions:

1. correct the defective repairs to the Site or such other adjacent areas;
2. correct such defective Work;
3. if the defective Work has been rejected by Owner, remove it from the Project and replace it with Work that is not defective, and
4. satisfactorily correct or repair or remove and replace any damage to other Work, to the work of others, or to other land or areas resulting therefrom.

B. If Contractor does not promptly comply with the terms of Owner's written instructions, or in an emergency where delay would cause serious risk of loss or damage, Owner may have the defective Work corrected or repaired or may have the rejected Work removed and replaced. Contractor shall pay all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such correction or repair or such removal and replacement (including but not limited to all costs of repair or replacement of work of others).

C. In special circumstances where a particular item of equipment is placed in continuous service before Substantial Completion of all the Work, the correction period for that item may start to run from an earlier date if so provided in the Specifications.

D. Where defective Work (and damage to other Work resulting therefrom) has been corrected or removed and replaced under this paragraph, the correction period hereunder with respect to such Work will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.

E. Contractor's obligations under this paragraph are in addition to all other obligations and warranties. The provisions of this paragraph shall not be construed as a substitute for, or a waiver of, the provisions of any applicable statute of limitation or repose.

ARTICLE 16 – SUSPENSION OF WORK AND TERMINATION

16.01 *Owner May Suspend Work*

A. At any time and without cause, Owner may suspend the Work or any portion thereof for a period of not more than 90 consecutive days by written notice to Contractor and Engineer. Such notice will fix the date on which Work will be resumed. Contractor shall resume the Work on the date so fixed. Contractor shall be entitled to an adjustment in the Contract Price or an extension of the Contract Times, or both, directly attributable to any such suspension. Any Change Proposal seeking such adjustments shall be submitted no later than 30 days after the date fixed for resumption of Work.

16.02 *Owner May Terminate for Cause*

A. The occurrence of any one or more of the following events will constitute a default by Contractor and justify termination for cause:

1. Contractor's persistent failure to perform the Work in accordance with the Contract Documents (including, but not limited to, failure to supply sufficient skilled workers or suitable materials or equipment or failure to adhere to the Progress Schedule);
2. Failure of Contractor to perform or otherwise to comply with a material term of the Contract Documents;
3. Contractor's disregard of Laws or Regulations of any public body having jurisdiction; or
4. Contractor's repeated disregard of the authority of Owner or Engineer.

B. If one or more of the events identified in Paragraph 16.02.A occurs, then after giving Contractor (and any surety) ten days written notice that Owner is considering a declaration that Contractor is in default and termination of the contract, Owner may proceed to:

1. declare Contractor to be in default, and give Contractor (and any surety) notice that the Contract is terminated; and
2. enforce the rights available to Owner under any applicable performance bond.

C. Subject to the terms and operation of any applicable performance bond, if Owner has terminated the Contract for cause, Owner may exclude Contractor from the Site, take possession of the Work, incorporate in the Work all materials and equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere, and complete the Work as Owner may deem expedient.

D. Owner may not proceed with termination of the Contract under Paragraph 16.02.B if Contractor within seven days of receipt of notice of intent to terminate begins to correct its failure to perform and proceeds diligently to cure such failure.

E. If Owner proceeds as provided in Paragraph 16.02.B, Contractor shall not be entitled to receive any further payment until the Work is completed. If the unpaid balance of the Contract Price exceeds the cost to complete the Work, including all related claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals) sustained by Owner, such excess will be paid to Contractor. If the cost to complete the Work including such related claims, costs, losses, and damages exceeds such unpaid balance, Contractor shall pay the difference to Owner. Such claims, costs, losses, and damages incurred by Owner will be reviewed by Engineer as to their reasonableness and, when so approved by Engineer, incorporated in a Change Order. When exercising any rights or remedies under this paragraph, Owner shall not be required to obtain the lowest price for the Work performed.

F. Where Contractor's services have been so terminated by Owner, the termination will not affect any rights or remedies of Owner against Contractor then existing or which may thereafter accrue, or any rights or remedies of Owner against Contractor or any surety under any payment bond or performance bond. Any retention or payment of money due Contractor by Owner will not release Contractor from liability.

G. If and to the extent that Contractor has provided a performance bond under the provisions of Paragraph 6.01.A, the provisions of that bond shall govern over any inconsistent

provisions of Paragraphs 16.02.B and 16.02.D.

16.03 *Owner May Terminate For Convenience*

A. Upon seven days written notice to Contractor and Engineer, Owner may, without cause and without prejudice to any other right or remedy of Owner, terminate the Contract. In such case, Contractor shall be paid for (without duplication of any items):

1. completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such Work;

2. expenses sustained prior to the effective date of termination in performing services and furnishing labor, materials, or equipment as required by the Contract Documents in connection with uncompleted Work, plus fair and reasonable sums for overhead and profit on such expenses; and

3. other reasonable expenses directly attributable to termination, including costs incurred to prepare a termination for convenience cost proposal.

B. Contractor shall not be paid on account of loss of anticipated overhead, profits, or revenue, or other economic loss arising out of or resulting from such termination.

16.04 *Contractor May Stop Work or Terminate*

A. If, through no act or fault of Contractor, (1) the Work is suspended for more than 90 consecutive days by Owner or under an order of court or other public authority, or (2) Engineer fails to act on any Application for Payment within 30 days after it is submitted, or **(3)** Owner fails for 30 days to pay Contractor any sum finally determined to be due, then Contractor may, upon seven days written notice to Owner and Engineer, and provided Owner or Engineer do not remedy such suspension or failure within that time, terminate the contract and recover from Owner payment on the same terms as provided in Paragraph 16.03.

B. In lieu of terminating the Contract and without prejudice to any other right or remedy, if Engineer has failed to act on an Application for Payment within 30 days after it is submitted, or Owner has failed for 30 days to pay Contractor any sum finally determined to be due, Contractor may, seven days after written notice to Owner and Engineer, stop the Work until payment is made of all such amounts due Contractor, including interest thereon. The provisions of this paragraph are not intended to preclude Contractor from submitting a Change Proposal for an adjustment in Contract Price or Contract Times or otherwise for expenses or damage directly attributable to Contractor's stopping the Work as permitted by this paragraph.

ARTICLE 17 – FINAL RESOLUTION OF DISPUTES

17.01 *Methods and Procedures*

A. *Disputes Subject to Final Resolution*: The following disputed matters are subject to final resolution under the provisions of this Article:

1. A timely appeal of an approval in part and denial in part of a Claim, or of a denial in full; and

2. Disputes between Owner and Contractor concerning the Work or obligations under the Contract Documents, and arising after final payment has been made.

B. *Final Resolution of Disputes*: For any dispute subject to resolution under this Article, Owner or Contractor may:

1. elect in writing to invoke the dispute resolution process provided for in the Supplementary Conditions; or

2. agree with the other party to submit the dispute to another dispute resolution process; or

3. if no dispute resolution process is provided for in the Supplementary Conditions or mutually agreed to, give written notice to the other party of the intent to submit the dispute to a court of competent jurisdiction.

ARTICLE 18 – MISCELLANEOUS

18.01 *Giving Notice*

A. Whenever any provision of the Contract Documents requires the giving of written notice, it will be deemed to have been validly given if: delivered in person, by a commercial courier service or otherwise, to the individual or to a member of the firm or to an officer of the corporation for which it is intended; or

1. delivered at or sent by registered or certified mail, postage prepaid, to the last business address known to the sender of the notice.

B. When any period of time is referred to in the Contract by days, it will be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

18.02 *Cumulative Remedies*

A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee, or by other provisions of the Contract. The provisions of this paragraph will be as effective as if repeated specifically in the Contract Documents in connection with each particular duty, obligation, right, and remedy to which they apply.

18.03 *Limitation of Damages*

A. With respect to any and all Change Proposals, Claims, disputes subject to final resolution, and other matters at issue, neither Owner nor Engineer, nor any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, shall be liable to Contractor for any claims, costs, losses, or damages sustained by Contractor on or in connection with any other project or anticipated project.

18.04 *No Waiver*

A. A party's non-enforcement of any provision shall not constitute a waiver of that provision, nor shall it affect the enforceability of that provision or of the remainder of this Contract.

18.05 *Survival of Obligations*

A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Contract, as well as all continuing obligations indicated in the Contract, will survive final payment, completion, and acceptance of the Work or termination or completion of the Contract or termination of the services of Contractor.

18.06 *Controlling Law*

A. This Contract is to be governed by the law of the state in which the Project is located.

18.07 *Headings*

A. Article and paragraph headings are inserted for convenience only and do not constitute parts of these General Conditions.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 00 22 15
SUPPLEMENTARY CONDITIONS

These Supplementary Conditions amend or supplement the Standard General Conditions of the Construction Contract, EJCDC® C-700 (2013 Edition). All provisions that are not so amended or supplemented remain in full force and effect.

The terms used in these Supplementary Conditions have the meanings stated in the General Conditions. Additional terms used in these Supplementary Conditions have the meanings stated below, which are applicable to both the singular and plural thereof.

The address system used in these Supplementary Conditions is the same as the address system used in the General Conditions, with the prefix "SC" added thereto.

ARTICLE 5 – AVAILABILITY OF LANDS; SUBSURFACE AND PHYSICAL CONDITIONS; HAZARDOUS ENVIRONMENTAL CONDITIONS

SC-5.06 Hazardous Environmental Conditions

SC 5.06 Delete Paragraphs 5.06.A and 5.06.B in their entirety and insert the following:

A. No reports or drawings related to Hazardous Environmental Conditions at the Site are known to Owner.

ARTICLE 6 – BONDS AND INSURANCE

SC-6.02 Insurance—General Provisions

SC-6.02 Add the following paragraph immediately after Paragraph 6.02.B:

1. Contractor may obtain worker's compensation insurance from an insurance company that has not been rated by A.M. Best, provided that such company (a) is domiciled in the state in which the project is located, (b) is certified or authorized as a worker's compensation insurance provider by the appropriate state agency, and (c) has been accepted to provide worker's compensation insurance for similar projects by the state within the last 12 months.

SC-6.03 Contractor's Liability Insurance

SC 6.03 Add the following new paragraph immediately after Paragraph 6.03.J:

K. The limits of liability for the insurance required by Paragraph 6.03 of the General Conditions shall provide coverage for not less than the following amounts or greater where required by Laws and Regulations:

1. Workers' Compensation, and related coverages under Paragraphs 6.03.A.1 and A.2 of the General Conditions:

State:	Statutory
Federal, if applicable (e.g., Longshoreman's):	Statutory
Jones Act coverage, if applicable:	
Bodily injury by accident, each accident	$ NA
Bodily injury by disease, aggregate	$ NA
Employer's Liability:	
Bodily injury, each accident	$ 500,000.00
Bodily injury by disease, each employee	$ 500,000.00
Bodily injury/disease aggregate	$ 1,000,000.00
Foreign voluntary worker compensation	Statutory

2. Contractor's Commercial General Liability under Paragraphs 6.03.B and 6.03.C of the General Conditions:

General Aggregate	$ 2,000,000.00
Products - Completed Operations Aggregate	$ 1,000,000.00
Personal and Advertising Injury	$ 1,000,000.00
Each Occurrence (Bodily Injury and Property Damage)	$ 1,000,000.00

3. Automobile Liability under Paragraph 6.03.D. of the General Conditions:

Bodily Injury:	
Each person	$ 500,000.00
Each accident	$ 1,000,000.00
Property Damage:	
Combined Single Limit of	$ 1,000,000.00

4. **Excess or Umbrella Liability:**

General Aggregate	$	1,000,000.00

5. **Contractor's Professional Liability:**

Each Claim	$	1,000,000.00
Annual Aggregate	$	2,000,000.00

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

ARTICLE 7 – CONTRACTOR'S RESPONSIBILITIES

A. If the Owner has no objections to the Contractor working multiple shifts, weekends, and legal holidays, use the following:

SC-7.02.B. Delete Paragraph 7.02 B. in its entirety, and insert the following:

B. In the absence of any Laws or Regulations to the contrary, Contractor may perform the Work on holidays, during any or all hours of the day, and on any or all days of the week, at Contractor's sole discretion.

SC-7.02.C. Add the following new paragraph immediately after Paragraph 7.02.B:

Contractor shall be responsible for the cost of any overtime pay or other expense incurred by the Owner for Engineer's services (including those of the Resident Project Representative, if any), Owner's representative, and construction observation services, occasioned by the performance of Work on Saturday or as overtime on any regular work day. If Contractor is responsible but does not pay, or if the parties are unable to agree as to the amount owed, then Owner may impose a reasonable set-off against payments due under Article 15.

ARTICLE 15 – PAYMENTS TO CONTRACTOR; SET-OFFS; COMPLETION; CORRECTION PERIOD

SC-15.03 Substantial Completion

SC 15.03.B Add the following new subparagraph to Paragraph 15.03.B:

1. If some or all of the Work has been determined not to be at a point of Substantial Completion and will require re-inspection or re-testing by Engineer, the cost of such re-inspection or re-testing, including the cost of time, travel and living expenses, shall be paid by Contractor to Owner. If Contractor does not pay, or the parties are unable to agree as to the amount owed, then Owner may impose a reasonable set-off against payments due under Article 15.

ARTICLE 17 – FINAL RESOLUTION OF DISPUTES

SC-17.02 Add the following new paragraph immediately after Paragraph 17.01.

SC-17.02 Arbitration

A. All matters subject to final resolution under this Article will be decided by arbitration in accordance with the Florida Rules of Civil Procedure, subject to the conditions and limitations of this paragraph. This agreement to arbitrate and any other agreement or consent to arbitrate entered into will be specifically enforceable under the prevailing law of any court having jurisdiction.

B. The demand for arbitration will be filed in writing with the other party to the Contract and with the selected arbitrator or arbitration provider, and a copy will be sent to Engineer for information. The demand for arbitration will be made within the specific time required in this Article, or if no specified time is applicable within a reasonable time after the matter in question has arisen, and in no event shall any such demand be made after the date when institution of

legal or

equitable proceedings based on such matter in question would be barred by the applicable statute of limitations. The demand for arbitration should include specific reference to Paragraph SC-17.02.D below.

C. No arbitration arising out of or relating to the Contract shall include by consolidation, joinder, or in any other manner any other individual or entity (including Engineer, and Engineer's consultants and the officers, directors, partners, agents, employees or consultants of any of them) who is not a party to this Contract unless:

1. the inclusion of such other individual or entity is necessary if complete relief is to be afforded among those who are already parties to the arbitration; and
2. such other individual or entity is substantially involved in a question of law or fact which is common to those who are already parties to the arbitration and which will arise in such proceedings.

D. The award rendered by the arbitrator(s) shall be consistent with the agreement of the parties, in writing, and include a concise breakdown of the award, and a written explanation of the award specifically citing the Contract provisions deemed applicable and relied on in making the award.

E. The award will be final. Judgment may be entered upon it in any court having jurisdiction thereof, and it will not be subject to modification or appeal, subject to provisions of the Laws and Regulations relating to vacating or modifying an arbitral award.

F. The fees and expenses of the arbitrators and any arbitration service shall be shared equally by Owner and Contractor.

END OF SECTION

SECTION 00 26 00 AGREEMENT BETWEEN OWNER AND CONTRACTOR FOR CONSTRUCTION CONTRACT

THIS AGREEMENT is by and between **The City of Flagler Beach** ("Owner") and **Lads Construction Services LLC** ("Contractor").

Owner and Contractor hereby agree as follows:

ARTICLE 1 – WORK

1.01 Contractor shall complete all Work as specified or indicated in the Contract Documents. The Work is generally described as follows: Hurricane Milton Damage Repairs to Flagler Beach Public Library.

ARTICLE 2 – THE PROJECT

2.01 The Project, of which the Work under the Contract Documents is a part, is generally described as follows: Hurricane Milton Damage Repairs to Flagler Beach Public Library.

ARTICLE 3 – ENGINEER

3.01 The part of the Project that pertains to the Work has been designed by the City of Flagler Beach.

ARTICLE 4 – CONTRACT TIMES

4.01 *Time of the Essence*

A. All time limits for Substantial Completion, and Final Completion and readiness for final payment as stated in the Contract Documents are of the essence of the Contract.

4.02 *Contract Times: Days*

A. The Work will be substantially completed within Ninety (90) days after the date when the Contract Times commence to run as provided in Paragraph 4.01 of the General Conditions, and completed and ready for final payment in accordance with Paragraph 15.06 of the General Conditions within One Hundred Twenty (120) days after the date when the Contract Times commence to run.

4.03 *Liquidated Damages*

A. Contractor and Owner recognize that time is of the essence as stated in Paragraph 4.01 above and that Owner will suffer financial and other losses if the Work is not completed and Milestones not achieved within the times specified in Paragraph 4.02 above, plus any extensions thereof allowed in accordance with the Contract. The parties also recognize the delays, expense, and difficulties involved in proving in a legal or arbitration proceeding the actual loss suffered by Owner if the Work is not completed on time. Accordingly, instead of requiring any such proof, Owner and Contractor agree that as liquidated damages for delay (but not as a penalty):

1. Substantial Completion: Contractor shall pay Owner $500.00 for each day that expires after the time (as duly adjusted pursuant to the Contract) specified in Paragraph 4.02.A above for Substantial Completion until the Work is substantially complete.
2. Completion of Remaining Work: After Substantial Completion, if Contractor shall neglect, refuse, or fail to complete the remaining Work within the Contract Times (as duly adjusted pursuant to the Contract) for completion and readiness for final payment, Contractor shall pay Owner $1,000.00 for each day that expires after such time until the Work is completed and ready for final payment.
3. Liquidated damages for failing to timely attain Substantial Completion and final completion are not additive and will not be imposed concurrently.

ARTICLE 5 – CONTRACT PRICE

5.01 Owner shall pay Contractor for completion of the Work in accordance with the Contract Documents the amounts that follow, subject to adjustment under the Contract:

ARTICLE 6 – PAYMENT PROCEDURES

6.01 *Submittal and Processing of Payments*

A. Contractor shall submit Applications for Payment in accordance with Article 15 of the General Conditions. Applications for Payment will be processed by Engineer as provided in the General Conditions.

6.02 *Progress Payments; Retainage*

A. Owner shall make progress payments on account of the Contract Price on the basis of Contractor's Applications for Payment on or about the 15th day of each month during performance of the Work as provided in Paragraph 6.02.A.1 below, provided that such Applications for Payment have been submitted in a timely manner and otherwise meet the requirements of the Contract. All such payments will be measured by the Schedule of Values established as provided in the General Conditions (and in the case of Unit Price Work based on the number of units completed) or, in the event there is no Schedule of Values, as provided elsewhere in the Contract.

1. Prior to Substantial Completion, progress payments will be made in an amount equal to the percentage indicated below but, in each case, less the aggregate of payments previously made and less such amounts as Owner may withhold, including but not limited to liquidated damages, in accordance with the Contract

a. 95 percent of Work completed (with the balance being retainage). If the Work has been 50 percent completed as determined by Engineer, and if the character and progress of the Work have been satisfactory to Owner and Engineer, then as long as the character and progress of the Work remain satisfactory to Owner and Engineer, there will be no additional retainage; and

B. Upon Substantial Completion, Owner shall pay an amount sufficient to increase total payments to Contractor to 100 percent of the Work completed, less such amounts set off by Owner pursuant to Paragraph 15.01.E of the General Conditions, and less 200 percent of

Engineer's estimate of the value of Work to be completed or corrected as shown on the punch list of items to be completed or corrected prior to final payment.

6.03 *Final Payment*

A. Upon final completion and acceptance of the Work in accordance with Paragraph 15.06 of the General Conditions, Owner shall pay the remainder of the Contract Price as recommended by Engineer as provided in said Paragraph 15.06.

ARTICLE 7 – INTEREST

7.01 All amounts not paid when due shall bear interest at the rate of 3 percent per annum.

ARTICLE 8 – CONTRACTOR'S REPRESENTATIONS

8.01 In order to induce Owner to enter into this Contract, Contractor makes the following representations:

A. Contractor has examined and carefully studied the Contract Documents, and any data and reference items identified in the Contract Documents.

B. Contractor has visited the Site, conducted a thorough, alert visual examination of the Site and adjacent areas, and become familiar with and is satisfied as to the general, local, and Site conditions that may affect cost, progress, and performance of the Work.

C. Contractor is familiar with and is satisfied as to all Laws and Regulations that may affect cost, progress, and performance of the Work.

D. Contractor has carefully studied all reports of explorations and tests of subsurface conditions at or adjacent to the Site and all drawings of physical conditions relating to existing surface or subsurface structures at the Site that have been identified in the Supplementary Conditions, especially with respect to Technical Data in such reports and drawings.

E. Contractor has considered the information known to Contractor itself; information commonly known to contractors doing business in the locality of the Site; information and observations obtained from visits to the Site; the Contract Documents; and the Site-related reports and drawings identified in the Contract Documents, with respect to the effect of such information, observations, and documents on (1) the cost, progress, and performance of the Work; (2) the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor; and (3) Contractor's safety precautions and programs.

F. Based on the information and observations referred to in the preceding paragraph, Contractor agrees that no further examinations, investigations, explorations, tests, studies, or data are necessary for the performance of the Work at the Contract Price, within the Contract Times, and in accordance with the other terms and conditions of the Contract.

G. Contractor is aware of the general nature of work to be performed by Owner and others at the Site that relates to the Work as indicated in the Contract Documents.

H. Contractor has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Contractor has discovered in the Contract Documents, and the written resolution thereof by Engineer is acceptable to Contractor.

I. The Contract Documents are generally sufficient to indicate and convey understanding of all terms and conditions for performance and furnishing of the Work.

J. Contractor's entry into this Contract constitutes an incontrovertible representation by Contractor that without exception all prices in the Agreement are premised upon performing and furnishing the Work required by the Contract Documents.

ARTICLE 9 – CONTRACT DOCUMENTS

9.01 *Contents*

A. The Contract Documents consist of the following:

1. This Agreement (pages 132 to 137, inclusive).
2. The Drawings (Sheets A1 – A2, attached separately).
3. Performance bond (pages 144 to 146, inclusive).
4. General Conditions (pages *i* to *v* and pages 59 to 125, inclusive).
5. Supplementary Conditions (pages 127 to 131, inclusive).
6. Specifications as listed in the table of contents of the Project Manual.
7. Issued Addenda
8. Exhibits to this Agreement (enumerated as follows):
   a. Contractor's Bid Form (pages *i* to *ii* and pages 138 to 143, inclusive).
9. The following which may be delivered or issued on or after the Effective Date of the Contract and are not attached hereto:
   a. Notice to Proceed.
   b. Work Change Directives.
   c. Change Orders.
   d. Field Orders.

B. The documents listed in Paragraph 9.01.A are attached to this Agreement (except as expressly noted otherwise above).

C. There are no Contract Documents other than those listed above in this Article 9.

D. The Contract Documents may only be amended, modified, or supplemented as provided in the General Conditions.

ARTICLE 10 – MISCELLANEOUS

10.01 *Terms*

A. Terms used in this Agreement will have the meanings stated in the General Conditions and the Supplementary Conditions. *Assignment of Contract*

B. Unless expressly agreed to elsewhere in the Contract, no assignment by a party hereto of any rights under or interests in the Contract will be binding on another party hereto without the written consent of the party sought to be bound; and, specifically but without limitation, money that may become due and money that is due may not be assigned without such consent (except to the extent that the effect of this restriction may be limited by law), and unless specifically stated to the contrary in any written consent to an assignment, no assignment will release or discharge the assignor from any duty or responsibility under the Contract Documents.

10.02 *Successors and Assigns*

A. Owner and Contractor each binds itself, its successors, assigns, and legal representatives to the other party hereto, its successors, assigns, and legal representatives in respect to all covenants, agreements, and obligations contained in the Contract Documents.

10.03 *Severability*

A. Any provision or part of the Contract Documents held to be void or unenforceable under any Law or Regulation shall be deemed stricken, and all remaining provisions shall continue to be valid and binding upon Owner and Contractor, who agree that the Contract Documents shall be reformed to replace such stricken provision or part thereof with a valid and enforceable provision that comes as close as possible to expressing the intention of the stricken provision.

10.04 *Contractor's Certifications*

A. Contractor certifies that it has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for or in executing the Contract. For the purposes of this Paragraph 10.05:

1. "corrupt practice" means the offering, giving, receiving, or soliciting of any thing of value likely to influence the action of a public official in the bidding process or in the Contract execution;

2. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process or the execution of the Contract to the detriment of Owner, (b) to establish Bid or Contract prices at artificial non-competitive levels, or (c) to deprive Owner of the benefits of free and open competition;

3. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Owner, a purpose of which is to establish Bid prices at artificial, non-competitive levels; and

4. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the execution of the Contract.

END OF TABLE OF CONTENTS

ARTICLE 1 – BID RECIPIENT

1.01 This Bid is submitted to:

City of Flagler Beach
105 S 2nd Street
Flagler Beach, FL 32136

1.02 The undersigned Bidder proposes and agrees, if this Bid is accepted, to enter into an Agreement with Owner in the form included in the Bidding Documents to perform all Work as specified or indicated in the Bidding Documents for the prices and within the times indicated in this Bid and in accordance with the other terms and conditions of the Bidding Documents.

ARTICLE 2 – BIDDER'S ACKNOWLEDGEMENTS

2.01 Bidder accepts all of the terms and conditions of the Instructions to Bidders, including without limitation those dealing with the disposition of Bid security. This Bid will remain subject to acceptance for 60 days after the Bid opening, or for such longer period of time that Bidder may agree to in writing upon request of Owner.

ARTICLE 3 – BIDDER'S REPRESENTATIONS

3.01 In submitting this Bid, Bidder represents that:

A. Bidder has examined and carefully studied the Bidding Documents, and any data and reference items identified in the Bidding Documents, and hereby acknowledges receipt of the following Addenda:

Addendum No.	Addendum, Date
1	01/19/25
2	01/19/25

B. Bidder (or authorized representative) has attended the Mandatory Pre-Bid Conference.

C. Bidder has visited the Site, conducted a thorough, alert visual examination of the Site and adjacent areas, and become familiar with and satisfied itself as to the general, local, and Site conditions that may affect cost, progress, and performance of the Work.

D. Bidder is familiar with and has satisfied itself as to all Laws and Regulations that may affect cost, progress, and performance of the Work.

E. Bidder has carefully studied all: (1) reports of explorations and tests of subsurface conditions at or adjacent to the Site and all drawings of physical conditions relating to existing surface or subsurface structures at the Site that have been identified in the Supplementary Conditions, especially with respect to Technical Data in such reports and drawings.

F. Bidder has considered the information known to Bidder itself; information commonly known to contractors doing business in the locality of the Site; information and observations

obtained from visits to the Site; the Bidding Documents; and any Site-related reports and drawings identified in the Bidding Documents, with respect to the effect of such information, observations, and documents on (1) the cost, progress, and performance of the Work; (2) the means, methods, techniques, sequences, and procedures of construction to be employed by Bidder; and (3) Bidder's safety precautions and programs.

G. Bidder agrees, based on the information and observations referred to in the preceding paragraph, that no further examinations, investigations, explorations, tests, studies, or data are necessary for the determination of this Bid for performance of the Work at the price bid and within the times required, and in accordance with the other terms and conditions of the Bidding Documents.

H. Bidder is aware of the general nature of work to be performed by Owner and others at the Site that relates to the Work as indicated in the Bidding Documents.

I. Bidder has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Bidder has discovered in the Bidding Documents, and confirms that the written resolution thereof by Engineer is acceptable to Bidder.

J. The Bidding Documents are generally sufficient to indicate and convey understanding of all terms and conditions for the performance and furnishing of the Work.

K. The submission of this Bid constitutes an incontrovertible representation by Bidder that Bidder has complied with every requirement of this Article, and that without exception the Bid and all prices in the Bid are premised upon performing and furnishing the Work required by the Bidding Documents.

ARTICLE 4 – BIDDER'S CERTIFICATION

4.01 Bidder certifies that:

A. This Bid is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any collusive agreement or rules of any group, association, organization, or corporation;

B. Bidder has not directly or indirectly induced or solicited any other Bidder to submit a false or sham Bid;

C. Bidder has not solicited or induced any individual or entity to refrain from bidding; and

D. Bidder has not engaged in corrupt, fraudulent, collusive, or coercive practices in competing for the Contract. For the purposes of this Paragraph 4.01.D:

1. "corrupt practice" means the offering, giving, receiving, or soliciting of any thing of value likely to influence the action of a public official in the bidding process;

2. "fraudulent practice" means an intentional misrepresentation of facts made (a) to influence the bidding process to the detriment of Owner, (b) to establish bid prices at artificial non-competitive levels, or (c) to deprive Owner of the benefits of free and open competition;

3. "collusive practice" means a scheme or arrangement between two or more Bidders, with or without the knowledge of Owner, a purpose of which is to establish bid prices at artificial, non-competitive levels; and

4. "coercive practice" means harming or threatening to harm, directly or indirectly, persons or their property to influence their participation in the bidding process or affect the e execution of the Contract.

ARTICLE 5 – BASIS OF BID

5.01 **BASE BID:** Bidder will complete the Base Bid Work in accordance with the Contract Documents for the following price(s):

Base Bid Lump Sum Bid Price	$ 34,440.00

5.02 **ALTERNATE 1:** Replace Roof.

A. See Drawings Sheet A-2, Remediation Work for details.

B. See Section 01110, Summary of Work for the full scope.

Alternate #1 Remove Skylights & Replace Roofs	$ 92,375.00

Total of Lump Sum + Alternate #1 = Total Bid $ 126,815.00

ARTICLE 6 – TIME OF COMPLETION

6.01 The Project shall be substantially completed within Ninety (90) days from the Notice to Proceed. An additional Thirty (30) days shall be used to complete any outstanding issues or punch-list items. Final Completion shall be One Hundred Twenty (120) days from Notice to Proceed.

6.02 Bidder agrees that the Work will be substantially complete and will be completed and ready for final payment in accordance with Paragraph 15.06 of the General Conditions on or before the dates or within the number of calendar days indicated.

6.03 Bidder accepts the provisions of the Agreement as to liquidated damages established as Five Hundred ($500) per day beyond the 120 days of total project time.

ARTICLE 7 – ATTACHMENTS TO THIS BID

7.01 The following documents are submitted with and made a condition of this Bid:

A. Required Performance security;

B. List of Proposed Subcontractors;

C. List of Proposed Suppliers;

D. List of Project References;

E. Evidence of authority to do business in the state of the Project; or a written covenant to obtain such license within the time for acceptance of Bids;

F. Required Bidder Qualification Statement with supporting Attachments A through O; and

G. Submit sealed bids including one (1) original copy and one (1) electronic copy in pdf format on USB thumb drive.

ARTICLE 8 – DEFINED TERMS

8.01 The terms used in this Bid with initial capital letters have the meanings stated in the Instructions to Bidders, the General Conditions, and the Supplementary Conditions.

1. The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to the Owner for the performance of the Construction Contract, which is incorporated herein by reference.

2. If the Contractor performs the Construction Contract, the Surety and the Contractor shall have no obligation under this Bond, except when applicable to participate in a conference as provided in Paragraph 3.

3. If there is no Owner Default under the Construction Contract, the Surety's obligation under this Bond shall arise after:

3.1 The Owner first provides notice to the Contractor and the Surety that the Owner is considering declaring a Contractor Default. Such notice shall indicate whether the Owner is requesting a conference among the Owner, Contractor, and Surety to discuss the Contractor's performance. If the Owner does not request a conference, the Surety may, within five (5) business days after receipt of the Owner's notice, request such a conference. If the Surety timely requests a conference, the Owner shall attend. Unless the Owner agrees otherwise, any conference requested under this Paragraph 3.1 shall be held within ten (10) business days of the Surety's receipt of the Owner's notice. If the Owner, the Contractor, and the Surety agree, the Contractor shall be allowed a reasonable time to perform the Construction Contract, but such an agreement shall not waive the Owner's right, if any, subsequently to declare a Contractor Default;

3.2 The Owner declares a Contractor Default, terminates the Construction Contract and notifies the Surety; and

3.3 The Owner has agreed to pay the Balance of the Contract Price in accordance with the terms of the Construction Contract to the Surety or to a contractor selected to perform the Construction Contract.

4. Failure on the part of the Owner to comply with the notice requirement in Paragraph 3.1 shall not constitute a failure to comply with a condition precedent to the Surety's obligations, or release the Surety from its obligations, except to the extent the Surety demonstrates actual prejudice.

5. When the Owner has satisfied the conditions of Paragraph 3, the Surety shall promptly and at the Surety's expense take one of the following actions:

5.1 Arrange for the Contractor, with the consent of the Owner, to perform and complete the Construction Contract;

5.2 Undertake to perform and complete the Construction Contract itself, through its agents or independent contractors;

5.3 Obtain bids or negotiated proposals from qualified contractors acceptable to the Owner for a contract for performance and completion of the Construction Contract, arrange for a contract to be prepared for execution by the Owner and a contractor selected with the Owners concurrence, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Construction Contract, and pay to the Owner the amount of damages as described in Paragraph 7 in excess of the Balance of the Contract Price incurred by the Owner as a result of the Contractor Default; or

5.4 Waive its right to perform and complete, arrange for completion, or obtain a new contractor, and with reasonable promptness under the circumstances:

5.4.1 After investigation, determine the amount for which it may be liable to the Owner and, as soon as practicable after the amount is determined, make payment to the Owner; or

5.4.2 Deny liability in whole or in part and notify the Owner, citing the reasons for denial.

6. If the Surety does not proceed as provided in Paragraph 5 with reasonable promptness, the Surety shall be deemed to be in default on this Bond seven days after receipt of an additional written notice from the Owner to the Surety demanding that the Surety perform its obligations under this Bond, and the Owner shall be entitled to enforce any remedy available to the Owner. If the Surety proceeds as provided in Paragraph 5.4, and the Owner refuses the payment or the Surety has denied liability, in whole or in part, without further notice the Owner shall be entitled to enforce any remedy available to the Owner.

7. If the Surety elects to act under Paragraph 5.1, 5.2, or 5.3, then the responsibilities of the Surety to the Owner shall not be greater than those of the Contractor under the Construction Contract, and the responsibilities of the Owner to the Surety shall not be greater than those of the Owner under the Construction Contract. Subject to the commitment by the Owner to pay the Balance of the Contract Price, the Surety is obligated, without duplication for:

7.1 the responsibilities of the Contractor for correction of defective work and completion of the Construction Contract;

7.2 additional legal, design professional, and delay costs resulting from the Contractor's Default, and resulting from the actions or failure to act of the Surety under Paragraph 5; and

7.3 liquidated damages, or if no liquidated damages are specified in the Construction Contract, actual damages caused by delayed performance or non-performance of the Contractor.

8. If the Surety elects to act under Paragraph 5.1, 5.3, or 5.4, the Surety's liability is limited to the amount of this Bond.

9. The Surety shall not be liable to the Owner or others for obligations of the Contractor that are unrelated to the Construction Contract, and the Balance of the Contract Price shall not be reduced

or set off on account of any such unrelated obligations. No right of action shall accrue on this Bond to any person or entity other than the Owner or its heirs, executors, administrators, successors, and assigns.

10. The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders, and other obligations.

11. Any proceeding, legal or equitable, under this Bond may be instituted in any court of competent jurisdiction in the location in which the work or part of the work is located and shall be instituted within two years after a declaration of Contractor Default or within two years after the Contractor ceased working or within two years after the Surety refuses or fails to perform its obligations under this Bond, whichever occurs first. If the provisions of this paragraph are void or prohibited by law, the minimum periods of limitations available to sureties as a defense in the jurisdiction of the suit shall be applicable.

12. Notice to the Surety, the Owner, or the Contractor shall be mailed or delivered to the address shown on the page on which their signature appears.

13. When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted here from and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

14. Definitions

14.1 Balance of the Contract Price: The total amount payable by the Owner to the Contractor under the Construction Contract after all proper adjustments have been made including allowance for the Contractor for any amounts received or to be received by the Owner in settlement of insurance or other claims for damages to which the Contractor is entitled, reduced by all valid and proper payments made to or on behalf of the Contractor under the Construction Contract.

14.2 Construction Contract: The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and changes made to the agreement and the Contract Documents.

14.3 Contractor Default: Failure of the Contractor, which has not been remedied or waived, to perform or otherwise to comply with a material term of the Construction Contract.

14.4 Owner Default: Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

14.5 Contract Documents: All the documents that comprise the agreement between the Owner and Contractor.

15. If this Bond is issued for an agreement between a contractor and subcontractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

AUTO-OWNERS INSURANCE COMPANY

LANSING, MICHIGAN

POWER OF ATTORNEY

NO. BD160946

KNOW ALL MEN BY THESE PRESENTS: That the AUTO-OWNERS INSURANCE COMPANY AT LANSING, MICHIGAN, a Michigan Corporation, having its principal office at Lansing, County of Eaton, State of Michigan, adopted the following Resolution by the directors of the Company on January 27, 1971, to wit:

"RESOLVED, That the President or any Vice President or Secretary or Assistant Secretary of the Company shall have the power and authority to appoint Attorneys-in-fact, and to authorize them to execute on behalf of the Company, and attach the seal of the Company thereto, bonds and undertakings, recognizances, contracts of indemnity, and other writings obligatory in the nature thereof. Signatures of officers and seal of Company imprinted on such powers of attorney by facsimile shall have same force and effect as if manually affixed. Said officers may at any time remove and revoke the authority of any such appointee."

Does hereby constitute and appoint Teresa E. Gibson

Its true and lawful attorney(s)-in-fact, to execute, seal and deliver for and on its behalf as surety, any and all bonds and undertakings, recognizances, contracts of indemnity and other writings obligatory in the nature thereof, and the execution of such instrument(s) shall be as binding upon the AUTO-OWNERS INSURANCE COMPANY AT LANSING, MICHIGAN as fully and amply, to all intents and purposes, as if the same had been duly executed and acknowledged by its regularly elected officers at its principal office.

IN WITNESS WHEREOF, the AUTO-OWNERS INSURANCE COMPANY AT LANSING, MICHIGAN, has caused this to be signed by its authorized officer this 22nd day of December, 2023.

Brandi Holly — Senior Vice President

STATE OF MICHIGAN } ss.
COUNTY OF EATON }

On this 22nd day of December, 2023, before me personally came Brandi Holly, to me known, who being duly sworn, did depose and say that they are Brandi Holly, Senior Vice President of AUTO-OWNERS INSURANCE COMPANY, the corporation described in and which executed the above instrument, that they know the seal of said corporation, that the seal affixed to said instrument is such Corporate Seal, and that they received said instrument on behalf of the corporation by authority of their office pursuant to a Resolution of the Board of Directors of said corporation.

JEFFREY P MANY NOTARY PUBLIC COUNTY OF MICHIGAN My Commission Expires January 26th, 2029 Acting in the County of STATE OF MICHIGAN

My commission expires January 26th, 2029.

Jeffrey P. Many — Notary Public

STATE OF MICHIGAN } ss.
COUNTY OF EATON }

I, the undersigned First Vice President, Secretary and General Counsel of AUTO-OWNERS INSURANCE COMPANY, do hereby certify that the authority to issue a power of attorney as outlined in the above board of directors resolution remains in full force and effect as written and has not been revoked and the resolution as set forth is now in force.

Signed and sealed at Lansing, Michigan. Dated this 21st day of January, 2025.

AUTO-OWNERS INSURANCE CORPORATE SEAL LANSING, MICHIGAN

William F. Woodbury, First Vice President, Secretary and General Counsel

SECTION 00 51 00
NOTICE OF AWARD

Date of Issuance: _____ ___, 20_____

Owner: City of Flagler Beach — Owner's Project No.:

Engineer: — Engineer's Project No.:

Project: City of Flagler Beach Bid Number FB-250102 Public Library Hurricane Milton Damage Repairs, Flagler Beach, FL 32136

TO BIDDER:

You are notified that Owner has accepted your Bid dated _____ __, 20_____ for the above Contract, and that you are the Successful Bidder and are awarded a Contract for: City of Flagler Beach Bid Number FB-250102 Public Library Hurricane Milton Damage Repairs, Flagler Beach, FL 32136

The Contract Price of the awarded Contract is: **$**_____

One (1) unexecuted counterparts of the Agreement accompany this Notice of Award and one copy of the Contract Documents has been made available to Bidder electronically.

☐ a set of the Drawings will be delivered separately from the other Contract Documents.

You must comply with the following conditions precedent within ten (10) days of the date of this Notice of Award:

1. Deliver to Owner Three (3) counterparts of the Agreement, fully executed by Bidder.
2. Deliver with the executed Agreement(s) the Contract security *[e.g., performance bond]* and insurance documentation as specified in the Instructions to Bidders and General Conditions, Articles 2 and 6.
3. Other conditions precedent (if any): *None*

Failure to comply with these conditions within the time specified will entitle Owner to consider you in default, annul this Notice of Award, and declare your Bid security forfeited.

Within ten days after you comply with the above conditions, Owner will return to you one fully executed counterpart of the Agreement, together with any additional copies of the Contract Documents as indicated in Paragraph 2.02 of the General Conditions.

NOTICE OF ACCEPTABILITY OF WORK

PROJECT:

OWNER: City of Flagler Beach

CONTRACTOR:

OWNER'S CONSTRUCTION CONTRACT IDENTIFICATION:

EFFECTIVE DATE OF THE CONSTRUCTION CONTRACT:_____, 20____

ENGINEER:

NOTICE DATE:

To: City of Flagler Beach
Owner

And To: _____
Contractor

From: _____
Engineer

The Engineer hereby gives notice to the above Owner and Contractor that Engineer has recommended final payment of Contractor, and that the Work furnished and performed by Contractor under the above Construction Contract is acceptable, expressly subject to the provisions of the related Contract Documents, the Agreement between Owner and Engineer for Professional Services dated _____, 20___, and the following terms and conditions of this Notice:

CONDITIONS OF NOTICE OF ACCEPTABILITY OF WORK

The Notice of Acceptability of Work ("Notice") is expressly made subject to the following terms and conditions to which all those who receive said Notice and rely thereon agree:

1. This Notice is given with the skill and care ordinarily used by members of the engineering profession practicing under similar conditions at the same time and in the same locality.

2. This Notice reflects and is an expression of the Engineer's professional opinion.

3. This Notice is given as to the best of Engineer's knowledge, information, and belief as of the Notice Date.

4. This Notice is based entirely on and expressly limited by the scope of services Engineer has been employed by Owner to perform or furnish during construction of the Project (including observation of the Contractor's work) under Engineer's Agreement with Owner, and applies only to facts that are within Engineer's knowledge or could reasonably have been ascertained by Engineer as a result of carrying out the responsibilities specifically assigned to Engineer under such Agreement.

5. This Notice is not a guarantee or warranty of Contractor's performance under the Construction Contract, an acceptance of Work that is not in accordance with the related Contract Documents, including but not limited to defective Work discovered after final inspection, nor an assumption of responsibility for any failure of Contractor to furnish and perform the Work thereunder in accordance with the Construction Contract Documents, or to otherwise comply with the Construction Contract Documents or the terms of any special guarantees specified therein.

6. This Notice does not relieve Contractor of any surviving obligations under the Construction Contract, and is subject to Owner's reservations of rights with respect to completion and final payment.

SECTION 01110

SUMMARY OF WORK

PART 1 GENERAL

1.01 Section Includes

Summary of work, other contracts, work sequence, operation of existing facilities, use of premises, coordination, cutting and patching.

1.02 Summary of Work

The building sustained extensive water damages due to Hurricane Milton. The Project consists of miscellaneous interior and exterior repairs to the City of Flagler Beach Public Library building located at 315 South 7th Street in Flagler Beach, Florida. These include:

A. PRE-CONSTRUCTION WORK:

1. Contractor shall field verify all conditions and dimensions prior to performing demolition. Contractor is required to do demolition of all items required to accomplish the new work, whether or not shown or noted;
2. The Contractor shall be responsible for the removal and proper disposal of all materials as called for in the contract documents. The placement and access to waste receptacles for demolition/construction debris shall be coordinated with the Owner. Contractor to coordinate the demolition of all utilities with Owner prior to commencing demolition. Contractor is responsible for providing the name, address, and GPS coordinates of final disposal site of all debris in accordance with FEMA requirements;
3. The Owner has the first right of refusal on all salvaged equipment;
4. The Contractor shall notify and await approval from the owner before interruption of any utilities;
5. Facilities or portions of facilities shall not be occupied during construction, unless exits, fire detection, early warning systems and any safety barriers are continuously maintained and clearly marked at all times.
6. Prior to the issuance of the notice to proceed, a safety plan shall be provided by the Contractor which clearly delineates area(s) for construction, safety barriers, construction traffic during all phases, and conditions of construction.

B. INTERIOR WORK – INCLUDED IN BASE BID:

1. Replace all drywall on surfaces where previously removed – match thickness of existing;
2. Tape and mud all drywall joints and sand to a smooth finish – match texture of existing;
3. Replace all baseboard with new wood to match existing in species and profile;
4. Remove automatic door operator, push button, and all associated conduit/wiring – to be reinstalled after entry wall construction;
5. Remove exit sign and conduit – to be reinstalled after entry wall construction;

6. Remove doors and reinstall after new framing is constructed;
7. Remove framed wall from slab to underside of roof (approximately 10'-0" high) and from masonry wall to masonry wall (approximately 10'-8" wide);
8. Reconstruct removed framed wall as shown on Details 2 and 4 on Sheet A-2. Add R-19 batt insulation;
9. Remove existing laminate flooring at the entry doors and install new, owner-supplied ceramic tile (approximately 50 SF);
10. Paint all new surfaces to match existing;
11. Caulk all interior surfaces around windows and main entry doors.

C. EXTERIOR WORK – INCLUDED IN BASE BID:

1. On east wall only, completely remove the aluminum fascia covering and drip edge and the pressure-treated 2" x 6" wood fascia board along gable rake.
2. Rebuild the fascia as shown on Detail 5, Sheet A-2.
3. Remove push button for door opener and all conduit/wiring – to be reinstalled after entry wall construction;
4. Remove or secure existing camera located at northeast underside of canopy so as to be safeguarded from demolition/new construction while still remaining operational at all times – reinstall after exterior work is completed in the entrance area;
5. Remove existing outdoor carpeting, including metal edge-strips, located directly outside the double entry doors as shown on Detail 1, Sheet A-2. Remove any adhesive residue, thoroughly clean substrate concrete;
6. Caulk exterior surfaces around all windows and double entry doors;
7. Remove excess built-up soil above the slab level along the east and north walls. Regrade and provide new sod per Detail 6, Sheet A-2.

D. EXTERIOR WORK – ADD ALTERNATE – 1:

1. Remove completely the existing modified bitumen roof on entire building.
2. Remove all skylights on flat roof. Install new decking and insulation to match existing. These openings, once properly installed and inspected, will be covered by new roof.
3. Remove all skylights on elevated structure at the west end of the Library. Close with new deck material and insulation to match surrounding area. These openings, once properly installed and inspected, will be covered by new roof.

1.04 Work Sequence

The Contractor's sequence of work may be of his choosing in order to complete the work in the allowed time frame while accommodating other contractors on site.

1.05 Contractor Use of Premises

Confine operations at the site to areas permitted by applicable laws, ordinances, permits, and by the Contract Documents. Do not unreasonably encumber the site with materials or equipment. Do not load structures with weight that will endanger the structure. The Contractor shall assume full responsibility for protection and safekeeping of products stored on the job site.

1.06 Coordination

A. The Contractor shall be fully responsible for the coordination of its work and the work of its employees, subcontractors, and suppliers and to assure compliance with schedules.

B. The coordination requirements of this Section are in addition to the requirements of the front-end bidding documents issued by the City.

C. It is the Contractor's responsibility to coordinate with all the utilities regarding locates, testing, or relocations.

1.07 Cutting and Patching

A. The Contractor shall, at no additional expense to the City, perform cutting and patching necessary to the completion of the Project. Perform cutting and patching in a manner to prevent damage to the structure or previously completed work.

B. Refinish surfaces as necessary to provide an even finish.

PART 2 PRODUCTS - Not Used

PART 3 EXECUTION - Not Used

END OF SECTION

SECTION 01270

MEASUREMENT AND PAYMENT - LUMP SUM CONTRACTS

PART 1 GENERAL

1.01 GENERAL

A. Payment for all work done in compliance with the Contract Documents, inclusive of furnishing all manpower, equipment, materials, and performance of all operations relative to construction of this project, will be made under Pay Items. Work for which there is not a pay item will be considered incidental to the Contract and no additional compensation will be allowed.

B. The Owner reserves the right to modify work as may be necessary and increase or decrease quantities of work to be performed, including deduction or cancellation of any one or more of the Pay Items. Changes in the work shall not be considered as a waiver of any conditions of the Contract nor invalidate any provisions thereof.

C. The Contractor's attention is again called to the fact that the quotations for the various items of work are intended to establish a total price cost for completing the work in its entirety. Should the Contractor feel that the cost of any item of the work has not been established by the Bid Form, he shall include the cost for the work in some other applicable bid item, so that his proposal for the project does reflect his total price for completing the work in its entirety.

D. The quantities for payment under this Contract shall be determined by actual measurement and payment of the completed items, in place, ready for service and accepted by the Owner, in accordance with the applicable method of measurement therefore contained herein. A representative of the Contractor shall witness all field measurements.

E. Work performed by the Contractor outside the limits of construction shall be at the Contractor's expense.

2.01 MEASUREMENT

A. The quantities for payment under this Contract shall be determined by actual measurement of the completed items, in place, ready for service and accepted by the Owner, in accordance with the applicable method of measurement therefore contained herein.

3.01 PAYMENT ITEMS

A. Items are as enumerated on the bid form and the lump sums provided encompass the entire scope of work as described herein.

END OF SECTION

SECTION 01320

PROJECT COMPLETION SCHEDULE

PART 1 GENERAL

1.01 Section Includes

Project completion scheduling

1.02 Submittals

A. Prior to construction, prepare a schedule showing all major activities needed to complete project. Include major material and equipment order and delivery times. Submit to Owner no later than the date of the preconstruction conference. Update the schedule if any major events occur that would alter the previously submitted schedule.

B. Include on the schedule a minimum float of 1 day every 3 weeks during construction.

C. Project substantial and final completion dates shown on schedule shall be same as or earlier than the contractual dates.

PART 2 PRODUCTS - Not Used

PART 3 EXECUTION

3.01 Monitoring and Updating of Schedule

A. Float shown on the schedule belongs to the project.

B. Progress data shall be accumulated to update the schedule on a monthly basis, prior to submittal of the application for payment. Progress data shall include:

1. Activities started
2. Activities completed
3. Predicted activity starts and predicted activity completions
4. Changes in original duration for specific activities
5. Changes in activity sequences
6. Percent complete on activities

END OF SECTION

SECTION 01410

REGULATORY REQUIREMENTS AND PERMITS

PART 1 GENERAL

1.01 Section Includes

Regulatory requirements, project permits

1.02 Requirements of Regulatory Agencies

A. Whenever the Drawings and Specifications conflict with the requirements of the permit, then the requirements of the permit shall govern and the cost of abiding by the provisions of the permit shall be considered incidental to the Contract.

B. All electrical apparatus and wiring pertaining to a piece of equipment or an appliance furnished and installed under this Contract shall comply with the National Electrical Code and shall be listed by Underwriters Laboratories or bear the approval of a recognized Testing Laboratory approved by the Engineer.

1.03 Project Permits

A. Prior to construction, the Contractor shall apply for a separate Building Permit for each pump station from the City of Flagler Beach Building Department. Signed and sealed construction plans will be provided to the Contractor for its use in applying for the above permits. The Contractor is to coordinate with each permitting agency in order to determine the number of sets of signed and sealed construction plans that are required and the required sheet size (full size 22"x34" or half size 11"x17").

B. The Contractor shall review and become familiar with all permits for the Project, complete with all conditions, attachments, exhibits and permit modifications. A copy of all permits for the Project shall be maintained by the Contractor at the project site, and shall be available for review upon request.

C. The Contractor shall be fully responsible to abide by all provisions of the permits. The Contractor is responsible for the selection, implementation and operation of all measures required by the permits, including the maintenance of said measures as necessary during construction. No additional compensation will be allowed for any work associated with permit requirements.

PART 2 PRODUCTS - Not Used

PART 3 EXECUTION - Not Used

END OF SECTION

SECTION 01420

ABBREVIATIONS

PART 1 GENERAL

1.01 Reference to Standards and Specifications of Technical Societies

A. Definitions and interpretations shall be as provided in Section 1 of the General Conditions.

B. Work specified by reference to published standard or specification of government agency, technical association, trade association, professional society or institute, testing agency, or other organization shall meet requirements or surpass minimum standards of quality for materials and workmanship established by designated standard or specification.

C. Where so specified, products or workmanship shall also meet or exceed additional prescriptive or performance requirements included within Contract Documents to establish a higher or more stringent standard of quality than required by referenced standard.

D. Where two or more standards are specified to establish quality, product and workmanship shall meet or exceed requirements of most stringent.

E. Where both a standard and a brand name are specified for a product in Contract Documents, proprietary product named shall meet or exceed requirements of specified reference standard.

F. Copies of standards and specifications of technical societies and copies of applicable referenced standards have not been bound in these Contract Documents.

G. Where copies of standards are needed by Contractor, obtain a copy or copies directly from publication source and maintain in an orderly manner at the Site as Work Site records, available to Contractor's personnel, Subcontractors, Owner, and Engineer.

1.02 Abbreviations

A. Following is a list of abbreviations for trade organizations, government agencies, and construction industry organizations to which references may be made in the Contract Documents, with abbreviations used.

PART 3 EXECUTION - Not Used

END OF SECTION

SECTION 01450

QUALITY CONTROL

PART 1 GENERAL

1.01 Section Includes

Quality control, quality assurance.

1.02 Quality Control

A. It is the Contractor's responsibility to perform all work in conformance with the Plans and Specifications. In order to fulfill this responsibility, the Contractor is required to have an approved Quality Control Program, including testing (if required by the permit), as part of its Contract work in accordance with the Contract Documents and to submit details of its Program to the City for review and approval prior to commencing any construction operations. The submittal shall include detailed information on locations and number of all tests, etc., that will be necessary for the Contractor to make its own determination that the work is being performed in compliance with the Project requirements.

B. In addition to Quality Control Testing, the Contractor shall be responsible for required testing or approvals for any work (or any part thereof) if laws or regulations of any public body having jurisdiction specifically require testing, inspections or approval. The Contractor shall pay all costs in connection therewith and shall furnish the City the required certificates of inspection, testing or approval. The Contractor shall also be responsible for and shall pay all costs in connection with any inspection or testing required in connection with City acceptance of a supplier of materials or equipment proposed to be incorporated into the work.

C. Any design or testing laboratory utilized by the Contractor shall be an independent laboratory acceptable to the City, approved in writing, and complying with the latest edition of the "Recommended Requirements for Independent Laboratory Qualification", published by the American Council of Independent Laboratories.

D. Testing laboratories, whether provided by the City or the Contractor, shall promptly notify the City and the Contractor of irregularities or deficiencies of work that are observed during performance of services. Laboratories shall submit electronic copies (PDF format) of all reports directly to the City and the Contractor.

1.03 Testing of Materials

A. Unless otherwise specified, all materials shall be sampled and tested in accordance with the latest published standard methods of ASTM in effect at the time bids are received.

B. Test of materials shall be made by a representative of the Contractor, unless otherwise provided. Testing of equipment shall be the responsibility of the Contractor or an authorized manufacturer's representative. All test results shall be furnished to the City in

writing. The Contractor shall provide facilities required to collect and forward samples. The Contractor shall furnish the required samples without charge.

C. The Contractor shall not make use of or incorporate in the work, the materials represented by the sample until tests have been made and the material found to be in accordance with the requirements of the Specifications.

D. Materials to be tested and the applicable test procedure shall be as outlined in the individual sections of these Specifications.

1.04 Source and Quality of Materials and Equipment

A. The source of materials to be used shall be in accordance with the Contract Documents and as approved by the City before delivery. The approval of the source of any material shall continue as long as the material conforms to the Specifications.

B. All material not conforming to the requirements of the Specifications shall be considered as defective and shall be removed from the work. If in place, faulty materials shall be removed by the Contractor at its expense and replaced with acceptable material unless permitted otherwise by the City. No defective materials that have been subsequently corrected shall be reused until approval has been given.

C. Upon failure of the Contractor to comply immediately with any order of the City to remove and replace defective material, the City shall have authority to remove and replace defective materials, and to deduct the cost of removal and replacement from any monies due or to become due to the Contractor. Failure to reject any defective materials or work at the time of installation shall in no way prevent later rejection when such defects are discovered, nor obligate the City to final acceptance.

1.05 Additional Testing

The Contractor shall perform other testing called for in the Contract Documents including but not limited to piping, pressure, leakage, infiltration and exfiltration, as required.

PART 2 PRODUCTS - Not Used

PART 3 EXECUTION - Not Used

END OF SECTION

SECTION 01520

TEMPORARY FACILITIES AND CONTROLS

PART 1 GENERAL

1.01 Section Includes

Construction facilities, temporary utilities, project identification signs, field office and storage sheds, storage of materials and equipment.

1.02 Construction Facilities

All construction facilities remain the property of the Contractor establishing them and shall be maintained in a safe and useful condition until removed from the construction site.

1.03 Removal of Temporary Construction

Remove the various temporary facilities, services, and legally dispose of them as soon as the Owner deems permissible. Portions of the site and areas used for temporary facilities shall be restored to existing or better condition, including but not limited to fill replacement, regrading, compaction, and sodding.

1.04 Transportation and Handling

A. Manufactured materials and products shall be delivered to the project site as needed for installation, undamaged, in original packages, containers, or bundles, as packaged by the manufacturer with manufacturer's name, brand, seals, and labels intact.

B. Materials other than those designated within the Specifications or approved by the Owner shall not be delivered to the project site.

1.05 Storage and Protection

A. The Contractor shall be responsible for protection and preservation of all materials until final acceptance of the Project. Any damage to work prior to acceptance shall be remedied by the Contractor at no additional cost to the Owner.

B. Provide temporary weather-tight enclosures to protect work from damage by the elements, and protect finished surfaces to prevent any damage resulting from the work of any trade.

1.06 Security

A. Contractor shall, at all times, be responsible for the security required in all project areas and shall provide all reasonable protection to prevent damage, injury or loss to employees on the Work and all other persons who may be affected thereby; all the work materials and equipment to be incorporated therein, whether in storage on or off the project site, under the care, custody or control of the Contractor or any subcontractors; and any other property under the care, custody or control of the Contractor or any

subcontractors. Contractor shall be responsible for such security and safety until final acceptance of the Work.

B. Full time watchmen will not be specifically required as a part of the Contract, but the Contractor shall provide inspection of work area daily and shall take whatever measures are necessary to protect the safety of the public, workmen, and materials, and provide for the security of the site, both day and night.

PART 2 PRODUCTS

2.01 Temporary Electric Service

A. Furnish and maintain temporary lighting and power required to perform the Work. Include in the Bid all costs for providing temporary electrical service.

B. Temporary service shall include protective enclosures, branch wiring, outlets, lamps, and grounding as required by NEC and Local Electrical Codes.

2.02 Temporary Heating

The Contractor shall furnish fuel or power and provide and operate all temporary heating units. Heat shall be provided as necessary to perform the Work. Temporary heating units shall be adequately vented and approved devices which will not damage finished areas. The Contractor shall also furnish all tarpaulins and temporary enclosures necessary to provide this protection.

2.03 Temporary Ventilation

The Contractor shall provide, operate, and furnish power for temporary ventilation required for the proper installation and curing of materials and safety of workmen.

2.04 Temporary Sanitary Facilities

Provide temporary toilet facilities as required. Maintain these during the entire period of construction under this Contract for the use of all construction personnel on the job. Enough chemical toilets shall be provided to conveniently serve the needs of all personnel. Chemical toilets and their maintenance shall meet the requirements of State and local health regulations and ordinances.

2.05 Material Hoists and Cranes

A. Provide material hoists required for normal use by all trades and employ skilled hoist operators. Provide all necessary guards, signals, safety devices, etc., required for safe hoist operation. The construction and operation of material hoists shall be in accordance with the applicable ANSI Standards, the "Manual Code of Accident Prevention in Construction" of the Associated General Contractors of America, OSHA, and of other Federal, State, and municipal codes or ordinances. The Contractor shall prohibit the use of hoists for transporting personnel. Hoists shall be located to avoid risk of damage to completed work.

B. Special rigging and hoisting facilities shall be provided by each trade requiring their use.

2.06 Temporary Runways, Scaffolding, and Ladders

A. Provide temporary ladders, ramps, and runways as required for performance and inspection of the work. The above facilities shall be constructed and maintained in accordance with the applicable Federal, State, and Municipal regulations and codes.

B. Furnish, erect, and maintain all scaffolding required for this work. Scaffolding shall be constructed and maintained in accordance with applicable State and Federal laws and local ordinances. Scaffolding shall be promptly removed after serving its purpose.

C. The structural strength and safety of scaffolding, runways, covers, railings, ladders, stairs, etc., and compliance with law shall be the sole responsibility of the Contractor.

2.07 Temporary Chutes

No materials shall be dropped from structures except through enclosed wooden or metal chutes which shall be provided and maintained as required for the performance of the work by the various trades.

PART 3 EXECUTION - Not Used

END OF SECTION

SECTION 01770

CONTRACT CLOSEOUT

PART 1 GENERAL

1.01 Section Includes

Substantial completion requirements, clean-up, final completion requirements, closeout submittals

1.02 Clean-Up Operations

A. The entire project site shall be thoroughly cleaned at the completion of the work.

B. Clean all interior and exterior work areas, plus all adjacent areas affected by construction, as directed by the City or jurisdictional agency. Equipment to clean these surfaces shall be subject to approval by the City.

C. Restore to original condition or better all property not designated for alteration by the Contract Documents, including all areas used for staging and storage. Restoration includes but is not limited to fill replacement, regrading, compaction, and sodding. Conduct inspections of the completed restoration with the City, and conduct additional restoration as directed.

1.03 Substantial Completion Requirements

A. Complete the following before requesting the inspection for certification of substantial completion.

1. Submit record drawings in accordance with section 01780.
2. Complete required cleaning and testing of the completed construction in accordance with the specifications and the Owner's operating and maintenance personnel.

B. Work is not substantially complete until the following have occurred:

1. Flood testing of finished work areas to ensure water-tight installation.
2. All doors and windows are in excellent working order with no air or water penetration.

1.04 Final Completion Requirements

A. Complete the following before requesting the inspection for certification of final completion.

1. All punch list items identified during the substantial completion inspection.
2. Deliver tools, spare parts, extra stocks of material and similar physical items to the Owner.

3. Discontinue or change over and remove temporary facilities and services from the project site, along with construction tools and facilities, mock-ups, and similar elements.
4. Clean all marred surfaces including touch up painting, pressure washing, or other measures as needed as directed by the City.
5. Hose clean sidewalks, parking lot, loading areas, and others contiguous with principal structures.
6. Fully restore all property not designated for construction including all areas used for staging and storage.
7. Provide Final Record Drawings in accordance with Section 01780.

1.05 Closeout Submittals

A. Upon completion of the project, or portions thereof, the Contractor shall transfer to the City all applicable items accumulated throughout construction. These include but are not limited to the following items:

1. Service manuals, installation instructions, maintenance and operating instructions, special tools, and specialties
2. Spare parts ordered as part of this Contract
3. Delivery of any salvaged or borrowed materials or equipment to the Owner
4. All keys to all doors, gates, and equipment
5. Checklist indicating satisfactory completion of all unfinished items from the final inspection
6. Certificate of Substantial Completion
7. Certificate of Final Completion
8. Submittal of the Material and Workmanship Bond
9. Submittal of manufacturers' guarantees, warranties, bonds, and letters of coverage extending beyond the time limitations of the Contractor's guarantee.
10. Contractor's Final Release of Lien
11. Final Waivers of lien from all Subcontractors and Suppliers
12. Consent of Surety to Final Payment
13. Final Record documents of completed facilities.
14. Certificate of Final Inspection
15. Certificate of Architect/Engineer

B. Closeout submittals provided by others include:

1. Certificate of Engineer/Architect

STAFF REPORT

City Commission Regular Meeting

February 13, 2025

To: Elected Officials

From: Dale L. Martin, City Manager

Date: February 7, 2025

Item Name: Resolution 2025-12. A Resolution by the City Commission of the City of Flagler Beach, to approve Project #589 in an amount not to exceed $164,500 to DDS Enterprises, LLC to improve Parking Lot #4; providing for conflict and an effective date.

Background: City staff prepared and solicited proposals for the improvements to the S. Central Avenue/S. 8th Street parking facility (Parking Lot #3), opening said proposals on November 14, 2024. This project was presented before the Commission (and the Community Redevelopment Agency Executive Board) and approved on December 12, 2024 (Resolution 2024-55). The award was for $147,000.00 to DDS Enterprises, LLC (DDS). Work commenced the week of January 6, 2025 and is nearing completion.

The City Engineer, at the request of the City Manager, delegated to staff the task of obtaining a Change Order to the original contract with DDS Enterprises to similarly improve Parking Lot #4, located at the corner of N. Central Avenue and N. 5th Street. This work will remove the current shell surface and install turf block with gravel infill. Also included are stub-outs for water and sewer to connect a future restroom facility constructed on site (when determined and budgeted by the City Commission/Community Redevelopment Agency Executive Board).

Staff has analyzed the proposal and found it to be reasonable and consistent with the project amount approved for Parking Lot #3.

Fiscal Impact: The Community Redevelopment Agency 2024/2025 budget included an appropriation of $285,000 for Parking Facility Improvements (said funds transferred to the Capital Fund). The original project (Parking Lot #3) cost $147,000. The proposed cost for the second parking facility (Parking Lot #4) is $164,500, for a total Parking Facility Improvement cost of $311,500, leading to a deficit of $26,500 for the two projects in relation to the budgeted amount. The proposed Resolution includes a budget amendment to transfer funds within the Community Redevelopment Agency (from Salaries and related benefits to Transfer to Capital Fund) to address the $26,500 shortfall.

Staff Recommendation: Staff recommends approval of Resolution 2025-12.

Attachment:

Resolution 2025-12

RESOLUTION 2025-12

A RESOLUTION BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, TO APPROVE PROJECT #589 (IMPROVEMENTS TO PARKING LOT #4) IN AN AMOUNT NOT TO EXCEED $164,500 TO DDS ENTERPRISES, LLC; PROVIDING FOR CONFLICT AND AN EFFECTIVE DATE.

WHEREAS, the City owns several parcels within the Community Redevelopment Agency (CRA) district, with those parcels being used for public parking; and,

WHEREAS, the 2024/2025 CRA budget included an appropriation of $285,000 for improvements to two of the public parking facilities (S. 8th Street at S. Central Avenue and N. 5th Street at N. Central Avenue); and,

WHEREAS, a contract for improvements to the S. 8th Street at S. Central Avenue parking facility was awarded to DDS Enterprises in the amount of $147,000 on December 12, 2024 (Resolution 2024-55); and,

WHEREAS, City staff requested that DDS Enterprises submit a proposal to construct similar improvements to the N. 5th Street at N. Central Avenue parking facility; and,

WHEREAS, DDS Enterprises submitted the proposal as a Change Order to the original contract for improvements to the N. 5th Street at N. Central Avenue parking facility ($164,500; see Exhibit A) for City consideration; and,

WHEREAS, additional funds within the CRA Fund budget are available to be transferred for the costs that exceed the approved budget appropriation ($26,500);

NOW THEREFORE BE IT RESOLVED BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, AS FOLLOWS:

SECTION 1. The City of Flagler Beach City Commission approves the proposal from DDS Enterprises (January 30, 2025), as presented in Exhibit A to this Resolution, as Change Order No. 1 to the original contract with DDS Enterprises (Resolution 2024-55).

SECTION 2. The City Commission approves a budget transfer in the amount of $26,500 from CRA Department Salaries (Line 101.5391.101200) to Transfer to Capital Fund (Line 101.5391.909304).

SECTION 3. All resolutions or parts of resolutions in conflict herewith are hereby repealed.

SECTION 4. This Resolution shall become effective immediately upon passage as provided by law.

PASSED AND ADOPTED THIS 13th DAY OF FEBRUARY, 2025.

STAFF REPORT

City Commission Regular Meeting

February 13, 2025

To: Elected Officials

From: Dale L. Martin, City Manager

Date: February 7, 2025

Item Name: Resolution 2025-13. A Resolution of the City Commission of the City of Flagler Beach accepting a proposal from Neu Urban Concepts to develop a Mobility Action Plan and Mobility Fee for the City of Flagler Beach; providing for conflict and an effective date.

Background: The City Commission has previously expressed interest in establishing a Mobility Fee. This fee, when developed and approved, would be assessed on all new construction, payable in association with the building permit fee.

In order to implement a Mobility Fee, the City must first develop a Mobility Plan to demonstrate the need for additional transportation projects. Efforts to solicit a consultant to prepare a Mobility Plan for the City were generally unsuccessful, until City Attorney Mr. Smith shared with me the efforts of the City of Oviedo with Neu Urban Concepts.

Following an "electronic introduction," City Planner Lupita McClenning and I had a lengthy discussion and provided documentation to Neu Urban Concepts staff, specifically the Downtown Master Plan and the most current area traffic study completed by the Veranda Bay developers. Using those documents, Neu Urban Concepts has prepared a proposal to develop a Mobility Plan for City Commission consideration.

Ms. Lauren Rushing of Neu Urban Concepts will be available to answer questions and provide additional insight to the process and final products.

Fiscal Impact: Funding for this project ($140,000) will be drawn from the City's Infrastructure Surtax Reserve (current balance approximately $2,125,000)

Staff Recommendation: Staff recommends approval of Resolution 2025-13.

Hi Dale,

Fernandina Beach is a great place. I briefly crossed paths with their Planning Director Kelly Gibson back in 2016 when I reviewed/assisted (through FDOT) with the Small Area Plan for 8th Street.

Looking at our calendars, next Friday (10/4) works best for us.

I'll send an invite to you and Ms. Lupita for 1pm that day.

Until then, best wishes for staying out of Hurricane Helene's path.

Best,
Lauren

Good morning, Ms. Rushing:

Thank you for the prompt response. Referencing Mr. Paul's comments, Lassiter was one of the consultants to whom I reached out, but never received a reply.

As for meeting, this week may be disrupted because of Hurricane Helene (although its actual effects here may be minimal, we still have to prepare).

As for next week, my calendar is fully available on Monday, late afternoon Wednesday, and late morning/all afternoon Friday.

I have added Ms. Lupita McClenning (City Planner) to this discussion. For additional reference, prior to coming to Flagler Beach, I was closer to the Jacksonville area, serving in Fernandina Beach for over seven years.

I look forward to speaking with you soon.

Hi Dale,

It's great to see you have interest in a mobility plan and fee for Flagler Beach.

I'm happy to facilitate a meeting so we can discuss further. Can you please provide us with your availability for the remainder of this week and next week?

I will send a Zoom invite once we can coordinate a time.

Thank you and we look forward to speaking with you.

Best regards,
Lauren Rushing

Hello Dale,

We are very interested.

We are working on or have just completed 15 of these right now from the panhandle to Miami.

We have just successfully taken Oviedo and Longwood to adoption and are wrapping up Okaloosa, DeBary, Palm Beach Gardens, Boynton Beach, and North Miami.

We did St Augustine's three years back. We have done more than any firm in the state. We are always working with Lassiter on Palm Coast road impact fee update.

Please let me know when would be a good time to touch base. I have copied Lauren with my firm, she is out of Jacksonville.

You have my email, my cell is 352-363-0614. We could set-up a zoom call or get on a team call.

Thanks

Subject: External - RE: External - Flagler Beach Mobility Action Plan & Fee Scope

Caution: This email originated from outside the organization. Do not click or open attachments unless you recognize the sender and know the content is safe.

Dale,

The Infrastructure surtax proceeds do have some limitations. They have to 1) be used on infrastructure, which in the definition used for the surtax statutes means: “any fixed capital expenditure or fixed capital costs associated with the construction, reconstruction, or improvement of public facilities that have a life expectancy of 5 or more years and any land acquisition, land improvement, design, and engineering costs related thereto” and 2) be included within the stated purposes of the surtax when it was put out to referendum by the County.

The County’s stated purpose for the surtax is "To provide the funding for necessary public capital projects, Flagler County and its cities require additional revenue. The proposed revenue source is a ten (10) year 0.5 cent (0.5¢) per dollar sales surtax on taxable transactions occurring within Flagler County. These revenues would be used for funding public projects and improvements such as the renovation, reconstruction and construction of roads, streets, pedestrian safety projects, motor vehicles, public buildings and associated capital facilities throughout Flagler County." I think the inclusion of roads, streets, pedestrian safety projects, and motor vehicles is enough to include mobility *projects* as an allowable use. In addition, in 2012, we asked for an Attorney General Opinion on behalf of the City if the surtax proceeds could be used for planning expenses related to beach improvement. While the Attorney General suggested the purpose statement was not broad enough to include beach restoration activities, she did opine that *design and planning* expenses related to construction of covered infrastructure would be allowed.

With that in mind, infrastructure surtax proceeds could be used to pay the costs of actual design and planning of mobility infrastructure. The question that remains is whether the mobility plan is far enough along the road of design and planning of infrastructure to fall into that allowance. Reviewing the proposal, I think we can certainly call it planning. What I don’t know and where I have some reservations, though, is how much actual design of infrastructure we would get out of it. If the plan is going to be “these are things that you could do,” I would lean away from using infrastructure surtax. If, however, the plan is going to be (and the proposal reads this way to me) step one in planning the implementation of a transportation infrastructure improvement plan that will be implemented by the City, I think that would bring us into the realm of “design and planning” of actual infrastructure to be constructed.

RE: MOBILITY ACTION PLAN & MOBILITY FEE FOR FLAGLER BEACH

NUE Urban Concepts (NUC) **(Consultant)** is pleased to provide a scope of service to develop a mobility action plan and mobility fee for the City of Flagler Beach **(City)**. An adopted mobility action plan would serve as the basis for development of a mobility fee. The mobility action plan will set the framework for follow-on actions to be undertaken by the City. The mobility action plan will also incorporate projects, to the extent they are still priorities, identified in other adopted plans, such as a Downtown Master Plan or Long Range Transportation Plan.

One of the concepts that could be incorporated into the mobility action plan would be the concept of a park once environment, with the potential for transit circulators on both land and water. The other concept will include a recommendation for street quality of service (QOS) standards, based on posted speed limits, that could replace roadway level of service standards for City Streets and establish the framework for implementation of low speed shared streets between the Matanzas River and the Atlantic.

A mobility fee is a one-time fee charged to new development and redevelopment to mitigate any transportation impacts from that development. The adoption of a mobility fee would serve as an alternative to transportation concurrency and proportionate share. The mobility fee would provide Flagler Beach with a revenue funding source that it controls and prioritizes based on the projects identified in the mobility action plan. One concept that has worked well in other beach front communities is basing residential fees on square footage, versus per dwelling unit, to account for tear downs and impacts from building larger units. Another concept is assessing vacation rentals per room, excluding kitchens and baths, similar to other overnight accommodations, as opposed to per dwelling unit.

The development of a mobility action plan and mobility fee will require follow-on initiatives (aka actions) to develop administration, implementation, and funding steps for the mobility projects. Some of these initiatives are included as additional tasks, others would be undertaken by the City as part of day to day administration and implementation. Many of these initiatives can be funded either from collected mobility fees or from a service charge based on a study that is applied to mobility fees to help off-set the cost to administer, implement, and update mobility fees consistent with case law and Florida Statute.

HB 479 was adopted by the Florida Legislature this past session and went into effect on October 1st, 2024. HB 479 updated the criteria for development of a mobility plan and a mobility fee. HB 479 also requires that municipalities and counties negotiate the mitigation of transportation impacts, where both local governments attempt to collect a transportation mitigation fee from one development. Since Flagler County does not require the City to collect its transportation impact fee, this provision of HB 479 would not apply to the City. However, it may be prudent for the City to consider what would occur should the County attempt to collect a transportation mitigation fee.

The final deliverable for the Mobility Action Plan & Mobility Fee will consist of **1) a Mobility Action Plan; 2) a Mobility Fee Technical Report**; and **3)** a **Mobility Fee ordinance**. Through a separate additional task, the mobility action plan would need to be incorporated into the Comprehensive Plan, either through inclusion of plans and projects or as an implementing measure of the Comprehensive Plan.

The scope of service identifies primary tasks and subtasks. The scope of service also includes a cost, and hours estimate per primary task. The scope of service is as follows:

MOBILITY SCOPE OF SERVICE:

TASK 1: MOBILITY ACTION PLAN DEVELOPMENT

TASK 1.1 – DATA & PLAN REVIEW: The Consultant will review existing GIS and other available data and resources provided by the City including the Comprehensive Plan and Capital Improvements Program, the FDOT Transportation Improvement Program, the River to Sea TPO Long Range Transportation Plan, the 2006 Downtown Master Plan, the Veranda Bay Traffic Impact Analysis, and other relevant plans identified by Flager Beach staff. The review will identify funded and unfunded mobility projects proposed or planned within and adjacent to the City of Flagler Beach.

TASK 1.2 – DATA COLLECTION: The Consultant will collect and compile existing traffic characteristics data for functionally classified arterial and collector roads from the City, County, and FDOT into a traffic characteristics report. The data will include the number of travel lanes, AADT, functional classification, length of segment, speed limits, and LOS Standards. ***Additional traffic counts may be needed if the City does not currently have traffic counts for functionally classified City roads. If traffic counts are not available, an addendum will be required to collect the counts or have the City collect the counts through other means.***

TASK 1.3 – IDENTIFY MOBILITY ACTION PLAN PROJECTS: The Consultant will explore innovative solutions to providing a safe, connected, and integrated multimodal transportation system that moves people whether they are walking, bicycling, riding golf carts or a transit circulator, or driving a vehicle.

The Consultant will incorporate projects identified through Task 1.1. The Consultant will also identify up to ten (10) unique projects and up to fifteen (15) generalized (catch-all) mobility action plan projects not currently identified through Task 1.1 (e.g., Construct high visibility mid-block crossings at up to 10 locations within the City).

All projects will be coordinated with City Staff. The consultant, as part of the 10 mobility action plan projects, will recommend projects for creation of a park once environment as a follow-on initiative and establishment of street QOS standards to promote establishment of low speed shared streets.

The Consultant will review the Veranda Bay Traffic Impact Analysis and evaluate whether additional off-site improvements will be necessary to accommodate the future annexation of the +/- 900 acre proposed development into the City of Flagler Beach as part of the 10 unique projects.

The Consultant will develop GIS map(s) of identified mobility action plan projects.

TASK 1.4 – MOBILITY ACTION PLAN PROJECT COST: The Consultant will prepare planning level cost estimates for the mobility action plan projects. The planning level cost for the proposed mobility action plan projects will be based on the most recent and localized data as required by Florida Statute. ***The City shall provide any current cost associated with planning, design right-of-way, inspection, landscape, streetscape, utility relocation, stormwater, and construction cost from any recent multimodal projects.***

TASK 1.5 – ESTABLISH MULTIMODAL CAPACITIES: The Consultant will calculate multimodal capacities for projects to be included in the mobility action plan. Multimodal capacities are necessary to ensure mobility projects are adequate to accommodate future travel demand and new development is not charged more than its fair share. The multimodal capacities will also be used in the mobility fee calculations.

Deliverables: (1) Mobility Action Plan with table that includes project, description, planning level cost estimate, multimodal capacity, and time frames for prioritization. (2) Maps of the location of mobility action plan projects.

TASK 2: MOBILITY FEE DEVELOPMENT

TASK 2.1 – MOBILITY FEE SCHEDULE: The Consultant will evaluate the City's Future Land Use Map, and existing development patterns and develop a proposed schedule of land uses. The City will feature a single assessment area and a single benefit district. ***Additional mobility fee schedule alternatives, multiple assessment areas, or multiple benefit districts would be considered an additional service.***

TASK 2.2 – PROJECT FUTURE GROWTH: The Consultant will evaluate the latest Central Florida Regional Planning Model (CFRPM) to obtain base year and future year vehicle miles of travel (VMT) data. The calculated growth rate would then be used to project travel demand (aka VMT) out to 2045.

TAZ data from the Central Florida Regional Planning Model (CFRPM) will be used to obtain population and employment projections to demonstrate future growth and need as required to meet the first part of the dual rational nexus test. The VMT (aka travel demand) data will be used for planning and to calculate a mobility fee.

TASK 2.3 – PERSON MILES OF TRAVEL (PMT) Factor: The Consultant will develop a person miles of travel (PMT) factor to convert vehicle miles of travel to person miles of travel to account for multiple modes of travel within the City. The PMT factor will be based upon the 2022 National Household Travel Survey. The PMT factor will be used to establish a person miles of travel rate to be used in the mobility fee calculation and the new growth evaluation to ensure new development is not being charged more than its fair share of the cost of mobility action plan projects.

TASK 2.4 – BACKLOG EVALUATION: The Consultant will conduct an existing areawide level of service analysis for the study area network. The evaluation will be conducted to ensure new growth is not paying for existing deficiencies.

TASK 2.5 – NEW GROWTH EVALUATION: The Consultant will conduct a new growth evaluation based on the projected increase in person miles of travel using the VMT data, the PMT factor and the increase in multimodal capacity. The analysis will be utilized to develop a new growth evaluation factor to demonstrate that new growth is not being charged for more than its fair share of projects.

TASK 2.6 – REVENUE ADJUSTMENTS: The Consultant will evaluate existing funding sources for multimodal projects. Case law requires that existing funding for multimodal projects is factored into the mobility fee. Funding may include sales tax, gas tax, special assessments and grants that are reasonably available to fund the multimodal improvements. Revenue funding adjustments will be developed based on whole dollar funding availability to reduce overall cost.

TASK 2.7 – PERSON MILES OF CAPACITY (PMC) RATE: The Consultant will develop a person mile of capacity rate based upon the cost of mobility action plan projects, with adjustments for deficiencies, new growth, and available revenues. The rate will be divided by the increase in person miles of travel based on the regional travel demand model.

TASK 2.8 – PERSON TRAVEL DEMAND (PTD) FOR LAND USES: The Consultant will calculate a person travel demand (PTD) for each land use identified in the mobility fee schedule for travel within the City. The PTD will be based on trip generation rates, adjusted for pass-by and internal capture, adjustments for limited access facilities, origin and destination, and person trips and trip lengths from the 2022 National Household Travel Survey Data, adjusted for local conditions and City travel.

TASK 2.9 – CALCULATE THE MOBILITY FEE: The Consultant will develop a mobility fee schedule based on the data and analysis from prior tasks. The mobility fee schedule will include the applicable units of measure and the mobility fee rates to be assessed per land use. ***The mobility fee will address all requirements of HB 479.***

TASK 2.10 - MOBILITY FEE TECHNICAL REPORT: A technical report will document the methodology and data used to develop the mobility action plan and the mobility fee. The technical report will provide the factual basis to demonstrate the mobility action plan and mobility fee meets legal and statutory requirements. The report will include an in-depth legal review and include definitions and future recommendations.

Deliverable: Mobility Fee Technical Report documenting the methodology used to develop the Mobility Fee Schedule.

TASK 3: MOBILITY FEE ORDINANCE

The Consultant will assist the City with development of a mobility fee implementing ordinance. The Consultant shall take the lead in development of the ordinance with assistance from the City Attorney. The Mobility Fee Ordinance provides the legal basis to enact a mobility fee and allows the City to begin to assess new development for its multimodal travel impact. ***The City will provide the title block, the Code or Ordinance or Land Development Article, Section and Chapter location, and an Ordinance format with the ordinance formatting detailed in a word document.***

Deliverable: Mobility Fee Ordinance.

TASK 4: BUSINESS IMPACT STATEMENT

The consultant will develop a "Business Impact Statement" for the Mobility Fee Ordinance as required by Florida Statute including information such as the proposed ordinance's purpose, estimated economic impact on businesses, and compliance costs.

TASK 5: MEETINGS, PUBLIC HEARINGS & WORKSHOPS

TASK 5.1 - PRESENTATIONS: The Consultant shall prepare presentations as required for meetings, hearings, and workshops.

TASK 5.2 - CONFERENCE CALLS: The Consultant shall participate in conference calls scheduled by the City or as requested by the City.

TASK 5.3 – IN-PERSON MEETINGS: Consultant will participate in a maximum of five (5) in person meetings, with one (1) consultant team members consisting of some combination of: staff meetings, public workshops, community outreach, hearings, and coordination with governmental and transportation partners. Additional team members will attend virtually.

All outreach materials, advertisement, social media engagement, meeting locations, food and beverage, meeting set-ups, and meeting logistics is the responsibility of the City.

Hours for meetings, hearings, and workshops shall be based on the time, including travel, allocated for preparation and participation in meetings. There will be a maximum number of hours allocated. If the City utilizes the allotment of hours, then the scope will require an amendment to address the need for additional hours.

Final Deliverables:

(1) Mobility Action Plan
(2) Mobility Fee Technical Report
(3) Mobility Fee Ordinance
(4) Business Impact Statement

All deliverables are in an electronic format only. No hardcopy materials are included in this scope.

CALENDAR

Florida Statute requires that the Study be completed, and the fee adopted within one year from the date that the study commenced.

Scope Cost: The cost per hour is based on a rate of $200 per hour. The total number of projected hours is up to 700 and the total cost is not to exceed $140,000. Of that total, 100 hours and $20,000, is for meetings, hearings and public workshops, which is fairly typical for this type of service.

TASK #	TASK	HOURS	COST
1	MOBILITY ACTION PLAN DEVELOPMENT	230	$46,000
2	MOBILITY FEE DEVELOPMENT	250	$50,000
3	MOBILITY FEE ORDINANCE	100	$20,000
4	BUSINESS IMPACT STATEMENT	20	$4,000
5	MEETINGS, HEARINGS & PUBLIC WORKSHOPS	100	$20,000
Total		700	140,000

ADDITIONAL TASK (NOT COVERED IN THE SCOPE):

COMPREHENSIVE PLAN AMENDMENT: The Consultant will integrate the mobility action plan and mobility fee into the Comprehensive Plan. The Consultant will also update goals, objectives, and policies (GOP's) to ensure consistency with Florida Statute. The amendment will include an overview behind the amended GOPs and the necessary data inventory and analysis. **Hours Estimate: (130 hours, includes Planning Board, transmittal & adoption hearings, and response to agency comments)**

Note: This is a follow on task to be completed within one (1) year from date of adoption to insure internal consistency. Staff would advertise Comprehensive Plan Amendment hearings and formally submit the amendment to Florida Commerce. The consultant would assist with the staff report, support documentation and the ordinance.

ADDITIONAL TASK CONSIDERATIONS (NOT COVERED IN THE SCOPE):

Tasks included in the scope above are legally and statutorily required tasks. The following are tasks requested by local governments to compliment the day-to-day assessment, administration, and implementation of a mobility action plan and mobility fee. The following are related to the Mobility Action Plan and Mobility Fee:

PARKING ONCE ENVIRONEMNT: The Consultant will further refine the components to create a park once environment with recommendations on phasing of parking and ideal locations for a potential parking structure. Planning for transit circulation via low speed electric vehicles and multi-passenger water borne vehicles (aka water taxi) will be incorporated into planning for a park once environment. The planning initiative will also include recommendations for variable message signs related to parking availability.
Hours Estimate: (100 to 150 hours)

PARKING MANAGEMENT STRATEGIES: The Consultant will develop parking and curbside management strategies to include dynamic pricing, time of day restrictions, residential parking permit programs, visitor parking passes for overnight accommodations and coordinating with the State to regulate on-street parking. Coordination with the County may also include development of a County resident program to pay for beach parking. While there is some potential overlap with creating a park once environment, this program is more focused on capturing revenue for ongoing parking demand and developing a program that protects City residents. **Hours Estimate: (100 to 150 hours)**

LOW SPEED SHARED STREETS PROGRAM: The Consultant will develop a low speed shared streets program for City Streets east of the Matanzas River. This program will integrate Street Quality of Service (QOS) Standards and allow for the City to lower speed limits on City Streets (the State sets speed limits on State Roads). The speed limits could range between 15 MPH to 25 MPH, with 20 MPH being a representative speed limit.

Just posting speed limits won't result in a reduction in speeds. There are geometric and physical changes that will be needed to existing ROW. Some involve traffic calming techniques through physical vertical deflection (aka chicane, mini roundabout, raised intersection) other involve horizontal changes through pavement markings that limit effective pavement width. Some local governments elect to go as far as conversion of streets to one-way pairs and adding either dedicated spaces for bicycles, golf carts, and scooters, or the addition of metered on-street parking to help off-set maintenance cost and pay for improvements. **Hours Estimate: (125 to 175 hours)**

FINANCE COORDINATION: Florida Statute requires that Mobility Fees be maintained in separate funding accounts to allow for annual auditing. In addition, there are legal requirements regarding the collection and expenditure of Mobility Fee funds and the ability to audit said expenditures. Coordination is required with Finance and Accounting and Budgeting Departments to ensure fund accounts are consistent with the adopted ordinance and Statutory requirements. **Hours Estimate: (10 to 15 hours)**

BUILDING PERMIT INTEGRATION: The City's permit system may need to be updated to process the collection of mobility fees. Some permit systems are relatively simple and can be accommodated through simple look up tables and excel spreadsheets. Other permit systems are propriety and require coordination with third party venders to initiate updates. Permit clerks may need to be trained, and a process established for quality control checks. The Building Permit Department is also the front-line interaction with the development community. There is oftentimes further outreach done with the development community and builders during the implementation stage. Florida Statute requires a minimum of 90 days between the adoption of a Fee Implementing Ordinance and collection of the Fee, unless the fee is lower than existing fees. **Hours Estimate: (15 to 20 hours)**

SITE / MOBILITY IMPACT ANALYSIS REQUIREMENTS: The City would be eliminating transportation concurrency through adoption of a mobility action plan and mobility fee. The City may wish to consider developing site / mobility impact analysis requirements as a replacement of traffic impact analysis. These requirements address site related turn lanes, traffic control devices, trip generation, driveway design, access management, on-site and off-site multimodal improvements, internal circulation, and parking. While these requirements can be included in Land Development Regulations, they are also provided as separate stand-alone requirements. **Hours Estimate: (100 to 150 hours)**

ADMINISTRATIVE MANUAL: There are many day-to-day administrative items that arise in the assessment and collection of fees. Some local governments have developed an administrative manual to address these issues. The manual often incudes forms, review fees for special request related to credit, determinations, and offsets. The manual also provides consistency in implementation to address changes in Staff administering the ordinance and provides back-up to permit clerks and interim administrators should the individual(s) tasked with implementing the Fee not be available. Florida Statute has placed the burden on local governments to defend not only its Fee but also its administration
Hours Estimate: (125 to 150 hours).

ADMINISTRATIVE SERVICE CHARGES: To relieve impact to the general fund, local governments frequently develop administrative service charges and fees to administer and implement the mobility fee. Florida Statute requires service charges not exceed the cost to fully administer a mobility fee. NUE Urban Concepts can prepare a report documenting the cost to administer and implement a mobility fee **Hours Estimate: (75 to 100 hours)**.

INTERLOCAL AGREEMENT: The Consultant will assist the City with developing an interlocal agreement with Flagler County. The interlocal update would include any mobility fees to be set aside for County Roads and County impact fees to be set aside for City Roads. The update would also identify the County Road projects for which the mobility fees would be expended and the City Roads for which County impact fees would be required. The interlocal agreement would address requirements of HB 479. **Hours Estimate: (100 to 125 hours)**.

Thank you for your consideration of this first draft scope of services. Please let me know if have any questions.

Sincerely,

Jonathan B. Paul, AICP
Principal

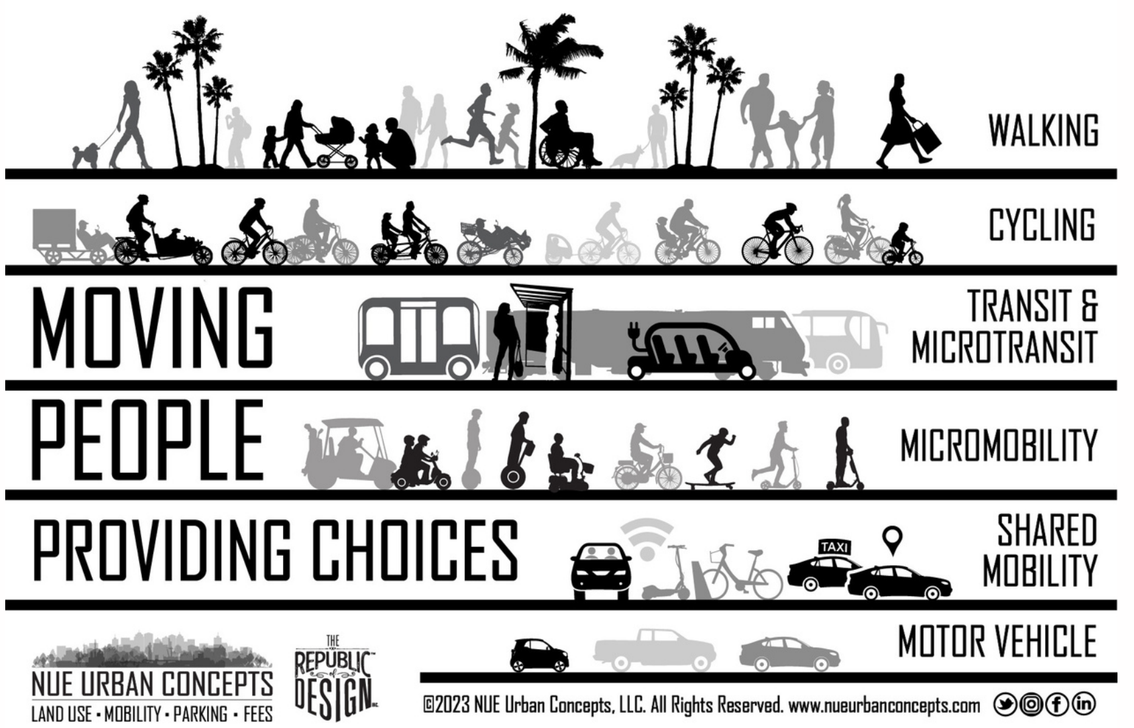
**Based on plan of improvements (e.g. Mobility Plan, Transportation Plan, Capital Improvements Program) **Fee developed by NUE Urban Concepts*

Additional local governments currently undergoing adoption or update of mobility fees by NUE Urban Concepts include Boynton Beach, Cape Coral, Crestview, Flagler Beach, Gainesville (Mobility Fee), Lake City, Palm Springs, and West Palm Beach.



What is a Mobility Plan?

- Vision for the City's transportation system to transition from one focused primarily on **moving vehicles quickly** to **moving people safely** and providing **mobility choices**

- **Long-term plan** (2050 horizon)

- Identifies project needs at a high level

- Required by Florida Statute to serve as basis for development of a **mobility fee**

What is a Mobility Fee?

- Alternative to transportation concurrency & road impact fees
- One-time fee paid by (re) development
- Intended to mitigate transportation impact
- Creates city-controlled funding source
- Funds variety of multimodal infrastructure
- Funds policies, programs, and services

Road Impact Fee vs Mobility Fee

Impact Fees

- Based on general cost of capacity, not specific projects
- Fund adding road capacity
- Based on future vehicle miles of travel

Mobility Fees

- **Based on a plan of mobility projects**
- Fund variety of multimodal facilities, plans, programs, and policies
- Based on cost of multimodal projects in the Mobility Plan
- Based on person miles of travel and person travel demand

DEVELOPING A **MOBILITY PLAN & MOBILITY FEE**

1 LAND USE EVALUATION

Review existing development patterns, future Land Use Plans, Special Area Plans, & Zoning Districts

2 DATA COLLECTION

Existing traffic & travel characteristics, demographics, mode share, & multimodal infrastructure

3 EXISTING CONDITIONS EVALUATION

Identify existing system-level traffic backlog & deficiency

(Function: Demonstrates that new growth is not paying for existing backlog & deficiency)

4 PROJECT FUTURE GROWTH

Calculate Projected Growth in population, employment, & Vehicle & Person Miles of Travel (VMT & PMT). Alternatives: Calculate VMT & PMT based on future land use for defined area or establish future mode share goals

(Function: The first component of the dual rational nexus test is to demonstrate need)

5 PREPARE MULTIMODAL PROJECT COST

Develop Planning Level Cost Estimates for Mobility Plan projects

6 ESTABLISH SERVICE STANDARDS

Develop Areawide Road Level of Service (LOS) & Multimodal Quality of Service (QOS) Standards for Mobility Plan projects

7 ESTABLISH MULTIMODAL CAPACITIES

Develop Multimodal Capacities for Mobility Plan projects based on LOS & QOS Standards

8 IDENTIFY AVAILABLE FUNDING

Existing and Projected Funding Sources

(Function: Ensures new development is not paying twice for the same mobility projects by recognizing reasonable anticipated funding of mobility plan projects)

9 CONDUCT NEW GROWTH EVALUATION

Establish the share of Mobility Plan projects assignable & attributable to New Growth

(Function: Demonstrates new growth is not responsible for more than its fair share of mobility plan projects)

10 CALCULATE PERSON MILES OF CAPACITY (PMC) OR TRAVEL RATE (PMT)

Based on Steps 3 to 8 develop a PMC or PMT Mobility Fee Rate attributable to New Growth

(Function: Demonstrates new growth is not being charged for existing deficiencies and is being assessed more than its fair share of the cost of mobility plan projects)

11 ESTABLISH ASSESSMENT AREAS

Defined Areas for Mobility Fee assessment & collection

Function: Reflects localized differences in existing infrastructure, the need for mobility plan projects, & PMT

12 ESTABLISH MOBILITY FEE SCHEDULE OF USES

Develop a Schedule of Uses based on Land Use evaluation & established Assessment Areas

13 CALCULATE PERSON TRAVEL DEMAND PER USE

Based on Trip Generation, % of new trips, Person Trip Conversion factors, Person Trip length, Assessment Areas, Limited Access Travel, & Origin & Destination adjustments

(Function: Used to demonstrate that the mobility fee is roughly proportional to the impact of new growth)

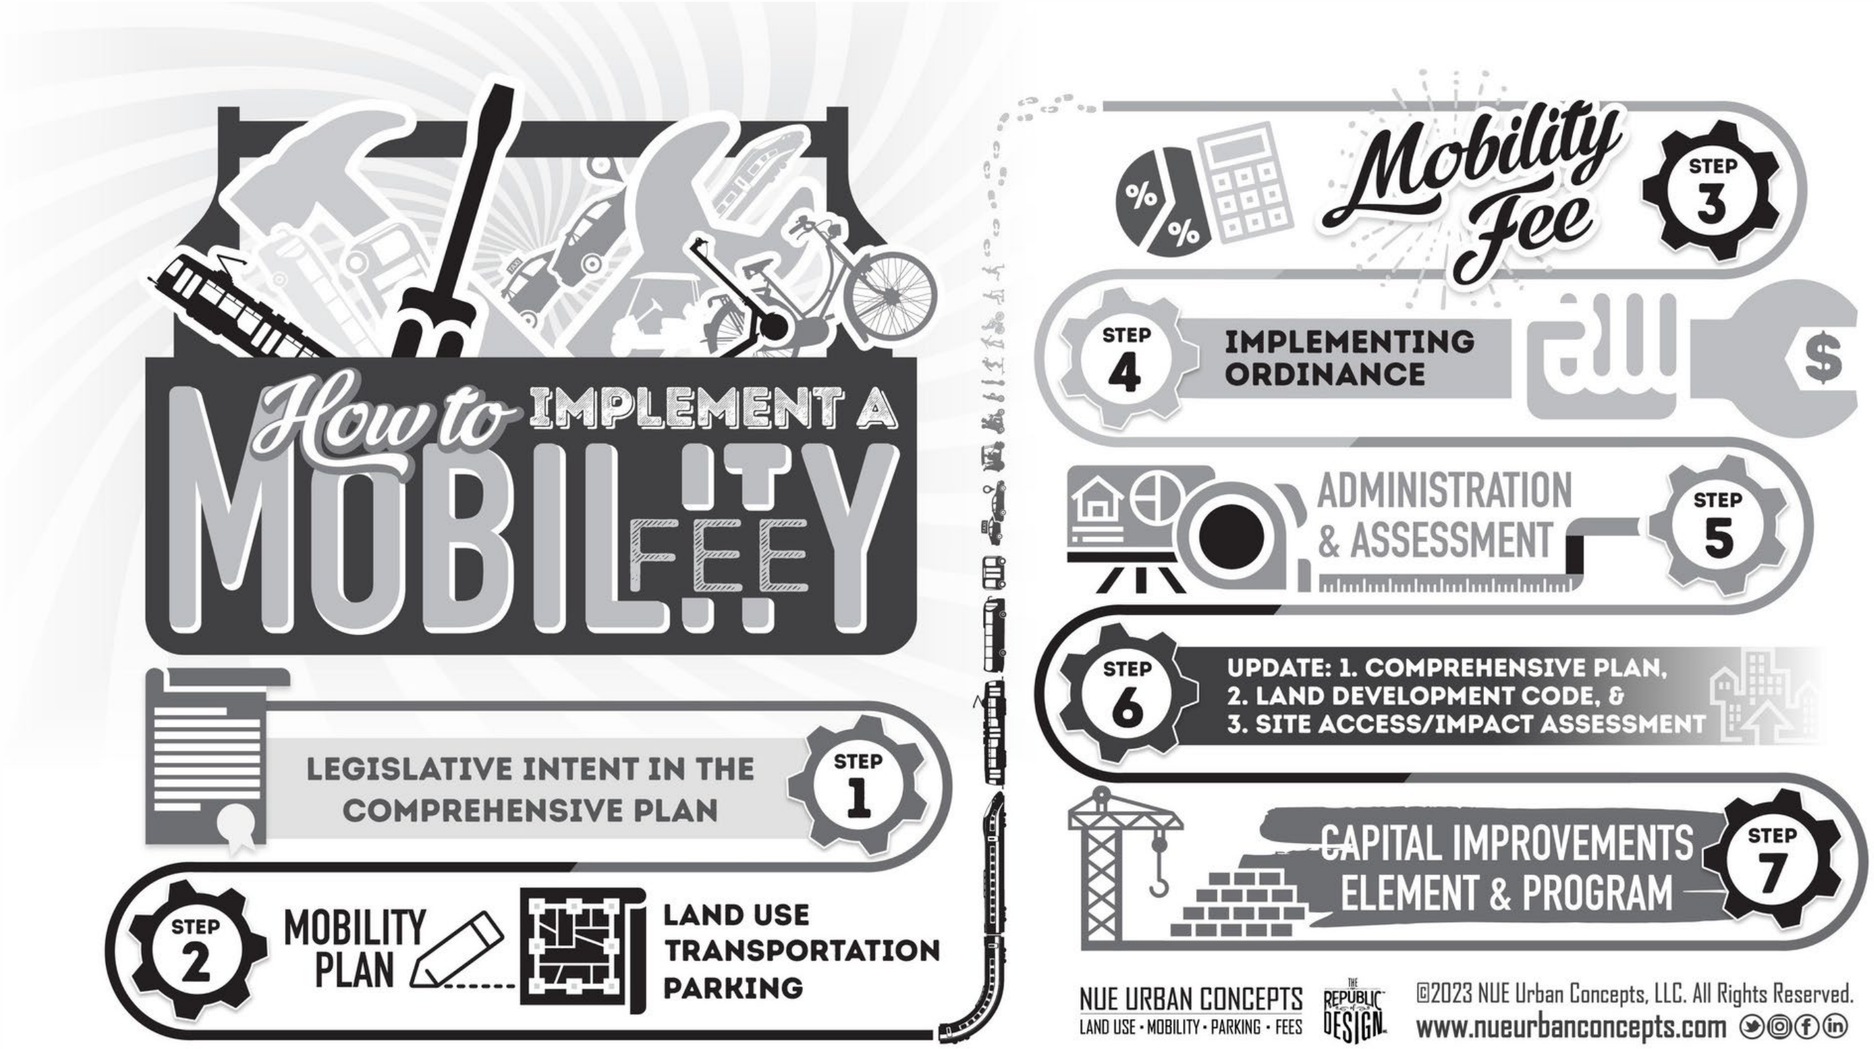
14 CALCULATE MOBILITY FEE PER USE

Establish a Mobility Fee per Specific Use & Assessment Area based on Steps 12, 14, & 15

(Function: Calculation of mobility fees to be paid by new development to fund assignable and attributable mobility plan projects)

15 ESTABLISH BENEFIT DISTRICTS

Define Benefit Districts for expenditure of Mobility Fee to fund Mobility Plan projects



(Function: The second component of the dual rational nexus test is to demonstrate benefit)

16 DEVELOP MOBILITY FEE TECHNICAL REPORT

Document Data Sources and Methodology

Function: Demonstrates that the data & methodology used to calculate the mobility fee is legally & statutorily compliant. Provides documentation used to develop or update mobility fee implementing ordinance)

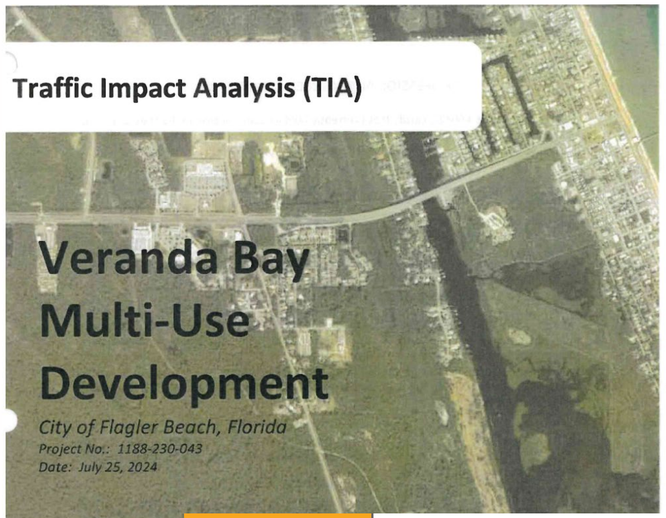
How to Implement a Mobility

How to Assess a Mobility Fee?

The Mobility Fee features two assessment areas: (1) Within the Multimodal District; and (2) Outside the Multimodal District. The Mobility Fee is lower within the Multimodal District due to shorter trip lengths, mixture of land uses, and the interconnected transportation network. Any areas that annex into the City would be assessed the Mobility Fee based on the Outside the Multimodal District rates. Assessment Areas are established as part of the legally and statutorily required rough proportionality test.

The Mobility Fee will feature a Single Benefit District. Mobility Fees collected within the City can be spent on multimodal projects throughout the City. Travel patterns are citywide and multimodal projects will serve residents and businesses throughout the City. A Benefit District is established to meet the second requirement of the legally and statutorily required dual rational nexus test. The first requirement of the legally and statutorily required dual rational nexus test is addressed based on future person travel demand and is addressed in the Mobility Plan and Mobility Fee technical Report.

Mobility Fee Schedule



Use Categories, Land Uses Classifications, and Representative Land Uses	*Unit of Measure*	*Mobility Fee*
Residential & Lodging Uses		
Residential	per sq. ft.	$1.05
Overnight Lodging (Bed & breakfast, Hotel, Inn, Motel, Vacation Rental)	per room	$1,763
Mobile Residence (Mobile Home, RV, Home on Wheels, Travel Trailer)	per space/lot	$1,216
Institutional Uses		
Community Serving (Civic, Place of Assembly, Museum, Gallery)	per sq. ft.	$0.86
Long Term Care (Assisted Living, Congregate Care Facility, Nursing Facility)	per sq. ft.	$0.87
Private Education (Day Care, Private Primary School, Pre-K)	per sq. ft.	$1.57
Industrial Uses		
Industrial (Assembly, Manufacturing, Nursery, Outdoor Storage, Warehouse, Utilities)	per sq. ft.	$0.58
Recreational Uses		
Indoor Commercial Recreation (Gym, Indoor Sports, Kids Activities, Recreation)	per sq. ft.	$3.54
Outdoor Commercial Recreation (Amusement, Golf, Multi-Purpose, Sports, Tennis)	per acre	$1,873
Marina (Including dry storage)	per berth	$370
Office Uses		
Office (Bank, General, Higher Education, Professional)	per sq. ft.	$1.62
Medical Office (Clinic, Dental, Emergency Care, Hospital, Medical, Veterinary)	per sq. ft.	$2.43

Why Mobility Plans & Fees Work

- Allows city to plan and **fund a variety of multimodal mobility projects**
- Helps address short-term, **day-to-day needs**
- Provides **comprehensive vision** to guide capital projects and development
- Assists city in **prioritizing** mobility projects to best meet the needs of the city
- Helps the City **balance** community growth and reducing congestion
- Opens up additional **funding opportunities** for mobility projects
- Provides a framework for innovation

Identify Future Roadway & Multimodal Needs

Develop Mobility Plan

CITY OF NORTH MIAMI 2045 MOBILITY PLAN
STREETS PLAN

2040 MOBILITY PLAN: WALKING & BICYCLING PLAN

To enhance safety and connectivity for people walking and bicycling, a network of protected bike lanes and trails is proposed on City, County and State roads. In addition, a multimodal riverwalk is proposed along the redeveloping San Sebastian waterfront from King Street to SR 312. There are also several high-visibility crosswalks proposed at key intersections.

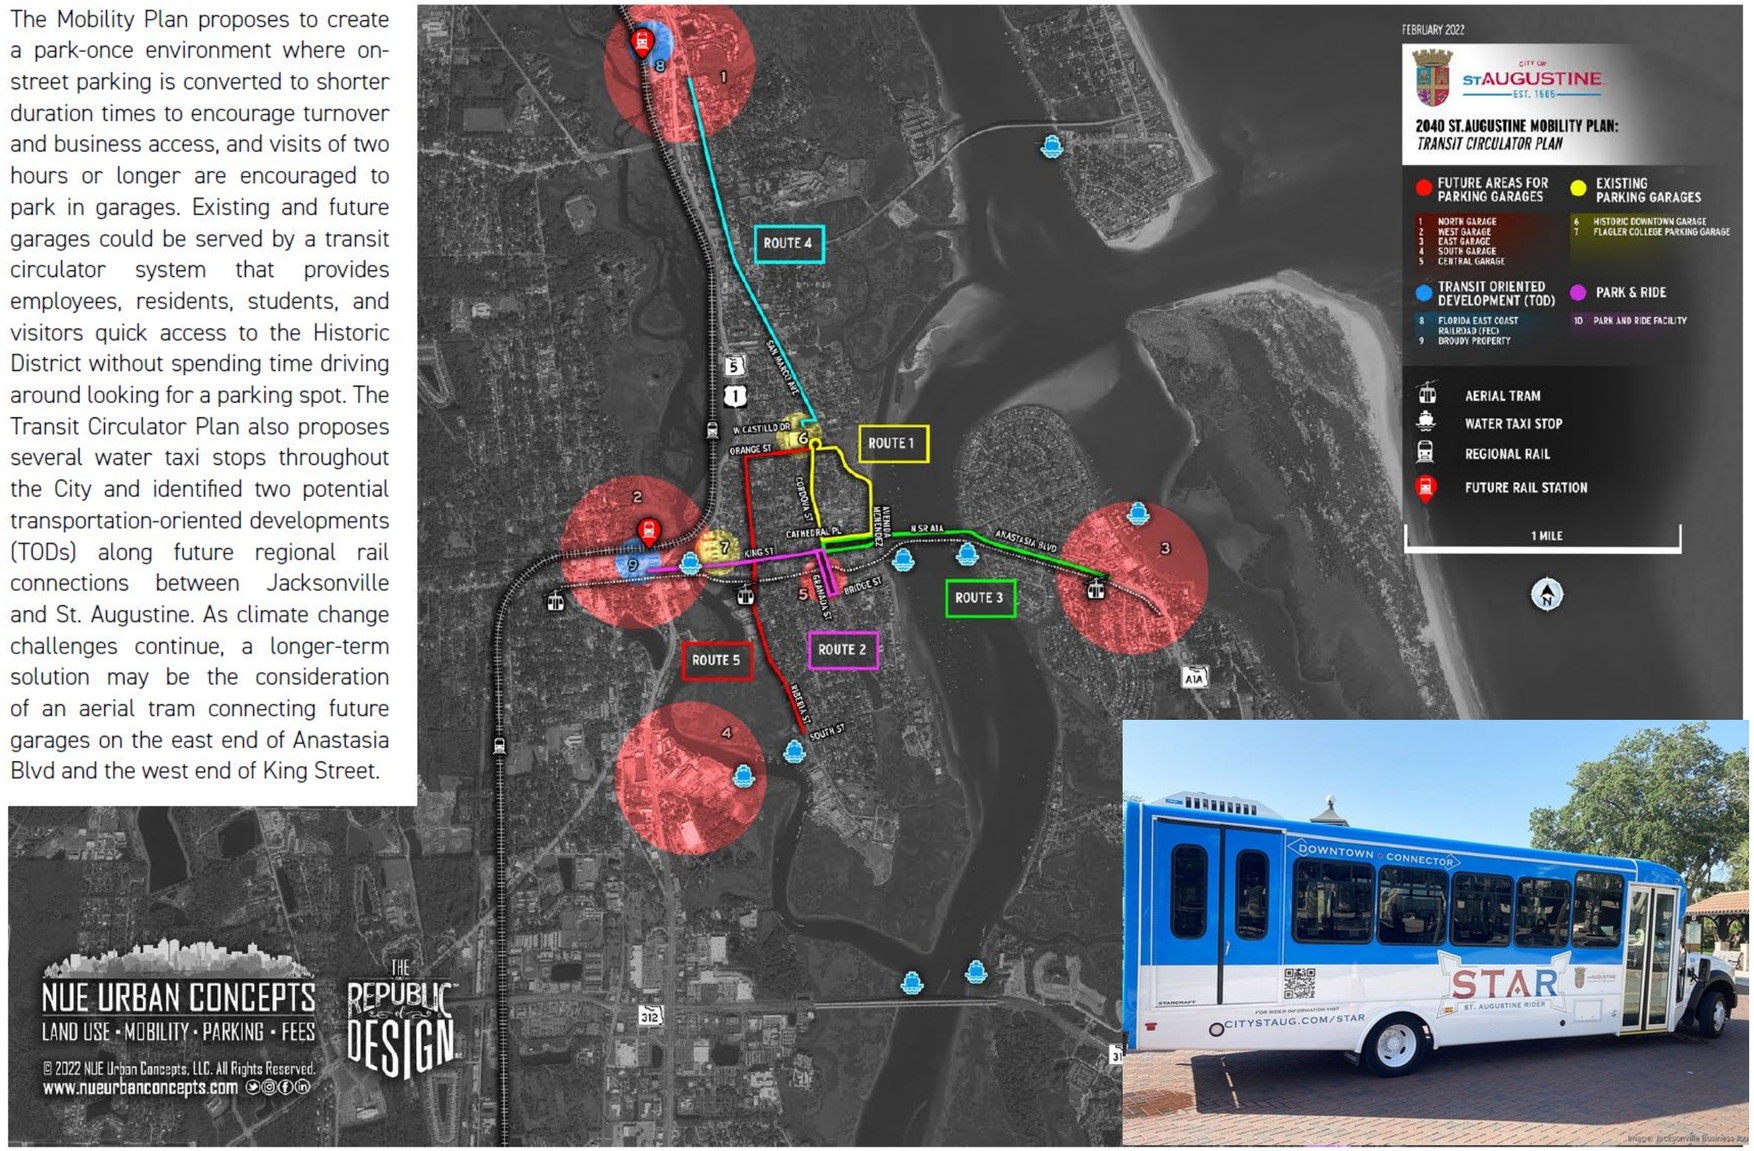
What Types of Projects Will a Mobility Fee Fund?

Everything that can be funded with road impact fees, plus the following:

- Sidewalks
- Multi-use/shared-use paths
- Greenways
- Bike lanes
- Streetscape & landscape
- Traffic calming / low speed streets
- Roundabouts / traffic circles
- Micromobility & microtransit
- Policies, programs, services and studies
- Green infrastructure
- Parking
- Mobility hubs
- Tactical urbanism (quick build)
- Transit circulators
- Transit vehicles
- Transit stop enhancements
- Safety improvements & upgrades

Park Once Environment

City of St. Augustine “Park Once” Environment



Park Once Environment

City of St. Augustine Transit Circulator Plan

The Mobility Plan proposes to create a park-once environment where on-street parking is converted to shorter duration times to encourage turnover and business access, and visits of two hours or longer are encouraged to park in garages. Existing and future garages could be served by a transit circulator system that provides employees, residents, students, and visitors quick access to the Historic District without spending time driving around looking for a parking spot. The Transit Circulator Plan also proposes several water taxi stops throughout the City and identified two potential transportation-oriented developments (TODs) along future regional rail connections between Jacksonville and St. Augustine. As climate change challenges continue, a longer-term solution may be the consideration of an aerial tram connecting future garages on the east end of Anastasia Blvd and the west end of King Street.

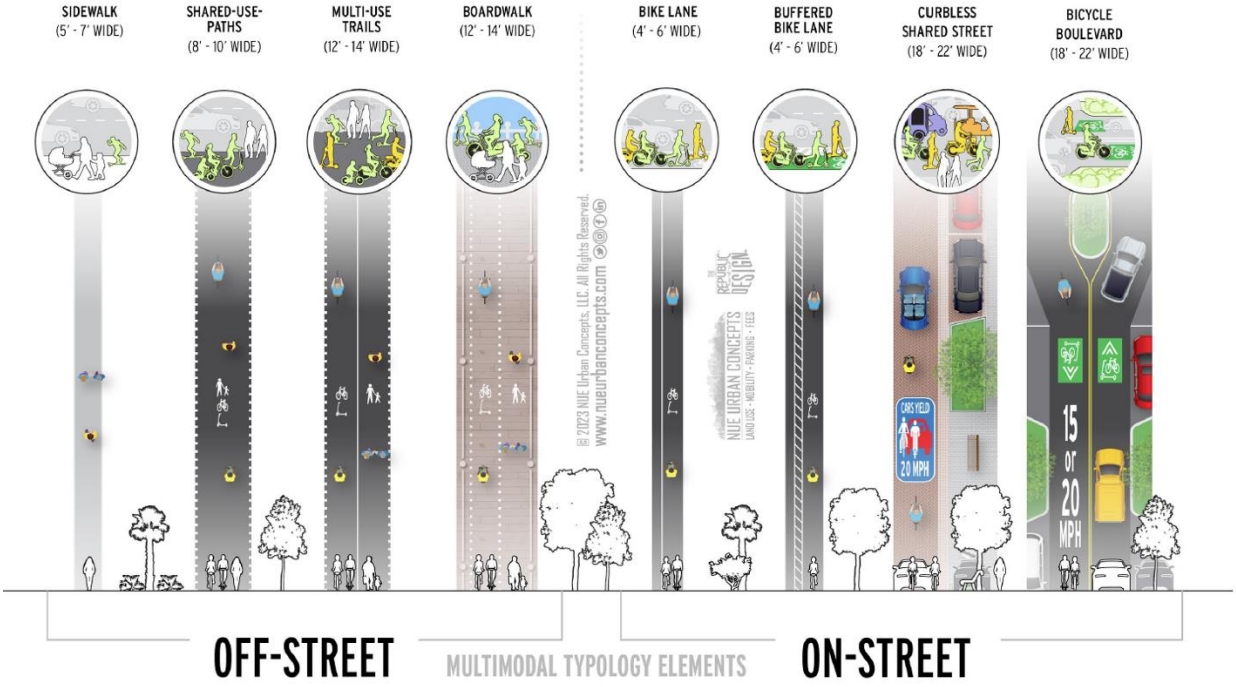
THE CITY OF FLAGLER BEACH
MOBILITY PLAN & MOBILITY FEE
FREQUENTLY ASKED QUESTIONS (FAQ)

WHY DOES THE CITY NEED A MOBILITY PLAN?

Development of a mobility plan would enable the City to move towards further development of a connected and integrated multimodal transportation system and to develop a comprehensive vision for mobility in Flagler Beach. Identification of mobility plan projects would assist the City in efforts to pursue Federal and State funding in partnership with Flagler County and FDOT.

WHAT IS A MOBILITY PLAN?



A mobility plan is a blueprint from which the City can **reimagine and repurpose** its transportation system **from primarily moving cars** on congested roads towards a multimodal system that **emphasizes safely moving people:** whether they walk, bicycle, ride a golf cart or a transit circulator, need mobility assistance (i.e., wheelchair), use shared mobility, or drive a vehicle.

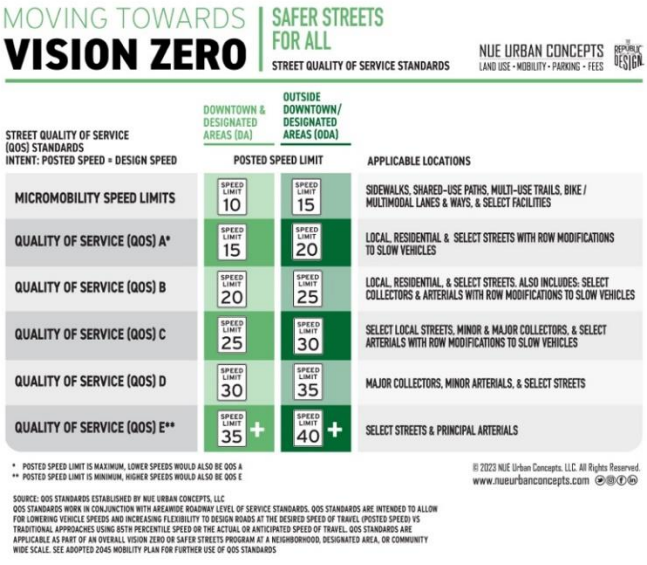
THE CITY OF FLAGLER BEACH
MOBILITY PLAN & MOBILITY FEE
FREQUENTLY ASKED QUESTIONS (FAQ)

WHAT TYPE OF PROJECTS CAN BE INCLUDED IN THE MOBILITY PLAN?

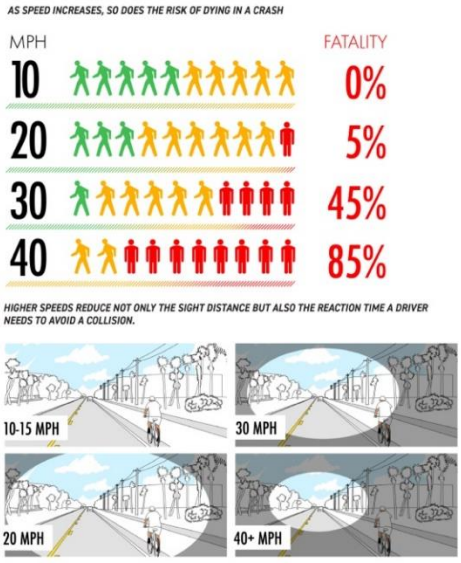
The mobility plan can include sidewalks, paths, trails, bike lanes, curbless shared streets, complete streets, new roads, road upgrades, road widenings, roundabouts, intersection improvements, pedestrian safety improvements, and more. The plan can also include innovative concepts such as transit circulators, mobility on demand, parking structures, and shared mobility services such as electric bikes or golf carts. The establishment of planning initiatives through the mobility plan also allows for incorporation of traffic calming and low speed streets, low speed vehicle policies, landscape and streetscape projects, alleyway revitalization, upgrades to transit stops, road safety initiatives, and improvements for compliance with the Americans with Disabilities Act (ADA) requirements.

WILL THE MOBILITY PLAN INCLUDE COUNTY AND STATE ROADS?

The proposed mobility plan can include improvements on County and State Roads. Since the City does not maintain these roads, the ultimate decision on the design and funding of improvements will be the County and the State. However, both the County and the State do look to municipalities for their feedback and support for projects. A mobility fee would provide the City a funding source to offer as a local contribution for funding improvements that the County and State would not typically fund. The mobility fee would be designed to be adopted as a standalone City mobility fee separate from the County transportation impact fee and to be the only fee assessed within the city limits of Flagler Beach.



THE CITY OF FLAGLER BEACH
MOBILITY PLAN & MOBILITY FEE
FREQUENTLY ASKED QUESTIONS (FAQ)

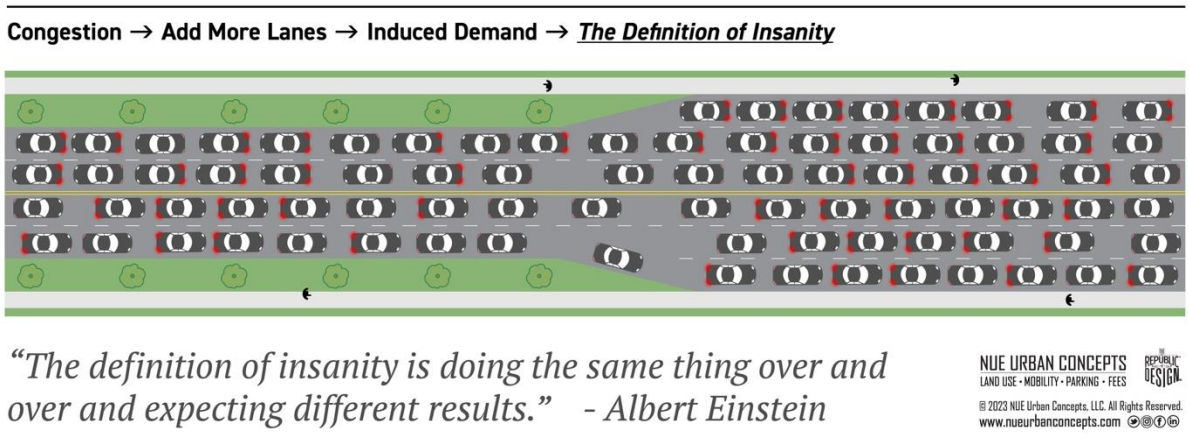


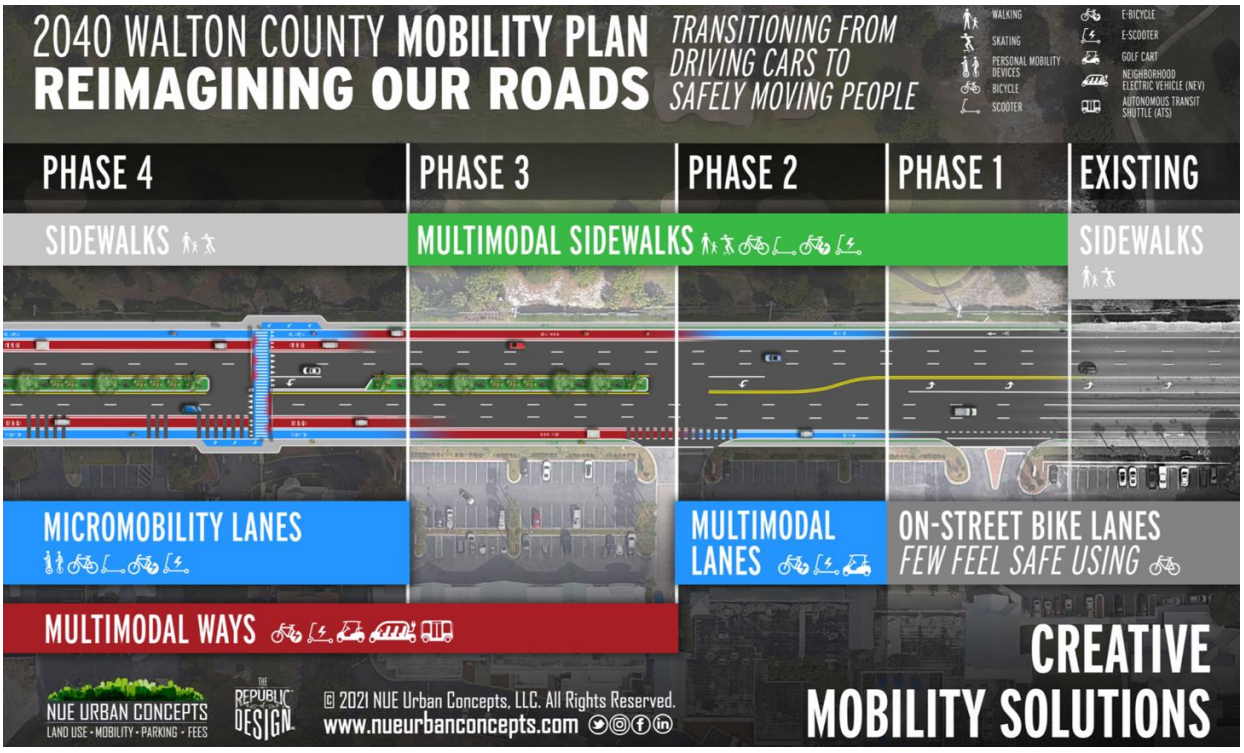
HB 479 was adopted by the Florida Legislature this past session and went into effect on October 1st, 2024. HB 479 updated the criteria for development of a mobility plan and a mobility fee. HB 479 also requires that municipalities and counties negotiate the mitigation of transportation impacts where both local governments attempt to collect a transportation mitigation fee from one development. Since Flagler County does not require the City to collect its transportation impact fee, this provision of HB 479 would not apply to the City. However, it may be prudent for the City to consider what would occur should the County attempt to collect a transportation mitigation fee. House Bill 479, will significantly assist in the coordination process with the County.

CAN THE CITY ELIMINATE ROADWAY LEVEL OF SERVICE (LOS)?

Florida Statute encourages local governments adopting a mobility plan and fee to establish tools and techniques, such as "multimodal level of service standards," to complement its application. Florida Statute also requires the adoption of measurable standards in the Comprehensive Plan to address transportation and mobility. Many local governments are using the development of a mobility plan and mobility fee to move beyond monitoring roadway level of service (LOS) for transportation concurrency and adding roadway capacity.

NUE Urban Concepts has developed Street Quality of Service (QOS) standards, which are then tailored to each local government, that allow local governments to either eliminate or supplement road LOS. The Street QOS is based on posted speed limit and establishes a very simple and straightforward premise: **streets should be designed at the desired speed of travel.** Street QOS allows elected officials to prioritize safety for all users by actively supporting a street QOS of "A" or "B", versus settling for congestion and being resigned to road LOS of "E" or "F".

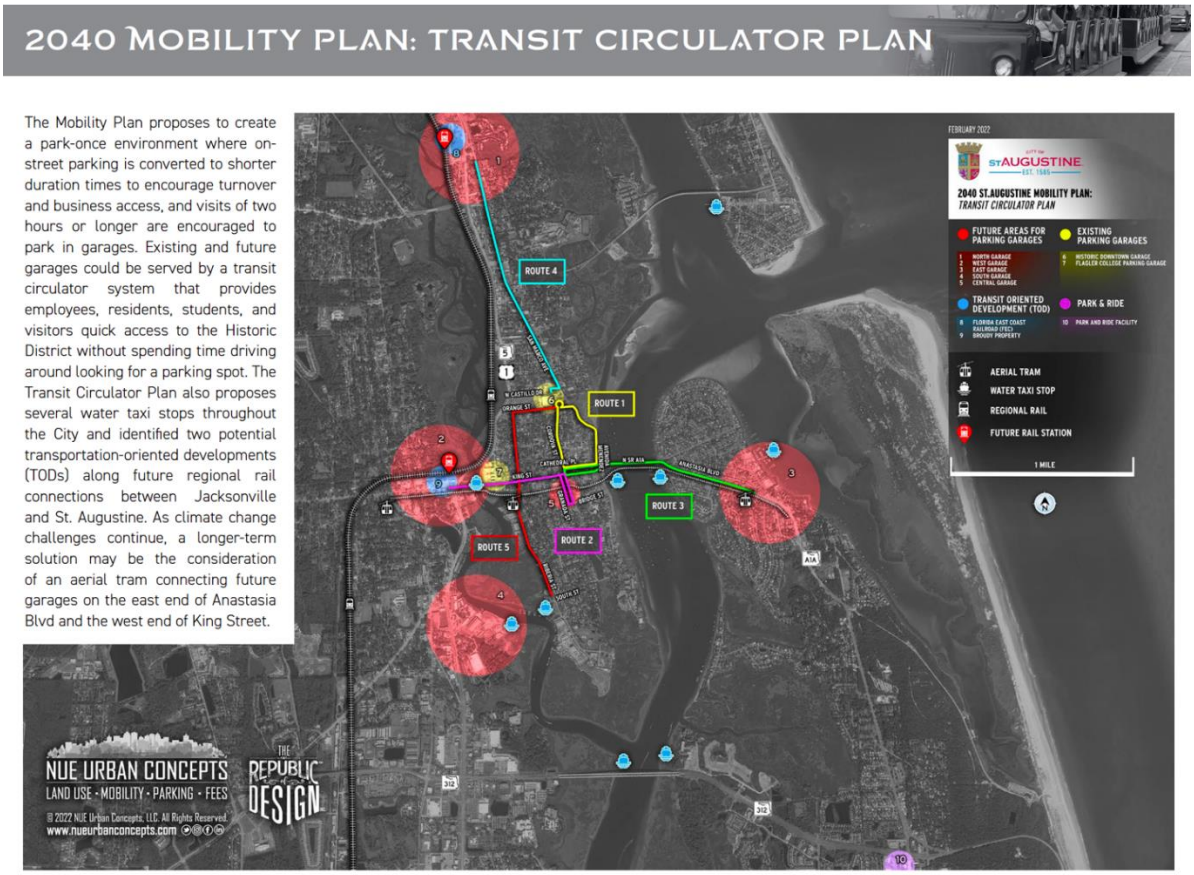




THE CITY OF FLAGLER BEACH
MOBILITY PLAN & MOBILITY FEE
FREQUENTLY ASKED QUESTIONS (FAQ)

IS THERE AN ALTERNATIVE TO CHASING CONGESTION?

No government globally has been able to build enough roads to eliminate congestion. This is due in part to the theory of "induced demand" (aka build it and they will come). The addition of road capacity does not reduce congestion, as the new capacity is used up shortly after being added. The current transportation system did not develop overnight. It is the result of funding and policy decisions over the last 75 years that prioritized the movement of cars. Land use polices that incentivize mixed-use, parking regulations that allow for innovation, and a mobility plan focused on moving people are needed to reimagine and repurpose our roads to enhance mobility.



THE CITY OF FLAGLER BEACH
MOBILITY PLAN & MOBILITY FEE
FREQUENTLY ASKED QUESTIONS (FAQ)

CAN MOBILITY PLANS BE USED TO CREATE A PARK ONCE ENVIRONMENT?

The integration of parking management has become a major component in the development of mobility plans. Developing a park once environment that still recognizes people will drive, but once they reach a destination, the goal is that they use some other form of transportation for mobility. These other forms would be walking, bicycling, riding a scooter, or using microtransit circulator services in the form of neighborhood electric vehicles or rubber-tired trolleys.

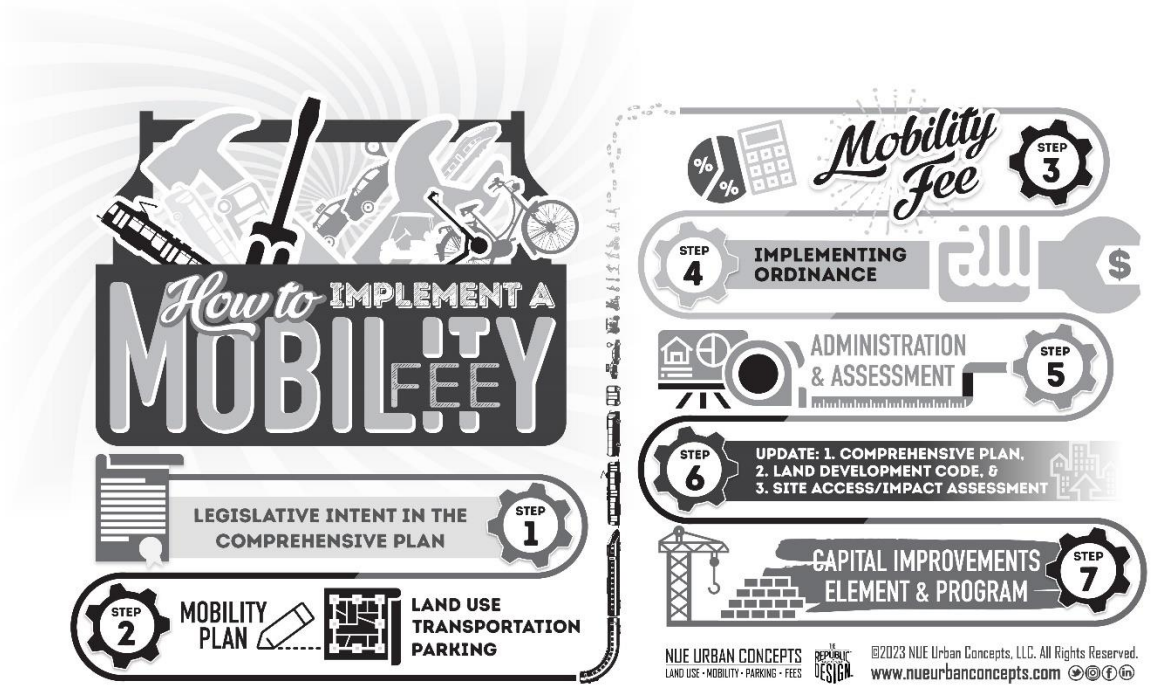
The mobility plan sets the stage for a park once environment and can identify desired locations for mobility hubs with existing or planned parking lots or structures, and then a network of transit circulator routes, water taxis, and/or enhanced bicycle ways to connect residents, destinations, and mobility hubs. There are follow-on planning initiatives that address the specific components of creating a park once environment. The City of St. Augustine's adopted Mobility Plan is a recent example, and the City's mobility fee is a funding source for transit service and vehicles and a change in its approach to parking in its land development regulations.

THE CITY OF FLAGLER BEACH
MOBILITY PLAN & MOBILITY FEE
FREQUENTLY ASKED QUESTIONS (FAQ)

HOW ARE MOBILITY PLANS DIFFERENT THAN OTHER PLANS?

Reimagining and repurposing the City's transportation system from one focused on moving cars to safely moving people requires more than installing bike lanes. Land use policies, as well as design standards, can either facilitate or create barriers to reducing congestion and offering multimodal lifestyles. Mobility Plans take a holistic approach to mobility by integrating transportation with land use. Mobility Plans serve as a tool for managing growth and are a catalyst for new development, redevelopment, and equitable placemaking.

WHAT IS A MOBILITY FEE?



A mobility fee is a **one-time fee** paid by new development activity to the City to mitigate the traffic impact of the development on the City's transportation system. Mobility fees, based on a plan of improvements (i.e., mobility plan), were established by the Legislature in 2013 through Florida Statute 163.3180 to provide new development activity a simplified alternative to transportation concurrency, proportionate share, and road impact fees. The City's **Mobility Fees** will be **based on projects** (improvements, services, programs) adopted as part of the City's **Mobility Plan.** Those **Fees** will be used to **fund the projects** identified in the **Plan.**

THE CITY OF FLAGLER BEACH
MOBILITY PLAN & MOBILITY FEE
FREQUENTLY ASKED QUESTIONS (FAQ)

HOW WILL THE MOBILITY FEE BE DEVELOPED?

The City's mobility fee will be developed based on data and methodologies detailed in a technical report that will be designed to meet what are known as the dual relational nexus test and the rough proportionately test established by case law and Florida Statute. The graphic on the following page shows the steps that are typically undertaken to develop a Mobility Fee. Steps one (1) and six (6) can overlap, depending on the City's existing Comprehensive Plan. Steps five (5) and seven (7) typically occur after adoption of the mobility plan and mobility fee.

WHO PAYS A MOBILITY FEE?

Any new development activity within the City that requires the issuance of a building permit and results in an increase in person travel demand (impact) above the existing use of property will be assessed a mobility fee. Mobility fees are not a tax, and they are not charged to existing homes, businesses, or property; unless there is an addition, change of use, expansion, modification, or redevelopment that **requires issuance of a building permit** and **generates additional person travel demand** above the existing use of property. Florida Statute exempts State of Florida governmental uses, and public and charter schools from paying mobility fees. The City may also elect to exempt other governmental uses, as well as affordable housing.

THE CITY OF FLAGLER BEACH
MOBILITY PLAN & MOBILITY FEE
FREQUENTLY ASKED QUESTIONS (FAQ)

WHEN DOES NEW DEVELOPMENT ACTIVITY PAY ITS MOBILITY FEE?

Mobility fees are generally assessed at the time of a building permit application. Mobility fees would be required to be paid no later than issuance of a building permit, unless otherwise specified in an approved development order or agreement. Adopted mobility fees could become effective as soon as 90 days after 1st public notice of the fees. Some local governments make the fees effective 90 days after they are officially adopted after second reading of an ordinance.

HOW IS A MOBILITY FEE DETERMINED FOR NEW DEVELOPMENT ACTIVITY?

The mobility plan and mobility fee technical report and the implementing ordinance will include a simplified table, known as a mobility fee schedule, that provides the mobility fee rates for various uses of property, such as residential, retail, industrial, and office. The mobility fee assessed is calculated based on the mobility fee rate and a specific unit of measure, such as heated and cooled square feet for a residential use, and number of rooms for a hotel.

ARE OFFSETS OR CREDITS AVAILABLE FOR MOBILITY FEES?

Offsets of mobility fees may be available where redevelopment is replacing an existing structure. Credits may be available for previous proportionate share payments, for dedication of right-of-way, and/or the construction of multimodal projects identified in the mobility plan. The mobility fee ordinance will contain details for off-sets and credits.

WHAT WILL HAPPEN TO MOBILITY FEES PAID TO THE CITY?

Mobility fees are required by Florida Statue to be separated into a specific fund that tracks both payments and expenditures. The fund is subject to an annual audit by the State of Florida Department of Revenue. The requirement for a special fund is to ensure that: (1) mobility fees are not included in general revenues, (2) that the collection and expenditure of fees is transparent, and (3) the fees are being used for the purpose for which they were collected.

STAFF REPORT

City Commission Regular Meeting

February 13, 2025

To: Elected Officials

From: Dale L. Martin, City Manager

Date: February 7, 2025

Item Name: Resolution 2025-14. A Resolution by the City Commission of the City of Flagler Beach, to award a contract to Moffatt & Nichol (M&N) for the fee of $ $349,500 to provide construction support services in the capacity of Engineer of Record (EOR) overseeing the construction of the Flagler Beach Pier; providing for conflict and an effective date.

Background: Flagler Beach Pier is located at 215 South Ocean Shore Boulevard in Flagler Beach, Florida. The project consists of the demolition and reconstruction of the historic Flagler Beach Pier that was initially built in 1928. The pier has suffered significant damage due to several storms and hurricanes and was deemed inoperable in 2022.

The City has contracted with Moffatt & Nichol for design and permitting services for the demolition and reconstruction. The scope of this project is complicated and stringent reporting requirements will have to mbe met to ensure Federal and State funding is not jeopardized. The additional construction support services are part of the federal requirements to provide adequate on-site construction observation.

Fiscal Impact: The funds to support the additional construction support services will be drawn from the City's General Fund Unrestricted Reserve and then be reimbursed (87.5%) by Federal and State agencies.

Staff Recommendation: Staff recommends approval of Resolution 2025-14.

Attachment:

Resolution 2025-14

RESOLUTION 2025-14

A RESOLUTION BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, TO AWARD A CONTRACT TO MOFFATT & NICHOL (M&N) FOR THE FEE OF $ $349,500 TO PROVIDE CONSTRUCTION SUPPORT SERVICES IN THE CAPACITY OF ENGINEER OF RECORD (EOR) OVERSEEING THE CONSTRUCTION OF THE FLAGLER BEACH PIER; PROVIDING FOR CONFLICT AND AN EFFECTIVE DATE.

WHEREAS, the City hired the firm of Moffatt & Nichol to design Project #260 Flagler Beach Pier Construction; and

WHEREAS, City staff solicited a proposal (Exhibit A) from Moffatt & Nichol, to provide construction support services;

NOW THEREFORE BE IT RESOLVED BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, AS FOLLOWS:

SECTION 1. The City of Flagler Beach City Commission approves the proposal submitted by Moffatt & Nichol in an amount not to exceed $349,500 (Exhibit A) for construction support services related to Project #260 Flagler Beach Fishing Pier.

SECTION 2. The City Commission authorizes City Staff to issue a Notice to Proceed.

SECTION 3. All resolutions or parts of resolutions in conflict herewith be and the same are hereby repealed.

SECTION 4. This Resolution shall become effective immediately upon passage as provided by law.

PASSED AND ADOPTED THIS 13th DAY OF FEBRUARY, 2025.

EXH

January 15, 2025

City of Flagler Beach
105 S. 2nd Street
Flagler Beach, Florida 32136

Attn: Dale Martin, City Manager

Subject: Flagler Beach Pier – Construction Support Services

Dear Mr. Martin:

Moffatt & Nichol (M&N) is submitting this proposal to provide construction support services to the City of Flagler Beach (the City) during the Flagler Beach Pier construction project. This work is a continuation of our engineering services provided during the planning, permitting, design and bid phases of this project. Construction support services will be performed in three tasks:

- Task 1: On-Site Construction Observations and Meetings
- Task 2: Engineering Office Support
- Task 3: Geotechnical Engineering Support

M&N will work closely with the City, the City's construction manager (CM), the Contractor, and stakeholders toward the pier construction's technical alignment with the engineering design and construction documents and produce a set of record drawings following construction completion.

Task 1: On-Site Construction Observations and Meetings

Scope:

Moffatt & Nichol will perform regular on-site observations to support the City's construction management team during pre-construction and throughout construction, including:

- Attending up to two (2) in-person pre-construction meetings with the Contractor and stakeholders.
- Attending up to six (6) public meetings and City Commission meetings and presenting, as needed, to keep the public informed on progress.
- Performing site visits and attending in-person meetings. M&N staff will be on site four (4) to eight (8) days per month with greater presence during the start and toward the end of construction.
- Reviewing construction progress based on the approved schedule maintained by the CM and responding to Contractor inquiries while on site.
- Generating daily field reports documenting observations with photographs while on site.
- Preparing a pre-punch list as the project is nearing substantial completion.

- Preparing a punch list at substantial completion.
- Performing final walk through with the City and CM.

Dependencies/Special Requirements:

- Construction management services and continuous onsite representation are not included and will be provided by the City.
- A temporary workspace for on-site staff will be provided by the City or the Contractor that includes a desk and internet connection.
- Construction inspection and materials testing are not included. M&N staff will be on site to observe construction progress and conformance with the contract documents and to facilitate technical communications, not to perform construction inspection and materials testing tasks.
- Pre-construction and construction activities are anticipated to have durations of two (2) and sixteen (16) months, respectively.

Deliverables:

- Daily field visit reports summarizing observations with photographs.
- Pre-punch list and punch list following substantial completion.

Task 2: Engineering Office Support

Scope:

M&N staff will provide in-office engineering construction support services that include Contractor shop drawing reviews, submittal reviews, responding to Contractor and CM RFIs (requests for additional information) during construction, and participating in virtual meetings with the Contractor and the City's construction management team. Services for this task include:

- Reviewing shop drawings and submittals from the Contractor.
- Responding to Contractor and CM RFIs expeditiously during construction.
- Developing construction sketches, as needed, to clarify the design drawings for the Contractor.
- Reviewing Contractor-provided as-built surveys.
- Performing required design modifications and issuing drawing revisions, accordingly.
- Working with our subconsultant, Tierra, to verify the geotechnical site conditions.
- Issuing record drawings following construction completion that include any design modifications and Contractor-provided redlines/as-built surveys.

Dependencies/Special Requirements:

- Contractor to provide redlines and as-built surveys as they become available.
- As-built surveys provided by the Contractor will be signed and sealed by a licensed FL surveyor.
- Construction management services and continuous onsite Owner representation is not included and will be provided by the City.
- Review and processing of contractor pay applications is not included.
- Environmental permitting compliance support is not included.

Deliverables:

- RFI responses within ten (10) days of receipt.
- Submittals and shop drawing review comments within ten (10) days of receipt.
- Record drawings incorporating revisions and Contractor as-built surveys and redline drawings.

Task 3: Geotechnical Engineering Support

The geotechnical engineering support services will be performed by Tierra as a subconsultant to M&N. Tierra will utilize the Contactor's working platform for access to perform four (4) geotechnical verification borings along the length of the new pier. Once the additional borings have been completed, M&N and Tierra will work together on verifying the initial pile designs.

Scope:

The geotechnical exploration and evaluation to supplement the final design criteria and construction of the new pier will include the following:

- Executing a program of subsurface exploration consisting of four (4) Standard Penetration Test (SPT) borings using a track-mounted drill rig completed from the top of the working platform to be constructed by the Contractor
    - The borings will be performed to a depth of approximately 125 feet below the elevation of the working platform (approximate elevation +25 feet NAVD).
    - The soil sampling will be performed in accordance with the American Society for Testing and Materials (ASTM) test designation D-1586.
    - Typically, SPT resistance N-values will be taken continuously to a depth of ten (10) feet below the sea floor and on intervals of five (5) feet thereafter.
- Visually classifying soil samples in the lab using the Unified Soil Classification System (USCS)
- Identifying soil conditions at each of the boring locations and perform a laboratory testing program.
- Evaluating the design pier foundation piles based on the new SPT boring results and design loads, including performing axial capacity analyses, lateral load analyses, and determining estimated pile tip elevations.
- Preparing an engineering report summarizing the work performed, field data generated, subsurface conditions encountered, and engineering recommendations.

Dependencies/Special Requirements:

- The Contractor's working platform must be capable of supporting the drill equipment, which weighs approximately 27,000 pounds requires a minimum working space of approximately 25 ft by 10 ft.
- The Contractor will provide access for Tierra's equipment onto the working platform, including cranes if needed, and to the boring locations. Costs related to equipment rental or other means necessary to facilitate access to the boring locations for Tierra's drill equipment are not included.

Deliverables:

- Final Geotechnical Report

Project Schedule

This proposal has a duration of eighteen (18) months from notice to proceed / Contractor selection that includes two (2) months of pre-construction activities and sixteen (16) months of construction.

Fees

Professional engineering fees for the above referenced services will be Lump Sum and are summarized in the table below. M&N will invoice each month on a percent completed basis. This proposal is valid for sixty (60) days from date on proposal cover sheet.

Task	Description	Fees
1	On-site Construction Observation and Meetings	$183,800
2	Engineering Office Support	$92,900
	Subtotal	*$276,700*
3	Geotechnical Engineering Support	$72,800
	TOTAL	**$349,500**

We appreciate the opportunity to submit this proposal, and we look forward to supporting the City of Flagler Beach during construction of this iconic project. Should you have any questions, please contact Gabriel Perdomo at 813.695.9562 or gperdomo@moffattnichol.com.

Sincerely,

MOFFATT & NICHOL

STAFF REPORT

City Commission Regular Meeting

February 13, 2025

To: Elected Officials

From: Dale L. Martin, City Manager

Date: February 7, 2025

Item Name: Resolution 2025-15. A Resolution by the City Commission of the City of Flagler Beach, Florida, approving an amendment of the Fiscal Year 2024/25 Budget to authorize the merger of two budget line items (Taser Reserve and Body Cam Reserve); authorizing the purchase of Tasers and Body Cams from Axon; providing for conflict and an effective date.

Background: Currently, Police Officers at the Flagler Beach Police Department are issued Tasers, a Conducted Energy Weapon (CEW), and Body Worn Cameras (BWC). Axon Enterprise Inc. ("Axon") is the vendor for both products and currently the City is slated to purchase new Tasers during this fiscal year, and new BWC's next fiscal year (2025/2026).

Police Department Command Staff, in the process of negotiating an extension of the current Tasers contract with a representative from Axon, an alternative five-year contract was developed to replace both Tasers and BWC's this year. The average annual savings for the City of Flagler Beach by placing the two (2) purchases into the same budget year through 2029 is $18,928.24. Over the proposed five-year length of the reconfigured contract, the total savings to the City for purchasing this equipment now is **$94,644.24**. The first payment for the proposed contact would be $79,052.65, due in April 2025, and the second payment in May 2025 would be $2,438.79 (total $81,491.44). Currently, the Taser Reserve total balance is $81,540 and BWC reserve balance is $50,000. The total balance if the aforementioned line items merged into one (1) would be **$131,540**.

Fiscal Impact: As indicated, the two budget lines (Taser Reserve: Line 001-5214-606400.275, balance $81,540; Body Camera Reserve: Line 001-5214-606400.276, balance $50,000) will sufficiently fund the proposed combined expenditure of $81,491.44. Subsequently, through the reconfigured contract for both items, the anticipated savings to the City over five years is $94,644.24 over a five (5) year period.

Staff Recommendation: Staff recommends approval of Resolution 2025-15.

Attachment:

Resolution 2025-15

RESOLUTION 2025-15

A RESOLUTION BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, FLORIDA, APPROVING AN AMENDMENT OF THE FISCAL YEAR 2024/25 BUDGET TO AUTHORIZE THE MERGER OF TWO BUDGET LINE ITEMS (TASER RESERVE AND BODY CAM RESERVE); AUTHORIZING THE PURCHASE OF TASERS AND BODY CAMS FROM AXON; PROVIDING FOR CONFLICT AND AN EFFECTIVE DATE HEREOF.

WHEREAS, the City Commission has approved budget reserves for the Police Taser and Body Worn Camera equipment, and

WHEREAS, Staff has negotiated with the contracted provider to reduce costs over a five (5) year period, while maintaining the same equipment and quantiles by merging the two (2) individual contracts into one, and

WHEREAS, a budget amendment is necessary to merge the two (2) line items into one (1). Line 001-5214-606400.276 Body Camera Reserve in the amount of $50,000 will be merged into Line 001-5214-606400.275 totaling $131,540 and the line will be renamed Taser/Body Cam Reserve.

NOW THEREFORE BE IT RESOLVED BY THE CITY COMMISSION OF THE CITY OF FLAGLER BEACH, AS FOLLOWS:

SECTION 1. Authorizes the Finance Director to combine 001-5214-606400.275 (Taser Reserve) and 001-5214-606400.276 (Body Worn Camera Reserve) to create one (1) budget line for both.

SECTION 2. Authorizes the expenditure of $94,644.24 as detailed in the attached Exhibit “A” proposal from Axon Enterprises Inc. dated January 2025.

SECTION 3. All resolutions or parts of resolutions in conflict herewith be and the same are hereby repealed.

SECTION 4. This Resolution shall become effective immediately upon passage as provided by law.

PASSED AND ADOPTED THIS 13TH DAY OF FEBRUARY 2025.

Standard Terms and Conditions

Axon Enterprise Inc. Sales Terms and Conditions

Axon Master Services and Purchasing Agreement:

This Quote is limited to and conditional upon your acceptance of the provisions set forth herein and Axon's Master Services and Purchasing Agreement (posted at https://www.axon.com/sales-terms-and-conditions), as well as the attached Statement of Work (SOW) for Axon Fleet and/or Axon Interview Room purchase, if applicable. In the event you and Axon have entered into a prior agreement to govern all future purchases, that agreement shall govern to the extent it includes the products and services being purchased and does not conflict with the Axon Customer Experience Improvement Program Appendix as described below.

ACEIP:

The Axon Customer Experience Improvement Program Appendix, which includes the sharing of de-identified segments of Agency Content with Axon to develop new products and improve your product experience (posted at www.axon.com/legal/sales-terms-and-conditions), is incorporated herein by reference. By signing below, you agree to the terms of the Axon Customer Experience Improvement Program.

Acceptance of Terms:

Any purchase order issued in response to this Quote is subject solely to the above referenced terms and conditions. By signing below, you represent that you are lawfully able to enter into contracts. If you are signing on behalf of an entity (including but not limited to the company, municipality, or government agency for whom you work), you represent to Axon that you have legal authority to bind that entity. If you do not have this authority, please do not sign this Quote.

Exceptions to Standard Terms and Conditions

Agency has existing contract(s) originated via Quote(s):

Q-416620

Agency is terminating those contracts effective 5/1/2025 Any changes in this date will result in modification of the program value which may result in additional fees or credits due to or from Axon.

The parties agree that Axon is applying a Net Transfer Credit of -$3,458

Any credits contained in this quote are contingent upon payment in full of the following amounts:

INV-342293 Posted 11/1/2024 $17,406.62

100% discounted body-worn camera and docking station hardware contained in this quote reflects a TAP replacement for hardware purchased under existing contract #Q-416620. All TAP obligations from this contract will be considered fulfilled upon execution of this quote.

MEMORANDUM

To: **City Commission**
From: **Lupita McClenning, City Planner**
Date: **February 6, 2025**
Re: **Floodplain Management Articles IV, V, VI, VIII, and IX**

Summary
The city had +2 ft in all flood zones, which was rolled back in Zone A/AE by Ord 2016-01. Subsequently, the city adopted local amendments to the Florida Building Code to:

1) limit enclosures below elevated buildings in coastal high hazard areas and Coastal A Zones;
2) increase the minimum elevation requirements for nonresidential buildings and dwellings in coastal high hazard areas, and
3) require construction documents for dwellings to be prepared and sealed by registered design professionals, for buildings and structures in flood hazard areas for the purpose of participating in the National Flood Insurance Program's Community Rating System.

Pursuant to section 553.73(5), F.S., the city is reformatting those requirements to coordinate with the *Florida Building Code,* and adopting a requirement to increase the minimum elevation requirement for dwellings in all flood hazard areas for the purpose of participating in the National Flood Insurance Program's Community Rating System and to coordinate with the *Florida Building Code*.

The City of Flagler Beach participates in the National Flood Insurance Program and participates in the NFIP's Community Rating System, a voluntary incentive program that recognizes and encourages community floodplain management activities that exceed the minimum program requirements and achieved a CRS rating of Class #6, making citizens who purchase NFIP flood insurance policies eligible for premium discounts.

In 2020 the NFIP Community Rating System established certain minimum prerequisites for communities to qualify for or maintain class ratings of Class 8 or better. To satisfy the prerequisite and for the city to maintain the current CRS rating, all homes installed or replaced in special flood hazard areas must be elevated to or above at least the base flood elevation plus 1 foot, which necessitates modification of the existing requirements.

The city determined that it is in the public interest to amend the floodplain management regulations to better protect manufactured homes and to continue participating in the Community Rating System at the current class rating.

The Code of Ordinances, Appendix" A," Land Development Regulations, is amended as follows:
Article IV Environmental and Cultural Resource Protection
Section 4.07.00 Floodplain Management

The intent and purpose of this section and the flood load and flood resistant construction requirements of the Florida Building Code are to establish minimum requirements to safeguard the public health, safety, and general welfare and to minimize public and private losses due to flooding through regulation of development in flood hazard areas.

The provisions of this section apply to all development that is wholly within or partially within any flood hazard area, including but not limited to the subdivision of land; filling, grading, and other site improvements and utility installations; construction, alteration, remodeling, enlargement, improvement, replacement, repair, relocation or demolition of buildings, structures, and facilities that are exempt from the Florida Building Code; placement, installation, or replacement of manufactured homes and manufactured buildings; including installation or replacement of tanks; placement of recreational vehicles; installation of swimming pools; and any other development.

The applicability of this section applies to all flood hazard areas within the city.

The city engineer, is designated as the floodplain administrator. The floodplain administrator has the authority to render interpretations of this section consistent with the intent and purpose of this section and may establish policies and procedures in order to clarify the application of its provisions.

Any owner or owner's authorized agent who intends to undertake any development activity which is wholly within or partially within any flood hazard area shall first make application to the floodplain administrator, and the building official if applicable, and shall obtain the required permit(s) and approval(s).

Site plan or construction documents for any development subject to the requirements of this section shall be drawn to scale and shall include, as applicable to the proposed development delineation of flood hazard areas, flood zone(s), base flood elevation(s), and ground elevations necessary for review of the proposed development. Development for which a floodplain development permit is required shall be subject to inspection.

Any development regulated by this section that does not fully comply is presumed to be in violation and the floodplain administrator is authorized to serve notices of violation or stop work orders.

Technical amendments to the Florida Building Code that address design requirements for buildings in flood hazard areas are adopted in Section 5.00.10.

Article V Development Design and Improvement Standards
Section 5.00.10 Technical Amendment to the Florida Building Code

The minimum elevation for buildings in flood hazard areas that are within the scope of the Florida Building Code, Building, shall be, as specified in ASCE 24, the base flood elevation plus two (2) feet, or the design flood elevation, whichever is higher.

The minimum elevation for one- and two-family dwellings and townhouses in flood hazard areas that are within the scope of the Florida Building Code, Residential, shall be the base flood elevation plus two (2) feet or the design flood elevation, whichever is higher.

Enclosures below elevated buildings in coastal high hazard areas and Coastal A Zones. In coastal high hazard areas and Coastal A Zones, enclosed areas below the elevation required in the building code shall not be partitioned or finished into separate rooms except for stairwells, ramps, and elevators and the access to enclosed areas shall be the minimum necessary to allow for the parking of vehicles (garage door) or limited storage of maintenance equipment used in connection with the premises (standard exterior door) or entry to the building (stairway or elevator).

Construction documents for dwellings in flood hazard areas. Construction documents for dwellings in flood hazard areas shall include documentation that is prepared and sealed by a registered design professional that the foundation design accounts for flood loads.

Article VI Subdivisions
Section 6.00.005 Minimum Elevation

The language for minimum elevation in this section is found in Article IX, Engineering Design.

Article VIII Administration and Enforcement

In addition to the requirements for granting a variance found in Section. 8.04.16 (a) 1-6, in reviewing requests for variances, the city commission shall consider all technical evaluations, all relevant factors, all other applicable provisions of the Florida Building Code, this article, and the following considerations:

(a) The danger that materials and debris may be swept onto other lands resulting in further injury or damage;

(b) The danger to life and property due to flooding or erosion damage;

(c) The susceptibility of the proposed development, including contents, to flood damage and the effect of such damage on current and future owners;

(d) The importance of the services provided by the proposed development to the community;

(e) The availability of alternate locations for the proposed development that are subject to lower risk of flooding or erosion;

(f) The compatibility of the proposed development with existing and anticipated development;

(g) The relationship of the proposed development to the comprehensive plan and floodplain management program for the area;

(h) The safety of access to the property in times of flooding for ordinary and emergency vehicles;

(i) The expected heights, velocity, duration, rate of rise and debris and sediment transport of the floodwaters and the effects of wave action, if applicable, expected at the site; and

(j) The costs of providing governmental services during and after flood conditions including maintenance and repair of public utilities and facilities such as sewer, gas, electrical and water systems, streets and bridges.

Additionally, variances shall be issued only upon the following conditions:

(a) Submission by the applicant, of a showing of good and sufficient cause that the unique characteristics of the size, configuration, or topography of the site limit compliance with any provision of this article or the required elevation standards;

(b) Determination by the city commission that:

(i) Failure to grant the variance would result in exceptional hardship due to the physical characteristics of the land that render the lot undevelopable; increased costs to satisfy the requirements or inconvenience do not constitute hardship;
(ii) The granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, nor create nuisances, cause fraud on or victimization of the public or conflict with existing local laws and ordinances; and
(iii) The variance is the minimum necessary, considering the flood hazard, to afford relief;

(c) Receipt of a signed statement by the applicant that the variance, if granted, shall be recorded in the office of the clerk of the court in such a manner that it appears in the chain of title of the affected parcel of land; and

(d) If the request is for a variance to allow construction of the lowest floor of a new building, or substantial improvement of a building, below the required elevation, a copy in the record of a written notice from the floodplain administrator to the applicant for the variance, specifying the difference between the base flood elevation and the proposed elevation of the lowest floor, stating that the cost of federal flood insurance will be commensurate with the increased risk resulting from the reduced floor elevation (up to amounts as high as twenty-five dollars ($25.00) for one hundred dollars ($100.00) of insurance coverage), and stating that construction below the base flood elevation increases risks to life and property.

Article IX Engineering Design and Development

The purpose of this section is to set forth engineering design regulations for residential and nonresidential uses as required in the Land Development Code. The floodplains manager may adopt technical manuals that relate to technical requirements pertaining to the city's water, wastewater, reclaimed water, drainage, street, and other systems.

In order to align codes with the State Building Code, the requirements to updating the floodplain management ordinance made by the Office of Floodplain Management (OFM) for this Article are to Section 9.04.04 (b) (1) Fill is limited to the compacted amount needed inside the perimeter of a stem wall foundation in order to achieve a solid subsurface to pour a concrete slab to the elevation required by the Florida Building Code as modified by the City.

Findings and Recommendations

Findings: In 2021, the Florida Statute, sec. 553.73(4) was amended to provide that if a Florida Building Code (FBC) technical amendment is not adopted in accordance with the statute, then that action may be subject to a petition by a "substantially affected person." Therefore, a plain reading is that if a local amendment **is adopted in accordance with the statute**, that local FBC amendment are not subject to petition, even when those amendments reside in land development codes. The 2021 statute amendment adds subparagraph
(l), which states:

(l) If a local government adopts a regulation, law, ordinance, policy, amendment, or land use or zoning provision without using the process established in this subsection, and a substantially affected person considers such regulation, law, ordinance, policy, amendment, or land use or zoning provision to be a technical amendment to the Florida Building Code, then the substantially affected person may submit a petition to the Florida Building Commission for a nonbinding advisory opinion. If a substantially affected person submits a request in accordance with this paragraph, the Florida Building Commission shall issue a nonbinding advisory opinion stating whether or not the commission interprets the regulation, law, ordinance, policy, amendment, or land use or zoning provision as a technical amendment to the Florida Building Code. As used in this paragraph, the term "local government" means a county, municipality, special district, or political subdivision of the state.

Recommendation: Recommend to the City Commission to Adopt the Floodplain Management Ordinance with language provided by the Office of Floodplain Management (OFM), Florida Division of Emergency Management and with the recommendation from the Planning & Architectural Review Board to raise the minimum base flood elevation to a + three (3) feet.

PLANNING AND ARCHITECTURAL REVIEW BOARD MEETING MINUTES

Tuesday, February 04, 2025 at 5:30 PM

City Commission Chambers – 105 S. 2ND Street, Flagler Beach, FL 32136

---

1. Call the meeting to order

Chair Johnston called the meeting to order at 5:30pm.

2. Pledge of Allegiance

Chair Johnston led the Pledge of Allegiance.

3. Roll Call / Determination of Quorum

Present: Chair Suzie Johnston, Boudie Estberg, Brenda Wotherspoon, Lisa Smith, Joann Soman, Vice-Chair Scott Chappuis, Paul Chestnut

Absent: None

Staff Present: City Attorney Drew Smith, City Planner Lupita McClenning and Secretary Michele Ficocello

4. Approval of Meeting Minutes

a. January 7, 2025

Vice-Chair Chappuis made a motion to approve the meeting minutes; Joann Soman seconded. Motion passed unanimously.

Brenda Wotherspoon's Form 8B is included in the minutes and submitted for the record.

5. Deletions and changes to the agenda

None

6. Old Business

None

7. New Business

a. ORDINANCE NO. 2025-XX: AN ORDINANCE BY THE CITY OF FLAGLER BEACH, FLORIDA, AMENDING THE FLAGLER BEACH CODE OF ORDINANCES, APPENDIX "A," LAND DEVELOPMENT REGULATIONS, TO SPECIFY ELEVATION OF MANUFACTURED HOMES IN FLOOD HAZARD AREAS; TO ADOPT AND REFORMAT LOCAL AMENDMENTS TO THE FLORIDA BUILDING CODE; PROVIDING FOR APPLICABILITY AND SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.

An amendment to section 7, item a., page 36 of the agenda packet was provided to the Board prior to the meeting and is attached to the minutes. City Planner Lupita McClenning presented the item and staff report to the Board. Discussion ensued. Board comments included ISO rating and insurance rates related to the ordinance, threshold for damage in a natural disaster, Article 9 updates and eliminating duplication, aligning with city code and state code, Subdivision Design Standards in regards to double frontage, alleys counted as streets, NFI Building requirements, gutters and downspouts maintenance,

alleys considered rights-of-way, new home builds causing flooding on existing homes off alleys, manufactured home definition, raising minimum base flood elevation from a + two (2) feet to a + three (3) feet. Public comment was opened. No public comment was received.

Joann Soman made a motion to recommend approval of item 7a.; Paul Chestnut seconded the motion. Ms. McClenning inquired if the Board would consider including raising the minimum base flood elevation to a + three (3) feet in the motion to recommend approval. Joann Soman amended her motion to include raising the minimum base flood elevation to a + three (3) feet in the recommendation of approval for item 7a.; Paul Chestnut seconded the motion.

Roll call: Paul Chestnut, Yea; Vice-Chair Chappuis, Yea; Lisa Smith, Yea; Boudie Estberg, Yea; Joann Soman, Yea; Chair Johnston, Yea; Brenda Wotherspoon, Yea. Motion passed unanimously as amended.

8. Other Business

None

9. City Planner Report

City Planner Lupita McClenning provided an update to include a land development code rewrite status update, parking requirements in regards to fixed seating analysis, due date for DEO evaluation and appraisal report, a list of new legislation will be disseminated to the Board, the Comprehensive Plan Amendment due by January 2026, creating a Stakeholder Committee after adopting the Land Development Code, Gridics Software access, projects to be included on Gridics and a Code Enforcement update. Public comment was opened. Commissioner Jane Mealy's comments included legislative updates.

10. Board Comments

Brenda Wotherspoon announced this is her last Board Meeting, her term is up and she will not be reapplying. Ms. McClenning and the Board thanked Brenda for her service to the City. Joann Soman invited everyone to the Municipal Election Candidates Night hosted by the Flagler Women's Club, February 26, 2025, at 7:00pm.

11. Adjournment

Joann Soman made a motion to adjourn; Paul Chestnut seconded. Motion passed unanimously. Chair Johnston adjourned the meeting at 6:08pm.

FORM 8B MEMORANDUM OF VOTING CONFLICT FOR COUNTY, MUNICIPAL, AND OTHER LOCAL PUBLIC OFFICERS

LAST NAME—FIRST NAME—MIDDLE NAME	NAME OF BOARD, COUNCIL, COMMISSION, AUTHORITY, OR COMMITTEE
Witherspoon Brenda Kay	PAR Board
MAILING ADDRESS	THE BOARD, COUNCIL, COMMISSION, AUTHORITY OR COMMITTEE ON WHICH I SERVE IS A UNIT OF:
1182 S Central Ave	☐ CITY ☐ COUNTY ☐ OTHER LOCAL AGENCY
CITY / COUNTY	NAME OF POLITICAL SUBDIVISION:
Flagler Beach FL Flagler	N/A
DATE ON WHICH VOTE OCCURRED	MY POSITION IS:
	☐ ELECTIVE ☐ APPOINTIVE

WHO MUST FILE FORM 8B

This form is for use by any person serving at the county, city, or other local level of government on an appointed or elected board, council, commission, authority, or committee. It applies equally to members of advisory and non-advisory bodies who are presented with a voting conflict of interest under Section 112.3143, Florida Statutes.

Your responsibilities under the law when faced with voting on a measure in which you have a conflict of interest will vary greatly depending on whether you hold an elective or appointive position. For this reason, please pay close attention to the instructions on this form before completing the reverse side and filing the form.

INSTRUCTIONS FOR COMPLIANCE WITH SECTION 112.3143, FLORIDA STATUTES

A person holding elective or appointive county, municipal, or other local public office MUST ABSTAIN from voting on a measure which inures to his or her special private gain or loss. Each elected or appointed local officer also is prohibited from knowingly voting on a measure which inures to the special gain or loss of a principal (other than a government agency) by whom he or she is retained (including the parent organization or subsidiary of a corporate principal by which he or she is retained); to the special private gain or loss of a relative; or to the special private gain or loss of a business associate. Commissioners of community redevelopment agencies under Sec. 163.356 or 163.357, F.S., and officers of independent special tax districts elected on a one-acre, one-vote basis are not prohibited from voting in that capacity.

For purposes of this law, a "relative" includes only the officer's father, mother, son, daughter, husband, wife, brother, sister, father-in-law, mother-in-law, son-in-law, and daughter-in-law. A "business associate" means any person or entity engaged in or carrying on a business enterprise with the officer as a partner, joint venturer, coowner of property, or corporate shareholder (where the shares of the corporation are not listed on any national or regional stock exchange).

* * * * * * * * * * * * * * * * *

ELECTED OFFICERS:

In addition to abstaining from voting in the situations described above, you must disclose the conflict:

PRIOR TO THE VOTE BEING TAKEN by publicly stating to the assembly the nature of your interest in the measure on which you are abstaining from voting; *and*

WITHIN 15 DAYS AFTER THE VOTE OCCURS by completing and filing this form with the person responsible for recording the minutes of the meeting, who should incorporate the form in the minutes.

* * * * * * * * * * * * * * * * *

APPOINTED OFFICERS:

Although you must abstain from voting in the situations described above, you otherwise may participate in these matters. However, you must disclose the nature of the conflict before making any attempt to influence the decision, whether orally or in writing and whether made by you or at your direction.

IF YOU INTEND TO MAKE ANY ATTEMPT TO INFLUENCE THE DECISION PRIOR TO THE MEETING AT WHICH THE VOTE WILL BE TAKEN:

- You must complete and file this form (before making any attempt to influence the decision) with the person responsible for recording the minutes of the meeting, who will incorporate the form in the minutes. (Continued on other side)

APPOINTED OFFICERS (continued)

- A copy of the form must be provided immediately to the other members of the agency.
- The form must be read publicly at the next meeting after the form is filed.

IF YOU MAKE NO ATTEMPT TO INFLUENCE THE DECISION EXCEPT BY DISCUSSION AT THE MEETING:

- You must disclose orally the nature of your conflict in the measure before participating.
- You must complete the form and file it within 15 days after the vote occurs with the person responsible for recording the minutes of the meeting, who must incorporate the form in the minutes. A copy of the form must be provided immediately to the other members of the agency, and the form must be read publicly at the next meeting after the form is filed.

DISCLOSURE OF LOCAL OFFICER'S INTEREST

I, Brenda Kay Wotherspoon, hereby disclose that on 1-7, 20 25:

(a) A measure came or will come before my agency which (check one)

___ inured to my special private gain or loss;

___ inured to the special gain or loss of my business associate, _____;

___ inured to the special gain or loss of my relative, _____;

___ inured to the special gain or loss of _____, by whom I am retained; or

___ inured to the special gain or loss of _____, which is the parent organization or subsidiary of a principal which has retained me.

(b) The measure before my agency and the nature of my conflicting interest in the measure is as follows:

Live within 200 ft.

1-7-2025
Date Filed

Brenda Kay Wotherspoon
Signature

NOTICE: UNDER PROVISIONS OF FLORIDA STATUTES §112.317, A FAILURE TO MAKE ANY REQUIRED DISCLOSURE CONSTITUTES GROUNDS FOR AND MAY BE PUNISHED BY ONE OR MORE OF THE FOLLOWING: IMPEACHMENT, REMOVAL OR SUSPENSION FROM OFFICE OR EMPLOYMENT, DEMOTION, REDUCTION IN SALARY, REPRIMAND, OR A CIVIL PENALTY NOT TO EXCEED $10,000.

Sec. 5.05.00. Reserved ~~Stormwater Management.~~

~~**Sec. 5.05.01. Purpose and intent.**~~

~~The purpose of this section is to manage stormwater drainage within the City of Flagler Beach in order to maintain and enhance the public health, safety, and welfare through the control of runoff volume and treatment of stormwater runoff for the protection of surface water and groundwater quality, and the control and prevention of erosion, sedimentation, and flooding by providing standards for the design, construction, and operation of stormwater management systems in conformance with best overall management practices. This section is intended to enforce the goals, objectives, and policies of the comprehensive plan, and to be consistent with the applicable policies and regulations of regional, state and federal agencies regarding stormwater management.~~

~~(Ord. No. 2005-07, § 1, 4-28-05; Ord. No. 2007-12, § 6, 6-14-07)~~

~~**Sec. 5.05.02. Prohibitions and exemptions.**~~

~~Section 5.05.02.1 *Prohibitions.*~~

~~No person may develop or make any change in the use of land or construct a structure or change the size of a structure, except as exempted herein, without submission and approval of a stormwater management plan as provided herein. For the purpose of this section, the development may potentially alter or disrupt existing stormwater runoff patterns, and as such, will, unless exempted below, require submission and approval of a stormwater management plan prior to the commencement of construction, includes, but is not limited to:~~

1. ~~Clearing and/or drainage of land as an adjunct to construction.~~
2. ~~Clearing and/or draining of nonagricultural land for agricultural purposes.~~
3. ~~Converting agricultural lands to nonagricultural uses.~~
4. ~~Subdividing land.~~
5. ~~Replatting recorded subdivisions and the development of recorded and unrecorded subdivisions.~~
6. ~~Changing the use of land and/or the construction of a structure or a change in the size of one or more structures.~~
7. ~~Altering the shoreline or bank of any surface water body.~~
8. ~~The permanent (long period) lowering of the water table.~~
9. ~~Addition of impervious or semi-impervious area.~~

~~Section 5.05.02.2 *Exemptions.*~~

~~The following activities shall be exempt from this section unless as hereinafter required by the land development regulations:~~

1. ~~Single-family and duplex residence and accessory structures except for the Mirror Lake Watershed Overlay District.~~
2. ~~Any maintenance, alteration, renewal, use or improvement to an existing structure not changing or affecting rate or volume of stormwater runoff.~~

3. Bona fide agricultural zoning classifications, including forestry, except where an artificial drainage system will be used to increase the flow of surface water from the applicant's land.

4. Maintenance work performad on existing drainage canals for the purpose of public health and welfare.

5. Maintenance work on utility or transportation systems, provided such maintenance work does not alter the purpose and intent of the drainage system as constructed.

(Ord. No. 2005-07, § 1, 4-28-05; Ord. No. 2007-12, § 6, 6-14-07)

Sec. 5.05.03. Design standards.

Section 5.05.03.01 *Threshold categories.*

The review of stormwater management plans for all development projects shall be based upon the net increase in impervious surface resulting from the development and any cumulative increase due to development that has occurred within the previous two (2) years. All single-family and duplex residence structures in Mirror Lake Watershed Overlay District shall be considered as category II only. Category thresholds for the various limits of developments are as follows:

1. Category I—Net increase of impervious area of up to five hundred (500) square feet.

2. Category II—Net increase of impervious area between five hundred one (501) square feet and one thousand (1,000) square feet and all single-family and duplex residence structures within the Mirror Lake Watershed Overlay District.

3. Category III—Net increase of impervious area between one thousand one (1,001) square feet and four thousand (4,000) square feet of surfaces subject to vehicular traffic or five thousand (5,000) square feet of building of other surfaces.

4. Category IV—Net increase of impervious area exceeds four thousand (4,000) square feet of surfaces subject to vehicular traffic or five thousand (5,000) square feet of building or other surfaces.

Section 5.05.03.02 *Basic standards.*

All categories of development shall require the preparation of a stormwater management plan. Stormwater management system design shall conform with the following performance standards:

1. Stormwater runoff shall be subjected to best management practice prior to discharge into natural or artificial drainage systems. Best management practice shall mean a practice or combination of practices determined by the city to be the most effective, practical means of preventing or reducing the amount of pollution generated by the project to a level compatible with Florida water quality standards found in chapter 17-3, Florida Administrative Code.

2. No site alteration shall cause siltation of wetlands, pollution of downstream wetlands or reduce the natural retention or filtering capabilities of wetlands.

3. No site alteration shall allow water to become a health hazard or contribute to the breeding of mosquitoes.

4. All site alteration activities shall provide for such water retention and settling structures and flow attenuation devices as may be necessary to insure that the foregoing standards and requirements are met. No site alteration shall result in any net reduction of available floodplain storage.

5. Design of water retention and detention structures and flow attenuation devices shall be subject to the approval of the city pursuant to the standards hereof. Detention structures shall be designed to release runoff to the downstream drainage system over a period of time so as not to exceed the capacity of the existing downstream system. The design of water retention and detention structures and flow attenuation devices shall be in compliance with the standard construction details.

6. In order to maintain good water quality in stormwater management detention ponds and maximize the provision of fish and wildlife habitat, stormwater management systems with permanently wet detention ponds should be designed, operated and maintained so as to resemble a natural pond to the greatest extent practicable. A natural pond design should include: a littoral zone comprised of native emergent and submersed aquatic macrophytic vegetation; a deep open water limnetic zone free of rooted emergent and submersed vegetation; and, where feasible, an upland buffer of native trees, shrubs and understory vegetation.

7. A positive drainage system shall be provided which will not adversely impact downstream owners or adjacent lands, including rain gutter system on the structure as needed.

8. Where possible, natural vegetation shall be used as a component of the drainage system. The water table should not be manipulated so as to endanger natural vegetation beneficial to water quality unless natural vegetation can be replanted and survive with a lowered water table condition.

9. Runoff from higher adjacent lands shall be considered and provisions for conveyance of such runoff shall be included in the drainage plan.

10. Runoff shall be treated to remove oil and floatable solids before discharge from the site in a manner approved by the city.

11. Erosion by wind or water shall be prevented by the developer throughout the construction process.

12. Direct discharge to class II waters is prohibited. A workable filter system approved by the city must be provided prior to any discharge to class II waters.

13. For the purpose of this section, it is presumed that the lowering of the water table for the purpose of constructing detention/retention basins and for the purpose of permanently protecting road construction does not conflict with the stated objectives of this section if all of the following are met:

    a. The development site is not in an area known to the city, based on data collected and interpreted by the U.S. Geological Survey, the St. Johns River Water Management District, the city and other

professional investigators, as important to recharge or to prevention of discharge to the Floridan aquifer.

b. The proposed lowering of the water table shall be over no more than fifteen (15) percent of the site to a depth of five (5) feet below the surface of the existing undisturbed ground, or an equivalent volume, said area to be measured at the overflow elevation of the retention areas(s).

c. If ditches, underdrains or similar devices are used to lower the water table, the lateral volumetric effect will be calculated, and the volume will be deducted from that allowed for retention areas.

d. The high water table may be lowered up to two (2) feet below the undisturbed ground in the vicinity of roads for the purpose of protecting the sub-base and base of the roadway and/or for the purpose of preventing mosquito breeding in the roadside swales.

e. The lowering of the water table has no adverse effect on wetlands off site vegetation as defined herein.

f. The lowering of the water table does not increase flows to the detriment of neighboring lands.

14. For project sizes greater than one (1) acre of disturbed area, the applicant shall acquire permit coverage from the Florida Department of Environmental Protection, National Pollutant Discharge Elimination System program and provide proof of such to the city prior to construction.

Section 5.05.03.03 *Additional standards.*

1. Category II development—The minimum volume of retention to be provided shall be equivalent to one (1) inch of runoff over the entire project area and two (2) inches of runoff over the entire project area if within the Mirror Lake Watershed Overlay District. For certain soil conditions or ground water table conditions which do not permit the percolation of this volume within the five days following a storm event, the city may approve detention with filtration systems in lieu of retention.

2. Category III development—Stormwater management plan shall be prepared by a professional engineer or landscape architect licensed in the State of Florida and shall conform to:

a. Category II development requirements.

b. The discharge hydrograph produced for the developed or redeveloped site shall not exceed, in terms of peak flow and total volume, the hydrograph produced by conditions existing before development or redevelopment for a twenty-four-hour, twenty-five-year frequency storm, if this provision will be met through detention of the difference between said volumes, said volume difference shall be released over not less than a twenty-four-hour nor greater than a seventy-two-hour period of time. Runoff rates and volumes resulting from the project, in excess of existing amounts, shall be accommodated on-site. Off-site retention may be permitted if, in the opinion of the city, the recharge requirements of this section are met.

c. Peak discharge one hundred-year storm. The peak discharge resulting from a twenty-four-hour, one hundred-year frequency storm on the developed or

redeveloped site shall not exceed the peak discharge resulting from a one hundred-year frequency storm for existing conditions on the site for flood prone areas as determined by the city.

d. Runoff computations. Runoff computations shall be based on the most critical situation (rainfall duration, distribution and antecedent soil moisture condition) and conform to the methods described in the Florida Department of Transportation Drainage Manual, latest edition, and the St. Johns River Water Management District Regulation of Stormwater Management Systems.

3. Category IV development—City shall defer to permitting by St. Johns River Water Management District.

(Ord. No. 2005-07, § 1, 4-28-05; Ord. No. 2007-12, § 6, 6-14-07)

Sec. 5.05.04. Maintenance.

The installed system(s) required by this section shall be maintained by the owner except where the city specifically accepts a certain system for maintenance. The selection of critical areas and/or structures to be maintained by the city shall be recommended to the city commission by the department. All areas and/or structures to be maintained by the city must be conveyed to the city by plat or separate instrument and accepted by the city commission. The owner shall provide adequate easements with respect to system(s) to be maintained by the owner to permit the city to inspect and, if necessary, to take corrective action should the owner fail to maintain the system(s).

(Ord. No. 2005-07, § 1, 4-28-05; Ord. No. 2007-12, § 6, 6-14-07)

ORDINANCE NO. 2025-XX

AN ORDINANCE BY THE CITY OF FLAGLER BEACH AMENDING THE FLAGLER BEACH CODE OF ORDINANCES, APPENDIX "A," LAND DEVELOPMENT REGULATIONS, TO SPECIFY ELEVATION OF MANUFACTURED HOMES IN FLOOD HAZARD AREAS; TO ADOPT AND REFORMAT LOCAL AMENDMENTS TO THE FLORIDA BUILDING CODE; PROVIDING FOR APPLICABILITY AND SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, the Legislature of the State of Florida has, in Chapter 166 – Municipalities, Florida Statutes, conferred upon local governments the authority to adopt regulations designed to promote the public health, safety, and general welfare of its citizenry; and

WHEREAS, the **City of Flagler Beach** participates in the National Flood Insurance Program and participates in the NFIP's Community Rating System, a voluntary incentive program that recognizes and encourages community floodplain management activities that exceed the minimum program requirements and achieved a CRS rating of Class **#6)**, making citizens who purchase NFIP flood insurance policies eligible for premium discounts; and

WHEREAS, in 2020 the NFIP Community Rating System established certain minimum prerequisites for communities to qualify for or maintain class ratings of Class 8 or better; and

WHEREAS, to satisfy the prerequisite and for the **City of Flagler Beach** to maintain the current CRS rating, all manufactured homes installed or replaced in special flood hazard areas must be elevated to or above at least the base flood elevation plus ~~1 foot~~, three (3) feet which necessitates modification of the existing requirements; and

WHEREAS, the **City Commission** determined that it is in the public interest to amend the floodplain management regulations to better protect manufactured homes and to continue participating in the Community Rating System at the current class rating.

WHEREAS, Chapter 553, Florida Statutes, allows for local administrative and technical amendments to the *Florida Building Code* that provide for more stringent requirements than those specified in the Code and allows adoption of local administrative and local technical amendments to the Florida Building Code to implement the National Flood Insurance Program and incentives; and

WHEREAS, the **City of Flagler Beach** previously adopted local amendments to the Florida Building Code and is reformatting those amendments; and

WHEREAS, the **City Commission** previously adopted local amendments to the Florida Building Code to (1) limit enclosures below elevated buildings in coastal high hazard areas and Coastal A Zones, (2) increase the minimum elevation requirements for nonresidential buildings and dwellings in coastal high hazard areas, and (3) require construction documents for dwellings to be prepared and sealed by registered design professionals, for buildings and structures in flood hazard areas for the purpose of participating in the National Flood Insurance Program's Community Rating System and, pursuant to section 553.73(5), F.S., and is reformatting those requirements to coordinate with the *Florida Building Code*; and

WHEREAS, the **City Commission** is adopting a requirement to increase the minimum elevation requirement for dwellings in all flood hazard areas for the purpose of participating in the National Flood Insurance Program's Community Rating System and, pursuant to section 553.73(5), F.S., is formatting that requirement to coordinate with the *Florida Building Code*; and

WHEREAS, the **City Commission** has determined that it is in the public interest to adopt the proposed local technical amendments to the *Florida Building Code,* and the proposed amendments are not more stringent than necessary to address the need identified, do not discriminate against materials, products or construction techniques of demonstrated capabilities, are in compliance with section 553.73(4), Florida Statutes.

NOW, THEREFORE, BE IT ORDAINED by the **City Commission** of the **City of Flagler Beach** that the **Code of Ordinances, Appendix" A," Land Development Regulations,** is amended as set forth in the following amendments.

SECTION 1. AMENDMENTS

Appendix "A," LAND DEVELOPMENT REGULATIONS OF THE CITY OF FLAGLER BEACH CODE OF ORDINANCES is hereby amended as follows (Note: additions are shown as underline text, deletions are shown as ~~strikethrough~~, and portions of the Code that remain unchanged and which are not reprinted here are show as ellipses (***)).

ARTICLE IV. ENVIRONMENTAL AND CULTURAL RESOURCE PROTECTION[1]

Sec. 4.07.00. Floodplain management.

Sec. 4.07.01. General.

(A) *Title.* These regulations shall be known as the "Floodplain Management Ordinance" of the city, hereinafter referred to as "this ~~article~~ section."

(B) *Scope.* The provisions of this ~~article~~ section shall apply to all development that is wholly within or partially within any flood hazard area, including but not limited to the subdivision of land; filling, grading, and other site improvements and utility installations; construction, alteration, remodeling, enlargement, improvement, replacement, repair, relocation or demolition of buildings, structures, and facilities that are exempt from the Florida Building Code; placement, installation, or replacement of manufactured homes and manufactured buildings; installation or replacement of tanks; placement of recreational vehicles; installation of swimming pools; and any other development.

(C) *Intent.* The purposes of this ~~article~~ section and the flood load and flood resistant construction requirements of the Florida Building Code are to establish minimum requirements to safeguard the public health, safety, and general welfare and to minimize public and private losses due to flooding through regulation of development in flood hazard areas to:

(1) Minimize unnecessary disruption of commerce, access and public service during times of flooding;

[1]Editor's note(s)—Ord. No. 2017-02, § 2, adopted May 11, 2017, amended the title of art. IV, to read as set out herein. Previously art. IV was titled "Resource Protection Standards."

(2) Require the use of appropriate construction practices in order to prevent or minimize future flood damage;

(3) Manage filling, grading, dredging, mining, paving, excavation, drilling operations, storage of equipment or materials, and other development which may increase flood damage or erosion potential;

(4) Manage the alteration of flood hazard areas, watercourses, and shorelines to minimize the impact of development on the natural and beneficial functions of the floodplain;

(5) Minimize damage to public and private facilities and utilities;

(6) Help maintain a stable tax base by providing for the sound use and development of flood hazard areas;

(7) Minimize the need for future expenditure of public funds for flood control projects and response to and recovery from flood events; and

(8) Meet the requirements of the National Flood Insurance Program for community participation as set forth in the Title 44 Code of Federal Regulations, Section 59.22.

(D) *Coordination with the Florida Building Code.* This ~~article~~ section is intended to be administered and enforced in conjunction with the Florida Building Code. Where cited, ASCE 24 refers to the edition of the standard that is referenced by the Florida Building Code.

(E) *Warning.* The degree of flood protection required by this ~~article~~ section and the Florida Building Code, as amended by the city, is considered the minimum reasonable for regulatory purposes and is based on scientific and engineering considerations. Larger floods can and will occur. Flood heights may be increased by man-made or natural causes. This ~~article~~ section does not imply that land outside of mapped special flood hazard areas, or that uses permitted within such flood hazard areas, will be free from flooding or flood damage. The flood hazard areas and base flood elevations contained in the flood insurance study and shown on flood insurance rate maps and the requirements of Title 44 Code of Federal Regulations, Sections 59 and 60 may be revised by the Federal Emergency Management Agency, requiring this community to revise these regulations to remain eligible for participation in the National Flood Insurance Program. No guaranty of vested use, existing use, or future use is implied or expressed by compliance with this ~~article~~ section.

(F) *Disclaimer of liability.* This ~~article~~ section shall not create liability on the part of the city commission or by any officer or employee thereof for any flood damage that results from reliance on this ~~article~~ section or any administrative decision lawfully made there under.

Sec. 4.07.02. Applicability.

(A) *General.* Where there is a conflict between a general requirement and a specific requirement, the specific requirement shall be applicable.

(B) *Areas to which this ~~article~~ section applies.* This ~~article~~ section shall apply to all flood hazard areas within the city, as established in subsection (C).

(C) *Basis for establishing flood hazard areas.* The flood insurance study for Flagler County, Florida and Incorporated Areas dated ~~July 17, 2006~~ June 6, 2018, and for Volusia County, Florida and Incorporated Areas dated ~~February 19, 2014~~ September 29, 2017, and all subsequent amendments and revisions, and the accompanying flood insurance rate maps (FIRM), and all subsequent amendments and revisions to such maps, are adopted by reference as a part of this ~~article~~ section and shall serve as the minimum basis for

establishing flood hazard areas. Studies and maps that establish flood hazard areas are on file at Flagler Beach City Hall, located at 105 S. 2nd Street, Flagler Beach, FL, 32136.

(D) *Submission of additional data to establish flood hazard areas.* To establish flood hazard areas and base flood elevations, pursuant to Section ~~4.07~~ 4.07.05 the floodplain administrator may require submission of additional data. Where field surveyed topography prepared by a state licensed professional surveyor or digital topography accepted by the community indicates that ground elevations:

(1) Are below the closest applicable base flood elevation, even in areas not delineated as a special flood hazard area on a FIRM, the area shall be considered as flood hazard area and subject to the requirements of this ~~article~~ section and, as applicable, the requirements of the Florida Building Code.

(2) Are above the closest applicable base flood elevation, the area shall be regulated as special flood hazard area unless the applicant obtains a letter of map change that removes the area from the special flood hazard area.

(E) *Other laws.* The provisions of this ~~article~~ section shall not be deemed to nullify any provisions of local, state or federal law.

(F) *Abrogation and greater restrictions.* This ~~article~~ section supersedes any ordinance in effect for management of development in flood hazard areas. However, it is not intended to repeal or abrogate any existing ordinances including but not limited to land development regulations, zoning ordinances, stormwater management regulations, or the Florida Building Code. In the event of a conflict between this ~~article~~ section and any other ordinance, the more restrictive shall govern. This ~~article~~ section shall not impair any deed restriction, covenant or easement, but any land that is subject to such interests shall also be governed by this ~~article~~ section.

(G) *Interpretation.* In the interpretation and application of this ~~article~~ section, all provisions shall be:

(1) Considered as minimum requirements;

(2) Liberally construed in favor of the governing body; and

(3) Deemed neither to limit nor repeal any other powers granted under state statutes.

Sec. 4.07.03. Duties and powers of the floodplain administrator.

(A) *Designation.* The city engineer, or his designee is designated as the floodplain administrator. The floodplain administrator may delegate performance of certain duties to other employees.

(B) *General.* The floodplain administrator is authorized and directed to administer and enforce the provisions of this ~~article~~ section. The floodplain administrator shall have the authority to render interpretations of this ~~article~~ section consistent with the intent and purpose of this ~~article~~ section and may establish policies and procedures in order to clarify the application of its provisions. Such interpretations, policies, and procedures shall not have the effect of waiving requirements specifically provided in this ~~article~~ section without the granting of a variance pursuant to Section ~~4.05.07~~ 8.04.16(b).

(C) *Applications and permits.* The floodplain administrator, in coordination with other pertinent offices of the city, shall:

(1) Review applications and plans to determine whether proposed new development will be located in flood hazard areas;

(2) Review applications for modification of any existing development in flood hazard areas for compliance with the requirements of this ~~article~~ section;

(3) Interpret flood hazard area boundaries where such interpretation is necessary to determine the exact location of boundaries; a person contesting the determination shall have the opportunity to appeal the interpretation;

(4) Provide available flood elevation and flood hazard information;

(5) Determine whether additional flood hazard data shall be obtained from other sources or shall be developed by an applicant;

(6) Review applications to determine whether proposed development will be reasonably safe from flooding;

(7) Issue floodplain development permits or approvals for development other than buildings and structures that are subject to the Florida Building Code, including buildings, structures and facilities exempt from the Florida Building Code, when compliance with this ~~article~~ section is demonstrated, or disapprove the same in the event of noncompliance; and

(8) Coordinate with and provide comments to the building official to assure that applications, plan reviews, and inspections for buildings and structures in flood hazard areas comply with the applicable provisions of this ~~article~~ section.

(D) *Substantial improvement and substantial damage determinations.* For applications for building permits to improve buildings and structures, including alterations, movement, enlargement, replacement, repair, change of occupancy, additions, rehabilitations, renovations, substantial improvements, repairs of substantial damage, and any other improvement of or work on such buildings and structures, the floodplain administrator, in coordination with the building official, shall:

(1) Estimate the market value, or require the applicant to obtain an appraisal of the market value prepared by a qualified independent appraiser, of the building or structure before the start of construction of the proposed work; in the case of repair, the market value of the building or structure shall be the market value before the damage occurred and before any repairs are made;

(2) Compare the cost to perform the improvement, the cost to repair a damaged building to its pre-damaged condition, or the combined costs of improvements and repairs, if applicable, to the market value of the building or structure;

(3) Determine and document whether the proposed work constitutes substantial improvement or repair of substantial damage; and

(4) Notify the applicant if it is determined that the work constitutes substantial improvement or repair of substantial damage and that compliance with the flood resistant construction requirements of the Florida Building Code and this ~~article~~ section is required.

(E) *Modifications of the strict application of the requirements of the Florida Building Code.* The floodplain administrator shall review requests submitted to the building official that seek approval to modify the strict application of the flood load and flood resistant construction requirements of the Florida Building Code to determine whether such requests require the granting of a variance pursuant to Section ~~4.05.07~~ 8.04.16(b).

(F) *Notices and orders.* The floodplain administrator shall coordinate with appropriate local agencies for the issuance of all necessary notices or orders to ensure compliance with this ~~article~~ section.

(G) *Inspections.* The floodplain administrator shall make the required inspections as specified in Section ~~4.05.06~~ 4.07.06 for development that is not subject to the Florida Building Code, including buildings, structures and facilities exempt from the Florida Building Code. The floodplain administrator shall inspect flood hazard areas to determine if development is undertaken without issuance of a permit.

(H) *Other duties of the floodplain administrator.* The floodplain administrator shall have other duties, including but not limited to:

(1) Establish, in coordination with the building official, procedures for administering and documenting determinations of substantial improvement and substantial damage made pursuant to Section ~~4.05.03(D)~~ 4.07.03(D);

(2) Require applicants who submit hydrologic and hydraulic engineering analyses to support permit applications to submit to FEMA the data and information necessary to maintain the flood insurance rate maps if the analyses propose to change base flood elevations, or flood hazard area boundaries; such submissions shall be made within six (6) months of such data becoming available;

(3) Review required design certifications and documentation of elevations specified by this ~~article~~ section and the Florida Building Code and this ~~article~~ section to determine that such certifications and documentations are complete;

(4) Notify the Federal Emergency Management Agency when the corporate boundaries of the city are modified; and

(5) Advise applicants for new buildings and structures, including substantial improvements, which are located in any unit of the Coastal Barrier Resources System established by the Coastal Barrier Resources Act (Pub. L. 97-348) and the Coastal Barrier Improvement Act of 1990 (Pub. L. 101-591) that federal flood insurance is not available on such construction; areas subject to this limitation are identified on flood insurance rate maps as "Coastal Barrier Resource System Areas" and "Otherwise Protected Areas."

(I) *Floodplain management records.* Regardless of any limitation on the period required for retention of public records, the floodplain administrator shall maintain and permanently keep and make available for public inspection all records that are necessary for the administration of this ~~article~~ section and the flood resistant construction requirements of the Florida Building Code, including flood insurance rate maps; letters of map change; records of issuance of permits and denial of permits; determinations of whether proposed work constitutes substantial improvement or repair of substantial damage; required design certifications and documentation of elevations specified by the Florida Building Code and this ~~article~~ section; notifications to adjacent communities, FEMA, and the state related to alterations of watercourses; assurances that the flood carrying capacity of altered watercourses will be maintained; documentation related to appeals and variances, including justification for issuance or denial; and records of enforcement actions taken pursuant to this ~~article~~ section and the flood resistant construction requirements of the Florida Building Code. These records shall be available for public inspection at Flagler Beach City Hall, located at 105 S. 2nd Street, Flagler Beach, FL, 32136.

Sec. 4.07.04. Permits.

(A) *Permits required.* Any owner or owner's authorized agent (hereinafter "applicant") who intends to undertake any development activity within the scope of this ~~article~~ section, including buildings, structures and facilities exempt from the Florida Building Code, which is

wholly within or partially within any flood hazard area shall first make application to the floodplain administrator, and the building official if applicable, and shall obtain the required permit(s) and approval(s). No such permit or approval shall be issued until compliance with the requirements of this ~~article~~ section and all other applicable codes and regulations has been satisfied.

(B) *Floodplain development permits or approvals.* Floodplain development permits or approvals shall be issued pursuant to this ~~article~~ section for any development activities not subject to the requirements of the Florida Building Code, including buildings, structures and facilities exempt from the Florida Building Code. Depending on the nature and extent of proposed development that includes a building or structure, the floodplain administrator may determine that a floodplain development permit or approval is required in addition to a building permit.

(C) *Buildings, structures and facilities exempt from the Florida Building Code.* Pursuant to the requirements of federal regulation for participation in the National Flood Insurance Program (44 C.F.R. Sections 59 and 60), floodplain development permits or approvals shall be required for the following buildings, structures and facilities that are exempt from the Florida Building Code and any further exemptions provided by law, which are subject to the requirements of this ~~article~~ section:

(1) Railroads and ancillary facilities associated with the railroad.

(2) Nonresidential farm buildings on farms, as provided in F.S. § 604.50.

(3) Temporary buildings or sheds used exclusively for construction purposes.

(4) Mobile or modular structures used as temporary offices.

(5) Those structures or facilities of electric utilities, as defined in F.S. § 366.02, which are directly involved in the generation, transmission, or distribution of electricity.

(6) Chickees constructed by the Miccosukee Tribe of Indians of Florida or the Seminole Tribe of Florida. As used in this subsection, the term "chickee" means an open-sided wooden hut that has a thatched roof of palm or palmetto or other traditional materials, and that does not incorporate any electrical, plumbing, or other non-wood features.

(7) Family mausoleums not exceeding two hundred fifty (250) square feet in area which are prefabricated and assembled on site or preassembled and delivered on site and have walls, roofs, and a floor constructed of granite, marble, or reinforced concrete.

(8) Temporary housing provided by the department of corrections to any prisoner in the state correctional system.

(9) Structures identified in F.S. § 553.73(10)(k), are not exempt from the Florida Building Code if such structures are located in flood hazard areas established on flood insurance rate maps.

(D) *Application for a permit or approval.* To obtain a floodplain development permit or approval the applicant shall first file an application in writing on a form furnished by the city. The information provided shall:

(1) Identify and describe the development to be covered by the permit or approval.

(2) Describe the land on which the proposed development is to be conducted by legal description, street address or similar description that will readily identify and definitively locate the site.

(3) Indicate the use and occupancy for which the proposed development is intended.

(4) Be accompanied by a site plan or construction documents as specified in Section 4.07.05.

(5) State the valuation of the proposed work.

(6) Be signed by the applicant or the applicant's authorized agent.

(7) Give such other data and information as required by the Floodplain Administrator.

(E) *Validity of permit or approval.* The issuance of a floodplain development permit or approval pursuant to this ~~article~~ section shall not be construed to be a permit for, or approval of, any violation of this ~~article~~ section, the Florida Building Codes, or any other ordinance adopted by the city commission. The issuance of permits based on submitted applications, construction documents, and information shall not prevent the floodplain administrator from requiring the correction of errors and omissions.

(F) *Expiration.* A floodplain development permit or approval shall become invalid unless the work authorized by such permit is commenced within one hundred eighty (180) days after its issuance, or if the work authorized is suspended or abandoned for a period of one hundred eighty (180) days after the work commences. Extensions for periods of not more than one hundred eighty (180) days each shall be requested in writing and justifiable cause shall be demonstrated.

(G) *Suspension or revocation.* The floodplain administrator is authorized to suspend or revoke a floodplain development permit or approval if the permit was issued in error, on the basis of incorrect, inaccurate or incomplete information, or in violation of this ~~article~~ section or any other ordinance, regulation or requirement adopted by the city commission.

(H) *Other permits required.* Floodplain development permits and building permits shall include a condition that all other applicable state or federal permits be obtained before commencement of the permitted development, including but not limited to the following:

(1) The St. Johns River Water Management District; F.S. § 373.036.

(2) Florida Department of Health for onsite sewage treatment and disposal systems; F.S. § 381.0065 and Chapter 64E-6, F.A.C.

(3) Florida Department of Environmental Protection for construction, reconstruction, changes, or physical activities for shore protection or other activities seaward of the coastal construction control line; F.S. § 161.141.

(4) Florida Department of Environmental Protection for activities subject to the joint coastal permit; F.S. § 161.055.

(5) Florida Department of Environmental Protection for activities that affect wetlands and alter surface water flows, in conjunction with the U.S. Army Corps of Engineers; Section 404 of the Clean Water Act.

(6) Federal permits and approvals.

Sec. 4.07.05. Site plans and construction documents.

(A) *Information for development in flood hazard areas.* The site plan or construction documents for any development subject to the requirements of this ~~article~~ section shall be drawn to scale and shall include, as applicable to the proposed development:

(1) Delineation of flood hazard areas, flood zone(s), base flood elevation(s), and ground elevations if necessary for review of the proposed development.

(2) Location of the proposed activity and proposed structures, and locations of existing buildings and structures; in coastal high hazard areas, new buildings shall be located landward of the reach of mean high tide.

(3) Location, extent, amount, and proposed final grades of any filling, grading, or excavation.

(4) Where the placement of fill is proposed, the amount, type, and source of fill material; compaction specifications; a description of the intended purpose of the fill areas; evidence that the proposed fill areas are the minimum necessary to achieve the intended purpose; and documentation that compensatory storage is provided if required by Section 4.07.12(D)(3).

(5) Delineation of the coastal construction control line or notation that the site is seaward of the coastal construction control line, if applicable.

(6) Extent of any proposed alteration of sand dunes or mangrove stands, provided such alteration is approved by the state department of environmental protection.

The floodplain administrator is authorized to waive the submission of site plans, construction documents, and other data that are required by this ~~article~~ section but that are not required to be prepared by a registered design professional if it is found that the nature of the proposed development is such that the review of such submissions is not necessary to ascertain compliance with this ~~article~~ section.

(B) *Additional analyses and certifications.* For activities that propose to alter sand dunes or mangrove stands in coastal high hazard areas (zone V), the applicant shall provide an engineering analysis that demonstrates that the proposed alteration will not increase the potential for flood damage signed and sealed by a state licensed engineer for submission with the site plan and construction documents.

(C) *Submission of additional data.* When additional hydrologic, hydraulic or other engineering data, studies, and additional analyses are submitted to support an application, the applicant has the right to seek a letter of map change from FEMA to change the base flood elevations or change boundaries of flood hazard areas shown on FIRMs, and to submit such data to FEMA for such purposes. The analyses shall be prepared by a state licensed engineer in a format required by FEMA. Submittal requirements and processing fees shall be the responsibility of the applicant.

Sec. 4.07.06. Inspections.

(A) *General.* Development for which a floodplain development permit or approval is required shall be subject to inspection.

(B) *Development other than buildings and structures.* The floodplain administrator shall inspect all development to determine compliance with the requirements of this ~~article~~ section and the conditions of issued floodplain development permits or approvals.

(C) *Buildings, structures and facilities exempt from the Florida Building Code.* The floodplain administrator shall inspect buildings, structures and facilities exempt from the Florida Building Code to determine compliance with the requirements of this ~~article~~ section and the conditions of issued floodplain development permits or approvals.

(D) *Buildings, structures and facilities exempt from the Florida Building Code, lowest floor inspection.* Upon placement of the lowest floor, including basement, and prior to further vertical construction, the owner of a building, structure or facility exempt from the Florida Building Code, or the owner's authorized agent, shall submit to the floodplain administrator

the required elevation of the lowest floor, the certification of elevation of the lowest floor prepared and sealed by a state licensed professional surveyor.

(E) *Buildings, structures and facilities exempt from the Florida Building Code, final inspection.* As part of the final inspection, the owner or owner's authorized agent shall submit to the floodplain administrator a final certification of elevation of the lowest floor or final documentation of the height of the lowest floor above the highest adjacent grade; such certifications and documentations shall be prepared as specified in Section 4.07.06(D).

(F) *Manufactured homes.* The floodplain administrator shall inspect manufactured homes that are installed or replaced in flood hazard areas to determine compliance with the requirements of this ~~article~~ section and the conditions of the issued permit. Upon placement of a manufactured home, certification of the elevation of the bottom of the frame and lowest floor shall be submitted to the floodplain administrator.

Sec. 4.07.07. Variances and appeals.

Requests for variances from the strict application of this section and the strict application of the flood resistant construction requirements of the Florida Building Code are subject to the requirements of Section 8.04.16(b). Appeals of decisions or determinations made by the floodplain administrator are subject to Section 8.04.17(b).

~~(A) *General.* The city commission, after review and recommendation from the planning and architectural review board as established by the city, shall hear and decide on requests for appeals and requests for variances from the strict application of this article. Pursuant to F.S. § 553.73(5), the city commission shall hear and decide on requests for appeals and requests for variances from the strict application of the flood resistant construction requirements of the Florida Building Code. This section does not apply to Section 3109 of the Florida Building Code, Building.~~

~~(B) *Appeals.* The city commission shall hear and decide appeals when it is alleged there is an error in any requirement, decision, or determination made by the floodplain administrator in the administration and enforcement of this article. Any person aggrieved by the decision of the city commission may appeal such decision to the circuit court, as provided by state statutes.~~

~~(C) *Limitations on authority to grant variances.* The city commission shall base its decisions on variances on technical justifications submitted by applicants, the considerations for issuance in subsection (F), the conditions of issuance set forth in subsection (G), and the comments and recommendations of the floodplain administrator and the building official. The city commission has the right to attach such conditions as it deems necessary to further the purposes and objectives of this article.~~

~~(D) *Historic buildings.* A variance is authorized to be issued for the repair, improvement, or rehabilitation of a historic building that is determined eligible for the exception to the flood resistant construction requirements of the Florida Building Code, Existing Building, Chapter 11 Historic Buildings, upon a determination that the proposed repair, improvement, or rehabilitation will not preclude the building's continued designation as a historic building and the variance is the minimum necessary to preserve the historic character and design of the building. If the proposed work precludes the building's continued designation as a historic building, a variance shall not be granted and the building and any repair, improvement, and rehabilitation shall be subject to the requirements of the Florida Building Code.~~

~~(E) *Functionally dependent uses.* A variance is authorized to be issued for the construction or substantial improvement necessary for the conduct of a functionally dependent use, as~~

defined in this article, is the minimum necessary considering the flood hazard, and all due consideration has been given to use of methods and materials that minimize flood damage during occurrence of the base flood.

(F) *Considerations for issuance of variances.* In reviewing requests for variances, the city commission shall consider all technical evaluations, all relevant factors, all other applicable provisions of the Florida Building Code, this article, and the following:

(1) The danger that materials and debris may be swept onto other lands resulting in further injury or damage;

(2) The danger to life and property due to flooding or erosion damage;

(3) The susceptibility of the proposed development, including contents, to flood damage and the effect of such damage on current and future owners;

(4) The importance of the services provided by the proposed development to the community;

(5) The availability of alternate locations for the proposed development that are subject to lower risk of flooding or erosion;

(6) The compatibility of the proposed development with existing and anticipated development;

(7) The relationship of the proposed development to the comprehensive plan and floodplain management program for the area;

(8) The safety of access to the property in times of flooding for ordinary and emergency vehicles;

(9) The expected heights, velocity, duration, rate of rise and debris and sediment transport of the floodwaters and the effects of wave action, if applicable, expected at the site; and

(10) The costs of providing governmental services during and after flood conditions including maintenance and repair of public utilities and facilities such as sewer, gas, electrical and water systems, streets and bridges.

(G) *Conditions for issuance of variances.* Variances shall be issued only upon:

(1) Submission by the applicant, of a showing of good and sufficient cause that the unique characteristics of the size, configuration, or topography of the site limit compliance with any provision of this article or the required elevation standards;

(2) Determination by the city commission that:

(a) Failure to grant the variance would result in exceptional hardship due to the physical characteristics of the land that render the lot undevelopable; increased costs to satisfy the requirements or inconvenience do not constitute hardship;

(b) The granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, nor create nuisances, cause fraud on or victimization of the public or conflict with existing local laws and ordinances; and

(c) The variance is the minimum necessary, considering the flood hazard, to afford relief;

~~(3) Receipt of a signed statement by the applicant that the variance, if granted, shall be recorded in the office of the clerk of the court in such a manner that it appears in the chain of title of the affected parcel of land; and~~

~~(4) If the request is for a variance to allow construction of the lowest floor of a new building, or substantial improvement of a building, below the required elevation, a copy in the record of a written notice from the floodplain administrator to the applicant for the variance, specifying the difference between the base flood elevation and the proposed elevation of the lowest floor, stating that the cost of federal flood insurance will be commensurate with the increased risk resulting from the reduced floor elevation (up to amounts as high as twenty-five dollars ($25.00) for one hundred dollars ($100.00) of insurance coverage), and stating that construction below the base flood elevation increases risks to life and property.~~

Sec. 4.07.08. Violations.

(A) *Violations.* Any development that is not within the scope of the Florida Building Code but that is regulated by this ~~article~~ section that is performed without an issued permit, that is in conflict with an issued permit, or that does not fully comply with this ~~article~~ section, shall be deemed a violation of this ~~article~~ section. A building or structure without the documentation of elevation of the lowest floor, other required design certifications, or other evidence of compliance required by this ~~article~~ section or the Florida Building Code is presumed to be a violation until such time as that documentation is provided.

(B) *Authority.* For development that is not within the scope of the Florida Building Code but that is regulated by this ~~article~~ section and that is determined to be a violation, the floodplain administrator is authorized to serve notices of violation or stop work orders to owners of the property involved, to the owner's agent, or to the person or persons performing the work.

(C) *Unlawful continuance*. Any person who shall continue any work after having been served with a notice of violation or a stop work order, except such work as that person is directed to perform to remove or remedy a violation or unsafe condition, shall upon conviction thereof, be fined not more than five hundred dollars ($500.00) or imprisoned for not more than sixty (60) days, of both, and in addition shall pay all costs and expenses involved in the case. Each day such violation continues shall be considered a separate offense. Nothing herein contained shall prevent the city from taking such other lawful action as is necessary to prevent or remedy any violation.

Sec. 4.07.09. Definitions.

Unless otherwise expressly stated, the following words and terms shall, for the purposes of this ~~article~~ section, have the meanings shown in this section. Where terms are not defined in this ~~article~~ section and are defined in the Florida Building Code, such terms shall have the meanings ascribed to them in that code. Where terms are not defined in this ~~article~~ section or the Florida Building Code, such terms shall have ordinarily accepted meanings such as the context implies.

Alteration of a watercourse. A dam, impoundment, channel relocation, change in channel alignment, channelization, or change in cross-sectional area of the channel or the channel capacity, or any other form of modification which may alter, impede, retard or change the direction and/or velocity of the riverine flow of water during conditions of the base flood.

Appeal. A request for a review of the floodplain administrator's interpretation of any provision of this ~~article~~ section ~~or a request for a variance~~.

ASCE 24. A standard titled "Flood Resistant Design and Construction" that is referenced by the Florida Building Code. ASCE 24 is developed and published by the American Society of Civil Engineers, Reston, VA.

Base flood. A flood having a one (1) percent chance of being equaled or exceeded in any given year. [Also defined in FBC, B, Section 1612.2.] The base flood is commonly referred to as the "100-year flood" or the "one-percent-annual chance flood."

Base flood elevation. The elevation of the base flood, including wave height, relative to the National Geodetic Vertical Datum (NGVD), North American Vertical Datum (NAVD) or other datum specified on the flood insurance rate map (FIRM). [Also defined in FBC, B, Section 1612.2.]

Basement. The portion of a building having its floor subgrade (below ground level) on all sides. [Also defined in FBC, B, Section 1612.2.]

Coastal A zone. Flood hazard areas that have been delineated as subject to wave heights between one and one-half (1½) feet and three (3) feet. Such areas are seaward of the limit of moderate wave action shown on the flood insurance rate map.

Coastal construction control line. The line established by the state pursuant to F.S. § 161.053, and recorded in the official records of the community, which defines that portion of the beach-dune system subject to severe fluctuations based on a 100-year storm surge, storm waves or other predictable weather conditions.

Coastal high hazard area. A special flood hazard area extending from offshore to the inland limit of a primary frontal dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources. Coastal high hazard areas are also referred to as "high hazard areas subject to high velocity wave action" or "V zones" and are designated on Flood Insurance Rate Maps (FIRM) as zone V1-V30, VE, or V. ~~[Note: The FBC, B defines and uses the term "flood hazard areas subject to high velocity wave action" and the FBC, R uses the term "coastal high hazard areas."]~~

Compensatory storage. Excavation within or directly contiguous to a flood hazard area, above the normal high groundwater table elevation and below the base flood elevation, of a volume equivalent to the volume of proposed fill (one (1) to one (1) ratio), provided to balance the effects of proposed fill on the flood hazard area (no net loss of floodplain storage volume).

Design flood. The flood associated with the greater of the following two (2) areas: [Also defined in FBC, B, Section 1612.2.]

(1) Area with a floodplain subject to a one (1) percent or greater chance of flooding in any year; or

(2) Area designated as a flood hazard area on the community's flood hazard map, or otherwise legally designated.

Design flood elevation. The elevation of the "design flood," including wave height, relative to the datum specified on the community's legally designated flood hazard map. In areas designated as zone AO, the design flood elevation shall be the elevation of the highest existing grade of the building's perimeter plus the depth number (in feet) specified on the flood hazard map. In areas designated as zone AO where the depth number is not specified on the map, the depth number shall be taken as being equal to two (2) feet. [Also defined in FBC, B, Section 1612.2.]

Development. Any man-made change to improved or unimproved real estate, including but not limited to, buildings or other structures, tanks, temporary structures, temporary or permanent storage of equipment or materials, mining, dredging, filling, grading, paving, excavations, drilling operations or any other land disturbing activities.

Encroachment. The placement of fill, excavation, buildings, permanent structures or other development into a flood hazard area which may impede or alter the flow capacity of riverine flood hazard areas.

Existing building and existing structure. Any buildings and structures for which the "start of construction" commenced before January 10, 1985. [Also defined in FBC, B, Section 1612.2.]

~~*Existing manufactured home park or subdivision.* A manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading of the pouring of concrete pads) is completed before January 10, 1985.~~

~~*Expansion to an existing manufactured home park or subdivision.* The preparation of additional sites by the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads).~~

Federal Emergency Management Agency (FEMA). The federal agency that, in addition to carrying out other functions, administers the National Flood Insurance Program.

Flood or *flooding.* A general and temporary condition of partial or complete inundation of normally dry land from: [Also defined in FBC, B, Section 1612.2.]

(1) The overflow of inland or tidal waters.

(2) The unusual and rapid accumulation or runoff of surface waters from any source.

Flood damage-resistant materials. Any construction material capable of withstanding direct and prolonged contact with floodwaters without sustaining any damage that requires more than cosmetic repair. [Also defined in FBC, B, Section 1612.2.]

Flood hazard area. The greater of the following two (2) areas: [Also defined in FBC, B, Section 1612.2.]

(1) The area within a floodplain subject to a one (1) percent or greater chance of flooding in any year.

(2) The area designated as a flood hazard area on the community's flood hazard map, or otherwise legally designated.

Flood insurance rate map (FIRM). The official map of the community on which the Federal Emergency Management Agency has delineated both special flood hazard areas and the risk premium zones applicable to the community. [Also defined in FBC, B, Section 1612.2.]

Flood insurance study (FIS). The official report provided by the Federal Emergency Management Agency that contains the flood insurance rate map, the flood boundary and floodway map (if applicable), the water surface elevations of the base flood, and supporting technical data. [Also defined in FBC, B, Section 1612.2.]

Floodplain administrator. The office or position designated and charged with the administration and enforcement of this ~~article~~ section (may be referred to as the floodplain manager).

Floodplain development permit or approval. An official document or certificate issued by the community, or other evidence of approval or concurrence, which authorizes performance of specific development activities that are located in flood hazard areas and that are determined to be compliant with this ~~article~~ section.

Florida Building Code. The family of codes adopted by the Florida Building Commission, including: Florida Building Code, Building; Florida Building Code, Residential; Florida Building Code, Existing Building; Florida Building Code, Mechanical; Florida Building Code, Plumbing; Florida Building Code, Fuel Gas.

Functionally dependent use. A use which cannot perform its intended purpose unless it is located or carried out in close proximity to water, including only docking facilities, port facilities that are necessary for the loading and unloading of cargo or passengers, and ship building and ship repair facilities; the term does not include long-term storage or related manufacturing facilities.

Highest adjacent grade. The highest natural elevation of the ground surface prior to construction next to the proposed walls or foundation of a structure.

Historic structure. Any structure that is determined eligible for the exception to the flood hazard area requirements of the Florida Building Code, Existing Building, Chapter ~~11~~ 12 Historic Buildings.

Letter of map change (LOMC). An official determination issued by FEMA that amends or revises an effective flood insurance rate map or flood insurance study. Letters of map change include:

(1) *Letter of map amendment (LOMA).* An amendment based on technical data showing that a property was incorrectly included in a designated special flood hazard area. A LOMA amends the current effective flood insurance rate map and establishes that a specific property, portion of a property, or structure is not located in a special flood hazard area.

(2) *Letter of map revision (LOMR).* A revision based on technical data that may show changes to flood zones, flood elevations, special flood hazard area boundaries and floodway delineations, and other planimetric features.

(3) *Letter of map revision based on fill (LOMR-F).* A determination that a structure or parcel of land has been elevated by fill above the base flood elevation and is, therefore, no longer located within the special flood hazard area. In order to qualify for this determination, the fill must have been permitted and placed in accordance with the community's floodplain management regulations.

(4) *Conditional letter of map revision (CLOMR).* A formal review and comment as to whether a proposed flood protection project or other project complies with the minimum NFIP requirements for such projects with respect to delineation of special flood hazard areas. A CLOMR does not revise the effective flood insurance rate map or flood insurance study; upon submission and approval of certified as-built documentation, a letter of map revision may be issued by FEMA to revise the effective FIRM.

Light-duty truck. As defined in 40 C.F.R. 86.082-2, any motor vehicle rated at eight thousand five hundred (8,500) pounds gross vehicular weight rating or less which has a vehicular curb weight of six thousand (6,000) pounds or less and which has a basic vehicle frontal area of forty-five (45) square feet or less, which is:

(1) Designed primarily for purposes of transportation of property or is a derivation of such a vehicle, or

(2) Designed primarily for transportation of persons and has a capacity of more than twelve (12) persons; or

(3) Available with special features enabling off-street or off-highway operation and use.

Lowest floor. The lowest floor of the lowest enclosed area of a building or structure, including basement, but excluding any unfinished or flood-resistant enclosure, other than a basement, usable solely for vehicle parking, building access or limited storage provided that such enclosure is not built so as to render the structure in violation of the non-elevation requirements of the Florida Building Code or ASCE 24. [Also defined in FBC, B, Section 1612.2.]

Manufactured home. A structure, transportable in one (1) or more sections, which is eight (8) feet or more in width and greater than four hundred (400) square feet, and which is built on a permanent, integral chassis and is designed for use with or without a permanent foundation when attached to the required utilities. The term "manufactured home" does not include a "recreational vehicle" or "park trailer." [Also defined in 15C-1.0101, F.A.C.]

Manufactured home park or subdivision. A parcel (or contiguous parcels) of land divided into two (2) or more manufactured home lots for rent or sale.

Market value. ~~The price at which a property will change hands between a willing buyer and a willing seller, neither party being under compulsion to buy or sell and both having reasonable knowledge of relevant facts.~~ As used in this ~~article~~ section, the term refers to the market value of buildings and structures, excluding the land and other improvements on the parcel. Market value ~~may be established by a qualified independent appraiser,~~ is the actual cash value (like-kind replacement cost depreciated for age, wear and tear, neglect, and quality of construction) determined by a qualified independent appraiser, or tax assessment value adjusted to approximate market value by a factor provided by the county property appraiser.

New construction. For the purposes of administration of this ~~article~~ section and the flood resistant construction requirements of the Florida Building Code, structures for which the "start of construction" commenced on or after January 10, 1985, and includes any subsequent improvements to such structures.

~~*New manufactured home park or subdivision.* A manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed on or after January 10, 1985.~~

Park trailer. A transportable unit which has a body width not exceeding fourteen (14) feet and which is built on a single chassis and is designed to provide seasonal or temporary living quarters when connected to utilities necessary for operation of installed fixtures and appliances. [Defined in F.S. § 320.01]

Recreational vehicle. A vehicle, including a park trailer, which is: [See F.S. § 320.01]

(1) Built on a single chassis;

(2) Four hundred (400) square feet or less when measured at the largest horizontal projection;

(3) Designed to be self-propelled or permanently towable by a light duty truck; and

(4) Designed primarily not for use as a permanent dwelling but as temporary living quarters for recreational, camping, travel, or seasonal use.

Sand dunes. Naturally occurring accumulations of sand in ridges or mounds landward of the beach.

Special flood hazard area. An area in the floodplain subject to a one (1) percent or greater chance of flooding in any given year. Special flood hazard areas are shown on FIRMs as zone A, AO, A1-A30, AE, A99, AH, V1-V30, VE or V. [Also defined in FBC, B Section 1612.2.]

Start of construction. The date of issuance of permits for new construction and substantial improvements to existing structures, provided the actual start of construction, repair, reconstruction, rehabilitation, addition, placement, or other improvement is within one hundred eighty (180) days of the date of the issuance. The actual start of construction means either the first placement of permanent construction of a building (including a manufactured home) on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns. Permanent

~~Permanent~~ construction does not include land preparation (such as clearing, grading, or filling), the installation of streets or walkways, excavation for a basement, footings, piers, or foundations, the erection of temporary forms or the installation of accessory buildings such as garages or sheds not occupied as dwelling units or not part of the main buildings. For a substantial improvement, the actual "start of construction" means the first alteration of any wall, ceiling, floor or other structural part of a building, whether or not that alteration affects the external dimensions of the building. [Also defined in FBC, B Section 1612.2.]

Substantial damage. Damage of any origin sustained by a building or structure whereby the cost of restoring the building or structure to its before-damaged condition would equal or exceed fifty (50) percent of the market value of the building or structure before the damage occurred.

Substantial improvement. Any repair, reconstruction, rehabilitation, addition, or other improvement of a building or structure, the cost of which equals or exceeds fifty (50) percent of the market value of the building or structure before the improvement or repair is started. If the structure has incurred substantial damage," any repairs are considered substantial improvement regardless of the actual repair work performed. The term does not, however, include any project for improvement of a building required to correct existing health, sanitary, or safety code violations identified by the building official and that are the minimum necessary to assure safe living conditions.

Variance. A grant of relief from the requirements of this ~~article~~ section, or the flood resistant construction requirements of the Florida Building Code, which permits construction in a manner that would not otherwise be permitted by this ~~ordinance~~ section or the Florida Building Code.

Watercourse. A river, creek, stream, channel or other topographic feature in, on, through, or over which water flows at least periodically.

Sec. 4.07.10. Buildings and structures.

(A) *Design and construction of buildings, structures and facilities exempt from the Florida Building Code.* Pursuant to Section 4.07.04(C), buildings, structures, and facilities that are exempt from the Florida Building Code, including substantial improvement or repair of substantial damage of such buildings, structures and facilities, shall be designed and constructed in accordance with the flood load and flood resistant construction requirements of ASCE 24. Structures exempt from the Florida Building Code that are not walled and roofed buildings shall comply with the requirements of Section 4.07.16.

(B) *Buildings and structures seaward of the coastal construction control line.* If extending, in whole or in part, seaward of the coastal construction control line and also located, in whole or in part, in a flood hazard area:

(1) Buildings and structures shall be designed and constructed to comply with the more restrictive applicable requirements of the Florida Building Code, Building Section 3109 and Section 1612 or Florida Building Code, Residential Section R322.

(2) Minor structures and non-habitable major structures as defined in F.S. § 161.54, shall be designed and constructed to comply with the intent and applicable provisions of this ~~article~~ section and ASCE 24.

(C) *Florida Building Code technical amendments.*

Technical amendments to the Florida Building Code that address design requirements for buildings in flood hazard areas are adopted in Section 5.00.10.

Sec. 4.07.11. Subdivisions.

(A) *Minimum requirements.* Subdivision proposals, including proposals for manufactured home parks and subdivisions, shall be reviewed to determine that:

(1) Such proposals are consistent with the need to minimize flood damage and will be reasonably safe from flooding;

(2) All public utilities and facilities such as sewer, gas, electric, communications, and water systems are located and constructed to minimize or eliminate flood damage; and

(3) Adequate drainage is provided to reduce exposure to flood hazards; in zones AH and AO, adequate drainage paths shall be provided to guide floodwaters around and away from proposed structures.

(B) *Subdivision plats.* Where any portion of proposed subdivisions, including manufactured home parks and subdivisions, lies within a flood hazard area, the following shall be required:

(1) Delineation of flood hazard areas, flood zones, and design flood elevations, as appropriate, shall be shown on preliminary plats;

(2) Compliance with the site improvement and utilities requirements of Section 4.07.12.

Sec. 4.07.12. Site improvement, utilities and limitations.

(A) *Minimum requirements.* All proposed new development shall be reviewed to determine that:

(1) Such proposals are consistent with the need to minimize flood damage and will be reasonably safe from flooding;

(2) All public utilities and facilities such as sewer, gas, electric, communications, and water systems are located and constructed to minimize or eliminate flood damage; and

(3) Adequate drainage is provided to reduce exposure to flood hazards; in zones AH and AO, adequate drainage paths shall be provided to guide floodwaters around and away from proposed structures.

(B) *Sanitary sewage facilities.* All new and replacement sanitary sewage facilities, private sewage treatment plants (including all pumping stations and collector systems), and on-site waste disposal systems shall be designed in accordance with the standards for onsite sewage treatment and disposal systems in Chapter 64E-6, F.A.C. and ASCE 24 Chapter 7 to minimize or eliminate infiltration of floodwaters into the facilities and discharge from the facilities into flood waters, and impairment of the facilities and systems.

(C) *Water supply facilities.* All new and replacement water supply facilities shall be designed in accordance with the water well construction standards in Chapter 62-532.500, F.A.C. and ASCE 24 Chapter 7 to minimize or eliminate infiltration of floodwaters into the systems.

(D) *Limitations on placement of fill.* Subject to the limitations of this ~~article~~ section:

(1) Fill shall be designed to be stable under conditions of flooding including rapid rise and rapid drawdown of floodwaters, prolonged inundation, and protection against flood-related erosion and scour.

(2) If intended to support buildings and structures (zone A only), fill shall comply with the requirements of the Florida Building Code.

(3) In special flood hazard areas (other than coastal high hazard areas and coastal A zones) and in the Mirror Lake Overlay District, if the placement of fill is proposed, compensatory storage shall be provided at a one (1) to one (1) ratio to minimize increases in flood levels. Activities exempt from this requirement include: seawalls, accessory structures, shoreline hardening, pool/patio construction, sidewalks and driveways, filled stemwall foundations, restoration earthwork due to erosion and scour, and other minor activities not exceeding a volume of fifty (50) cubic yards.

(4) In coastal high hazard areas (zone V) and coastal A zones, non-compacted fill may be used around buildings for landscaping, drainage and aesthetic purposes provided the fill will wash out during storm surge to minimize obstruction to the passage of waves and to minimize ramping effects or wave deflection. Applications for placement of non-compacted fill shall include an analysis by an engineer, architect, or soil scientist demonstrating that the following have been considered:

(a) Particle composition of the fill does not have a tendency for excessive natural compaction;

(b) Volume and distribution of fill will not cause wave deflection to adjacent properties; and

(c) The slope of fill will not cause wave run-up or ramping.

(E) *Limitations on sites in coastal high hazard areas (zone V).* In coastal high hazard areas, alteration of sand dunes and mangrove stands shall be permitted only if such alteration is approved by the state department of environmental protection and only if the engineering analysis required by Section 4.07.05(B)~~(4)~~ demonstrates that the proposed alteration will not increase the potential for flood damage. Construction or restoration of dunes under or around elevated buildings and structures shall comply with Section 4.07.16(E)(3).

Sec. 4.07.13. Manufactured homes.

(A) *General.* All manufactured homes installed in flood hazard areas shall be installed by an installer that is licensed pursuant to F.S. § 320.8249, and shall comply with the requirements of Chapter 15C-1, F.A.C. and the requirements of this ~~article~~ section. New manufactured homes and replacement manufactured homes shall not be installed in coastal high hazard areas except in an existing manufactured home parks or subdivisions. If located seaward of the coastal construction control line, all manufactured homes shall comply with the more restrictive of the applicable requirements.

(B) *Foundations.* All new manufactured homes and replacement manufactured homes installed in flood hazard areas shall be installed on permanent, reinforced foundations that:

(1) In flood hazard areas (zone A) other than coastal high hazard areas and coastal A zones, are designed in accordance with the foundation requirements of the Florida Building Code, Residential Section R322.2 and this ~~article~~ section.

(2) In coastal high hazard areas (zone V) and coastal A zones, are designed in accordance with the foundation requirements of the Florida Building Code, Residential Section R322.3 and this ~~article~~ section.

(C) *Anchoring.* All new manufactured homes and replacement manufactured homes shall be installed using methods and practices which minimize flood damage and shall be securely anchored to an adequately anchored foundation system to resist flotation, collapse or lateral movement. Methods of anchoring include, but are not limited to, use of over-the-top or frame ties to ground anchors. This anchoring requirement is in addition to applicable state and local anchoring requirements for wind resistance.

(D) *Elevation.* All manufactured homes that are placed, replaced, or substantially improved in flood hazard areas shall be elevated such that the bottom of the frame is at or above the base flood elevation plus three (3) feet. ~~Manufactured homes that are placed, replaced, or substantially improved shall comply with subsection (E) or (F), as applicable.~~

~~(E) *General elevation requirement.* Unless subject to the requirements of subsection (F), all manufactured homes that are placed, replaced, or substantially improved on sites located: (a) outside of a manufactured home park or subdivision; (b) in a new manufactured home park or subdivision; (c) in an expansion to an existing manufactured home park or subdivision; or (d) in an existing manufactured home park or subdivision upon which a manufactured home has incurred "substantial damage" as the result of a flood, shall be elevated such that the bottom of the frame is at or above the elevation required, as applicable to the flood hazard area, in the Florida Building Code, Residential Section R322.2 (zone A) or Section R322.3 (zone V).~~

~~(F) *Elevation requirement for certain existing manufactured home parks and subdivisions.* Manufactured homes that are not subject to subsection (E), including manufactured homes that are placed, replaced, or substantially improved on sites located in an existing manufactured home park or subdivision, unless on a site where substantial damage as result of flooding has occurred, shall be elevated such that either the:~~

~~(1) Bottom of the frame of the manufactured home is at or above the elevation required, as applicable to the flood hazard area, in the Florida Building Code, Residential Section R322.2 (Zone A) or Section R322.3 (zone V); or~~

~~(2) Bottom of the frame is supported by reinforced piers or other foundation elements of at least equivalent strength that are not less than 36 inches in height above grade.~~

(E) ~~(G)~~ *Enclosures.* Enclosed areas below elevated manufactured homes shall comply with the requirements of the Florida Building Code, Residential Section R322 for such enclosed areas, as applicable to the flood hazard area.

(F) ~~(H)~~ *Utility equipment.* Utility equipment that serves manufactured homes, including electric, heating, ventilation, plumbing, and air conditioning equipment and other service facilities, shall comply with the requirements of the Florida Building Code, Residential Section R322, as applicable to the flood hazard area.

Sec. 4.07.14. Recreational vehicles and park trailers.

(A) *Temporary placement.* Recreational vehicles and park trailers placed temporarily in flood hazard areas shall:

(1) Be on the site for fewer than one hundred eighty (180) consecutive days; or

(2) Be fully licensed and ready for highway use, which means the recreational vehicle or park model is on wheels or jacking system, is attached to the site only by quick-disconnect type utilities and security devices, and has no permanent attachments such as additions, rooms, stairs, decks and porches.

(B) *Permanent placement.* Recreational vehicles and park trailers that do not meet the limitations in subsection (A) for temporary placement shall meet the requirements of Section 4.07.13 for manufactured homes.

Sec. 4.07.15. Tanks.

(A) *Underground tanks.* Underground tanks in flood hazard areas shall be anchored to prevent flotation, collapse or lateral movement resulting from hydrodynamic and hydrostatic loads during conditions of the design flood, including the effects of buoyancy assuming the tank is empty.

(B) *Above-ground tanks, not elevated.* Above-ground tanks that do not meet the elevation requirements of subsection (C) shall:

(1) Be permitted in flood hazard areas (zone A) other than coastal high hazard areas, provided the tanks are anchored or otherwise designed and constructed to prevent flotation, collapse or lateral movement resulting from hydrodynamic and hydrostatic loads during conditions of the design flood, including the effects of buoyancy assuming the tank is empty and the effects of flood-borne debris.

(2) Not be permitted in coastal high hazard areas (zone V).

(C) *Above-ground tanks, elevated.* Above-ground tanks in flood hazard areas shall be attached to and elevated to or above the design flood elevation on a supporting structure that is designed to prevent flotation, collapse or lateral movement during conditions of the design flood. Tank-supporting structures shall meet the foundation requirements of the applicable flood hazard area.

(D) *Tank inlets and vents.* Tank inlets, fill openings, outlets and vents shall be:

(1) At or above the design flood elevation or fitted with covers designed to prevent the inflow of floodwater or outflow of the contents of the tanks during conditions of the design flood; and

(2) Anchored to prevent lateral movement resulting from hydrodynamic and hydrostatic loads, including the effects of buoyancy, during conditions of the design flood.

Sec. 4.07.16. Other development.

(A) *General requirements for other development.* All development, including man-made changes to improved or unimproved real estate for which specific provisions are not specified in this ~~article~~ section or the Florida Building Code, shall:

(1) Be located and constructed to minimize flood damage;

(2) Be anchored to prevent flotation, collapse or lateral movement resulting from hydrostatic loads, including the effects of buoyancy, during conditions of the design flood;

(3) Be constructed of flood damage-resistant materials; and

(4) Have mechanical, plumbing, and electrical systems above the design flood elevation, except that minimum electric service required to address life safety and electric code requirements is permitted below the design flood elevation provided it conforms to the provisions of the electrical part of building code for wet locations.

(B) *Concrete slabs used as parking pads, enclosure floors, landings, decks, walkways, patios and similar nonstructural uses in coastal high hazard areas (zone V) and coastal A zones.* In coastal high hazard areas and coastal A zones, concrete slabs used as parking pads,

enclosure floors, landings, decks, walkways, patios and similar nonstructural uses are permitted beneath or adjacent to buildings and structures provided the concrete slabs are designed and constructed to be:

(1) Structurally independent of the foundation system of the building or structure;

(2) Frangible and not reinforced, so as to minimize debris during flooding that is capable of causing significant damage to any structure; and

(3) Have a maximum slab thickness of not more than four (4) inches.

(C) *Decks and patios in coastal high hazard areas (zone V) and coastal A zones.* In addition to the requirements of the Florida Building Code, in coastal high hazard areas and coastal A zones decks and patios shall be located, designed, and constructed in compliance with the following:

(1) A deck that is structurally attached to a building or structure shall have the bottom of the lowest horizontal structural member at or above the design flood elevation and any supporting members that extend below the design flood elevation shall comply with the foundation requirements that apply to the building or structure, which shall be designed to accommodate any increased loads resulting from the attached deck.

(2) A deck or patio that is located below the design flood elevation shall be structurally independent from buildings or structures and their foundation systems, and shall be designed and constructed either to remain intact and in place during design flood conditions or to break apart into small pieces to minimize debris during flooding that is capable of causing structural damage to the building or structure or to adjacent buildings and structures.

(3) A deck or patio that has a vertical thickness of more than twelve (12) inches or that is constructed with more than the minimum amount of fill necessary for site drainage shall not be approved unless an analysis prepared by a qualified registered design professional demonstrates no harmful diversion of floodwaters or wave runup and wave reflection that would increase damage to the building or structure or to adjacent buildings and structures.

(4) A deck or patio that has a vertical thickness of twelve (12) inches or less and that is at natural grade or on nonstructural fill material that is similar to and compatible with local soils and is the minimum amount necessary for site drainage may be approved without requiring analysis of the impact on diversion of floodwaters or wave runup and wave reflection.

(D) *Other development in coastal high hazard areas (zone V) and coastal A zones.* In coastal high hazard areas and coastal A zones, development activities other than buildings and structures shall be permitted only if also authorized by the appropriate federal, state or local authority; if located outside the footprint of, and not structurally attached to, buildings and structures; and if analyses prepared by qualified registered design professionals demonstrate no harmful diversion of floodwaters or wave runup and wave reflection that would increase damage to adjacent buildings and structures. Such other development activities include but are not limited to:

(1) Bulkheads, seawalls, retaining walls, revetments, and similar erosion control structures;

(2) Solid fences and privacy walls, and fences prone to trapping debris, unless designed and constructed to fail under flood conditions less than the design flood or otherwise function to avoid obstruction of floodwaters; and

(3) On-site sewage treatment and disposal systems defined in 64E-6.002, F.A.C., as filled systems or mound systems.

(E) *Nonstructural fill in coastal high hazard areas (zone V) and coastal A zones.* In coastal high hazard areas and coastal A zones:

(1) Minor grading and the placement of minor quantities of nonstructural fill shall be permitted for landscaping and for drainage purposes under and around buildings.

(2) Nonstructural fill with finished slopes that are steeper than one (1) unit vertical to five (5) units horizontal shall be permitted only if an analysis prepared by a qualified registered design professional demonstrates no harmful diversion of floodwaters or wave runup and wave reflection that would increase damage to adjacent buildings and structures.

(3) Where authorized by the state department of environmental protection or applicable local approval, sand dune construction and restoration of sand dunes under or around elevated buildings are permitted without additional engineering analysis or certification of the diversion of floodwater or wave runup and wave reflection if the scale and location of the dune work is consistent with local beach-dune morphology and the vertical clearance is maintained between the top of the sand dune and the lowest horizontal structural member of the building.

ARTICLE V. DEVELOPMENT DESIGN AND IMPROVEMENT STANDARDS

Sec. 5.00.00. General.

* * *

Sec. 5.00.09. Reserved. ~~Administrative amendments to the Florida Building Code, Building.~~

~~107.6.1 *Building permits issued on the basis of an affidavit.* Pursuant to the requirements of federal regulation for participation in the National Flood Insurance Program (44 C.F.R. Sections 59 and 60), the authority granted to the Building Official to issue permits, to rely on inspections, and to accept plans and construction documents on the basis of affidavits and plans submitted pursuant to Section 105.14 and Section 107.6, shall not extend to the flood load and flood resistance construction requirements of the *Florida Building Code.*~~

~~117 VARIANCES IN FLOOD HAZARD AREAS~~

~~117.1 *Flood hazard areas.* Pursuant to section 553.73(5), F.S., the variance procedures adopted in the local floodplain management ordinance shall apply to requests submitted to the Building Official for variances to the provisions of Section 1612.4 of the *Florida Building Code, Building* or, as applicable, the provisions of R322 of the *Florida Building Code, Residential*. This section shall not apply to Section 3109 of the *Florida Building Code, Building.*~~

Sec. 5.00.10 Technical amendments to the Florida Building Code, Building.

(1) Minimum building elevations in flood hazard areas:

(a) The minimum elevation for buildings in flood hazard areas that are within the scope of the Florida Building Code, Building, shall be, as specified in ASCE 24, the base flood elevation plus two (2) feet, or the design flood elevation, whichever is higher.

(b) The minimum elevation for one- and two-family dwellings and townhouses in flood hazard areas that are within the scope of the Florida Building Code, Residential, shall be the base flood elevation plus two (2) feet or the design flood elevation, whichever is higher.

(2) Enclosures below elevated buildings in coastal high hazard areas and Coastal A Zones. In coastal high hazard areas and Coastal A Zones, enclosed areas below the elevation required in the building code shall not be partitioned or finished into separate rooms except for stairwells, ramps, and elevators and the access to enclosed areas shall be the minimum necessary to allow for the parking of vehicles (garage door) or limited storage of maintenance equipment used in connection with the premises (standard exterior door) or entry to the building (stairway or elevator).

(3) Construction documents for dwellings in flood hazard areas. Construction documents for dwellings in flood hazard areas shall include documentation that is prepared and sealed by a registered design professional that the foundation design accounts for flood loads.

~~*The previously adopted definitions of "Substantial Damage" and "Substantial Improvement" provided in Sec. 202, Florida Building Code, Building, are hereby amended as follows:*~~

~~*Substantial Damage.* Damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.~~

~~*Substantial Improvement.* Any repair, reconstruction, rehabilitation, addition, or other improvement of a building or structure, the cost of which equals or exceeds 50 percent of the market value of the building or structure before the improvement or repair is started. If the structure has incurred substantial damage," any repairs are considered substantial improvement regardless of the actual repair work performed. The term does not, however, include either:~~

~~1. Any project for improvement of a building required to correct existing health, sanitary, or safety code violations identified by the building official and that are the minimum necessary to assure safe living conditions.~~

~~2. Any alteration of a historic structure provided that the alteration will not preclude the structure's continued designation as a historic structure and the alteration is approved by variance issued pursuant to Section 117.~~

~~*Section 1612 of the Florida Building Code, Building, is hereby amended by the following:*~~

~~1612.4.1 *Additional requirements for enclosed areas.* In addition to the requirements of ASCE 24, in coastal high hazard areas (Zone V) enclosed areas below the design flood elevation shall not be partitioned or finished into separate rooms except for stairwells, ramps, and elevators and the access to enclosed areas shall be the minimum necessary to allow for the parking of vehicles (garage door) or limited storage of maintenance equipment used in connection with the premises (standard exterior door) or entry to the building (stairway or elevator).~~

~~1612.4.2 *Elevation requirements.* The minimum elevation requirements applicable in coastal high hazard areas and Coastal A Zones shall be as specified ASCE 24 or the base flood elevation plus 2 feet (610 mm), whichever is higher.~~

Sec. 5.00.11. Reserved. ~~Technical amendments to the Florida Building Code, Existing Building.~~

~~*The previously adopted definitions of "Substantial Damage" and "Substantial Improvement" provided in Sec. 202, Florida Building Code, Existing Building, are hereby amended as follows:*~~

~~*Substantial Damage.* Damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed fifty (50) percent of the market value of the structure before the damage occurred.~~

~~*Substantial Improvement.* Any repair, reconstruction, rehabilitation, addition, or other improvement of a building or structure, the cost of which equals or exceeds 50 percent of the market value of the building or structure before the improvement or repair is started. If the structure has incurred substantial damage," any repairs are considered substantial improvement regardless of the actual repair work performed. The term does not, however, include either:~~

~~1. Any project for improvement of a building required to correct existing health, sanitary, or safety code violations identified by the building official and that are the minimum necessary to assure safe living conditions.~~

~~2. Any alteration of a historic structure provided that the alteration will not preclude the structure's continued designation as a historic structure and the alteration is approved by variance issued pursuant to Section 117.~~

Sec. 5.00.12. Reserved. ~~Technical amendments to the Florida Building Code, Residential.~~

~~R322.2 *Flood hazard areas (including A Zones).* All areas that have been determined to be prone to flooding but not subject to high-velocity wave action shall be designated as flood hazard areas. Flood hazard areas that have been delineated as subject to wave heights between 1.5 feet and 3 feet or otherwise designated by the jurisdiction shall be designated as Coastal A Zones and are subject to the requirements in Section R322.3. All buildings and structures constructed in whole or in part in flood hazard areas shall be designed and constructed in accordance with Sections R322.2.1 through R322.2.3.~~

~~R322.2.1 *Elevation requirements.*~~

~~1. Buildings and structures in flood hazard areas not designated as Coastal A Zones shall have the lowest floors elevated to or above the base flood elevation plus 1 foot or the design flood elevation.~~

~~2. Reserved.~~

~~3. In areas of shallow flooding (AO Zones), buildings and structures shall have the lowest floor (including basement) elevated at least as high above the highest adjacent grade as the depth number specified in feet on the FIRM, or at least 3 feet if a depth number is not specified.~~

~~4. Basement floors that are below grade on all sides shall be elevated to or above the base flood elevation plus 1 foot or the design flood elevation.~~

~~Exception: Enclosed areas below the design flood elevation, including basements whose floors are not below grade on all sides, shall meet the requirements of Section R322.2.2.~~

~~R322.2.3 *Foundation design and construction.* Foundations for all buildings and structures erected in flood hazard areas shall meet the requirements of Chapter 4 and the construction documents shall include documentation that is prepared and sealed by a registered design professional that the foundation design accounts for flood loads.~~

R322.3 *Coastal high-hazard areas (including V Zones and Coastal A Zones, where designated).* Areas that have been determined to be subject to wave heights in excess of 3 feet (914 mm) or subject to high-velocity wave action or wave-induced erosion shall be designated as coastal high-hazard areas. Flood hazard areas that have been delineated as subject to wave heights between 1.5 feet and 3 feet or otherwise designated by the jurisdiction shall be designated as Coastal A Zones. All buildings and structures constructed in whole or in part in coastal high-hazard areas and in Coastal A Zones, where designated, shall be designed and constructed in accordance with Sections R322.3.1 through R322.3.6.

R322.3.2 *Elevation requirements.*

1. All buildings and structures erected within coastal high-hazard areas and Coastal A Zones shall be elevated so that the lowest portion of all structural members supporting the lowest floor, with the exception of mat or raft foundations, piling, pile caps, columns, grade beams and bracing, is:

    1.1 Located at or above the base flood elevation plus 2 feet or the design flood elevation, whichever is higher, if the lowest horizontal structural member is oriented parallel to the direction of wave approach, where parallel shall mean less than or equal to 20 degrees (0.35 rad) from the direction of approach, or

    1.2 Located at the base flood elevation plus 3 feet or the design flood elevation, whichever is higher, if the lowest horizontal structural member is oriented perpendicular to the direction of wave approach, where perpendicular shall mean greater than 20 degrees (0.35 rad) from the direction of approach.

2. Basement floors that are below grade on all sides are prohibited.

3. The use of fill for structural support is prohibited.

4. Minor grading, and the placement of minor quantities of fill, shall be permitted for landscaping and for drainage purposes under and around buildings and for support of parking slabs, pool decks, patios and walkways.

Exception: Walls and partitions enclosing areas below the design flood elevation shall meet the requirements of Sections R322.3.4 and R322.3.5.

R322.3.3 *Foundations.* All buildings and structures erected in coastal high-hazard areas and Coastal A Zones, shall be supported on pilings or columns and shall be adequately anchored to such pilings or columns. The space below the elevated building shall be either free of obstruction or, if enclosed with walls, the walls shall meet the requirements of Section R322.3.4. Piling shall have adequate soil penetrations to resist the combined wave and wind loads (lateral and uplift). Water loading values used shall be those associated with the design flood. Wind loading values shall be those required by this code. Pile embedment shall include consideration of decreased resistance capacity caused by scour of soil strata surrounding the piling. Pile systems design and installation shall be certified in accordance with Section R322.3.6. Spread footing, mat, raft or other foundations that support columns shall not be permitted where soil investigations that are required in accordance with Section R401.4 indicate that soil material under the spread footing, mat, raft or other foundation is subject to scour or erosion from wave-velocity flow conditions. If permitted, spread footing, mat, raft or other foundations that support columns shall be designed in accordance with ASCE 24. Slabs, pools, pool decks and walkways shall be located and constructed to be structurally independent of buildings and structures and their foundations to prevent transfer of flood loads to the buildings and structures during conditions of flooding, scour or erosion from wave-velocity flow conditions, unless the buildings and structures and their foundation are designed to resist the additional flood load.

~~*Exception:* In Coastal A Zones, stem wall foundations supporting a floor system above and backfilled with soil or gravel to the underside of the floor system shall be permitted provided the foundations are designed to account for wave action, debris impact, erosion, and local scour. Where soils are susceptible to erosion and local scour, stem wall foundations shall have deep footings to account for the loss of soil.~~

~~R322.3.4 *Walls below design flood elevation.* Walls are not permitted below the elevated floor unless permitted in Section R322.3.4. Areas below the elevated floor are permitted to be surrounded with insect screening, open lattice, or decorative screening for aesthetic purposes, provided such materials are designed to break away under flood loads. Electrical, mechanical, and plumbing system components are not to be mounted on or penetrate through materials designed to break away under flood loads.~~

~~R322.3.5 *Enclosed areas below the design flood elevation.* Enclosed areas below the design flood elevation shall be used solely for parking of vehicles, building access or storage. Elevators are permitted below the design flood elevation provided flood loads acting on elevator shafts are accounted for in the foundation design.~~

* * *

Sec. 5.05.00. Reserved ~~Stormwater Management.~~

~~Sec. 5.05.01. Purpose and intent.~~

~~The purpose of this section is to manage stormwater drainage within the City of Flagler Beach in order to maintain and enhance the public health, safety, and welfare through the control of runoff volume and treatment of stormwater runoff for the protection of surface water and groundwater quality, and the control and prevention of erosion, sedimentation, and flooding by providing standards for the design, construction, and operation of stormwater management systems in conformance with best overall management practices. This section is intended to enforce the goals, objectives, and policies of the comprehensive plan, and to be consistent with the applicable policies and regulations of regional, state and federal agencies regarding stormwater management.~~

~~(Ord. No. 2005-07, § 1, 4-28-05; Ord. No. 2007-12, § 6, 6-14-07)~~

~~Sec. 5.05.02. Prohibitions and exemptions.~~

~~Section 5.05.02.1 *Prohibitions.*~~

~~No person may develop or make any change in the use of land or construct a structure or change the size of a structure, except as exempted herein, without submission and approval of a stormwater management plan as provided herein. For the purpose of this section, the development may potentially alter or disrupt existing stormwater runoff patterns, and as such, will, unless exempted below, require submission and approval of a stormwater management plan prior to the commencement of construction, includes, but is not limited to:~~

~~1. Clearing and/or drainage of land as an adjunct to construction.~~
~~2. Clearing and/or draining of nonagricultural land for agricultural purposes.~~
~~3. Converting agricultural lands to nonagricultural uses.~~
~~4. Subdividing land.~~

5. Replatting recorded subdivisions and the development of recorded and unrecorded subdivisions.
6. Changing the use of land and/or the construction of a structure or a change in the size of one or more structures.
7. Altering the shoreline or bank of any surface water body.
8. The permanent (long period) lowering of the water table.
9. Addition of impervious or semi-impervious area.

Section 5.05.02.2 *Exemptions.*

The following activities shall be exempt from this section unless as hereinafter required by the land development regulations:

1. Single-family and duplex residence and accessory structures except for the Mirror Lake Watershed Overlay District.
2. Any maintenance, alteration, renewal, use or improvement to an existing structure not changing or affecting rate or volume of stormwater runoff.
3. Bona fide agricultural zoning classifications, including forestry, except where an artificial drainage system will be used to increase the flow of surface water from the applicant's land.
4. Maintenance work performed on existing drainage canals for the purpose of public health and welfare.
5. Maintenance work on utility or transportation systems, provided such maintenance work does not alter the purpose and intent of the drainage system as constructed.

(Ord. No. 2005-07, § 1, 4-28-05; Ord. No. 2007-12, § 6, 6-14-07)

Sec. 5.05.03. Design standards.

Section 5.05.03.01 *Threshold categories.*

The review of stormwater management plans for all development projects shall be based upon the net increase in impervious surface resulting from the development and any cumulative increase due to development that has occurred within the previous two (2) years. All single-family and duplex residence structures in Mirror Lake Watershed Overlay District shall be considered as category II only. Category thresholds for the various limits of developments are as follows:

1. Category I—Net increase of impervious area of up to five hundred (500) square feet.
2. Category II—Net increase of impervious area between five hundred one (501) square feet and one thousand (1,000) square feet and all single-family and duplex residence structures within the Mirror Lake Watershed Overlay District.
3. Category III—Net increase of impervious area between one thousand one (1,001) square feet and four thousand (4,000) square feet of surfaces subject to vehicular traffic or five thousand (5,000) square feet of building of other surfaces.
4. Category IV—Net increase of impervious area exceeds four thousand (4,000) square feet of surfaces subject to vehicular traffic or five thousand (5,000) square feet of building or other surfaces.

Section 5.05.03.02 *Basic standards.*

~~All categories of development shall require the preparation of a stormwater management plan. Stormwater management system design shall conform with the following performance standards:~~

1. ~~Stormwater runoff shall be subjected to best management practice prior to discharge into natural or artificial drainage systems. Best management practice shall mean a practice or combination of practices determined by the city to be the most effective, practical means of preventing or reducing the amount of pollution generated by the project to a level compatible with Florida water quality standards found in chapter 17-3, Florida Administrative Code.~~
2. ~~No site alteration shall cause siltation of wetlands, pollution of downstream wetlands or reduce the natural retention or filtering capabilities of wetlands.~~
3. ~~No site alteration shall allow water to become a health hazard or contribute to the breeding of mosquitoes.~~
4. ~~All site alteration activities shall provide for such water retention and settling structures and flow attenuation devices as may be necessary to insure that the foregoing standards and requirements are met. No site alteration shall result in any net reduction of available floodplain storage.~~
5. ~~Design of water retention and detention structures and flow attenuation devices shall be subject to the approval of the city pursuant to the standards hereof. Detention structures shall be designed to release runoff to the downstream drainage system over a period of time so as not to exceed the capacity of the existing downstream system. The design of water retention and detention structures and flow attenuation devices shall be in compliance with the standard construction details.~~
6. ~~In order to maintain good water quality in stormwater management detention ponds and maximize the provision of fish and wildlife habitat, stormwater management systems with permanently wet detention ponds should be designed, operated and maintained so as to resemble a natural pond to the greatest extent practicable. A natural pond design should include: a littoral zone comprised of native emergent and submersed aquatic macrophytic vegetation; a deep open water limnetic zone free of rooted emergent and submersed vegetation; and, where feasible, an upland buffer of native trees, shrubs and understory vegetation.~~
7. ~~A positive drainage system shall be provided which will not adversely impact downstream owners or adjacent lands, including rain gutter system on the structure as needed.~~
8. ~~Where possible, natural vegetation shall be used as a component of the drainage system. The water table should not be manipulated so as to endanger natural vegetation beneficial to water quality unless natural vegetation can be replanted and survive with a lowered water table condition.~~
9. ~~Runoff from higher adjacent lands shall be considered and provisions for conveyance of such runoff shall be included in the drainage plan.~~
10. ~~Runoff shall be treated to remove oil and floatable solids before discharge from the site in a manner approved by the city.~~
11. ~~Erosion by wind or water shall be prevented by the developer throughout the construction process.~~

12. Direct discharge to class II waters is prohibited. A workable filter system approved by the city must be provided prior to any discharge to class II waters.
13. For the purpose of this section, it is presumed that the lowering of the water table for the purpose of constructing detention/retention basins and for the purpose of permanently protecting road construction does not conflict with the stated objectives of this section if all of the following are met:

    a. The development site is not in an area known to the city, based on data collected and interpreted by the U.S. Geological Survey, the St. Johns River Water Management District, the city and other professional investigators, as important to recharge or to prevention of discharge to the Floridan aquifer.

    b. The proposed lowering of the water table shall be over no more than fifteen (15) percent of the site to a depth of five (5) feet below the surface of the existing undisturbed ground, or an equivalent volume, said area to be measured at the overflow elevation of the retention areas(s).

    c. If ditches, underdrains or similar devices are used to lower the water table, the lateral volumetric effect will be calculated, and the volume will be deducted from that allowed for retention areas.

    d. The high water table may be lowered up to two (2) feet below the undisturbed ground in the vicinity of roads for the purpose of protecting the sub-base and base of the roadway and/or for the purpose of preventing mosquito breeding in the roadside swales.

    e. The lowering of the water table has no adverse effect on wetlands off site vegetation as defined herein.

    f. The lowering of the water table does not increase flows to the detriment of neighboring lands.

14. For project sizes greater than one (1) acre of disturbed area, the applicant shall acquire permit coverage from the Florida Department of Environmental Protection, National Pollutant Discharge Elimination System program and provide proof of such to the city prior to construction.

Section 5.05.03.03 *Additional standards.*

1. Category II development—The minimum volume of retention to be provided shall be equivalent to one (1) inch of runoff over the entire project area and two (2) inches of runoff over the entire project area if within the Mirror Lake Watershed Overlay District. For certain soil conditions or ground water table conditions which do not permit the percolation of this volume within the five days following a storm event, the city may approve detention with filtration systems in lieu of retention.

2. Category III development—Stormwater management plan shall be prepared by a professional engineer or landscape architect licensed in the State of Florida and shall conform to:

   a. Category II development requirements.
   b. The discharge hydrograph produced for the developed or redeveloped site shall not exceed, in terms of peak flow and total volume, the hydrograph produced by

conditions existing before development or redevelopment for a twenty-four-hour, twenty-five-year frequency storm, if this provision will be met through detention of the difference between said volumes, said volume difference shall be released over not less than a twenty-four-hour nor greater than a seventy-two-hour period of time. Runoff rates and volumes resulting from the project, in excess of existing amounts, shall be accommodated on-site. Off-site retention may be permitted if, in the opinion of the city, the recharge requirements of this section are met.

c. Peak discharge one hundred-year storm. The peak discharge resulting from a twenty-four-hour, one hundred-year frequency storm on the developed or redeveloped site shall not exceed the peak discharge resulting from a one hundred-year frequency storm for existing conditions on the site for flood prone areas as determined by the city.

d. Runoff computations. Runoff computations shall be based on the most critical situation (rainfall duration, distribution and antecedent soil moisture condition) and conform to the methods described in the Florida Department of Transportation Drainage Manual, latest edition, and the St. Johns River Water Management District Regulation of Stormwater Management Systems.

3. Category IV development—City shall defer to permitting by St. Johns River Water Management District.

(Ord. No. 2005-07, § 1, 4-28-05; Ord. No. 2007-12, § 6, 6-14-07)

Sec. 5.05.04. Maintenance.

The installed system(s) required by this section shall be maintained by the owner except where the city specifically accepts a certain system for maintenance. The selection of critical areas and/or structures to be maintained by the city shall be recommended to the city commission by the department. All areas and/or structures to be maintained by the city must be conveyed to the city by plat or separate instrument and accepted by the city commission. The owner shall provide adequate easements with respect to system(s) to be maintained by the owner to permit the city to inspect and, if necessary, to take corrective action should the owner fail to maintain the system(s).

(Ord. No. 2005-07, § 1, 4-28-05; Ord. No. 2007-12, § 6, 6-14-07)

ARTICLE VI. SUBDIVISIONS

Sec. 6.00.00. General.

* * *

Sec. 6.00.05. Reserved. ~~Minimum elevation.~~

~~The minimum average elevation of any building site in any subdivision in the city shall be in accordance with the requirements of Sections 05.00 Flood Damage Prevention through Section 06.05, Standards for areas of shallow flooding. The owner is hereby required to see that this minimum elevation is attained before any construction is commenced.~~

* * *

ARTICLE VIII. ADMINISTRATION AND ENFORCEMENT

Sec. 8.00.00. General procedure.

*** * ***

Sec. 8.04.16. Variances

(a) *General.* The planning and architectural review board shall recommend such variance from the terms of this ordinance as will not be contrary to the public interest and where, owing to special conditions a literal enforcement of the provisions of this ordinance will result in unnecessary and undue hardships. In order to recommend any variance from the terms of this ordinance the planning and architectural review board must and shall find each of the following criteria are met by the applicant, and the board's written findings shall be sent to the Commission:

1. That special conditions and circumstances exist which are peculiar to the land, structure or building involved and which are not applicable to other lands, structures or buildings in the same zoning district;
2. That the special conditions and circumstances do not result from the action of the applicant;
3. That granting the variance requested will not confer on the applicant any special privilege that is denied by this ordinance to other lands, buildings or structures in the same zoning district;
4. That literal interpretation of the provisions of this ordinance would deprive the applicant of rights commonly enjoyed by other properties in the same zoning district under the terms of this ordinance and would work unnecessary and undue hardship on the applicant;
5. That the variance granted is the minimum variance that will make possible the reasonable use of the land, building or structure;
6. That the grant of the variance will be in harmony with the general intent and purpose of this ordinance, and that such variance will not be injurious to the area involved or otherwise detrimental to the public welfare.

In recommending any variance, the planning and architectural review board may recommend appropriate conditions and safeguards in conformity with this ordinance. If adopted by the Commission, any violation of such conditions and safeguards, when made a part of the terms under which the variance is granted shall be deemed a violation of this ordinance. The planning and architectural review board may recommend a reasonable time limit within which the action

for which the variance is required shall be begun or completed or both. Under no circumstances except as permitted above shall the planning and architectural review board recommend a variance to permit use not generally or by special exception permitted in the zoning district involved or any use expressly or by implication prohibited by the terms of this ordinance in the zoning district. No nonconforming use of neighboring lands, structures or buildings in the same zoning district and no permitted use of lands, structures or buildings in other zoning districts shall be considered grounds for the granting of a variance. The City Commission shall apply the criteria set forth herein in making its quasi-judicial decision to grant or deny a variance and shall consider the recommendation made by the planning and architectural review board.

(b) *Flood hazard areas*

(1) The city commission, after review and recommendation from the planning and architectural review board as established by the city, shall hear and decide on requests for variances from the strict application of Article 4.07.00. Pursuant to F.S. § 553.73(5), the city commission shall hear and decide on requests for variances from the strict application of the flood resistant construction requirements of the Florida Building Code. This section does not apply to Section 3109 of the Florida Building Code, Building.

(2) The city commission shall base its decisions on variances on technical justifications submitted by applicants, the considerations for issuance in paragraph (5), the conditions of issuance set forth in paragraph (6) of this section, and the comments and recommendations of the floodplain administrator and the building official. The city commission has the right to attach such conditions as it deems necessary to further the purposes and objectives of this article.

(3) A variance is authorized to be issued for the repair, improvement, or rehabilitation of a historic building that is determined eligible for the exception to the flood resistant construction requirements of the Florida Building Code, Existing Building, Chapter 12 Historic Buildings, upon a determination that the proposed repair, improvement, or rehabilitation will not preclude the building's continued designation as a historic building and the variance is the minimum necessary to preserve the historic character and design of the building. If the proposed work precludes the building's continued designation as a historic building, a variance shall not be granted and the building and any repair, improvement, and rehabilitation shall be subject to the requirements of the Florida Building Code.

(4) A variance is authorized to be issued for the construction or substantial improvement necessary for the conduct of a functionally dependent use, as defined in this article, is the minimum necessary considering the flood hazard, and all due consideration has been given to use of methods and materials that minimize flood damage during occurrence of the base flood.

(5) In reviewing requests for variances, the city commission shall consider all technical evaluations, all relevant factors, all other applicable provisions of the Florida Building Code, this article, and the following considerations:

(a) The danger that materials and debris may be swept onto other lands resulting in further injury or damage;

(b) The danger to life and property due to flooding or erosion damage;

(c) The susceptibility of the proposed development, including contents, to flood damage and the effect of such damage on current and future owners;

(d) The importance of the services provided by the proposed development to the community;

(e) The availability of alternate locations for the proposed development that are subject to lower risk of flooding or erosion;

(f) The compatibility of the proposed development with existing and anticipated development;

(g) The relationship of the proposed development to the comprehensive plan and floodplain management program for the area;

(h) The safety of access to the property in times of flooding for ordinary and emergency vehicles;

(i) The expected heights, velocity, duration, rate of rise and debris and sediment transport of the floodwaters and the effects of wave action, if applicable, expected at the site; and

(j The costs of providing governmental services during and after flood conditions including maintenance and repair of public utilities and facilities such as sewer, gas, electrical and water systems, streets and bridges.

(6) Variances shall be issued only upon the following conditions:

(a) Submission by the applicant, of a showing of good and sufficient cause that the unique characteristics of the size, configuration, or topography of the site limit compliance with any provision of this article or the required elevation standards;

(b) Determination by the city commission that:

(i) Failure to grant the variance would result in exceptional hardship due to the physical characteristics of the land that render the lot undevelopable; increased costs to satisfy the requirements or inconvenience do not constitute hardship;

(ii) The granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, nor create nuisances, cause fraud on or victimization of the public or conflict with existing local laws and ordinances; and

(iii) The variance is the minimum necessary, considering the flood hazard, to afford relief;

(c) Receipt of a signed statement by the applicant that the variance, if granted, shall be recorded in the office of the clerk of the court in such a manner that it appears in the chain of title of the affected parcel of land; and

(d) If the request is for a variance to allow construction of the lowest floor of a new building, or substantial improvement of a building, below the required elevation, a copy in the record of a written notice from the floodplain administrator to the applicant for the variance, specifying the difference between the base flood elevation and the proposed elevation of the lowest floor, stating that the cost of federal flood insurance will be commensurate with the increased risk resulting from the reduced floor elevation (up to amounts as high as twenty-five dollars ($25.00) for one hundred dollars ($100.00) of insurance coverage), and stating that construction below the base flood elevation increases risks to life and property.

Sec. 8.04.17. Appeals.

(a) *General.* Any adverse decision made by the planning and architectural review board may be appealed by any person aggrieved or by any officer, board or commission of the City of Flagler Beach affected by such decision to the Flagler Beach City Commission.

1. Staying of work on premises: An appeal to the city commission stays all work on the premises and all proceedings in furtherance of the action appealed for, unless the official from whom the appeal was taken shall certify to the city commission, by reason of facts stated in the certificate, a stay would cause imminent peril to life or property. In such case, proceedings or work shall not be stayed except by a restraining order which may be granted to the city commission by a court of record on application, on notice to the officer from whom the appeal is taken and on due cause shown.
2. Procedure: Any person appealing any decision of an administrative official shall make such appeal within thirty (30) days after rendition of the order, requirement, decision or determination appealed from in writing to the city commission and file the same, and ten (10) copies thereof, with supporting facts and data with the city clerk. This does not, however, restrict the filing of a request for a special exception or variance by any person at any time as provided for elsewhere in this article.

Upon receipt of said appeal, the building official shall forthwith examine such appeal or request application and endorse his or her recommendation thereon together with all documents, plans, papers or other materials constituting the record upon which the action appealed was taken and transmit same to the city commission. At the hearing, any party may appear in person, or by agent or by attorney.

(b) *Flood hazard areas.* The city commission shall hear and decide appeals when it is alleged there is an error in any requirement, decision, or determination made by the floodplain administrator in the administration and enforcement of this Article 4.07.00. Any person aggrieved by the decision of the city commission may appeal such decision to the circuit court, as provided by state statutes.

ARTICLE IX. ENGINEERING DESIGN AND DEVELOPMENT

Sec. 9.01.00. General provisions.

Sec. 9.01.01. Purpose and intent.

The purpose of this section is to set forth engineering design regulations for residential and nonresidential uses as required in this Land Development Code. This section sets forth uniform regulations, requirements, and procedures to protect the health, safety, and welfare of the citizens and to assure quality of life to the citizens of the city. The floodplains manager may adopt technical manuals that relate to technical requirements pertaining to the city's water, wastewater, reclaimed water, drainage, street, and other systems.

Sec. 9.01.02. Applicability.

The design and construction requirements shall apply to:

(a) Nonresidential and residential subdivision projects (applies to subdivisions with private or public roadway dedications);

(b) Nonresidential and residential construction projects; and

(c) City and other public agency owned projects.

Sec. 9.01.03. General requirements.

(a) *Utility lines.*

(1) Utility lines for all new development projects shall be installed underground. Switchgear, pumps, transformers, and other appurtenances shall be allowed aboveground, but shall be shielded with landscaping as required in this Land Development Code. Connections from distribution lines, mains, and collectors in the public or utility rights-of-way or easements shall be placed underground.

(2) All redevelopment projects shall relocate existing on-site overhead utility lines underground, within project limits. The floodplains manager may allow exceptions to this requirement if it is determined that such relocation is not feasible based upon the unique configuration of the real property.

(3) For all new private and public development projects, underground communications conduit(s) shall be installed in accordance with city standards.

(b) *Traffic control devices.* All traffic control devices shall meet the more stringent requirements of all of the following: 1) the latest edition of the Manual of Uniform Traffic Control Devices, 2) Florida Department of Transportation Design Standards Road and Bridge Technical Specifications, 3) Florida Highway Administration Standard Highway Signs, and 4) Florida Department of Transportation Traffic Engineering and Operations Manuals.

Sec. 9.01.04. Construction plans submittal requirements.

(a) Construction plans and calculations shall be prepared, signed, and sealed by a Florida Licensed Professional Engineer or other Licensed Professional qualified in the appropriate field for which the construction plans and calculations are prepared. Plans and calculations shall be submitted for review in accordance with the city's development review process.

(b) The city shall establish submittal checklists relating to the required contents of all development review submittals. The checklists shall establish minimum requirements for the contents of construction plan and design document submittals. Additional information may be requested if the city believes the information is reasonably necessary in support of drainage analysis; including maps, charts, tables, graphs, photographs, narrative descriptions, additional calculations, explanations, and citations to support references as deemed appropriate to communicate the required information for reasonable evaluation of the site.

(c) Grading and drainage plans shall include existing and proposed contours at one-foot (min.) intervals with spot elevations as needed for clarity and to adequately depict drainage patterns.

(d) Topographic survey for half of right-of-way adjacent to project for full length of frontage, including existing driveways and right-of-way intersections within one hundred (100) feet of site, showing drainage structures, signage, and utilities.

(e) Section views of all proposed retention/detention ponds, swales, berms, etc. showing twenty-five-year stormwater elevation and top of bank elevation.

(f) Construction details for all proposed manholes, inlets, and other stormwater control structures.

(g) Location, size, length, and elevations of all proposed piping systems and related control structures.

(h) Erosion control plans shall be on a separate sheet with existing and proposed contours.

(i) Legends shown with all abbreviations and symbols identified.

(j) Copies of permits from all regulatory agencies having jurisdiction over the project (prior to commencement of construction).

(k) Phasing of development. The phasing of development is allowed as part of approval of a site plan or a subdivision preliminary plat in accordance with the following standards:

(1) Phasing of approved development shall be in keeping with an approved phasing plat that shows phase boundaries and describes included development and improvements.

(2) Each phase shall be designed and constructed to include all improvements and other aspects of development necessary to meet all requirements of the Code and all other applicable regulations.

Sec. 9.02.00. Platting requirements.

Sec. 9.02.01. Purpose.

The purpose of this section is to establish requirements for the subdivision of land in the city and to ensure compliance with F.S. Ch. 177.

Sec. 9.02.02. Subdivision design standards.

In addition to the requirements stated in other sections of this Code, subdivisions shall be designed according to the following:

(a) *Lots.* All lots shall conform to the dimensional, yard, and building setback requirements of the applicable zoning district development standards. In addition, the following requirements shall apply:

(1) *Width.* All lots shall have a minimum street frontage of twenty (20) feet, and those fronting on a curve shall meet the minimum lot width measured at the front setback line.

(2) *Depth.*

a. Lots along arterial streets shall be deep enough to accommodate the two required front yard setbacks.

b. Flag lots are prohibited unless approved as part of a Master Planned Development.

(3) *Orientation.* Residential lots shall be designed so vehicular ingress and egress to/from those individual lots is not provided from abutting limited access roadways or arterials.

(b) *Permanent reference markers.* A registered land surveyor shall install permanent reference monuments, permanent control points, and state plane coordinates in accordance with state laws and professional standards. These must be inspected by the second party surveyor to certify they have been set in the field prior to final plat approval or recording of the mylar.

Sec. 9.02.03. Easements.

(a) *Drainage easements.*

(1) Drainage easements of a width required for conveying and maintaining an adequate storm drainage system shall be provided. Minimum width for piped systems shall be fifteen (15) feet plus the pipe diameter, and fifteen (15) feet for open channels plus channel width, measured from top of bank to top of bank. Where deemed necessary by the floodplains manager, additional easements and increased width may be required along waterways, natural watercourses, canals, and drainage ways.

(2) Whenever a subdivision lies wholly or partly in any area for which the city has adopted a drainage plan, and is traversed by a natural or designed watercourse for which such plan requires a drainage easement or right-of-way, such easement or right-of-way shall be set forth on the preliminary and final plat and shall be dedicated to the city for public use.

(b) *[Stormwater storage facilities.]* Stormwater storage facilities shall be constructed to provide adequate access for maintenance. An access and maintenance easement of ten feet around the perimeter of wet ponds and five feet around the perimeter of dry ponds, measured from top of bank, shall be provided for detention facilities. Maximum grade for maintenance easement shall be ten percent.

(c) [*Stormwater management systems.*] Stormwater management systems must be designed to accommodate maintenance equipment access and to facilitate regular operational maintenance (such as underdrain replacement, unclogging filters, sediment removal, mowing, and vegetation control).

(d) *Utility easements.* Utility easements for both underground and aboveground facilities shall be provided where required by the city manager or designee. Such easements shall have a minimum width of ten feet and shall normally be laid out on property lines. In all cases, such easements shall be dedicated to the perpetual use of the public. Where lots abut along a common property line, the easement may be centered along said common property line.

(e) *Pedestrian paths and sidewalk easements.* Pedestrian easements or walkways shall be provided through the interior of lots where such easements are required by the city manager or designee. Pedestrian easements shall be at least eight (8) feet wide, or walkway width plus two feet, whichever is greater, and shall be laid out along the side or rear property lines. In all cases, such easements shall be dedicated to the perpetual use of the public.

(f) *Private easements.* Private easements (or spite strips) between the road and the subdivision boundary or between subdivision boundaries shall not be permitted unless conditions are established under which the adjacent parcel can be connected to the road or adjacent property.

(g) *Easements and right-of-way maintenance.* The city will maintain only those easements, rights-of-way, and public sites which it accepts for maintenance.

(h) *Vacation of easements.* An easement may be vacated by a replat of the plat in which the easement was dedicated, or via a resolution of the city commission, based on the best interests of the public. The only easements eligible for vacation by resolution are easements which have been previously dedicated and accepted, such as with the approval of a plat. The applicant must submit recommendation letters from utility companies; and a survey and legal description of the area to be vacated; and must show that the easement should be vacated due to utility reroute, non-use of the easement, or that the easement is no longer needed for public purposes. The city can vacate only "public" easements located within the city which are dedicated to the city or to the public. Upon receipt of a vacation request, the city clerk will publish a notice of public hearing, and shall notify property owners within the block where the easement is located of the public hearing by certified mail, return receipt

requested. In addition, the applicant must post the notice at each end of the easement to be vacated, not less than thirty (30) days prior to the public hearing. An affidavit of proof of posting must be submitted to the city clerk not less than seven (7) days prior to the hearing.

Sec. 9.02.04. Plat approval.

Prior to the city commission hearing for approval of a plat, the developer must submit all required documents, recording costs and fees, and:

(a) If infrastructure improvements have not been commenced, a surety bond guaranteeing funds to construct all subdivision public improvements must be provided for city commission. After approval, the mylar can be processed for recording; or

(b) If infrastructure improvements have commenced and are continuing in good faith, the final plat can go to city commission without a bond but the mylar will not be processed for recording until all infrastructure is complete, based on city approval of all final inspections in the site development permit, and the submittal of a maintenance bond.

Sec. 9.02.05. Performance surety for subdivisions and site plan construction projects.

At such time as the city agrees to accept the dedication of any public improvements, a performance guarantee in accordance with the standards in this section shall be required. To ensure completion of public infrastructure improvements that are required as part of an approved site plan or final plat (E.g., streets, sidewalks, stormwater management facilities, potable water facilities, wastewater facilities, and streetlights), the developer shall execute performance and maintenance sureties that guarantee the required improvements against all defects in workmanship and materials, including failure to construct or to continue to construct in accordance with approved plans and specifications.

(a) *Performance surety.*

(1) *Plat and site plan performance surety amount.* A plat or site plan surety must be in the form of a cash bond, performance bond, or letter of credit. The cost estimate amount of the surety shall be based on 120 percent of the sum of the following costs, as certified under seal by the project engineer of record:

a. Required subdivision public infrastructure improvements costs.
b. Costs of all required improvements relating to public road right-of-way.
c. Costs of all required off-site public infrastructure improvements.

The amount of surety is subject to approval by the floodplains manager.

(2) *Performance surety release.* Upon completion of all performance surety guaranteed improvements, applicable inspections, and acceptance by the city, performance sureties shall be released by the floodplains manager.

(b) *Maintenance surety.*

(1) *Plats and site plans with public improvements maintenance surety.* A maintenance surety for public improvements shall be submitted upon release of the performance surety. The maintenance surety provides a guarantee that the required improvements were completed without defects in workmanship and materials. The term of this guarantee shall be one year from the date of acceptance, unless the floodplains manager specifies a longer time frame.

(2) *Maintenance surety amount.* The amount of the maintenance surety shall be based on twenty (20) percent of the entire actual/present day costs of construction,

including the costs of materials and labor for installing the required public infrastructure improvements. Actual costs for installing required public infrastructure improvements shall be itemized by improvement type as certified under seal by the project engineer of record, and subject to approval by the floodplains manager.

(3) *Maintenance surety release.* The maintenance surety may be released no earlier than one year from the date of acceptance of the required improvements by the floodplains manager. This action must be initiated, in writing, by the developer.

Sec. 9.02.06. Compliance with design requirements.

All land development improvements shall comply with all the requirements of this Land Development Code, including those which contain design and construction information for the following:

(a) Horizontal and vertical dimensional design requirements.

(b) Roadway, parking, and vehicle access ways.

(c) Pedestrian pathways, sidewalks, and recreational trails.

(d) Storm drainage, potable water, reclaimed water, and sanitary sewer infrastructure improvements.

(e) Clearing, earthwork, and grading.

Sec. 9.03.00. Construction and inspection requirements.

Sec. 9.03.01. Purpose.

(a) The purpose of this section is to establish requirements for the inspection of the construction of all site development improvements on both residential and non-residential projects. The construction inspection procedures set forth in this chapter and in the City Technical Standards Manual ensure conformity of construction with approved development orders, this Land Development Code, and any conditions of approval.

(b) Separate construction inspection requirements for water and sewer improvements are established in part II of this chapter. Inspections shall be performed as required by the floodplains manager.

Sec. 9.03.02. Commencement of construction.

Commencement of construction or disturbance of land of any type is prohibited unless:

(a) A final development order is issued in conjunction with a site development permit or applicable building permits;

(b) All requisite federal, state, county, and city site work permits for the project are obtained. Certification by the engineer of record, along with copies of all required permits, may be required by the floodplains manager.

(c) A preconstruction meeting for the project is scheduled and held with the city, unless deemed unnecessary by the floodplains manager.

Sec. 9.03.03. Types of inspections.

(a) The following construction inspections shall be held during the course of the construction of the project infrastructure:

(1) Scheduled mandatory key checkpoint inspections.

(2) Scheduled or requested minor inspections and field conferences.

(3) Unscheduled site visits and inspections.

(4) Stormwater Pollution Prevention Plan (SWPPP) Inspections.

(5) All other inspections required by the governing contract for a specific project.

(6) Scheduled final inspection for punch list work.

(7) Scheduled re-inspection of punch list work.

(8) Scheduled final inspection walkthrough, as required prior to the developer submitting a request for the following:

a. Release of surety and acceptance by city of a maintenance bond.

b. Acknowledgement of completion of required subdivision improvements to allow final plat recordation.

c. Acceptance of roadways dedicated to the city.

Sec. 9.03.04. Privately owned bridges.

Privately owned bridges shall meet the design, construction, inspection, maintenance, and reporting criteria in accordance with the Florida Department of Transportation and federal standards.

Sec. 9.04.00. Stormwater management requirements.

Sec. 9.04.01. Purpose and intent.

The purpose of this section is to manage stormwater drainage within the City of Flagler Beach in order to maintain and enhance the public health, safety, and welfare through the control of runoff volume and treatment of stormwater runoff for the protection of surface water and groundwater quality, and the control and prevention of erosion, sedimentation, and flooding by providing standards for the design, construction, and operation of stormwater management systems in conformance with best overall management practices. This section is intended to enforce the goals, objectives, and policies of the comprehensive plan, and to be consistent with the applicable policies and regulations of regional, state and federal agencies regarding stormwater management.

The City of Flagler Beach will always consider reasonable alternatives to the design parameters specified in this chapter and as implemented by the city engineering office so long as it utilizes good engineering judgement, best practices, and is put forth by a licensed professional engineer licensed in the State of Florida.

Sec. 9.04.02. Stormwater design criteria.

The design concepts of a drainage system shall be consistent with sound engineering principles and practices and shall be consistent with applicable rules, regulations and policies of the St. Johns River Water Management District (SJRWMD) and the Florida Department of Environmental Protection (FDEP). In all instances, the drainage design calculations shall be submitted along with the engineering plans, preferably overlain on the Site Survey submitted at the permit application step. These drainage calculations shall consider all relevant information that would affect the stormwater management system including, but not limited to, the following: drainage basin characteristics, system hydraulics, operating conditions and other external

influences upstream and downstream from the stormwater system that may impact or be impacted by the proposed system.

The design and construction of detention facilities shall be in accordance with the criteria set forth herein. Detention is the concept of capturing stormwater and/or to slow the intensity of runoff so as to mitigate flooding. Water should be allowed to percolate into the ground so that all standing water is fully absorbed within a seventy-two-hour period after the rain event. Detention, in combination with appropriate grading, also helps to control runoff water from any one property flowing onto any adjacent property.

Sec. 9.04.03. Detention.

(a) Detention is defined as a constructed or natural structure, either raised or depressed, used to deter or slow down runoff water so that percolation into the ground is enhanced. Detention is required on all lots as is practical especially for single family and duplex residential uses lying within the special flood hazard area (SFHA). Good judgement and standard professional engineering best practices shall be used to determine what is or is not practical.

(b) Within applicable areas, residential single-family and two-family residences are required to detain stormwater over the entire portion of the property area. This includes protected areas such as wetlands, wetland buffer zones, utility easements, city rights-of-way, etc. This may be accomplished by natural or artificial drainage systems including but not limited to, swales, berms, pipes, French drains, other approved structures, or any combination of the above.

(c) Where practical, all development is required to have retention swales constructed within the rights-of-way (R-O-W) along the property lines adjoining paved roadways. These swales shall be 0.75 feet (nine (9) inches) deep with the center line of the swale located approximately seven (7) feet from the edge of pavement (EOP). They shall be finished with a suitable, one hundred (100) percent pervious material.

Sec. 9.04.04. Fill.

(a) Proposed fill shall be limited to the minimum amount of fill necessary to provide positive drainage flow and to abide by any applicable floodplain protection or building code regulations. Positive drainage shall be established on the grading plan. The city shall consider a thirty-three (33) percent maximum grade (1:3) or elevation of six (6) inches above side lot or front swale as the standards for positive drainage unless the existing grades dictate otherwise. At no point shall a lot or parcel be filled higher than the final average grade of any adjacent developed properties if original natural grade was not already higher that the adjacent developed properties. No fill shall be permitted on right-of-way areas except as required for driveway and culvert installation. Fill shall be defined as imported soil or material used to raise the grade of existing lands, excluding sod, gravel and other permeable materials used as ground cover.

(b) *AE SFHA flood zone.*

(1) Fill is limited to the compacted amount needed inside the perimeter of a stem wall foundation in order to achieve a solid subsurface to pour a concrete slab to the elevation <u>required by the Florida Building Code as modified by the City</u> ~~of the approved FFE~~.

(2) Additional fill is permissible to bring driveways and/or sidewalks to the approved elevations proposed on the site plan.

(3) Any additional fill is then limited to 50 cubic yards outside the building, driveway and sidewalk footprints, generally, not to exceed six (6) inches in overall grade change and with slopes constructed no greater than 3:1 slopes to meet adjacent property grades.

(4) Detention is required to keep runoff due to the development contained on the property.

(c) *X flood zone.*

(1) Fill is limited to the compacted amount needed inside the perimeter of a stem wall foundation in order to achieve a solid subsurface to pour a concrete slab to the elevation of the approved FFE.

(2) Fill is permitted, not necessarily limited to fifty (50) cubic yards, outside the building footprint, under the driveway(s), walkways, and other flatwork, sufficient to provide proper drainage away from structures and into onsite detention areas and R-O-W swales.

(3) Final grades generally shall not exceed six (6) inches in overall elevation change and constructed at no greater than 3:1 slopes to meet adjacent property grades.

Sec. 9.04.05. Illicit discharge, detection and elimination.

(a) *[Purpose.]* The purpose of this section is to provide for the health, safety, and general welfare of the citizens of Flagler Beach through the regulation of non-stormwater discharges to the storm drainage system to the maximum extent practicable as required by federal and state law. This section establishes minimum standards and methods for controlling the introduction of pollutants into the municipal separate storm sewer system (MS4) in order to comply with requirements of the National Pollutant Discharge Elimination System (NPDES) permit process.

(b) *Prohibition of illegal discharges.* No commercial business, resident or any other person shall discharge or cause to be discharged into the municipal storm drain system or watercourses any materials, including but not limited to pollutants or waters containing any pollutants that cause or contribute to a violation of applicable water quality standards, other than stormwater. The commencement, conduct or continuance of any illicit discharge to the storm drain system is prohibited except as described as follows:

(1) Discharges specified in writing by the city as being necessary to protect public health and safety.

(2) Dye testing is an allowable discharge, but requires a written notification to the city forty-eight (48) hours prior to the time of the test.

(3) The prohibition shall not apply to any non-stormwater discharge permitted under an NPDES permit, waiver, or waste discharge order issued to the discharger and administered under the authority of the Federal Environmental Protection Agency (EPA), provided that the discharger is in full compliance with all requirements of the permit, waiver, or order and other applicable laws and regulations, and provided that written approval has been granted for any discharge to the storm drain system.

(c) *Prohibition of illicit connections.* This prohibition expressly includes, without limitation, illicit connections made in the past, regardless of whether the connection was permissible under law or practices applicable or prevailing at the time of connection.

(1) The construction, use, maintenance or continued existence of illicit connections to the storm drain system is prohibited.

(2) A commercial business, resident or any other person is considered to be in violation of this section if the entity connects a line conveying sewage to the MS4, or allows such a connection to continue.

(3) A commercial business, resident or any other person commits an offense if that person reinstates MS4 access to premises terminated pursuant to this section without the prior approval by the city.

(d) *Suspension of access to a municipal storm sewer system.* The city may suspend access to the municipal storm sewer system if either one of the following situations occurs:

(1) *Suspension due to illicit discharges in emergency situations.* The city, without prior notice, may suspend MS4 discharge access to a person when such suspension is necessary to stop an actual or threatened discharge which presents or may present imminent and substantial danger to the environment, or to the health or welfare of persons, or to the MS4 or Waters of the United States. If the violator fails to comply with a suspension order issued in an emergency, the city may enter the property and take such steps as deemed necessary to prevent or minimize damage to the MS4 or Waters of the United States, or to minimize danger to persons. The person/violator shall be responsible to reimburse the city of their agent for all costs incurred from the corrective action.

(2) *Suspension due to the detection of illicit discharge.* Any commercial business, resident or any other person discharging to the MS4 in violation of this section may have their MS4 access terminated if such termination would abate or reduce an illicit discharge.

(e) *Industrial or construction activity discharges.* Any person subject to an industrial or construction activity NPDES stormwater discharge permit shall comply with all provisions of such permit. Proof of compliance with said permit may be required in a form acceptable to the City of Flagler Beach prior to the allowing of discharges to the MS4.

(f) *Monitoring of discharges.* The following regulations apply to all facilities that have stormwater discharges associated with industrial activity, including construction activity:

(1) The city shall be permitted to enter and inspect facilities subject to regulation under this section as often as may be necessary to determine compliance with this section. If a discharger has security measure in force which requires proper identification and clearance before entry into its premises, the discharger shall make the necessary arrangements to allow access to representatives of the city.

(2) Facility operators shall allow the city access to all parts of the premises for the purposes of inspection, sampling, examination and copying of records that must be kept under the conditions of an NPDES permit to discharge stormwater, and the performance of any additional duties as defined by state and federal law.

(3) The city has the right to require the discharger to install monitoring equipment as necessary. The facility's sampling and monitoring equipment shall be maintained at all times in a safe and proper operating condition by the discharger at its own expense. All devices used to measure stormwater flow and quality shall be calibrated to ensure their accuracy.

(4) The city shall have the right to set up on any permitted facility such devices as are necessary in the opinion of the city to conduct monitoring and/or sampling of the facility's stormwater discharge.

(5) Any temporary or permanent obstruction to safe and easy access to the facility to be inspected and/or sampled shall be promptly removed by the operator at the written or oral request of the city and shall not be replaced. The costs of clearing such access shall be borne by the operator.

(6) Unreasonable delays in allowing the city access to a permitted facility is a violation of a stormwater discharge permit and of this section. An operator of a facility with a NPDES permit to discharge stormwater associated with industrial activity commits an offense if the operator denies the city reasonable access to the permitted facility for the purpose of conducting any activity authorized or required by this section.

(7) If the city has been refused access to any part of the premises from which stormwater is discharged, and the city is able to demonstrate probable cause to believe that there may be a violation of this section, or that there is a need to inspect and/or sample as part of a routine inspection and sampling program designed to verify compliance with this section or any order issued hereunder, or to protect the overall public health, safety, and welfare of the community, then the city may seek issuance of a search warrant from any court of competent jurisdiction.

(g) *Requirement to prevent, control, and reduce stormwater pollutants by the use of best management practices (BMP's).* The City of Flagler Beach has adopted requirements identifying BMP's for any activity, operation, or facility which may cause or contribute to pollution or contamination of stormwater, the storm drain system, or waters of the U.S. The owner or operator of a commercial or industrial establishment shall provide, at their own expense, reasonable protection from accidental discharge of prohibited materials or other wastes into the MS4 or watercourses through the use of these structural and non-structural BMP's. Further, any person responsible for a property or premise, which is, or may be the source of an illicit discharge, may be required to implement, at said person' expense, additional structural and non-structural BMP's to prevent the further discharge of pollutants into the MS4. Compliance with all terms and conditions of a valid NPDES permit authorizing the discharge of stormwater associated with industrial activity, to the extent practicable, shall be deemed compliance with the provisions of this section. These BMP's shall be part of a Stormwater Pollution Prevention Plan (SWPPP) as necessary for compliance with requirements of the NPDES permit.

(h) *Watercourse protection.* Persons owning property through which a watercourse passes, or such person's lessee, shall keep and maintain that part of the watercourse within the property free of trash, debris, excessive vegetation, and other obstacles that would pollute, contaminate, or significantly reduce the flow of water through the watercourse. In addition, the owner or lessee shall maintain existing privately owned structures within or adjacent to a watercourse, so that such structures will not become a hazard to the use, function, or physical integrity of the watercourse.

(i) *Notification of spills.* Notwithstanding other requirements of law, as soon as any person responsible for a facility or operation, or responsible for emergency response for a facility or operation has information of any known or suspected release of materials which are resulting or may result in illegal discharges or pollutants discharging into stormwater, the storm drain system, or water of the Florida, said person shall take all necessary steps to ensure the discovery, containment, and cleanup of such release. In the event of such a release of hazardous materials said person shall immediately notify emergency response agencies of the occurrence via emergency dispatch services. In the event of a release of non-hazardous materials, said person shall notify the city in person or by phone or facsimile no later than the next business day. Notifications in person or by phone all be confirmed by written notice addressed and mailed to the city within three (3) business days of the phone notice. If the discharge of prohibited materials emanates from a commercial or industrial establishment, the owner or operator of such establishment shall also retain an on-site written record of the discharge and the actions taken to prevent is recurrence. Such records shall be retained for at least five years.

(j) *Enforcement.* Whenever the city finds that an owner/operator has violated a prohibition or failed to meet a requirement of this section, the city may order compliance by written notice of violation to the responsible owner/operator. Such notice may require without limitation:

(1) The performance of monitoring, analyses, and reporting;

(2) The elimination of illicit connections or discharges;

(3) That violating discharges, practices, or operations shall cease and desist;

(4) The abatement or remediation of storm water pollution or contamination hazards and the restoration of any affected property;

(5) Payment of a fine to cover administrative and remediation costs; and

(6) The implementation of source control or treatment BMPs.

If abatement of a violation and/or restoration of affected property is required, the notice shall set forth a deadline within which such remediation or restoration must be completed. Said notice shall further advise that, should the violator fail to remediate or restore within the established deadline, the work will be done by the city or the city's designee and the expense thereof shall be charged to the violator.

(k) *Appeal of notice of violation.* Any person receiving a Notice of Violation may appeal the determination of the city. Any person aggrieved by such notice of violation shall file an appeal application in accordance with the regulations stated in the Land Development Code.

(l) *Enforcement measures after appeal.* In the event of an appeal where the notice of violation has been upheld, the affected person has thirty (30) calendar days from the date the notice of violation was upheld to correct the violation as stated under the terms of the notice of violation. Failure to correct the violation as stated under the terms of the notice of violation within the previously state thirty (30) calendar days shall cause the city or representatives of the city to take any and all measures necessary to abate the violation and/or restore the property. It shall be unlawful for any person, owner, agent or person in possession of any premises to refuse to allow the city or representatives of the city to enter upon the premises for the purposes set forth above.

(m) *Cost of abatement of the violation.* Within fourteen (14) calendar days after abatement of the violation, the owner of the property will be notified of the cost of abatement, including administrative costs. The property owner may file a written protest objecting to the amount of the assessment within fourteen (14) calendar days. If the amount due is not paid within a timely manner as determined by the decision of the municipal authority or by the expiration of the time in which to file an appeal, the charges shall become a special assessment against the property and shall constitute a lien on the property for the amount of the assessment. Any person violating any of the provisions of this article shall become liable to the city.

(n) *Material management.* The purpose of this section is to promote good housekeeping practices that are designed to significantly reduce and control stormwater runoff pollution which runs into storm drains, treatment facilities and local waterways.

(Ord. No. 2023-01, § 2, 5-25-23)

Sec. 9.04.06. Material and waste management.

(a) The purpose of this section is to promote good housekeeping practices that are designed to significantly reduce and control stormwater runoff pollution which runs into storm drains, treatment facilities and local waterways during construction operations.

(b) *Construction sites:*

(1) Never dispose of any waste material into storm drains or sanitary sewers.

(2) Portable waste receptacles must be on the construction site and must be serviced on a regular basis.

(3) Ensure the disposal of scraps, waste, recyclables and surplus materials is in accordance with Federal regulations and local codes.

(4) Paint/solvent storage shall not be within fifty (50) feet of an environmentally sensitive area (ESA) and shall be enclosed in weather/leak proof storage facility. Frequently schedule the safe collection and removal of combustible waste.

(5) Fuel storage tanks shall be located seventy-five (75) feet or more from an ESA or storm drain and shall be in a state-approved leak proof container.

(6) All above ground tanks for fueling shall be secondarily contained.

(7) Construction site driveways can be installed with or without wheel washing stations, but must prevent construction site vehicle wheels from transporting soil and sediment off of construction site and onto roadways.

(8) All hazardous waste material will be disposed of in a manner specified by federal, state, local regulations and manufacturer's specifications.

(9) All on-site vehicles and tanks will be monitored for leaks and receive regular preventative maintenance to reduce the chance of leakage. Petroleum products shall be stored in tightly sealed containers, which are clearly labeled. Storage shall be at least seventy-five (75) feet from an ESA or storm drain.

(10) Any pesticide and herbicide usage shall be applied by a state licensed applicator.

(11) Fertilizers used shall be applied only in the minimum amount recommended by the manufacturer. If stored on-site, covered storage shall be provided. Any contents of any partially used bags of fertilizers shall be transferred to a sealable container.

(c) *Private property or residential property:*

(1) Herbicides shall not be applied within a minimum of twenty-five (25) feet from an ESA or stormwater drains, inlets or infiltration structures that have connection to a waterway.

(2) Pesticides shall not be applied or stored within a minimum of twenty-five (25) feet of an ESA or stormwater drains, inlets or infiltration structures that have connection to a waterway.

(3) Fertilizer shall not be applied or stored within a minimum of twenty-five (25) feet of an ESA or stormwater drains, inlets or infiltration structures that have connection to a waterway.

(4) Fuel and paint storage shall be in a weather and leak proof storage container not less than twenty-five (25) feet from an ESA or stormwater drains, inlets or infiltration structures that have connection to a waterway.

(5) Never pour toxic chemicals down any drain - this includes the drains inside of a house or other building as well as storm drains or gutters that lead to storm drains. Also never pour toxic chemicals on the ground where they can seep into the water table and eventually the aquifer or a stream. Some household chemicals that need to be disposed of properly include but not limited to:

a. Metal polish solvent;
b. Kitchen and bathroom cleaners;
c. Furniture polish;
d. Battery acid or batteries;
e. Automatic transmission fluid;
f. Brake fluid;
g. Car wax with solvent;
h. Paint (oil-based);
i. Paint thinner;
j. Turpentine and varnish;
k. Illicit discharge ordinance.

(d) *Public property:*

(1) Herbicides shall not be applied within a minimum of twenty-five (25) feet from an ESA or stormwater drains, inlets or infiltration structures that have connection to a waterway.

(2) Pesticides shall not be applied or stored within a minimum of twenty-five (25) feet of an ESA or stormwater drains, inlets or infiltration structures that have connection to a waterway.

(3) Fertilizer shall not be applied or stored within a minimum of twenty-five (25) feet of an ESA or stormwater drains, inlets or infiltration structures that have connection to a waterway.

(4) Any pesticide and herbicide usage shall be applied by a state-licensed applicator.

(5) Fuel and paint storage shall be contained in a weather proof and leak proof storage facility not less than twenty-five (25) feet from an ESA or stormwater drains, inlets or infiltration structures that have connection to a waterway.

Sec. 9.04.07. Erosion control.

(a) All technical requirements are covered in Detail M-16B, Contractor Requirements for Site Clearing, Grading, and Erosion Control Design and Construction Notes of the COFB Standard Details, Resolution No. 2018-30.

(b) Erosion control is required for all construction projects and may be achieved by a variety of methods using one or a combination of the following:

(1) *Silt fence.*

a. A silt fence is a temporary sediment control device used on construction sites to prevent the transport of materials off-site and to protect water quality in nearby streams, rivers, and lakes from loose soil in stormwater runoff. A typical fence consists of a piece of synthetic filter fabric (also called a geotextile) stretched between a series of wooden or metal fence stakes along a horizontal contour level. The stakes are installed on the downhill side of the fence, and the bottom edge of the fabric shall be trenched a minimum of four (4) inches into the soil and backfilled on the uphill side. The silt fence is not designed to concentrate or channel

stormwater. The silt fence is installed on a site before soil disturbance begins, and is placed down-slope from the disturbance area.

b. Silt fencing must be installed to prevent silt exfiltration. It shall be placed around the perimeter of any and all disturbed areas of construction.

c. The fence may be dismantled temporarily from time to time to allow for delivery of materials and equipment but must be put back in place and maintained each day until the site is ready for final grading and sodding. Failure to diligently maintain this fence in good condition will result in a warning and followed up by a stop work order until the silt fence is properly re-installed.

d. The height of the silt fence shall be between two (2) feet and three (3) feet above grade. A minimum of four (4) inches shall be either buried below grade or have the bottom flap folded over above grade covered with dirt to hold it in place. An extra strength filter fabric shall be attached to fence posts spaced no wider than ten (10) feet apart and driven at least one (1) foot into the ground. [See COFB Standard Construction Details.]

(2) *Berm.*

a. A berm is a level space, shelf, or raised barrier, typically made of compacted soil, separating two areas. They are used to control erosion and sedimentation by reducing the rate of surface runoff - they typically either reduce the velocity of the water, or direct water to areas that are less susceptible to erosion.

b. A typical berm is one (1) foot - two (2) feet high, a minimum shelf of one (1) foot wide, and has sides sloped at 3:1 (horizontal to vertical) maximum.

(3) *Swale.*

a. A swale is a shallow channel with gently sloping sides. It can be natural or man-made. Artificial swales are often infiltration basins, designed to manage water runoff, filter pollutants, and increase rainwater infiltration.

b. Swales are largely used either for managing water runoff from one property to another or to collect rain runoff water from road surfaces that helps mitigate flooding onto street-front properties.

c. Swales vary in size, width, and depth depending on their function.

d. Typical City of Flagler Beach street roadside swales have been established to be nine (9) inches in depth. [See COFB Standard Construction Details.]

(4) *French drain.*

a. A french drain is a trench filled with gravel or rock that may also contain a perforated pipe that redirects surface water and groundwater away from an area. A French drain can have perforated hollow pipes along the bottom to quickly vent water that seeps down through the upper gravel or rock. They are a good alternative to open ditches.

b. French drains may be very useful to help manage surface water in constricted areas like the narrow five-foot side setbacks on many of the city's properties. [See COFB Standard Construction Details.]

(5) *Hay bales.*

a. A temporary sediment barrier consisting of a row of entrenched and anchored straw bales. Used to intercept and detain small amounts of sediment from disturbed areas of limited extent to prevent sediment from leaving the site. Decreases the intensity of sheet flows and low-to-moderate level channel flows.

b. Bales should be placed in a single- or staggered-row, lengthwise on the contour, with ends of adjacent bales tightly abutting one another.

c. All bales should be either wire-bound or string-tied. Straw bales should be installed so that bindings are oriented around the sides rather than along the tops and bottoms of the bales in order to prevent deterioration of the bindings.

d. The barrier should be entrenched and backfilled. A trench should be excavated the width of a bale and the length of the proposed barrier to a minimum depth of four (4) inches. The trench must be deep enough to remove all grass and other material which might allow underflow. After the bales are staked and chinked (filled by wedging), the excavated soil should be backfilled against the barrier. Backfill soil should conform to the ground level on the downhill side and should be built up to four (4) inches against the uphill side of the barrier. [See COFB Standard Construction Details.]

(c) Where a cleared vacant lot is created through demolition, the owner must screen the property from adjacent streets, alleys, and public improvement areas by landscaping a perimeter buffer of three (3) feet with the exception of intersection visibility standards which are two and one-half (2.5) feet high maximum. All cleared vacant lots shall be covered with sod, grass, or other suitable pervious material approved for the property by the city designee. The ground cover shall be maintained and the property kept free of trash and debris. All improvements shall be completed within sixty (60) days of demolition.

(d) Where a lot or a portion of a lot has been improved by new construction, an addition, or some other activity that clears the lot of existing vegetation, at the end of such construction or improvements, all disturbed land shall be permanently stabilized by adding sod, grass, or other suitable pervious materials as described herein. All other elements of the construction notwithstanding, no certificate of occupancy shall be granted until such time as the above has been accomplished and passes the final site inspection.

(e) Gutters and downspouts.

(1) All roofs and existing gutters and downspouts shall be maintained to prevent damage to the structure and adjoining properties and public rights-of-way.

(2) Gutters and downspouts are recommended for new houses but required for new houses that meet the following criteria:

a. Have sloped roofs with a pitch greater than 3:12 (vertical to horizontal) or fourteen (14) degrees;

b. Has a neighboring house on either side yard where the facing walls are within ten (10) feet of each other;

c. The roof surface of the gable(s) or hip(s) slopes toward the side yard; and,

d. The eave of the roof is greater than one (1) foot.

(3) New houses that are constructed with gutters and downspouts, whether by choice or by virtue of the above conditions, must point all downspout outlets toward the front or rear yards and, at a minimum, discharge onto a splash block or into a side yard swale, subject to any additional requirements of this Code. No configuration of the downspout

outlets shall cause stormwater to be directed toward a neighboring side property where the facing walls are within (10) feet of each other.

(4) It is recommended that all downspout outlets be connected to a perforated corrugated plastic pipe that is:

a. Buried from eight (8) inches to twenty-four (24) inches below the finished grade;

b. Wrapped with a porous filter fabric;

c. Embedded in aggregate - pea gravel to larger pieces of river rock;

d. Positively sloped, minimum two (2) percent, away from the downspout outlet.

Sec. 9.04.08. Prohibitions and exemptions for stormwater management.

(a) *Prohibitions.* No person may develop or make any change in the use of land or construct a structure or change the size of a structure, except as exempted herein, without submission and approval of a stormwater management plan as provided herein. For the purpose of this section, the development may potentially alter or disrupt existing stormwater runoff patterns, and as such, will require the submission and approval of a stormwater management plan prior to the commencement of construction unless exempted in paragraph (b) below. This includes, but is not limited to:

(1) Clearing and/or drainage of land as an adjunct to construction.

(2) Subdividing land.

(3) Re-platting recorded subdivisions and the development of recorded and unrecorded subdivisions.

(4) Changing the use of land and/or the construction of a structure or a change in the size of one or more structures.

(5) Altering the shoreline or bank of any surface water body.

(6) The permanent (long period) lowering of the water table.

(7) Addition of impervious or pre-approved semi-impervious construction.

(8) Direct deposition of stormwater runoff into rights-of-way and/or alleyways.

(b) *Exemptions.* The following activities shall be exempt from this section (Section 8.00 [9.04.08]) unless as hereinafter required by the land development regulations:

(1) Any maintenance, alteration, renewal, use or improvement to an existing structure not changing or affecting the rate or volume of stormwater runoff and not disturbing existing ground surfaces.

(2) Maintenance work performed on existing drainage canals for the purpose of public health and welfare.

(3) Maintenance work on utility or transportation systems, provided such maintenance work does not alter the purpose and intent of the drainage system as constructed.

Sec. 9.04.09. Stormwater management design standards.

Table VIII-01 establishes categories of development and corresponding impervious area thresholds. The review of stormwater management plans for all development projects shall be based upon the net increase in impervious surface area resulting from the development and any cumulative increase due to development that has occurred within the previous two (2) years.

TABLE VIII-01

CATEGORY THRESHOLDS FOR THE VARIOUS LIMITS OF DEVELOPMENTS	
CATEGORY	NET INCREASE OF IMPERVIOUS AREA
Category I	Up to five hundred square feet (<500 sf)
Category II	Between five hundred one square feet and four thousand square feet of surfaces subject to vehicular traffic and/or (501 sf - 4,000 sf) Between five hundred one square feet and five thousand square feet of building or other surfaces (501 sf - 5,000 sf)
Category III	Exceeds four thousand square feet of surfaces subject to vehicular traffic (>4,000 sf) Exceeds five thousand square feet of building or other surfaces (>5,000 sf)

(a) *Standards for category 1.* All categories of development shall require the preparation of a stormwater plan that shows the intended direction of runoff flow. Stormwater management system designs shall conform to the following performance standards:

(1) Stormwater runoff shall be subjected to best management practices prior to discharge into natural or artificial drainage systems. Best management practice shall mean a practice or combination of practices determined by the city to be the most effective, practical means of preventing or reducing the amount of pollution generated by the project to a level compatible with Florida water quality standards found in the St. Johns River Water Management District, the Florida Department of Environmental Protection, and Chapter 17-3, Florida Administrative Code.

(2) Additional detention on lots is not required in developments that have a master stormwater/retention system constructed except to contain runoff from flowing onto adjacent properties.

(3) No site alteration shall cause siltation of wetlands, pollution of downstream wetlands or reduce the natural retention or filtering capabilities of wetlands.

(4) Silt fences or other approved erosion control methods shall be required at the perimeter of all proposed disturbed areas and shall be properly maintained until the final site construction is approved.

(5) No site alteration shall allow water to become a health hazard or contribute to the breeding of mosquitoes.

(6) All site alteration activities shall provide for such water detention and settling structures and flow attenuation devices as may be necessary to ensure that the foregoing standards and requirements are met. No site alteration shall result in any net reduction of available floodplain storage.

(7) Design of water detention structures and flow attenuation devices shall be subject to the approval of the city engineering office pursuant to the standards hereof. Detention structures shall be designed to release runoff to the downstream drainage system over a period of time so as not to exceed the capacity of the existing downstream system. The design of water detention structures and flow

attenuation devices shall be in compliance with the standard construction details found in the City of Flagler Beach Standard Construction Details.

(8) A positive drainage system shall be provided which will not adversely impact downstream owners or adjacent lands.

(9) Where possible, natural vegetation shall be used as a component of the drainage system. The water table should not be manipulated so as to endanger natural vegetation beneficial to water quality unless natural vegetation can be replanted and survive with a lowered water table condition.

(10) Runoff from higher adjacent lands shall be considered and provisions for conveyance of such runoff shall be included in the drainage plan.

(11) Runoff shall be treated to remove oil and floatable solids before discharge from the site in a manner approved by the city.

(12) Erosion by wind or water shall be prevented by the developer throughout the construction process.

(13) Direct discharge to class II waters (Shellfish Propagation or Harvesting) is prohibited. A workable filter system approved by the city must be provided prior to any discharge to class II waters.

(14) For the purpose of this section, it is presumed that the lowering of the water table for the purpose of constructing detention barriers and/or permanently protecting road construction does not conflict with the stated objectives of this section if all of the following are met:

a. Based on data collected and interpreted by the U.S. Geological Survey, the St. Johns River Water Management District (SJRWMD), the city and other professional investigators, as important to recharge or to prevent discharge into the Floridian aquifer;
b. With separate special approval by the city, the proposed lowering of the water table shall be over no more than fifteen (15) percent of the site to a depth of five (5) feet below the surface of the existing undisturbed ground, or an equivalent volume; said area to be measured at the overflow elevation of the detention barrier(s);
c. With separate special approval by the city, the high-water table may be lowered up to two (2) feet below the undisturbed ground in the vicinity of roads for the purpose of protecting the sub-base and base of the roadway and/or for the purpose of preventing mosquito breeding in the roadside swales;
d. The lowering of the water table has no adverse effect on wetlands off site vegetation as defined herein; and
e. The lowering of the water table does not increase flows to the detriment of neighboring lands.

(15) For project sizes greater than one (1) acre of disturbed area, the applicant shall acquire permit coverage from the SJRWMD, National Pollutant Discharge Elimination System program and provide proof of such to the city prior to construction.

(b) *Standards for category II.*

(1) Meet all conditions of category I plus: For certain soil conditions or ground water table conditions which do not permit the percolation of this volume within seventy-

two (72) hours following a storm event, the city shall approve detention with filtration.

(c) *Standards for category III.*

(1) Meet all conditions of categories I and II plus: The city shall defer to permitting by St. Johns River Water Management District.

(2) Stormwater management plans shall be prepared by a professional engineer or landscape architect licensed in the State of Florida and shall conform to:

a. The discharge hydrograph produced for the developed or redeveloped site shall not exceed, in terms of peak flow and total volume, the hydrograph produced by conditions existing before development or redevelopment for a twenty-four-hour, twenty-five-year frequency storm, if this provision will be met through detention of the difference between said volumes, said volume difference shall be released over not less than a twenty-four (24) hours nor greater than a seventy-two (72) hours period of time. Runoff rates and volumes resulting from the project, in excess of existing amounts, shall be accommodated on-site. Off-site retention may be permitted if, in the opinion of the city, the recharge requirements of this section are met.

b. The peak discharge resulting from a twenty-four-hour, one-hundred-year frequency storm on the developed or redeveloped site shall not exceed the peak discharge resulting from a one-hundred-year frequency storm for pre-construction/development conditions on the site for flood prone areas as determined by the city.

c. Runoff computations shall be based on the most critical situation (rainfall duration, distribution and antecedent soil moisture condition) and conform to the methods described in the Florida Department of Transportation Drainage Manual, latest edition, and the St. Johns River Water Management District Regulation of Stormwater Management Systems.

(d) *Maintenance of stormwater management facilities.* The installed system(s) required by this section shall be maintained by the owner except where the city specifically accepts a certain system for maintenance. All areas and/or structures planned to be maintained by the city must be conveyed to the city by plat or separate instrument and accepted by the city commission. The owner shall provide adequate easements for approval with respect to system(s) to be maintained by the owner to permit the city to inspect and, if necessary, to take corrective action should the owner fail to maintain the system(s).

(e) *Alternative stormwater management designs.* Alternative designs and construction methods, such as perforated pipe systems, above and below ground water storage tanks and cisterns, rain barrels, and similar techniques, may be approved for use at the discretion of the city engineering department if they are consistent with professional best practices.

SECTION 2. FISCAL IMPACT STATEMENT. In terms of design, plan application review, construction, and inspection of buildings and structures, the cost impact as an overall average is negligible in regard to the local technical amendments because all development has been subject to the requirements of the local floodplain management ordinance adopted for participation in the

National Flood Insurance Program. Therefore, in terms of lower potential for flood damage, there will be continued savings and benefits to consumers.

SECTION 3. APPLICABILITY.

For the purposes of jurisdictional applicability, this ordinance shall apply in the **City of Flagler Beach**. This ordinance shall apply to all applications for development in flood hazard areas submitted on or after the effective date of this ordinance.

SECTION 4. INCLUSION INTO THE CODE OF ORDINANCES.

It is the intent of the **City Commission** that the provisions of this ordinance shall become and be made a part of the **City of Flagler Beach Code of Ordinances**, and that the sections of this ordinance may be renumbered or re-lettered. The word “ordinance” may be changed to “section,” “article,” “regulation,” or such other appropriate word or phrase in order to accomplish such intentions.

SECTION 5. SEVERABILITY.

If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, declared by the courts to be unconstitutional or invalid, such decision shall not affect the validity of the ordinance as a whole, or any part thereof, other than the part so declared.

SECTION 6. EFFECTIVE DATE.

This ordinance shall take effect immediately upon adoption in accordance with the City of Flagler Beach Charter.

PASSED ON FIRST READING THIS _____ DAY OF _____, 2025.

PASSED AND ADOPTED THIS _____ DAY OF _____, 2025.

CITY OF FLAGLER BEACH, FLORIDA
CITY COMMISSION
